Congratulations , future. May God b
 Send me yo
 Thank you 4:14 PM

Thanks for ur guidens and the test papers 8:40 PM

Thanks for the compliment 8:41 PM ✓

Share your pic also 8:44 PM ✓

I am thank full to you 3:13 PM

As I could clear my ipcc with your help 3:13 PM

Thanks a lot 3:13 PM

And you are doing such a wonderful work for CA student 3:13 PM

Thank you so much sir 3:47 PM

Grp 1 cleared 🙌🙌🙌 14:20

Congoo 14:20

Thank you sir 🙌🙌🙌 14:20

Ur efforts helped I want ur marksheet and pic To be displayed on website 14:20

paper , expecting exemption this Great work catseries. Some ions were exactly same 18:25

Gud, focus on law paper 11

Jay I have only attempted your 's and it's very helpful. Thanks. 18:27

CA FOUNDATION

BUSINESS MATHEMATICS, LOGICAL REASONING AND STATISTICS

ANSWERS TO MCQs

Answers:

1. A

Explanation:

Let the income of A and B be $3x$ and $2x$

Expenditure of A and B be $5y$ and $3y$

Then, $3x - 5y = 1500$(i)

$2x - 3y = 1500$(ii)

By solving i and ii we get

$x = 3000$ and $y = 1500$

Hence, B's income = $2x = 2 \times 3000 = \text{Rs}6000$

2. C

3. A

Explanation:

Here, $A:B:C = 1/4:1/5:1/6 = 15:12:10/60 = 15:12:10$

$$A's \text{ share} = 407 * 15 / 37 = \text{Rs. } 165$$

$$B's \text{ share} = 407 * 12 / 37 = \text{Rs. } 132$$

$$C's \text{ share} = 407 * 10 / 37 = \text{Rs. } 110$$

4. C

5. A

6. C

7. C

8. A

Explanation:

Let starting salary be x and annual increment be y

Then, $x + 4y = 1500$ 1 and $x + 10y = 1800$ 2

By solving 1&2 we get $x = 1300$ = starting salary and $y = 50$ = annual increment

9. B

Explanation:

Let coordinates of C be (x, y)

centroid = $\frac{X_1 + X_2 + X_3}{3}, \frac{Y_1 + Y_2 + Y_3}{3}$

Then, $5 + (-1) + x / 3 = 2, 6 + 4 + y / 3 = 3$

$$4+x=6, 10+y=9$$

$$x=2, y=-1$$

Coordinates of C are (2,-1)

10. B

11. C

12. B

13. A

Explanation:

Since a is a positive number therefore its reciprocal i.e. $1/a$ will also be positive

Since b is a negative number therefore its reciprocal i.e. $1/b$ will also be negative

So, we can conclude that $1/a$ is $> 1/b$

14. B

15. D

Explanation:

Let experience person = x units work per day

Fresh one = y units work per day

Therefore, $7x + 5y \geq 35$

16. B

17. B

18. C

19. A

Explanation:

The number of triangles that can be formed from a set of 12 points = ${}^{12}C_3$ since 7 points are on the same line, therefore no triangle can be formed from these points i.e. number of triangles = ${}^{12}C_3 - {}^7C_3 = 220 - 35 = 185$

20. A

Explanation:

There are two cases possible:

CASE 1:- When mathematics part-II is borrowed (i.e it means part-I has also been borrowed)

Number of ways = ${}^6C_1 = 6$ ways

CASE 2:-when mathematics part-II is not borrowed (i.e.3 3 books are to be selected out of 7)

Number of ways = ${}^7C_3 = 35$ ways

Hence, total number of ways = $35 + 6 = 41$ ways

21. A

Explanation:

$${}^6P_r = 24 \times {}^6C_r 6! (6 - r)! = 24 \times 6!r! \times (6 - r)! = 24r!r! = 244!r! = 4!r = 4$$

22. A

Explanation:

No. of ways of drawing 3 balls at a time = 120 ways

No. of ways of drawing 3 white balls out of 5 white balls = 10 ways

Total no. of ways = favourable cases/total no. of cases = $10/120 = 1/12$

23. B

Explanation:

Total no. of 2 digits that can be formed = $9 \times 8 = 72$

Total no. of 3 digits that can be formed = $9 \times 8 \times 7 = 504$

Total no. of 1 digits that can be formed = 9

Total numbers that can be formed = $9 + 72 + 504 = 585$

24. C

Explanation:

Since 2 particular books are to be kept always at the first and last place, so if we fix places, the remaining 5 books can be arranged in 5! Ways

Those, 2 books can also change their places in 2! ways

The total number of arrangements are = $5! \times 2! = 120 \times 2 = 240$ ways

25. B

Explanation:

CASE I P=Rs 1400, T=3Yrs, R = X%

$$SI = \frac{PRT}{100} = 1400 \times X \times 3/100 = 42X$$

CASE II P = Rs 1800, T = 3Yrs, R = X%

$$SI = \frac{PRT}{100} = 1800 \times X \times 3/100 = 54X$$

Given, case I – case II = 80

$$54X - 42X = 80$$

$$X = 80/12 = 6.67\% = R$$

26. A

Explanation:

Purchase cost of machine at present =Rs 8100

Present value of the lease rental = $a/i[(1 + i)^n - 1/(1 + i)^n] = 2000/0.18[(1 + 0.18)^5 - 1/(1 + 0.18)^5] = 11111 \times 0.5629 = \text{Rs. } 6254.34$ (aprox)

27. B

28. B

Explanation:

CASE I $P = \text{Rs } 1400, T = 3\text{Yrs}, R = X\%$

$$SI = \frac{PRT}{100} = 1400 \times X \times 3/100 = 42X$$

CASE II $P = \text{Rs } 1800, T = 3\text{Yrs}, R = X\%$

$$SI = \frac{PRT}{100} = 1800 \times X \times 3/100 = 54X$$

Given, case I – case II = 80

$$54X - 42X = 80$$

$$X = 80/12 = 6.67\% = R$$

29. B

Explanation:

Given say principal P

$$SI = 4/9P$$

$$T = R$$

$$SI = \frac{PRT}{100}$$

$$4/9P = P \times R \times T/100$$

$$R = 20/3\%$$

30. B

Explanation:

$$A = P[1 + rt/100]$$

$$10000 = 8000[1 + r \times 2/100]$$

$$10000/8000 = 100 + 2r/100$$

$$2r = 125 - 100$$

$$R = 25/2 = 12.5\% \text{ p.a.}$$

Let the amount which will become Rs 6875 be P. then,

$$6875 = p[1 + 12.5 \times 3/100]$$

$$6875 = p[100 + 37.5/100]$$

$$p = 6875 \times 100/1375$$

$$p = \text{Rs. } 5000$$

31. A

32. B

Explanation:

Here, $a = 200$, $d = 25$ and $S_n = 9450$ Assume that the contract time is over run for n days. Then
$$S_n = n[2a + (n - 1)d] 9450 = n[2 \times 200 + (n - 1)25] 18900 = n[400 + 25n - 25] 18900 = n(375 + 25n) 18900 = 375n + 25n^2 18900 = 0n^2 + 15n - 756 = 0$$
$$n^2 + 36n - 21n - 756 = 0$$
$$n(n + 36) - 21(n + 36) = 0(n - 21)(n + 36) = 0$$
$$n = 21 \text{ or } n = -36$$
 hence, no. of days can't be negative so $n = 21$ days

33. A

Explanation:

Let the first terms of G.P be a, then its second term = a - 2

Common ratio i.e. $r = \frac{a-2}{a}$

Sum of infinity=50

$$\frac{a}{1-r} = 50$$

$$\frac{a}{1 - \frac{a-2}{a}} = 50$$

$$\frac{a}{a - a + \frac{2}{a}} = 50$$

$$a = 10$$

$$r = \frac{10-2}{10} = \frac{8}{10} = \frac{4}{5}$$

Therefore, the required series is 10, 8, $\frac{32}{5}$

34. A

35. C

Explanation:

$$\text{Given, } S_n = 2n^2 + 5n \quad S_{n-1} = 2(n-1)^2 + 5(n-1)$$

$$= 2n^2 + 2 - 4n + 5n - 5$$

$$= 2n^2 + n - 3 \quad \text{nth term } (T_n) = S_n - S_{n-1}$$

$$= (2n^2 + 5n) - (2n^2 + n - 3)$$

$$= 4n + 3$$

36. A

37. B

38. A

Explanation:

$A = \{1, 2, 3\}$ and $B = \{6, 4, 7\}$

Relation $R = \{(2, 4)(3, 6)\}$ will be function from A to B.

39. D

Explanation:

Let photography = P

Music = M

Swimming = S

$n(P \cup M \cup S) = 200$, $n(M) = 100$, $n(P) = 70$, $n(S) = 40$

$n(M \cap P) = 40$, $n(M \cap S) = 30$, $n(P \cap S) = 20$

$n(P \cap M \cap S) = 10$

$n(P \cap M' \cap S') = n(P) - n(P \cap M) - n(P \cap S) + n(P \cap M \cap S)$

$= 70 - 40 - 20 + 10 = 80 - 60 = 20$

40. C

Explanation:

$f: A \rightarrow B$ $2 \rightarrow 4$ $2 \rightarrow 4$ $3 \rightarrow 9$ $3 \rightarrow 9$ many one function from A onto B

41. A

Explanation:

If $A = \{1, 2, 3, 4\}$

$B = \{2, 4, 6, 8\}$

When $f: A \rightarrow B$, $f = \{(1, 2), (2, 4), (3, 6), (4, 8)\}$ implies $f^{-1}: B \rightarrow A$ $f^{-1} = \{(2, 1), (4, 2), (6, 3), (8, 4)\}$

42. D

Explanation:

$$n(\text{NURUT}) = n(N) + n(R) + n(T) - n(N \cap R) - n(N \cap T) - n(R \cap T) + n(N \cap R \cap T)$$

$$= 200 + 100 + 40 - 50 - 25 - 20 + 5$$

$$= 250$$

No. of companies not using any media

$$= n(S) - n(\text{NURUT})$$

$$= 300 - 250$$

$$= 50$$

43. D

Explanations:

H is sister of G and G is child of D.

So H and G children of D.

J is aunt of H.

So J can be wife of D's brother C or J can be sister of D's wife.

In both cases J will be sister in law of D.

44. B

Explanation:

B and A are husband wife, who have 2 children of same sex. A is mother of D who is father of G. This means both children are males. D is brother of C, so C and D both are sons of A and B. D also has two children – G and H. If B is grandfather of E then C must be father of E.

45. B

Explanation:

B, C, and D are certainly males H and J are females. Gender of E and G not known.

46. D

47. A

48. B

49. D

Explanation:

73, 57, 49, 44, 43, 42

$73 - 57 = 16$

$57 - 49 = 8$

$49 - 45 = 4$

$45 - 43 = 2$

$$43 - 42 = 1$$

Differences between the consecutive numbers are in Geometric Progression (G.P)

Hence, 44 is the wrong number.

50. A

Explanation:

$$21 - 16 = 5$$

$$31 - 21 = 10$$

$$48 - 31 = 17$$

$$74 - 48 = 26; 10 - 5 = 5; 17 - 10 = 7; 26 - 17 = 9$$

51. B

Explanation:

$$1 \times 1 = 1$$

$$1 \times 2 = 2$$

$$2 \times 3 = 6$$

$$6 \times 4 = 24$$

$$24 \times 5 = 120 \text{ not } 96$$

$$120 \times 6 = 720$$

96 is wrong

52. A

Explanation:

$$11 + 1^2 + 1 = 13$$

$$13 + 2^2 + 1 = 18$$

$$18 + 4^2 + 1 = 35 \dots\dots$$

53. B

Explanation:

54. A

Explanation:

The movements of the girl are as shown in Fig. (A to B, B to C, C to D, D to A). Clearly, she is finally moving in the direction DA i.e. North east.

55. A

Explanation:

According to the question, the direction diagram is as follows

S = Starting point, T = Finishing point

AS = BC = 25m

AB = SC = 50m

CT = 60m

Required distance, $ST = CT - SC = 60 - 50 = 10\text{m}$

Clearly, at point T, Mahesh is 10 m West from S.

56. A

Explanation:

Required distance = PQ = $150 - (25 + 25 + 35) = 65\text{km}$

57. D

Explanation:

According to the question, the direction diagram is as follows

A = Original position, E = Finishing point

BC = 20, AB = 15m, AC = ED = 5m, CD = AE = 10m

Clearly, at finishing point E, Anoop is 10 m East from original position A.

Directions (Q. 58-62):

58. B

59. C

60. A

61. D

62. D

Direction (Q 63-67):

ROW 1	S	P	U	R	T	Q	Facing south
ROW 2	K	L	M	N	O	J	Facing north

63. C

Explanation:

In the south facing row, S and Q are sitting at the extreme ends of the row.

64. B

Explanation:

O is sitting immediate right of N

65. C

Explanation:

P and R are the immediate neighbours of U.

66. D

Explanation:

L and N are interchanges their position hence, P faces N.

67. D

Explanation:

First person is sitting immediate right of second person in all the option except option d).

68. B

69. A

70. C

71. B

72. C

73. D

74. C

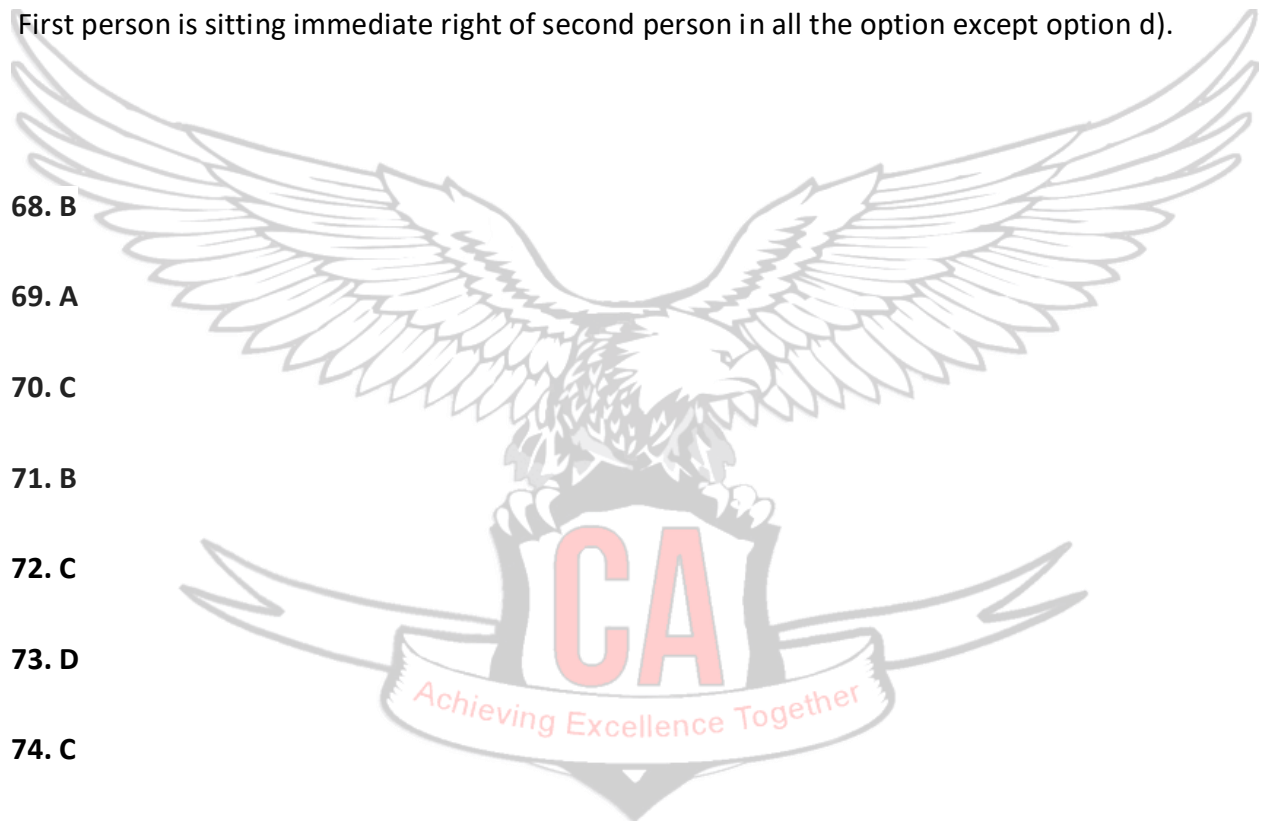

75. B

76. C

77. D

78. C

79. D

80. A

Explanation:

From 1 to 16, there are 4 numbers which are multiple of 4

1st 2 are multiple of 4, and one any other number from $(16 - 4) = 12$ tickets

$$4C_2 * 12C_1 / 16C_3 = 72/560$$

2nd all are multiples of 4.

$$4C_3 / 16C_3 = 4/560$$

$$\text{Add both } 72/560 + 4/560 = 76/560 = 19/140$$

81. D

Explanation:

Prob. of 1st winning = $2/7$, so not winning

$$= 1 - 2/7 = 5/7$$

Prob. of 2nd winning = $3/5$, so not winning

$$= 1 - 3/5 = 2/5$$

$$\text{So required prob.} = 2/7 * 2/5 + 3/5 * 5/7 = 19/35$$

82. C

Explanation:

$P(A) = 3/5$ and $P(B) = 4/5$. Now they are contradicting means one is telling truth and other telling the lie. So,

$$\text{Probability} = (3/5) * (1/5) + (2/5) * (4/5)$$

$$= 3/25 + 8/25 = 11/25$$

83. B

Explanation:

$$\text{Total possibility} = 5 * 4 * 3 * 2$$

Favourable outcomes = $2 * 4 * 3 * 2$ (to be divisible by 5 unit digit can be filled with only 0 or 5, so only two possibilities are there, then the remaining can be filled in 4, 3 and 2 ways respectively)

$$\text{So probability} = 2/5$$

84. B

85. A

86. B

87. A

88. C
