Q considers the contract and notes that although the lease payments contain variability based on usage, and there is a realistic possibility that Q may not use the machinery in some months, a monthly payment of 1,000 is unavoidable. Accordingly, this is an in-substance fixed payment, and is included in the measurement of the lease liability.

*****

Illustration 21 - In-substance fixed lease payment

Entity P enters into a five-year lease for office space with Entity Q. The initial base rent is ₹ 1 lakh per month. Rents increase by the greater of 1% of Entity P's generated sales or 2% of the previous rental rate on each anniversary of the lease commencement date.

Describe the lease payments for the purpose of measuring lease liability.

Solution:

In the given case, the lease payments for purposes of classifying the lease are the fixed monthly payments of ₹ 1 lakh plus the minimum annual increase of 2% of the previous rental rate. Entity P is required to pay no less than a 2% increase regardless of the level of sales activity; therefore, this minimum level of increase is in substance fixed lease payment.

*****

Illustration 22 - In substance fixed lease payments

Company N leases a production line. The lease payments depend on the number of operating hours of the production line – i.e., N has to pay ₹ 1,000 per hour of use. The annual minimum payment is ₹ 10,00,000. The expected usage per year is 1,500 hours.

Determine the lease payment.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

Solution:

The lease contains in substance fixed payments of ₹ 10,00,000 per year, which are included in the initial measurement of the lease liability. The additional ₹ 5,00,000 that Company N expects to pay per year are variable payments that do not depend on an index or a rate but usage.

*****

Lease incentives

'Lease incentives' is defined as payments made by a lessor to a lessee associated with a lease, or the reimbursement or assumption by a lessor of costs of a lessee.

A lease agreement with a lessor might include incentives for the lessee to sign the lease, such as an upfront cash payment to the lessee, payment of costs for the lessee (such as moving / transportation expenses) or the assumption by the lessor of the lessee's pre-existing lease with a third party.

For lessee, lease incentives that are paid or payable to lessee by the lessor are deductible from lease payments and reduce the initial measurement of lessee' ROU asset.

For lessors, lease incentives are also deducted from lease payments and affect the lease classification test. For finance leases, lease incentives that are payable to the lessee reduce the expected lease receivables at the commencement date and thereby the initial measurement of the lessor's net investment in the lease. Consequently, the selling profit or loss is not affected. For operating leases, lessors should defer the cost of any lease incentives paid or payable to the lessee and recognise that cost as a reduction to lease income over the lease term.

Lessor reimbursement for some (or all) of the costs a lessee incurs to complete leasehold improvements is a common example of a lease incentive. To determine whether a payment from the lessor to the lessee represents a lease incentive, a reporting entity should evaluate the nature of the improvement and determine whether it represents an asset for lessee or a lessor. If an improvement represents an asset for lessee, the lessor payment is a lease incentive that should be recorded as a reduction to fixed lease payments. On the other hand, reimbursement for an improvement that is an asset for lessor is not a lease incentive; it should be recorded as a reimbursement to the lessee for the cost of the asset of lessor.

8.3.3.2 Variable lease payments that depend on an index or a rate:

'Variable lease payments' are defined as the portion of payments made by a **lessee** to a **lessor** for the right to use an **underlying asset** during the **lease term** that varies because of changes in facts or circumstances occurring after the **commencement date**, other than the passage of time.

Join us t.me/caborntofight
Sensitivity: Public (C4)

These may include, ***for e.g.***, payments linked to a consumer price index, payments linked to a benchmark interest rate (such as LIBOR) or payments that vary to reflect changes in market rental rates. Such payments are **included** in the lease payments and are measured using the prevailing index or rate at the measurement date (e.g., lease commencement date for initial measurement).

Despite the measurement uncertainty associated with changes to index- or rate-based payments, the payments meet the definition of an asset (for lessor) and a liability (for lessee) because they are **unavoidable** and **do not depend on any future activity** of the lessee. Lessees subsequently remeasure the lease liability if there is a change in the cash flows (i.e., when the adjustment to the lease payments takes effect) for future payments resulting from a change in index or rate used to determine lease payments.

Illustration 23 - Variable lease payments that depend on an index or rate

An entity enters into a 10-year lease of property. The lease payment for the first year is ₹ 1,000. The lease payments are linked to the consumer price index (CPI), i.e., not a floating interest rate. The CPI at the beginning of the first year is 100. Lease payments are updated at the end of every second year. At the end of year one, the CPI is 105. At the end of year two, the CPI is 108.

Determine the lease payments?

Solution:

At the lease commencement date, the lease payments are ₹ 1,000 per year for 10 years. The entity does not take into consideration the potential future changes in the index. At the end of year one, the payments have not changed and hence, the liability is not updated.

At the end of year two, when the lease payments change, the entity updates the remaining eight lease payments to ₹ 1,080 per year (i.e., ₹ 1,000 / 100 x 108).

*****

Variable lease payments that do not depend on an index or a rate:

Variable lease payments that do not depend on an index or rate and are **not, in substance, fixed** (as discussed above – In-substance fixed lease payments). Examples may include payments such as those based on performance (***for e.g.***, a percentage of sales) or usage of the underlying asset (***for e.g.***, the number of hours flown, the number of units produced), are **not included** as lease payments. Instead, they are recognised in profit or loss in the period in which the event that triggers the payment occurs (unless they are included in the carrying amount of another asset in accordance with other Ind AS).

In some cases, the variability may be resolved during the lease term, so that payments become fixed for the remainder of the lease term. The new fixed payments are then used to remeasure the lease liability (with an offset to the ROU Asset).

When variable payments not included in consideration in the contract are recognized, lessees also allocate these amounts between lease and non-lease components on the same basis as the allocation of consideration in the contract. These payments include variable payments not based on an index or rate or the changes in variable payments based on an index or rate after the commencement date of the lease.

Illustration 24 - Variable lease payments that do not depend on an index or rate

Entity XYZ is a medical equipment manufacturer and a supplier of the related consumables. Customer ABC operates a medical centre. Under the agreement entered into by both parties, Entity XYZ grants Customer ABC the right to use a medical laboratory machine at no cost and Customer ABC purchases consumables for use in the equipment from Entity XYZ at ₹ 100 each.

The consumables can only be used for that equipment and Customer ABC cannot use other consumables as substitutes. There is no minimum purchase amount required in the contract.

Based on its historical experience, Customer ABC estimates that it is highly likely to purchase at least 8,000 units of consumables annually. Customer ABC has appropriately assessed that the arrangement contains a lease of medical equipment. There are no residual value guarantees or other forms of consideration included in the contract.

Analyze whether these payments affect the calculation of lease liability and ROU Asset. Further discuss how Entity XYZ and Customer ABC would allocate these lease payments.

Solution:

There are two components in the arrangement, viz., a lease of equipment and the purchase of consumables.

Even though Customer ABC may believe that it is highly unlikely to purchase lesser than 8,000 units of consumables every year, in this example, there are no lease payments for purposes of initial measurement (for Entity XYZ and Customer ABC) and lease classification (for Entity XYZ).

Entity XYZ and Customer ABC would allocate the payments associated with the future payments to the lease and consumables component of the contract (assuming Customer ABC does not elect to combine lease and non-lease components for this class of asset).

If Customer ABC elects the practical expedient not to separate the associated non-lease component from the lease component and instead accounts for the lease component and the non-lease component as a single lease component, the future payments for the consumables will still constitute genuine variability. Hence there will also be no lease payments for purposes of initial measurement.

*****

Sensitivity: Public (C4)

Illustration 25 - Variable lease payments

Entity A enters into a five-year lease of an office building. The lease payments are ₹ 5,00,000 per year and the contract includes an additional water charge calculated as ₹ 0.50 per litre consumed. Payments are due at the end of year. Entity A elects to apply the practical expedient to combine lease and non-lease components

Solution:

As stated above, payments are due at the end of the year. Entity A elects to apply the practical expedient not to separate lease and non-lease components.

At the commencement date, Entity A measures the lease liability as the present value of the fixed lease payments (i.e. five annual payments of ₹ 5,00,000). Although Entity A has elected to apply the practical expedient to combine non-lease components (i.e. water charges) with the lease component, Entity A excludes the non-lease component from its lease liability because they are variable payments that depend on usage. That is, the nature of the costs does not become fixed just because Entity A has elected not to separate them from the fixed lease payments. Entity A recognises the payments for water – as a variable lease payment – in profit or loss when they are incurred.

In contrast, if B does not elect to apply the practical expedient to combine lease and non-lease components, then it recognises the payments for water – as an operating expense – in profit or loss when they are incurred.

*****

8.3.3.3 Exercise price of a purchase option

If the lessee is **reasonably certain** to exercise a purchase option, the exercise price is **included** as a lease payment, i.e., entities consider the exercise price of asset purchase options included in lease contracts consistently with the evaluation of lease renewal and termination options (as discussed earlier).

8.3.3.4. Penalties for terminating a lease

If it is **reasonably certain** that the lessee will not terminate a lease, the lease term is determined assuming that the termination option would not be exercised, and any termination penalty is **excluded** from the lease payments. **Otherwise**, the lease termination penalty is **included** as a lease payment. The determination of whether to include lease termination penalties as lease payments is similar to the evaluation of lease renewal options (as discussed earlier).

8.3.3.5. Residual value guarantees (lessees):

'Residual value guarantee' is defined as a guarantee made to a **lessor** by a party unrelated to the lessor that the value (or part of the value) of an **underlying asset** at the end of a **lease** will be at least a specified amount.

Join us t.me/caborntofight
Sensitivity: Public (C4)

For a lessee, lease payments include amounts expected to be **payable by the lessee** under residual value guarantees. A lessee may provide a guarantee to the lessor that the value of the underlying asset it returns to the lessor at the end of the lease will be at least of a specified amount. Such guarantees are enforceable obligations that the lessee has assumed by entering into the lease. A lessee is required to remeasure the lease liability if there is a change in the amounts expected to be payable under a residual value guarantee.

Illustration 26 - Residual value guarantee included in lease payments

An entity (a lessee) enters into a lease and guarantees that the lessor will realise ₹ 20,000 from selling the asset to another party at the end of the lease. At lease commencement, based on the lessee's estimate of the residual value of the underlying asset, the lessee determines that it expects that it will owe ₹ 8,000 at the end of the lease. Whether the lessee should include the said payment of ₹ 8,000 as a lease payment?

Solution:

The lessee should include the amount of ₹ 8,000 as a lease payment because it is expected that it will owe the same to the lessor under the residual value guarantee.

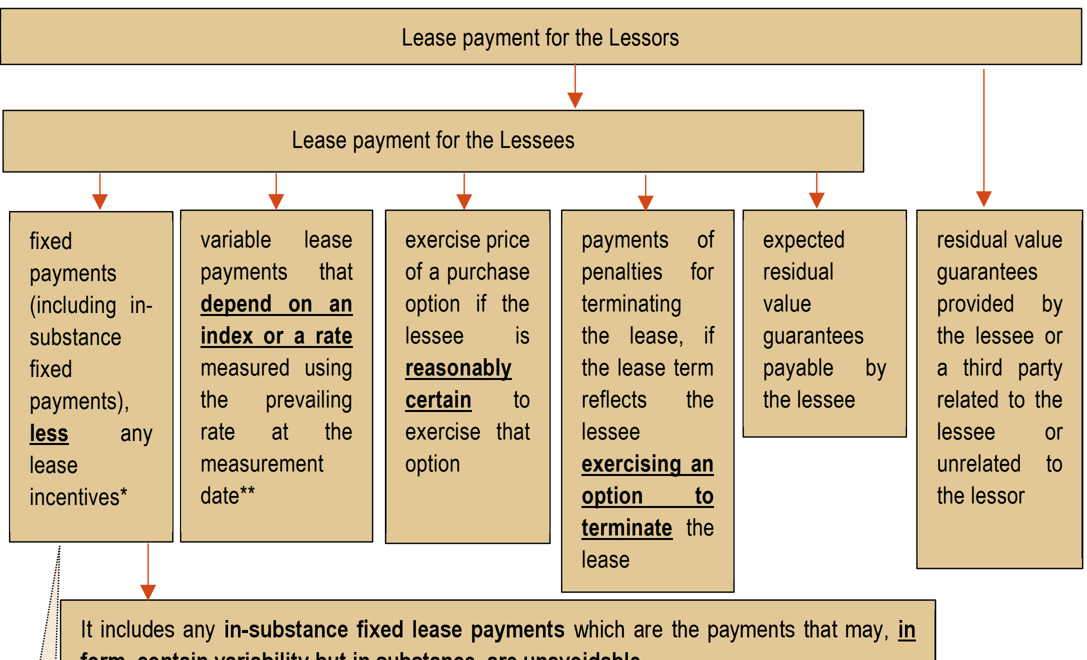
*****

Residual value guarantees (lessors):

Ind AS 116 requires lessors to **include** in the lease payments, any residual value guarantees provided to the lessor by the lessee, a party related to the lessee, or a third party unrelated to the lessor that is financially capable of discharging the obligations under the guarantee. This amount included in the lease payments is **different** from that for a lessee which only includes the amount expected to be payable by lessee only (as discussed above).

The concept explained in para 8.3.3 above can be summarized as follows:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)



***Lease incentives**

- **For lessee -** lease incentives that are paid or payable to lessee by the lessor are deductible from lease payments and reduce the initial measurement of lessee' ROU asset.
- **For lessors -** lease incentives are also deducted from lease payments and affect the lease classification test.
  - **For finance leases**
    - lease incentives reduce the expected lease receivables at the commencement date and thereby the initial measurement of the lessor's net investment in the lease.
    - Selling profit or loss is not affected.
  - **For operating leases**
    - defer the cost of any lease incentives paid or payable to the lessee and recognise that cost as a reduction to lease income over the lease term.

**Lessees subsequently remeasure the lease liability if there is a change in the cash flows (i.e., when the adjustment to the lease payments takes effect) for future payments resulting from a change in index or rate used to determine lease payments.

Exclusion of payments for calculating lease liability:

a. **Lease payments allocated to non-lease components of a contract,** unless the lessee elects to combine non-lease components with a lease component and to account for them as a single lease component.

b. Variable lease payments that **do not** depend on index or rate. They are recognised in profit or loss in the period in which the event that triggers the payment occurs.

Sensitivity: Public (C4)

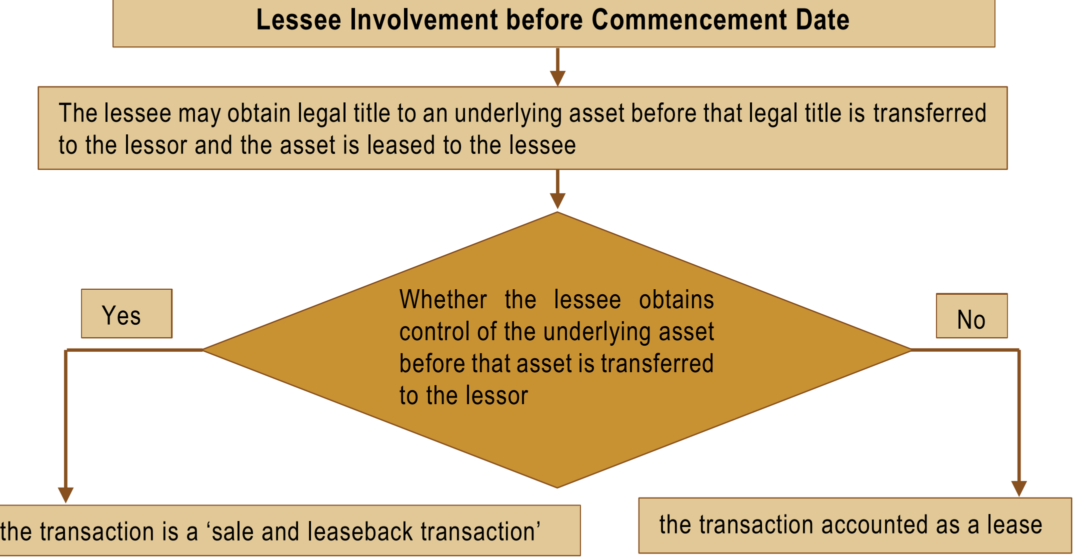
8.3.4 Lessee Involvement before Commencement Date

An entity may negotiate a lease before the underlying asset is available for use by the lessee. For some leases, the underlying asset may need to be constructed or redesigned for use by the lessee. Thus, based on the terms and conditions of the contract, a lessee may be required to make payments relating to the construction or design of the asset.

Costs relating to the construction or design of an underlying asset do not include payments made by the lessee for the right to use the underlying asset since, payments for the right to use an underlying asset are the payments for a lease, regardless of the timing of those payments. Thus, if the lessee incurs such costs, they are accounted by applying other Ind AS (such as Ind AS 16, Property, Plant and Equipment).

The lessee may obtain legal title to an underlying asset before that legal title is transferred to the lessor and the asset is leased to the lessee. Obtaining legal title does not in itself determine how to account for the transaction. If the lessee controls (or obtains control of) the underlying asset before that asset is transferred to the lessor, the transaction is a 'sale and leaseback transaction' (Please refer Section 8.6.2 'Sale and Leaseback Transactions' for further discussion)

However, if the lessee does not obtain control of the underlying asset before the asset is transferred to the lessor, the transaction is not a 'sale and leaseback transaction'. ***For e.g.***, this may be the case if a manufacturer, a lessor and a lessee negotiate a transaction for the purchase of an asset from the manufacturer by the lessor, which is in turn leased to the lessee. The lessee may obtain legal title to the underlying asset before legal title transfers to the lessor. In this case, if the lessee obtains legal title to the underlying asset, but does not obtain control of the asset before it is transferred to the lessor, the transaction is not accounted for as a sale and leaseback transaction, but it is rather accounted as a lease.



Join us t.me/caborntofight
Sensitivity: Public (C4)

8.3.5 Initial Direct Costs

'Initial direct costs' are defined as **the incremental costs of obtaining a lease** that would not have been incurred if the lease had not been obtained, except for such costs incurred by a manufacturer or dealer lessor in connection with a finance lease.

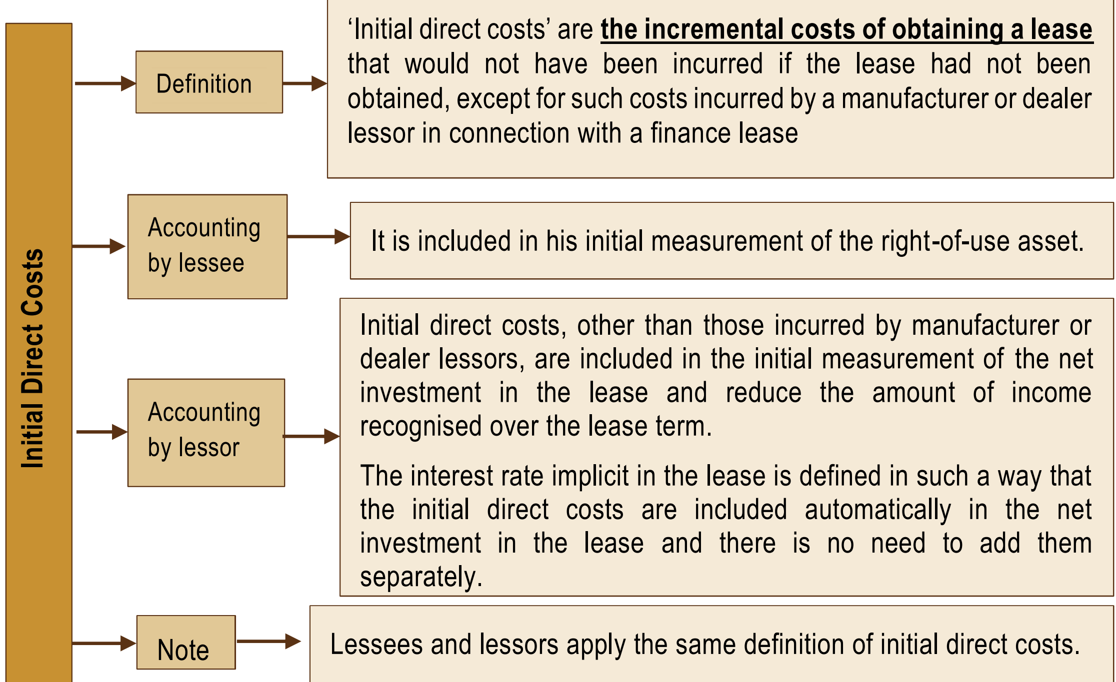
Ind AS 116 requires lessees to include their initial direct costs in their initial measurement of the right-of-use asset.

Examples of costs included and excluded from initial direct costs is provided below.

Included	Excluded
Commission (including payments to employees acting as selling agents)	Employee salaries
Legal fees resulting from the execution of the lease	Legal fees for services rendered before the execution of the lease
Lease document preparation costs incurred after the execution of the lease	Negotiating lease term and conditions
Certain payments to existing tenants to move out	Advertising
Consideration paid for a guarantee of a residual asset by an unrelated third party	Depreciation and amortization

Lessees and lessors apply the same definition of initial direct costs. The requirements under Ind AS 116 for initial direct costs are consistent with the concept of incremental costs in Ind AS 115, Revenue from Contracts with Customers.

For lessors, initial direct costs, other than those incurred by manufacturer or dealer lessors, are included in the initial measurement of the net investment in the lease and reduce the amount of income recognised over the lease term. The interest rate implicit in the lease is defined in such a way that the initial direct costs are included automatically in the net investment in the lease and there is no need to add them separately.

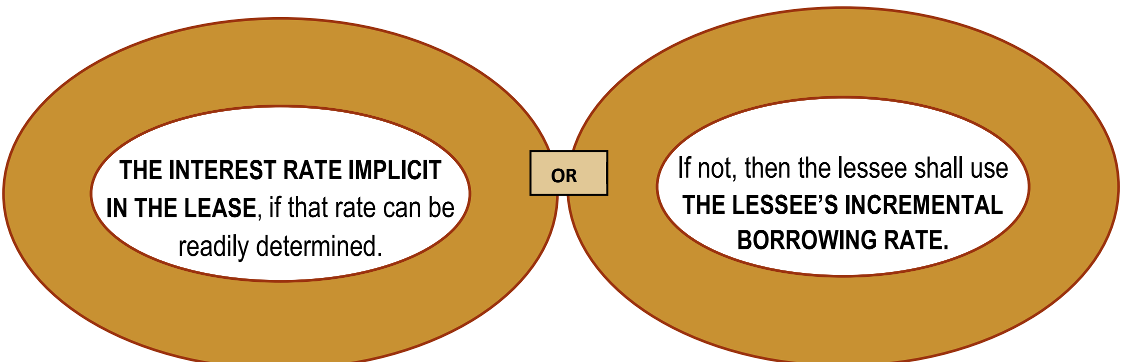


8.3.6 Discount Rates

Discount rates are used to determine the present value of the lease payments, which are used to determine Right of Use asset and Lease liability in case of a lessee and to measure a lessor's net investment in the lease.

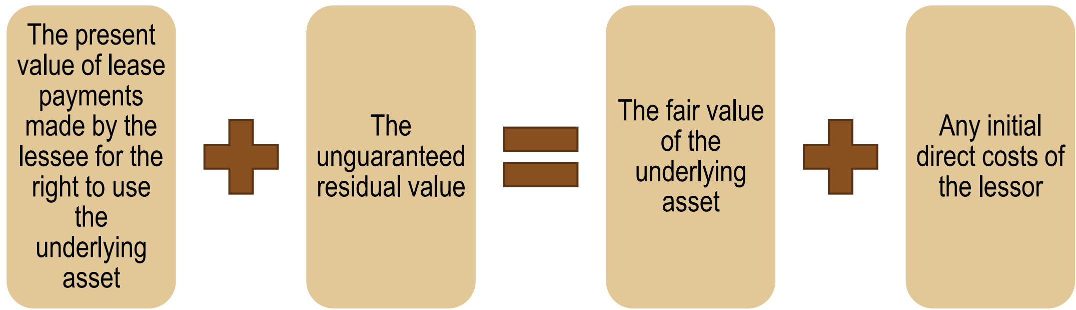
For a Lessee

As per Ind AS 116, the Discount Rate to be used should be:



Where,

'Interest rate implicit in the lease' is defined as the rate of interest that causes the following:



Lease payments are discounted using the interest rate implicit in the lease (as above and to be calculated from the perspective of lessor) if that rate can be readily determined. But, if that rate cannot be readily determined then, the lessee uses the incremental borrowing rate.

As discussed above, the lessee's **incremental borrowing rate** is the rate of interest that

— the lessee would have to pay to borrow over a **similar term**,

— and with a **similar security**,

— the funds necessary to obtain an asset of a **similar value** to the Right of use Asset

— in a **similar economic environment**.

In determining the incremental borrowing rate, the lessee considers borrowings with a similar term and security to the ROU Asset (**NOT the underlying asset**). ***For e.g.***, in the case of a five-year property lease, the lessee considers the borrowings with a similar term to the five-year ROU Asset (and NOT the property itself), which may have a significantly longer life. Observable rates (such as a property yield) can be used as a **starting point** to determine the incremental borrowing rate but adjustments need to be considered for an asset with a value similar to the ROU Asset. Other potential sources of adjustment may include the credit profile of the lessee, the borrowing currency, or the length of the lease term. It is likely that, in some cases, **significant judgement** will be needed to determine the incremental borrowing rate.

As discussed above, the lessee's incremental borrowing rate reflects the rate of interest that a lessee would have to pay, among others, in a similar economic environment. If the contract requires lease payments to be made in a currency other than the functional currency of the lessee (i.e., payments are to be made in a foreign currency) then, the incremental borrowing rate of the lessee should be determined based on a borrowing of a similar amount in that foreign currency.

For a Lessor:

Lessor to use the interest rate implicit in the lease as discussed above.

Sensitivity: Public (C4)

8.3.7 Economic Life

'Economic Life' is defined as either

- the period over which an asset is expected to be economically usable by one or more users or
- the number of production or similar units expected to be obtained from an asset by one or more users.

8.3.8 Fair Value

The fair value for the purposes of applying the lessor accounting requirements in Ind AS 116 is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

The fair value definition for lessors has been carried forward from Ind AS 17.

Please note that for the purposes of determination of fair value under Ind AS 116, the above stated definition is to be considered, hence Ind AS 113 "Fair Value Measurement" is not applicable for determination of fair value.

8.4 LESSEE ACCOUNTING

8.4.1 Initial Recognition and Measurement

A **<u>'lessee'</u>** is defined as an entity that obtains the right to use an **underlying asset** for a period of time in exchange for consideration.

At the commencement date, a lessee shall recognise a ROU Asset and a Lease Liability. Ind AS 116 requires lessees to recognise a liability to make lease payments and an asset representing the right to use the underlying asset (i.e., the ROU Asset) during the lease term for ***ALL*** leases (**<u>except</u>** for short-term leases and leases of low-value assets, if they choose to apply such exemptions).

<u>Measuring the lease liability:</u>

At the commencement date, a lessee initially measures the Lease Liability at the **<u>present value of the remaining lease payments to be made over the lease term, discounted using the rate implicit in the lease (or if that rate cannot be readily determined, the lessee's incremental borrowing rate)</u>**. Lease payments used in measuring the lease liability are amounts due to the lessor excluding any payments that a lessee makes before lease commencement. (Refer Section 8.3.3 Lease payments).

Join us t.me/caborntofight
Sensitivity: Public (C4)

At the commencement date, the lease payments included in the measurement of the lease liability comprise the following payments for the right to use the underlying asset during the lease term that are not paid at the commencement date:

- fixed payments (including in-substance fixed payments), less any lease incentives receivable;
- variable lease payments that depend on an index or a rate, initially measured using the index or rate as at the commencement date;
- amounts expected to be payable by the lessee under residual value guarantees;
- the exercise price of a purchase option if the lessee is reasonably certain to exercise that option; and
- payments of penalties for terminating the lease, if the lease term reflects the lessee exercising an option to terminate the lease.

Illustration 27: Initial measurement of lease liability

Entity L enters into a lease for 10 years, with a single lease payment payable at the beginning of each year. The initial lease payment is ₹ 100,000. Lease payments will increase by the rate of LIBOR each year. At the date of commencement of the lease, LIBOR is 2 per cent.

Assume that the interest rate implicit in the lease is 5 per cent. How is lease liability initially measured?

Solution:

In the given case, the lease payments depend on a rate (i.e., LIBOR) and hence is included in measuring lease liability. As per Ind AS 116, the lease payments should initially be measured using the rate (i.e. LIBOR) as at the commencement date. LIBOR at that date is 2 per cent; therefore, in measuring the lease liability, it is assumed that each year the payments will increase by 2 per cent, as follows:

Year	Lease Payment	Discount factor @ 5%	PV of lease payments
1	1,00,000	1	100,000
2	1,02,000	0.952	97,102
3	1,04,040	0.907	94,364
4	1,06,121	0.864	91,689
5	1,08,243	0.823	89,084
6	1,10,408	0.784	86,560
7	1,12,616	0.746	84,012

Sensitivity: Public (C4)

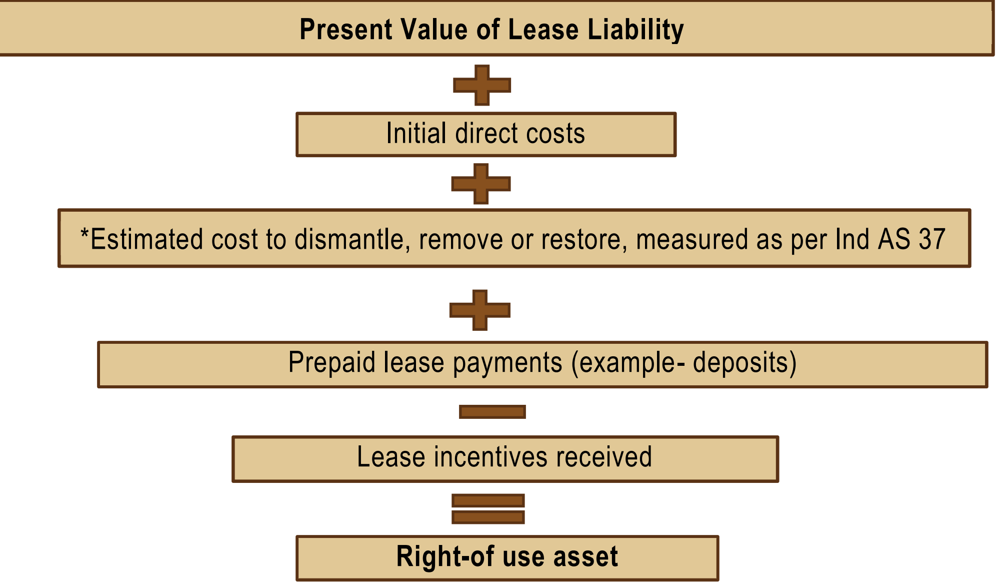
8	1,14,869	0.711	81,672
9	1,17,166	0.677	79,321
10	1,19,509	0.645	77,083
			8,80,887

Therefore, the lease liability is initially measured at ₹ 8,80,887

*****

Measuring the right-of-use asset:

A lessee initially measures the ROU Asset at **COST**, which consists of ***ALL*** of the following:



Journal entry in the books of lessee

ROU Asset	Dr.	Sum total of all below items
To Lease liability	Cr.	PV of outstanding lease payments by lessee using interest rate implicit in lease
To Lessor / Supplier	Cr.	Any lease payment made on or before the commencement date ***less*** lease incentives received
To Bank / Creditor	Cr.	Initial direct costs incurred by lessee
To Provision for dismantling / removing the underlying asset	Cr.	Estimate of costs to be recognised only when lessee incurs an obligation for these costs (Ind AS 37)

*On initial measurement, a lessee is required to recognise dismantling, removal and restoration costs as part of the ROU Asset. Costs may be incurred at lease commencement or during a particular period as a consequence of having used an underlying asset. Costs that are incurred during a particular period as a consequence of having used the ROU Asset to produce inventories are accounted for under Ind AS 2 *Inventories*. The liability associated with dismantling, removal and restoration costs is recognised and measured in accordance with Ind AS 37 *Provisions, Contingent Liabilities and Contingent Assets*.

Illustration 28: Measuring right-of-use asset

Entity Y and Entity Z execute a 12-year lease of a railcar with the following terms on 1 January, 20X1:

- *The lease commencement date is 1 February 20X1.*
- *Entity Y must pay Entity Z the first monthly rental payment of ₹ 10,000 upon execution of the lease.*
- *Entity Z will pay Entity Y ₹ 50,000 cash incentive to enter into the lease payable upon lease execution.*

Entity Y incurred ₹ 1,000 of initial direct costs, which are payable on 1 February 20X1. Entity Y calculated the initial lease liability as the present value of the lease payments discounted using its incremental borrowing rate because the rate implicit in the lease could not be readily determined; the initial lease liability is ₹ 8,50,000.

How would Lessee Company measure and record this lease?

Solution:

Entity Y would calculate the right-of-use asset as follows: ₹

Initial measurement of lease liability	8,50,000
Lease payments made to Entity Z at or before the commencement date	10,000
Lease incentives received from Entity Z	(50,000)
Initial direct cost	1,000
Initial measurement of right-of-use asset	**8,11,000**

*****

Illustration 29 - Dismantling costs to be included in initial measurement of ROU Asset

Company H leases an aircraft for a period of 5 years. The aircraft must undergo a planned check after every 100,000 flight hours. At the end of the lease, company H must have a check performed

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

(or refund the costs to the lessor), irrespective of the actual number of flight hours. What are the lease payments for purposes of calculating ROU asset?

Solution:

In the given case, the legal requirement to perform a check after every 1,00,000 flight hours does not directly lead to an obligation as it depends on future circumstances. However, as the check must be carried out at the end of the lease irrespective of the actual number of flight hours gives rise to an obligation.

As a result, company H has to recognize a provision for the costs of the final check ("present value of the expected cost") at the beginning of the lease term. At the same time, these costs must be included in the cost of the right-of-use (ROU) asset pursuant to para 24 (d) of Ind AS 116.

*****

Comparison with AS 19:

AS 19 is based on dual classification model of operating and finance leases with different classification and measurement guidance for each of them.

- In case of finance lease, asset and liability is recognized at an amount equal to the fair value of the leased asset at the inception of the lease, unless the present value of minimum lease payments is less than the fair value.
- In case of operating lease, rentals payable is charged as an expense in the statement of profit and loss on a straight-line basis over the lease term, even if the payments are not made on that basis, unless another systematic basis is more representative of the time pattern of the user's benefit.

Hence, the accounting for leases in the books of lessee under AS 19 is completely different from that under Ind AS 116. ROU asset is not required to be accounted for under AS 19. Hence, the subsequent measurement, presentation and disclosure of ROU asset is also not relevant from AS 19 perspectives.

8.4.2 Subsequent Measurement

8.4.2.1 Right-of-use assets (ROU Asset)

After the commencement date, the right-of-use asset should be measured using a cost model, unless it applies the revaluation model as specified under Ind AS 16.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

Sensitivity: Public (C4)

Cost model for right-of-use assets:

To follow the cost model, an entity measures a right-of-use asset at cost:

(a) Less **accumulated depreciation** and accumulated impairment losses (recognised in accordance with Ind AS 36, Impairment of Assets); and

(b) Adjusted for **re-measurements of the lease liability** specified in section 8.4.3

Depreciation for right-of-use assets

ROU Assets measured under the cost model should be depreciated in accordance with the depreciation requirements given in Ind AS 16, subject to the following:

- If the lease transfers ownership of the underlying asset to the lessee by the end of the lease term, or if the cost of the ROU Asset reflects that the lessee will exercise a purchase option, the ROU Asset should be depreciated from the commencement date to the end of the useful life of the underlying asset;
- otherwise, the right-of-use asset should be depreciated from the commencement date to the earlier of the end of the useful life of the ROU Asset and the end of the lease term.

Where, **'useful life'** is defined as the period over which an asset is expected to be available for use by an entity; or the number of production or similar units expected to be obtained from an asset by an entity.

Therefore, if the ownership of the underlying asset transfers to the lessee at the end of the lease term, or it is reasonably certain that the lessee will exercise a purchase option, depreciation is based on the useful life of the underlying asset. Otherwise, depreciation is determined by reference to the useful life of the right-of-use asset (provided that is not longer than the lease term).

Revaluation model for right-of-use assets:

If right-of-use assets relate to a class of property, plant and equipment to which the lessee applies the revaluation model in Ind AS 16, a lessee may elect to apply that revaluation model to all of the right-of-use assets that relate to that class of property, plant and equipment.

However, if right-of-use assets that meet the definition of investment property under Ind AS 40 "Investment Property", then, revaluation model cannot be applied because at present Ind AS 40 "Investment property" does not permit revaluation model and only cost model is allowed for all investment properties.

Join us t.me/caborntofight
Sensitivity: Public (C4)

8.4.2.2 Lease liability:

A Lease Liability should be accounted for in a manner similar to other financial liabilities (i.e., on an amortised cost basis). Consequently, the lease liability is accreted using an amount that produces a constant periodic discount rate on the remaining balance of the liability (i.e., the discount rate determined at commencement, as long as a reassessment requiring a change in the discount rate has not been triggered). Lease payments reduce the lease liability when paid.

Thus, after the commencement date, a lessee shall measure the lease liability by:

a. increasing the carrying amount to reflect interest on the lease liability;

b. reducing the carrying amount to reflect the lease payments made; and

c. remeasuring the carrying amount to reflect any reassessment or lease modifications or to reflect revised in-substance fixed lease payments.

8.4.2.3 Expense recognition

Lessees recognise the following items in expense for leases:

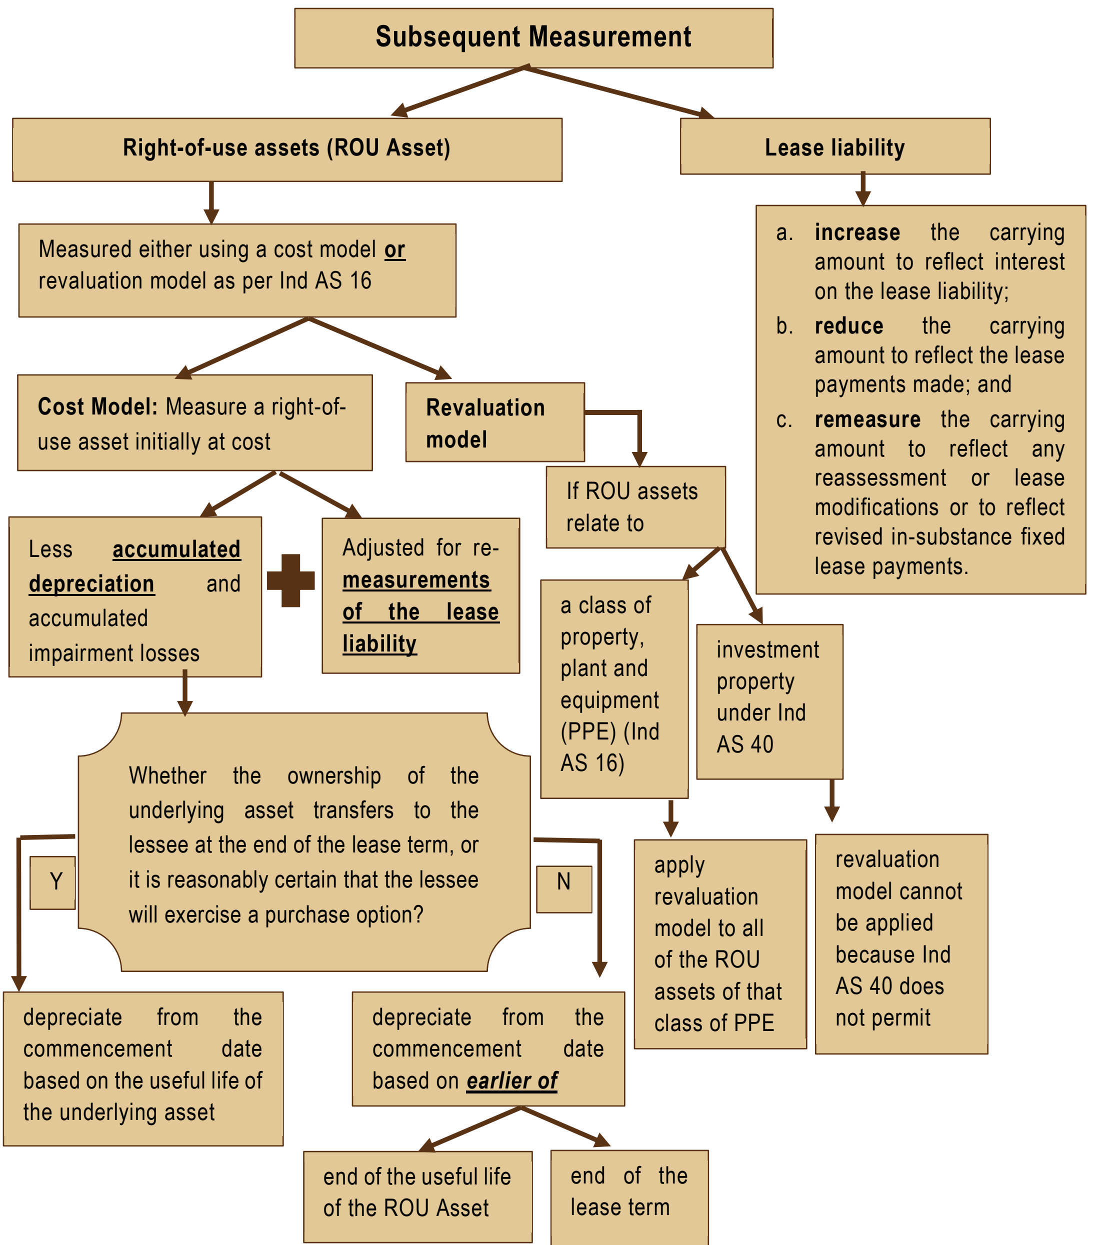
- Depreciation of the ROU Asset
- Interest expense on the Lease Liability
- Variable lease payments that are not included in the lease liability (***for e.g.***, variable lease payments that do not depend on an index or rate)
- Impairment of the ROU Asset

These expenses are further explained below:

Depreciation of the ROU Asset and Interest on the Lease Liability	***Variable lease payments***	***Impairment of the ROU Asset***
After the commencement date, a lessee recognises depreciation of the ROU Asset and separately recognises interest on the lease liability. When a lessee depreciates the ROU Asset on a straight-	After the commencement date, lessees recognise in profit or loss, any variable lease payments **not included** in the measurement of the lease liability in the period in which the event or condition that triggers those payments	Lessees' ROU Assets are subject to existing impairment requirements in Ind AS 36, *Impairment of Assets*. If a lessee determines that a ROU Asset is impaired, it recognises an **impairment**

Sensitivity: Public (C4)

line basis, the total periodic expense (i.e., the sum of interest and depreciation expense) is generally higher in the early periods and lower in the later periods. Interest expense decreases as cash payments are made during the lease term and the lease liability decreases because a constant interest rate is applied to the lease liability. Therefore, more interest expense is incurred in the early periods and less in the later periods. This trend in the interest expense, combined with straight-line depreciation of the ROU Asset, results in a **front-loaded expense recognition pattern**.	occur.	**loss** and measures the ROU Asset at its carrying amount immediately after the impairment. A lessee subsequently depreciates, generally on a straight-line basis, the ROU Asset from the date of the impairment to the earlier of the end of the useful life of the ROU Asset or the end of the lease term. However, the depreciation period is the remaining useful life of the underlying asset if the lessee is reasonably certain to exercise an option to purchase the underlying asset or if the lease transfers ownership of the underlying asset to the lessee by the end of the lease term.



Let us have a look at illustration on 'Lessee Accounting':

Illustration 30 - Lessee Accounting

*Entity ABC (lessee) enters into a three-year lease of equipment. Entity ABC agrees to make the following annual payments at the **end** of each year:*

- *₹ 20,000 in year one*

- *₹ 30,000 in year two*
- *₹ 50,000 in year three.*

For simplicity purposes, there are no other elements to the lease payments (like purchase options, lease incentives from the lessor or initial direct costs). Assumed a discount rate of 12% (which is Entity ABC's incremental borrowing rate because the interest rate implicit in the lease cannot be readily determined). Entity ABC depreciates the ROU Asset on a straight-line basis over the lease term.

How would Entity ABC would account for the said lease under Ind AS 116?

Solution:

At the commencement date, Entity ABC would initially recognise ROU Asset and the corresponding Lease Liability of ₹ **77,364** which is calculated as follows:

Year	Payments (Cash flows)	Discounting Factor @12%	Discounted Cash flows / Present Value
1	20,000	0.8929	17,858
2	30,000	0.7972	23,916
3	50,000	0.7118	35,590
	1,00,000		**77,364**

Then, the next step would be to prepare a schedule for Lease Liability and ROU Asset as follows:

Lease Liability

Year	Opening balance	Interest Expense	Payments	Closing balance
1	77,364	9,284	(20,000)	66,648
2	66,648	7,998	(30,000)	44,646
3	44,646	5,354*	(50,000)	-

* Difference of ₹ 4 is due to approximation.

ROU Asset (assuming no lease incentives, no initial direct costs, etc.):

Year	Opening balance	Depreciation	Closing balance
1	77,364	(25,788)	51,576
2	51,576	(25,788)	25,788
3	25,788	(25,788)	-

At lease commencement, Entity ABC would recognise the Lease Liability and the corresponding ROU Asset as follows:

ROU Asset	Dr.	77,364	
To Lease Liability			77,364
To initially recognise the Lease Liability and the corresponding ROU Asset			

The following journal entries would be recorded in the first year:

Interest Expense	Dr.	9,284	
To Lease Liability			9,284
To record interest expense and accrete the lease liability using the effective interest method (₹ 77,364 x 12%)			
Depreciation Expense	Dr.	25,788	
To ROU Asset			25,788
To record interest expense and accrete the lease liability using the straight-line method (₹ 77,364 / 3 years)			
Lease Liability	Dr.	20,000	
To Cash / Bank			20,000
To record lease payment			

Following is the summary of the said lease contract's accounting (assuming no changes due to reassessment):

Particulars	***Initially***	***Year 1***	***Year 2***	***Year 3***
Cash lease payments		20,000	30,000	50,000
Lease Expense Recognised:				
Interest Expense		9,284	7,998	5,354
Depreciation Expense		25,788	25,788	25,788
Total Periodic Expense		35,072	33,786	31,142
Balance Sheet:				
ROU Asset	77,364	51,576	25,788	-
Lease Liability	(77,364)	(66,648)	(44,646)	-

*****

Illustration 31 - Subsequent measurement using cost model

Company EFG enters into a property lease with Entity H. The initial term of the lease is 10 years with a 5-year renewal option. The economic life of the property is 40 years and the fair value of the leased property is ₹ 50 Lacs. Company EFG has an option to purchase the property at the end of the lease term for ₹ 30 lacs. The first advance annual payment is ₹ 5 lacs with an increase of 3% every year thereafter. The implicit rate of interest is 9.04%. Entity H gives Company EFG an incentive of ₹ 2 lacs (payable at the beginning of year 2), which is to be used for normal tenant improvement.

Company EFG is reasonably certain to exercise that purchase option. How would EFG measure the right-of-use asset and lease liability over the lease term?

Solution:

As per Ind AS 116, Company EFG would first calculate the lease liability as the present value of the annual lease payments, less the lease incentive paid in year 2, plus the exercise price of the purchase option using the rate implicit in the lease of approximately 9.04%.

PV of lease payments, less lease incentive (W.N. 1)	₹ 37,39,648
PV of purchase option at end of lease term (W.N. 2)	₹ 12,60,000
Total lease liability	**₹ 49,99,648 or ₹ 50,00,000 (approx.)**

The right-of-use asset is equal to the lease liability because there is no adjustment required for initial direct costs incurred by Company EFG, lease payments made at or before the lease commencement date, or lease incentives received prior to the lease commencement date.

Entity EFG would record the following journal entry on the lease commencement date.

Right-of-use Asset Dr.	₹ 50,00,000	
To Lease Liability		₹ 50,00,000
To record ROU asset and lease liability at the commencement date.		

Since the purchase option is reasonably certain to be exercised, EFG would amortize the right-of-use asset over the economic life of the underlying asset (40 years). Annual amortization expense would be ₹ 1,25,000 (₹ 50,00,000 / 40 years)

Interest expense on the lease liability would be calculated as shown in the following table. This table includes all expected cash flows during the lease term, including the lease incentive paid by Entity H and Company EFG's purchase option.

Sensitivity: Public (C4)

Year	Payment	Principal paid at the beginning of the year	Interest paid	Interest expense	Lease Liability (end of the year
	a	b= a-c	c = (d of pvs. Year)	d = [(e of pvs. year- a) x 9.04%]	e = (e of pvs. Year + d – a)
Commencement					50,00,000
Year 1	5,00,000	5,00,000	-	4,06,800	49,06,800
Year 2	3,15,000*	(91,800)	4,06,800	4,15,099	50,06,899
Year 3	5,30,450	1,15,351	4,15,099	4,04,671	48,81,120
Year 4	5,46,364	1,41,693	4,04,671	3,91,862	47,26,618
Year 5	5,62,754	1,70,892	3,91,862	3,76,413	45,40,277
Year 6	5,79,637	2,03,224	3,76,413	3,58,042	43,18,682
Year 7	5,97,026	2,38,984	3,58,042	3,36,438	40,58,094
Year 8	6,14,937	2,78,499	3,36,438	3,11,261	37,54,418
Year 9	6,33,385	3,22,124	3,11,261	2,82,141	34,03,174
Year 10	6,52,387	3,70,246	2,82,141	2,49,213*	30,00,000
Year 10	30,00,000	27,50,787	2,49,213*	-	-
Total	**85,31,940**	**50,00,000**	**35,31,940**	**35,31,940**	

*(5,00,000 + increased by 3% - lease incentive paid amounting to 2,00,000)

Although the lease was for 10 years, the asset had an economic life of 40 years. When Company EFG exercises its purchase option at the end of the 10-year lease, it would have fully extinguished its lease liability but continue depreciating the asset over the remaining useful life.

Working Notes

1. Calculating PV of lease payments, less lease incentive:

Year	Lease Payment (A)	Present value factor @ 9.04% (B)	Present value of lease payments (A x B = C)
Year 1	5,00,000	1	5,00,000
Year 2	3,15,000	0.92	2,89,800
Year 3	5,30,450	0.84	4,45,578
Year 4	5,46,364	0.77	4,20,700
Year 5	5,62,754	0.71	3,99,555
Year 6	5,79,637	0.65	3,76,764

Join us t.me/caborntofight
Sensitivity: Public (C4)

Year 7	5,97,026	0.59	3,52,245
Year 8	6,14,937	0.55	3,38,215
Year 9	6,33,385	0.50	3,16,693
Year 10	6,52,387	0.46	3,00,098
Total			**37,39,648**

2. Calculating PV of purchase option at end of lease term:

Year	Payment on purchase option (A)	Present value factor @ 9.04% (B)	Present value of purchase option (A x B = C)
Year 10	30,00,000	0.42	12,60,000
Total			**12,60,000**

The discount rate for year 10 is different in the above calculations because in the earlier one its beginning of year 10 and in the later one its end of the year 10.

*****

8.4.2.4 Impairment of ROU Assets

Lessees' ROU Assets are subject to existing impairment requirements in Ind AS 36 *Impairment of Assets*. Ind AS 36 requires an impairment indicator analysis at each reporting period. If any indicators are present, the entity is required to estimate the recoverable amount of the asset (or the cash-generating unit (CGU) of which the asset is a part). The entity has to recognise an impairment loss if the recoverable amount of the CGU is less than the carrying amount of the CGU. After an impairment loss is recognised, the adjusted carrying amount of the ROU Asset would be its new basis for depreciation.

Subsequent reversal of a previously recognised impairment loss needs to be assessed if there is any indication that an impairment loss recognised in prior periods may no longer exist or may have decreased. In recognising any reversal, the increased carrying amount of the asset must not exceed the carrying amount that would have been determined after depreciation, had there been no impairment.

8.4.2.5 Leases denominated in a foreign currency

Lessees apply Ind AS 21 *The Effects of Changes in Foreign Exchange Rates*, to leases denominated in a foreign currency. Lessees remeasure the foreign currency-denominated lease liability using the exchange rate at each reporting date, like they do for other monetary liabilities. Any changes to the lease liability due to exchange rate changes are recognised in profit or loss. Because the ROU Asset is a non-monetary asset measured at historical cost, it is not affected by changes in the exchange rate.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

This approach could result in volatility in profit or loss from the recognition of foreign currency exchange gains or losses, but it will be clear to the users of financial statements that the gains or losses result solely from changes in exchange rates.

8.4.3 Remeasurement

Ind AS 116 requires lessees to **REMEASURE LEASE LIABILITIES** upon a change in lease payments on account of **ANY** of the following:

- The reassessment of lease term on account of reasonable certainty to exercise/not exercise of extension and/or termination option
- The reassessment of whether the lessee is reasonably certain to exercise an option to purchase the underlying asset
- In-substance fixed lease payments
- The amounts expected to be payable under residual value guarantees
- Future lease payments resulting from a change in an index or rate

When to use the 'original' and a 'revised' discount rate?

Revised Discount Rate	***Original Discount Rate***
Lessees use a **revised** discount rate when lease payments are updated for - reassessment of the lease term ***OR*** - a reassessment of a purchase option. The revised discount rate is based on the interest rate implicit in the lease for the **REMAINDER** of the lease term. If that rate cannot be readily determined, the lessee uses its incremental borrowing rate.	Lessees use the **original** discount rate when lease payments are updated for - a change in expected amounts for residual value guarantees ***AND*** - payments dependent on an index or rate, **unless** the rate is a floating interest rate. - the variability of payments is resolved so that they become in-substance fixed payments.

When a lease includes a **market rate adjustment** (a market rent review), the negotiations between the lessee and the lessor may take some time to complete (i.e., the negotiation period). ***For e.g.***, consider a 10-year lease that has a market rate adjustment that applies from the end of year 5. The market rent review negotiations begin during year 5 but are not completed until later in year 6. During year 6, while the negotiation is ongoing, the lessee is required to pay the original contractual lease payments. At the conclusion of the negotiation period (i.e., upon a final determination of the lease payments for year 6 until year 10), the new lease payments apply retrospectively from the beginning of year 6. In this example, the lessee does not adjust the lease

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

payments at the beginning of year 6 for the expected increase in rent. Rather, any adjustment is recognised as an adjustment to lease payments when the market rent review is finalised and the change in contractual cash flows takes effect.

A lessee recognises the amount of the remeasurement of the lease liability as an adjustment to the ROU Asset. However, if the carrying amount of the ROU Asset is reduced to zero and there is a further reduction in the measurement of the lease liability, a lessee recognises any remaining amount of the remeasurement in profit or loss.

Illustration 32- Remeasurement of a lease with variable lease payments

Entity W entered into a contract for lease of retail store with Entity J in January 1/1/20X1. The initial term of the lease is 5 years with a renewal option of a further 3 years. The annual payments for initial term and renewal term are ₹ 100,000 and ₹ 110,000 respectively. The annual lease payment will increase based on the annual increase in the CPI at the end of the preceding year. For example, the payment due on 1/1/20X2 will be based on the CPI available at 31/12/20X1.

Entity W's incremental borrowing rate at the lease inception date and as at 1/1/20X4 is 5% and 6% respectively and the CPI at lease commencement date and as at 1/1/20X4 is 120 and 125 respectively.

At the lease commencement date, Entity W did not have a significant economic incentive to exercise the renewal option. In the first quarter of 20X4, Entity W installed unique lease improvements into the retail store with an estimated five-year economic life. Entity W determined that it will only recover the cost of the improvements if it exercises the renewal option, creating a significant economic incentive to extend.

Is Entity W required to remeasure the lease in the first quarter of 20X4?

Solution:

Since Entity W is now reasonably certain that it will exercise its renewal option, it is required to remeasure the lease in the first quarter of 20X4.

The following table summarizes information pertinent to the lease remeasurement.

Remeasured lease term	**5 years; 2 years remaining in the initial term plus 3 years in the renewal period**
Entity W's incremental borrowing rate On the remeasurement date	6%
CPI available on the remeasurement date	125
Right-of-use asset immediately before the remeasurement	₹ 1,81,840 (Refer note 1)
Lease liability immediately before the remeasurement	₹ 1,95,244 (Refer note 1)

To remeasure the lease liability, Entity W would first calculate the present value of the future lease payments for the new lease term (using the updated discount rate of 6%). The following table shows the present value of the future lease payments based on an updated CPI of 125. Since the initial lease payments were based on a CPI of 120, the CPI has increased by 4.167% approx. As a result, Entity W would increase the future lease payments by 4.167%. As shown in the table, the revised lease liability is ₹ 4,91,376.

Year	4	5	6	7	8	Total
Lease payment	1,04,167	1,04,167	1,14,583	1,14,583	1,14,583	5,52,083
Discount @ 6%	1	0.943	0.890	0.840	0.792	
Present value	1,04,167	98,230	1,01,979	96,250	90,750	4,91,376

To calculate the adjustment to the lease liability, Entity W would compare the recalculated and original lease liability balances on the remeasurement date.

Revised lease liability	4,91,376
Original lease liability	(1,95,244)
	2,96,132

Entity W would record the following journal entry to adjust the lease liability.

ROU Asset	Dr.	**2,96,132**	
To Lease liability			2,96,132
Being lease liability and ROU asset adjusted on account of remeasurement.			

Working Notes:

1. Calculation of ROU asset before the date of remeasurement

Year beginning	Lease Payment (A)	Present value factor @ 5% (B)	Present value of lease payments (A x B=C)
1	1,00,000	1.000	1,00,000
2	1,00,000	0.952	95,200
3	1,00,000	0.907	90,700
4	1,00,000	0.864	86,400
5	1,00,000	0.823	82,300
Lease liability as at commencement date			**4,54,600**

Merged By CA - Born To Fight

2. Calculation of Lease Liability and ROU asset at each year end

Year	Lease Liability				ROU asset		
	Initial value	Lease payments	Interest expense @ 5%	Closing balance	Initial Value	Depreciation for 5 years	Closing balance
1	4,54,600	1,00,000	17,730	3,72,330	4,54,600	90,920	3,63,680
2	3,72,330	1,00,000	13,617	2,85,947	3,63,680	90,920	2,72,760
3	2,85,947	1,00,000	9,297	1,95,244	2,72,760	90,920	1,81,840
4	1,95,244				1,81,840		

*****

8.4.4 Lease Modifications

A 'lease modification' is a **change** in the scope of a lease, or the consideration for a lease, that was not part of the original terms and conditions of the lease (***for e.g.***, adding or terminating the right to use one or more underlying assets, or extending or shortening the contractual lease term).

The following are examples of lease modifications that may be negotiated after the lease commencement date:

- A lease extension
- Early termination of the lease
- A change in the timing of lease payments
- Leasing additional space in the same building
- Surrendering a part of the underlying asset.

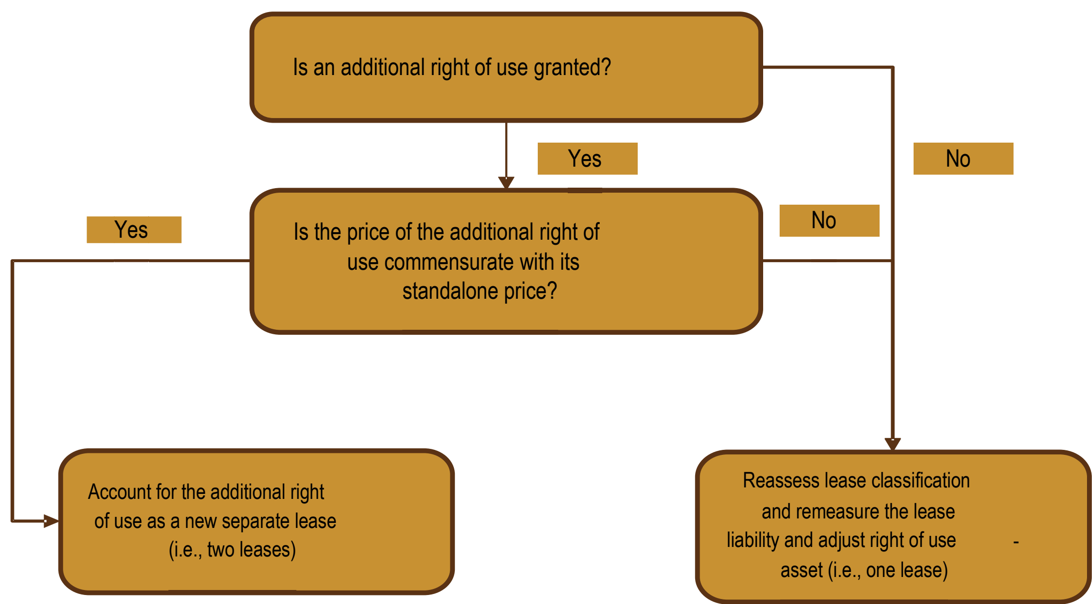
If a lease is modified (as stated above), the modified contract is evaluated to determine whether it is or contains a lease. If a lease continues to exist, lease modification can result in:

- A separate lease OR
- A change in the accounting for the existing lease (i.e., not a separate lease).

The exercise of an existing purchase or renewal option or a change in the assessment of whether such options are reasonably certain to be exercised are **not lease modifications but can result in the remeasurement** of Lease Liabilities and ROU Assets (Remeasurement – as discussed above).

The following diagram demonstrates Lessee's analysis of a change in a lease:

Join us t.me/caborntofight
Sensitivity: Public (C4)



Let us understand in detail when and how the lease modification will be accounted as a separate lease contract and not as a separate lease contract:

Modification – Separate lease

A lease modification is accounted for as a separate lease if both:

a. The modification increases the scope of the lease by adding the right to use one or more underlying assets; **and**

b. The consideration for the lease increases by an amount commensurate with the standalone price for the increase in scope.

If both criteria are met, a lessee would follow the previous guidance on the initial recognition and measurement of lease liabilities and right-of-use assets.

Illustration 33 - Modification that is a separate lease

Lessee enters into a 10-year lease for 2,000 square metres of office space. At the beginning of Year 6, Lessee and Lessor agree to amend the original lease for the remaining five years to include an additional 3,000 square metres of office space in the same building. The additional space is made available for use by Lessee at the end of the second quarter of Year 6. The increase in total consideration for the lease is commensurate with the current market rate for the new 3,000 square metres of office space, adjusted for the discount that Lessee receives reflecting that Lessor does not incur costs that it would otherwise have incurred if leasing the same space to a new tenant (for example, marketing costs).

How should the said modification be accounted for?

Join us t.me/caborntofight
Sensitivity: Public (C4)

Solution:

Lessee accounts for the modification as a separate lease, separate from the original 10-year lease because the modification grants Lessee an additional right to use an underlying asset, and the increase in consideration for the lease is commensurate with the stand-alone price of the additional right-of-use adjusted to reflect the circumstances of the contract. In this question, the additional underlying asset is the new 3,000 square metres of office space. Accordingly, at the commencement date of the new lease (at the end of the second quarter of Year 6), Lessee recognises a ROU Asset and a lease liability relating to the lease of the additional 3,000 square metres of office space. Lessee does not make any adjustments to the accounting for the original lease of 2,000 square metres of office space as a result of this modification.

*****

Modification- Not Separate Lease:

If a lease modification fails the test above (e.g. additional right of use granted, but not at a standalone price) or the modification is of any other type (e.g. a decrease in scope from the original contract), the lessee must modify the initially recognised components of the lease contract.

The accounting treatment required for lease modifications that are not accounted for as separate leases is summarised below:

Decrease in scope

1. Remeasure lease liability using revised discount rate*(1)
2. Decrease right-of-use asset (2)
   i. by its relative scope of lease liability
   ii. compared to the original lease
3. Difference between (2i) and (2ii) recognised in P&L
4. Make a corresponding adjustment to the ROU asset

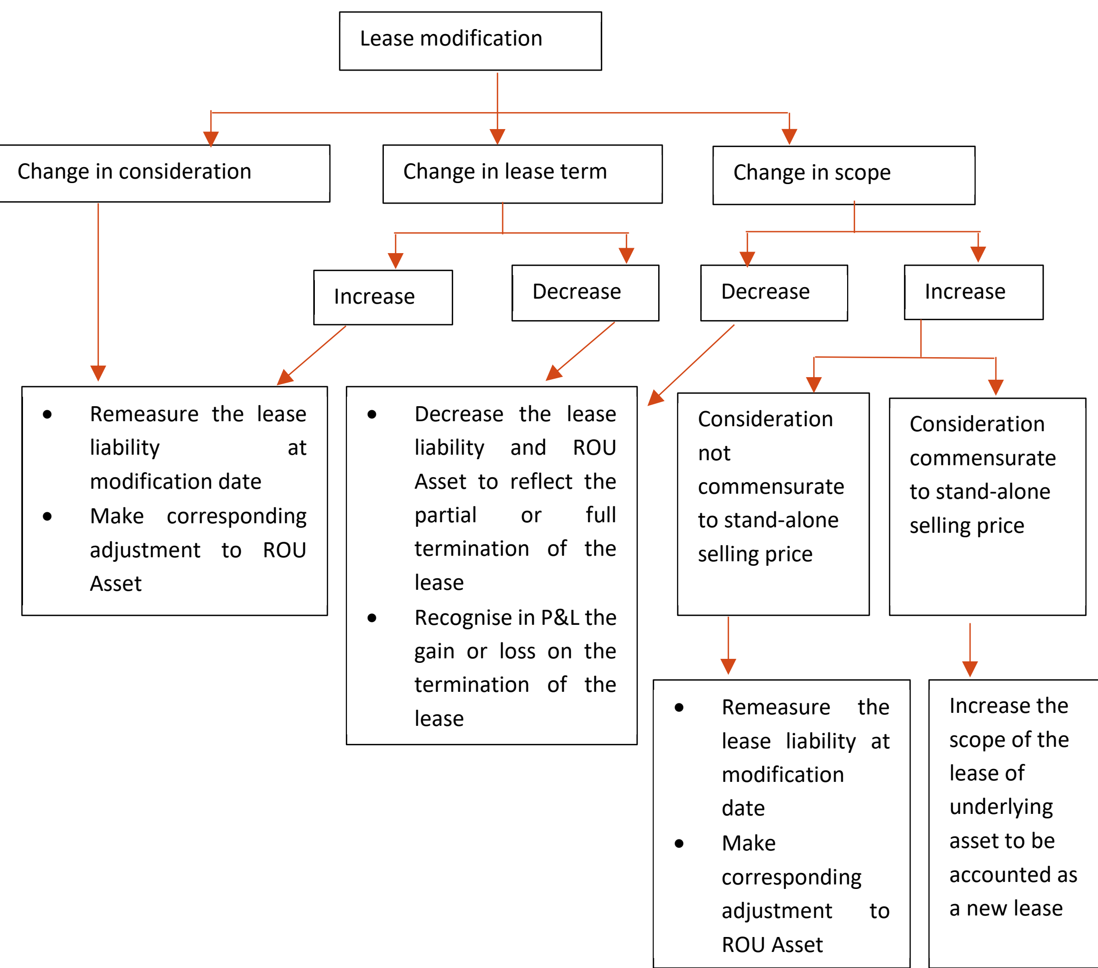
All other lease modification

- Remeasure lease liability using revised discount rate*
- Remeasure right-of-use asset by same amount

*The implicit rate in the lease is to be used. If it cannot be readily determined, the incremental rate of borrowing is to be used.

The re-measurements above occur as of the effective date of the lease modification on a prospective basis.

Sensitivity: Public (C4)



In some cases, the lessee and lessor may agree to a modification to the lease contract that starts at a later date (i.e., the terms of the modification take effect at a date later than the date when both parties agreed to the modification). This can be understood with the help of a following example:

A lessee enters into a lease arrangement with a lessor to lease an asset for 10 years. At the beginning of year 8, the lessee and lessor agree to a modification to the contract that will take effect from the beginning of year 9.

Scenario 1 (Increase in scope – Not a Separate Lease)	***Scenario 2 (Increase in scope – Separate Lease)***	***Scenario 3 (Decrease in scope)***
If the modification is an increase in the scope that	If the modification results in a separate lease component,	If the modification is a decrease in the scope, the

does not result in a separate lease, the lessee will re-allocate the consideration in the modified contract to each of the existing lease and non-lease components and remeasure the lease liability at the date both parties agreed to the modification (the beginning of year 8).	the lessee will allocate the consideration in the modified contract to each of the existing and new lease and non-lease components at the date both parties agreed to the modification (the beginning of year 8). The lessee will remeasure the lease liability for the existing lease components at that date as well. However, recognition of the lease liability and ROU Asset for any new lease component occurs at the commencement date of the new lease component (the beginning of year 9).	lessee will re-allocate the consideration in the modified contract to each existing lease and non-lease component and remeasure the lease liability and ROU Asset at the effective date of the modification (the beginning of year 8).

This can be summarised with the help of the following flow chart:

Following are some more examples for 'lease modification':

Illustration 34 - Modification that increases the scope of the lease by extending the contractual lease term

Lessee enters into a 10-year lease for 5,000 square metres of office space. The annual lease payments are ₹ 1,00,000 payable at the end of each year. The interest rate implicit in the lease cannot be readily determined. Lessee's incremental borrowing rate at the commencement date is 6% p.a. At the beginning of Year 7, Lessee and Lessor agree to amend the original lease by extending the contractual lease term by four years. The annual lease payments are unchanged (i.e., ₹ 1,00,000 payable at the end of each year from Year 7 to Year 14). Lessee's incremental borrowing rate at the beginning of Year 7 is 7% p.a.

How should the said modification be accounted for?

Solution:

At the effective date of the modification (at the beginning of Year 7), Lessee remeasures the lease liability based on:

(a) An eight-year remaining lease term

(b) Annual payments of ₹ 1,00,000 and

Join us t.me/caborntofight
Sensitivity: Public (C4)

(c) Lessee's incremental borrowing rate of 7% p.a.

The modified lease liability equals ₹ 5,97,100 (W.N.1). The lease liability immediately before the modification (including the recognition of the interest expense until the end of Year 6) is ₹ 3,46,355 (W.N.3). Lessee recognises the difference between the carrying amount of the modified lease liability and the carrying amount of the lease liability immediately before the modification (i.e., ₹ 2,50,745) (W.N. 4) as an adjustment to the ROU Asset.

Working Notes:

1. Calculation of modified lease liability:

Year	Lease Payment (A)	Present value factor @ 7% (B)	Present value of lease payments (A*B=C)
7	100,000	0.935	93,500
8	100,000	0.873	87,300
9	100,000	0.816	81,600
10	100,000	0.763	76,300
11	100,000	0.713	71,300
12	100,000	0.666	66,600
13	100,000	0.623	62,300
14	100,000	0.582	58,200
Modified lease liability			**5,97,100**

2. Calculation of Lease liability as at commencement date:

Year	Lease Payment (A)	Present value factor @ 6% (B)	Present value of lease payments (A x B = C)
1	100,000	0.943	94,300
2	100,000	0.890	89,000
3	100,000	0.840	84,000
4	100,000	0.792	79,200
5	100,000	0.747	74,700
6	100,000	0.705	70,500
7	100,000	0.665	66,500
8	100,000	0.627	62,700

Sensitivity: Public (C4)

9	100,000	0.592	59,200
10	100,000	0.558	55,800
Lease liability as at commencement date			**7,35,900**

3. Calculation of Lease liability immediately before modification date:

Year	Opening lease liability (A)	Interest @ 6% (B) = [A x 6%]	Lease payments (C)	Closing liability (D) = [A+B-C]
1	7,35,900	44,154	100,000	6,80,054
2	6,80,054	40,803	100,000	6,20,857
3	6,20,857	37,251	100,000	5,58,108
4	5,58,108	33,486	100,000	4,91,594
5	4,91,594	29,496	100,000	4,21,090
6	4,21,090	25,265	100,000	3,46,355
	Lease liability as at modification date			3,46,355

4. Adjustment to ROU asset:

Modified Lease liability	5,97,100
Original Lease liability as at modification date	(3,46,355)
Adjustment to ROU asset	**2,50,745**

The ROU asset will be increased by ₹ 2,50,745 on the date of modification.

*****

Illustration 35 - Modification that decreases the scope of the lease

Lessee enters into a 10-year lease for 5,000 square metres of office space. The annual lease payments are ₹ 50,000 payable at the end of each year. The interest rate implicit in the lease cannot be readily determined. Lessee's incremental borrowing rate at the commencement date is 6% p.a. At the beginning of Year 6, Lessee and Lessor agree to amend the original lease to reduce the space to only 2,500 square metres of the original space starting from the end of the first quarter of Year 6. The annual fixed lease payments to be made at the end of the year (from Year 6 to Year 10) are ₹ 30,000. Lessee's incremental borrowing rate at the beginning of Year 6 is 5% p.a.

How should the said modification be accounted for in the books of lessee?

Sensitivity: Public (C4)

Solution:

In the given case, Lessee calculates the ROU asset and the lease liabilities before modification as follows:

Year	Lease Liability				ROU asset		
	Initial value	Lease payments	Interest expense @ 6%	Closing balance	Initial Value	Depreciation	Closing balance
	a	b	c = a x 6%	d = a-b + c	e	f	g
1	3,67,950*	50,000	22,077	3,40,027	3,67,950	36,795	3,31,155
2	3,40,027	50,000	20,402	3,10,429	3,31,155	36,795	2,94,360
3	3,10,429	50,000	18,626	2,79,055	2,94,360	36,795	2,57,565
4	2,79,055	50,000	16,743	2,45,798	2,57,565	36,795	2,20,770
5	2,45,798	50,000	14,748	2,10,546	2,20,770	36,795	1,83,975
6	2,10,546				1,83,975		

*(refer note 1)

At the effective date of the modification (at the beginning of Year 6), Lessee remeasures the lease liability based on:

(a) a five-year remaining lease term,

(b) annual payments of ₹ 30,000 and

(c) Lessee's incremental borrowing rate of 5% p.a.

Year	Lease Payment(A)	Present value factor @ 5% (B)	Present value of lease payments (A x B = C)
6	30,000	0.952	28,560
7	30,000	0.907	27,210
8	30,000	0.864	25,920
9	30,000	0.823	24,690
10	30,000	0.784	23,520
Total			**1,29,900**

Lessee determines the proportionate decrease in the carrying amount of the ROU Asset on the basis of the remaining ROU Asset (i.e., 2,500 square metres corresponding to 50% of the original ROU Asset).

50% of the pre-modification ROU Asset (₹ 1,83,975) is ₹ 91,987.50.

50% of the pre-modification lease liability (₹ 2,10,546) is ₹ 1,05,273.

Consequently, Lessee reduces the carrying amount of the ROU Asset by ₹ 91,987.50 and the carrying amount of the lease liability by ₹ 1,05,273. Lessee recognises the difference between the decrease in the lease liability and the decrease in the ROU Asset (₹ 1,05,273 – ₹ 91,987.50 = ₹ 13,285.50) as a gain in profit or loss at the effective date of the modification (at the beginning of Year 6).

Journal Entry

Lease liability	Dr.	₹ 1,05,273	
To ROU Asset			₹ 91,987.50
To Profit and Loss			₹ 13,285.50

Lessee recognises the difference between the remaining lease liability of ₹ 1,05,273 and the modified lease liability of ₹ 1,29,900 (which equals ₹ 24,627) as an adjustment to the ROU Asset reflecting the change in the consideration paid for the lease and the revised discount rate.

Journal Entry

ROU Asset	Dr.	₹ 24,627	
To Lease liability			₹ 24,627

Working Note:

Calculation of Initial value of ROU asset and lease liability:

Year	Lease Payment(A)	Present value factor @ 6% (B)	Present value of lease payments (A x B = C)
1	50,000	0.943	47,150
2	50,000	0.890	44,500
3	50,000	0.840	42,000
4	50,000	0.792	39,600
5	50,000	0.747	37,350
6	50,000	0.705	35,250
7	50,000	0.665	33,250
8	50,000	0.627	31,350
9	50,000	0.592	29,600
10	50,000	0.558	27,900
			3,67,950

*****

Sensitivity: Public (C4)

Illustration 36 - Modification that is a change in consideration only

Lessee enters into a 10-year lease for 5,000 square metres of office space. At the beginning of Year 6, Lessee and Lessor agree to amend the original lease for the remaining five years to reduce the lease payments from ₹ 1,00,000 per year to ₹ 95,000 per year. The interest rate implicit in the lease cannot be readily determined. Lessee's incremental borrowing rate at the commencement date is 6% p.a. Lessee's incremental borrowing rate at the beginning of Year 6 is 7% p.a. The annual lease payments are payable at the end of each year.

How should the said modification be accounted for?

Solution:

In the given case, Lessee calculates the ROU asset and the lease liabilities before modification as follows:

Year	Opening lease liability (A)	Interest @ 6% (B) = [A x 6%]	Lease payments (C)	Closing liability (D) = [A+B-C]
1	7,35,900	44,154	100,000	6,80,054
2	6,80,054	40,803	100,000	6,20,857
3	6,20,857	37,251	100,000	5,58,108
4	5,58,108	33,486	100,000	4,91,594
5	4,91,594	29,496	100,000	4,21,090
6	4,21,090			

At the effective date of the modification (at the beginning of Year 6), Lessee remeasures the lease liability based on:

(a) a five-year remaining lease term,

(b) annual payments of ₹ 95,000, and

(c) Lessee's incremental borrowing rate of 7% p.a.

Year	Lease Payments (A)	Present value @ 7% (B)	Present value of lease payments (A x B = C)
1	95,000	0.935	88,825
2	95,000	0.873	82,935
3	95,000	0.816	77,520
4	95,000	0.763	72,485
5	95,000	0.713	67,735
			3,89,500

Lessee recognises the difference between the carrying amount of the modified liability (₹ 3,89,500) and the lease liability immediately before the modification (₹ 4,21,090) of ₹ 31,590 as an adjustment to the ROU Asset.

Working Note:

Calculation of Initial value of ROU asset and lease liability:

Year	Lease Payment (A)	Present value factor @ 6% (B)	Present value of lease payments (A x B = C)
1	1,00,000	0.943	94,300
2	1,00,000	0.890	89,000
3	1,00,000	0.840	84,000
4	1,00,000	0.792	79,200
5	1,00,000	0.747	74,700
6	1,00,000	0.705	70,500
7	1,00,000	0.665	66,500
8	1,00,000	0.627	62,700
9	1,00,000	0.592	59,200
10	1,00,000	0.558	55,800
Lease liability as at commencement date			**7,35,900**

*****

Illustration 37 - Modification that both increases and decreases the scope of the lease

Lessee enters into a 10-year lease for 2,000 square metres of office space. The annual lease payments are ₹ 1,00,000 payable at the end of each year. The interest rate implicit in the lease cannot be readily determined. Lessee's incremental borrowing rate at the commencement date is 6% p.a.

At the beginning of Year 6, Lessee and Lessor agree to amend the original lease to:

(a) include an additional 1,500 square metres of space in the same building starting from the beginning of Year 6 and

(b) reduce the lease term from 10 years to eight years. The annual fixed payment for the 3,500 square metres is ₹ 1,50,000 payable at the end of each year (from Year 6 to Year 8). Lessee's incremental borrowing rate at the beginning of Year 6 is 7% p.a.

The consideration for the increase in scope of 1,500 square metres of space is not commensurate with the stand-alone price for that increase adjusted to reflect the circumstances of the contract.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

Consequently, Lessee does not account for the increase in scope that adds the right to use an additional 1,500 square metres of space as a separate lease.

How should the said modification be accounted for?

Solution:

The pre-modification ROU Asset and the pre-modification lease liability in relation to the lease are as follows:

Year	Lease liability				ROU Asset		
	Opening balance	Interest expense @ 6%	Lease payment	Closing balance	Opening balance	Depreciation charge	Closing balance
1	7,35,900*	44,154	(1,00,000)	6,80,054	7,35,900	(73,590)	6,62,310
2	6,80,054	40,803	(1,00,000)	6,20,857	6,62,310	(73,590)	5,88,720
3	6,20,857	37,251	(1,00,000)	5,58,108	5,88,720	(73,590)	5,15,130
4	5,58,108	33,486	(1,00,000)	4,91,594	5,15,130	(73,590)	4,41,540
5	4,91,594	29,496	(1,00,000)	4,21,090	4,41,540	(73,590)	3,67,950
6	4,21,090				3,67,950		

*Refer Note 4.

At the effective date of the modification (at the beginning of Year 6), Lessee remeasures the lease liability on the basis of:

(a) A three-year remaining lease term (ie. till 8th year),

(b) Annual payments of ₹ 150,000 and

(c) Lessee's incremental borrowing rate of 7% p.a.

Year	Lease Payments (A)	Present value @ 7% (B)	Present value of lease payments (A x B = C)
1	1,50,000	0.935	1,40,250
2	1,50,000	0.873	1,30,950
3	1,50,000	0.816	1,22,400
Modified lease liability			**3,93,600**

The modified liability equals ₹ 3,93,600, of which (a) ₹ 1,31,200 relates to the increase of ₹ 50,000 in the annual lease payments from Year 6 to Year 8 and (refer note 1) (b) ₹ 2,62,400 relates to

Sensitivity: Public (C4)

the remaining three annual lease payments of ₹ 1,00,000 from Year 6 to Year 8 with reduction of lease term (Refer Note 3).

Decrease in the lease term:

At the effective date of the modification (at the beginning of Year 6), the pre-modification ROU Asset is ₹ 3,67,950. Lessee determines the proportionate decrease in the carrying amount of the ROU Asset based on the remaining ROU Asset for the original 2,000 square metres of office space (i.e., a remaining three-year lease term rather than the original five-year lease term). The remaining ROU Asset for the original 2,000 square metres of office space is ₹ 2,20,770 [i.e., ₹ (3,67,950 / 5) x 3 years].

At the effective date of the modification (at the beginning of Year 6), the pre-modification lease liability is ₹ 4,21,090. The remaining lease liability for the original 2,000 square metres of office space is ₹ 2,67,300 (i.e., present value of three annual lease payments of ₹ 1,00,000, discounted at the original discount rate of 6% p.a.) (refer note 2).

Consequently, Lessee reduces the carrying amount of the ROU Asset by ₹ 1,47,180 (₹ 3,67,950 – ₹ 2,20,770), and the carrying amount of the lease liability by ₹ 1,53,790 (₹ 4,21,090 – ₹ 2,67,300). Lessee recognises the difference between the decrease in the lease liability and the decrease in the ROU Asset (₹ 1,53,790 – ₹ 1,47,180 = ₹ 6,610) as a gain in profit or loss at the effective date of the modification (at the beginning of Year 6).

Lease Liability	Dr.	1,53,790	
To ROU Asset			1,47,180
To Gain			6,610

At the effective date of the modification (at the beginning of Year 6), Lessee recognises the effect of the remeasurement of the remaining lease liability reflecting the revised discount rate of 7% p.a., which is ₹ 4,900 (₹ 2,67,300 – ₹ 2,62,400*), as an adjustment to the ROU Asset.

*(Refer note 3)

Lease Liability	Dr.	4,900	
To ROU Asset			4,900

Increase in the leased space:

At the commencement date of the lease for the additional 1,500 square metres of space (at the beginning of Year 6), Lessee recognises the increase in the lease liability related to the increase in leased space of ₹ 1,31,200 (i.e., present value of three annual lease payments of ₹ 50,000, discounted at the revised interest rate of 7% p.a.) as an adjustment to the ROU Asset.

8.4.5 Presentation

ROU Assets and lease liabilities are subject to the same considerations as other assets and liabilities in classifying them as current and non-current in the balance sheet. The following table depicts how lease-related amounts and activities are presented in lessees' financial statements:

Balance Sheet	***Statement of profit and loss***	***Statement of cash flows***
ROU Assets: They are presented either: - Separately from other assets (e.g., owned assets) ***OR*** - Together with other assets as if they were owned, with disclosures of the balance sheet line items that include ROU Assets and their amounts ROU Assets that meet the definition of investment property are presented as investment property **Lease Liabilities:** They are presented either: - Separately from other liabilities ***OR*** - Together with other liabilities with disclosure of the balance sheet line items that includes lease liabilities and their amounts	**Depreciation and Interest:** Depreciation on Right of use asset and interest expense accreted on lease liabilities are presented **separately** (i.e., they **CANNOT** be combined). This is because interest expense on the lease liability is a component of **finance costs**	**Principal portion of the lease liability:** - These cash payments are presented within financing activities **Interest portion of the lease liability:** - These cash payments are presented within financing activities **Short-term leases and leases of low-value assets:** - Lease payments pertaining to them (i.e., not recognised on the balance sheet as per Ind AS 116) are presented within operating activities **Variable lease payments not included in the lease liability:** - These are also presented within operating activities **Non-cash activity:** Such activity is disclosed as a supplemental non-cash item (e.g., the initial recognition of the lease at commencement)

Sensitivity: Public (C4)

8.4.6 Disclosure

Disclosure objective:

The objective of the disclosures is for lessees to disclose information in the notes that, together with the information provided in the balance sheet, statement of profit and loss and statement of cash flows, gives a basis for users of financial statements to assess the effect that leases have on the financial position, financial performance, and cash flows of the lessee.

Ind AS 116 requires lessees to present all disclosures in:

— a single note ***OR***

— separate section in the financial statements.

Quantitative Disclosure Requirement		
Balance sheet	***Statement of Profit and Loss***	***Statement of Cash Flows***
– Additions to right-of-use assets. – Carrying value of right-of-use assets at the end of the reporting period by class. – Maturity analysis of lease liabilities separately from other liabilities based on Ind AS 107 requirements.	– Depreciation of assets by class. – Interest expense on lease liabilities. – Short-term leases expensed* – Low-value leases expensed* – Variable lease payments expensed. – Income from subleasing. – Gains or losses arising from sale and leaseback transactions.	– Total cash outflow for leases.

* These disclosures need not include leases with lease terms of one month or less.

All of the above disclosures are required to be presented in tabular format, unless another format is more appropriate. The amounts disclosed include costs that a lessee has included in the carrying amount of another asset during the reporting period.

Other disclosure requirements also include:

♦ Commitments for short-term leases if the current period expense is dissimilar to future commitments.

Join us t.me/caborntofight
Sensitivity: Public (C4)

- For right-of-use assets that meet the definition of investment property, the disclosure requirements of Ind AS 40, *Investment property*, with a few exclusions.
- For right-of-use assets where the revaluation model has been applied, the disclosure requirements of Ind AS 16, *Property, plant and equipment.*
- Entities applying the short-term and/or low-value lease exemptions are required to disclose that fact.

Qualitative Disclosure Requirements
– A summary of the nature of the entity's leasing activities;
– Potential cash outflows the entity is exposed to that are not included in the measured lease liability, including:
– Variable lease payments;
– Extension options and termination options;
– Residual value guarantees; and
– Leases not yet commenced to which the lessee is committed.
– Restrictions or covenants imposed by leases; and
– Sale and leaseback transaction information.

In providing additional information, lessees are required to consider:

(a) Whether that information is relevant to the users of the financial statements. The additional information (as specified above) is included **<u>ONLY IF</u>** that information is **<u>expected to be relevant</u>** to users of financial statements. For e.g., this is likely to be relevant if it helps those users to understand:

The flexibility provided by leases	*for e.g., a lessee can reduce its exposure by exercising termination options or renewing leases with favourable terms and conditions*
Restrictions imposed by leases	*for e.g., by requiring the lessee to maintain particular financial ratios*
Sensitivity of reported information to key variables	*for e.g., future variable lease payments*
Deviations from industry practice	*for e.g., unusual or unique lease terms and conditions that affect a lessee's lease portfolio*

Sensitivity: Public (C4)

Exposure to other risks arising from leases	

(b) Whether that information is apparent from information either presented in the primary financial statements or disclosed in the notes. A lessee need not duplicate information that is already presented elsewhere in the financial statements.

8.4.7 Income tax accounting

For lessees, Ind AS 116 requires recognition of lease related assets and liabilities that are not on the balance sheet under today's accounting (i.e. amounts related to leases that are operating leases under Ind AS 17) and could change the measurement of other lease-related assets and liabilities. These changes affect certain aspects of accounting for income taxes such as the following:

(a) recognition and measurement of deferred tax assets and liabilities; and

(b) assessment of the recoverability of deferred tax assets.

8.5 LESSOR ACCOUNTING

8.5.1 Lease Classification

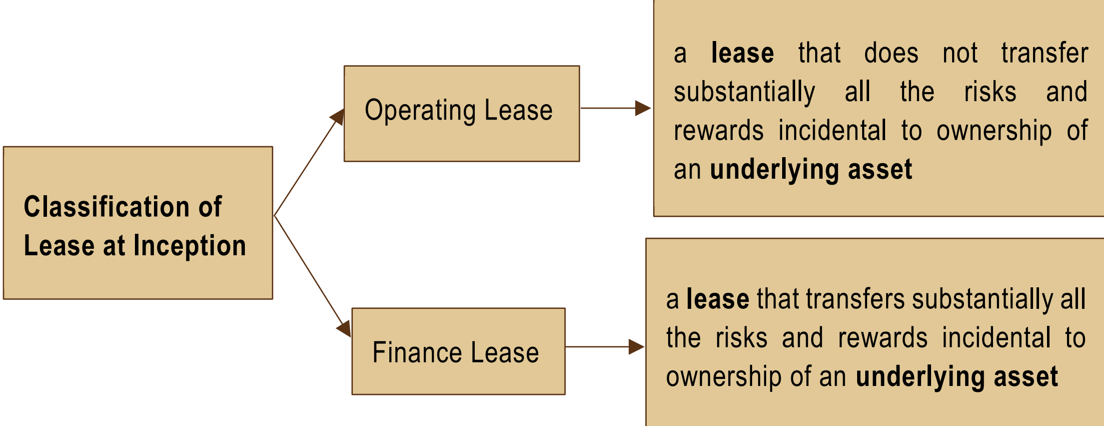
A **'lessor'** is defined as an entity that provides the right to use an **underlying asset** for a period of time in exchange for consideration.

At inception, lessors classify all leases as FINANCE LEASE or OPERATING LEASE. Lease classification is very important because it determines how and when a lessor recognizes lease income and what assets are recorded. Classification is based on the extent to which the risks and rewards incidental to ownership of the underlying asset lie with the lessor or the lessee. It depends on the substance of the transaction rather than the form of the contract.

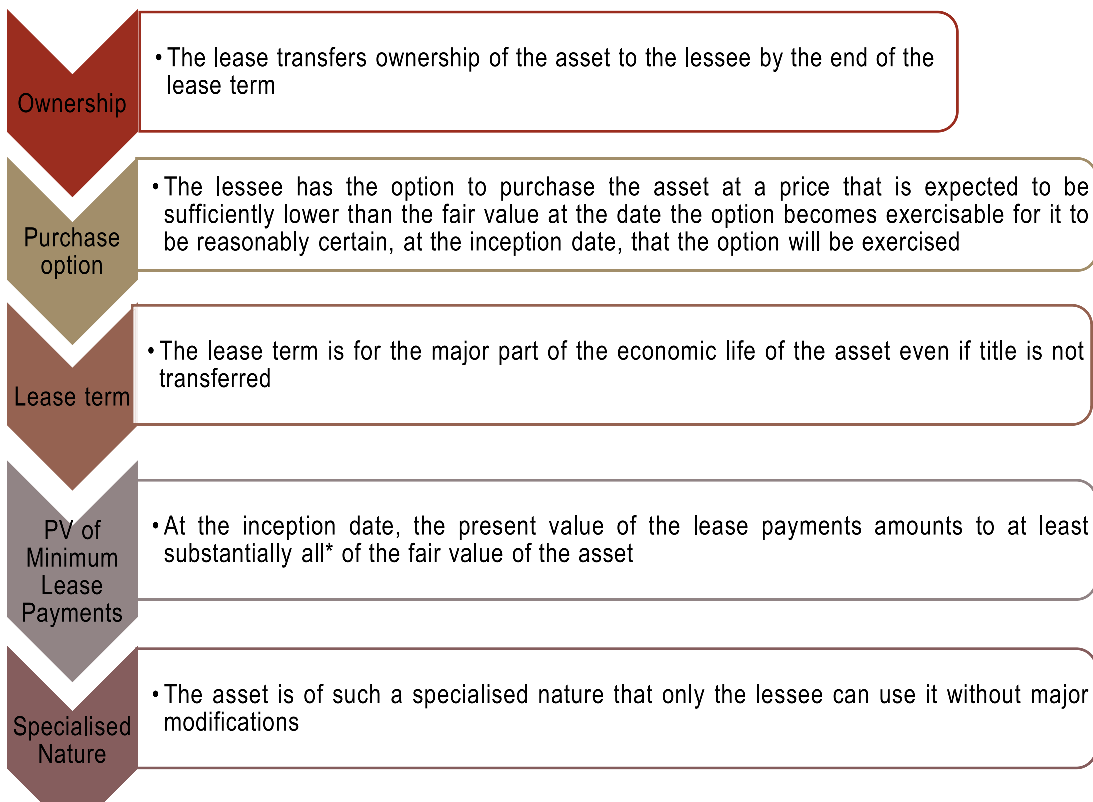
Where, a **'Finance Lease'** is defined as a **lease** that transfers substantially all the risks and rewards incidental to ownership of an **underlying asset**.

Where, an **'Operating Lease'** is defined as a **lease** that does not transfer substantially all the risks and rewards incidental to ownership of an **underlying asset**.

Join us t.me/caborntofight
Sensitivity: Public (C4)



Ind AS 116 lists a number of examples that individually, or in combination, would normally lead to a lease being classified as a **FINANCE LEASE**:



*The term "substantially all" is not defined in Ind AS 116.

Sensitivity: Public (C4)

Additionally, Ind AS 116 lists the following indicators of situations that, individually or in combination, could also lead to a lease being classified as a **FINANCE LEASE**:

Loss on cancellation	• If the lessee can cancel the lease, the lessor's losses associated with the cancellation are borne by the lessee
Risk of fair value of the residual asset	• Gains or losses from the fluctuation in the fair value of the residual accrue to the lessee (e.g., in the form of a rent rebate that is equal to most of the sale proceeds at the end of the lease)
Option to extend lease	• The lessee has the ability to continue the lease for a secondary period at a rent that is substantially lower than market rent

Other considerations that could be made in determining the economic substance of the lease arrangement include the following:

- Are the lease rentals based on a market rate for use of the asset (which would indicate an operating lease) or a financing rate for use of the funds, which would be indicative of a finance lease?
- Is the existence of put and call options a feature of the lease? If so, are they exercisable at a predetermined price or formula (indicating a finance lease) or are they exercisable at the market price at the time the option is exercised (indicating an operating lease)?

Lease classification test for land and buildings:

For a lease that includes both land and buildings elements, the lessor **separately assesses** the classification of each element as a finance lease or an operating lease, **having fact that land normally has an indefinite economic life**.

The lessor allocates lease payments between the land and the buildings elements in proportion to the relative fair values of the leasehold interests in the land element and buildings element of the lease at the inception date. If the lease payments cannot be allocated reliably between these two elements, the entire lease is classified as a finance lease, unless it is clear that both elements are operating leases, in which case, the entire lease is classified as an operating lease.

For a lease of land and buildings in which the amount for the land element is **immaterial** to the lease, the lessor may treat the land and buildings as a **single unit** for the purpose of lease classification and classify it as a finance lease or an operating lease. In such a case, the lessor regards the economic life of the buildings as the economic life of the **entire** underlying asset.

Join us t.me/caborntofight
Sensitivity: Public (C4)

Residual value guarantees included in the lease classification test:

In evaluating Ind AS 116's lease classification criteria, lessors are required to include in the 'substantially all' test, **any (i.e., the maximum obligation) residual value guarantees** provided by both lessees and any other third party unrelated to the lessor.

Reassessment of lease classification:

Lessors are required to **reassess** the lease classification only if there is a lease modification (i.e., a change in the scope of a lease, or the consideration for a lease, that was not part of the original terms and conditions of the lease). Lessors reassess lease classification as at the **effective date of the modification** using the modified conditions at that date. If a lease modification results in a separate new lease, that new lease would be classified in the **same manner** as any new lease.

Key concepts applied by the lessor:

'Gross investment in the lease' is the **SUM** of:

(a) the lease payments receivable by a lessor under a finance lease; ***AND***

(b) any unguaranteed residual value accruing to the lessor.

'**Net investment in the lease'** is the gross investment in the lease discounted at the interest rate implicit in the lease.

'**Unguaranteed residual value'** is that portion of the residual value of the underlying asset, the realisation of which by a lessor is not assured or is guaranteed solely by a party related to the lessor.

8.5.2 Finance Leases

8.5.2.1 Recognition

At the commencement date, a lessor shall recognise assets held under a finance lease in its balance sheet and present them as receivable at an amount equal to the **net investment in the lease**.

8.5.2.2 Initial Measurement

At lease commencement, a lessor accounts for a finance lease, as follows:

Derecognises the carrying amount of the underlying asset

↓

Recognises the net investment in the lease

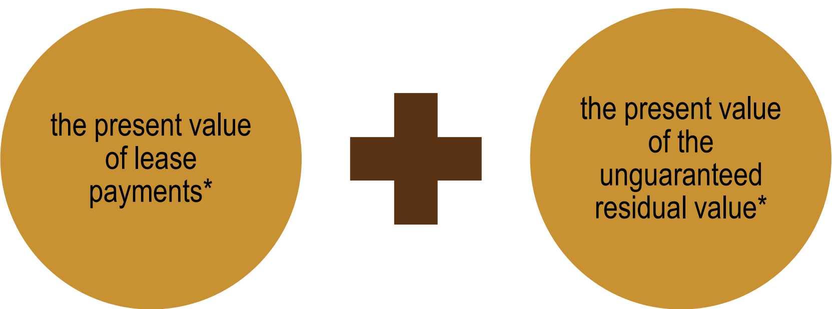
↓

Recognises, in profit or loss, any selling profit or selling loss

Sensitivity: Public (C4)

For finance leases (<u>other than those involving manufacturer and dealer lessors</u>), initial direct costs are included in the initial measurement of the finance lease receivable. Initial direct costs are included in the lease and are not added separately to the net investment in lease.

The net investment in the lease is initially measured as the sum of:



*discounted using the interest rate implicit in the lease (i.e., the discount rate).

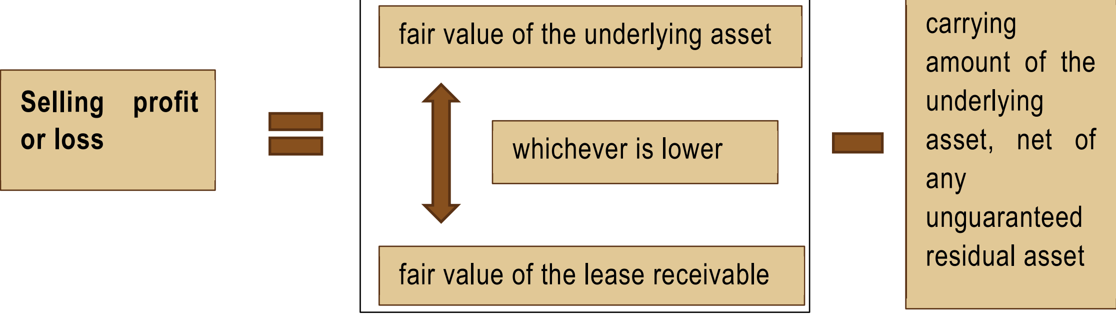
*Lease payments as described in section 8.3.3

Any selling profit or loss is measured as the difference between the fair value of the underlying asset or the lease receivable, if lower, and the carrying amount of the underlying asset, net of any unguaranteed residual asset.

Journal entry for finance lease on initial measurement

Finance lease receivable Dr.	Net investment
To Underlying asset	Carrying amount

(Balancing figure is profit or loss)



8.5.2.3 Initial Measurement – Manufacturer or Dealer Lessors

At the commencement date, a manufacturer or dealer lessor recognises selling profit or loss in accordance with its policy for outright sales to which Ind AS 115 applies.

Therefore, at lease commencement, a manufacturer or dealer lessor recognises the following:

Sensitivity: Public (C4)

The fair value of the underlying asset as revenue ***OR*** the present value of the lease payments discounted using a market rate of interest, whichever is **lower**.

The cost (or carrying amount) of the asset (less) the present value of the unguaranteed residual value, as cost of sale.

The selling profit or loss in accordance with the policy for outright sales.

At the commencement date, a manufacturer or dealer lessor recognises selling profit or loss on a **finance lease**, regardless of whether the lessor transfers the underlying asset as described under Ind AS 115. Costs incurred by a manufacturer or dealer lessor in connection with obtaining a finance lease are recognised as an expense at the commencement date and are **excluded** from the net investment in the lease because they are mainly related to earning the manufacturer or dealer's selling profit.

Accounting for initial direct costs shall be done in the following manner:

By Lessor
Finance Lease: Ind AS 116 requires 'lessors' (*other than manufacturer or dealer lessors*) to include initial direct costs in the initial measurement of their net investments in finance leases and reduce the amount of income recognised over the lease term. The interest rate implicit in the lease is defined in such a way that the initial direct costs are included automatically in the net investment in the lease and they are not added separately. (*Initial direct costs related to finance leases incurred by manufacturer or dealer lessors are expensed at lease commencement*). **Operating Lease:** Ind AS 116 requires lessors to include initial direct costs in the carrying amount of the underlying asset in an operating lease. These initial direct costs are recognised as an expense over the lease term on the same basis as lease income.

8.5.2.4 Subsequent Measurement

After lease commencement, a lessor accounts for a finance lease, as follows:

- Recognises **finance income** (in profit or loss) over the lease term in an amount that produces a constant periodic rate of return on the remaining balance of the net investment in the lease (i.e., using the interest rate implicit in the lease).

- Income is recognised on the components of the net investment in the lease, which is Interest on the lease receivables.

♦ Reduces the net investment in the lease for lease payments received (net of finance income calculated above)

♦ Separately recognises income from variable lease payments that are not included in the net investment in the lease (e.g., performance- or usage-based variable payments) in the period in which that income is earned

♦ Recognises any impairment of the net investment in the lease

Remeasurement of the net investment in the lease:

After lease commencement, the net investment in a lease is **NOT REMEASURED UNLESS** in either of the following situations:

♦ The lease is modified (i.e., a change in the scope of the lease, or the consideration for the lease, that was not part of the original terms and conditions of the lease) and the modified lease is not accounted for as a separate contract

OR

♦ The lease term is revised when there is a change in the non-cancellable period of the lease

(Refer section 8.5.4 Modification of lease)

Summary-Accounting treatment in the books of a lessor

Particulars	Finance lease	Operating lease
Initial measurement		
Balance sheet	• Derecognise the carrying amount of the underlying asset • Recognise the net investment in the lease i.e. a finance lease receivable (equal to the present value of the lease payments to be received)	• Continue to present the underlying asset • Add any initial direct costs incurred in connection with obtaining the lease to the carrying amount of the underlying asset • A **manufacturer or dealer lessor does not recognise any selling profit** on entering into an operating lease because it is not equivalent of a sale

Statement of Profit and loss	• Recognises, in profit or loss, any **selling profit or selling loss**	
Subsequent measurement		
Balance sheet	• Reduce the net investment in the lease for lease payments received (net of finance income calculated above) • **After** lease commencement, the net investment in a lease is **NOT REMEASURED UNLESS** either: + The lease is modified and the modified lease is not accounted for as a separate contract ***OR*** + The lease term is revised when there is a change in the non-cancellable period of the lease. • Recognise any impairment of the net investment in the lease, if there has been a **reduction in the estimated unguaranteed residual value**	• Calculate depreciation in accordance with Ind AS 16 and Ind AS 38. • Apply Ind AS 36 to determine whether an underlying asset is impaired and to account for any impairment loss identified.
Statement of Profit and loss	• Apportion the amount received between the finance income and reduction in receivable • Finance income will be computed to give a constant periodic rate of return • Separately recognises income from variable lease payments	• Recognise lease income over the lease term, typically on a straight line basis • Depreciation expense to be recognised related to the underlying asset • Recognise variable lease payments that do not depend on an index or rate (e.g.,

	that are not included in the net investment in the lease in the period in which that income is earned • **Revise the income allocation** over the lease term and recognise immediately any reduction in respect of amounts accrued, if there has been a **reduction in the estimated unguaranteed residual value**	performance- or usage- based payments) **as they are earned**.

Illustration 38 - Lessor accounting for a finance lease → dealer-lessor case

A Dealer-Lessor enters into a 10-year lease of equipment with Lessee. The equipment is not specialised in nature and is expected to have alternative use to Lessor at the end of the 10-year lease term. Under the lease:

- *Lessor receives annual lease payments of ₹ 15,000, payable at the end of the year*
- *Lessor expects the residual value of the equipment to be ₹ 50,000 at the end of the 10-year lease term*
- *Lessee provides a residual value guarantee that protects Lessor from the first ₹ 30,000 of loss for a sale at a price below the estimated residual value at the end of the lease term (i.e., ₹ 50,000)*
- *The equipment has an estimated remaining economic life of 15 years, a carrying amount of ₹ 1,00,000 and a fair value of ₹ 1,11,000*
- *The lease does not transfer ownership of the underlying asset to Lessee at the end of the lease term or contain an option to purchase the underlying asset*
- *The interest rate implicit in the lease is 10.078%.*

How should the Lessor account for the same in its books of accounts?

Solution:

Lessor shall classify the lease as a **FINANCE LEASE** because the sum of the present value of lease payments amounts to **substantially all** of the fair value of the underlying asset.

At lease commencement, Lessor accounts for the finance lease, as follows:

Net investment in the lease	Dr.	₹ 1,11,000[(a)]	
Cost of goods sold	Dr.	₹ 92,340[(b)]	
To Revenue			₹ 1,03,340[(c)]
To Property held for lease			₹ 1,00,000[(d)]

To record the net investment in the finance lease and derecognise the underlying asset.

(a) The net investment in the lease consists of:

(1) the present value of 10 annual payments of ₹ 15,000 plus the guaranteed residual value of ₹ 30,000, both discounted at the interest rate implicit in the lease, which equals ₹ 1,03,340 (i.e., the lease payment) (Refer note 1) ***AND***

(2) the present value of unguaranteed residual asset of ₹ 20,000, which equals ₹ 7,660 (Refer note 2).

Note that the net investment in the lease is subject to the same considerations as other assets in classification as current or non-current assets in a classified balance sheet.

(b) Cost of goods sold is the carrying amount of the equipment of ₹ 1,00,000 (less) the present value of the unguaranteed residual asset of ₹ 7,660.

(c) Revenue equals the lease receivable.

(d) The carrying amount of the underlying asset.

At lease commencement, Lessor recognizes selling profit of ₹ 11,000 which is calculated as = lease payment of ₹ 1,03,340 – [carrying amount of the asset (₹ 1,00,000) – net of any unguaranteed residual asset (₹ 7,660) ie which equals ₹ 92,340]

Year 1 **Journal entry for a finance lease**

Cash	Dr.	₹ 15,000[(e)]	
To Net investment in the lease			₹ 3,813[(f)]
To Interest income			₹ 11,187[(g)]

(e) Receipt of annual lease payments at the end of the year.

(f) Reduction of the net investment in the lease for lease payments received of ₹ 15,000, net of interest income of ₹ 11,187

(g) Interest income is the amount that produces a constant periodic discount rate on the remaining balance of the net investment in the lease. Please refer the computation below:

Join us t.me/caborntofight
Sensitivity: Public (C4)

The following table summarizes the interest income from this lease and the related amortization of the net investment over the lease term:

Year	Annual Rental Payment	Annual Interest Income (h)	Net investment at the end of the year
Initial net investment	-	-	1,11,000
1	15,000	11,187	1,07,187
2	15,000	10,802	1,02,989
3	15,000	10,379	98,368
4	15,000	9,914	93,282
5	15,000	9,401	87,683
6	15,000	8,837	81,520
7	15,000	8,216	74,736
8	15,000	7,532	67,268
9	15,000	6,779	59,047
10	15,000	5,953	50,000(i)

(h) *Interest income equals 10.078% of the net investment in the lease at the beginning of each year. For e.g., Year 1 annual interest income is calculated as ₹ 1,11,000 (initial net investment) x 10.078%.*

(i) *The estimated residual value of the equipment at the end of the lease term.*

Working Notes:

1 Calculation of net investment in lease:

Year	Lease Payment (A)	Present value factor @ 10.078% (B)	Present value of lease payments (A x B = C)
1	15,000	0.908	13,620
2	15,000	0.825	12,375
3	15,000	0.750	11,250
4	15,000	0.681	10,215
5	15,000	0.619	9,285

10	15,000	0.383	5,745
10	30,000	0.383	11,480*
			1,03,340

* Figure has been rounded off for equalization of journal entry.

2 Calculation of present value of unguaranteed residual asset

Year	Lease Payment (A)	Present value factor @ 10.078% (B)	Present value of lease payments (A x B = C)
10	20,000	0.383	7,660

*****

Impairment of the net investment in the lease:

A lessor shall apply the derecognition and impairment requirements in Ind AS 109 to the net investment in the lease. A lessor shall review regularly estimated unguaranteed residual values used in computing the gross investment in the lease. If there has been a reduction in the estimated unguaranteed residual value, the lessor shall revise the income allocation over the lease term and recognise immediately any reduction in respect of amounts accrued.

8.5.3 Operating Leases

8.5.3.1 Recognition and Measurement

A lessor shall recognise lease payments from operating leases as income on either a straight-line basis ***OR*** another systematic basis. The lessor shall apply another systematic basis if that basis is more representative of the pattern in which benefit derived from the use of the underlying asset is diminished.

Lessors **subsequently** recognise lease payments over the lease term on either a straight-line basis or another systematic and rational basis if that basis better represents the pattern in which benefit is expected to be derived from the use of the underlying asset. After lease commencement, lessors recognise variable lease payments that do not depend on an index or rate (e.g., performance- or usage- based payments) **as they are earned**.

Join us t.me/caborntofight
Sensitivity: Public (C4)

A lessor recognises costs, including depreciation, incurred in earning the lease income as an expense.

Ind AS 116 also requires lessors of operating leases to **add** initial direct costs incurred in obtaining an operating lease to the carrying amount of the underlying asset at lease commencement and recognise those costs as an expense over the lease term on the **same basis** as lease income.

The depreciation policy for depreciable underlying assets subject to operating leases must be consistent with the lessor's normal depreciation policy for similar assets. A lessor calculates depreciation in accordance with Ind AS 16 and Ind AS 38. A lessor applies Ind AS 36 to determine whether an underlying asset subject to an operating lease is impaired and to account for any impairment loss identified.

A manufacturer or dealer lessor does not recognise any selling profit on entering into an operating lease because it is not equivalent of a sale.

8.5.4 Lease Modifications

A '**lease modification**' is a change in the scope of a lease, or the consideration for a lease, that was not part of the original terms and conditions of the lease (***for e.g.***, adding or terminating the right to use one or more underlying assets, or extending or shortening the contractual lease term).

8.5.4.1 Finance Lease Modification

Modification- Separate lease:

A lease modification is accounted for as a separate lease if both:

(a) The modification increases the scope of the lease by adding the right to use one or more underlying assets; **and**

(b) The consideration for the lease increases by an amount commensurate with the standalone price for the increase in scope.

If both criteria are met, a lessor would follow the existing lessor guidance on initial recognition and measurement.

Modification- Not Separate lease:

If a lease modification fails the test to be considered as separate lease as mentioned above, the lessor follows the following guidance:

When a modification to a finance lease is not a separate lease, the lessor first assesses whether the lease classification would have been different if the modified terms had been effective at the inception date. If the lease would have been classified as an operating lease had the modified terms been effective at the inception date, then the lessor:

Join us t.me/caborntofight
Sensitivity: Public (C4)

- accounts for the lease modification as a termination of the original lease and the creation of a new lease from the effective date of the modification; and
- measures the carrying amount of the underlying asset as the net investment in the original lease immediately before the effective date of the lease modification.

The re-measurements above occur as of the effective date of the lease modification on a prospective basis.

8.5.4.2 Operating Lease Modification:

A lessor shall account for a modification to an operating lease as a new lease from the effective date of the modification, considering any prepaid or accrued lease payments relating to the original lease as part of the lease payments for the new lease.

Illustration 39- Deferral of lease payments not a lease modification

Lessor L leases retail space to Lessee Z and classifies the lease as an operating lease. The lease includes fixed lease payments of ₹ 10,000 per month.

Due to the COVID-19 pandemic, L and Z agree on a rent concession that allows Z to pay no rent in the period from July, 2020 to September, 2020 but to pay rent of 20,000 per month in the period from January 2021 to March 2021. There are no other changes to the lease.

How this will be accounted for by lessor?

Solution:

L determines that the reduction in lease payments in July 2020 to September 2020 and the proportional increase in January 2021 to March 2021 does not result in an overall change in the consideration for the lease.

L does not account for the change as a lease modification. L continues to recognise operating lease income on a straight-line basis, which is representative of the pattern in which Z's benefit from use of the underlying asset is diminished.

Illustration 40 - Unamortised lease incentive: Lease modification

Lessor M enters into a 10-year lease of office space with Lessee K, which commences on 1 April 2015. The rental payments are 15,000 per month, payable in arrears. M classifies the lease as an operating lease. M reimburses K's relocation costs of K of 600,000, which M accounts for as a lease incentive. The lease incentive is recognised as a reduction in rental income over the lease term using the same basis as for the lease income – in this case, on a straight- line basis over 10 years.

On 1 April 2020, during the COVID-19 pandemic, M agrees to waive K's rental payments for May, June and July 2020.

This decrease in consideration is not included in the original terms and conditions of the lease and is therefore a lease modification.

How this will be accounted for by the lessor?

Solution:

M accounts for this modification as a new operating lease from its effective date – i.e. 1 April 2020. M recognises the impact of the waiver on a straight-line basis over the five-year term of the new lease. M also takes into account the carrying amount of the unamortised lease incentive on 1 April 2020 of ₹ 3,00,000. M amortises this balance on a straight-line basis over the five-year term of the new lease.

Join us t.me/caborntofight
Sensitivity: Public (C4)

Illustration 41 - Modification that is not a separate lease and lease would have been classified as an operating lease

Lessor L enters into an eight-year lease of 40 lorries with Lessee M that commences on 1 January 2018. The lease term approximates the lorries' economic life and no other features indicate that the lease transfer or does not transfer substantially all of the risks and rewards incidental to ownership of the lorries. Assuming that substantially all of the risks and rewards incidental to ownership of the lorries are transferred, L classifies the lease as a finance lease.

During the COVID-19 pandemic, M's business has contracted. In June 2020, L and M amend the contract so that it now terminates on 31 December 2020.

Early termination was not part of the original terms and conditions of the lease and this is therefore a lease modification. The modification does not grant M an additional right to use the underlying assets and therefore cannot be accounted for as a separate lease.

How this will be accounted for by lessor?

Solution:

L determines that, had the modified terms been effective at the inception date, the lease term would not have been for major part of the lorries' economic life. Furthermore, there are no other indicators that the lease would have transferred substantially all the risks and rewards incidental to ownership of the lorries. Therefore, the lease would have been classified as an operating lease.

In June 2020, L accounts for the modified lease as a new operating lease. The lessor L:

a) derecognises the finance lease receivable and recognises the underlying assets in its statement of financial position according to the nature of the underlying asset – i.e. as property, plant and equipment in this case; and

b) measures the aggregate carrying amount of the underlying assets as the amount of the net investment in the lease immediately before the effective date of the lease modification.

Comparison with AS 19:

While the accounting for leases in the books of lessor is similar under AS 19 to that under Ind AS 116, AS 19 does not provide guidance on lease modifications.

8.5.5 Presentation

Lessors have the following presentation requirements under Ind AS 116, depending on the classification of the leases:

Finance Leases	*Operating Leases*
Lessors recognise assets held under a **finance lease** in the balance sheet and present them as a receivable at an amount equal to the net investment in the lease	Lessors are required to present underlying assets subject to **operating leases** according to the

Sensitivity: Public (C4)

under Ind AS 116. In addition, the net investment in the lease is subject to the **same considerations** as other assets in classification as current or non-current assets in a balance sheet.	nature of that asset in the balance sheet under Ind AS 116.

8.5.6 Disclosure

The objective of the disclosure requirements for lessors to disclose information in the notes that together with the information provided in the balance sheet, statement of profit or loss and statement of cash flows, gives a basis for users of financial statements to assess the effect that leases have on the financial position, financial performance and cash flows of the lessor.

The lessor disclosure requirements in Ind AS 116 are more extensive to enable users of financial statements to better evaluate the amount, timing and uncertainty of cash flows arising from a lessor's leasing activities.

Following are the disclosure requirements under Ind AS 116 for lessors:

Quantitative Disclosure Requirements	
Finance leases	– Selling profit or loss; – Finance income on the net investment; – Income from variable lease payments; – Qualitative and quantitative explanation of changes in the net investment; and – Maturity analysis of lease payments receivable.
Operating leases	– Lease income, separately disclosing variable lease payments; – Disclosure requirements of Ind AS 16 for leased assets, separating leased assets from non-leased assets; – Other applicable disclosure requirements based on the nature of the underlying asset (eg. Ind AS 36, Ind AS 38, Ind AS 40 and Ind AS 41); and – Maturity analysis of lease payments.

The standard prescribes that the quantitative disclosures should be presented in a tabular format, unless another format is more appropriate to be presented.

Join us t.me/caborntofight
Sensitivity: Public (C4)

Qualitative Disclosure Requirements
Similar to the lessee disclosure requirements, Ind AS 116 requires a lessor to disclose additional qualitative and quantitative information about its leasing activities in order to provide users with a basis for assessing the leasing's impact on the financial statements. This disclosure would include the nature of the lessor's leasing activities and how the lessee manages risks associated with those activities, including risk management on rights retained in underlying assets and risk management strategies including: – Buy-back agreements; – Residual value guarantees; – Variable lease payments for excess use; and – Any other risk management strategies.

8.6 OTHER MATTERS

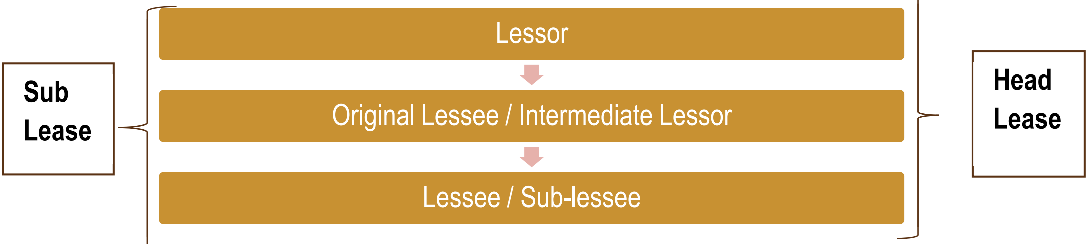
8.6.1 Sub-Leases

8.6.1.1 Recognition and Measurement

A 'Sub-lease' is defined as a transaction for which an underlying asset is re-leased by a lessee ('intermediate lessor') to a third party, and the original lease ('head lease') between the head lessor and lessee remains in effect.

Lessees often enter into arrangements to sublease a leased asset to a third party while the original lease contract is in effect, where, one party acts as both the lessee and lessor of the same underlying asset. The original lease is often referred to as a 'head lease', the original lessee is often referred to as an 'intermediate lessor' or 'sub-lessor' and the ultimate lessee is often referred to as the 'sub-lessee'.

It can be demonstrated with the help of a following simple diagram:



In some cases, the sublease is a separate lease agreement while, in other cases, a third party assumes the original lease but, the original lessee remains the primary obligor under the original lease.

Join us t.me/caborntofight
Sensitivity: Public (C4)

Intermediate Lessor Accounting:

Where an underlying asset is re-leased by a lessee to a third party and the original lessee retains the primary obligation under the original lease, the transaction is a sublease, i.e., the original lessee generally continues to account for the original lease (the head lease) as a lessee and accounts for the sublease as the lessor (intermediate lessor).

When the head lease is a short-term lease, the sublease is classified as an operating lease. Otherwise, the sublease is classified using the classification criteria (as discussed earlier) BUT, it should be by reference to the 'ROU Asset' in the head lease (and NOT the 'underlying asset' of the head lease). This can be understood better with the help of a following illustration:

Illustration 42 - Classification of a sublease in case of an Intermediate Lessor

Entity ABC (original lessee/intermediate lessor) leases a building for five years. The building has an economic life of 40 years. Entity ABC subleases the building for four years.

How should the said sublease be classified by Entity ABC?

Solution:

The sublease is classified with reference to the 'ROU Asset' in the head lease (and **NOT** the 'underlying building' of the head lease). Hence, when assessing the useful life criterion, the sublease term of four years is compared with five-year ROU Asset in the head lease (**NOT** compared with 40-year economic life of the building) and accordingly may result in the sublease being classified as a finance lease.

*****

The intermediate lessor accounts for the sublease as follows:

If the sublease is classified as a 'Finance Lease'	***If the sublease is classified as an 'Operating Lease'***
The original lessee derecognises the ROU Asset on the head lease at the sublease commencement date and continues to account for the original lease liability in accordance with the lessee accounting model. The original lessee (as the intermediate lessor) recognises a net investment in the sublease and evaluates it for impairment.	The original lessee continues to account for the lease liability and ROU asset on the head lease like any other lease. If the total remaining carrying amount of the ROU asset on the head lease exceeds the anticipated sublease income, this may indicate that the ROU asset associated with the head lease is impaired (which is assessed for impairment under Ind AS 36).

Join us t.me/caborntofight
Sensitivity: Public (C4)

In a sublease, an intermediate lessor may use the discount rate for the head lease (**adjusted for initial direct costs, if any, associated with the sublease**) to measure the net investment in the sublease, if the interest rate implicit in the lease cannot be readily determined.

When contracts are entered into at or near the same time, an intermediate lessor is required to consider the criteria for **combining contracts** (***for e.g.***, when the contracts are negotiated as a package with a single commercial objective, or when the consideration to be paid in one contract depends on the price or performance of the other contract). If the contracts are required to be combined, the intermediate lessor accounts for the head lease and sublease as a **single combined transaction**.

An intermediate lessor who subleases, or expects to sublease an asset, **CANNOT** account for the head lease as a lease of a low-value asset **even when** the required criteria w.r.t. 'leases of low-value assets' (as discussed earlier) are satisfied.

Let us consider some more examples with regards to applying the requirements of Ind AS 116 to an intermediate lessor that enters into a head lease and a sublease of the same underlying asset:

Illustration 43 - Intermediate Lessor – Where the sublease is classified as a 'Finance Lease'

Head lease:

An intermediate lessor enters into a five-year lease for 10,000 square metres of office space (the head lease) with Entity XYZ (the head lessor).

Sublease:

At the beginning of Year 3, the intermediate lessor subleases the 10,000 square metres of office space for the remaining lease term i.e three years of the head lease to a sub-lessee.

How should the said sublease be classified and accounted for by the Intermediate Lessor?

Solution:

The intermediate lessor classifies the sublease by reference to the ROU Asset arising from the head lease (i.e., in this case, comparing the three-year sublease with the five-year ROU Asset in the head lease). The intermediate lessor classifies the sublease as a finance lease, having considered the requirements of Ind AS 116 (i.e., one of the criteria of 'useful life' for a lease to be classified as a finance lease).

When the intermediate lessor **enters into** a sublease, the intermediate lessor:

(i) derecognises the ROU asset relating to the head lease that it transfers to the sublessee and recognises the net investment in the sublease;

(ii) recognises any difference between the ROU asset and the net investment in the sublease in profit or loss; ***AND***

Sensitivity: Public (C4)

(iii) retains the lease liability relating to the head lease in its balance sheet, which represents the lease payments owed to the head lessor.

During the term of the sublease, the intermediate lessor recognises both

- finance income on the sublease ***AND***
- interest expense on the head lease.

*****

Illustration 44 - Intermediate Lessor – Where the sublease is classified as a 'Operating Lease'

Head lease:

An intermediate lessor enters into a five-year lease for 10,000 square metres of office space (the head lease) with Entity XYZ (the head lessor).

Sublease:

At the commencement of the head lease, the intermediate lessor subleases the 10,000 square metres of office space for two years to a sub-lessee.

How should the said sublease be classified and accounted for by the Intermediate Lessor?

Solution:

The intermediate lessor classifies the sublease by reference to the ROU Asset arising from the head lease (i.e., in this case, comparing the two-year sublease with the five-year ROU Asset in the head lease). The intermediate lessor classifies the sublease as an operating lease, having considered the requirements of Ind AS 116 (i.e., one of the criteria of 'useful life' for a lease to be classified as a finance lease and since, it is not satisfied, classified the same as an operating lease).

When the intermediate lessor **enters into** the sublease, the intermediate lessor retains:

- the lease liability ***AND***
- the ROU asset

both relating to the head lease in its balance sheet.

During the term of the sublease, the intermediate lessor:

(a) recognises a depreciation charge for the ROU asset and interest on the lease liability; ***AND***

(b) recognises lease income from the sublease.

Sub-lessee Accounting:

A sub-lessee accounts for its lease in the same manner as any other lease (i.e., as a new lease subject to Ind AS 116's recognition and measurement provisions).

Sensitivity: Public (C4)

8.6.1.2 Presentation

According to paragraph 32 of Ind AS 1, *Presentation of Financial Statements*, an entity **cannot offset** assets and liabilities or income and expenses, **unless** required or permitted by an Ind AS.

Thus, intermediate lessors are **not permitted** to offset lease liabilities and lease assets that arise from a head lease and a sublease, respectively, **unless** those liabilities and assets meet the requirements in Ind AS 1 for offsetting.

Similarly, intermediate lessors are **not permitted** to offset depreciation and interest expenses and lease income relating to a head lease and a sublease of the same underlying asset, respectively, **unless** the requirements for offsetting in Ind AS 1 are met.

8.6.1.3 Disclosure

Under Ind AS 116, entities (**including intermediate lessors**) are required to disclose **qualitative** and **quantitative** information which gives a **basis** for users of financial statements to assess the effect that leases have on the financial position, financial performance and cash flows of the lessor (refer the disclosures for 'lessors' and 'lessees' already discussed earlier).

8.6.2 Sale and Leaseback Transactions

A sale and leaseback transaction involves the transfer of an asset by an entity (the seller-lessee) to another entity (the buyer-lessor) and the leaseback of the same asset by the seller-lessee.

Sale and leaseback transactions would no longer provide lessees with a source of off-balance sheet financing because under Ind AS 116, lessees are required to recognise most leases on the balance sheet (i.e., all leases **except** for leases of low-value assets and short-term leases depending on the lessee's accounting policy election).

Further, both the seller-lessee and the buyer-lessor are required to apply Ind AS 115 to determine whether to account for a sale and leaseback transaction as a sale and purchase of an asset.

How to determine whether the transfer of an asset is a sale:

As discussed above, when determining whether the transfer of an asset should be accounted for as a sale or purchase, both the seller-lessee and the buyer-lessor shall apply the requirements of Ind AS 115 on when an entity satisfies a performance obligation by transferring **'control'** of an asset. Thus, there are following two possibilities in this scenario:

If Control is passed	***If Control is NOT passed***
If the control of an underlying asset is **passed** to the buyer-lessor, the transaction is accounted for as a **'sale or purchase'** of the asset and a **'lease'**.	If the control of an underlying asset is **NOT passed** to the buyer-lessor, both the seller-lessee and the buyer-lessor account for the transaction as a **'financing transaction'**.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

None of the indicators mentioned under Ind AS 115 individually determine whether the buyer-lessor has obtained control of the underlying asset and thus, both the seller-lessee and the buyer-lessor must consider **all relevant facts and circumstances** to determine whether control has been transferred. Further, **not all of the indicators must be present** to determine that the buyer-lessor has gained control rather, said indicators are the factors that are often present when a customer has obtained control of an asset and the said list is meant to help entities to apply the principle of control.

The existence of a leaseback, **in isolation**, does **NOT preclude a sale** because a lease is different from the sale or purchase of an underlying asset, since a lease does **not transfer 'control'** of the underlying asset. Instead, a lease **transfers the 'right to control'** the use of the underlying asset for the period of the lease.

However, if the seller-lessee has a **'substantive repurchase option'** for the underlying asset (i.e., a right to repurchase the asset), **'NO sale'** has occurred because the buyer-lessor has **NOT** obtained control of the asset.

Accounting Treatment for Sale and Lease back Transaction

Particulars	Seller-lessee	Buyer-lessor
Transfer of asset is a sale	**Apply accounting for sale** • Recognise the cash received • Derecognise the underlying asset **Apply ROU Accounting** • Apply the lessee accounting model to the leaseback asset • Measure the ROU asset at the retained portion of the previous carrying amount • Recognise a gain or loss related to the portion of the assets transferred to the buyer-lessor	• Recognise the underlying asset based on the nature of the asset • Apply the lessor accounting model to leaseback asset
Transfer of asset is not a sale	• Continue to recognise the underlying asset • Account for the transaction as financing transaction • Recognise a financial liability under Ind AS 109 for any	• Do not recognise the underlying asset • Recognise a financial asset under Ind AS 109 for any amount paid to the seller-lessee i.e. account

	amount received from the buyer-lessor • Decrease the financial liability by the payments made (as and when) less the portion considered as interest expense	for the amount paid as a receivable

Note:

- When a sale occurs, both the seller-lessee and the buyer-lessor account for the leaseback in the same manner as any other lease (**with adjustments for any off-market terms**).
- A seller-lessee recognises a lease liability and ROU asset for the leaseback (**subject to the optional exemptions** for short-term leases and leases of low-value assets).

An entity shall make the following adjustments to measure the sale proceeds at fair value if:

- the fair value of the consideration for the sale of an asset does not equal the fair value of the asset ***OR***
- the payments for the lease are not at market rates:
  - (a) any **below**-market terms shall be accounted for as a prepayment of lease payments; ***AND***
  - (b) any **above**-market terms shall be accounted for as an additional financing provided by the buyer-lessor to the seller-lessee.

The entity shall measure any potential adjustment ('a' or 'b' - as described above) on the basis of the following (whichever is more readily determinable):

(a) the difference between the **fair value** of the consideration for the sale and the **fair value** of the asset; ***OR***

(b) the difference between the **present value** of the contractual payments for the lease and the **present value** of payments for the lease at market rates.

The sale transaction and the resulting lease are **generally interdependent and negotiated as a package**. Consequently, some transactions could be structured with a negotiated sales price that is above or below the asset's fair value and with lease payments for the resulting lease that are above or below the market rates. These off-market terms could mislead / falsify the gain or loss on the sale and the recognition of lease expense and lease income for the lease. Thus, to ensure that the gain or loss on the sale and the lease-related assets and liabilities associated with such transactions are **NEITHER understated NOR overstated**, Ind AS 116 requires **adjustments for any off-market terms** of sale and leaseback transactions, on the **more readily determinable basis** (as discussed above). Thus, the two possibilities of the sale price ***OR*** the present value of

Join us t.me/caborntofight
Sensitivity: Public (C4)

the lease payments being 'less' or 'greater' than the fair value of the asset ***OR*** present value of the market lease payments, respectively, is discussed in detail:

<table>
<tr><th>When sale price or Present Value is <u>LESS</u></th><th>When sale price or Present Value is <u>GREATER</u></th></tr>
<tr><td>Using the more readily determinable basis:
When the sale price is <u>LESS</u> than the underlying asset's fair value OR
the present value of the lease payments is <u>LESS</u> than the present value of the market lease payments,
a seller-lessee recognises the difference as an <u>increase</u> to the sales price and the initial measurement of the ROU asset as a <u>'lease prepayment'</u>.</td><td>Using the more readily determinable basis:
When the sale price is <u>GREATER</u> than the underlying asset's fair value OR
the present value of the lease payments is <u>GREATER</u> than the present value of the market lease payments,
a seller-lessee recognises the difference as a <u>reduction</u> in the sales price and an <u>'additional financing received'</u> from the buyer-lessor.</td></tr>
<tr><td colspan="2">Buyer-lessors are also required to <u>adjust the purchase price</u> of the underlying asset for any off-market terms. Such adjustments are recognised as:
- <u>'lease prepayments'</u> made by the seller-lessee OR
- <u>'additional financing provided'</u> to the seller-lessee.</td></tr>
</table>

Let us consider an illustration to understand the accounting for a sale and leaseback transaction:

Illustration 45 - Sale and leaseback transaction

An entity (Seller-lessee) sells a building to another entity (Buyer-lessor) for cash of ₹ 30,00,000. Immediately before the transaction, the building is carried at a cost of ₹ 15,00,000. At the same time, Seller-lessee enters into a contract with Buyer-lessor for the right to use the building for 20 years, with annual payments of ₹ 2,00,000 payable at the end of each year.

The terms and conditions of the transaction are such that the transfer of the building by Seller-lessee satisfies the requirements for determining when a performance obligation is satisfied in Ind AS 115 'Revenue from Contracts with Customers'.

The fair value of the building at the date of sale is ₹ 27,00,000. Initial direct costs, if any, are to be ignored. The interest rate implicit in the lease is 12% p.a., which is readily determinable by Seller-lessee.

Buyer-lessor classifies the lease of the building as an operating lease.

How should the said transaction be accounted by the Seller-lessee and the Buyer-lessor?

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

Solution:

Considering facts of the case, Seller-lessee and buyer-lessor account for the transaction as a sale and leaseback.

Firstly, since the consideration for the sale of the building is not at fair value, Seller-lessee and Buyer - lessor make adjustments to measure the sale proceeds at fair value. Thus, the amount of the excess sale price of ₹ 3,00,000 (as calculated below) is recognised as additional financing provided by Buyer-lessor to Seller-lessee.

Sale Price:	30,00,000
Less: Fair Value (at the date of sale):	(27,00,000)
Additional financing provided by Buyer-lessor to Seller-lessee	**3,00,000**

Next step would be to calculate the present value of the annual payments which amounts to ₹ 14,94,000 (calculated considering 20 payments of ₹ 2,00,000 each, discounted at 12% p.a.) of which ₹ 3,00,000 relates to the additional financing (as calculated above) and balance ₹ 11,94,000 relates to the lease — corresponding to 20 annual payments of ₹ 40,164 and ₹ 1,59,836, respectively (refer calculations below).

Proportion of annual lease payments:

Present value of lease payments (as calculated above)	(A)	14,94,000
Additional financing provided (as calculated above)	(B)	3,00,000
Relating to the Additional financing provided	(C) = (E x B / A)	40,160
Relating to the Lease	(D) = (E – C)	1,59,840
Annual payments (at the end of each year)	(E)	2,00,000

Seller-Lessee:

At the commencement date, Seller-lessee measures the ROU asset arising from the leaseback of the building at the proportion of the previous carrying amount of the building that relates to the right-of-use retained by Seller-lessee, calculated as follows:

Carrying Amount	(A)	15,00,000
Fair Value (at the date of sale)	(B)	27,00,000
Discounted lease payments for the 20-year ROU asset	(C)	11,94,000
ROU Asset	**[(A / B) x C]**	**6,63,333**

Seller-lessee recognises only the amount of the gain that relates to the rights transferred to Buyer-lessor, calculated as follows:

Sensitivity: Public (C4)

Fair Value (at the date of sale)	(A)	27,00,000
Carrying Amount	(B)	15,00,000
Discounted lease payments for the 20-year ROU asset	(C)	11,94,000
Gain on sale of building	**(D) = (A - B)**	**12,00,000**
Relating to the right to use the building retained by Seller-lessee	(E) = [(D/A) x C]	5,30,667
Relating to the rights transferred to Buyer-lessor	(D - E)	6,69,333

At the commencement date, Seller-lessee accounts for the transaction, as follows:

Cash	Dr.	30,00,000	
ROU Asset	Dr.	6,63,333	
To Building			15,00,000
To Financial Liability			14,94,000
To Gain on rights transferred			6,69,333

Buyer-Lessor:

At the commencement date, Buyer-lessor accounts for the transaction, as follows:

Building	Dr.	27,00,000	
Financial Asset (20 payments of ₹ 40,160 discounted @ 12% p.a.) (approx.)	Dr.	3,00,000	
To Cash			30,00,000

After the commencement date, Buyer-lessor accounts for the lease by treating ₹ 1,59,840 of the annual payments of ₹ 2,00,000 as lease payments. The remaining ₹ 40,160 of annual payments received from Seller-lessee are accounted for as:

(a) payments received to settle the financial asset of ₹ 3,00,000 ***AND***

(b) interest revenue.

*****

Disclosures:

A seller-lessee may be required to provide additional qualitative and quantitative information about its leasing activities that is necessary to meet the disclosure objective in Ind AS 116.

A seller-lessee is also required to disclose any gains and losses arising from sale and leaseback transaction separately from gains and losses on disposals of other assets under Ind AS 116. Thus, additional information relating to sale and leaseback transactions that, depending on the

circumstances, may be needed to satisfy the disclosure objective in Ind AS 116, could include information that helps users of financial statements to assess, ***for e.g.***:

(a) The lessee's reasons for sale and leaseback transactions and the prevalence of those transactions

(b) Key terms and conditions of individual sale and leaseback transactions

(c) Payments not included in the measurement of lease liabilities

(d) The cash flow effect of sale and leaseback transactions in the reporting period

8.7 TRANSITION APPROACH

An entity shall apply Ind AS 116 for annual reporting periods beginning on or after ***01 April 2019***.

For the purposes of the requirements of this 'Transition' section, the **date of initial application** is the **beginning of the annual reporting period** in which an entity first applies Ind AS 116.

Thus, Ind AS 116's transition provisions are applied at the beginning of the annual reporting period in which the entity first applies Ind AS 116 (i.e., the date of initial application). ***For e.g.***, an entity with a reporting date of 31 March 2020, applies the transition provisions on 01 April 2019.

8.7.1 Definition of a Lease

There is a practical expedient provided which permits lessees and lessors to make an election of not reassessing whether existing contracts contain a lease as defined under Ind AS 116.

Thus, if an entity elects this practical expedient, contracts that do not contain a lease under Ind AS 17 (including those under Appendix C to Ind AS 17, *Determining whether an Arrangement contains a Lease*) are not reassessed either. This practical expedient has been provided because if the entities are required to reassess existing contracts by applying the lease definition guidance in Ind AS 116, probably it would not justify the costs/complexity.

Further, if an entity chooses to apply the practical expedient, it must be applied to ***ALL*** contracts that are ongoing at the date of initial application (i.e., an entity is ***NOT*** permitted to apply the option on a lease-by-lease basis) and that fact shall also be disclosed.

Join us t.me/caborntofight
Sensitivity: Public (C4)

8.7.2 Transition Options for Lessees

A lessee is required to apply Ind AS 116 to its leases in either of the following ways:

Full Retrospective Approach	***Modified Retrospective Approach***
Retrospectively to each prior reporting period presented, applying Ind AS 8, i.e., an entity applies Ind AS 116 as if it had been applied since the inception of all lease contracts that are presented in the financial statements. If Ind AS 116 is applied at 1 April 2019, this means that, in the 31 March 2020 financial statements, the comparative period to 31 March 2019 must be restated (assuming that this is the only comparative period presented). A restated opening balance sheet at 1 April 2018 will also need to be disclosed as required by Ind AS 1. Hence, the balance sheets for 3 period will be presented: As at 31 March 2020, 31 March 2019 & 1 April 2018.	Retrospectively with cumulative effect of initially applying Ind AS 116 recognised as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) at the date of the initial application. Therefore, restatement of comparatives is not required and only Balance Sheets for reporting date and comparative date is required to be presented.

A lessee shall apply the elected transition approach consistently to ***ALL*** leases in which it is lessee.

8.7.3 Modified Retrospective Approach

8.7.3.1 Leases Previously Classified as Operating Leases

When **applying the modified retrospective approach**, a lessee does not restate comparative figures rather, a lessee recognises the cumulative effect of initially applying Ind AS 116 as an adjustment to the opening balance of retained earnings (or other component of equity, as appropriate) at the date of initial application.

For leases previously classified as operating leases under Ind AS 17, a lessee recognises a lease liability measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate at the date of initial application. A lessee measures the ROU asset on a **lease-by-lease basis**, at either:

— Its carrying amount as if Ind AS 116 had always been applied since the commencement date, but using a discount rate based on the lessee's incremental borrowing rate at the date of initial application (Alternative 1)

Sensitivity: Public (C4)

OR

— An amount equal to the lease liability, adjusted for previously recognised prepaid or accrued lease payments (Alternative 2)

A lessee applies Ind AS 36 to ROU assets at the date of initial application, unless the lessee applies the practical expedient for onerous leases (as discussed below).

A lessee is not required to make adjustments on transition for 'leases of low-value assets' (which is one of the recognition exemptions under Ind AS 116 – as discussed earlier).

Additionally, a lessee is also permitted to apply the following practical expedients to leases previously classified as operating leases (when applying modified retrospective approach), on a **lease-by-lease basis**:

Discount rate	• Apply a single discount rate to a portfolio of leases with reasonably similar characteristics;
Onerous contracts	• Rely on its assessment of whether leases are onerous by applying Ind AS 37 Provisions, Contingent Liabilities and Contingent Assets as opposed to performing an impairment review;
Short term leases	• Not recognise leases whose term ends within 12 months of the date of initial application of Ind AS 116. If this election is taken, these leases are accounted for as short-term leases;
Initial direct cost	• Exclude initial direct costs from the measurement of right-of-use assets at the date of initial application;
Hindsight	• Use hindsight, such as in determining the lease term for leases that contain options

Ind AS 116 is silent on as to how a lessee would separate and allocate lease and non-lease components of a contract upon transition when the modified retrospective approach is adopted. So, lessees could allocate the consideration in the contract (determined at lease commencement) to each lease and non-lease component on the basis of the relative stand-alone price of the lease component on that same date unless the lessee elects to use the practical expedient to account for each lease component and any associated non-lease components as a 'single lease component' (as discussed earlier).

8.7.3.2 Leases Previously Classified as Finance Leases

When applying modified retrospective approach, for leases that were classified as finance leases applying Ind AS 17, the carrying amount of the ROU asset and the lease liability at the date of

Join us t.me/caborntofight
Sensitivity: Public (C4)

initial application shall be the carrying amount of the lease asset and lease liability immediately before that date measured applying Ind AS 17. For such leases, a lessee shall account for the ROU asset and the lease liability applying Ind AS 116 from the date of initial application. Thus, a lessee will not change its initial carrying amounts for assets and liabilities under finance leases existing at the date of initial application of Ind AS 116.

For leases previously classified as operating leases and finance leases, the below table summarises the application of Modified retrospective approach:

Operating Lease	Lease liability	Measure at the present value of the remaining lease payments, discounted using lessee's incremental borrowing rate at the date of initial application
	Right-of-use asset	Retrospective calculation, using a discount rate based on lessee's incremental borrowing rate at the date of initial application. or Amount of lease liability (adjusted by the amount of any previously recognised prepaid or accrued lease payments relating to that lease). Lessee can choose one of the alternatives on a lease-by-lease basis.
Finance Lease	Lease liability	Carrying amount of the lease liability immediately before the date of initial application.
	Right-of-use asset	Carrying amount of the lease asset immediately before the date of initial application.
	Application of Ind AS 116	Apply the provisions of this standard to Right of Use asset and lease liability from the date of initial application.

The standard also prescribes certain practical expedients under Modified retrospective approach to leases previously classified as operating leases applying Ind AS 17.

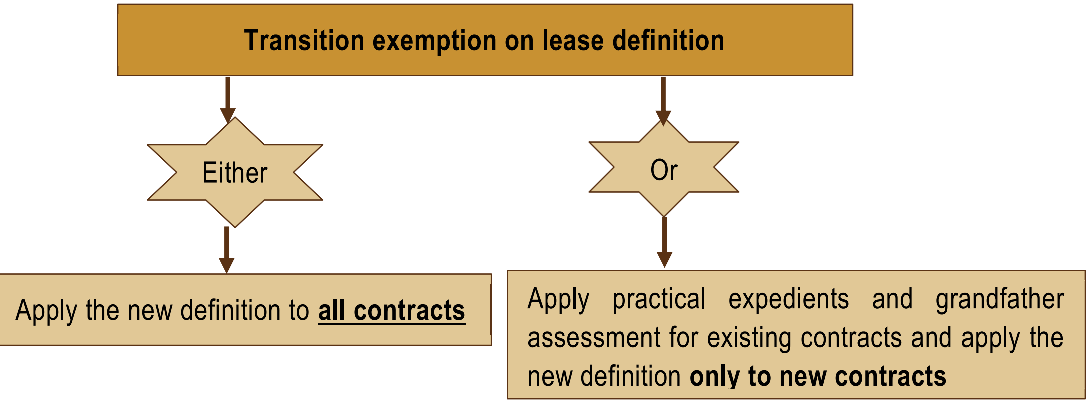
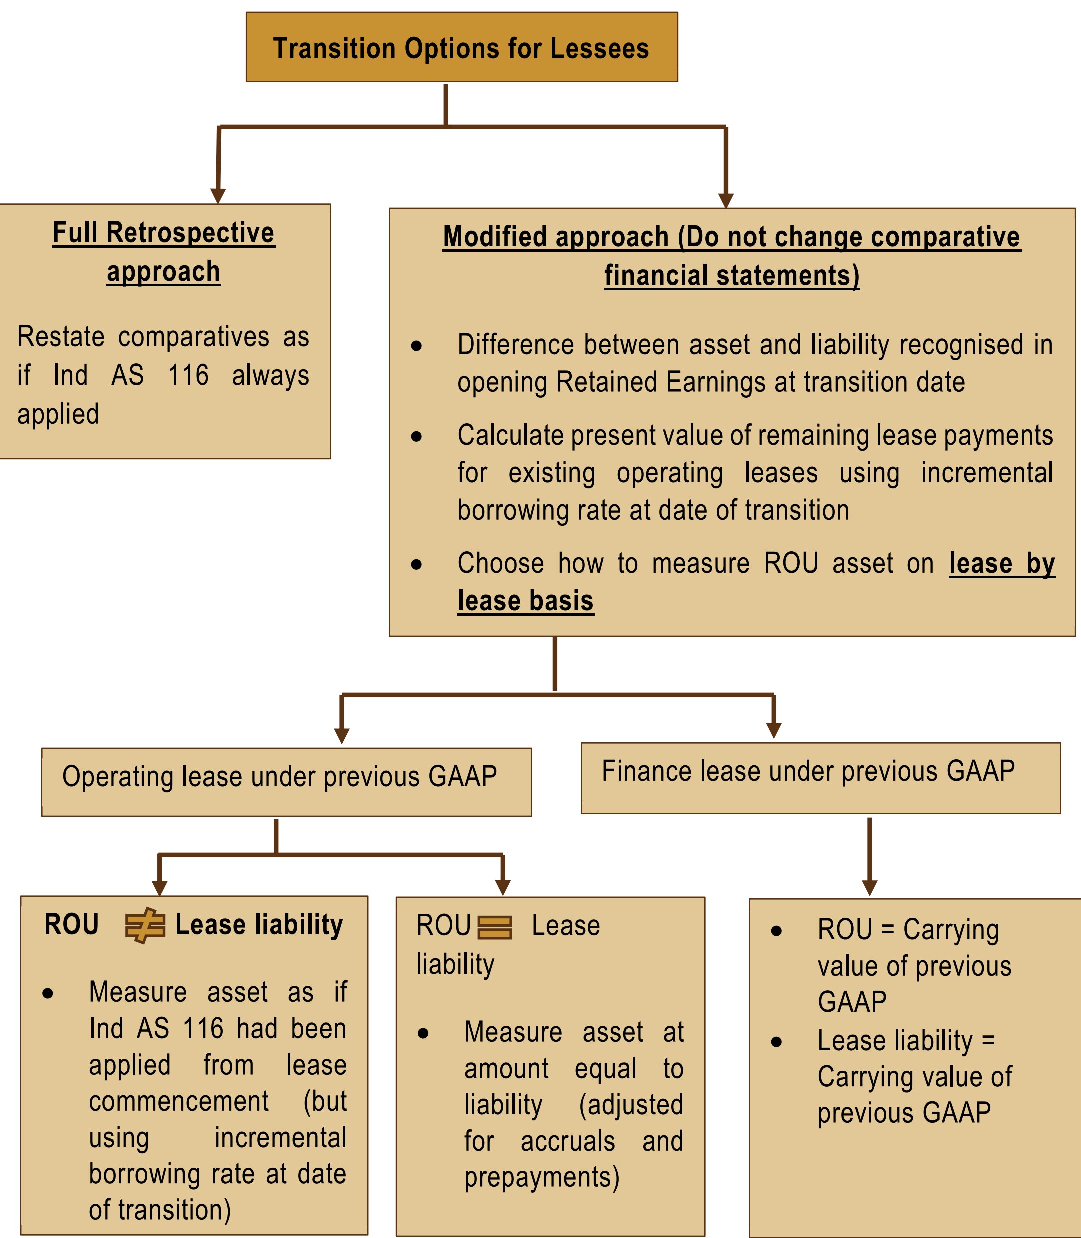
Join us t.me/caborntofight
Sensitivity: Public (C4)



Practical Expedient

- This exemption must be applied either for all contracts or none **i.e. cherry picking is not permitted**
- This exemption does not mean that previously identified operating leases can remain off-balance sheet for lessee (unless qualify for a recognition exemption). It merely saves the entity the costs and effort of reassessing)
- If the exemption is elected, the new definition of a lease is applied only to contracts entered into or changed on or after initial application
- Disclosure is required if a practical expedient is elected

Join us t.me/caborntofight
Sensitivity: Public (C4)



Note:

- A lessee applies Ind AS 36 to ROU assets at the date of initial application, unless the lessee applies the practical expedient for onerous leases.
- A lessee is not required to make adjustments on transition for 'leases of low-value assets' (which is one of the recognition exemptions under Ind AS 116)

Let us consider an illustration to understand the transition approaches in a more precise manner:

Illustration 46 - Transition Approaches

A retailer (lessee) entered into 3-year lease of retail space beginning at 1 April 2017 with three annual lease payments of ₹ 2,00,000 due on 31 March 2018, 2019 and 2020, respectively. The lease is classified as an operating lease under Ind AS 17. The retailer initially applies Ind AS 116 for the first time in the annual period beginning at 1 April 2019. The incremental borrowing rate at the date of the initial application (i.e., 1 April 2019) is 10% p.a. and at the commencement of the lease (i.e., 1 April 2017) was 12% p.a. The ROU asset is subject to straight-line depreciation over the lease term. Assume that no practical expedients are elected, the lessee did not incur initial direct costs, there were no lease incentives and there were no requirements for the lessee to dismantle and remove the underlying asset, restore the site on which it is located or restore the underlying asset to the condition under the terms and conditions of the lease.

What would be the impact for the lessee using all the following transition approaches:

Full Retrospective Approach

Modified Retrospective Approach

- Alternative 1

- Alternative 2

Solution:

Full Retrospective Approach:

Under the full retrospective approach, the lease liability and the ROU asset are measured on the commencement date (i.e., 1 April 2017 in this case) using the incremental borrowing rate **at lease commencement date** (i.e., 12% p.a. in this case). The lease liability is accounted for by the interest method subsequently and the ROU asset is subject to depreciation on the straight-line basis over the lease term of three years. Let us first calculate the Lease Liability and ROU Asset as follows:

Year	Payments (Cash flows)	Present Value Factor @12%	Discounted Cash flows / Present Value
31 Mar 2018	2,00,000	0.8929	1,78,580
31 Mar 2019	2,00,000	0.7972	1,59,440
31 Mar 2020	2,00,000	0.7118	1,42,360
	6,00,000		**4,80,380**

Join us t.me/caborntofight
Sensitivity: Public (C4)

Lease Liability Schedule:

Year	Opening	Interest Expense @ 12%	Payments	Closing
31 Mar 2018	4,80,380	57,646	(2,00,000)	3,38,026
31 Mar 2019	3,38,026	40,563	(2,00,000)	1,78,589
31 Mar 2020	1,78,589	21,411*	(2,00,000)	-

*Difference is due to approximation

ROU Asset Schedule:

Year	Opening	Depreciation	Closing
31 Mar 2018	4,80,380	(1,60,126)	3,20,254
31 Mar 2019	3,20,254	(1,60,127)	1,60,127
31 Mar 2020	1,60,127	(1,60,127)	-

The following table shows account balances under this method beginning at lease commencement:

Date	ROU Asset	Lease Liability	Interest Expense	Depreciation Expense	Retained Earnings
1 Apr 2017	4,80,380	4,80,380	-	-	-
31 Mar 2018	3,20,254	3,38,026	-	-	-
1 Apr 2018	3,20,254	3,38,026			(17,772)
31 Mar 2019	1,60,127	1,78,589	40,563	1,60,127	-
1 Apr 2019	1,60,127	1,78,589	-	-	-
31 Mar 2020	-	-	21,411	1,60,127	-

Ind AS 116 is applicable for the financial year beginning from 1st April 2019. Hence, 2019-2020 is the first year of adoption and using Full retrospective method the comparative for 2018-2019 needs to be restated and 1st April 2018 (i.e the opening of the comparative) is taken as transition date for adoption of this standard. At adoption, the lessee would record the ROU asset and lease liability at the 1st April 2018 by taking values from the above table, with the difference between the ROU asset and lease liability going to retained earnings as of 1st April 2018 (assuming that only the 2018-2019 financial information is included as comparatives).

ROU Asset	Dr.	3,20,254	
Retained Earnings	Dr.	17,772	
To Lease Liability			3,38,026
To initially recognise the lease-related asset and liability as of 1 April 2018.			

The following journal entries would be recorded during 2018-2019:

Interest expense	Dr.	40,563	
To Lease Liability			40,563
To record interest expense and accrete the lease liability using the interest method.			
Depreciation expense	Dr.	1,60,127	
To ROU Asset			1,60,127
To record depreciation expense on the ROU asset.			
Lease Liability	Dr.	2,00,000	
To Cash			2,00,000
To record lease payment.			

The following journal entries would be recorded during 2019-2020:

Interest expense	Dr.	21,411	
To Lease Liability			21,411
To record interest expense and accrete the lease liability using the interest method.			
Depreciation expense	Dr.	1,60,127	
To ROU Asset			1,60,127
To record depreciation expense on the ROU asset.			
Lease Liability	Dr.	2,00,000	
To Cash			2,00,000
To record lease payment.			

Modified Retrospective Approach (Alternative 1):

Under the modified retrospective approach (Alternative 1), the lease liability is measured based on the remaining lease payments (i.e., from the date of transition to the lease end date, viz., 1st April 2019 to 31st March 2020 in this case) discounted using the incremental borrowing rate as of the date of initial **application being 01 April 2019** (i.e. 10% p.a. in this case). The ROU asset

is at its carrying amount as if Ind AS 116 had been applied since the commencement date (i.e., 1st April 2017 in this case) by using incremental borrowing rate as at transition date. Let us first calculate the Lease Liability and ROU Asset as follows:

Year	Payments (Cash flows)	Discounting Factor @10%	Discounted Cash flows / Present Value
31 Mar 2020	2,00,000	0.9091	1,81,820
	2,00,000		**1,81,820**

Lease Liability Schedule:

Year	Opening Balance	Interest Expense @ 10%	Payments	Closing Balance
31 Mar 2020	1,81,820	18,180	(2,00,000)	-

ROU Asset Schedule:

Year	Opening Balance	Depreciation	Closing Balance
31 Mar 2020	1,65,787***	(1,65,787)	-

***(Refer note no 3)

The following table shows account balances under this method beginning at lease commencement:

Date	ROU Asset	Lease Liability	Interest Expense	Depreciation Expense	Retained Earnings
1 Apr 2017	4,97,360*	4,97,360**	-	-	-
31 Mar 2018	3,31,574	3,47,096	49,736	1,65,786	-
31 Mar 2019	1,65,787	1,81,806	34,710	1,65,787	(16,019)
1 Apr 2019	1,65,787	1,81,806	-	-	-
31 Mar 2020	-	-	18,194	1,65,787	-

*(Refer note no 1)

**(Refer note no 2)

At adoption, the lessee would record the ROU asset and lease liability at the 1st April 2019 by taking values from the above table, with the difference between the ROU asset and lease liability going to retained earnings as of 1st April 2019.

ROU Asset	Dr.	1,65,787	
Retained Earnings	Dr.	16,019	
To Lease Liability			1,81,806
To initially recognise the lease-related asset and liability as of 1 April 2019.			

The following journal entries would be recorded during 2019-2020:

Interest expense	Dr.	18,194	
To Lease Liability			18,194
To record interest expense and accrete the lease liability using the interest method.			
Depreciation expense	Dr.	1,65,787	
To ROU Asset			1,65,787
To record depreciation expense on the ROU asset.			
Lease Liability	Dr.	2,00,000	
To Cash			2,00,000
To record lease payment.			

Note 1:

Calculation of Present value of lease payments as at commencement date i.e. 1st April, 2017

Year	*Payments (Cash flows)*	*Discounting Factor @10%*	*Discounted Cash flows / Present Value*
31 Mar 2018	2,00,000	0.9091	1,81,820
31 Mar 2019	2,00,000	0.8264	1,65,280
31 Mar 2020	2,00,000	0.7513	1,50,260
	6,00,000		**4,97,360**

Lease Liability Schedule:

Year	*Opening*	*Interest Expense @ 10%*	*Payments*	*Closing*
31 Mar 2018	4,97,360	49,736	(2,00,000)	3,47,096
31 Mar 2019	3,47,096	34,710	(2,00,000)	1,81,806
31 Mar 2020	1,81,806	18,194*	(2,00,000)	-

*Difference is due to approximation

Calculation of ROU asset as at transition date i.e., 1st April, 2019

Year	Opening	Depreciation	Closing
31 Mar 2018	4,97,360	(1,65,786)	3,31,574
31 Mar 2019	3,31,574	(1,65,787)	1,65,787
31 Mar 2020	1,65,787	(1,65,787)	-

Modified Retrospective Approach (Alternative 2):

Under the modified retrospective approach (Alternative 2), the lease liability is also measured based on the remaining lease payments (i.e., from the date of transition to the lease end date, viz., 1st April 2019 to 31st March 2020 in this case) discounted using the incremental borrowing rate as of the date of initial **application being 1st April 2019** (i.e. 10% p.a. in this case). The carrying amount of the ROU asset is an amount equal to the carrying amount of the lease liability on the date of initial application as there are no prepayments or accrual items and hence, no impact on retained earnings as on the transition date.

Let us first calculate the Lease Liability and ROU Asset as follows:

Year	Payments (Cash flows)	Discounting Factor @ 10%	Discounted Cash flows / Present Value
31 Mar 2020	2,00,000	0.9091	1,81,820
	2,00,000		**1,81,820**

Lease Liability Schedule:

Year	Opening	Interest Expense	Payments	Closing
31 Mar 2020	1,81,820	18,182	(2,00,000)	-

ROU Asset Schedule:

Year	Opening	Depreciation	Closing
31 Mar 2020	1,81,820	(1,81,820)	-

The following table shows account balances under this method beginning at lease commencement:

Date	ROU Asset	Lease Liability	Interest Expense	Depreciation Expense	Retained Earnings
1st Apr 2019	1,81,820	1,81,820	-	-	-
31 Mar 2020	-	-	18,182	1,81,820	-

At adoption, the lessee would record the ROU asset and lease liability at the 1st April 2019 by taking values from the above table and there will be no impact on retained earnings on the transition date being 1st April 2019 since under this alternative, ROU Asset is equal to the Lease Liability.

ROU Asset Dr.	1,81,820	
To Lease Liability		1,81,820
To initially recognise the lease-related asset and liability as of 1 April 2019.		

The following journal entries would be recorded during 2019-2020:

Interest expense Dr.	18,182	
To Lease Liability		18,182
To record interest expense and accrete the lease liability using the interest method.		
Depreciation expense Dr.	1,81,820	
To ROU Asset		1,81,820
To record depreciation expense on the ROU asset.		
Lease Liability Dr.	2,00,000	
To Cash		2,00,000
To record lease payment.		

A summary of the lease contract's accounting (assuming there are no changes due to reassessments) is, as follows:

Particulars	***Full Retrospective Approach***	***Modified Retrospective Approach (Alternative 1)***	***Modified Retrospective Approach (Alternative 2)***
Opening balance sheet impact as on 1 April 2019:			
ROU Asset	1,60,126	1,65,787	1,81,820
Lease Liability	1,78,589	1,81,806	1,81,820
Period ended 31 March 2020 activity:			
Cash lease payments	2,00,000	2,00,000	2,00,000

Lease payments recognised:			
Interest expense	21,411	18,194	18,180
Depreciation expense	1,60,127	1,65,787	1,81,820
Total periodic expense	1,81,538	1,83,981	2,00,002

*****

8.7.4 Disclosure

Disclosure requirements vary in accordance with the Transition Approach opted. The lessee shall disclose the following as required by Ind AS 8 (except that it is impracticable to determine the amount of the adjustment):

Full Retrospective Approach	***Modified Retrospective Approach***
(a) the title of the Ind AS;	(a) the title of the Ind AS;
(b) when applicable, that the change in accounting policy is made in accordance with its transitional provisions;	(b) when applicable, that the change in accounting policy is made in accordance with its transitional provisions;
(c) the nature of the change in accounting policy;	(c) the nature of the change in accounting policy;
(d) when applicable, a description of the transitional provisions;	(d) when applicable, a description of the transitional provisions;
(e) when applicable, the transitional provisions that might have an effect on future periods;	(e) when applicable, the transitional provisions that might have an effect on future periods;
(f) for the current period and each prior period presented, to the extent practicable, the amount of the adjustment: (i) for each financial statement line item affected; and (ii) if Ind AS 33 *Earnings per Share* applies to the entity, for basic and diluted earnings per share;	(f) the weighted average lessee's incremental borrowing rate applied to lease liabilities recognised in the balance sheet at the date of initial application; and an explanation of any difference between: (i) operating lease commitments disclosed applying Ind AS 17 at the end of the annual reporting period immediately preceding the date of initial application, discounted using the incremental borrowing

Sensitivity: Public (C4)

	rate at the date of initial application; and (ii) lease liabilities recognised in the balance sheet at the date of initial application.
(g) the amount of the adjustment relating to periods before those presented, to the extent practicable; and	(g) the amount of the adjustment relating to periods before those presented, to the extent practicable; and
(h) if retrospective application required by Ind AS 8 is impracticable for a particular prior period, or for periods before those presented, the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied.	(h) if retrospective application required by Ind AS 8 is impracticable for a particular prior period, or for periods before those presented, the circumstances that led to the existence of that condition and a description of how and from when the change in accounting policy has been applied. Further, if a lessee uses one or more of the practical expedients (already discussed above), it shall disclose that fact.

8.7.5 Lessors

A lessor is not required to make any adjustments on transition for leases in which it is a lessor and shall account for those leases applying Ind AS 116 from the date of initial application **except** in case of an ***'Intermediate Lessor'*** who shall:

(a) reassess subleases that were classified as operating leases applying Ind AS 17 and are ongoing at the date of initial application, to determine whether each sublease should be classified as an operating lease or a finance lease applying Ind AS 116. The intermediate lessor shall perform this assessment at the date of initial application on the basis of the remaining contractual terms and conditions of the head lease and sublease at that date with reference to the ROU Asset associated with the head lease and not the underlying asset.

(b) for subleases that were classified as operating leases applying Ind AS 17 but, finance leases applying Ind AS 116, account for the sublease as a new finance lease entered into at the date of initial application. Any gain or loss arising on the sublease arrangement is included in the cumulative catch-up adjustment to retained earnings at the date of initial application.

8.7.6 Sale and Leaseback Transactions before the date of Initial Application

An entity shall not reassess sale and leaseback transactions entered into before the date of initial application to determine whether the transfer of the underlying asset satisfies the requirements under Ind AS 115 to be accounted for as a sale, i.e., a seller-lessee is prohibited from reassessing historical sale and leaseback transactions to determine whether a sale occurred in accordance with Ind AS 115.

Thus, a seller-lessee does not perform any retrospective adjustments to sale and leaseback transactions on transition to Ind AS 116. Instead, the leaseback is accounted for on transition in the following manner, depending on the classification:

Finance Lease	*Operating Lease*
If a sale and leaseback transaction was accounted for as a sale and a **finance lease** applying Ind AS 17, the seller-lessee shall: (a) account for the leaseback in the same way as it accounts for any other finance lease that exists at the date of initial application ***AND*** (b) continue to amortise any gain on sale over the lease term.	If a sale and leaseback transaction was accounted for as a sale and **operating lease** applying Ind AS 17, the seller-lessee shall: (a) account for the leaseback in the same way as it accounts for any other operating lease that exists at the date of initial application; ***AND*** (b) adjust the leaseback ROU asset for any deferred gains or losses that relate to off-market terms recognised in the balance sheet immediately before the date of initial application.

8.7.7 Amounts Previously recognised in respect of Business Combinations

If a lessee previously recognised an asset or a liability applying Ind AS 103 *Business Combinations*, relating to favourable or unfavourable terms of an operating lease acquired as part of a business combination, the lessee shall derecognise that asset or liability and adjust the carrying amount of the ROU asset by a corresponding amount at the date of initial application.

Sensitivity: Public (C4)

8.8 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITY

Following are the extracts from the financial statements of the listed entity 'InterGlobe Aviation Limited' for the financial year 2021-2022 with respect to 'ROU Assets' and 'Lease Liabilities'.

In the Assets side of the Balance Sheet:

	Note	As at 31 March 2022
I. ASSETS		
Non-current assets		
a. Property, plant and equipment	3.a	8,225.20
b. Right of use assets	4	204,381.48

4. Right of use assets

As at 31 March 2022

Particulars	Aircraft and Engines	Equipment	Leasehold Land	Buildings	Total
Gross value - at cost

Net carrying value as at 31 March 2022	196,229.28	3,901.94	2,646.26	1,604.00	204,381.48

*Includes adjustment on account of foreign currency loss, arising on re-statement of long-term foreign currency monetary loans used for acquisition of a depreciable capital asset, amounting to Rs. 398.00 (previous year foreign currency gain amounting to Rs. 417.55) and modification on leases amounting to Rs. 3,001.04 (previous year Rs. 1,669.70).

** Depreciation for the year includes Rs. 61.67 (previous year Rs. 167.26) capitalised as part of Capital work-in-progress.

In the Liabilities side of the Balance Sheet:

LIABILITIES			
Non-current liabilities			
a. Financial liabilities			
(i) Borrowings	17.a	4,161.71	3,816.28
(ia) Lease liabilities	17.b	250,586.59	202,805.34
Current liabilities			
a. Financial liabilities			
(i) Borrowings	17.a	34,805.65	21,239.95
(ia) Lease liabilities	17.b	79,224.42	70,734.97

17.b Lease liabilities

Particulars	As at 31 March 2022		As at 31 March 2021	
	Non-current	Current	Non-current	Current
Lease liabilities*	250,586.59	79,224.42	202,805.34	70,734.97
Total	250,586.59	79,224.42	202,805.34	70,734.97

The Company's leased assets primarily consist of leases for aircraft and engines, equipment, leasehold land and buildings.

Interest expense on lease liabilities for the year is amounting to Rs. 19,627.85 (previous year Rs. 16,435.04) (including interest amounting to Rs. 109.45 (previous year Rs. 238.17) capitalised under capital work-in-progress). Refer to Note 26.

Certain lease liabilities amounting to Rs. 13,155.50 (previous year Rs. 16,153.80) are secured against the respective aircraft. Remaining lease liabilities are secured to the extent of letter of credits issued / deposits given to lessors.

The Company has recognised an expense of Rs. 3,116.84 (previous year Rs. 2,804.57) on account of short term leases which represents leased aircraft and engines having a remaining lease term of less than 12 months as on transition date and other short term leases. The portfolio of other short-term leases to which the Company is committed at the end of the reporting period is not materially different from the portfolio of other short term leases for which expense has been recognised during the year.

The Company has several lease contracts that include extension and termination options. The management has included termination options in determination of lease term for contracts having such option. Extension options have not been included in determination of lease term since the management is reasonably certain not to exercise these options. Potential cash flows in relation to such extension options cannot be ascertained since the cash outflow for the extended period will depend on the negotiations with the lessors in the event of exercising the extension options.

Under certain lease arrangements of aircraft and engines, the Company incurs variable payments towards maintenance of the aircraft which are disclosed under "Supplementary rentals and aircraft repair and maintenance (net)".

The Company has entered into sale and leaseback arrangements, for certain aircraft and engines owned and controlled by the Company, to increase its liquidity. The Company has recorded proceeds of Rs. 6,006.43 (previous year Rs. 18,833.68) (net) from the sale and leaseback arrangements as disclosed in the Standalone Cash Flow Statement. The profit (net of loss) on sale and leaseback arrangements is Rs.750.96 (previous year Rs. 12.81) disclosed in Note 23.

Future cash outflows for leases not yet commenced amounts to Rs. 64,435.43 (previous year Rs. 62,343.06).

The maturity analysis of lease liabilities are disclosed in Note 29. Further, information about the Company's exposure to market risks is disclosed in Note 29.

*Includes lease liabilities with related parties amounting to Rs. 5,093.61 (previous year Rs. 5,429.29). Refer to Note 35.

ACCOUNTING POLICY

Leases

The Company's lease asset classes primarily consist of leases for aircraft and engines, equipment, leasehold land and buildings. The Company assesses at the inception date whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

i) Lease liabilities

At the commencement date, the Company measures the lease liabilities at the present value of the lease payments that are not paid at that date. The lease liabilities include lease payments, payment of penalties for terminating the lease, if the lease term reflects the Company exercising the option to terminate, exercise price of a purchase option, if the company is reasonably certain to exercise that option, less any incentives receivable.

The lease payments are discounted using the interest rate implicit in the lease, if that rate can be readily determined. If that rate cannot be readily determined, the Company uses incremental borrowing rate (IBR). The IBR is the rate of interest that the Company would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right of use assets in a similar economic environment.

After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced by the lease payments made. In addition, the carrying amount of lease liabilities is re-measured if there is a lease modification, including modification in the lease term, lease payments or assessment of an option to purchase the underlying asset. The lease liabilities are re-measured by discounting the revised lease payments using a revised discount rate at the effective date of the modification.

ii) Right of use assets

At the commencement date, the right of use assets are measured at cost. The cost includes an amount equal to the lease liabilities plus any lease payments made before the commencement date and any initial direct costs, less any incentives received from equipment manufacturer in terms of the same lease. An estimate of costs to be incurred in respect of redelivery obligation, in accordance with the terms of the lease, is also included in the right of use assets at commencement date.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

After the commencement date, the right of use assets is measured in accordance with the accounting policy for property, plant and equipment i.e. right of use assets are measured at cost, less any accumulated depreciation and impairment losses, if any. Right of use assets are also correspondingly adjusted to reflect any re-measurement impact in the lease liabilities on account of lease modification. The right of use assets are also subject to impairment. Refer to the accounting policies in Note 2.(b) (xiv) Impairment of non-financial assets.

iii) Lease Term

At the commencement date, the Company determines the lease term which represents non-cancellable period of initial lease for which the asset is expected to be used, together with the periods covered by an option to extend or terminate the lease, if the Company is reasonably certain at the commencement date to exercise the extension or termination option.

iv) Other Leases

Lease payments associated with any other leases which falls outside the purview of Ind AS 116, short term leases and leases for which the underlying asset is of low value are charged to Standalone Statement of Profit and Loss on straight line basis over the lease term or another systematic basis which is more representative of the pattern of use of underlying asset.

v) Sale and leaseback transactions

The right of use arising from leaseback is measured at the proportion of previous carrying amount of the asset that relates to right of use retained by the Company. Where sale proceeds (net of maintenance obligation, if any) received are judged to reflect the aircraft's fair value, any gain or loss arising on disposal is recognised in the Standalone Statement of Profit and Loss, to the extent that it relates to the rights that have been transferred. Gains and losses that relate to the rights that have been retained are included in the carrying amount of the right of use assets recognised at commencement of the lease. Where sale proceeds (net of maintenance obligation, if any) received are not at the aircraft's fair value, any below market terms are recognised as a prepayment of lease payments, and above market terms are recognized as additional financing provided by the lessor.

vi) Depreciation

Depreciation on assets held as right of use assets is charged to Standalone Statement of Profit and Loss on a straight-line basis from the commencement date to the earlier of

the end of the useful life of the right of use assets or the end of the lease term, except for leased aircraft previously classified as finance leases under erstwhile Ind AS where depreciation is charged on useful life of right of use assets.

Depreciation on right of use assets has been charged based on the following period:

Asset Head	***Useful life in years***
Aircraft and engines:	
— *Aircraft and engines components including spare engines*	*1-12*
— *Leased aircraft previously classified as finance lease under erstwhile Ind AS*	*20*
— *Major inspection and overhaul costs (Refer to Note 2(b) (xxi))*	*2-12*
Equipment	*8*
Leasehold land	*15-20*
Buildings	*1-10*

(Source: Annual Report 2021-2022 - 'InterGlobe Aviation Limited')

8.9 KEY DIFFERENCES BETWEEN IND AS 17 AND IND AS 116

The significant differences between Ind AS 17 (Earlier Standard on Leases) and Ind AS 116 (New Standard on Leases) are given below:

Sr. No.	***Particulars***	***Ind AS 17***	***Ind AS 116***
1	Lease Definition	A lease is an agreement whereby the lessor conveys to the lessee, in return for a payment or series of payments, the **right to use** an asset for an agreed period of time. Under Appendix C to Ind AS 17 *Determining whether an Arrangement contains a Lease,*	A lease is a contract, or part of a contract, that conveys the **right to control** the use of an asset (the underlying asset) for a period of time in exchange for consideration. To determine if the right to control has been conveyed to the customer, an entity

Join us t.me/caborntofight
Sensitivity: Public (C4)

		it is not necessary for an arrangement to convey the right to control the use of an asset to be in scope of Ind AS 17.	assesses whether, throughout the period of use, the customer has the right to obtain substantially all of the economic benefits from use of the identified asset and **the right to direct the use** of the identified asset.
2	Short-term lease exemption	Ind AS 17 doesn't mention about this.	Lessees can elect to apply a method similar to Ind AS 17 (i.e., operating lease accounting) to leases with a lease term of 12 months or less and without a purchase option. This option is available by **'class of underlying asset'** to which the right of use relates.
3	Leases of low-value assets exemption	Ind AS 17 doesn't mention about this.	Lessees can elect to apply a method similar to Ind AS 17 (i.e., operating lease accounting) to leases of low-value assets. Examples of such assets include tablets and personal computers, small items of office furniture and telephones. This option is available on a **'lease-by lease'** basis.
4	Lease Classification	Lessees apply a **dual** recognition and measurement approach for all leases. Lessees classify a lease as a 'finance lease' if it transfers substantially all the risks and rewards incidental to ownership. Otherwise a lease is classified as an 'operating lease'.	Lessees apply a **single** recognition and measurement approach for all leases, with options not to recognize ROU assets and lease liabilities for short-term leases and leases of low-value assets. There is not more classification of leases into operating and finance in case of lessees.

5	Lease Payments	At the commencement of the lease term, lessees recognize finance leases as assets and liabilities in their balance sheet at amounts equal to: a) the fair value of the leased property ***OR*** b) the present value of the minimum lease payments, whichever is **lower**, each determined at the inception of the lease. Minimum lease payments are the payments over the lease term that the lessee is or can be required to make, excluding contingent rent, costs for services and taxes to be paid by and reimbursed to the lessor, together with, for a lessee, any amounts guaranteed by the lessee or by a party related to the lessee. No assets and liabilities are recognized for the initial measurement of operating leases, i.e., operating leases only impacted the statement of profit or loss.	At the commencement date, lessees measure the lease liability at the present value of the lease payments to be made over the lease term (except short-term leases and leases of low-value assets). Lease payments include: a) Fixed payments (including in-substance fixed payments), **less** any lease incentives receivable; b) Variable lease payments that depend on an index or a rate, initially measured using the index or rate at the commencement date; c) Amounts expected to be payable by the lessee under residual value guarantees; d) The exercise price of a purchase option if the lessee is reasonably certain to exercise that option; e) Payments of penalties for terminating the lease, if the lease term reflects the lessee exercising an option to terminate the lease. In addition, the cost of the ROU asset comprises: a) The lease liability (as calculated above); b) Lease payments made at or before the commencement date, **less** any lease incentives received; c) Initial direct costs;

Sensitivity: Public (C4)

			d) Asset retirement obligations (unless those costs are incurred to produce inventories).
6	Reassessment of lease liability	Does not apply under Ind AS 17	After the commencement date, lessees are required to remeasure the lease liability when there is a lease modification (i.e., a change in the scope of a lease, ***OR*** the consideration for a lease that was not a part of the original terms and conditions of the lease) that is **NOT** accounted for as a separate contract. Lessees are also required to remeasure lease payments upon a change in **ANY** of the following: - The lease term; - The assessment of whether the lessee is reasonably certain to exercise an option to purchase the underlying asset; - The amounts expected to be payable under residual value guarantees; - Future lease payments resulting from a change in an index or rate.
7	Lease income from operating leases	Ind AS 17 contains a **carve out** of not straight-lining the lease escalation, if they are in line with the expected general inflation compensating the lessor for expected inflationary cost.	There is **no such carve out** under Ind AS 116 and thus, a lessor shall recognize lease payments from operating leases as income on either a straight-line basis or another systematic basis.

Sensitivity: Public (C4)

8	Lease modifications to an operating lease	Ind AS 17 doesn't mention about this.	Lessors account for a modification to an operating lease as a **new lease** from the effective date of the modification (considering any prepaid or accrued lease payments relating to the original lease as part of the lease payments for the new lease).
9	Lease modifications which do not result in new separate leases	Ind AS 17 doesn't mention about this.	**Lessees:** a) Allocate the consideration in the modified contract; b) Determine the lease term of the modified lease; c) Remeasure the lease liability by discounting the revised lease payments using a revised discount rate with a corresponding adjustment to ROU asset. Additionally, lessees recognize in profit or loss any gain or loss relating to the partial or full termination of the lease. **Lessors:** If a lease would have been an operating lease, had the modification been in effect at the inception date, lessors in a finance lease would: (i) Account for the modification as a new lease; (ii) Measure the carrying amount of the underlying asset as the net investment in the lease immediately

			before the effective date of the modification. Otherwise, the modification is accounted for in accordance with Ind AS 109 *Financial Instruments*.
10	Presentation (Lessees) – Balance Sheet	Ind AS 17 doesn't mention about this.	**ROU Assets:** They are presented either: - Separately from other assets (e.g., owned assets) ***OR*** - Together with other assets as if they were owned, with disclosures of the balance sheet line items that include ROU Assets and their amounts ROU Assets that meet the definition of investment property are presented as investment property **Lease Liabilities:** They are presented either: - Separately from other liabilities ***OR*** - Together with other liabilities with disclosure of the balance sheet line items that include lease liabilities and their amounts.
11	Presentation (Lessees) – Statement of profit or loss	Operating lease expense is presented as a **single item**.	**Depreciation and Interest:** Lease-related depreciation and lease-related interest expense are presented **separately** (i.e., they **CANNOT** be combined). This is because interest

			expense on the lease liability is a component of finance costs, which paragraph 82(b) of Ind AS 1 *Presentation of Financial Statements* requires to be presented separately in the statement of profit or loss.
12	Presentation (Lessees) – Cashflow statement	**For operating leases:** Cash payments are included within **operating activities**.	**Principal portion of the lease liability:** - These cash payments are presented within financing activities **Interest portion of the lease liability:** - These cash payments are presented within financing activities **Short-term leases and leases of low-value assets:** - Lease payments pertaining to them (i.e., not recognised on the balance sheet as per Ind AS 116) are presented within operating activities **Variable lease payments not included in the lease liability:** - These are also presented within operating activities **Non-cash activity:** Such activity is disclosed as a supplemental non-cash item (e.g., the initial recognition of the lease at commencement)
13	Disclosures	Quantitative and qualitative disclosures are required but,	**Detailed** disclosures (including the format of disclosure) are

		generally **fewer** disclosures are required than those under Ind AS 116.	required under Ind AS 116. **Additionally**, qualitative and quantitative information about leasing activities is required in order to meet the disclosure objective.
14	Sale and leaseback transactions – 'Sale'	Ind AS 17 focuses on whether the leaseback is an **operating or finance** lease.	Seller-lessees and buyer-lessors apply the requirements in Ind AS 115 to determine whether a **sale** has occurred in a sale and leaseback transaction.
15	Sale and leaseback transactions – Accounting by seller-lessees	If a sale and leaseback transaction results in a **finance lease**, any excess of sales proceeds over the carrying amount are deferred and amortized over the lease term. If a sale and leaseback transaction results in an **operating lease**, and it is clear that the transaction is established at fair value, any profit or loss is recognized immediately.	The seller-lessee measures the **ROU asset** arising from the leaseback at the proportion of the previous carrying amount of the asset that relates to the right-of use retained by the seller-lessee and recognizes only the amount of any gain or loss that relates to the rights transferred to the buyer lessor.
16	Sale and leaseback transactions – Transactions NOT at fair value	If a sale and leaseback transaction results in an **operating lease** and the sale price is: - Below fair value: Any profit or loss is recognized immediately except that, if the loss is compensated for by future lease payments at below market price, it is deferred and amortised in proportion to the lease payments over the period for which the asset is expected	If the fair value of the consideration for the sale of an asset does **NOT** equal the fair value of the asset ***OR*** if the payments for the lease are not at market rates then, an entity is required to measure the sale proceeds at fair value with an adjustment (as appropriate) either as a prepayment of lease

		to be used. - Above fair value: The excess over fair value is deferred and amortised over the period for which the asset is expected to be used.	payments (any **below** market terms) ***OR*** additional financing (any **above** market terms).
17	Business combinations – Acquiree is a lessee	Unlike Ind AS 116, there is no exemption under Ind AS 17 for leases with a remaining lease term of less than 12 months from the acquisition date, or leases for which the underlying asset is of low value (i.e., recognition exemptions). An intangible asset is recognized if the terms of operating lease are favourable relative to market terms and a liability is recognized if terms are unfavourable relative to market terms. An intangible asset may be associated with an operating lease, which may be evidenced by market participants' willingness to pay a price for the lease even if it is at market terms.	The acquirer is not required to recognize ROU assets and lease liabilities for leases with a remaining lease term of less than 12 months from the acquisition date, or leases for which the underlying asset is of a lower value (i.e., recognition exemptions). The acquirer measures the ROU asset at the same amount as the lease liability, adjusted to reflect favourable or unfavourable terms of the lease, relative to market terms.

8.9 KEY DIFFERENCES BETWEEN IND AS 116 AND AS 19

The significant differences between Ind AS 116 and AS 19 are given below:

Sr. No.	Particulars	Ind AS 116	AS 19
1	Lease definition	Under Ind AS 116, the definition of lease is similar to that in AS 19. But, in Ind AS 116, there is substantial	Under Ind AS 116, the definition of lease is similar to that in AS 19. However,

		change in the guidance of how to apply this definition. The changes primarily relate to the concept of 'control' used in identifying whether a contract contains a lease or not. Ind AS 116 provides detailed guidance on whether an arrangement contains a lease or whether there are non-lease / service components within the arrangement.	guidance part given therein is different.
2	Modifications	Ind AS 116 brings in comprehensive prescription on accounting of modifications in lease contracts. It permits leases, as a practical expedient, not to assess whether the rent concessions that occur as a direct consequence of COVID 19 pandemic and meet specified conditions are lease modifications and instead, to account for those rent concessions as if they were not lease modifications.	No such comprehensive coverage is there
3	Scope	Ind AS 116 has no such scope exclusion	AS 19 excludes leases of land from its scope
4	Definition	Ind AS 116 makes a distinction between 'inception of lease' and 'commencement of lease'	No such distinction has been made in AS 19
5	Classification	Ind AS 116 eliminates the requirement of classification of leases as either operating leases or finance leases for a lessee and instead, introduces a single lessee accounting model which requires lessee to recognise assets and liabilities for all leases unless it applies the recognition exemption (for leases of low value assets or short-term leases)	AS 19 requires a lessee to classify leases as either finance leases or operating leases

6	Sale & Leaseback transactions	In Ind AS 116, the approach for computation of gain/loss for a completed sale is different. The amount of gain/loss should reflect the amount that relates to the right transferred to the buyer-lessor.	As per AS 19, if a sale and leaseback transaction results in a finance lease, excess, if any, of the sale proceeds over the carrying amount shall be deferred and amortised by the seller-lessee over the lease term in proportion to depreciation of the leased asset.
		Ind AS 116 requires a seller-lessee and a buyer-lessor to use the definition of a sale as per Ind AS 115, *Revenue from Contracts with Customers* to determine whether a sale has occurred in a sale and leaseback transaction. If the transfer of the underlying asset satisfies the requirements of Ind AS 115 to be accounted for as a sale, the transaction will be accounted for as a sale and a lease by both the lessee and the lessor. If not, then the seller-lessee shall recognise a finance liability and the buyer-lessor will recognise a financial asset to be accounted for as per the requirements of Ind AS 109, *Financial Instruments*.	AS 19 does not contain such specific requirement
7	Treatment of initial direct costs		
	Finance lease – lessor accounting		
	Non-manufacturer/ Non-dealer	Interest rate implicit in the lease is defined in such a way that the initial direct costs included automatically in the finance lease receivable.	Either recognised as expense immediately or allocated against the finance income over the lease term.
	Manufacturer/d	Same as per AS 19.	Recognised as expense

	ealer		immediately.
	Operating lease- Lessor accounting	Added to the carrying amount of the leased asset and recognised as expense over the lease term on the same basis as lease income.	Either deferred and allocated to income over the lease term in proportion to the recognition of rent income, or recognized as expense in the period in which incurred
8	Initial direct costs	Ind AS 116 contains clearer definition of 'initial direct costs, such as commissions and legal fees, are often incurred by lessors in negotiating and arranging a lease. Ind AS 116 define initial direct costs as 'Incremental costs of obtaining a lease that would not have been incurred if the lease had not been obtained, except for such costs incurred by a manufacturer or dealer lessor in connection with a finance lease.' Further, definition of the term 'interest rate implicit in the lease' has been modified in Ind AS 116.	Different guidance given
9	Presentation	As a consequence of introduction of single lease model for lessees, there are many changes in the presentation in the three components of financial statements *viz.* Balance sheet, Statement of Profit and Loss, Statement of Cash flows.	Different guidance given
10	Disclosure	There are a number of changes in the disclosure relating to qualitative aspects of leasing transactions. For eg. Entities are required to disclose the nature and risks arising from leasing transactions. Also, in case of lessor, there are changes in the disclosure of maturity analysis of leases payments receivable.	Different guidance given

8.10 MAJOR CHANGES UNDER IND AS 116 FROM IFRS 16

Ind AS 116, like other Ind AS, has been converged from the global standards, i.e., IFRS, which has been made applicable to the Indian entities (based on the net worth criteria) in a phased manner via Ministry of Corporate Affairs Roadmap. While converging from IFRS 16 (which is applicable globally from the reporting periods beginning on or after 1 January 2019), following are the carve outs given under Appendix 1 to Ind AS 116, keeping in mind, the requirements of other converged Ind AS and the economic environment in India:

S. No.	***Particulars***	***IFRS 16***	***Ind AS 116***
1	Subsequent measurement of investment property	Paragraph 34 of IFRS 16 provides that if lessee applies fair value model in IAS 40 to its investment property, it shall apply that fair value model to the ROU assets that meet the definition of investment property.	Paragraph 34 has been **deleted** under Ind AS 116 since Ind AS 40 *Investment Property* does **NOT** allow the use of fair value model. Consequently, reference of the same appearing anywhere under Ind AS 116 has also been **deleted**.
2	Interest portion of lease liability – classification in cash flow statement	Paragraph 50(b) of IFRS 16 requires classifying cash payments for interest portion of lease liability applying requirements of IAS 7 *Statement of Cash Flows*. IAS 7 provides option of treating interest paid as **operating or financing activity**.	Ind AS 7 requires interest paid to be treated as **financing activity only**. Accordingly, paragraph 50(b) has been **modified** under Ind AS 116 to specify that cash payments for interest portion of lease liability will be classified as financing activities applying Ind AS 7.

TEST YOUR KNOWLEDGE

QUESTIONS

1. A lessee enters into a ten-year contract with a lessor (freight carrier) to transport a specified quantity of goods. Lessor uses rail wagons of a particular specification and has a large pool of similar rail wagons that can be used to fulfil the requirements of the contract. The rail wagons and engines are stored at lessor's premises when they are not being used to transport goods. Costs associated with substituting the rail wagons are minimal for lessor.

   Whether the lessor has substantive substitutions rights and whether the arrangement contains a lease?

2. Customer M enters into a 20-year contract with Energy Supplier S to install, operate and maintain a solar plant for M's energy supply. M designed the solar plant before it was constructed – M hired experts in solar energy to assist in determining the location of the plant and the engineering of the equipment to be used. M has the exclusive right to receive and the obligation to take any energy produced. Whether it can be established that M is having the right to control the use of identified asset?

3. A Customer enters into a ten-year contract with a Company (a ship owner) for the use of an identified ship. The customer decides whether and what cargo will be transported, and when and to which ports the ship will sail throughout the period of use, subject to restrictions specified in the contract. These restrictions prevent the company from sailing the ship into waters at a high risk of piracy or carrying explosive materials. The company operates and maintains the ship and is responsible for safe passage.

   Does the customer have the right to direct how and for what purpose the ship is to be used throughout the period of use and whether the arrangement contains a lease?

Sensitivity: Public (C4)

4. A Lessee enters into a ten-year lease contract with a Lessor to use equipment. The contract includes maintenance services (as provided by the lessor). The Lessor obtains its own insurance for the equipment. Annual payments are ₹ 10,000 (₹ 1,000 related to maintenance services and ₹ 500 to insurance costs).

   The Lessee is able to determine that similar maintenance services and insurance costs are offered by third parties for ₹ 2,000 and ₹ 500 a year, respectively. The Lessee is unable to find an observable stand-alone rental amount for similar equipment because none is leased without related maintenance services provided by the lessor.

   How would the Lessee allocate the consideration to the lease component?

5. A Lessee enters into a non-cancellable lease contract with a Lessor to lease a building. Initially, the lease is for five years, and the lessee has the option to extend the lease by another five years at the same rental.

   To determine the lease term, the lessee considers the following factors:

   ♦ Market rentals for a comparable building in the same area are expected to increase by 10% over the ten-year period covered by the lease. At inception of the lease, lease rentals are in accordance with current market rents.

   ♦ The lessee intends to stay in business in the same area for at least 20 years.

   ♦ The location of the building is ideal for relationships with suppliers and customers.

   What should be the lease term for lease accounting under Ind AS 116?

6. A Lessee enters into a lease of a five-year-old machine. The non-cancellable lease term is 15 years. The lessee has the option to extend the lease after the initial 15-year period for optional periods of 12 months each at market rents.

   To determine the lease term, the lessee considers the following factors:

   ♦ The machine is to be used in manufacturing parts for a type of plane that the lessee expects will remain popular with customers until development and testing of an improved model are completed in approximately 15 years.

   ♦ The cost to install the machine in lessee's manufacturing facility is significant.

   ♦ The non-cancellable term of lessee's manufacturing facility lease ends in 15 years, and the lessee has an option to renew that lease for another twelve years.

   ♦ Lessee does not expect to be able to use the machine in its manufacturing process for other types of planes without significant modifications.

   ♦ The total remaining life of the machine is 30 years.

   What should be the lease term for lease accounting under Ind AS 116?

Join us t.me/caborntofight
Sensitivity: Public (C4)

7. A Company leases a manufacturing facility. The lease payments depend on the number of operating hours of the manufacturing facility, i.e., the lessee has to pay ₹ 2,000 per hour of use. The annual minimum payment is ₹ 2,00,00,000. The expected usage per year is 20,000 hours.

   Whether the said payments be included in the calculation of lease liability under Ind AS 116?

8. Entity X (lessee) entered into a lease agreement ('lease agreement') with Entity Y (lessor) to lease an entire floor of a shopping mall for a period of 9 years. The annual lease rent of ₹ 70,000 is payable at year end. To carry out its operations smoothly, Entity X simultaneously entered into another agreement ('facilities agreement') with Entity Y for using certain other facilities owned by Entity Y such as passenger lifts, DG sets, power supply infrastructure, parking space etc., which are specifically mentioned in the agreement, for annual service charges amounting to ₹ 1,00,000. As per the agreement, the ownership of the facilities shall remain with Entity Y. Lessee's incremental borrowing rate is 10%.

   The facilities agreement clearly specifies that it shall be co-existent and coterminous with 'lease agreement'. The facility agreement shall stand terminated automatically on termination or expiry of 'lease agreement'.

   Entity X has assessed that the stand-alone price of 'lease agreement' is ₹ 1,20,000 per year and stand-alone price of the 'facilities agreement' is ₹ 80,000 per year. Entity X has not elected to apply the practical expedient in paragraph 15 of Ind AS 116 of not to separate non-lease component(s) from lease component(s) and accordingly it separates non-lease components from lease components.

   How will Entity X account for lease liability as at the commencement date?

9. Entity X is an Indian entity whose functional currency is Indian Rupee. It has taken a plant on lease from Entity Y for 5 years to use in its manufacturing process for which it has to pay annual rentals in arrears of USD 10,000 every year. On the commencement date, exchange rate was USD = ₹ 68. The average rate for Year 1 was ₹ 69 and at the end of year 1, the exchange rate was ₹ 70. The incremental borrowing rate of Entity X on commencement of the lease for a USD borrowing was 5% p.a.

   How will entity X measure the right of use (ROU) asset and lease liability initially and at the end of Year 1?

ANSWERS

1. In this case, the rail wagons are stored at lessor's premises, and it has a large pool of similar rail wagons and substitution costs to be incurred are minimal. Thus, the lessor has the practical ability to substitute the asset. If at any point, the same becomes economically

Join us t.me/caborntofight
Sensitivity: Public (C4)

beneficial for the lessor to substitute the wagons, he can do so and hence, the lessor's substitution rights are substantive, and the arrangement does not contain a lease.

2. In this case, the nature of the solar plant is such that all the decisions about how and for what purpose the asset is used are predetermined because:

– the type of output (i.e. energy) and the production location are predetermined in the agreement; and

– when, whether and how much energy is produced is influenced by the sunlight and the design of the solar plant.

Because M designed the solar plant and thereby predetermined any decisions about how and for what purpose it is used, M is considered to have the right to direct the use. Although regular maintenance of the solar plant may increase the efficiency of the solar panels, it does not give the supplier the right to direct how, and for what purpose the solar plant is used. Hence, M has a right to control the use of asset.

3. The customer has the right to direct the use of the ship because the contractual restrictions are merely protective rights that protect the company's investment in the ship and its personnel. In the scope of its right of use, the customer determines how and for what purpose the ship is used throughout the ten-year period because it decides whether, where and when the ship sails, as well as the cargo that it will transport.

The customer has the right to change these decisions throughout the period of use and hence, the contract contains a lease.

4. The observable stand-alone price for maintenance services is ₹ 2,000. There is no observable stand-alone price for the lease. Further, the insurance cost does not transfer a good or service to the lessee and therefore, it is not a separate lease component.

Thus, the Lessee allocates ₹ 8,000 (₹ 10,000 – ₹ 2,000) to the lease component.

5. After considering all the stated factors, the lessee concludes that it has a significant economic incentive to extend the lease.

Thus, for the purpose of lease accounting under Ind AS 116, the lessee uses a lease term of ten years.

6. The lessee notes that the terms for the optional renewal provide no economic incentive and the cost to install is significant. The lessee has no incentive to make significant modifications to the machine after the initial 15-year period. Therefore, the lessee does not expect to have a business purpose for using the machine after the non-cancellable lease term of 15 years.

Thus, the lessee concludes that the lease term consists of 15-year non-cancellable period only.

 Join us t.me/caborntofight

Sensitivity: Public (C4)

7. The said lease contains in-substance fixed payments of ₹ 2,00,00,000 per year, which are included in the initial measurement of the lease liability under Ind AS 116.

   However, the additional ₹ 2,00,00,000 that the company expects to pay per year are variable payments that do not depend on an index or rate and, thus, are not included in the initial measurement of the lease liability but, are expensed when the over-use occurs.

8. Entity X identifies that the contract contains lease of premises and non-lease component of facilities availed. As Entity X has not elected to apply the practical expedient as provided in paragraph 15, it will separate the lease and non-lease components and allocate the total consideration of ₹ 1,70,000 to the lease and non-lease components in the ratio of their relative stand-alone selling prices as follows:

Particulars	**Stand-alone Prices**	**% of total Stand-alone Price**	**Allocation of consideration**
	₹		₹
Building rent	1,20,000	60%	1,02,000
Service charge	80,000	40%	68,000
Total	**2,00,000**	**100%**	**1,70,000**

As Entity X's incremental borrowing rate is 10%, it discounts lease payments using this rate and the lease liability at the commencement date is calculated as follows:

Year	**Lease Payment (A)**	**Present value factor @ 10% (B)**	**Present value of lease payments (A x B = C)**
Year 1	1,02,000	0.909	92,718
Year 2	1,02,000	0.826	84,252
Year 3	1,02,000	0.751	76,602
Year 4	1,02,000	0.683	69,666
Year 5	1,02,000	0.621	63,342
Year 6	1,02,000	0.564	57,528
Year 7	1,02,000	0.513	52,326
Year 8	1,02,000	0.467	47,634
Year 9	1,02,000	0.424	43,248
Lease Liability at commencement date			**5,87,316**

Further, ₹ 68,000 allocated to the non-lease component of facility used will be recognised in profit or loss as and when incurred.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight
Sensitivity: Public (C4)

9. On initial measurement, Entity X will measure the lease liability and ROU asset as under:

Year	Lease Payments (USD)	Present Value factor @ 5%	Present Value of Lease Payment	Conversion rate (spot rate)	INR value
1	10,000	0.952	9,520	68	6,47,360
2	10,000	0.907	9,070	68	6,16,760
3	10,000	0.864	8,640	68	5,87,520
4	10,000	0.823	8,230	68	5,59,640
5	10,000	0.784	7,840	68	5,33,120
Total			**43,300**		**29,44,400**

As per Ind AS 21 *The Effects of Changes in Foreign Exchange Rates*, monetary assets and liabilities are restated at each reporting date at the closing rate and the difference due to foreign exchange movement is recognised in profit and loss whereas non-monetary assets and liabilities carried measured in terms of historical cost in foreign currency are not restated.

Accordingly, the ROU asset in the given case being a non-monetary asset measured in terms of historical cost in foreign currency will not be restated but the lease liability being a monetary liability will be restated at each reporting date with the resultant difference being taken to profit and loss.

At the end of Year 1, the lease liability will be measured in terms of USD as under:

Lease Liability:

Year	Initial Value (USD) (a)	Lease Payment (b)	Interest @ 5% (c) = (a x 5%)	Closing Value (USD) (d = a + c - b)
1	43,300	10,000	2,165	35,465

Interest at the rate of 5% will be accounted for in profit and loss at average rate of ₹ 69 (i.e., USD 2,165 x 69) = ₹ 1,49,385.

Particulars		Dr. (₹)	Cr. (₹)
Interest Expense	Dr.	1,49,385	
To Lease liability			1,49,385

Lease payment would be accounted for at the reporting date exchange rate, i.e. ₹ 70 at the end of year 1

© The Institute of Chartered Accountants of India

Sensitivity: Public (C4)

Particulars		Dr. (₹)	Cr. (₹)
Lease liability	Dr.	7,00,000	
To Cash			7,00,000

As per the guidance above under Ind AS 21, the lease liability will be restated using the reporting date exchange rate i.e., ₹ 70 at the end of Year 1. Accordingly, the lease liability will be measured at ₹ 24,82,550 (35,465 x ₹ 70) with the corresponding impact due to exchange rate movement of ₹ 88,765 (24,82,550 – (29,44,400 + 1,49,385 – 700,000) taken to profit and loss.

At the end of year 1, the ROU asset will be measured as under:

Year	Opening Balance (₹)	Depreciation (₹)	Closing Balance (₹)
1	29,44,400	5,88,880	23,55,520

OTHER INDIAN ACCOUNTING STANDARDS

UNIT 1: INDIAN ACCOUNTING STANDARD 41: AGRICULTURE

LEARNING OUTCOMES

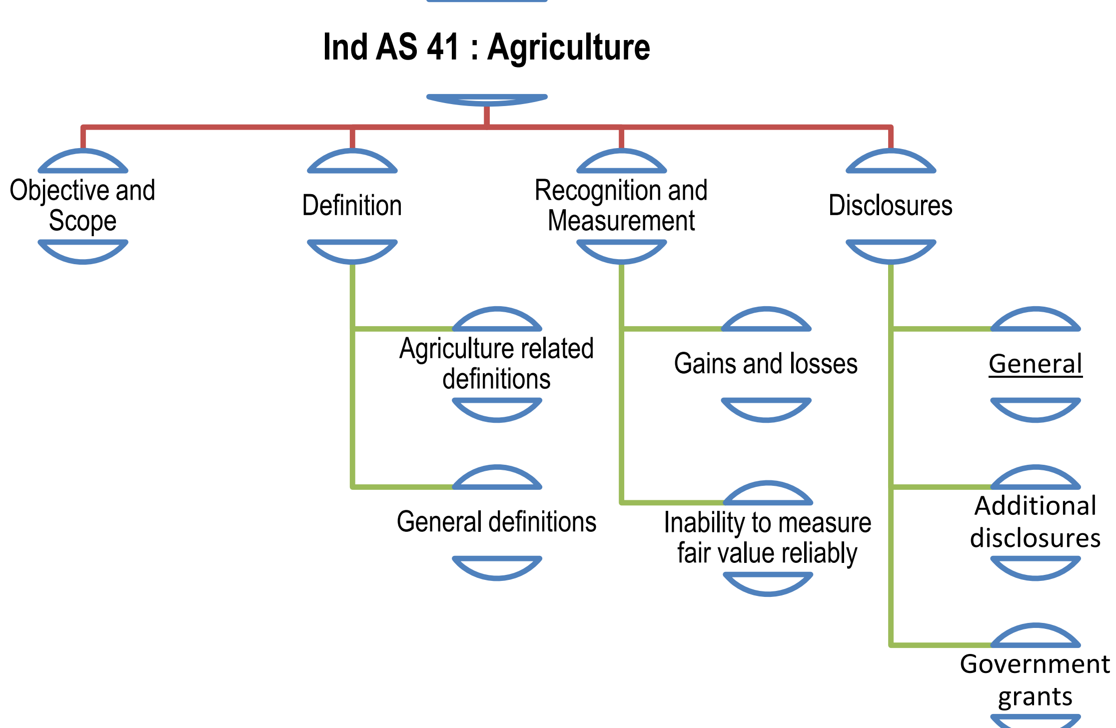
After studying this unit, you will be able to:

- State the objective and scope of the standard
- Define the terms agricultural activity, agricultural produce, bearer plant, biological asset and biological transformation
- Explain the principles of recognition and measurement
- Compute the gain and loss on initial and subsequent measurement
- Account for the grant relating to a biological asset
- List the various disclosures prescribed in this standard

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

UNIT OVERVIEW



Merged By CA - Born To Fight

1.1 INTRODUCTION AND OBJECTIVE

Ind AS 41, Agriculture is the first standard that specifically covers the accounting and reporting requirements for the primary sector. Prior to this standard, there were no established guidance on agriculture and allied industry. This Standard introduces a fair value model to agriculture accounting which is a major shift away from the traditional cost model widely applied in primary industry.

Ind AS 41 Agriculture sets out the accounting for agricultural activity, the management of the transformation of biological assets (living plants and animals) into agricultural produce (harvested product of the entity's biological assets). The standard generally requires biological assets to be measured at fair value less costs to sell.

Ind AS 41 addresses following key critical issues:

(a) When should a biological asset or agricultural produce be recognised on the Balance Sheet?

(b) At what value should a recognised biological asset or agricultural produce be measured?

(c) How should the differences in value of a recognised biological asset or agricultural produce be accounted for between two different reporting dates?

(d) What should be the key disclosures?

1.2 SCOPE

1. This Standard shall be applied to account for the following when they **relate to agricultural activity**:

   (a) biological assets;

   (b) agricultural produce at the point of harvest; and

   (c) government grants

2. **Ind AS 41 does not apply to:**

   (a) land related to agricultural activity : for example, the land on which the biological assets grow, regenerate and/or degenerate (Ind AS 16 *Property, Plant and Equipment* and Ind AS 40 *Investment Property*);

   (b) bearer plants related to agricultural activity. Such bearer plants are covered within the scope of Ind AS 16, Property, plant and Equipment and is accounted as per the provisions of that standard. However, this Standard applies to the produce on those bearer plants.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(c) government grants related to bearer plants (Ind AS 20 *Accounting for Government Grants and Disclosure of Government Assistance*).

(d) intangible assets associated with the agricultural activity, for example licenses and rights are covered under Ind AS 38 *Intangible Assets* and provisions of this standard will be applicable.

(e) right-of-use assets arising from a lease of land related to agricultural activity (Ind AS 116, Leases).

This Standard is applied to agricultural produce, which is the **harvested product** of the entity's biological assets, **only at the point of harvest**. Thereafter, Ind AS 2 or another applicable Standard is applied.

Examples 1 & 2

1. Processing of grapes into wine by a vintner who has grown the grapes. While such processing may be a logical and natural extension of agricultural activity, and the events taking place may bear some similarity to biological transformation, such processing is not included within the definition of agricultural activity in this Standard.
2. Agriculture produces after the point of harvest, for example Wool, meat, fruit, rubber, logs that are processed subsequently are not covered within purview of this standard and Ind AS 2 *Inventories* shall apply.

The table below provides examples of biological assets, agricultural produce, and products that are the result of processing after harvest:

Biological assets	**Agricultural produce**	**Products that are the result of processing after harvest**
Sheep	Wool	Yarn, carpet
Trees in a timber plantation	Felled Trees	Logs, lumber
Dairy Cattle	Milk	Cheese
Pigs	Carcass	Sausages, cured hams
Cotton plants	Harvested cotton	Thread, clothing
Sugarcane	Harvested cane	Sugar
Tobacco plants	Picked leaves	Cured tobacco
Tea bushes	Picked leaves	Tea
Grape vines	Picked grapes	Wine
Fruit trees	Picked fruit	Processed fruit
Rubber trees	Harvested latex	Rubber products

© The Institute of Chartered Accountants of India

Some plants, for example, tea bushes, grape vines, oil palms and rubber trees, usually meet the definition of a bearer plant and are within the scope of Ind AS 16, *Property, plant and Equipment*. However, the produce growing on bearer plants, for example, tea leaves, grapes, oil palm fruit and latex, are within the scope of Ind AS 41.

1.3 RELEVANT DEFINITIONS

The following are the key Agriculture-related definitions:

(a) **Agricultural activity** refers to the management by an entity of the biological transformation and harvest of biological assets for sale or for conversion into agricultural produce or into additional biological assets.

The standard states that 'agricultural activity' covers a wide range of activities, e.g. 'raising livestock, forestry, annual or perennial cropping, cultivating orchards and plantations, floriculture, and aquaculture (including fish farming)'. Nevertheless, these agricultural activities have certain common features:

I. **Capability to change** Living animals and plants are capable of biological transformation;

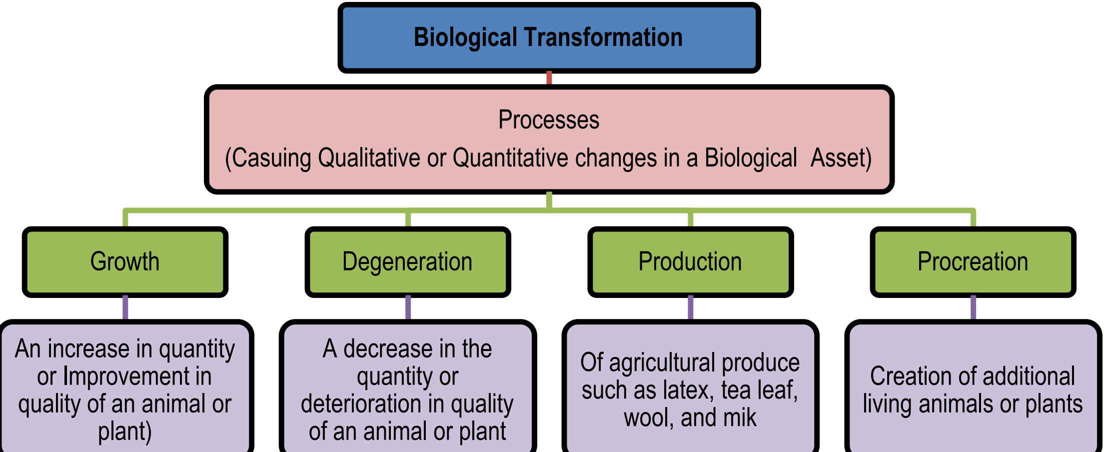
II. **Management of change** Management facilitates biological transformation by enhancing, or at least stabilising, conditions necessary for the process to take place (for example, nutrient levels, moisture, temperature, fertility, and light). Such management distinguishes agricultural activity from other activities. For example, harvesting from unmanaged sources (such as ocean fishing and deforestation) is not agricultural activity; and

III. **Measurement of change** The change in quality (for example, genetic merit, density, ripeness, fat cover, protein content, and fibre strength) or quantity (for example, progeny, weight, cubic metres, fibre length or diameter, and number of buds) brought about by biological transformation or harvest is measured and monitored as a routine management function.

Ind AS 41 does not deal with the processing of agricultural produce after harvest. The standard makes it clear that, even if the processing is considered 'a logical and natural extension of agricultural activity, and the events taking place bear some similarity to biological transformation, such processing is not included within the definition of agricultural activity'. For example, the process of brewing beer – in which yeast (a fungus) converts sugars into alcohol – would not meet the definition of agricultural activity in the standard. Similarly, cheese production would fall outside the definition of agricultural activity.

(b) **Biological Asset** is defined as a living animal or plant.

(c) **Biological transformation** comprises the processes of growth, degeneration, production, and procreation that cause qualitative or quantitative changes in biological asset.



(d) **Agricultural produce** is the harvested product of the entity's biological assets.

Ind AS 41 only applies to agricultural produce (i.e. harvested produce) at the point of harvest; not prior or subsequent to harvest. Under Ind AS 41, unharvested agricultural produce is considered to be part of the biological asset from which it will be harvested. Therefore, before harvest, agricultural produce should not be accounted for separately from the biological asset from which it comes. For example, milk is accounted for as part of the dairy cow right up to the moment at which the cow is milked.

Subsequent to harvest, agricultural produce is accounted for under Ind AS 2 or another standard, if applicable. Under Ind AS 2, agricultural produce is initially recognised as inventory at its fair value less costs to sell (measured in accordance with Ind AS 41), which becomes its cost for Ind AS 2 purposes.

(e) **Harvest** is the detachment of produce from a biological asset or the cessation of a biological asset's life processes.

(f) **Fair Value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (The definition of Fair value is as given in Ind AS 113, Fair Value Measurement)

(g) **Costs to sell** are the incremental costs directly attributable to the disposal of an asset, excluding finance costs and income taxes. Therefore, of all the costs that are necessary for a sale to occur, costs to sell include those that would otherwise not arise. Examples of costs to sell could include brokers' and dealers' commissions, levies by regulatory agencies and commodity exchanges, transfer taxes and duties.

(h) **Bearer plant** may be defined as a living plant that:

i. is used in the production or supply of agricultural produce;

ii. is expected to bear produce for more than one period; and

iii. has a remote likelihood of being sold as agricultural produce, except for incidental scrap sales.

All of the above criteria need to be met for a plant to be considered a bearer plant.

The definition captures plants that would intuitively be considered to be bearers, for instance, grape vines. Some plants that may appear to be consumable, such as the root systems of perennial plants (e.g. sugar cane, bamboo or asparagus), but due to the perennial nature of their root systems, they are expected to meet the definition of a bearer plant.

Annual crops and other plants that are held solely to be harvested as agricultural produce (e.g. many traditional arable crops such as maize, wheat and soya, as well as trees grown for lumber), are explicitly excluded from the definition of a bearer plant. In addition, plants that have a dual use (i.e. plants cultivated to bear agricultural produce, but for which there is more than remote likelihood that the plant itself will be harvested and sold as agricultural produce, beyond incidental scrap sales) are not bearer plants. This may be the case when, for example, an entity holds rubber trees to sell both the latex as agricultural produce and the trees as lumber.

For example, tea bushes, grape vines, oil palms and rubber trees, usually meet the definition of a bearer plant and are outside the scope of Ind AS 41 and covered under Ind AS 16.

However, produce growing on bearer plant is a biological asset.

This is important to note here that animals are not covered in the definition of the bearer plants. For example, Sheep, Cows etc are not bearer plants.

Illustration 1

ABC Ltd grows vines, harvests the grapes and produces wine. Which of these activities are in the scope of Ind AS 41?

Solution

The grape vines are bearer plants that continually generate crops of grapes which are covered by Ind AS 16, *Property, Plant and Equipment*.

When the entity harvests the grapes, their biological transformation ceases and they become agricultural produce covered by Ind AS 41, *Agriculture*.

Wine involves a lengthy maturation period. This process is similar to the conversion of raw materials to a finished product rather than biological transformation hence treated as inventory in accordance with Ind AS 2, *Inventories*.

1.4 RECOGNITION OF ASSETS

Entities are required to recognise a biological asset or agricultural produce when, and only when, all of the following conditions are met:

a) the entity controls the asset as a result of past events;

Control over biological assets or agricultural produce may be evidenced by legal ownership or rights to control, for example legal ownership of cattle and the branding or otherwise marking of the cattle on acquisition, birth, or weaning.

b) it is probable that future economic benefits associated with the asset will flow to the entity; and

Future economic benefits are expected to flow to the enterprise from its ownership or control of the asset. The future benefits are normally assessed by measuring the significant physical attributes.

c) the fair value or cost of the asset can be measured reliably.

1.5 MEASUREMENT

Biological Asset should be measured on initial recognition and at the end of each reporting period at its fair value less costs to sell, except for the case where the fair value cannot be measured reliably.

There is a presumption that fair value can be measured reliably for a biological asset. In the following cases biological asset should be measured at its cost less any accumulated depreciation and any accumulated impairment losses in accordance with Ind AS 2, Ind AS 16 and Ind AS 36:

- quoted market prices are not available for the biological assets and;
- alternative fair value measurements are determined to be clearly unreliable.

Once the fair value of such a biological asset becomes reliably measurable, an entity shall measure it at its Fair value less costs to sell.

The presumption can be rebutted only on initial recognition. An entity that has previously measured a biological asset at its fair value less costs to sell continues to measure the biological asset at its fair value less costs to sell until disposal.

In all cases, an entity measures agricultural produce at the point of harvest at its fair value less costs to sell. This Standard reflects the view that the fair value of agricultural produce at the point of harvest can always be measured reliably.

Merged By CA - Born To Fight

Agricultural produce harvested from an entity's biological assets should be measured at its fair value less costs to sell at the point of harvest. Such measurement is the cost at that date when applying Ind AS 2 or another applicable Standard.

The fair value measurement of a biological asset or agricultural produce may be facilitated by grouping biological assets or agricultural produce according to significant attributes; for example, by age or quality. An entity selects the attributes corresponding to the attributes used in the market as a basis for pricing.

The fair value less cost to sell of a biological asset can change due to both physical changes and price changes in the market.

Entities often enter into contracts to sell their biological assets or agricultural produce at a future date. Contract prices are not necessarily relevant in measuring fair value, because fair value reflects the current market conditions in which market participant buyers and sellers would enter into a transaction. As a result, the fair value of a biological asset or agricultural produce is not adjusted because of the existence of a contract.

Cost may sometimes approximate fair value, particularly when:

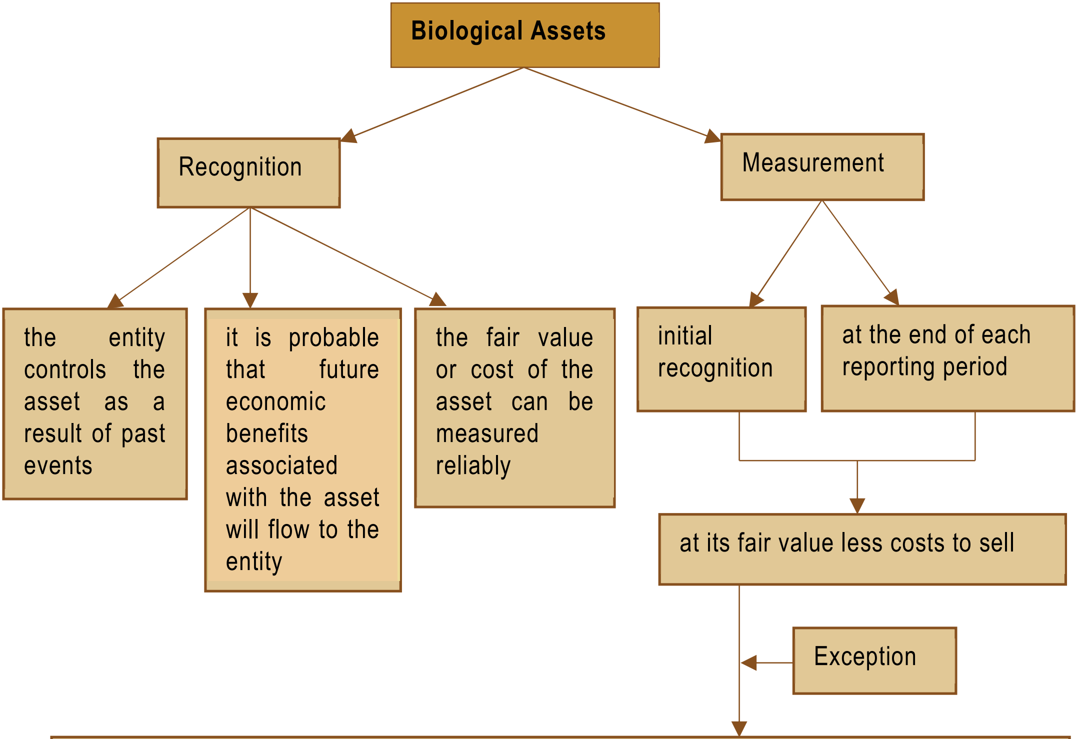
a) little biological transformation has taken place since initial cost incurrence (for example, for fruit tree seedlings planted immediately prior to the end of a reporting period or newly acquired livestock); or

b) the impact of the biological transformation on price is not expected to be material (for example, for the initial growth in a 30-year pine plantation production cycle)

Biological assets are often physically attached to land (for example, trees in a plantation forest). There may be no separate market for biological assets that are attached to the land but an active market may exist for the combined assets, that is, the biological assets, raw land, and land improvements, as a package. An entity may use information regarding the combined assets to measure the fair value of the biological assets. For example, the fair value of raw land and land improvements may be deducted from the fair value of the combined assets to arrive at the fair value of biological assets.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight



This presumption **can be rebutted only on initial recognition for a biological asset** when

a. quoted market prices are not available and

b. alternative fair value measurements determined are clearly unreliable.

In such a case, it shall be **measured at its cost less any accumulated depreciation and any accumulated impairment losses**.

Note: Once the fair value of such a biological asset becomes reliably measurable, an entity shall measure it at its fair value less costs to sell.

Note:

Once a **non-current** biological asset meets the criteria to be classified as held for sale (or is included in a disposal group that is classified as held for sale) as per Ind AS 105, it is presumed that fair value can be measured reliably.

Illustration 2

A farmer owned a dairy herd, of three years old cattle as at 1st April, 20X1 with a fair value of ₹ 13,750 and the number of cattle in the herd was 250.

The fair value of three-year cattle as at 31st March, 20X2 was ₹ 60 per cattle. The fair value of four-year cattle as at 31st March, 20X2 is ₹ 75 per cattle.

Calculate the measurement of group of cattle as at 31st March, 20X2 stating price and physical change separately.

Solution

Particulars	Amount (₹)
Fair value as at 1st April, 20X1	13,750
Increase due to Price change [250 x {60 - (13,750/250)}]	1,250
Increase due to Physical change [250 x {75-60}]	3,750
Fair value as at 31st March, 20X2	18,750

At the end of reporting period 31st March 20X2

Biological Asset (Cattle A/c)	Dr.	5,000	
To Gain – Change in value (P/L A/c)			5,000

(Being change in value of Cattle recognised at the end of the reporting period)

*****

Illustration 3

XYZ Ltd., on 1st December, 20X3, purchased 100 sheep from a market for ₹ 5,00,000. The transaction cost of 2% on the market price of the sheep was incurred which was paid by the seller. Sheep's fair value increased from ₹ 500,000 to ₹ 600,000 on 31st March, 20X4. Transaction cost of 2% would have to be incurred by the seller to get the sheep to the relevant market.

Determine the fair value on the date of purchase and the reporting date and pass necessary journal entries thereon.

Solution

The fair value less cost to sell of sheep's on the date of purchase would be ₹ 4,90,000 (5,00,000-10,000). Expense of ₹ 10,000 would be recognised in profit and loss.

On date of Purchase

Biological Asset	Dr.	4,90,000	
Loss on initial recognition	Dr.	10,000	
To Bank			5,00,000

(Being biological asset purchased)

On 31st March, 20X4 sheep would be measured at ₹ 5,88,000 as Biological Asset (6,00,000-12,000) and gain of ₹ 98,000 (5,88,000 - 4,90,000) would be recognised in profit or loss.

At the end of reporting period

Biological Asset	Dr.	98,000	
To Gain – Change in fair value			98,000

(Being change in fair value recognised at the end of reporting period)

*****

1.6 GAINS AND LOSSES

1) Biological Asset:

A gain or loss arising on initial recognition of a Biological Asset at Fair value less costs to sell and from a change in Fair value less costs to sell of a biological asset shall be included in Profit or Loss for the period in which it arises.

A loss may arise on initial recognition of a biological asset, because cost to sell are deducted in determining fair value less cost to sell of a biological asset. A gain may arise on initial recognition of a biological asset, such as when a calf is born.

Example 3

During the reporting period 20X1-20X2, an entity is having a cow which has given birth to a calf. The fair value less estimated cost to sell for a calf is ₹ 5,000. The amount of ₹ 5,000 is, therefore, immediately recognised in the Statement of Profit and Loss.

2) Agriculture Produce:

A gain or loss arising on initial recognition of agricultural produce at fair value less costs to sell shall be included in profit or loss for the period in which it arises.

A gain or loss may arise on initial recognition of agricultural produce as a result of harvesting.

1.7 GOVERNMENT GRANTS

1) **Biological Asset measured at fair value less cost to sell:**

a) **Unconditional Grant:**

An unconditional government grant related to a biological asset measured at its fair value less costs to sell shall be recognised in profit or loss when, and only when, the government grant becomes receivable.

b) **Conditional Grant:**

If a government grant related to a biological asset measured at its fair value less costs to sell is conditional, including when a government grant requires an entity not to engage in specified agricultural activity, an entity shall recognise the government grant in profit or loss when, and only when, the conditions attaching to the government grant are met.

Terms and conditions of government grants vary. For example, a grant may require an entity to farm in a particular location for five years and require the entity to return the entire grant if it farms for a period shorter than five years. In this case, the grant is not recognised in profit or loss until the five years have passed. However, if the terms of the grant allow part of it to be retained according to the time elapsed, the entity recognises that part in profit or loss as time passes.

Example 4

Sun Ltd cultivated a huge plot of land. The government offers a grant of ₹ 10 crore under the condition that the land is being cultivated for 5 years. If the land will be cultivated for a shorter period, the entity is required to return the entire grant.

Therefore, the government grant will be recognised as income only after 5 years of cultivation. The situation would be different if the returning obligation referred to the years of not cultivating the land is with respect to retention of grant for the period till which the entity has cultivated the land. In this case, the amount of ₹ 10 crore would be recognised as income, proportionately with the time period, meaning ₹ 2 crore per annum.

2) **Biological Asset measured at its cost:**

If a government grant relates to a Biological Asset measured at its cost less any accumulated depreciation and any accumulated impairment losses i.e. (i.e. inability to measure fair value reliably), Ind AS 20 is applied.

© The Institute of Chartered Accountants of India

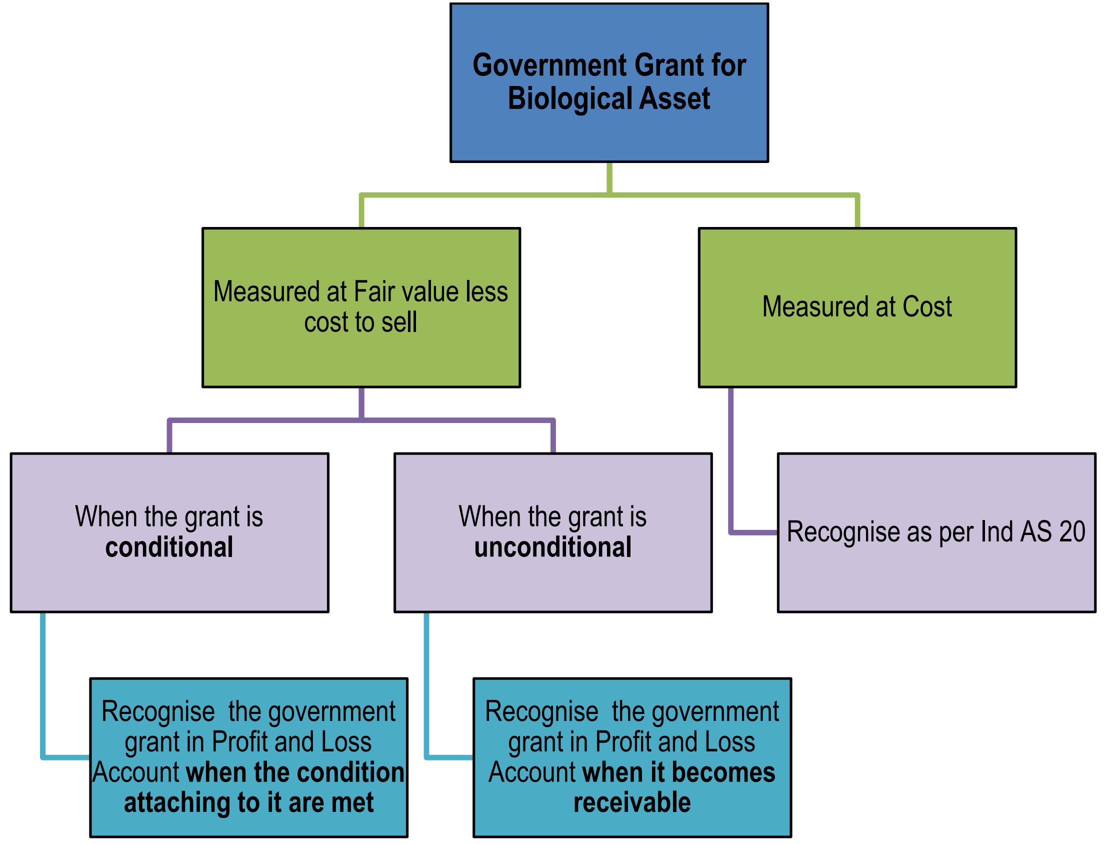

Illustration 4

Agro Foods Ltd. runs a poultry farm business. It has received a government grant from the government for setting up a new poultry unit in a backward area. Agro Foods Ltd used the amount of government grants to buy the first batch of broiler birds, incubators etc. The broiler birds are measured at fair value less costs to sell. However, the incubator machine is measured as per the cost model in Ind AS 16.

As such there are no conditions attached to the release of the government grants pertaining to purchase of poultry birds. However, as regards the investment in incubators and other related plant and machinery items, the government grant contains a condition that the plant and machinery item should be used for a minimum period of 3 years. The useful life of the incubator machine has also been determined to be 3 years in accordance with the management estimate of the time period over which the economic benefits embedded in the incubator machine shall be consumed.

Advise the accounting requirements prescribed in Ind AS 41 Agriculture and Ind AS 20 Accounting for Government Grants and Disclosure of Government Assistance in respect of both the government grants?

Solution

Ind AS 41 requires an unconditional government grant related to a biological asset measured at its fair value less costs to sell to be recognised in profit or loss when, and only when, the government grant becomes receivable. Accordingly, the amount of government grant attributable to the broiler birds which qualify as a biological bird shall be recognized in profit or loss account when the grant becomes receivable.

If a government grant is conditional, including when a government grant requires an entity not to engage in specified agricultural activity, an entity should recognize the government grant in profit or loss when, and only when, the conditions attaching to the government grant are met. This provision of Ind AS 41 is not applicable as we have been informed that there are no conditions attached to the release of the government grant pertaining to broiler birds. In the given case, the grant related to broiler birds has already been received for the purpose of providing immediate financial support to the entity with no future related conditions to be fulfilled. Accordingly, the grant relating to broiler birds is to be recognized in profit and loss in the period in which it is received.

If a government grant relates to a biological asset measured at its cost less any accumulated depreciation and any accumulated impairment losses, the entity applies Ind AS 20 Accounting for Government Grants and Disclosure of Government Assistance. The incubator machine does not qualify as a biological asset as it is specifically covered by Ind AS 16 which states that plant and machinery items used to develop or maintain biological assets is covered by Ind AS 16. Therefore, the provisions relating to Government grants contained in Ind AS 41 will not apply to the incubator machine. Therefore, we have to apply directly the provisions contained in IAS 20. Ind AS 20 contains two methods of presentation in financial statements of grants (or the appropriate portions of grants) related to assets are regarded as acceptable alternatives:

- One method recognises the grant as deferred income that is recognized in profit or loss on a systematic basis over the useful life of the asset.
- The other method deducts the grant in calculating the carrying amount of the asset. The grant is recognized in profit or loss over the life of a depreciable asset as a reduced depreciation expense.

Therefore, the grant relating to incubator machine will have to be accounted as a deferred income that is recognized in Profit or loss on a systematic basis over a period of 3 years in line with the condition attached to the grant. Alternatively, the grant may be deducted in determining the carrying amount of the incubator. In such a case the grant is recognised in Profit or Loss over the 3-year useful life of the depreciable incubator machine as a reduced depreciation expense.

1.8 DISCLOSURE

1) Description of biological assets and activities.

The entity is required to provide a description of each group of biological assets. This disclosure may take the form of a narrative or quantified description. An entity is encouraged to provide a quantified description of each group of biological assets, distinguishing between consumable and bearer biological assets or between mature and immature biological assets, as appropriate.

2) Gains and losses recognised during the period.

An entity shall disclose the aggregate gain or loss arising during the current period on initial recognition of biological assets and agricultural produce and from the change in fair value less costs to sell of biological assets.

3) Reconciliation of changes in biological assets.

A detailed reconciliation is required of changes in the carrying amount of biological assets between the beginning and the end of the current period, which includes:

a) gain or loss arising from changes in fair value less costs to sell;

b) increases arising from purchases;

c) decreases attributable to sales and biological assets classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with Ind AS 105;

d) decreases due to harvest;

e) increases resulting from business combinations;

f) net exchange differences arising on the translation of financial statements into a different presentation currency, and on the translation of a foreign operation into the presentation currency of the reporting entity; and

g) other changes.

4) Restricted assets, commitments and risk management strategies.

The entity should disclose:

a) the existence and carrying amounts of biological assets whose title is restricted, and the carrying amounts of biological assets pledged as security for liabilities;

Join us t.me/caborntofight

b) the amount of commitments for the development or acquisition of biological assets; and

c) financial risk management strategies related to agricultural activity.

5) Additional disclosures when fair value cannot be measured reliably.

If biological assets within the scope of Ind AS 41 are measured at cost less any accumulated depreciation and any accumulated impairment losses at the end of the period, the following disclosures are required:

a) a description of the biological assets;

b) an explanation of why fair value cannot be measured reliably;

c) the range of estimates within which fair value is highly likely to lie;

d) the depreciation method used;

e) the useful lives or the depreciation rates used; and

f) the gross carrying amount and the accumulated depreciation and impairment losses at the beginning and end of the period.

6) Government grants

The following disclosures are required for government grants relating to agricultural activity:

a) the nature and extent of government grants recognised;

b) unfulfilled conditions and other contingencies attaching to government grants; and

c) significant decreases expected in the level of government grants.

Illustration 5

Moon Ltd prepares financial statements to 31st March, each year. On 1st April 20X1 the company carried out the following transactions:

-- *Purchased a land for ₹ 50 Lakhs.*

-- *Purchased 200 dairy cows (average age at 1st April, 20X1 is 2 years) for ₹ 10 Lakhs.*

-- *Received a grant of ₹ 1 million towards the acquisition of the cows. This grant was non-refundable.*

For the year ending 31st March, 20X2, the company has incurred following costs:

-- *₹ 6 Lakh to maintain the condition of the animals (food and protection).*

-- *₹ 4 Lakh as breeding fee to a local farmer.*

On 1st October, 20X1, 100 calves were born. There were no other changes in the number of animals during the year ended 31st March, 20X2. As of 31st March, 20X2, Moon Ltd had 3,000 litres of unsold milk in inventory. The milk was sold shortly after the year end at market prices.

Information regarding fair values is as follows:

Item	Fair Value less cost to sell		
	1st April, 20X1	1st October, 20X1	31st March, 20X2
	₹	₹	₹
Land	50 Lakhs	60 Lakhs	70 Lakhs
New born calves (per calf)	1,000	1,100	1,200
Six month old calves (per calf)	1,100	1,200	1,300
Two year old cows (per cow)	5,000	5,100	5,200
Three year old cows (per cow)	5,200	5,300	5,500
Milk (per litre)	20	22	24

Prepare extracts from the Balance Sheet and Statement of Profit and Loss that would be reflected in the financial statements of the entity for the year ended 31st March, 20X2.

Solution

Extract from the Statement of Profit & Loss

	WN	Amount
Income		
Change in fair value of purchased dairy cow	WN 2	1,00,000
Government Grant	WN 3	10,00,000
Change in the fair value of newly born calves	WN 4	1,30,000
Fair Value of Milk	WN 5	72,000
Total Income		13,02,000
Expenses		
Maintenance Costs	WN 2	6,00,000
Breeding Fees	WN 2	4,00,000
Total Expense		(10,00,000)
Net Income		3,02,000

Extracts from Balance Sheet

Property, Plant and Equipment:		
Land	WN 1	50,00,000
Biological assets other than bearer plants:		
Dairy Cow	WN 2	11,00,000
Calves	WN 4	1,30,000
		62,30,000
Inventory:		
Milk	WN 5	72,000
		72,000

Working Notes:

1. **Land:** The purchase of the land is not covered by Ind AS 41. The relevant standard which would apply to this transaction is Ind AS 16. Under this standard the land would initially be recorded at cost and depreciated over its useful economic life. This would usually be considered to be infinite in the case of land and so no depreciation would be appropriate. Under Cost Model no recognition would be made for post-acquisition changes in the value of land. The allowed alternative treatment under Revaluation Model would permit the land to be revalued to market value with the revaluation surplus taken to the other comprehensive income. We have followed the Cost Model.

2. **Dairy Cows:** Under the 'fair value model' laid down in Ind AS 41 the mature cows would be recognised in the Balance Sheet at 31st March, 20X2 at the fair value of 200 x ₹ 5,500 = ₹ 11,00,000.

   Increase in price change 200 x (5,200-5,000) = 40,000

   Increase in physical change 200 x (5,500-5,200) = 60,000

   The total difference between the fair value of matured herd and its initial cost (₹ 11,00,000 – ₹ 10,00,000 = a gain of ₹ 1,00,000) would be recognised in the profit and loss along with the maintenance costs and breeding fee of ₹ 6,00,000 and ₹ 4,00,000 respectively.

3. **Grant:** Grant relating to agricultural activity is not subject to the normal requirement of Ind AS 20. Under Ind AS 41 such grants are credited to income as soon as they are unconditionally receivable rather than being recognised over the useful economic life of the herd. Therefore, ₹ 10,00,000 would be credited to income of the company.

4. **Calves:** They are a biological asset, and the fair value model is applied. The breeding fees

are charged to income and an asset of 100 x ₹ 1,300 = ₹ 1,30,000 recognised in the Balance Sheet and credited to Profit and Loss.

5. **Milk:** This is agricultural produce and initially recognised on the same basis as biological assets. Thus the milk would be valued at 3,000 x ₹ 24 = ₹ 72,000. This is regarded as 'cost' for the future application of Ind AS 2 to the unsold milk.

ACCOUNTING POLICY

Biological Assets

The Company recognises biological assets only when, the Company controls the assets as a result of past events, it is probable that future economic benefits associated with such assets will flow to the Company. Biological assets of the Company are in the nature of Consumable Biological Assets. It is bifurcated into Brood Stock, (the Parents) and harvested species which undergo biological transformation under different stages as nauplius, Zoea, Mysis and Post Larvae. The Company sells the biological assets harvested from brood stock at nauplius and Post Larvae Stages. The Brood Stock has a maximum useful life of 6 months for laying eggs, and thereafter these are destroyed.

The valuation of the Brood stock biological assets are determined on the following basis:

Brood stock are used for captive consumption or to support farmers, it cannot be sold before the end of its useful life and as such, there is no active market. Other references to market prices such as market prices for similar assets are also not available due to the uniqueness of the breed. Valuation based on a discounted cash flow method is considered to be unreliable given the uncertainty with respect to mortality rates and production. Consequently, brood stock and Shrimp seed (Different stages) are measured at cost, less depreciation and impairment losses.

The transmission phase from nauplius to Zoea and Mysis are not considered as significant transformation of biological asset and hence Zoea and Mysis are not valued as per Ind AS 41.

The Company recognises other biological assets at the fair value or cost of the assets that can be measured reliably. Expenditure incurred on biological assets are measured on initial recognition and at the end of each reporting period at its fair value less costs to sell. The gain or loss arising from a change in fair value less costs to sell the biological assets are included in Statement of Profit and Loss for the period in which it arises.

Management estimates the fair value less costs to sell of biological assets, taking into account the most reliable evidence available at each reporting date. The future realization of these biological assets may be affected by their survival rate, age and / or other market - driven changes that may reduce the future economic benefits associated with such assets. The fair value is arrived at based on the observable market prices of biological assets adjusted for cost to sells, as applicable.

Questions

1. Entity A purchased cattle at an auction on 30th June 20X1

Purchase price at 30th June 20X1	₹ 1,00,000
Costs of transporting the cattle back to the entity's farm	₹ 1,000
Sales price of the cattle at 31st March, 20X2	₹ 1,10,000

The company would have to incur similar transportation costs if it were to sell the cattle at auction, in addition to an auctioneer's fee of 2% of sales price. The auctioneer charges 2% of the selling price, from both, the buyer as well as the seller.

Calculate the amount at which cattle is to be recognised in books on initial recognition and at year end 31st March, 20X2. Show corresponding journal entries.

2. XY Ltd. is a farming entity where cows are milked on a daily basis. Milk is kept in cold storage immediately after milking and sold to retail distributors on a weekly basis. On 1st April 20X1, XY Ltd. had a herd of 500 cows which were all three years old.

During the year, some of the cows became sick and on 30th September 20X1, 20 cows died. On 1st October 20X1, XY Ltd. purchased 20 replacement cows from the market for ₹ 21,000 each. These 20 cows were all one-year old when they were purchased.

On 31st March 20X2, XY Ltd. had 1,000 litres of milk in cold storage which had not been sold to retail distributors. The market price of milk at 31st March 20X2 was ₹ 20 per litre. When selling the milk to distributors, XY Ltd. incurs selling costs of ₹ 1 per litre. These amounts did not change during March 20X2 and are not expected to change during April 20X2.

Information relating to fair value and costs to sell is given below:

Date	Fair value of a dairy cow (aged)				Costs to sell a cow
	1 year	1.5 years	3 years	4 years	
1st April 20X1	20,000	22,000	27,000	25,000	1,000
1st October 20X1	21,000	23,000	28,000	26,000	1,000
31st March 20X2	21,500	23,500	29,000	26,500	1,100

The fair value of a 3.5 years old cow on 1st October 20X1 is ₹ 27,000.

Pass necessary journal entries of above transactions with respect to cows in the financial statements of XY Ltd. for the year ended 31st March, 20X2? Also show the amount lying in inventory if any.

3. Company X purchased 100 goats at an auction for ₹ 1,00,000 on 30th September 20X1. Subsequent transportation costs were ₹ 1,000 that is similar to the cost X would have to incur to sell the goat at the auction. Additionally, there would be a 2% selling fee on the market price of the goat to be incurred by the seller.

On 31st March 20X2, the market value of the goat in the most relevant market increases to ₹ 1,10,000. Transportation costs of ₹ 1,000 would have to be incurred by the seller to get the goat to the relevant market. An auctioneer's fee of 2% on the market price of the goat would be payable by the seller.

On 1st June 20X2, X sold 18 goats for ₹ 20,000 and incurred transportation charges of ₹ 150. In addition, there was a 2% auctioneer's fee on the market price of the goat paid by the seller.

On 15th September 20X2, the fair value of the remaining goat was ₹ 82,820. 42 goats were slaughtered on that day, with a total slaughter cost of ₹ 4,200. The total market price of the carcasses on that day was ₹ 48,300, and the expected transportation cost to sell the carcasses is ₹ 420. No other costs are expected.

On 30th September 20X2, the market price of the remaining 40 goat was ₹ 44,800. The expected transportation cost is ₹ 400. Also, there would be a 2% auctioneer's fee on the market price of the goat payable by the seller.

Pass Journal entries for the initial and subsequent measurement for all above transactions. Interim reporting periods are of 30th September and 31 March and the company determines the fair values on these dates for reporting.

Join us t.me/caborntofight

4. On 1st November, 20X1, C Agro Ltd. purchased 100 goats of special breed from a market for ₹ 10,00,000 with a transaction cost of 2%. Goats fair value decreased from ₹ 10,00,000 to ₹ 9,00,000 as on 31st March, 20X2.

   Determine the fair value on the date of purchase and as on financial year ended 31st March, 20X2 under both the cases viz-

   (i) the transaction costs are borne by the seller and

   (ii) the transaction costs are incurred by the seller and purchaser both

   Also pass journal entries under both the situations on both dates.

5. Analyse whether the following activities fall within the scope of Ind AS 41 with proper reasoning:

   - Managing animal-related recreational activities like Zoo
   - Fishing in the ocean
   - Fish farming
   - Development of living organisms such as cells, bacteria and viruses
   - Growing of plants to be used in the production of drugs
   - Purchase of 25 dogs for security purpose of the company's premises.

Answers

1. **Initial recognition of cattle**

	₹
Fair value less costs to sell (₹ 1,00,000 – ₹ 1,000 - ₹ 2,000)	97,000
Cash outflow (₹ 1,00,000 + ₹ 1,000 + ₹ 2,000)	1,03,000
Loss on initial recognition	6,000
Cattle Measurement at year end	
Fair value less costs to sell (₹ 1,10,000 – 1,000 – (2% x 1,10,000))	1,06,800

At 31st March, 20X2, the cattle is measured at ₹ 1,06,800 i.e. fair value less cost to sell (transportation ₹ 1,000 and the estimated auctioneer's fee of ₹ 2,200). The estimated transportation costs of getting the cattle to the auction of ₹ 1,000 are deducted from the sales price in determining fair value.

1st October 20X1	20	1 year	21,000	1,000	20,000	4,00,000
						1,28,80,000
31st March 20X2	480	4 years	26,500	1,100	25,400	1,21,92,000
	20	1.5 years	23,500	1,100	22,400	4,48,000
						1,26,40,000

3. Value of goat at initial recognition (30th September 20X1) **(All figures are in ₹)**

Biological asset (goat)	Dr.	97,000*	
Loss on initial recognition	Dr.	4,000	
To Bank (Purchase and cost of transportation on purchase paid by buyer)			1,01,000
(Initial recognition of goat at fair value less costs to sell)			

*Fair value of goat = 1,00,000 – 1,000 – 2,000 (2% of 1,00,000) = 97,000

Subsequent measurement at 31st March 20X2 **(All figures are in ₹)**

Biological Assets (Goat)	Dr.	9,800	
To Gain on Sale (Profit & Loss)			9,800
(Subsequent measurement of Goat at fair value less costs to sell (1,06,800** – 97,000))			

** Fair value of goat = 1,10,0000 – 1,000 – 2,200 (2% of 1,10,000) = 1,06,800

Join us t.me/caborntofight

Sale of goat on 1st June 20X2 **(All figures are in ₹)**

Biological Assets (Goats)	Dr.	226	
To Gain on Sale (Profit & Loss)			226
(Subsequent re-measurement of 18 goats at fair value less costs to sell just prior to the point at which they are sold [19,450 - {(1,06,800/100) x 18}])			
Cost to Sales (20,000 – 400 {i.e. 2% of 20,000} – 150)	Dr.	19,450	
To Biological Assets (Goats)			19,450
(Recording a cost of sales figure separately with a corresponding reduction in the value of the biological assets)			
Bank	Dr.	19,450	
Selling expenses (150 + 400)	Dr.	550	
To Revenue			20,000
(Recognition of revenue from sale of goat)			

Transfer of Goat to Inventory on 15th September 20X2 **(All figures are in ₹)**

Inventory (48,300 - 420)	Dr.	47,880	
Loss on remeasurement	Dr.	1,176	
To Biological Asset (Goats)			44,856#
To Bank (Slaughtering cost)			4,200
(Transfer of goat to inventory)			

#Note: 44,856 is calculated as the proportion of goat sold using the fair value [(1,06,800+ 226 – 19,450) x 42/82]

Subsequent measurement of goat at 30th September 20X2 **(All figures are in ₹)**

Biological Asset (Goats)	Dr.	784	
To Gain on remeasurement			784
(Subsequent measurement of goat at fair value less costs to sell [43,504## – {(1,06,800 + 226 – 19,450) – 44,856}]			

##Fair value of goat = 44,800 – 400 – 896 (2% of 44,800) = 43,504.

4. As per para 12 of Ind AS 41, a biological asset shall be measured on initial recognition and at the end of each reporting period at its fair value less costs to sell. Therefore, regardless of who bears the transaction costs, the transaction costs of 2% are the costs to sell the goats on 1st November 20X1, and therefore, the goats should be measured at their fair value less costs to sell on initial recognition date, i.e., ₹ 9,80,000.

© The Institute of Chartered Accountants of India

Journal Entry

As on 1st November 20X1:

(h) Where transaction costs are borne by the seller:

Biological assets (Goats) A/c	Dr.	9,80,000	
Loss on purchase of biological assets (Goats) A/c	Dr.	20,000	
To Bank A/c			10,00,000

(ii) Where transaction costs are borne by the seller and buyer both:

Biological assets (Goats) A/c	Dr.	9,80,000	
Loss on purchase of biological asset (Goats) A/c	Dr.	40,000	
To Bank A/c			10,20,000

As on 31st March 20X2 – under both the scenarios:

Loss on fair valuation of biological assets A/c	Dr.	98,000	
To Biological assets (Goats) A/c			98,000

[9,80,000 - (9,00,000 - 18,000)]

5.

Activity	**Whether in the scope of Ind AS 41?**	**Remarks**
Managing animal-related recreational activities like Zoo	No	Since the primary purpose is to show the animals to public for recreational purposes, there is no management of biological transformation but simply control of the number of animals. Hence it will not fall in the purview of considered in the definition of agricultural activity.
Fishing in the ocean	No	Fishing in ocean is harvesting biological assets from unmanaged sources. There is no management of biological transformation since fish grow naturally in the ocean. Hence, it will not

© The Institute of Chartered Accountants of India

		fall in the scope of the definition of agricultural activity.
Fish farming	Yes	Managing the growth of fish and then harvest for sale is agricultural activity within the scope of Ind AS 41 since there is management of biological transformation of biological assets for sale or additional biological assets.
Development of living organisms such as cells, bacteria viruses	Analysis required	The development of living organisms for research purposes does not qualify as agricultural activity, as those organisms are not being developed for sale, or for conversion into agricultural produce or into additional biological assets. Hence, development of such organisms for the said purposes does not fall under the scope of Ind AS 41. However, if the organisms are being developed for sale or use in dairy products, the activity will be considered as agricultural activity under the scope of Ind AS 41.
Growing of plants to be used in the production of drugs	Yes	If an entity grows plants for using it in production of drugs, the activity will be agricultural activity. Hence it will come under the scope of Ind AS 41.
Purchase of 25 dogs for security purposes of the company's premises	No	Ind AS 41 is applied to account for the biological assets when they relate to agricultural activity. Guard dogs for security purposes do not qualify as agricultural activity, since they are not being kept for sale, or for conversion into agricultural produce or into additional biological assets. Hence, they are outside the scope of Ind AS 41.

UNIT 2 : INDIAN ACCOUNTING STANDARD 20: ACCOUNTING FOR GOVERNMENT GRANTS AND DISCLOSURE OF GOVERNMENT ASSISTANCE

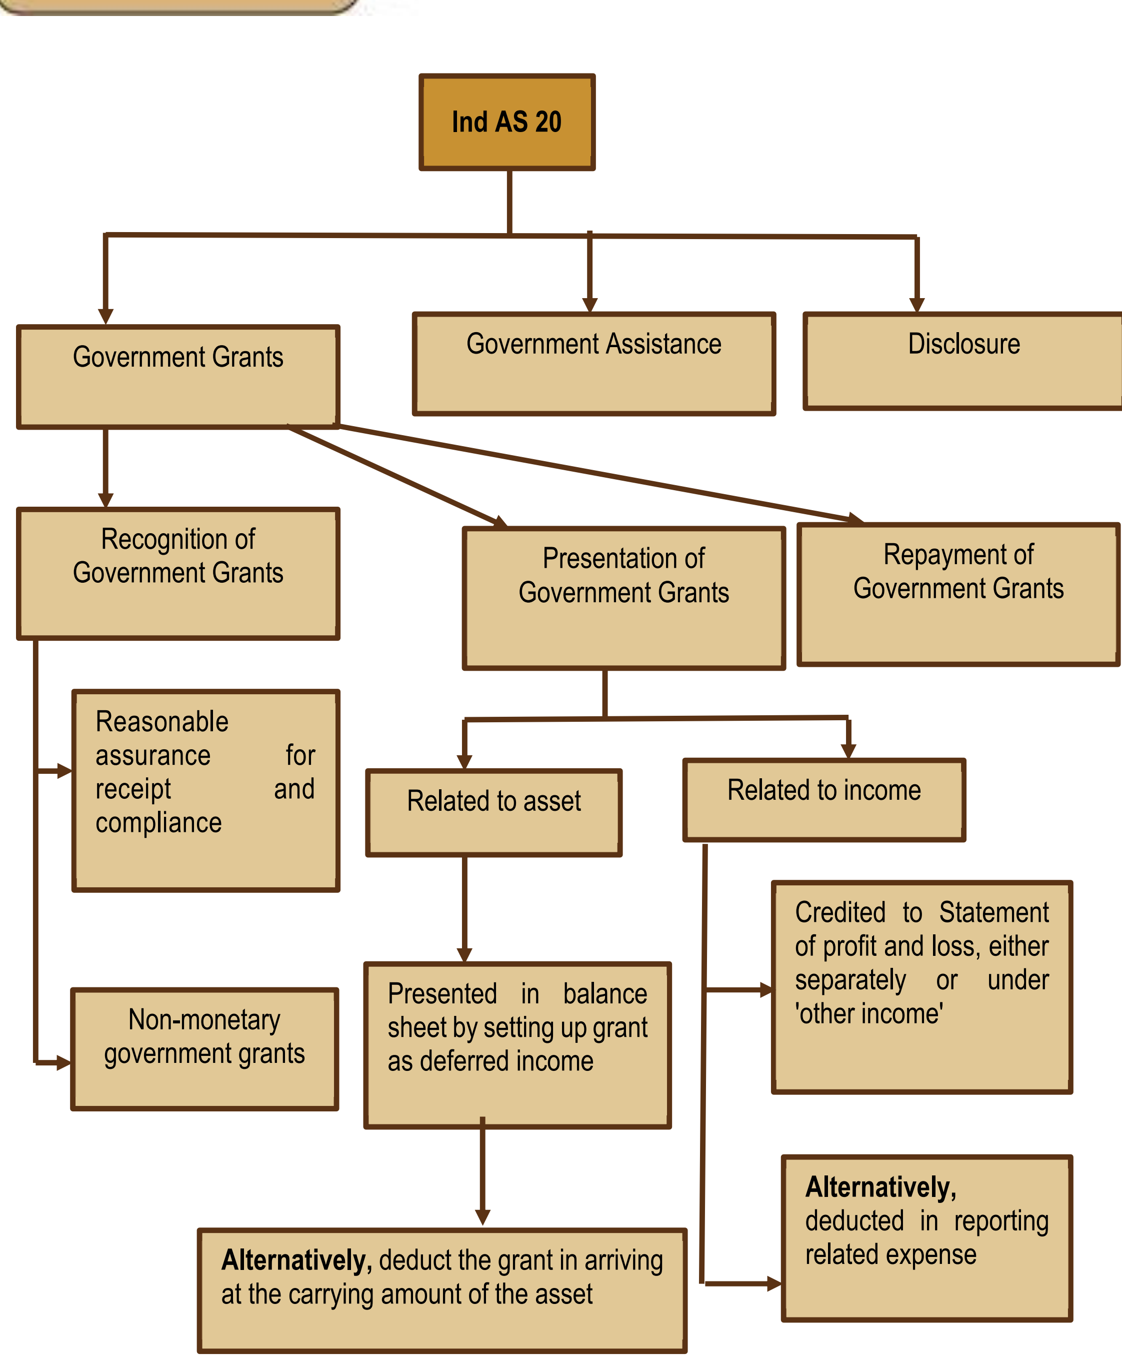
LEARNING OUTCOMES

After studying this unit, you will be able to:

- Interpret the principles for recognition of government grant including non-monetary grants
- Recommend presentation requirements of grants related to assets and income
- Account for repayment of government grants

Join us t.me/caborntofight

UNIT OVERVIEW



2.1 INTRODUCTION

The government gives grants to entities for various purposes including for industrial, geographic and social development, to facilitate the flow of foreign investments, to promote entrepreneurship, as subsidies to reduce the prices of goods and services offered by these entities.

The grant could be in different forms, e.g., monetary or non-monetary government grants.

Government grants may be significant for an entity and require appropriate treatment in the books of accounts and disclosures in the financial statements to facilitate comparison with other entities and with prior periods. Ind AS 20, *Accounting for Government Grants and Disclosure of Government Assistance,* provides guidance on this.

2.2 SCOPE

2.2.1 Applicability

Ind AS 20 should be applied for:

(a) accounting and disclosure of government grants; and

(b) disclosure of other forms of government assistance.

2.2.2 Non-applicability

Ind AS 20 does not deal with:

(a) the special problems arising in accounting for government grants in financial statements reflecting the effects of changing prices or in supplementary information of a similar nature;

(b) government assistance that is provided for an entity in the form of benefits that are available in determining taxable profit or tax loss, or are determined or limited on the basis of income tax liability;

> **Examples** of such benefits are income tax holidays, investment tax credits, accelerated depreciation.

(c) government participation in the ownership of the entity;

(d) government grants that will be covered by Ind AS 41, *Agriculture*.

2.3 DEFINITIONS

The following definitions are relevant for the purpose of understanding of Ind AS 20:

1. ***Government*** refers to government, government agencies and similar bodies whether local, national or international.

2. ***Government assistance*** is action by government designed to provide an economic benefit specific to an entity or range of entities qualifying under certain criteria.

Government assistance for the purpose of Ind AS 20 does not include benefits provided only indirectly through action affecting general trading conditions, such as the provision of infrastructure in development areas or the imposition of trading constraints on competitors.

Government assistance does not include the provision of infrastructure by improvement to the general transport and communication network and the supply of improved facilities such as irrigation or water reticulation which is available on an ongoing indeterminate basis for the benefit of an entire local community.

Government assistance takes many forms varying both in the nature of the assistance given and in the conditions which are usually attached to it. The purpose of the assistance may be to encourage an entity to embark on a course of action which it would not normally have taken if the assistance was not provided.

The receipt of government assistance by an entity may be significant for the preparation of the financial statements for two reasons:

- Firstly, if resources have been transferred, an appropriate method of accounting for the transfer must be found.
- Secondly, it is desirable to give an indication of the extent to which the entity has benefited from such assistance during the reporting period. This facilitates comparison of an entity's financial statements with those of prior periods and with those of other entities.

Examples 1-4 : Government assistance

1. Free technical assistance or marketing advice and the provision of guarantees are forms of government assistance to which no value could reasonably be assigned.
2. An example of transactions with government which cannot be distinguished from the normal trading transactions of the entity is a government procurement policy that is responsible for a portion of the entity's sales. The existence of the benefit might be unquestioned but any attempt to segregate the trading activities from government assistance could well be arbitrary.
3. **Assistance in the form of priority bidding status:** The government specifies that entities below a certain size are to be given priority in bidding for a particular type of government contract by mandating a minimum number of such entities to obtain bidding status. Although the entities will benefit from the quota, the value cannot be identified, and the effects of the assistance cannot be segregated from the trading activities of the entities.

© The Institute of Chartered Accountants of India

4. **Assistance in the form of credit facilities at market rates:** Three governments that amongst themselves own over 50% of the shares in an airline, participate in granting it a revolving credit facility at a market rate of interest. This is not a government grant as a loan is provided at market rate of interest which any private market participant might have accepted. However, it is government assistance as the benefit cannot be distinguished from normal trading activities of the airline.

The significance of the benefit in the above examples may be such that disclosure of the nature, extent and duration of the assistance is necessary in order that the financial statements may not be misleading.

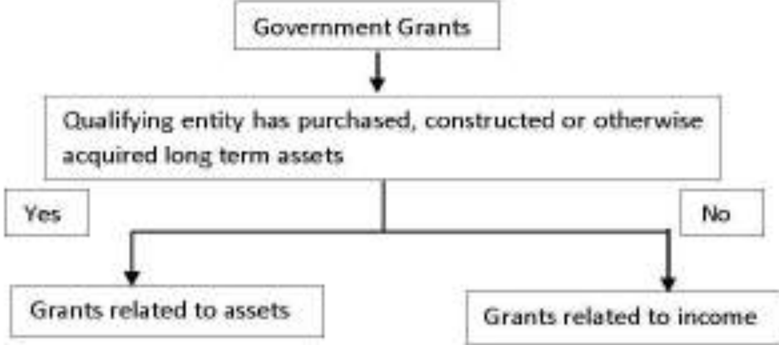
3. ***Government grants*** are assistance by the government in the form of transfers of resources to an entity in return for past or future compliance with certain conditions relating to the operating activities of the entity.

   They exclude those forms of government assistance which cannot reasonably have a value placed upon them and transactions with government which cannot be distinguished from the normal trading transactions of the entity.

   Government grants are sometimes called by other names such as subsidies, subventions, or premiums.

4. ***Grants related to assets*** are government grants whose primary condition is that an entity qualifying for them should purchase, construct or otherwise acquire long-term assets. Subsidiary conditions may also be attached restricting the type or location of the assets or the periods during which they are to be acquired or held.

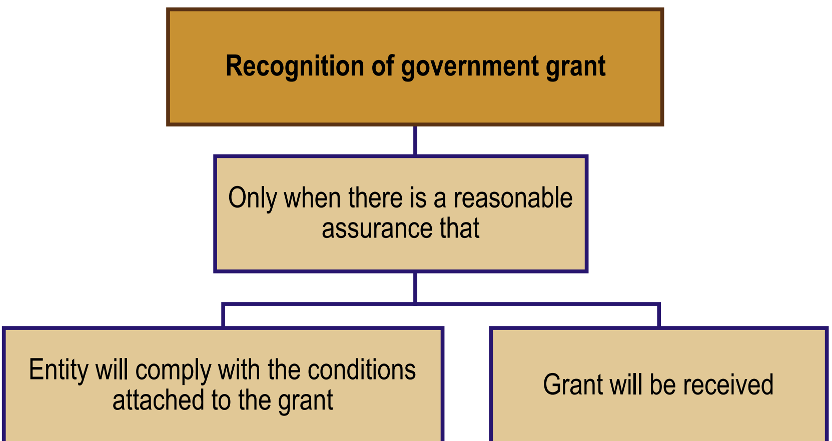
5. ***Grants related to income*** are government grants other than those related to assets.



6. ***Forgivable loans*** are loans which the lender undertakes to waive repayment of under certain prescribed conditions.

7. **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (Ind AS 113, *Fair Value Measurement*).

2.4 RECOGNITION OF GOVERNMENT GRANTS



Government grants, including non-monetary grants at fair value, shall not be recognised until there is reasonable assurance that:

(a) the entity will comply with the conditions attaching to them; and

(b) the grants will be received.

A government grant is not recognised until there is reasonable assurance that the entity will comply with the conditions attaching to it, and that the grant will be received. Receipt of a grant does not of itself provide conclusive evidence that the conditions attaching to the grant have been or will be fulfilled.

Illustration 1

Government gives a grant of ₹ 10,00,000 for past research of H1N1 vaccine to A Pharmaceuticals Limited. There is no condition attached to the grant.

Examine how this government grant be recognised in the books of A Pharmaceuticals Limited.

Solution

The entire grant should be recognised immediately in the statement of profit and loss.

*****

Illustration 2

Government gives a grant of ₹ 10,00,000 for research and development of H1N1 vaccine to A Pharmaceuticals Limited even though similar vaccines are available in the market but are expensive. The entity has to ensure by developing a manufacturing process over a period of

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

2 years that the costs come down by at least 40%.

Examine how this government grant be recognised assuming that A Pharmaceuticals Limited has reasonable assurance that the conditions attached to the grant will be complied with.

Solution

The entire grant should be recognised immediately as deferred income and charged to profit or loss over a period of two years.

*****

Illustration 3

A village of artisans in a district got devastated because of an earthquake. A Limited was operating in that district and was providing employment to the artisans. The government gave a grant of ₹ 10,00,000 to A Limited so that 100 artisans are rehabilitated over a period of 3 years. Government releases ₹ 2,00,000.

Examine how this government grant be recognised.

Solution

A Limited will recognise ₹ 10,00,000 as government grant and set it up as a deferred income and will recognise it in its profit or loss over the period of three years as per the principles enunciated in Ind AS 20.

Once a government grant is recognised, any related contingent liability or contingent asset is treated in accordance with Ind AS 37, *Provisions, Contingent Liabilities and Contingent Assets.*

The manner in which a grant is received does not affect the accounting method to be adopted in regard to the grant. Thus a grant is accounted for in the same manner whether it is received in cash or as a reduction of a liability to the government or in the form of a non-monetary asset.

*****

2.4.1 Forgivable loan

A forgivable loan from government is treated as a government grant when there is reasonable assurance that the entity will meet the terms for forgiveness of the loan.

2.4.2 Loans at less than market rate of interest

The benefit of a government loan at a below-market rate of interest is treated as a government grant. The loan should be recognised and measured in accordance with Ind AS 109, *Financial Instruments*. The benefit of the below-market rate of interest should be measured as the difference between the initial carrying value of the loan determined in accordance with

Ind AS 109 and the proceeds received. The benefit is accounted for in accordance with Ind AS 20. The entity should consider the conditions and obligations that have been, or must be, met when identifying the costs for which the benefit of the loan is intended to compensate.

Illustration 4

A Limited received from the government a loan of ₹ 50,00,000 @ 5% payable after 5 years in a bullet payment. The prevailing market rate of interest is 12%. Interest is payable regularly at the end of each year.

Calculate the amount of government grant and pass necessary journal entry. Also examine how the Government grant be recognised.

Solution

The fair value of the loan is calculated at ₹ 37,38,328 (refer Working Note).

Year	Opening Balance	Interest calculated @ 12%	Interest paid @ 5% on ₹ 50,00,000 + principal paid	Closing Balance
(a)	(b)	(c) = (b) x 12%	(d)	(e) =(b) + (c) – (d)
1	37,38,328	4,48,600	2,50,000	39,36,928
2	39,36,928	4,72,431	2,50,000	41,59,359
3	41,59,359	4,99,123	2,50,000	44,08,482
4	44,08,482	5,29,018	2,50,000	46,87,500
5	46,87,500	5,62,500	52,50,000	Nil

A Limited will recognise ₹ 12,61,672 (₹ 50,00,000 – ₹ 37,38,328) as the government grant and will make the following entry on receipt of loan:

Bank Account	Dr.	50,00,000	
To Deferred Income			12,61,672
To Loan Account			37,38,328

₹ 12,61,672 is to be recognised in profit or loss on a systematic basis over the periods in which A Limited recognise as expenses the related costs for which the grant is intended to compensate. (see Illustration 5 in this regard).

Working Note:

Particulars	Amount (₹)	Discounting factor	Present value taking 12% as the discount rate (₹)
Interest @ 5% for Year 1 on loan amount of ₹ 50 lakhs	2,50,000	0.893	2,23,214
Interest @ 5% for Year 2 on loan amount of ₹ 50 lakhs	2,50,000	0.797	1,99,298
Interest @ 5% for Year 3 on loan amount of ₹ 50 lakhs	2,50,000	0.712	1,77,945
Interest @ 5% for Year 4 on loan amount of ₹ 50 lakhs	2,50,000	0.636	1,58,880
Interest @ 5% for Year 5 on loan amount of ₹ 50 lakhs	2,50,000	0.567	1,41,857
Loan	50,00,000	0.567	28,37,134
Present value of loan at the beginning of Year 1			**37,38,328**

The above present value above has been computed on full scale basis.

*****

2.5 ACCOUNTING OF GOVERNMENT GRANT

There are two approaches to the accounting of government grant: 'capital approach' or 'income approach'. Under capital approach, a grant is recognised outside profit or loss, i.e., grant is credited directly to equity whereas under the income approach grant is recognised in profit or loss over one or more periods.

The Standard rejects the capital approach and prescribes only the income approach despite the following arguments in favour of capital approach:

(a) government grants are a financing device and should be dealt with as such in the balance sheet rather than be recognised in profit or loss to offset the items of expense that they finance. Since no repayment is expected, such grants should be recognised outside profit or loss.

(b) it is inappropriate to recognise government grants in profit or loss, because they are not earned but represent an incentive provided by government without related costs.

The income approach has been prescribed because of the following arguments in its favour:

(a) because government grants are receipts from a source other than shareholders, they should not be recognised directly in equity but should be recognised in profit or loss in appropriate periods.

(b) government grants are rarely gratuitous. The entity earns them through compliance with their conditions and meeting the envisaged obligations. They should therefore be recognised in

profit or loss over the periods in which the entity recognises as expenses the related costs for which the grant is intended to compensate.

(c) since income and other taxes are expenses, it is logical to deal also with government grants, which are an extension of fiscal policies, in profit or loss.

Principle:

Thus, government grants should be recognised in profit or loss on a systematic basis over the periods in which the entity recognises as expenses the related costs for which the grant is intended to compensate.

In most cases the periods over which an entity recognises the costs or expenses related to a government grant are readily ascertainable. Thus grants in recognition of specific expenses are recognised in profit or loss in the same period as the relevant expenses. Similarly, grants related to depreciable assets are usually recognised in profit or loss over the periods and in the proportions in which depreciation expense on those assets is recognised.

Illustration 5

Continuing with the facts given in the Illustration 4, state how the grant will be recognized in the statement of profit or loss assuming:

(a) the loan is an immediate relief measure to rescue the enterprise

(b) the loan is a subsidy for staff training expenses, incurred equally, for a period of 4 years

(c) the loan is to finance a depreciable asset.

Solution

₹ 12,61,672 is to be recognised in profit or loss on a systematic basis over the periods in which A Limited recognised as expenses the related costs for which the grant is intended to compensate.

Assuming (a), the loan is an immediate relief measure to rescue the enterprise - ₹ 12,61,672 will be recognised in profit or loss immediately.

Assuming (b), the loan is a subsidy for staff training expenses, incurred equally, for a period of 4 years, ₹ 12,61,672 will be recognised in profit or loss over a period of 4 years.

Assuming (c), the loan is to finance a depreciable asset - ₹ 12,61,672 will be recognised in profit or loss on the same basis as depreciation.

*****

2.5.1 Whether receipts basis permissible

Recognition of government grants in profit or loss on a receipts basis is not in accordance with the accrual accounting assumption (Ind AS 1, *Presentation of Financial Statements*) and would be acceptable only if no basis existed for allocating a grant to periods other than the one in which it was received.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

2.5.2 Grants related to non-depreciable assets

Grants related to non-depreciable assets may also require the fulfilment of certain obligations and would then be recognised in profit or loss over the periods that bear the cost of meeting the obligations.

Example 5

A grant of land may be conditional upon the erection of a building on the site and it may be appropriate to recognise the grant in profit or loss over the life of the building.

2.5.3 Conditional Grants received as part of a package of financial or fiscal aids

In such cases, care is needed in identifying the conditions giving rise to costs and expenses which determine the periods over which the grant will be earned. It may be appropriate to allocate part of a grant on one basis and part on another.

2.5.4 Grant for expenses or losses already incurred and grant as an immediate financial support

A government grant that becomes receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the entity with no future related costs should be recognised in profit or loss of the period in which it becomes receivable.

In some circumstances, a government grant may be awarded for the purpose of giving immediate financial support to an entity rather than as an incentive to undertake specific expenditures. Such grants may be confined to a particular entity and may not be available to a whole class of beneficiaries. These circumstances may warrant recognising a grant in profit or loss of the period in which the entity qualifies to receive it, with appropriate disclosures to ensure that its effect is clearly understood.

A government grant may become receivable by an entity as compensation for expenses or losses incurred in a previous period. Such a grant is recognised in profit or loss of the period in which it becomes receivable, with disclosure to ensure that its effect is clearly understood.

2.5.5 Non-monetary government grants

A government grant may take the form of a transfer of a non-monetary asset, such as land or other resources, for the use of the entity. In these circumstances the fair value of the non-monetary asset is assessed and both grant and asset are accounted for at that fair value. Alternatively, an entity may measure both asset and grant at nominal value.

© The Institute of Chartered Accountants of India

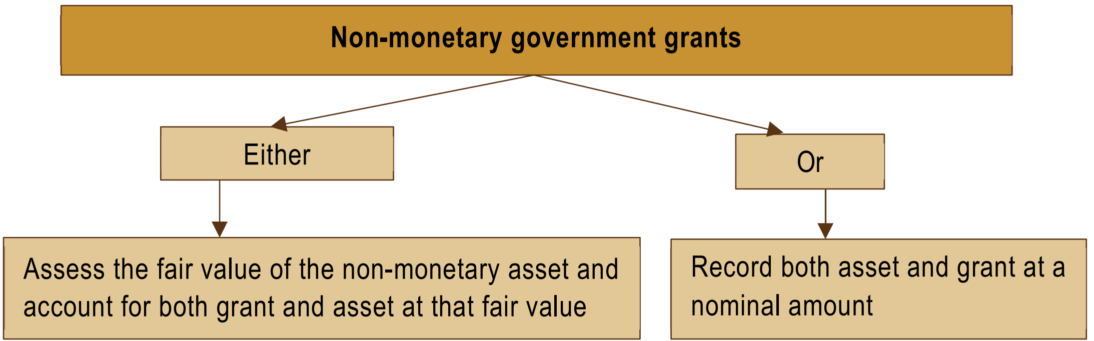

Illustration 6

A Limited wants to establish a manufacturing unit in a backward area and requires 5 acres of land. The government provides the land on a leasehold basis at a nominal value of ₹ 10,000 per acre. The fair value of the land is ₹ 100,000 per acre.

Calculate the amount of the government grant to be recognized by an entity.

Solution

A limited will recognise the land at fair value of ₹ 5,00,000 and ₹ 450,000 [(₹ 100,000 – ₹ 10,000) x 5)] as government grant. This government grant should be presented in the balance sheet by setting up the grant as deferred income.

Alternatively, the land may be recognised by A Ltd. at nominal value of ₹ 50,000 (₹ 10,000 x 5).

*****

2.5.6 Government Assistance – No Specific relation to Operating Activities

In some countries government assistance to entities may be aimed at encouragement or long-term support of business activities either in certain regions or industry sectors. Conditions to receive such assistance may not be specifically related to the operating activities of the entity.

Examples of such assistance are transfers of resources by governments to entities which:

(a) operate in a particular industry;

(b) continue operating in recently privatised industries; or

(c) start or continue to run their business in underdeveloped areas.

The issue is whether such government assistance is a 'government grant' within the scope of Ind AS 20 and, therefore, should be accounted for in accordance with Ind AS 20.

In this regard, Appendix A to Ind AS 20 provides that government assistance to entities meets the definition of government grants in Ind AS 20, even if there are no conditions specifically relating to the operating activities of the entity other than the requirement to operate in certain regions or

industry sectors. Such grants should therefore not be credited directly to shareholders' interests and should be recognised in profit or loss on a systematic basis.

2.6 PRESENTATION OF GRANTS RELATED TO ASSETS

2.6.1 Presentation in the Balance Sheet

Government grants related to assets should be presented in the balance sheet by setting up the grant as deferred income. The non-monetary grants at fair value should be presented in a similar manner.

Alternatively, it can be presented in the balance sheet by deducting the grant in arriving at the carrying amount of the asset.

The grant set up as deferred income is recognised in profit or loss on a systematic basis over the useful life of the asset.

The other method deducts the grant in calculating the carrying amount of the asset. The grant is recognised in profit or loss over the life of a depreciable asset as a reduced depreciation expense.

Illustration 7

A Limited establishes solar panels to supply solar electricity to its manufacturing plant. The cost of solar panels is ₹ 1,00,00,000 with a useful life of 10 years. The depreciation is provided on straight line method basis. The government gives ₹ 50,00,000 as a subsidy.

Examine how the Government grant be realized.

Solution

A Limited will set up ₹ 50,00,000 as deferred income and will credit ₹ 5,00,000 equally to its statement of profit and loss over next 10 years.

Alternatively, A Ltd. may deduct ₹ 50,00,000 from the cost of solar panel of ₹ 1,00,00,000.

*****

2.6.2 Disclosure in the statement of cash flows

The purchase of assets and the receipt of related grants can cause major movements in the cash flow of an entity. For this reason and in order to show the gross investment in assets, such movements are disclosed as separate items in the statement of cash flows. This presentation is done irrespective of the fact that the grant is deducted or not from the related asset, for the purpose of presentation in the balance sheet.

Join us t.me/caborntofight

Illustration 8

Continuing with the facts given in Illustration 7 above, state how the same will be disclosed in the Statement of cash flows.

Solution

A Limited will show ₹ 1,00,00,000 being acquisition of solar panels as outflow in investing activities. The receipt of ₹ 50,00,000 from government will be shown as inflow under investing activities.

*****

2.7 PRESENTATION OF GRANTS RELATED TO INCOME

Two methods are prescribed for presentation of grants related to income. The grant could be

(a) (first method) presented as a credit in the statement of profit and loss, either separately or under a general heading such as 'Other income'; or

(b) (second method) deducted in reporting the related expense.

The first method lays it foundation on the base:

(a) that it is inappropriate to net income and expense items and

(b) that separation of the grant from the expense facilitates comparison with other expenses not affected by a grant.

It is argued for the second method:

(a) that the expenses might well not have been incurred by the entity if the grant had not been available; and

(b) thus, presentation of the expense without offsetting the grant may therefore be misleading.

Both methods are regarded as acceptable for the presentation of grants related to income. Disclosure of the grant may be necessary for a proper understanding of the financial statements. Disclosure of the effect of the grants on any item of income or expense which is required to be separately disclosed is usually appropriate.

© The Institute of Chartered Accountants of India

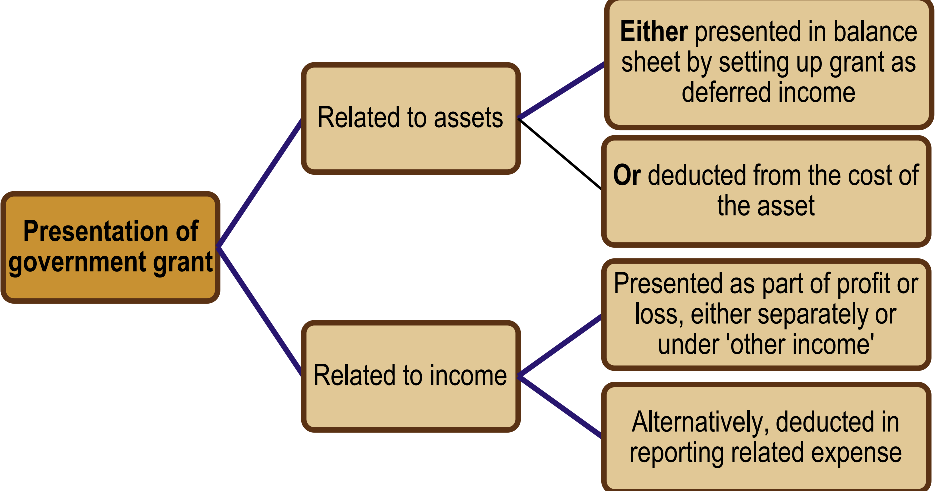

Illustration 9

A Ltd. received a government grant of ₹ 10,00,000 to defray expenses for environmental protection. Expected environmental costs to be incurred is ₹ 3,00,000 per annum for the next 5 years.

Determine the presentation of such grant related to income in the financial statements of A Ltd.?

Solution

As per paragraph 29 of Ind AS 20, grants related to income are presented as part of profit or loss, either separately or under a general heading such as 'Other income'; alternatively, they are deducted in reporting the related expense.

In accordance with the above, presentation of grants related to income under both the methods are as follows:

Method 1: Credit in the statement of profit and loss

The entity can recognise the grant as income on a straight line basis i.e., ₹ 2,00,000 per year in the statement of profit and loss either separately or under the head "Other Income".

The supporters of this method consider it inappropriate to present income and expense items on a net basis and that 'separation of the grant from the expense facilitates comparison with other expenses not affected by a grant'.

Method 2: As a deduction in reporting the related expense

Since the grant relates to environmental expenses incurred/to be incurred by the entity, it can present the grant by reducing the grant amount every year from the related expense i.e., environmental expense of ₹ 1,00,000 (i.e., net expense ₹ 3,00,000 – ₹ 2,00,000).

The supporters of this method are of the view that 'the expenses might well not have been incurred by the entity if the grant had not been available and presentation of the expense without offsetting

the grant may therefore be misleading'.

The Standard regards both the methods as acceptable for the presentation of grants related to income. However, method 2 may be more appropriate when the company can relate the grant to a specific expenditure.

The Standard also provides that disclosure of the grant may be necessary for a proper understanding of the financial statements. Disclosure of the effect of the grants on any item of income or expense which is required to be separately disclosed is usually appropriate.

*****

2.8 REPAYMENT OF GOVERNMENT GRANTS

An entity may have to repay the government grant including in cases where conditions related to the grant are not fulfilled by it.

A government grant that becomes repayable should be accounted for as a change in accounting estimate and be treated in accordance with Ind AS 8, *Accounting Policies, Changes in Accounting Estimates and Errors.*

Repayment of a grant related to income

The following steps should be followed in repayment of a grant related to income:

(a) The repayment should be applied first against any unamortised deferred credit recognised in respect of the grant.

(b) To the extent that the repayment exceeds any such deferred credit, or when no deferred credit exists, the repayment should be recognised immediately in profit or loss.

The repayment of a grant related to an asset should be recognised either by reducing the deferred income balance by the amount repayable or by increasing the carrying amount of the asset.

Join us t.me/caborntofight

Repayment of government grant

Related to income	Related to asset	
First applied towards any unapplied deferred credit and then charged to profit and loss account immediately	***Either** recognised by increasing the carrying amount of the asset *The cumulative additional depreciation that would have been recognised in profit or loss to date in the absence of the grant shall be recognised immediately in profit or loss. * Check the possible impairment of the new carrying amount of the asset.	**Or** by reducing the deferred income balance by the amount payable

Illustration 10

A Ltd. has received a grant of ₹ 10,00,00,000 in the year 20X1-20X2 from local government in the form of subsidy for selling goods at lower price to lower income group population in a particular area for two years. A Ltd. had accounted for the grant as income in the year 20X1-20X2. While accounting for the grant in the year 20X1-20X2, A Ltd. was reasonably assured that all the conditions attached to the grant will be complied with. However, in the year 20X5-20X6, it was found that A Ltd. has not complied with the above condition and therefore notice of refund of grant has been served to it. A Ltd. has contested but lost in court in 20X5-20X6 and now grant is fully repayable. The accounting done in previous years was not incorrect and was not an error as per Ind AS 8.

Analyse how should A Ltd. reflect repayable grant in its financial statements ending 20X5-20X6?

Solution

Paragraph 32 of Ind AS 20, states that a government grant that becomes repayable shall be accounted for as a change in accounting estimate (see Ind AS 8, Accounting Policies, Changes in Accounting Estimates and Errors).

Repayment of a grant related to income shall be applied first against any unamortised deferred credit recognised in respect of the grant. To the extent that the repayment exceeds any such deferred credit, or when no deferred credit exists, the repayment shall be recognised immediately in profit or loss.

The following journal entries should be passed:

S. No.	Particulars	Nature of Account		Amount (₹ in crores)	
(i)	Repayment of Government Grant	Expense (P/L)	Dr.	10	
	To Grant repayable	Balance sheet (Liability)			10
	(Being recognition of repayment of grant in statement of profit or loss)				
(ii)	Grant repayable	Balance sheet (Liability)	Dr.	10	
	To Bank	Balance sheet (Asset)			10
	(Being grant refunded)				

Assuming that no deferred credit balance exists in the year 20X5-20X6, therefore repayment recognised in P&L.

*****

2.9 DISCLOSURE

The following should be disclosed:

(a) the accounting policy adopted for government grants;

(b) the methods of presentation adopted for government grants in the financial statements;

(c) the nature and extent of government grants recognised in the financial statements;

(d) an indication of other forms of government assistance from which the entity has directly benefited. At times, the significance of the benefit of government assistance may be such that disclosure of the nature, extent and duration of the assistance is necessary in order that the financial statements may not be misleading; and

(e) unfulfilled conditions and other contingencies attaching to government assistance that has been recognised.

*****

2.10 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITIES

Following is the extract from the financial statements of the listed entity 'Hindustan Unilever Limited' for the financial year 2021-2022 with respect to 'Government Grants'.

Government grants:

The Company has received approval under the Production Linked Incentive Scheme of the Government of India for specific product categories. Incentive under the scheme is subject to meeting certain committed investments and defined incremental sales threshold. Such grants are recognised as other operating revenue when there is a reasonable assurance that the Company will comply with all necessary conditions attached to that.

Income from such grants is recognised on a systematic basis over the periods to which they relate.

	Year ended 31st March, 2022	Year ended 31st March, 2021
Sale of products	50,336	45,311
Other operating revenue*		
Income from services rendered	281	225
Commission income on consignment sales	315	264
Government grants (GST budgetary support and Production linked incentives) #	140	108
Others (including scrap sales, rentals, etc)	121	88
Total	**51,193**	**45,996**

Previous period figures have been re-classified from Others for better presentation

(Source: Annual Report 2021-2022 – Hindustan Unilever Limited)

2.11 SIGNIFICANT DIFFERENCES BETWEEN IND AS 20 AND AS 12

S. No.	Particulars	Ind AS 20	AS 12
1.	Monetary grants related to non-depreciable assets	Taken to the statement of profit and loss assuming that all grants have conditions attached to it. Specifically prohibits recognition of grants directly in the shareholders' funds	Credited as capital reserve which is part of shareholder's funds. If such grant requires fulfilment of certain obligations, credit the grant amount to income over the same period over which the cost of meeting such obligations is charged to income.
2.	Non-monetary	Accounted for at fair value	• Accounted for on the basis

	government grant given at a concessional rate	or at nominal value	of their acquisition cost • Non-monetary assets given free of cost are recorded at a nominal value
3.	Grants in the nature of promoter's contribution	Ind AS 20 does not recognise government grants of the nature of promoters' contribution. As stated at (1) above, Ind AS 20 is based on the principle that all government grants would normally have certain obligations attached to them and it, accordingly, requires all grants to be recognised as income over the periods which bear the cost of meeting the obligation.	To be credited to capital reserve and to be treated as part of shareholders' funds
4.	Loan received from the government at below-market rate of interest	Measured in accordance with Ind AS 109 (which requires all loans to be recognised at fair value, thus requiring interest to be imputed to loans with a below-market rate of interest)	AS 12 does not deal with such cases
5.	Government assistance not falling within the definition of government grants	Requires an indication of other forms of government assistance from which the entity has directly benefited and should be disclosed in the financial statements	Does not deal with such government assistance

Questions

1. ABC Ltd. has received the following grants from the Government of Delhi for its newly started pharmaceutical business:

   - ₹ 20 lakhs received for immediate start-up of business without any further condition.
   - ₹ 50 lakhs received for research and development of drugs required for the treatment of cardiovascular diseases with following conditions:
     - that drugs should be available to the public at 20% cheaper from current market price; and
     - the drugs should be in accordance with quality prescribed by the World Health Organisation [WHO].
   - Two acres of land (fair Value: ₹ 10 Lakhs) received for set up of plant.
   - ₹ 2 lakhs received for purchase of machinery of ₹ 10 lakhs. Useful life of machinery is 5 years. Depreciation on this machinery is to be charged on straight-line basis.

   Recommend how should ABC Ltd. recognise the government grants in its books of accounts.

2. A Limited received from the government a loan of ₹1,00,00,000 @ 5% payable after 5 years in a bulleted payment. The prevailing market rate of interest is 12%. Interest is payable regularly at the end of each year.

   Calculate the amount of government grant and pass necessary journal entry. Also examine how the government grant be recognised. Also state how the grant will be recognized in the statement of profit or loss assuming that the loan is to finance a depreciable asset.

3. MNC Ltd. has received grant in the nature of exemption of custom duty on capital goods with certain conditions related to export of goods under Export Promotion Capital Goods (EPCG) scheme of Government of India.

Merged By CA - Born To Fight

State whether the same is a government grant under Ind AS 20, Government Grants and Disclosure of Government Assistance? If yes, then how the same is to be accounted for if it is

(a) A grant related to asset; or

(b) A grant related to income.

4. ABC Ltd is a government company and is a first-time adopter of Ind AS. As per the previous GAAP, the contributions received by ABC Ltd. from the government (which holds 100% shareholding in ABC Ltd.) which is in the nature of promoters' contribution have been recognised in capital reserve and treated as part of shareholders' funds in accordance with the provisions of AS 12, Accounting for Government Grants.

   State whether the accounting treatment of the grants in the nature of promoters' contribution as per AS 12 is also permitted under Ind AS 20 Accounting for Government Grants and Disclosure of Government Assistance.

5. Rainbow Limited carries out various projects for which it has either received government financial assistance or is in the process of receiving the same. The company has received two grants of ₹ 1,00,000 each, relating to the following ongoing research and development projects:

   (i) The first grant relates to the "Clean river project" which involves research into the effect of various chemicals waste from the industrial area in Madhya Pradesh. However, no major steps have been completed by Rainbow limited to commence this research as at 31st March, 20X2.

   (ii) The second grant relates to the commercial development of a new equipment that can be used to manufacture eco-friendly substitutes for existing plastic products. Rainbow Limited is confident about the technical feasibility and financial viability of this new technology which will be available for sale in the market by April 20X3.

   In September 20X1, due to the floods near one of its factories, the entire production was lost and Rainbow Limited had to shut down the factory for a period of 3 months. The State Government announced a compensation package for all the manufacturing entities affected due to the floods. As per the scheme, Rainbow Limited is entitled to a compensation based on the average of previous three months' sales figure prior to the floods, for which the company is required to submit an application form on or before 30th June, 20X2 with necessary figures. The financial statements of Rainbow Limited for the year ended 31st March 20X2 are to be adopted on 31st May, 20X2, by which date the claim form would not have been filed with the State Government.

   Suggest the accounting treatment of, if any, for the two grants received and the flood-related compensation in the books of accounts of Rainbow Limited as at 31st March, 20X2.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

6. An entity opens a new factory and receives a government grant of ₹ 15,000 in respect of capital equipment costing ₹ 1,00,000. It depreciates all plant and machinery at 20% per annum on straight-line basis.

   Show the statement of profit and loss and balance sheet extracts in respect of the grant for first year under both the methods as per Ind AS 20.

7. A company receives a cash grant of ₹ 30,000 on 31st March 20X1. The grant is towards the cost of training young apprentices. Training programme is expected to last for 18 months starting from 1st April 20X1. Actual costs of the training incurred in 20X1-20X2 was ₹ 50,000 and in 20X2-20X3 ₹ 25,000.

   State, how this grant should be accounted for.

8. Entity A is awarded a government grant of ₹ 60,000 receivable over three years (₹ 40,000 in year 1 and ₹ 10,000 in each of years 2 and 3), contingent on creating 10 new jobs and maintaining them for three years. The employees are recruited at a total cost of ₹ 30,000, and the wage bill for the first year is ₹ 1,00,000, rising by ₹ 10,000 in each of the subsequent years.

   Calculate the grant income and deferred income to be accounted for in the books for the years 1, 2 and 3 under the following two situations:

   (a) There is reasonable assurance that the entity will comply with the conditions attaching to them and the grant will be received

   (b) There is no reasonable assurance that the grant will be received.

Answers

1. ABC Ltd. should recognise the grants in the following manner:

- ₹ 20 lakhs have been received for immediate start-up of business. This should be recognised in Statement of Profit and Loss immediately as there are no further conditions attached to the grant.
- ₹ 50 lakhs should be recognised in profit or loss on a systematic basis over the periods which the entity recognises as expense the related costs for which the grants are intended to compensate provided that there is reasonable assurance that ABC Ltd. will comply with the conditions attached to the grant.
- Land should be recognised at fair value of ₹ 10 lakhs and government grant should be presented in the balance sheet by setting up the grant as deferred income. Alternatively, deduct the amount of grant from the cost of the asset. In the given case, the land is granted at no cost. It will be presented in the books at nominal value.

Join us t.me/caborntofight

- ₹ 2 lakhs should be recognised as deferred income and will be transferred to profit and loss over the useful life of the asset. In this case, ₹ 40,000 [₹ 2 lakhs/5] should be credited to profit and loss each year over a period of 5 years. Alternatively, ₹ 2,00,000 will be deducted from the cost of the asset and depreciation will be charged at reduced amount of ₹ 8,00,000 (₹ 10,00,000 – ₹ 2,00,000) every year.

2. The fair value of the loan is calculated at ₹ 74,76,656 (refer Working Note).

Year	Opening Balance	Interest calculated @ 12%	Interest paid @ 5% on ₹ 1,00,00,000 + principal paid	Closing Balance
(a)	(b)	(c) = (b) x 12%	(d)	(e) =(b) + (c) – (d)
1	74,76,656	8,97,200	5,00,000	78,73,856
2	78,73,856	9,44,862	5,00,000	83,18,718
3	83,18,718	9,98,246	5,00,000	88,16,964
4	88,16,964	10,58,036	5,00,000	93,75,000
5	93,75,000	11,25,000	1,05,00,000	Nil

A Limited will recognise ₹ 25,23,344 (₹ 1,00,00,000 – ₹ 74,76,656) as the government grant and will make the following entry on receipt of loan:

Bank Account	Dr.	1,00,00,000	
To Deferred Income			25,23,344
To Loan Account			74,76,656

₹ 25,23,344 is to be recognised in profit or loss on a systematic basis over the periods in which A Limited recognised as expenses the related costs for which the grant is intended to compensate.

If the loan is to finance a depreciable asset. ₹ 25,23,344 will be recognised in profit or loss on the same basis as depreciation.

Working Note:

Particulars	Rs.	Discounting factor@ 12%	Present value taking 12% as the discount rate (Rs.)
Interest @ 5% for Year 1 on loan amount of ₹ 1 crore	5,00,000	0.893	4,46,429
Interest @ 5% for Year 2 on loan amount of ₹ 1 crore	5,00,000	0.798	3,98,597

Interest @ 5% for Year 3 on loan amount of ₹ 1 crore	5,00,000	0.712	3,55,890
Interest @ 5% for Year 4 on loan amount of ₹ 1 crore	5,00,000	0.636	3,17,759
Interest @ 5% for Year 5 on loan amount of ₹ 1 crore	5,00,000	0.567	2,83,713
Loan	1,00,00,000	0.567	56,74,269
Present value of loan at the beginning of Year 1			**74,76,656**

The above present value above has been computed on full scale basis.

3. Paragraph 3 of Ind AS 20 states that Government grants are assistance by government in the form of transfers of resources to an entity in return for past or future compliance with certain conditions relating to the operating activities of the entity. They exclude those forms of government assistance which cannot reasonably have a value placed upon them and transactions with government which cannot be distinguished from the normal trading transactions of the entity.

In accordance with the above, in the given case exemption of custom duty under EPCG scheme is a government grant and should be accounted for as per the provisions of Ind AS 20.

Ind AS 20 defines grant related to assets and grants related to income as follows:

"Grants related to asset are government grants whose primary condition is that an entity qualifying for them should purchase, construct or otherwise acquire long-term assets. Subsidiary conditions may also be attached restricting the type or location of the assets or the periods during which they are to be acquired or held. Grants related to income are government grants other than those related to assets."

Presentation

It is pertinent to note that the classification of the grant as related to asset or income will require exercise of judgement and careful examination of the facts, objective and conditions attached to the scheme of the government. Care is also required to ascertain the purpose of the grant and the costs for which the grant is intended to compensate. Based on the evaluation of facts, if it is ascertained that the grant is an asset related grant then the same shall be presented as per paragraphs 24 and 26 of Ind AS 20 which has been stated below:

Presentation of grants related to assets

As per para 24, government grants related to assets, including non-monetary grants at fair value, shall be presented in the balance sheet by setting up the grant as deferred income.

As per para 26, the grant set up as deferred income is recognised in profit or loss on a systematic basis over the useful life of the asset.

Join us t.me/caborntofight

Merged By CA - Born To Fight

If it is determined that the grant is related to income then the same shall be presented as follows:

Presentation of grants related to income

As per para 29, grants related to income are presented as part of profit or loss, either separately or under a general heading such as 'Other income'; alternatively, they are deducted in reporting the related expense.

It may be further noted that as per paragraph 12 of Ind AS 20, government grants shall be accounted as follows:

As per para 12, government grants shall be recognised in profit or loss on a systematic basis over the periods in which the entity recognises as expenses the related costs for which the grants are intended to compensate.

In the given case, if based on the terms and conditions of the scheme, the grant received is to compensate the import cost of assets subject to an export obligation as prescribed in the EPCG Scheme; recognition of grant in the statement of profit and loss should be linked to fulfilment of associated export obligations.

However, if the grant received is to compensate the import cost of the asset and based on the examination of the terms and conditions of the grant, if it can be reasonably concluded that conditions relating to export of goods are subsidiary conditions, then it is appropriate to recognise such grant in profit or loss over the life of the underlying asset.

4. Paragraph 2 of Ind AS 20, "Accounting for Government Grants and Disclosure of Government Assistance" inter alia states that the Standard does not deal with government participation in the ownership of the entity.

Since ABC Ltd. is a government company, it implies that government has 100% shareholding in the entity. Accordingly, as per Ind AS 20, the entity needs to determine whether the payment is provided as a shareholder contribution or as a government. Equity contributions will be recorded in equity while grants will be shown in the Statement of Profit and Loss.

Where it is concluded that the contributions are in the nature of government grant, the entity shall apply the principles of Ind AS 20 retrospectively as specified in Ind AS 101 'First Time Adoption of Ind AS'. Ind AS 20 requires all grants to be recognised as income on a systematic basis over the periods in which the entity recognises as expenses the related costs for which the grants are intended to compensate. Unlike AS 12, Ind AS 20 requires the grant to be classified as either a capital or an income grant and does not permit recognition of government grants in the nature of promoter's contribution directly to shareholders' funds.

5. **Accounting treatment for:**

1. **First Grant**

The first grant for 'Clear River Project' involving research into effects of various chemicals waste from the industrial area in Madhya Pradesh, seems to be unconditional as no details regarding its refund has been mentioned. Even though the research has not been started nor any major steps have been completed by Rainbow Limited to commence the research, yet the grant will be recognised immediately in profit or loss for the year ended 31st March, 20X2.

Alternatively, in case, the grant is conditional as to expenditure on research, the grant will be recognised in the books of Rainbow Limited over the year the expenditure is being incurred.

2. **Second Grant**

The second grant related to commercial development of a new equipment is a grant related to depreciable asset. As per the information given in the question, the equipment will be available for sale in the market from April, 20X3. Hence, by that time, grant relates to the construction of an asset and should be initially recognised as deferred income.

The deferred income should be recognised as income on a systematic and rational basis over the asset's useful life.

The entity should recognise a liability in its balance sheets as at 31st March, 20X2 and 31st March, 20X3. Once the equipment starts getting used in the manufacturing process, the deferred grant income of ₹ 100,000 should be recognised over the asset's useful life to compensate for depreciation costs.

Alternatively, as per Ind AS 20, Rainbow Limited would also be permitted to offset the deferred income of ₹ 100,000 against the cost of the equipment as at 1st April, 20X3.

3. **For flood related compensation**

Rainbow Limited will be able to submit an application form only after 31st May, 20X2 ie in the year 20X2-20X3. Although flood happened in September, 20X1 and loss was incurred due to flood in the year 20X1-20X2, the entity should recognise the income from the government grant in the year when the application form related to it is submitted and approved by the government for compensation.

Since, in the year 20X1-20X2, the application form could not be submitted due to adoption of financials with respect to sales figure before flood occurred, Rainbow Limited should not recognise the grant income as it has not become receivable as at 31st March,20X2.

6. (a) **When grant is treated as deferred income**

Statement of profit and loss – An extract

	₹
Depreciation (₹ 1,00,000 x 20%)	(20,000)
Government grant credit (W.N.1)	3,000

Balance Sheet - An extract

		₹
Non-current assets		
Property, plant and equipment	1,00,000	
Less: Accumulated depreciation	(1,00,000 x 20%) (20,000)	80,000
		XXXX
Non-current liabilities		
Government grant	[12,000 – 3,000 (current liability)]	9,000
Current liabilities		
Government grant	(15,000 x 20%)	3,000
		XXXX

Working Note:

1. Government grant deferred income account

	₹		₹
To Profit or loss (15,000 × 20%)	3,000	By Grant cash received	15,000
To Balance c/f	12,000		
	15,000		15,000

(b) When grant is deducted from cost of the asset

Statement of profit and loss – An extract

	₹
Depreciation [(₹ 1,00,000 – 15,000) x 20%]	(17,000)

Balance Sheet – An extract

		₹
Non-current assets		
Property, plant and equipment	(1,00,000-15,000) 85,000	
Less: Accumulated depreciation	(17,000)	68,000

7. As at 31st March 20X1 the grant would be recognised as a liability (deferred income) and presented in the balance sheet as a split between current and non-current amounts.

₹ 20,000 [(12 months / 18 months) x 30,000] is current which would be recognised in the statement of profit and loss for the year ended 31st March, 20X2. The balance amount of ₹ 10,000 will be shown as non-current.

At the end of year 20X1-20X2, there would be a current balance of 10,000 (being the non-current balance at the end of year 20X1-20X1 reclassified as current) in the balance sheet. This would be recognised in profit in the year 20X2-20X3.

Extracts from the financial statements are as follows:

Balance Sheet (extracts)

	31 March 20X1	31 March 20X2	31 March 20X3
Current liabilities			
Deferred income	20,000	10,000	-
Non-current liabilities			
Deferred income	10,000	-	-

Statement of profit and loss (extracts)

	31 March 20X2	31 March 20X3
Method 1		
Other Income - Government grant received	20,000	10,000
Training costs	(50,000)	(25,000)
Method 2		
Training costs (50,000 – 20,000)	30,000	
Training costs (25,000 – 10,000)		15,000

8. (a) **When there is reasonable assurance**

The grant of ₹ 60,000 should be recognised at the beginning of the first year as receivable and will be compensated for the related costs over three years.

The initial journal entry would be:

Grant Receivable Ac	Dr.	₹ 60,000	
To Deferred Income A/c			₹ 60,000

Join us t.me/caborntofight

Merged By CA - Born To Fight

Calculation of grant income and deferred income:

Year	Labour Cost	Grant Income	Computation of Grant Income	Deferred Income at the end of the year	Computation of deferred income at the end of the year
	₹	₹		₹	
1	1,30,000	21,667	60,000 x (130/360)	38,333	(60,000 – 21,667)
2	1,10,000	18,333	60,000 x (110/360)	20,000	(38,333 – 18,333)
3	1,20,000	20,000	60,000 x (120/360)	-	(20,000 – 20,000)
	3,60,000	60,000			

Therefore, grant income to be recognised in the Statement of Profit and Loss for the years 1, 2 and 3 would be ₹ 21,667, ₹ 18,333 and ₹ 20,000 respectively.

The amount of grant that has not yet been credited to the statement of profit and loss i.e. deferred income is to be shown in the balance sheet. Hence deferred income balance as at end of year 1, 2 and 3 are ₹ 38,333, ₹ 20,000 and Nil respectively.

(b) When reasonable assurance is not there

The grant of ₹ 60,000 should be recognised over three years to compensate for the related costs.

The journal entry on receipt of grant at year 1 would be:

Grant Receivable Ac Dr. ₹ 40,000

To Deferred Income A/c ₹ 40,000

Calculation of Grant Income and Deferred Income:

Year	Labour Cost	Grant Income	Computation of Grant Income	Deferred Income at the end of the year	Computation of deferred income at the end of the year
	₹	₹		₹	
1	1,30,000	21,667	60,000 x (130/360)	18,333	(40,000 – 21,667)
2	1,10,000	18,333	60,000 x (110/360)	10,000	(50,000 – 21,667 – 18,333)
3	1,20,000	20,000	60,000 x (120/360)	-	(60,000 – 21,667 – 18,333 – 20,000)
	3,60,000	60,000			

Therefore, Grant income to be recognised in the statement of Profit and Loss for the years 1, 2 and 3 would be ₹ 21,667, ₹ 18,333 and ₹ 20,000 respectively.

Amount of grant that has not yet been credited to the statement of profit and loss i.e; deferred income is to be shown in the balance sheet. Hence, deferred income balance as at the end of year 1, 2 and 3 are ₹ 18,333, ₹ 10,000 and Nil respectively.

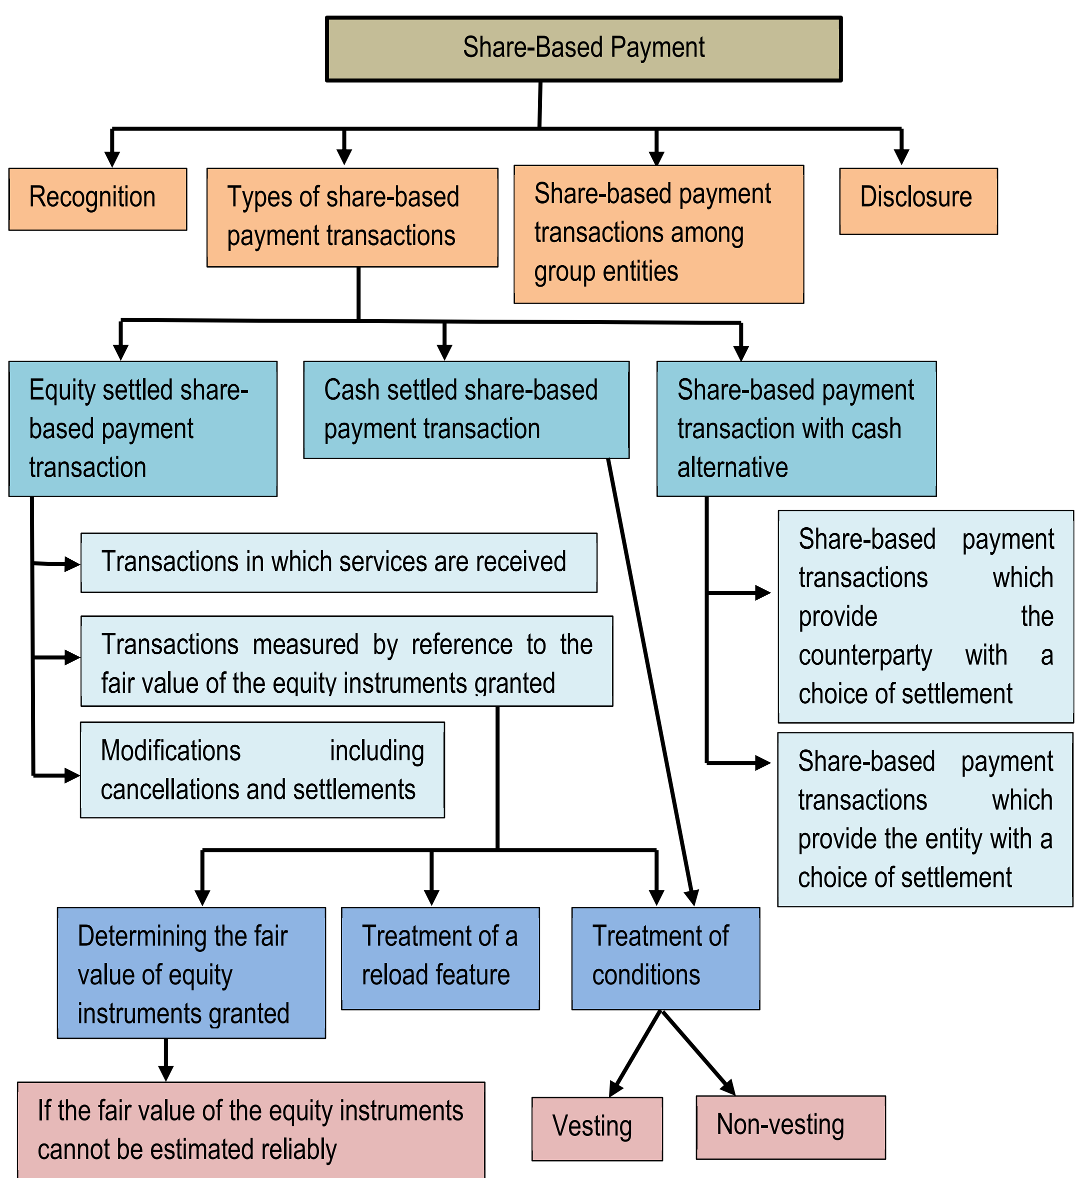
UNIT 3 : INDIAN ACCOUNTING STANDARD 102 : SHARE-BASED PAYMENT

LEARNING OUTCOMES

After studying this unit, you would be able to:

- Examine the transactions as share-based payment transactions
- Study the various types of share-based payments
- Recognize and measure the share-based payment transactions in the books
- Deal with the accounting issues in case of various vesting conditions attached with the share-based payment transactions
- Determine the fair value of share-based payment transactions
- Identify the accounting treatment for modification, cancellation and settlements of such transactions
- Make necessary and significant disclosures with respect to share-based payment transactions in the financial statements.

UNIT OVERVIEW



3.1 INTRODUCTION

As the name suggests, it is a payment based on price or value of shares. Entities often grant shares or share options to employees or other parties. Share plans and share option plans are a common feature of employee remuneration, for directors, senior executives and many other employees. Some entities issue shares or share options to pay suppliers, such as suppliers of professional services.

In India, accounting of share-based payment transactions is done in accordance with SEBI guidelines and Guidance Note on Accounting for Employee Share-Based Payments or on the basis of Ind AS 102 "Share-Based Payment". The corporate entities following Ind AS would not account for share-based payment based on Guidance Note. The Companies Act, 2013 also discusses about it under section 62.

Under Section 62 (1) (b) of the Companies Act 2013, where at any time a company having a share capital proposes to increase its subscribed capital by the issue of further shares, such shares may be offered to employees under a scheme of employees' stock option, subject to a special resolution passed by the company and subject to such conditions as may be prescribed.

3.2 DEFINITION

Some of the terms used in Ind AS 102 are as follows:

a. **Cash-settled share-based payment transaction:** A share-based payment transaction in which the entity acquires goods or services by incurring a liability to transfer cash or other assets to the supplier of those goods or services for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity.

b. **Employees and others providing similar services:** Individuals who render personal services to the entity and either (a) the individuals are regarded as employees for legal or tax purposes, (b) the individuals work for the entity under its direction in the same way as individuals who are regarded as employees for legal or tax purposes, or (c) the services rendered are similar to those rendered by employees. For example, the term encompasses all management personnel, i.e. those people having authority and responsibility for planning, directing and controlling the activities of the entity, including non-executive directors.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

c. **Equity instrument:** A contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.

d. **Equity instrument granted:** The right (conditional or unconditional) to an equity instrument of the entity conferred by the entity on another party, under a share-based payment arrangement.

e. **Equity-settled share-based payment transaction:** A share-based payment transaction in which the entity

(a) receives goods or services as consideration for its own equity instruments (including shares or share options), or

(b) receives goods or services but has no obligation to settle the transaction with the supplier.

f. **Fair value:** The amount for which an asset could be exchanged, a liability settled, or an equity instrument granted could be exchanged, between knowledgeable, willing parties in an arm's length transaction.

g. **Grant date :** The date at which the entity and another party (including an employee) agree to a share-based payment arrangement, being when the entity and the counterparty have a shared understanding of the terms and conditions of the arrangement. At the grant date the entity confers on the counterparty the right to cash, other assets, or equity instruments of the entity, provided the specified vesting conditions, if any, are met. If that agreement is subject to an approval process (for example, by shareholders), grant date is the date when that approval is obtained.

h. **Intrinsic value:** The difference between the fair value of the shares to which the counterparty has the (conditional or unconditional) right to subscribe or which it has the right to receive, and the price (if any) the counterparty is (or will be) required to pay for those shares. For example, a share option with an exercise price of ₹ 15, on a share with a fair value of ₹ 20, has an intrinsic value of ₹ 5.

i. **Market condition:** A condition upon which the exercise price, vesting or exercisability of an equity instrument depends that is related to the market price of the entity's equity instruments, such as attaining a specified share price or a specified amount of intrinsic value of a share option, or achieving a specified target that is based on the market price of the entity's equity instruments relative to an index of market prices of equity instruments of other entities.

j. **Measurement date:** The date at which the fair value of the equity instruments granted is measured for the purposes of this Ind AS. For transactions with employees and others

Join us t.me/caborntofight

providing similar services, the measurement date is grant date. For transactions with parties other than employees (and those providing similar services), the measurement date is the date the entity obtains the goods or the counterparty renders service.

k. **Performance condition:** A vesting condition that requires:

(a) the counterparty to complete a specified period of service (ie a service condition); the service requirement can be explicit or implicit; and

(b) specified performance target(s) to be met while the counterparty is rendering the service required in (a).

The period of achieving the performance target(s):

(a) shall not extend beyond the end of the service period; and

(b) may start before the service period on the condition that the commencement date of the performance target is not substantially before the commencement of the service period.

A performance target is defined by reference to:

(a) the entity's own operations (or activities) or the operations or activities of another entity in the same group (i.e. a non-market condition); or

(b) the price (or value) of the entity's equity instruments or the equity instruments of another entity in the same group (including shares and share options) (ie a market condition).

A performance target might relate either to the performance of the entity as a whole or to some part of the entity (or part of the group), such as a division or an individual employee.

l. **Reload feature:** A feature that provides for an automatic grant of additional share options whenever the option holder exercises previously granted options using the entity's shares, rather than cash, to satisfy the exercise price.

m. **Reload option**: A new share option granted when a share is used to satisfy the exercise price of a previous share option.

n. **Service condition**: A vesting condition that requires the counterparty to complete a specified period of service during which services are provided to the entity. If the counterparty, regardless of the reason, ceases to provide service during the vesting period, it has failed to satisfy the condition. A service condition does not require a performance target to be met.

Join us t.me/caborntofight

o. **Share option:** A contract that gives the holder the right, but not the obligation, to subscribe to the entity's shares at a fixed or determinable price for a specified period of time.

p. **Vest:** To become an entitlement. Under a share-based payment arrangement, a counterparty's right to receive cash, other assets or equity instruments of the entity vests when the counterparty's entitlement is no longer conditional on the satisfaction of any vesting conditions.

q. **Vesting condition:** A condition that determines whether the entity receives the services that entitle the counterparty to receive cash, other assets or equity instruments of the entity, under a share-based payment arrangement. A vesting condition is either a service condition or a performance condition.

r. **Vesting period:** The period during which all the specified vesting conditions of a share-based payment arrangement are to be satisfied.

3.2.1 Share-based payment arrangement

It is an agreement between the entity (or another group entity or any shareholder of any group entity) and another party (including an employee) that entitles the other party to receive -

(a) cash or other assets of the entity for amounts that are based on the price (or value) of equity instruments (including shares or share options) of the entity or another group entity, Or

(b) **equity instruments** (including shares or **share options**) of the entity or another group entity,

provided the specified **vesting conditions**, if any, are met.

3.2.2 Share-Based Payment Transaction

It is a transaction in which the entity -

(a) receives goods or services from the supplier of those goods or services (including an employee) in a share-based payment arrangement, or

(b) incurs an obligation to settle the transaction with the supplier in a share-based payment arrangement when another group entity receives those goods or services.

Analysis of share-based payment (SBP)

1. Share-based payment should be formed with an **agreement** between an entity & a party (includes employees) which essentially means that a communication of the terms and conditions should be in place in order to have share-based payment.

Example 1

A management committee of an entity has initiated a plan to provide some stock options to its employees but there are some terms which are yet to be finalized and the plan is not yet communicated to the employee. Since, there is no formal communication stating the terms or conditions of the agreement, it will not attract Ind AS 102 provisions. The standard will be attracted when there will be a binding arrangement.

2. Share-based payments should be made for goods/ services and should be with an external person e.g. supplier including employee.

Examples 2 & 3

2. Goods/services have been received by an entity for which it has issued its own equity shares to the counterparty (who has supplied the goods) at discount/ premium. The value of the goods received has been paid by using its own equity shares but if the fair value of the goods received are more / less than the value of share issued by an entity, then some un-identified goods / services will be received / or have been received. Hence, Ind AS 102 will still be applicable for such unidentified goods/ services.

3. An entity issuing its own shares to a charity without any consideration will be covered under Ind AS 102. This is a share-based payment arrangement, covered under Ind AS 102 (not a share-based payment transaction).

3. Goods/services that are being received by an entity should be from a supplier which will include an employee of the entity. The goods/services received from a counterparty who act in the capacity of shareholder will not be covered under Ind AS 102.

Example 4

Service Maintenance Agreement has been entered by an entity with one of the supplier, outside the entity which requires to pay for these services by issuing equity shares of the entity. Such an agreement will be covered under Ind AS 102.

4. A transaction with an employee (or other party) in his/her capacity as a holder of equity instruments of the entity is not a share-based payment transaction.

Example 5

An entity issued right shares to all its shareholders which include employees of the company. Since the employees who have received such shares are acting in the capacity of shareholders and not as employees, this transaction will **not** be covered under Ind AS 102.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

5. For receiving goods / services, an entity needs to settle the transaction either by issuing its own equity shares / or group entity's shares (which is called as "equity settled") or by paying cash amount equivalent against such shares (which is called as "cash settled") or a combination of these two where settlement option rests either with an entity or with the counterparty.

6. Equity instruments, which means a residual interest in asset & liability of the company will include –

   a) Ordinary shares

   b) Redeemable preference shares

   c) Written call option or warrants over such ordinary shares.

7. Share-based payment transaction may be settled by an entity through its own equity shares or one of group's entity shares which means that a parent of the reporting entity might issue shares on behalf of its subsidiary for providing goods/services to its subsidiary and the same transaction will be covered under Ind AS 102.

Example 6

1. A parent issues share options to the employee of its subsidiary company or a subsidiary company issues share options to its employees based on the price of equity shares of its parent company or the subsidiary company respectively. Both the plans will be covered under Ind AS 102.

2. An entity issues certain benefits to its employees by taking a reference of earnings of next year. Since the benefit is **not** based on share price of the entity, hence this transaction will not be covered under Ind AS 102. However, it may be treated as employee benefits under Ind AS 19.

8. Vesting conditions means the criteria which is to be fulfilled (if it is required as per the share-based agreement) in order to get such Shared based payment.

Example 7

A stock option has been issued by an entity to its employees those who remain in service for next 4 years. Those who leave before 4 years will not get the share-based payments. Staying with the organization for 4 years is a vesting condition in order to get the shared based payment.

© The Institute of Chartered Accountants of India

3.3 SCOPE

3.3.1 What is covered within Ind AS 102?

Based on the analysis of the definitions, the scope of the standard are as follows:

- Covers settlement in equity or in cash or alternative settlement option i.e. to issue shares or by paying cash.
- Even if an entity is not able to identify all goods/ services that are being received by settling the transaction, either by issuing its own equity / group's equity or by paying a cash value equivalent to the equity prices, still it will be covered under Ind AS 102.
- Un-identified goods/ services that are being received will be covered in the standard.
- Share-based payment can be settled by another group entity or by using equity shares of group's entity.
- Employee of a company, working as a service provider to an entity and receiving share-based payments (e.g. stock options, warrants etc.) will be covered under this standard.
- Goods will include inventories, consumables, property, plant & equipment and other non-financial items.

Examples 8 - 11

8. An entity grants 10 shares to its employees who will remain in service for next 2 years - this will be covered within the standard as equity settled share-based payment.
9. An entity grants ₹ 1,000 to each employee which is same as the current equity price. This will not be covered under Ind AS 102 as the amount of ₹ 1,000 is fixed now and it will be paid to the employees even if the market rate of its share goes up/down from the current level.
10. An entity received services from a party who is acting as shareholder will not be covered under the standard. However, an employee who received additional payment from the entity for providing services other than its normal employment will be covered under this standard.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

11. An entity has agreed to provide bonus to its employees purely based on the share price of the entity. Since the benefit is with reference to the share price of the entity, hence it will be covered under Ind AS 102.

3.3.2 What is not covered in Ind AS 102?

Transactions with shareholders as a whole, i.e., when the shareholders act solely in their capacity as shareholders.

Example 12

If an entity grants all holders of a particular class of its equity instruments the right to acquire additional equity instruments of the entity at a price that is less than the fair value of those equity instruments, and an employee receives such a right because he/she is a holder of equity instruments of that particular class, the granting or exercise of that right is not subject to the requirements of Ind AS 102.

- Entity shall not apply this standard to transactions in which the entity acquires goods as part of net assets acquired in business combinations as defined by Ind AS 103 'Business Combinations', or contribution for Joint ventures as per Ind AS 111 'Joint Arrangements'.

Examples 13 and 14

13. An entity has issued equity instruments in exchange for control of the acquiree is not within the scope of this standard. However, if the equity instruments are being issued to acquiree's employees in their capacity as employee, then it will be covered under Ind AS 102.
14. An entity buys a business from an individual to whom equity instruments are being issued. The individual will be working as an employee in the combined new entity. The instruments that are being issued as part of business purchase consideration under Ind AS 103 'Business Combination' will not be covered under Ind AS 102. However, if the equity instrument is being issued in the capacity of accepting employment in a new company, then it will be covered within Ind AS 102.

- Financial instruments issued to buy/sell non-financial items which can be settled at net will be outside Ind AS 102.

Example 15

Contracts for purchase and sale of goods/ services which are entered for settling in net amounts/ or keep it for speculation purposes will be covered under Ind AS 109- Financial Instruments and hence will not be covered under Ind AS 102.

Join us t.me/caborntofight

3.4 RECOGNITION

An entity shall recognise the goods or services received or acquired in a share-based payment transaction when it obtains the goods or as the services are received. The entity shall recognise a corresponding increase in equity if the goods or services were received in an equity-settled share-based payment transaction, or a liability if the goods or services were acquired in a cash-settled share-based payment transaction.

Analysis of recognition of SBP (Share-based payments)

- All such goods / services which are being received in share-based payment will be recognized when such goods are received or services are obtained.
- An entity would recognize an expense or an asset if the goods and/or services received meet the criteria for recognition as an asset.
- A corresponding increase in equity for equity settled transactions or in liabilities for cash-settled transactions would be recognized.
- The recognition will depend on vesting conditions, if any (in certain cases there will not be any vesting condition). It means, if there are certain conditions either service related or performance related which needs to be completed in order to be eligible for such share-based payments, then recognition will be based on the best estimate of the expected vesting value of such share-based payments.

Examples 16 and 17

16. An entity purchases some inventory from a supplier for which the entity will issue 100 shares as payment. The fair value of the inventory was ₹ 15,000. On purchase of inventory, the transaction will be recorded by a debit to the inventory and a credit to equity with an amount of ₹ 15,000 i.e. taking fair value of goods / services so transacted (except in case of transactions with an employee). However, if the fair value of goods / services is not reliably measurable, then fair value of shares can be considered.
17. An entity has given 100 stock options to each of its 1,000 employees for those who will remain in service for next 4 years. The grant date was 1st January, 20X1. The condition to remain in service shows that the stock option has been given for the

services to be provided in the next 4 years; hence at the end of each year, the entity will estimate the expected number of employees who will remain in service and accordingly will recognize the cost over 4 years.

Timing	• Goods: when received • Services: When obtained
Recognition (debit entry)	• Expenses • Asset (if goods/services qualify as asset)
Recognition (credit entry)	• Increase in equity (for equity—settled SBP) • Liability (for cash—settled SBP)

3.5 TYPES OF SHARE-BASED PAYMENTS

3.5.1 Equity Settled- Share-Based Payments

For equity-settled share-based payment transactions, the entity shall measure the goods or services received, and the corresponding increase in equity, directly, at the fair value of the goods or services received, unless that fair value cannot be estimated reliably. If the entity cannot estimate reliably the fair value of the goods or services received, the entity shall measure their value, and the corresponding increase in equity, indirectly, by reference to the fair value of the equity instruments granted.

Analysis of the Equity Settled Share-based payments

- As per Ind AS 102, all goods or services which are received by an entity should be fair valued in order to arrive at the transaction price to recognize the share-based payment.
- In the absence of reliable information to arrive at the fair value of goods & services received, the fair value of equity instrument issued will be used.
- In the case of EMPLOYEES, it is required by the standard to use fair value of equity granted because it is practically not possible to identify the fair value of the services rendered by the employees.

- In the case of awards to non-employees, there is a rebuttable presumption that the fair value of goods/services received from any external supplier can be estimated. However, if this is not feasible, then an indirect reference can be used by taking fair value of instruments issued.
- There might be some cases where the transaction is other than with employee, where goods / services received are less than the fair value of equity share issued then some un-identified goods / services are recognized by taking a difference between fair value of equity instruments issued and fair value of goods / services received.

Examples 18 and 19

18. An entity has agreed to issue 100 shares to each of its 500 employees if they remain in service for the next 3 years. In this case 3 years is a service period, on completion of which shares will be issued by the entity. Since this is a share-based payment plan with employees of the entity, the fair value of equity instruments issued will be used for calculating transaction value of the share-based payments.
19. An entity agreed to issue 100 shares to a supplier to provide some consultancy services for next 2 years. There is a similar contract in the market which has a value of ₹ 20,000. The similar value of the contract will be used as fair value of this share-based payment transaction unless there is no reliable fair value is available.

Measurement principle for equity—settled awards:

Counterparty	Measurement basis	Measurement date	Recognition date
Employee	Fair value of equity instruments awarded	Grant date	Date goods or services received
Non-employee	Fair value of goods or services received	Date goods or services received	Date goods or services received

Illustration 1-Equity Settled Shared Based Payment- Service conditions

ABC Limited granted to its employees, share options with a fair value of ₹ 5,00,000 on 1st April, 20X0, if they remain in the organization upto 31st March, 20X3. The exercise price if the share option is NIL. On 31st March, 20X1, ABC Limited expects only 91% of the employees to remain in the employment. On 31st March, 20X2, company expects only 89% of the employees to remain in the employment. However, only 82% of the employees remained in the organization at the end of March, 20X3 and all of them exercised their options. Share options will be settled in 5,000 shares of ₹ 100 each.

3.5.2 Cash Settled- Share-Based Payments

For cash-settled share-based payment transactions, the entity shall measure the goods or services acquired and the liability incurred at the fair value of the liability. Until the liability is settled, the entity shall remeasure the fair value of the liability at the end of each reporting period and at the date of settlement, with any changes in fair value recognized in profit or loss for the period.

Analysis of the Cash Settled Share-Based Payments

- It is a plan where entity issues rights to its employees/ suppliers where employees/ suppliers will be entitled for a cash payment in future based on equity share prices of the entity / or equity prices of the Group (group means parent company of the entity). In some cases, right to increase in equity prices is also provided which is known as Share Appreciation Rights (SAR).
- The goods/ services received against share-based payment plan to be settled in cash are measured at fair value of the liability and the liability continues to re-measured at every reporting date until it is actually paid off.
- There could be vesting conditions attached to the share-based payment plans e.g. to remain in service for next 3 years etc. The recognition of such share-based payment plans should be done by recognizing fair value of the liability at the time of goods/ services received and not at the date of grant. The liability so recognized will be fair valued at each reporting date and difference in fair value will be charged to profit or loss for the period.
- There could be some cases where no vesting period / condition is required to be fulfilled, in those cases, cash settled share-based payment can be recognized in full at initial recognition itself.

Examples 20 and 21

20. An entity issued share appreciation rights to its existing employees who remains in service for next 3 years and the benefit will then be settled in cash of an equivalent amount of share price.

21. Management of an entity decides to issue bonus amount to certain key employees for their past services based on share price of the entity. The amount equivalent to the shares will be recognized immediately as cost of employees because there are no conditions which are to be vested upon.

Illustration 2 - Cash Settled Shared-Based Payment - Service conditions

XYZ issued 10,000 Share Appreciation Rights (SARs) that vest immediately to its employees on 1st April, 20X0. The SARs will be settled in cash. Using an option pricing model, at that date it is estimated that the fair value of a SAR is ₹ 95. SAR can be exercised any time upto 31st March, 20X3. At the end of period on 31st March, 20X1 it is expected that 95% of total employees will exercise the option, 92% of total employees will exercise the option at the end of next year and finally 89% were exercised at the end of the 3rd year. Fair values at the end of each period have been given below:

Fair value of SAR		*₹*
31st March, 20X1		*112*
31st March, 20X2		*109*
31st March, 20X3		*114*

3.5.3 Share-Based Payment Transactions with Cash Alternatives

For share-based payment transactions in which the terms of the arrangement provide either the entity or the counterparty with the choice of whether the entity settles the transaction in cash (or other assets) or by issuing equity instruments, the entity shall account for that transaction, or the components of that transaction, as a cash settled share-based payment transaction if, and to the extent that, the entity has incurred a liability to settle in cash or other assets, or as an equity-settled share-based payment transaction if, and to the extent that, no such liability has been incurred.

Analysis of Share-Based Payment Transactions with Cash Alternatives

- The choice either to settle in cash or equity may be with the entity or its counterparty which will define the way of recognizing such alternatives either equity-settled or cash-settled. The choice to select the cash or equity alternatives can be segregated in two parts –

  a) When Counterparty has a choice of settlement

  - When counterparty has a choice of settlement for such share-based payments, then this will be treated as compound instrument which has debt and equity components.
  - When such alternatives are given in case of transactions with parties other than employees where fair value of goods / services is measured directly then the difference between fair value of such goods/ services and the fair value of debt

Merged By CA - Born To Fight

component, at the date when the goods or services are received, will be considered to be the value of equity component.

- For other transactions, including transactions with employees, a separate fair value of compound financial instruments will be calculated and accordingly the values of goods/services received will be accounted. To apply this requirement, the entity shall first measure the fair value of the debt component, and then measure the fair value of the equity component — taking into account that the counterparty must forfeit the right to receive cash in order to receive the equity instrument. The fair value of the compound financial instrument is the sum of the fair values of the two components. However, share-based payment transactions in which the counterparty has the choice of settlement are often structured so that the fair value of one settlement alternative is the same as the other. For example, the counterparty might have the choice of receiving share options or cash settled share appreciation rights. In such cases, the fair value of the equity component is zero, and hence the fair value of the compound financial instrument is the same as the fair value of the debt component. Conversely, if the fair values of the settlement alternatives differ, the fair value of the equity component usually will be greater than zero, in which case the fair value of the compound financial instrument will be greater than the fair value of the debt component.

- The entity shall account separately for the goods or services received or acquired in respect of each component of the compound financial instrument. For the debt component, the entity shall recognise the goods or services acquired, and a liability to pay for those goods or services, as the counterparty supplies goods or renders service, in accordance with the requirements applying to cash-settled share-based payment transactions. For the equity component (if any), the entity shall recognise the goods or services received, and an increase in equity, as the counterparty supplies goods or renders service, in accordance with the requirements applying to equity-settled share-based payment transactions.

- At the date of settlement, the entity shall remeasure the liability to its fair value. If the entity issues equity instruments on settlement rather than paying cash, the liability shall be transferred direct to equity, as the consideration for the equity instruments issued.

- If the entity pays in cash on settlement rather than issuing equity instruments, that payment shall be applied to settle the liability in full. Any equity component previously recognised shall remain within equity. By electing to receive cash on settlement, the counterparty forfeited the right to receive equity instruments.

Join us t.me/caborntofight

However, this requirement does not preclude the entity from recognising a transfer within equity, i.e. a transfer from one component of equity to another.

Example 22

An entity issues stock options to its employees which can be claimed either in cash or equity instrument of an entity. Employees need to be in service for next 2 years. Entity needs to find fair value component of equity to be settled and fair value of cash amount to be settled. Each balance sheet date, these values need to be updated. Upon the exercising of the option, if it is in equity then fair value liability will be transferred to the equity in full.

b) When the entity has a choice of settlement

If the entity can choose the settlement method then the whole award would be treated as either cash-settled or equity-settled, depending on-

- Whether entity has a present obligation to settle in cash in which case accounting of award would be as a liability. The assumption to consider present obligation to settle in cash would be in those cases when there is no commercial substance to issue equity (e.g. restriction to issue new share capital etc.) or there is past practice or stated policy to settle such type of arrangement in cash only or entity has generally settled in cash whenever counterparty asks for cash settlement.
- There is no such obligation to pay in cash then equity settled accounting treatment would be required.

In case, equity settled accounting has been done but the settlement is required to be done in cash then it would be accounted for as repurchase of an equity interest.

Upon settlement, if the entity elects the settlement alternative with the higher fair value, as at the date of settlement, the entity shall recognise an additional expense for the excess value given, i.e. the difference between the cash paid and the fair value of the equity instruments that would otherwise have been issued, or the difference between the fair value of the equity instruments issued and the amount of cash that would otherwise have been paid, whichever is applicable.

Examples 23 and 24

23. An entity issues stock options to its employees which provide entity an option to settle either in cash or by entity's own shares. As per the past practice of the entity, these kind of stock options have been settled in cash only, hence the entity will create a liability assuming present obligation to settle the options in cash.

Join us t.me/caborntofight

24. An entity has issued certain stock options to its employees where it has right to settle these options either in cash or by its own equity. Based on the past practices, the entity assumed the settlement will be done in equity only and accordingly the fair value of such options at grant date was credited to equity (based on expected vesting rights). However, the options were actually settled in cash, hence all such equity portion will be debited to the extent it was credited as re-purchasing the equity shares, and the portion above the equity portion so debited will be transferred to Profit and Loss of the period.

Illustration 3 - Share-based payment with cash alternative

On 1st January, 20X1, ABC limited gives options to its key management personnel (employees) to take either cash equivalent to 1,000 shares or 1,500 shares. The minimum service requirement is 2 years and shares being taken must be kept for 3 years.

Fair values of the shares are as follows:	₹
Share alternative fair value (with restrictions)	*102*
Grant date fair value on 1st January, 20X1	*113*
Fair value on 31st December, 20X1	*120*
Fair Value on 31st December, 20X2	*132*

The employees exercise their cash option at the end of 20X2.

Example 25-Share-based payment arrangements with cash alternatives

An entity grants an employee the right to choose either 2,000 shares, ie, a right to a cash payment equal to the value of 2,000 shares, or 2,400 shares. The grant is conditional upon the completion of three years' service. If the employee chooses the share alternative, the shares must be held for three years after vesting date.

At the grant date, the entity's share price is ₹ 50 per share. At the end of years 1, 2 and 3, the share price is ₹ 52, ₹ 55 and ₹ 60 respectively. The entity does not expect to pay dividends in the next three years. After taking into account the effects of the post-vesting transfer restrictions, the entity estimates that the grant date fair value of the share alternative is ₹ 48 per share.

At the end of year 3, the employee chooses:

Scenario 1: The cash alternative

Scenario 2: The equity alternative

Application of requirements

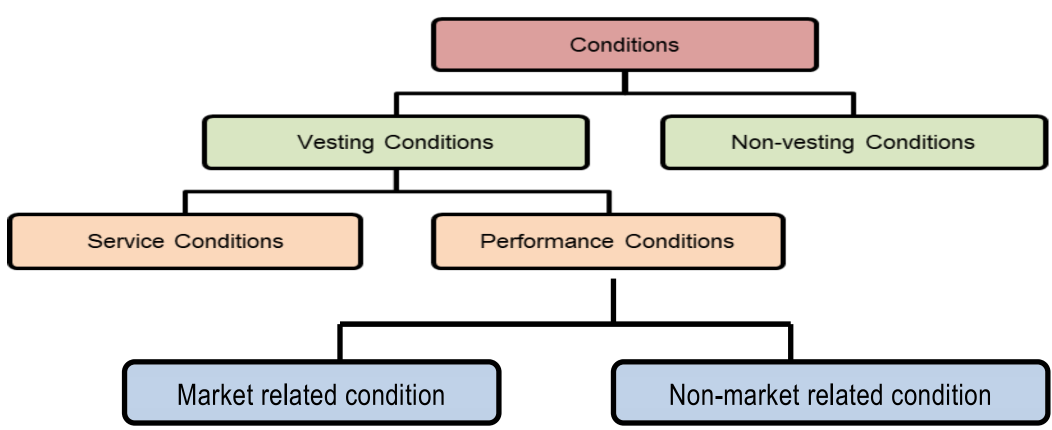
The fair value of the equity alternative is ₹ 1,15,200 (2,400 shares x ₹ 48). The fair value of

the cash alternative is ₹ 1,00,000 (2,000 shares x ₹ 50). Therefore, the fair value of the equity component of the compound instrument is ₹ 15,200 (₹ 1,15,200 - ₹ 1,00,000).

The entity recognizes the following amounts:

Year	Computation	Expense (₹)	Equity (₹)	Liability (₹)
1	Liability component: (2,000 x ₹ 52 x 1/3)	34,667		34,667
	Equity component: (₹ 15,200 x 1/3)	5,067	5,067	
2	Liability component: (2,000 x ₹ 55 x 2/3) — ₹ 34,666	38,666		38,666
	Equity component: (₹ 15,200 x 1/3)	5,067	5,067	
3	Liability component: (2,000 x ₹ 60) — ₹ 73,333	46,667		46,667
	Equity component: (₹ 15,200 x 1/3)	5,066	5,066	
End Year 3	Scenario 1: cash of ₹ 1,20,000 paid			(1,20,000)
	Scenario 1 totals	**1,35,200**	**15,200**	**0**
	Scenario 2: 2,400 shares issued		1,20,000	(1,20,000)
	Scenario 2 totals	**1,35,200**	**1,35,200**	

3.6 DETERMINING TYPES OF CONDITIONS



3.6.1 Vesting conditions

Share-based payment awards generally vest upon meeting specified conditions, such as service conditions (time-based) or performance conditions (eg. achieving a specified EBITDA target). These conditions affect the timing of when the expense is recognized, and in some cases, the measurement of expense. In addition, if a condition is not met, whether or not the entity may reverse previously recognized compensation expense depends on the nature of the condition that was not met. Hence classification of a condition is an important step in accounting of share-based payments.

Following are the classification of various conditions and their accounting requirements.

a) Service condition

When share-based payment is dependent upon the minimum term to be served in order to be eligible for employees share-based payment, it is called service condition.

Examples 26 & 27

26. An entity has issued 100 shares each to its 1,000 employees under share-based payment if they remain in the organization for next 3 years. This would be considered to be a service condition; 3 years being the period over which the employee would be required to be in service as a condition.

27. If an employee remains in service for at least three years from the grant date of the award, the employee can exercise the options at any time between three and ten years from the grant date of the award. The fair value of the award at the grant date, ignoring the effect of vesting condition, is ₹ 6,00,000.

    For this award, the vesting period is three years, the exercise period is seven years, and the life of the option is ten years. The requirement to remain employed is a (vesting) service condition. The entity recognizes an expense of ₹ 2,00,000 per year for three years, with a corresponding increase in equity.

    If the employee leaves at the end of year two, the entity reverses the cumulative expense previously recognized. However, if the employee does not exercise options after the vesting period, expense previously recognized cannot be reversed.

    Consider an alternate scenario. The employee was given an unconditional right to exercise the option at any time between the grant date and ten years from the grant date of the award. For this award, the vesting period is nil, the exercise period and the life of the option are ten years. The entity recognizes an expense of ₹ 6,00,000 immediately, with a corresponding increase in equity. Subsequently, the entity cannot

reverse this expense even if the employee does not exercise its options. This is because they are vested from day 1.

b) Performance condition

If an employee is granted share options conditional upon the achievement of a performance condition and remaining in the entity's employment until that performance condition is satisfied, and the length of the vesting period varies depending on when that performance condition is satisfied, the entity shall presume that the services to be rendered by the employee as consideration for the share options will be received in the future, over the expected vesting period. The entity shall estimate the length of the expected vesting period at grant date, based on the most likely outcome of the performance condition.

Performance condition may be

a. Market-related; or

b. Non-market related.

a. Market related condition

In order to be eligible for share-based payment, when one of the conditions is to achieve target price/ value of the share by an entity, it is called as market-related performance condition. If the performance condition is a market condition, the estimate of the length of the expected vesting period shall be consistent with the assumptions used in estimating the fair value of the options granted and shall not be subsequently revised.

Example 28

An entity issues stock options to its employees who will serve the organization for next 2 years and till the time the share price reaches to ₹ 100. The target price to reach ₹ 100 is one of the market-related condition.

b. Non-market related condition

When the parameter is not market driven but linked with some internal performance/ operations or activities of the entity, it will be considered as non-market related conditions. Non- market related conditions do not have any impact on market price of the shares of the entity issuing such share-based payments. If the performance condition is not a market condition, the entity shall revise its estimate of the length of the vesting period, if necessary, if subsequent information indicates that the length of the vesting period differs from previous estimates.

Example 29

An entity issued some stock options to employees with a condition that they have to remain in the organisation for next 2 years and EBITA of the entity should rise to ₹ 10 million. Here, the EBITA target is non-market related condition.

3.6.2 Non-vesting conditions

Such conditions which do not have any impact on eligibility to have share-based payments. It has not been specifically defined by the standard. However, one can understand this as conditions which are other than vesting conditions.

Examples 30 & 31

30. An entity issued some stock options to its employees wherein they are required to serve minimum period of next 2 years and from the end of 2nd year there will further be waiting time till next 1 year within which the entity should achieve revenue of ₹ 100 million. However, if an employee leaves the entity after the end of 2nd year then the employee will not lose the entitlement to get such share-based payments. Hence the condition of achieving revenue target is non-vesting condition.

31. An entity grants share options to a director on the condition that the director does not compete with the reporting entity for a period of at least three years. The fair value of the award at the date of the grant, including the effect of non - compete clause is ₹ 15 million. The 'non-compete' clause is a non-vesting condition because the entity does not receive any services. On the grant date, the entity immediately recognizes a cost of ₹ 15 million because director is not providing any future services. The entity cannot reverse the expense recognised, even if the director goes to work for a competitor and loses the share options.

3.7 DETERMINING IMPACT OF CONDITIONS ON SHARE BASED VALUATION

Once we understood the conditions attached with any share-based payment, next question arises that about the implication of the conditions on accounting / measurement of such share-based payments and why it is crucial to segregate them.

a. A grant of equity instruments might be conditional upon satisfying specified vesting conditions. For example, a grant of shares or share options to an employee is typically conditional on the employee remaining in the entity's employment for a specified period of time. There might be performance conditions that must be satisfied, such as the entity

achieving a specified growth in profit or a specified increase in the entity's share price. Vesting conditions, other than market conditions, shall not be taken into account when estimating the fair value of the shares or share options at the measurement date. Instead, vesting conditions shall be taken into account by adjusting the number of equity instruments included in the measurement of the transaction amount so that, ultimately, the amount recognised for goods or services received as consideration for the equity instruments granted shall be based on the number of equity instruments that eventually vest. Hence, on a cumulative basis, no amount is recognised for goods or services received if the equity instruments granted do not vest because of failure to satisfy a vesting condition, eg the counterparty fails to complete a specified service period, or a performance condition is not satisfied, subject to the requirements mentioned below in point c.

b. To apply the requirements mentioned in abovementioned point (a), the entity shall recognise an amount for the goods or services received during the vesting period based on the best available estimate of the number of equity instruments expected to vest and shall revise that estimate, if necessary, if subsequent information indicates that the number of equity instruments expected to vest differs from previous estimates. On vesting date, the entity shall revise the estimate to equal the number of equity instruments that ultimately vested, subject to the requirements mentioned below in point c.

c. Market conditions, such as a target share price upon which vesting (or exercisability) is conditioned, shall be taken into account when estimating the fair value of the equity instruments granted. Therefore, for grants of equity instruments with market conditions, the entity shall recognize the goods or services received from a counterparty who satisfies all other vesting conditions (eg services received from an employee who remains in service for the specified period of service), irrespective of whether that market condition is satisfied.

d. Similarly, an entity shall take into account all non-vesting conditions when estimating the fair value of the equity instruments granted. Therefore, for grants of equity instruments with non-vesting conditions, the entity shall recognise the goods or services received from a counterparty that satisfies all vesting conditions that are not market conditions (eg services received from an employee who remains in service for the specified period of service), irrespective of whether those non-vesting conditions are satisfied.,

Treatment of a reload feature

For options with a reload feature, the reload feature shall not be taken into account when estimating the fair value of options granted at the measurement date. Instead, a reload option shall be accounted for as a new option grant, if and when a reload option is subsequently granted.

Below mentioned table summarizes the impact of various conditions –

Conditions	To include in fair value of SBP (refer note-1)	To include expected equity shares which meet conditions (refer note-2)
Service condition	No	Yes
Performance condition - Market related	Yes	No
Performance condition - Non-market related	No	Yes
Non-vesting condition	Yes	No

Note 1 Share-based payment will be measured at fair value on initial recognition which will include the effect of these conditions. Equity settled share-based payment will be measured at fair value on grant date with no subsequent measurement, whereas cash settled share-based payment shall be re-measured at each reporting date till its settlement in full.

Note 2 These conditions will have no impact on fair valuation of share-based payments. However, they will be considered while estimating the expected number of equity shares at the end of each period for recognition of the share-based payment.

Summary of recognising expense for an award with multiple conditions:

Scenario	Service condition met?	Market condition met?	Non-market performance condition met?	Ind AS 102 expense?
1	Yes	Yes	Yes	Yes
2	Yes	No	Yes	Yes
3	Yes	Yes	No	No
4	Yes	No	No	No
5	No	Yes	Yes	No
6	No	No	Yes	No
7	No	Yes	No	No
8	No	No	No	No

Example 32

An entity issued 100 shares each to its 1,000 employees under share-based payment upon the condition to serve the organization for at least next 2-years subject to the below scenarios:

1) EBIDTA of the entity shall be ₹ 10 million in next 2 years.

Merged By CA - Born To Fight

2) Share price of the entity shall be ₹ 150 in next 2 years.

3) Employees are required to serve additional 4 months from the end of 2 years but will have no impact on vesting rights at the end of 2nd year.

Since 2 years to remain in service is a 'service related condition', it will be considered in the calculation of expected number of shares which will satisfy the conditions attached.

1) **EBIDTA** is one of the performance conditions which is non-market related, hence will be considered while making an estimation of number of shares which will satisfy the condition attached.

2) **Share price target** is one of the market related conditions and hence it will be considered in the measurement of fair value at initial recognition (equity & cash settled) and at subsequent dates (in case of cash settled).

3) **Additional 4-months** requirement does not have any impact on eligibility to get share-based payment. Therefore, it is a non -vesting condition and will be considered in fair value of the share-based payment.

Illustration 7 - Equity Settled – Non-market conditions

Ankita Holding Inc. grants 100 shares to each of its 500 employees on 1st January, 20X1. The employees should remain in service during the vesting period. The shares will vest at the end of the

First year if the company's earnings increase by 12%;

Second year if the company's earnings increase by more than 20% over the two-year period;

Third year if the entity's earnings increase by more than 22% over the three-year period.

The fair value per share at the grant date is ₹ 122. In 20X1, earnings increased by 10%, and 29 employees left the organisation. The company expects that the shares will vest at the end of the year 20X2. The company also expects that additional 31 employees will leave the organisation in the year 20X2 and that 440 employees will receive their shares at the end of the year 20X2. At the end of 20X2, company's earnings increased by 18%. Therefore, the shares did not vest. Only 29 employees left the organization during 20X2. Company believes that additional 23 employees will leave in 20X3 and earnings will further increase so that the performance target will be achieved in 20X3. At the end of the year 20X3, only 21 employees have left the organization. Assume that the company's earnings increased to desired level and the performance target has been met.

Determine the expense for each year and pass appropriate journal entries?

Join us t.me/caborntofight

Solution

Since the earnings of the entity is non-market related, hence it will not be considered in fair value calculation of the shares given. However, the same will be considered while calculating number of shares to be vested.

Workings:

	20X1	20X2	20X3
Total employees	500	500	500
Employees left (Actual)	(29)	(58)	(79)
Employees expected to leave in the next year	(31)	(23)	-
Year end – No of employees	440	419	421
Shares per employee	100	100	100
Fair value of share at grant date	122	122	122
Vesting period	1/2	2/3	3/3
Expenses-20X1 (Note 1)	26,84,000		
Expenses-20X2 (Note 2)		7,23,867	
Expenses-20X3 (Note 3)			17,28,333

Note 1:

Expense for 20X1 = Number of employees x Shares per employee x Fair value of share x Proportionate vesting period

= 440 x 100 x 122 X ½ = 26,84,000

Note 2:

Expense for 20X2 = (Number of employees x Shares per employee x Fair value of share x Proportionate vesting period) – Expense recognized in year 20X1

= (419 x 100 x 122 x 2/3) – 26,84,000 = 7,23,867

Note 3:

Expense for 20X3 = (No of employees x Shares per employee x Fair value of share x Proportionate vesting period) – Expense recognized in year 20X1 and 20X2

= (421 x 100 x 122 x 3/3) – (26,84,000 + 7,23,867) = 17,28,333.

Illustration 8 - Equity Settled – Non market conditions (Reversals)

ACC limited granted 10,000 share options to one of its managers. In order to get the options, the manager has to work for next 3 years in the organization and reduce the cost of production by 10% over the next 3 years.

Fair value of the option at grant date was	*₹ 95*	
Cost reduction achieved-		
Year 1	*12%*	*Achieved*
Year 2	*8%*	*Not expected to vest in future*
Year 3	*10%*	*Achieved*

How the expenses would be recorded?

Solution

It is a non-market related condition. Hence the target to achieve cost reduction would be taken while estimating the number of options to be vested.

Year	Options	Fair value		FV of the options vested
Year 1	10,000	95	1/3	3,16,667
Year 2	10,000	95	0	(3,16,667)
Year 3	10,000	95	3/3	9,50,000

The condition to achieve 10% cost reduction each was not fulfilled in the year 2 and there was no expectation to vest this non-market condition in future as well and hence earlier expense amount was reversed in year 2. Since in the year 3 the non-market condition was again met, hence all such expense will be charged to Profit and Loss.

*****

Illustration 9 - Equity Settled – Market based conditions

Apple Limited has granted 10,000 share options to one of its directors for which he must work for next 3 years and the price of the share should increase by 20% over next 3 years.

The share price has moved as per below details -

Year 1	*22%*
Year 2	*19%*
Year 3	*25%*

At the grant date, the fair value of the option was ₹ 120.

How should we recognize the transaction?

Solution

The share price movement is a market-based vesting condition hence its expectations are taken into consideration while calculating the fair value of the option.

Even if the required market condition as required is not fulfilled, there is no requirement to reverse the expense previously booked.

Irrespective of the outcome of the market prices (as it is already taken care of in the fair value of the option), each period an amount of (120 x 10,000)/3 = ₹ 4,00,000 will be charged to profit and loss.

*****

3.8 GRANT DATE

Definition of Grant date

"The date at which the entity and another party (including an employee) **agrees** to a share-based payment arrangement, being when the entity and the counterparty have a **shared understanding** of the terms and conditions of the arrangement. At grant date the entity confers on the counterparty the right to cash, other assets, or equity instruments of the entity, provided the specified vesting conditions, if any, are met. If that agreement is subject to an **approval process** (for example, by shareholders), grant date is the date when that approval is obtained".

Analysis of the definition of the Grant date

- It is crucial to determine grant date correctly for determination of fair value of share-based payment and its accounting.
- There must be an agreement between the employee/ supplier and the entity with clear communication of the terms and conditions of such share-based payment. The date of such agreement will be considered as grant date.
- If the agreement is subject to the approval of appropriate authorities, then the grant date will be the date of approval.

Example 33

Entity initiated a share-based payment agreement in its board meeting and directed the supervisors to communicate the agreement to the employee. Consider the following scenarios to arrive at grant date:

1) Employees have not yet given his/her consent either implicitly or explicitly. However, entity has taken approval of the agreement in its General Meeting.

2) Employees have agreed to the terms implicitly/ explicitly. However, the approval process is under finalization.

3) Certain terms have not been specifically mentioned since they are based on some subjective conditions in future.

Now,

1. Even when the approval has been acquired, no consent has been given by an employee/ counterparty; therefore, grant date cannot be determined.

2. Even when the employee/ counterparty has agreed to the terms but approval process is still not complete, hence the grant date should be the date when approvals are complete.

3. Terms/ conditions mentioned in the agreement must be objectively defined and should not be based on subjective outcome. Mutual understanding is crucial which essentially means that all terms/ clauses and calculation related to the equity prices must be clear and objectively defined.

3.9 SUBSEQUENT MEASUREMENT

3.9.1 Equity settled Share-Based Payment

The entity shall recognise an amount for the goods or services received during the vesting period based on the best available estimate of the number of equity instruments expected to vest and shall revise that estimate, if necessary, if subsequent information indicates that the number of equity instruments expected to vest differs from previous estimates. On vesting date, the entity shall revise the estimate to equal the number of equity instruments that ultimately vested.

Equity will be credited by an additional amount (adjusted with re-estimation of expected vesting equity shares at each reporting period) and there will not be any change in the value credited to the equity.

Example 34

An entity issued 100 shares each to its 2,000 employees subject to service condition of next 3 years. Grant date fair value of the shares is ₹ 200 each. There is an expectation that employee will remain in service at the rate 95% at end of 1st year, however the expectation got revised at the end of 2nd year to 92% and again got revised to 88% at the end of the 3rd year.

Year end	% Vest	Expense (current period)	Cumulative expenses
First	95%	2,000 x 100 x 200 x 95% x 1/3 = 1,26,66,667	1,26,66,667
Second	92%	2,000 x 100 x 200 x 92% x 2/3 – 1,26,66,667 = 1,18,66,667	2,45,33,333
Third	88%	2,000 x 100 x 200 x 88% x 3/3 – 2,45,33,333 = 1,06,66,667	3,52,00,000

3.9.2 Cash-settled share-based payment

After the initial recognition of a liability to settle SBP in cash, at the end of each subsequent period the liability would be fair valued till the time it is settled.

Join us t.me/caborntofight

Example 35

An entity issued 100 shares each to its 20 employees subject to service condition of next 3 years. The settlement is to be made in cash. Grant date fair value of the shares is ₹ 200 each. However, the fair value as at end of 1st year, 2nd year & 3rd year were ₹ 180, ₹ 190, ₹ 220 respectively.

Year end	Vest	Expense (current period)	Cumulative expenses
First	1/3	20 x 100 x 180 x 1/3 = 1,20,000	1,20,000
Second	2/3	20 x 100 x 190 x 2/3 – 1,20,000= 1,33,333	2,53,333
Third	3/3	20 x 100 x 220 x 3/3 – 2,53,333 =1,86,667	4,40,000

3.10 MODIFICATION, CANCELLATION AND SETTLEMENTS

An entity might modify the terms and conditions on which the equity instruments were granted. For example, it might reduce the exercise price of options granted to employees (i.e. reprice the options), which increases the fair value of those options.

Analysis of the requirement of Modification, Cancellation and Settlements

- An entity shall recognize, as a minimum, the services measured at the grant date fair value unless vesting conditions are not fulfilled. If an entity modifies as award, it must recognize, at a minimum, cost of the original award as if the award was not modified. If modification increases fair value of the award, the entity must recognize that additional cost. The additional cost is spread over the period from the modification date until the vesting of modified options, which may differ from the vesting date of original award. Whether a modification increases or decreases the fair value of an award is determined at the modification date. If an entity modifies a vested option, it recognizes any additional fair value given on the modification date itself.

- This requirement is applicable irrespective of any modification of terms, cancellation or early settlement, if any.

- If a grant of equity instruments is cancelled or settled during the vesting period (other than a grant cancelled by forfeiture when the vesting conditions are not satisfied):

  a. the entity shall account for the cancellation or settlement as an acceleration of vesting, and shall therefore recognise immediately the amount that otherwise would have been recognised for services received over the remainder of the vesting period.

© The Institute of Chartered Accountants of India

b. any payment made to the employee on the cancellation or settlement of the grant shall be accounted for as the repurchase of an equity interest, ie as a deduction from equity, except to the extent that the payment exceeds the fair value of the equity instruments granted, measured at the repurchase date. Any such excess shall be recognised as an expense. However, if the share-based payment arrangement included liability components, the entity shall remeasure the fair value of the liability at the date of cancellation or settlement. Any payment made to settle the liability component shall be accounted for as an extinguishment of the liability.

c. if new equity instruments are granted to the employee and on the date when those new equity instruments are granted, the entity identifies the new equity instruments granted as replacement equity instruments for the cancelled equity instruments, the entity shall account for the granting of replacement equity instruments in the same way as a modification of the original grant of equity instruments, in accordance with paragraph 27 of Ind AS 102 and the guidance in Appendix B of Ind AS 102. The incremental fair value granted is the difference between the fair value of the replacement equity instruments and the net fair value of the cancelled equity instruments, at the date the replacement equity instruments are granted. The net fair value of the cancelled equity instruments is their fair value, immediately before the cancellation, less the amount of any payment made to the employee on cancellation of the equity instruments that is accounted for as a deduction from equity in accordance with (b) above. If the entity does not identify new equity instruments granted as replacement equity instruments for the cancelled equity instruments, the entity shall account for those new equity instruments as a new grant of equity instruments.

- If an entity or counterparty can choose whether to meet a non-vesting condition, the entity shall treat the entity's or counterparty's failure to meet that non-vesting condition during the vesting period as a cancellation.
- If an entity repurchases vested equity instruments, the payment made to the employee shall be accounted for as a deduction from equity, except to the extent that the payment exceeds the fair value of the equity instruments repurchased, measured at the repurchase date. Any such excess shall be recognised as an expense.

Illustration 10 – Modifications – Equity-settled share-based payment

Marathon Inc. issued 150 share options to each of its 1,000 employees subject to the service condition of 3 years. Fair value of the option given was calculated at ₹ 129. Below are the details and activities related to the SBP plan-

Year 1: *35 employees left and further 60 employees are expected to leave*

Share options re-priced (as MV of shares has fallen) as the FV fell to ₹ 50.

After the re-pricing they are now worth ₹ 80, hence expense is expected to increase by ₹ 30.

Year 2: *30 employees left and further 36 employees are expected to leave*

Year 3: *39 employees left*

How the modification/ re-pricing will be accounted?

Solution

The re-pricing was done at the end of year 1, and hence the increased expense would be spread over next 2 years equally.

Total increased value due to modification is	₹ 30		(1/2 weight each years)
	Year 1	Year 2	Year 3
Number of employees	1,000	1,000	1,000
Employee left	(35)	(65)	104
Expected to leave	(60)	(36)	____
Net employees	905	899	896
Options per employee	150	150	150
Fair value of the option	129	129	129
Period weight	1/3	2/3	3/3
Modification		30	30
Expense (original)	58,37,250	57,59,850	57,40,500
Modification	Nil	20,22,750	20,09,250
		(899x150x30x1/2)	(896x150x30x2/2)- 20,22,750)

*****

Illustration 11 - Cancellation- Equity Settled Share-based payment

Anara Fertilisers Limited issued 2000 share options to its 10 directors for an exercise price of ₹ 100. The directors are required to stay with the company for next 3 years.

Fair value of the option estimated	*₹ 130*
Expected number of directors to vest the option	*8*

During the year 2, there was a crisis in the company and Management decided to cancel the scheme immediately. It was estimated further as below-

Fair value of option at the time of cancellation was *₹ 90*

Market price of the share at the cancellation date was *₹ 99*

There was a compensation which was paid to directors and only 9 directors were currently in employment. At the time of cancellation of such scheme, it was agreed to pay an amount of ₹ 95 per option to each of 9 directors.

Suggest how the cancellation will be recorded.

Solution

	Year 1	**Year 2**	
A)			
Expected directors to vest	8	9	
Fair value of option	130	130	
Number of options	2,000	2,000	
Total	20,80,000	23,40,000	
Expense weightage	1/3		Full, as it is cancelled
Expense for the year	6,93,333	16,46,667	Remaining amount since cancelled

B) Cancellation compensation	
Number of directors	9
Amount agreed to pay	95
Number of options / director	2,000
Compensation amount (9 x 95 x 2,000) Also refer working notes 1 and 2	17,10,000

Working Notes:

1. Amount to be deducted from Equity

Number of directors	9
Fair value of option (at the date of cancellation)	90
Number of options / director	2,000
Total	16,20,000

2. Amount transferred to Profit and Loss

Total cancellation compensation	17,10,000
Less: To deduct from Equity	(16,20,000)
Balance transferred to Profit and Loss	90,000

*****

3.11 FAIR VALUE CALCULATION

All the share-based payment plans are recognized referring fair value at grant date and it is crucial to understand how the fair value is arrived and the specific guidance available in the standard.

Fair value which is required to be used is not just a quoted price of any security. There are some market related conditions and / or non-vesting conditions that would be considered in the determination of fair value. Hence to determine such fair value, one has to use valuation techniques. However, there is nothing specific which has been defined by the standard. Black-scholes pricing model and Binomial pricing model are being used widely and are also generally accepted.

Standard specify minimum inputs to be used while calculating the fair value.

All option pricing models take into account, as a minimum, the following factors:

(a) the exercise price of the option;

(b) the life of the option;

(c) the current price of the underlying shares;

(d) the expected volatility of the share price;

(e) the dividends expected on the shares (if appropriate); and

(f) the risk-free interest rate for the life of the option.

Exercise price, current price and life of the option are observable inputs and relatively easy to understand and value can be easily identified. However, other inputs which are required to be used as minimum can be detailed out as below:

1. **Expected early exercise:** If a share-based payment has service / performance conditions attached, then there is an underlying presumption that the share-based payment plan will vest and it is usually expected to settle / exercise when the current market price crosses exercise price of the plan. Some senior level employees normally tend to exercise options

© The Institute of Chartered Accountants of India

later than lower-level employees. Since all expected exercise will not happen at the same time and it is difficult to establish a linear function for such behavior, hence Binomial model is generally used in such situations. Alternatively, expected early exercise could be modelled in a similar option pricing model that uses contractual life as an input.

2. **Expected volatility:** Expected volatility is a measure of the amount by which a price is expected to fluctuate during a period. The measure of volatility used in option pricing models is the annualised standard deviation of the continuously compounded rates of return on the share over a period of time. Volatility is typically expressed in annualised terms that are comparable regardless of the time period used in the calculation, for example, daily, weekly or monthly price observations.

3. **Expected dividend:** Whether expected dividend should be taken into account when measuring the fair value of shares or options granted depends on whether the counterparty is entitled to dividend or dividend equivalents.

Example 36

If employees were granted options and are entitled to dividend on the underlying shares or dividend equivalents (which might be paid in cash or applied to reduce the exercise price) between grant date and exercise date, the options granted should be valued as if no dividend will be paid on the underlying shares, i.e. the input for expected dividend should be zero.

4. **Risk-free interest rate:** The risk-free interest rate is the implied yield currently available on zero-coupon government issues of the country in whose currency the exercise price is expressed, with a remaining term equal to the expected term of the option being valued (based on the option's remaining contractual life and taking into account the effects of expected early exercise). It may be necessary to use an appropriate substitute, if no such government issues exist or circumstances indicate that the implied yield on zero-coupon government issues is not representative of the risk-free interest rate (for example, in high inflation economies). Also, an appropriate substitute should be used if market participants would typically determine the risk-free interest rate by using that substitute, rather than the implied yield of zero-coupon government issues, when estimating the fair value of an option with a life equal to the expected term of the option being valued.

3.12 GROUP SHARE-BASED PAYMENT PLAN

In practice, we have come across many cases where one member of the group (typically, the parent) has obligation to settle a share-based payment transaction in which services are

Join us t.me/caborntofight

provided to another member of the group (typically a subsidiary). For example, within a multinational group, shares in the listed parent entity may be granted to the employees of various subsidiary entities located around the world. In some other cases, a listed subsidiary may have obligation to settle a share-based payment transaction in which services are provided to another member of the group (including the parent). These transactions are within the scope of Ind AS 102 for the entity receiving the services. This is despite the fact that it is not a direct party to the arrangement between its group entity and its employee.

For share-based payment transactions among group entities, in its separate or individual financial statements, the entity receiving the goods or services shall measure the goods or services received as either an equity-settled or a cash-settled share-based payment transaction by assessing:

(a) the nature of the awards granted, and

(b) its own rights and obligations.

The amount recognised by the entity receiving the goods or services may differ from the amount recognised by the consolidated group or by another group entity settling the share-based payment transaction.

The entity receiving the goods or services shall measure the goods or services received as an equity-settled share-based payment transaction when:

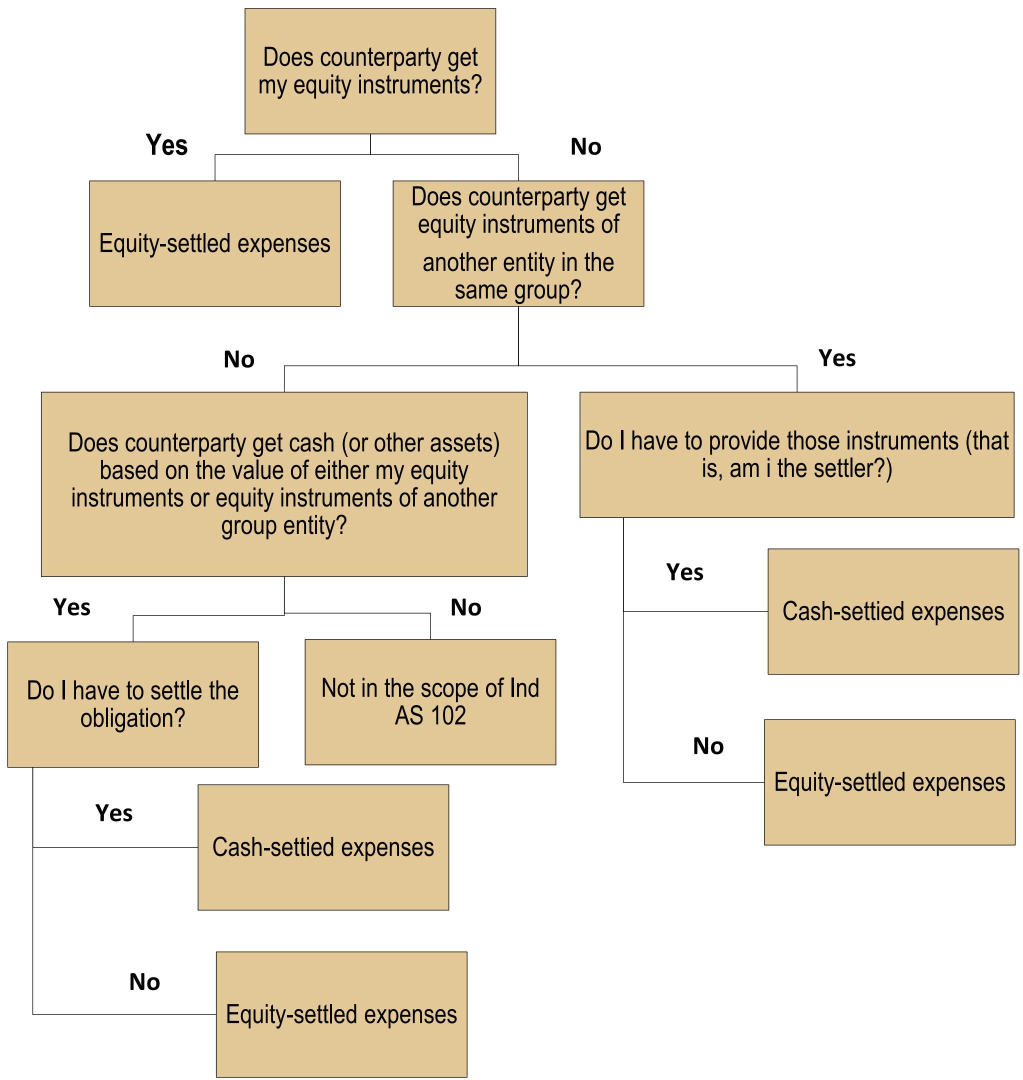
(a) the awards granted are its own equity instruments, or

(b) the entity has no obligation to settle the share-based payment transaction.

The entity shall subsequently remeasure such an equity-settled share-based payment transaction only for changes in non-market vesting conditions. In all other circumstances, the entity receiving the goods or services shall measure the goods or services received as a cash-settled share-based payment transaction.

The entity settling a share-based payment transaction when another entity in the group receives the goods or services shall recognise the transaction as an equity-settled share-based payment transaction only if it is settled in the entity's own equity instruments. Otherwise, the transaction shall be recognised as a cash-settled share-based payment transaction.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight



Let's understand the basis of determination of the classification of share-based payment transactions in both separate financial statements and consolidated financial statements in various scenarios:

1. **Parent issues its own shares for the share-based payment plan issued by its subsidiary**

   Since the subsidiary company do not have any obligation to settle the services/ goods which are being issued against the plan, hence it will be treated as equity-settled share-based payment (for subsidiary).

   - Parent would debit these shares as "Investment in Subsidiary" and credit its equity.

- Subsidiary will treat this as equity-settled share-based payment plan and will debit its expenses (employee related cost) and credit the capital contribution from the Parent.

2. Subsidiary provides rights to its employees to get equity instruments of its parent

Subsidiary will account for this arrangement as cash-settled share-based payment plan since it has an obligation to settle the same in other than its own equity shares.

- Parent would consider the payment/ settlement which is being made by its subsidiary as credit to "Dividend Income" and debit to Expenses (employee related cost).
- Subsidiary would debit its retained earnings as "Dividend distribution" and credit Equity (being share issued).

3. Parent settles the transaction by paying cash value for share-based payment plan issued by its subsidiary

Irrespective of the cash which is settled either based on Parent's equity or Subsidiary's equity, it will be treated as equity-settled share-based payment plan in case of separate financial statements of subsidiary because the subsidiary does not have any obligation to settle the payments.

Illustration 12

A parent grants 200 share options to each of 100 employees of its subsidiary, conditional upon the completion of two years' service with the subsidiary. The fair value of the share options on grant date is ₹ 30 each. At grant date, the subsidiary estimates that 80 percent of the employees will complete the two-year service period. This estimate does not change during the vesting period. At the end of the vesting period, 81 employees complete the required two years of service. The parent does not require the subsidiary to pay for the shares needed to settle the grant of share options.

Pass the necessary journal entries for giving effect to the above arrangement.

Solution

As required by paragraph B53 of the Ind AS 102, over the two-year vesting period, the subsidiary measures the services received from the employees in accordance, the requirements applicable to equity-settled share-based payment transactions as given in paragraph 43B. Thus, the subsidiary measures the services received from the employees on the basis of the fair value of the share options at grant date. An increase in equity is recognised as a contribution from the parent in the separate or individual financial statements of the subsidiary.

Join us t.me/caborntofight

The journal entries recorded by the subsidiary for each of the two years are as follows:

Year 1		₹	₹
Remuneration expense (Transfer to P/L) (200 x 100 employees x Rs. 30 x 80% x ½)	Dr.	2,40,000	
To Equity (Contribution from the parent)			2,40,000
Year 2			
Remuneration expense (Transfer to P/L) [(200 x 81 employees x Rs. 30) – 2,40,000]	Dr.	2,46,000	
To Equity (Contribution from the parent)			2,46,000

3.13 DISCLOSURE

Standard requires an entity to disclose the following-

- Type and scope of agreement existing during the reporting period.
- Describing general terms & conditions of each type of share-based payment plans.
- The number of weighted average price of share option as outstanding with a movement of granted, vested, expired, exercised, cancelled and closing balance of share-based payment plans.
- The average share price of exercised options.
- The range of exercise prices and weighted average remaining contractual life of options outstanding at the end of reporting period.
- The valuation method used to estimate the fair value of the awards.
- The impact on Statement of Profit and Loss and Balance Sheet for such share-based payments.

3.14 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITY

Following is the extract from the financial statements of the listed entity 'Bharti Airtel Limited' for the financial year 2021-2022 with respect to 'Share-based payment' and its accounting policy thereon.

25.1 Share-based payment plans

The following table provides an overview of all existing share option plans of the Company:

Scheme	Plan	Vesting period (years)	Contractual term (years)
Equity settled Plans			
Scheme I	2006 Plan	1 - 5	7
Scheme 2005	Long Term Incentive (LTI) Plan	1 - 3	7

The stock options vesting are subject to service and certain performance conditions mainly pertaining to certain financial parameters.

The movement in the number of stock options and the related weighted average exercise prices are as follows:

	For the year ended			
	March 31, 2022		March 31, 2021	
	Number of share options ('000)	Weighted average exercise price (₹)	Number of share options ('000)	Weighted average exercise price (₹)
2006 Plan				
Outstanding at beginning of year	113	5.00	30	5.00
Granted	-	-	93	5.00
Exercised	(113)	5.00	(10)	5.00
Outstanding at end of year	-	-	113	5.00
Exercisable at end of year	-	-	20	5.00
LTI Plan				
Outstanding at beginning of year	3,048	5.00	3,195	5.00
Granted	1,956	5.00	1,176	5.00
Exercised	(1,297)	5.00	(1,077)	5.00
Forfeited / expired	(484)	5.00	(246)	5.00
Outstanding at end of year	3,223	5.00	3,048	5.00
Exercisable at end of year	904	5.00	603	5.00

The details of weighted average remaining contractual life, weighted average fair value and weighted average share price for the options are as follows:

	March 31, 2022	March 31, 2021
Weighted average		
Remaining contractual life for the options outstanding as of (years)	0.4 to 6.4	1.4 to 6.7
Fair value for the options granted during the year ended (₹)	347.7 to 595.1	347.7 to 548.7
Share price for the options exercised during the year ended (₹)	581.7 to 716.6	483.3 to 590.2

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

The fair value of options is measured using Black-Scholes valuation model. The key inputs used in the measurement of the grant date fair valuation of equity settled plans is given in the table below:

	For the year ended March 31, 2022	For the year ended March 31, 2021
Risk free interest rates	5.5% to 5.8%	5.1% to 5.8%
Expected life	48 to 60 months	48 to 78 months
Volatility	32.8%	32.7%
Dividend yield	0.3%	0.4%
Exercise price (₹)	5	5
Share price on the date of grant (₹)	607.80	560.60

The expected life of the stock options is based on the Company's expectations and is not necessarily indicative of exercise patterns that may actually occur. The expected volatility reflects the assumption that the historical volatility over a period similar to the expected life of the options is indicative of future trends, which may not necessarily be the actual outcome. Further, the expected volatility is based on the weighted average volatility of the comparable benchmark companies.

ACCOUNTING POLICY

Share-based payments

The Company operates equity-settled and cash-settled employee share-based compensation plans, under which the Company receives services from employees as consideration for stock options either towards shares of the Company or cash settled units.

In case of equity-settled awards, the fair value of stock options (at grant date) is recognised as an expense in the Statement of Profit and Loss within employee benefits as employee share-based payment expenses over the vesting period, with a corresponding increase in share-based payment reserve (a component of equity).

However, in case of cash-settled awards, the credit is recognised as a liability within other non-financial liabilities over the vesting period. Subsequently, at each reporting period, until the liability is settled, and at the date of settlement, liability is re-measured at fair value through Statement of Profit and Loss.

The total amount so expensed is determined by reference to the grant date fair value of the stock options granted, which includes the impact of any market performance conditions and non-vesting conditions but excludes the impact of any service and non-market performance vesting conditions. However, the non-market performance vesting

Merged By CA - Born To Fight

and service conditions are considered in the assumption as to the number of options that are expected to vest. The forfeitures are estimated at the time of grant and reduce the said expense rateably over the vesting period.

The expense so determined is recognised over the requisite vesting period, which is the period over which all of the specified vesting conditions are to be satisfied. As at each reporting date, the Company revises its estimates of the number of options that are expected to vest, if required.

It recognises the impact of any revision to original estimates in the period of change. Accordingly, no expense is recognised for awards that do not ultimately vest, except for which vesting is conditional upon a market performance / non-vesting condition. These are treated as vested irrespective of whether or not the market / non-vesting condition is satisfied, provided that service conditions and all other non-market performance are satisfied.

Where the terms of an award are modified, in addition to the expense pertaining to the original award, an incremental expense is recognised for any modification that results in additional fair value or is otherwise beneficial to the employee as measured at the date of modification.

Where an equity-settled award is cancelled (including due to non-vesting conditions not being met), it is treated as if it is vested thereon, and any un-recognised expense for the award is recognised immediately. In case of cancellation of cash-settled award, change in the value of the liability, if any, is recognised in Statement of Profit and Loss.

Questions

1. An entity issued 100 shares each to its 1,000 employees subject to service condition of next 2 years. Grant date fair value of the share is ₹ 195 each. There is an expectation 97% of the employees will remain in service at the end of 1st year. However, at the end of 2nd year the expected employees to remain in service would be 91% of the total employees. Calculate the expense for years 1 & 2?

2. An entity issued 50 shares each to its 170 employees subject to service condition of next 2 years. The settlement is to be made in cash. Grant date fair value of the share is ₹ 85 each, however, the fair value as at end of 1st year, 2nd year were ₹ 80 & ₹ 90 respectively. Calculate the expense for years 1 and 2

3. Company P is a holding company for company B. A group share-based payment is being organized in which Parent issues its own equity-shares for the employees of company B. The details are as below –

Number of employees of company B	100
Grant date fair value of share	₹ 87
Number of shares to each employee granted	25
Vesting conditions	Immediately

Pass the journal entry in the books of company P & company B?

Merged By CA - Born To Fight

4. An entity P issues share-based payment plan to its employees based on the below details:

Number of employees	100
Fair value at grant date	₹ 25
Market condition	Share price to reach at ₹ 30
Service condition	To remain in service until market condition is fulfilled
Expected completion of market condition	4 years

Define expenses related to such share-based payment plan in each year subject to the below scenarios-

a) Market condition if fulfilled in year 3, or

b) Market condition is fulfilled in year 5.

5. Entity X grants 10 shares each to its 1,000 employees on the conditions as mentioned below-

- To remain in service & entity's profit after tax (PAT) shall reach to ₹ 100 million.
- It is expected that PAT should reach to ₹ 100 million by the end of 3 years.
- Fair value at grant date is ₹ 100.
- Employees expected for vesting right by 1st year 97%, then it revises to 95% by 2nd year and finally to 93% by 3rd year.

Calculate the expenses for next 3 years in respect of share-based payment?

6. At 1st January, 20X0, Ambani Limited grants its CEO an option to take either cash amount equivalent to 800 shares or 990 shares. The minimum service requirement is 2 years. There is a condition to keep the shares for 3 years if shares are opted.

Fair values of the shares	₹
Share alternative fair value (with restrictions)	212
Grant date fair value on 1st January, 20X0	213
Fair value on 31st December, 20X0	220
Fair value on 31st December, 20X1	232

The key management personnel exercises his cash option at the end of 20X2.

7. MINDA issued 11,000 share appreciation rights (SARs) that vest immediately to its employees on 1st April, 20X0. The SARs will be settled in cash. Using an option pricing model, at that date it is estimated that the fair value of a SAR is ₹ 100. SAR can be exercised any time until 31st March, 20X3. It is expected that out of the total employees, 94% at the end of the period on 31st March, 20X1, 91% at the end of next year will exercise the option. Finally, when these were vested i.e. at the end of the 3rd year, only 85% of the total employees exercised the option.

Fair value of SAR	₹
31st March, 20X1	132
31st March, 20X2	139
31st March, 20X3	141

Pass the Journal entries?

8. P Ltd. granted 400 stock appreciation rights (SAR) each to 75 employees on 1st April 20X1 with a fair value ₹ 200. The terms of the award require the employee to provide service for four years in order to earn the award. The fair value of each SAR at each reporting date is as follows:

31st March 20X2	₹ 210
31st March 20X3	₹ 220
31st March 20X4	₹ 215
31st March 20X5	₹ 218

What would be the difference if at the end of the second year of service (i.e. at 31st March 20X3), P Ltd. modifies the terms of the award to require only three years of service?

9. QA Ltd. had on 1st April, 20X1 granted 1,000 share options each to 2,000 employees. The options are due to vest on 31st March, 20X4 provided the employee remains in employment till 31st March, 20X4.

On 1st April, 20X1, the Directors of Company estimated that 1,800 employees would qualify for the option on 31st March, 20X4. This estimate was amended to 1,850 employees on 31st March, 20X2 and further amended to 1,840 employees on 31st March, 20X3.

On 1st April, 20X1, the fair value of an option was ₹ 1.20. The fair value increased to ₹ 1.30 as on 31st March, 20X2 but due to challenging business conditions, the fair value declined thereafter. In September, 20X2, when the fair value of an option was ₹ 0.90, the Directors repriced the option and this caused the fair value to increase to ₹ 1.05. Trading

Join us t.me/caborntofight

Merged By CA - Born To Fight

conditions improved in the second half of the year and by 31st March, 20X3 the fair value of an option was ₹ 1.25. QA Ltd. decided that additional cost incurred due to repricing of the options on 30th September, 20X2 should be spread over the remaining vesting period from 30th September, 20X2 to 31st March, 20X4.

Suggest the suitable accounting treatment for these transaction as on 31st March, 20X3.

10. A parent, Company P, grants 30 shares to 100 employees each of its subsidiary, Company S, on condition that the employees remain employed by Company S for three years. Assume that at the outset, and at the end of Years 1 and 2, it is expected that all the employees will remain employed for all the three years. At the end of Year 3, none of the employees has left. The fair value of the shares on grant date is ₹ 5 per share. Company S agrees to reimburse Company P over the term of the arrangement for 75 percent of the final expense recognised by Company S.

What would be the accounting treatment in the books of Company P and Company S?

11. An entity which follows its financial year as per the calendar year grants 1,000 share appreciation rights (SARs) to each of its 40 management employees as on 1st January 20X5. SARs provide the employees with the right to receive (at the date when the rights are exercised) cash equal to the appreciation in the entity's share price since the grant date. All of the rights vest on 31st December 20X6; and they can be exercised during 20X7 and 20X8. Management estimates that, at grant date, the fair value of each SAR is ₹ 11; and it estimates that overall 10% of the employees will leave during the two-year period. The fair values of the SARs at each year end are shown below:

Year	Fair value at year end
31 December 20X5	12
31 December 20X6	8
31 December 20X7	13
31 December 20X8	12

10% of employees left before the end of 20X6. On 31st December 20X7 (when the intrinsic value of each SAR was ₹ 10), six employees exercised their options; and the remaining 30 employees exercised their options at the end of 20X8 (when the intrinsic value of each SAR was equal to the fair value of ₹ 12).

How much expense and liability is to be recognized at the end of each year? Pass the Journal entries.

Answers

1.

Year end	% Vest	Expense (current period)
FIRST	97%	100 x 1,000 x 195 x 97% x 1/2 = 94,57,500
SECOND	91%	100 x 1,000 x 195 x 91% x 2/2 – 94,57,500= 82,87,500

2.

Year end	Vest	Expense (current period)
FIRST	1/2	50 x 170 x 80 x 1/2 = 3,40,000
SECOND	2/2	50 x 170 x 90 x 2/2 – 3,40,000 = 4,25,000

- Liability will be re-measured at each reporting date.
- Fair value at the end of the year will be used.

3. **Books of Company P**

Investment in Company B Dr. ₹ 2,17,500

To Equity Capital / Securities Premium (Issue of Shares) ₹ 2,17,500

Books of Company B

Expense Dr. ₹ 2,17,500

To Capital contribution from Parent P ₹ 2,17,500

4. Market conditions are required to be considered while calculating fair value at the grant date. However, service conditions will be considered as per the expected vesting right to be exercised by the employees and would be re-estimated during vesting period. However, if the market-related condition is fulfilled before it is expected then all remaining expenses would immediately be charged off. If market-related condition takes longer than the expected period, then original expected period will be followed.

a) Market condition is fulfilled in year 3:

Year 1	2,500/4 = 625
Year 2	2,500/4 = 625
Year 3	2,500-625-625=1,250
Year 4	NIL

b) Market condition is fulfilled in year 5:

Year 1	2,500/4 = 625
Year 2	2,500/4 = 625
Year 3	2,500/4 = 625
Year 4	2,500/4 = 625
Year 5	NIL

5. Entity's PAT is one of the non-market related conditions and hence would be included while making an expectation of vesting shares and there is no requirement to make any changes in the non-market condition whether this is fulfilled or not because it has already been considered in the expectation of vesting rights at the end of each year**.**

Year -1	1,000 x 10 x 100 x 97% x1/3 = 3,23,333
Year-2	1,000 x 10 x 100 x 95% x 2/3 - 3,23,333 = 3,10,000
Year -3	1,000 x 10 x 100 x 93% x 3/3 - 6,33,333 = 2,96,667

6.

Working Notes:

Calculation of expenses for issue of stock appreciation rights without modification of service period

For the year ended 31st March 20X2

= ₹ 210 x 400 awards x 75 employees x 1 year /4 years of service

= ₹ 15,75,000

For the year ended 31st March 20X3

= ₹ 220 x 400 awards x 75 employees x 2 years /4 years of service - ₹ 15,75,000 previous recognised

= ₹ 33,00,000 - ₹ 15,75,000 = ₹ 17,25,000

For the year ended 31st March 20X4

= ₹ 215 x 400 awards x 75 employees x 3 years/4 years of service - ₹ 33,00,000 previously recognised

= ₹ 48,37,500 - ₹ 33,00,000 = ₹ 15,37,500

© The Institute of Chartered Accountants of India

For the year ended 31st March, 20X5

= ₹ 218 x 400 awards x 75 employees x 4 years / 4 years of service – ₹ 48,37,500 previously recognised

= ₹ 65,40,000 – ₹ 48,37,500 = ₹ 17,02,500

Calculation of expenses for issue of stock appreciation rights with modification of service period

For the year ended 31st March 20X2

= ₹ 210 x 400 awards x 75 employees x 1 year / 4 years of service = ₹ 15,75,000

For the year ended 31st March 20X3

= ₹ 220 x 400 awards x 75 employees x 2 years / 3 years of service - ₹ 15,75,000 previous recognised

= ₹ 44,00,000 - ₹ 15,75,000 = ₹ 28,25,000

For the year ended 31st March 20X4

= ₹ 215 x 400 awards x 75 employees x 3 years/ 3 years of service - ₹ 44,00,000 previous recognised

= ₹ 64,50,000 - ₹ 44,00,000 = ₹ 20,50,000.

9. Paragraph 27 of Ind AS 102 requires the entity to recognise the effects of repricing that increase the total fair value of the share-based payment arrangement or are otherwise beneficial to the employee.

If the repricing increases the fair value of the equity instruments granted paragraph B43(a) of Appendix B requires the entity to include the incremental fair value granted (ie the difference between the fair value of the repriced equity instrument and that of the original equity instrument, both estimated as at the date of the modification) in the measurement of the amount recognised for services received as consideration for the equity instruments granted.

If the repricing occurs during the vesting period, the incremental fair value granted is included in the measurement of the amount recognised for services received over the period from the repricing date until the date when the repriced equity instruments vest, in addition to the amount based on the grant date fair value of the original equity instruments, which is recognised over the remainder of the original vesting period.

© The Institute of Chartered Accountants of India

Accordingly, the amounts recognised in years 1 and 2 are as follows:

Year	Calculation	Compensation expense for period	Cumulative compensation expense
		₹	₹
1	[1,850 employees x 1,000 options x ₹ 1.20] x $^{1}/_{3}$	7,40,000	7,40,000
2	(1,840 employees x 1,000 options x [(₹ 1.20 x $^{2}/_{3}$) + {(₹ 1.05 - 0.90) x 0.5/1.5}] – 7,40,000	8,24,000	15,64,000

Note: Year 3 calculations have not been provided as it was not required in the question.

10. Company S expects to recognise an expense totalling ₹ 15,000 (30 shares x 100 employees x ₹ 5 per share) and, therefore, expects the total reimbursement to be ₹ 11,250 (₹ 15,000 x 75%). Company S therefore reimburses Company P ₹ 3,750 (₹ 11,250 x 1/3) each year.

Accounting by Company S

In each of Years 1 to 3, Company S recognises an expense in profit or loss, the cash paid to Company P, and the balance of the capital contribution it has received from Company P.

Journal Entry		₹
Employee benefits expenses Dr.	5,000	
To Cash/Bank		3,750
To Equity (Contribution from the parent)		1,250
(To recognise the share-based payment expense and partial reimbursement to parent)		

Accounting by Company P

In each of Years 1 to 3, Company P recognises an increase in equity for the instruments being granted, the cash reimbursed by Company S, and the balance as investment for the capital contribution it has made to Company S.

Journal Entry			₹
Investment in Company S	Dr.	1,250	
Cash/Bank	Dr.	3,750	
To Equity			5,000
(To recognise the grant of equity instruments to employees of subsidiary less partial reimbursement from subsidiary)			

11. The amount recognized as an expense in each year and as a liability at each year-end) is as follows:

Year	*Expense* ₹	*Liability* ₹	Calculation of Liability
31 December 20X5	2,16,000	2,16,000	= 36 x 1,000 x 12 x ½
31 December 20X6	72,000	2,88,000	= 36 x 1,000 x 8
31 December 20X7	1,62,000*	3,90,000	= 30 x 1,000 x 13
31 December 20X8	(30,000)**	0	Liability extinguished

* Expense comprises an increase in the liability of ₹ 102,000 and cash paid to those exercising their SARs of ₹ 60,000 (6 x 1,000 x 10).

** Difference of opening liability (₹ 3,90,000) and actual liability paid [₹ 3,60,000 (30 x 1,000 x 12)] is recognised to Profit and loss ie ₹ 30,000.

Journal Entries

31 December 20X5			
Employee benefits expenses	Dr.	2,16,000	
To Share-based payment liability			2,16,000
(Fair value of the SAR recognized)			
31 December 20X6			
Employee benefits expenses	Dr.	72,000	
To Share-based payment liability			72,000
(Fair value of the SAR re-measured)			

31 December 20X7			
Employee benefits expenses	Dr.	1,62,000	
To Share-based payment liability			1,62,000
(Fair value of the SAR recognized)			
Share-based payment liability	Dr.	60,000	
To Cash			60,000
(Settlement of SAR)			
31 December 20X8			
Share-based payment liability	Dr.	30,000	
To Employee benefits expenses			30,000
(Fair value of the SAR recognized)			
Share-based payment liability	Dr.	3,60,000	
To Cash			3,60,000
(Settlement of SAR)

CHAPTER 8

IND AS ON LIABILITIES OF THE FINANCIAL STATEMENTS

UNIT 1: INDIAN ACCOUNTING STANDARD 19: EMPLOYEE BENEFITS

LEARNING OUTCOMES

After studying this unit, you will be able to:

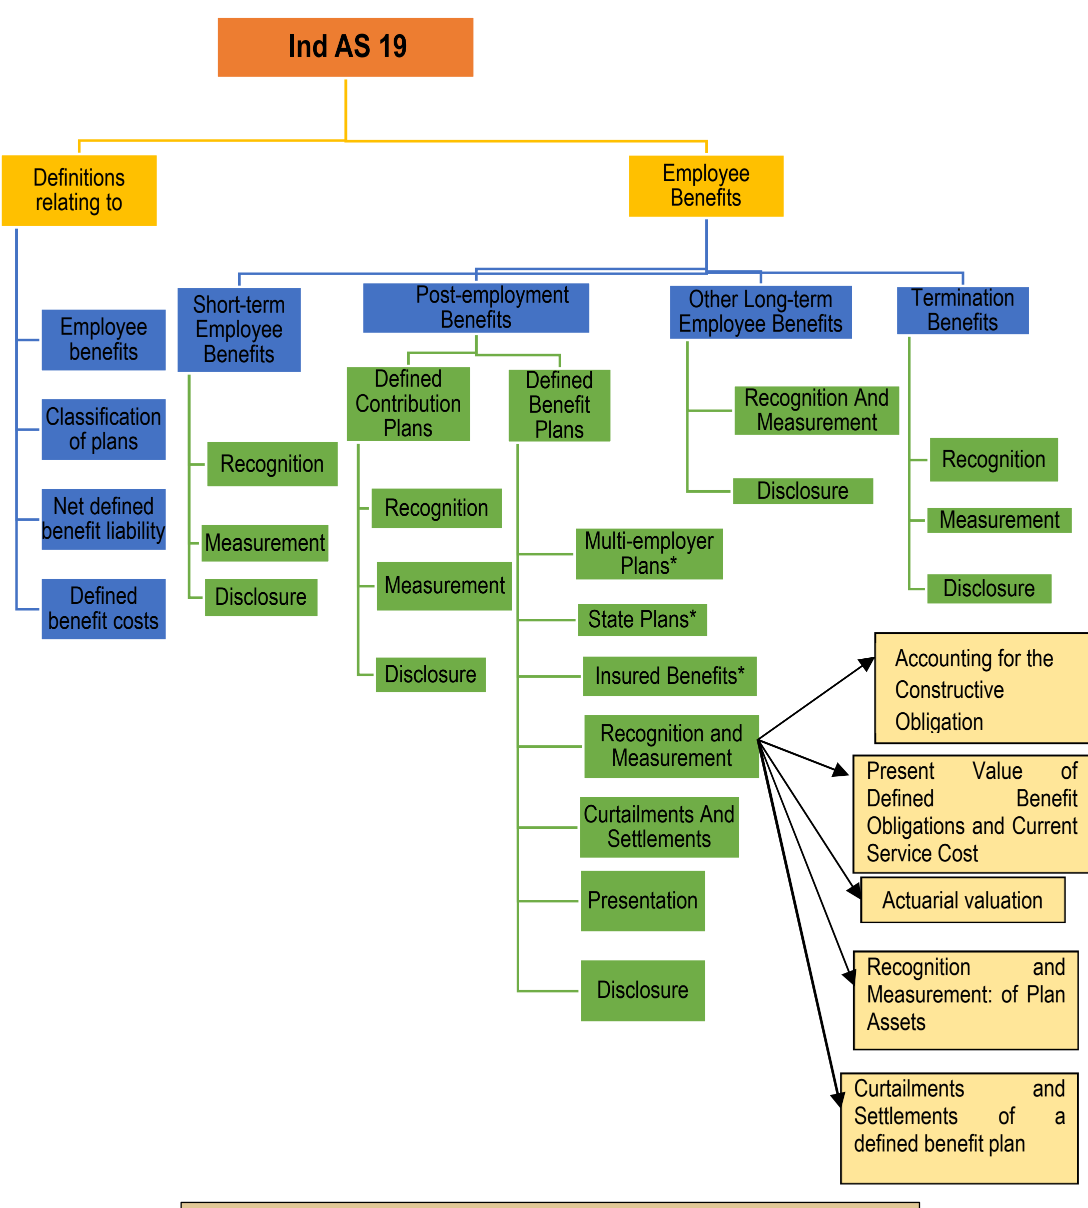
- State the objective and scope of Ind AS 19
- Define the terms relating to employee benefits, classification of plans, net defined benefit liability (asset) and defined benefit cost
- Examine the four categories of employee benefits (short-term, post-employment, other long- term and termination benefits)
- Recognise and measure all short term employee benefits, short term paid absences and account for profit sharing and bonus plans
- Distinguish between defined contribution plans and defined benefit plans
- Account for multiemployer plans, state plans and insured benefits
- Recognise and measure defined benefit plans that share risks between entities under common control
- Recognise, measure and disclose defined contribution plans
- Account for the constructive obligation plans under defined benefit plan

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- Apply actuarial valuations in recognition and measurement of defined benefit plans
- Remeasure the net defined benefit liability (asset) using the current fair value of plan assets and current actuarial assumptions
- Determine past service cost, or a gain or loss on settlement,
- Recognise the components of defined benefit cost
- Present and disclose employee benefits in the financial statements as per Ind AS 19

UNIT OVERVIEW



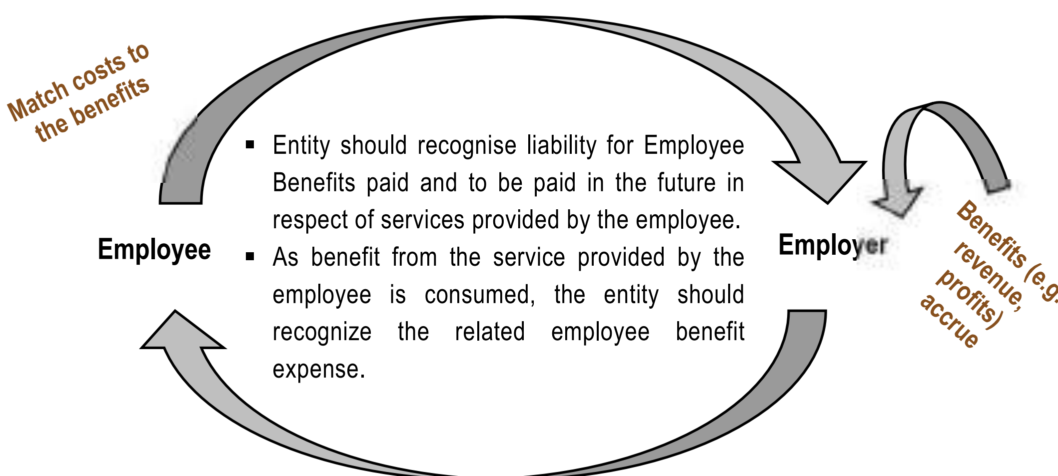
***Note:** These plans may also be considered as Defined Contribution Plans.

1.1 OBJECTIVE OF IND AS 19

- The objective of this standard is to prescribe the accounting and disclosure for employee benefits.
- Ind AS 19 requires an entity to recognise:
  - (a) a liability for the services received from an employee; and
  - (b) an expense for consumption of economic benefits arising from the service provided by an employee in exchange for employee benefits.

Financial statements are prepared on the accrual basis of accounting. Under this basis, the **effects** of transactions and other events are recognised **when they occur** (and not when cash or its equivalent is received or paid) and they are **recorded** in the accounting records and reported in the financial statements of the **periods to which they relate**. Financial statements prepared on the accrual basis inform users not only of past transactions involving the payment and receipt of cash but also of obligations to pay cash in the future and of resources that represent cash to be received in the future.

When employees provide services to their employer during a period, their services lead to generation of benefits (revenues or profits or increased efficiency), directly or indirectly, for their employers for that period. The underlying assumption of accrual requires that for the benefit earned in a particular period, the costs incurred in earning that benefit need to be recognised entirely. Adherence to this requirement of the framework is what is addressed by Ind AS 19.



Join us t.me/caborntofight

1.2 SCOPE

The concept of 'Employee Benefits' has evolved over the years to encompass more than just the salaries, wages and social welfare contributions. The companies of today – established or start-ups – provide a host of benefits to its employees including, but not limited to, Employees' Stock Option Plans, jubilee bonuses, long-term disability benefits etc. In fact, companies like Google even provide unusual benefits such as 'death benefits', which involve paying the deceased's spouse or domestic partner 50% of their salary for 10 years after death of the employee.

- This Standard shall be applied by an employer in **accounting for all employee benefits** except those to which Ind AS 102, *Share-based Payment*, is applicable (e.g. Employees Stock Option Plans).
- This Standard does not deal with reporting by employee benefit plans.
- Employee benefits to which this Standard applies include those provided
  - under formal plans/agreements between an entity and its individual employees/group of employees/their representatives,
  - as required by law or as required by any type of industry arrangements whereby an entity is required to contribute to any nation/state/industry or other multi-employer plans; or
  - by those informal practices that give rise to a constructive obligation. Informal practices give rise to a constructive obligation where the entity has no realistic alternative but to pay employee benefits.

    Example of a constructive obligation - Where a change in the entity's informal practices would cause unacceptable damage to its relationship with employees.

1.3 EMPLOYEE BENEFITS

Employee benefits include:

(i) short employee benefits,

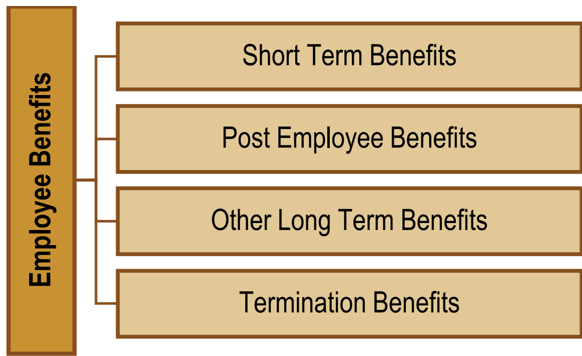
(ii) post-employment benefits,

(iii) other long term employee benefits and

(iv) termination benefits.

All these categories have different characteristics and hence the Standard has specified separate accounting requirements for each such category.

Join us t.me/caborntofight



- Employee benefits include benefits provided either to
  - employees; or
  - their dependants; or
  - their beneficiaries.
- Employee benefits may be settled by payments (or the provision of goods or services) made either directly
  - directly to the employees; or
  - to their spouses; or
  - to their children; or
  - to their other dependants; or
  - others, such as insurance companies.
- An employee may provide services to an entity on a
  - full-time; or
  - part-time; or
  - permanent; or
  - casual; or
  - temporary

  basis.

Note: For the purpose of this Standard, employees include directors and other management personnel.

Employee benefits include

Payments in cash or equivalents	Payments by provision of goods or services

Employee benefits are paid to

Employees	Dependants of employees	Beneficiaries of employees	Others such as insurance companies

Employees include

Full-time employees	Part time employees	Permanent employees	Casual employees	Temporary employees	Directors and other management personnel

1.4 DEFINITIONS

1.4.1 Definitions of employee benefits

1. ***Employee Benefits:*** All forms of consideration given by an entity in exchange for service rendered by employees or for the termination of employment.

2. ***Short-term Employee Benefits:*** Employee benefits (other than termination benefits) that are expected to be settled wholly **before twelve months** after the end of the annual reporting period in which the employees render the related service.

   Example : Wages, salaries, social security contributions (PF / ESI), paid annual leave / sick leave.

3. ***Post-employment Benefits:*** Employee benefits (other than termination benefits and short-term employee benefits) that are payable after the completion of employment.

   Example : Pensions, lumpsum payments on retirement.

4. ***Other long-term employee benefits*** are all employee benefits other than short-term employee benefits, post-employment benefits and termination benefits.

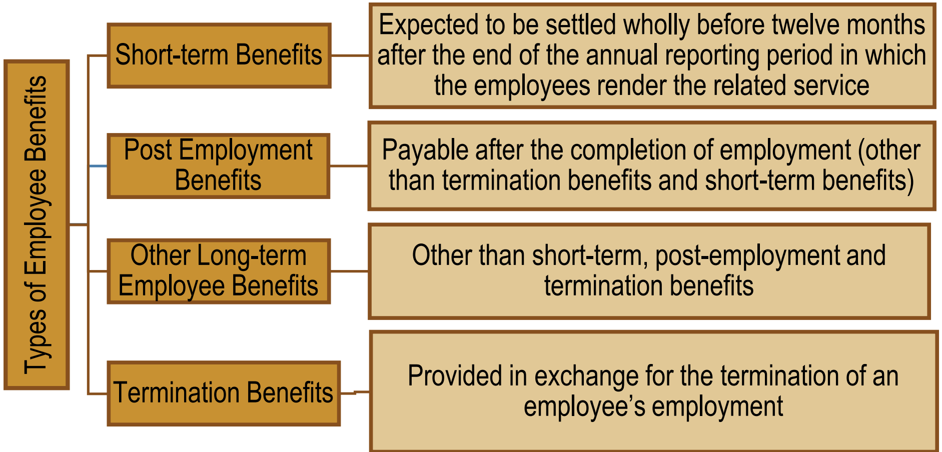
   Example : Long-term paid absences such as long-service leave or sabbatical leave, jubilee or other long-service benefits.

5. ***Termination benefits*** are employee benefits provided in exchange for the termination of an employee's employment as a result of either:

(a) an entity's decision to terminate an employee's employment before the normal retirement date; or

(b) an employee's decision to accept an offer of benefits in exchange for the termination of employment.

Example : VRS compensation or Retrenchment compensation



1.4.2 Definitions relating to classification of plans

1. ***Post-employment Benefit Plans:*** These plans are **formal** or **informal** arrangements under which an entity provides post-employment benefits for one or more employees.

   Under these plans, the benefits are given to the employees after employment, like gratuity, pension, provident fund etc.

   Note: Defined contribution plans and defined benefit plans are two categories of post-employment benefits plans.

2. ***Defined Contribution Plans:*** They are post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a Fund) and will have **no** legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods.

   In these plans, the contribution is defined i.e. contribution is fixed and known to the entity.

   Example : Provident Fund contribution by the employer to the Employees' Provident Fund Organisation under Ministry of Labour & Employment, Government of India.

3. ***Defined Benefit Plans:*** Post-employment benefit plans other than defined contribution plans.

   Example: Gratuity.

4. ***Multi-employer Plans:*** Defined contribution plans (other than state plans) or defined benefit plans (other than state plans) that:

   (a) pool the assets contributed by various entities that are not under common control; and

   (b) use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the entity that employs the employees.

1.4.3 Definitions relating to the net defined benefit liability (asset)

1. ***Net defined benefit liability (asset)***: The deficit or surplus, adjusted for any effect of limiting a net defined benefit asset to the asset ceiling.

2. ***Deficit or surplus:***

   (a) the present value of the defined benefit obligation ***less***

   (b) the fair value of plan assets (if any).

3. ***Asset ceiling***: The present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan.

4. ***Present value of a defined benefit obligation:*** Present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods.

5. ***Plan assets*** comprise:

   (a) assets held by a long-term employee benefit fund; and

   (b) qualifying insurance policies.

6. ***Assets held by a long-term employee benefit fund:*** Assets (other than non-transferable financial instruments issued by the reporting entity) that:

   (a) are held by an entity (a fund) that is legally separate from the reporting entity and exists solely to pay or fund employee benefits; and

   (b) are available to be used only to pay or fund employee benefits, are not available to the reporting entity's own creditors (even in bankruptcy), and cannot be returned to the reporting entity, unless either:

      (i) the remaining assets of the fund are sufficient to meet all the related employee benefit obligations of the plan or the reporting entity; or

      (ii) the assets are returned to the reporting entity to reimburse it for employee benefits already paid.

7. ***Qualifying Insurance Policy:*** Insurance policy issued by an insurer that is not a related party (as defined in Ind AS 24, *Related Party Disclosures*) of the reporting entity, if the proceeds of the policy:

(a) can be used only to pay or fund employee benefits under a defined benefit plan; and

(b) are not available to the reporting entity's own creditors (even in bankruptcy) and cannot be paid to the reporting entity, unless either:

(i) the proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations; or

(ii) the proceeds are returned to the reporting entity to reimburse it for employee benefits already paid.

8. ***Fair Value:*** The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (Ind AS 113, Fair Value Measurement.)

1.4.4 Definitions relating to defined benefit cost

1. ***Service cost*** comprises:

(a) *Current service cost*, which is the increase in the present value of the defined benefit obligation resulting from employee service in the current period;

(b) *Past service cost,* which is the change in the present value of the defined benefit obligation for employee service in prior periods, resulting from a plan amendment (the introduction or withdrawal of, or changes to, a defined benefit plan) or a curtailment (a significant reduction by the entity in the number of employees covered by a plan); and

(c) any gain or loss on settlement.

2. ***Net interest on the net defined benefit liability (asset):*** The change during the period in the net defined benefit liability (asset) that arises from the passage of time.

3. ***Remeasurements of the net defined benefit liability (asset)*** comprise:

(a) actuarial gains and losses;

(b) the return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset); and

(c) any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).

4. ***Actuarial gains and losses*** are changes in the present value of the defined benefit obligation resulting from:

(a) experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred); and

(b) the effects of changes in actuarial assumptions.

Join us t.me/caborntofight

5. ***Return on plan assets:*** Interest, dividends and other income derived from the plan assets, together with realised and unrealised gains or losses on the plan assets,

   Less:

   (a) any costs of managing plan assets; and

   (b) any tax payable by the plan itself, other than tax included in the actuarial assumptions used to measure the present value of the defined benefit obligation.

6. ***Settlement:*** A transaction that eliminates all further legal or constructive obligations for part or all of the benefits provided under a defined benefit plan, other than a payment of benefits to, or on behalf of, employees that is set out in the terms of the plan and included in the actuarial assumptions.

1.5 SHORT-TERM EMPLOYEE BENEFITS

❖ Short-term employee benefits include items expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related services.

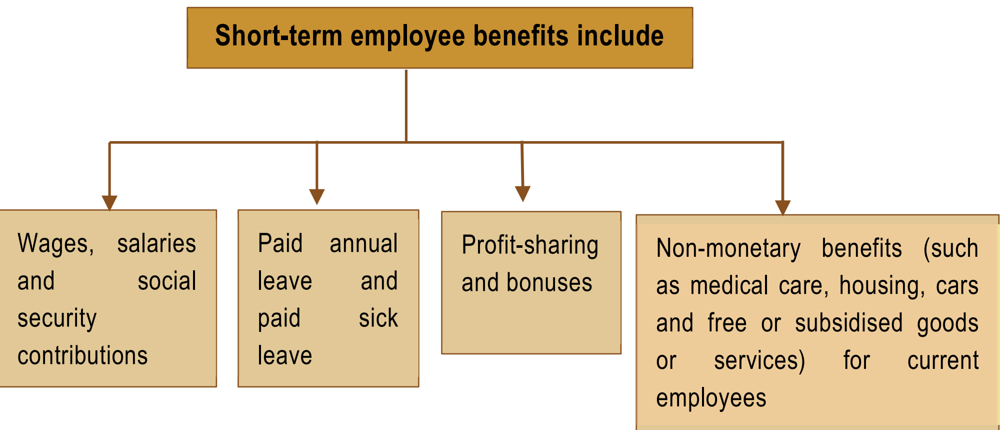
❖ It includes

(a) wages, salaries and social security contributions;

(b) paid annual leave and paid sick leave;

(c) profit-sharing and bonuses; and

(d) non-monetary benefits (such as medical care, housing, cars and free or subsidised goods or services) for current employees.



❖ Reclassification of a short-term employee benefit is not required if the entity's expectations of the timing of settlement of such benefits change temporarily.

Join us t.me/caborntofight

❖ Reclassification may be considered-

  - if the characteristics of the benefit change (such as a change from a non-accumulating benefit to an accumulating benefit) or
  - if a change in expectations of the timing of settlement is not temporary.

1.5.1 Recognition and measurement of short-term benefits

Accounting for short term benefits has two characteristics:

(a) short-term benefits are measured on an undiscounted basis; and

(b) they don't involve any actuarial valuation for their measurement.

The undiscounted amount of short-term employee benefits expected to be paid in exchange for that service shall be recognised:

(a) as a liability (accrued expense), after deducting any amount already paid.

If the amount already paid exceeds the undiscounted amount of the benefits, an entity shall recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and

(b) as an expense, if it doesn't form part of the cost of an asset as per any other Ind AS (e.g. Ind AS 2, *Inventories* or Ind AS 16 *Property, Plant and Equipment*).

Note: Recognition of short-term employee benefit is in the form of either paid expenses or profit sharing or bonus plans.

1.5.2 Short-term paid absences

An employer may compensate an employee for absence for various reasons including holidays, sickness and short-term disability, maternity or paternity, jury service and military service. Entitlement to paid absences (i.e. compensated balances) fall into two categories and are recognized as follows:

(a) **Accumulating** paid absences - recognized when the employees render service that increases their entitlement to future paid absences; and

(b) **Non-accumulating** paid absences - recognized when the absences occur.

1.5.2.1 Accumulating paid absences

❖ These are the absences that are carried forward and can be used in future periods if the employee is not able to use them in current reporting period of the employer. They can be either:

  (i) **Vesting:** In this case, employees are **entitled to a cash-payment** for the unutilised entitlement at the time of leaving the entity; and

  (ii) **Non-vesting:** In this case, employees are **not entitled to a cash payment** for unused entitlement on leaving.

- This obligation exists and is recognized, even if the paid (compensated) absences are non-vesting. However, in case an employee leaves the entity before they use an accumulated non-vesting entitlement, it will affect the measurement of this obligation.
- An entity shall measure the expected cost of accumulating paid (compensated) absences as the **additional amount that the entity expects to pay as a result of the unused entitlement** that has accumulated at the end of the reporting period.

Illustration 1: Vested Accumulating Benefits

Mr. Rajan is working for Infotech Ltd. Consider the following particulars:

Annual salary of Mr. Rajan = ₹ 30,00,000

Total working days in 20X0-20X1 = 300 days

Leaves allowed in 20X0-20X1 as per company policy = 10 days

Leaves utilized by Mr. Rajan in 20X0-20X1 = 8 days

The unutilized leaves are settled by way of payment and accordingly, carry forward of such leaves to the subsequent period is not allowed.

Compute the total employee benefit expense for Infotech Ltd. in respect of 20X0-20X1.

Solution

Mr Rajan is entitled to a salary of ₹ 30,00,000 for 300 total working days.

Thus, per day salary works out to ₹ 30,00,000 ÷ 300 days = ₹ 10,000 per day

In the year 20X0-20X1, Mr. Rajan availed 8 out of 10 leaves allowed by the company.

Accordingly, leaves unutilized = 10 – 8 = 2 days

In line with the company policy, Infotech Ltd. will pay Mr. Rajan for the unutilized leave.

Thus, total expense for 20X0-20X1 = ₹ 30,00,000 + (2 days unutilized leaves x ₹ 10,000 per day) = ₹ 30,20,000.

*****

Illustration 2: Non-Vested Accumulating Benefits

Mr. Niranjan is working for Infotech Ltd. Consider the following particulars:

	Year 20X0-20X1	***Year 20X1-20X2***
Annual salary	*₹ 30,00,000*	*₹ 30,00,000*
No. of working days during the year	*300 days*	*300 days*
Leave allowed	*10 days*	*10 days*
Leave taken	*7 days*	*13 days*
Leave unutilized carried forward to next year	*3 days*	*NIL*

Based on past experience, Infotech Ltd. assumes that Mr. Niranjan will avail the unutilized leaves of 3 days of 20X0-20X1 in 20X1-20X2.

Infotech Ltd. contends that it will record ₹ 30,00,000 as employee benefits expense in each of the years 20X0-20X1 and 20X1-20X2, stating that the leaves will, in any case, be utilized by 20X1-20X2.

Comment on the accounting treatment proposed to be followed by Infotech Ltd. Also pass journal entries for both the years.

Solution

Particulars	Year 20X0-20X1	Year 20X1-20X2
Annual Salary	₹ 30,00,000	₹ 30,00,000
No. of working days (A)	300 days	300 days
Leaves Allowed	10 days	10 days
Leaves Taken (B)	7 days	13 days
Therefore, number of days worked (A – B)	293 days	287 days
Expense proposed to be recognized by Infotech Ltd.	₹ 30,00,000	₹ 30,00,000

Based on the evaluation above, Mr. Niranjan has worked for 6 days more (293 days – 287 days) in 20X0-20X1 as compared to 20X1-20X2.

Since he has worked more in 20X0-20X1 as compared to 20X1-20X2, the accrual concept requires that the expenditure to be recognized in 20X0-20X1 should be more as compared to 20X1-20X2.

Thus, if Infotech Ltd. recognizes the same expenditure of ₹ 30,00,000 for each year, it would be in violation of the accrual concept.

The expenditure to be recognized will be as under:

Particulars	Year 20X0-20X1	Year 20X1-20X2
Annual salary (A)	₹ 30,00,000	₹ 30,00,000
No. of working days (B)	300 days	300 days
Salary cost per day (A ÷ B)	₹ 10,000 per day	₹ 10,000 per day
No. of days worked (from above)	293 days	287 days
Expense to be recognised: **In 20X0-20X1:** ₹ 30,00,000 + [₹ 10,000 per day x 3 days (leaves unutilized expected to be utilized subsequently)]	₹ 30,30,000	
In 20X1-20X2: ₹ 30,00,000 – [₹ 10,000 per day – 3 days (excess leave utilized in 20X1-20X2)]		₹ 29,70,000

Journal Entry for 20X0-20X1

Employee Benefits Expense Account	Dr.	30,30,000	
To Bank Account			30,00,000
To Provision for Leave Encashment			30,000

Journal Entry for 20X1-20X2

Employee Benefits Expense Account	Dr.	29,70,000	
Provision for Leave Encashment Account	Dr.	30,000	
To Bank Account			30,00,000

*****

Illustration 3: Non-Vested Accumulating Benefits

Assume same information as in Illustration 2.

Based on past experience, Infotech Ltd. assumes that Mr. Niranjan will avail the unutilized leaves of 2 days of 20X0-20X1 subsequently.

However, in 20X1-20X2, Mr. Niranjan availed in actual all 3 days of brought forward leave.

Compute the expense to be recognised in 20X0-20X1 and 20X1-20X2. Also pass journal entries for both the years.

Solution

The expenditure to be recognized will be as under:

Particulars	Year 20X0-20X1	Year 20X1-20X2
Annual salary (A)	₹ 30,00,000	₹ 30,00,000
No. of working days (B)	300 days	300 days
Salary cost per day (A ÷ B)	₹ 10,000 per day	₹ 10,000 per day
No. of days worked (from above)	293 days	287 days
Expense to be recognised: **In 20X0-20X1:** ₹ 30,00,000 + [₹ 10,000 per day x 2 days (leaves unutilized expected to be utilized subsequently)]	₹ 30,20,000	
In 20X1-20X2: ₹ 30,00,000 – [₹ 10,000 per day x 3 days (excess leave utilized in 20X1-20X2)] + ₹ 10,000 (additional expense due to change in accounting estimate)		₹ 29,80,000

The additional ₹ 10,000 booked as an expense in 20X1-20X2 represents a change in accounting estimate (i.e. as against the entity's estimation that 2 days of unutilized leave

Join us t.me/caborntofight

would be utilized subsequently, actually 3 days were utilized subsequently), for which a prospective effect needs to be given, in line with Para 36 of Ind AS 8 *Accounting Policies, Changes in Accounting Estimates and Errors*.

Journal Entry for 20X0-20X1

Employee Benefits Expense Account	Dr.	30,20,000	
To Bank Account			30,00,000
To Provision for Leave Encashment			20,000

Journal Entry for 20X1-20X2

Employee Benefits Expense Account	Dr.	29,80,000	
Provision for Leave Encashment Account	Dr.	20,000	
To Bank Account			30,00,000

*****

Illustration 4:

Sunderam Pvt. Ltd. has a headcount of 100 employees in 20X0-20X1. As per the employee policy, the employees are entitled to:

- *30 casual leaves out of which 10 casual leaves may be carried forward to the next year; and*
- *10 sick leaves out of which 2 sick leaves may be carried forward as paid leave.*

At 31st March, 20X1, the average unused entitlement is 5 days per employee for casual leaves and 1 day per employee for sick leave. On an average, it is found that the number of such employees who would be claiming casual leaves would be 30 and 10 employees who would claim sick leaves.

Compute the liability to be recognised in respect of sick leaves and casual leaves by the entity at the end of the financial year 20X0-20X1.

Solution

Type of leave (A)	Leave Entitlement (B)	Leaves c/f permissible (C)	Average leaves Unutilized (D)	No. of Employees (E)	Liability (F = D x E)
Casual Leave	30 days	10 days	5 days	30	150 days salary
Sick Leave	10 days	2 days	1 days	10	10 days salary

The entity will recognise liability in the books equal to 150 (30 x 5) days of paid casual leaves and 10 (10 x 1) days of paid sick leaves.

*****

Illustration 5

An entity has 100 employees, who are each entitled to ten working days of paid sick leave for each year. Unused sick leave may be carried forward for one financial year. Sick leave is taken first out of the current year's entitlement and then out of any balance brought forward from the previous year (a LIFO basis).

At 31st March 20X1, the average unused entitlement is two days per employee. Based on past experience, the management expects that only 20% of the employees will use 1 day from their carried forward leave. Salary per day is ₹ 2,500.

Compute the expenses in respect of the short-term compensated absences, if they are assumed to be (a) vested short-term compensated absences, and (b) non-vested short-term compensated absences.

Solution

Vested short-term compensated absences:

Employee Benefit Expense = 100 Employees x 2 Days x ₹ 2,500 = ₹ 5,00,000

Non-vested short-term compensated absences:

Employee Benefit Expense = 100 Employees x 20% x 1 Day x ₹ 2,500 = ₹ 50,000

*****

Illustration 6

Acer Ltd. has 350 employees (same as a year ago). The average staff attrition rates observed during past 10 years represents 6% per annum. Acer Ltd. provides the following benefits to all its employees:

Paid vacation - 10 days per year regardless of date of hiring. Compensation for paid vacation is 100% of employee's salary and unused vacation can be carried forward for 1 year. As of 31st March, 20X1, unused vacation carried forward was 3 days per employee, average salary was ₹ 15,000 per day and accrued expense for unused vacation in 20X0-20X1 was ` 65,00,000. During 20X1-20X2, employees took 9 days of vacation in average. Salary increases in 20X1-20X2 was 10%.

Analyse how would Acer Ltd. recognize liabilities and expenses for these benefits as of 31st March, 20X2. Pass the journal entry to show the accounting treatment.

Solution

Paid Vacation:

Step 1: Calculation of Unused Vacation in man-days as on 31st March, 20X2:

A. No. of Employees in service for the whole year (94%):

Particulars	Man-days
Unused vacation as on 31st March, 20X1	3 days per employee
Entitlement to vacation for 20X1-20X2	10 days per employee
Average vacation availed in 20X1-20X2	(9) days per employee
Unused vacation as on 31st March, 20X2 (being unused leaves of 20X1-20X2 on FIFO basis)	**4 days per employee**
Total Unused vacation as on 31st March, 20X2 - (A) (350 employees x 94% x 4 days per employee)	**1,316 man-days**

B. Newcomers (6%):

Particulars	Man-days
Entitlement to vacation for 20X1-20X2	10 days per employee
Average vacation availed in 20X1-20X2	(9) days per employee
Unused vacation as on 31st March, 20X2 (being unused leaves of 20X1-20X2 on FIFO basis)	**1 day per employee**
Total Unused vacation as on 31st March, 20X2 - (B) (350 employees x 6% x 1 day per employee)	**21 man-days**
Total unused vacation as on 31st March, 20X2 (A + B)	1,337 man-days

Step 2: Calculation of average salary per day:

Particulars	Amount (₹)
Average salary per day as on 31st March, 20X1	15,000
Salary increase in 20X1-20X2	10%
Average salary per day as on 31st March, 20X2	**16,500**

Step 3: Calculation of provision for unused paid vacation:

Particulars	Amount (₹)
Calculation of provision for unused paid vacation 20X1-20X2: (1,337 man-days x ₹ 16,500)	2,20,60,500
Provision for unused paid vacation 20X0-20X1	65,00,000

Step 4: Accounting treatment

Provision for 20X1-20X2

Employee Benefits Expenses A/c	Dr.	2,20,60,500	
To Provision for Leave Encashment			2,20,60,500

Settlement of Liability of 20X0-20X1

Provision for Leave Encashment A/c	Dr.	65,00,000	
To Cash / Bank			65,00,000

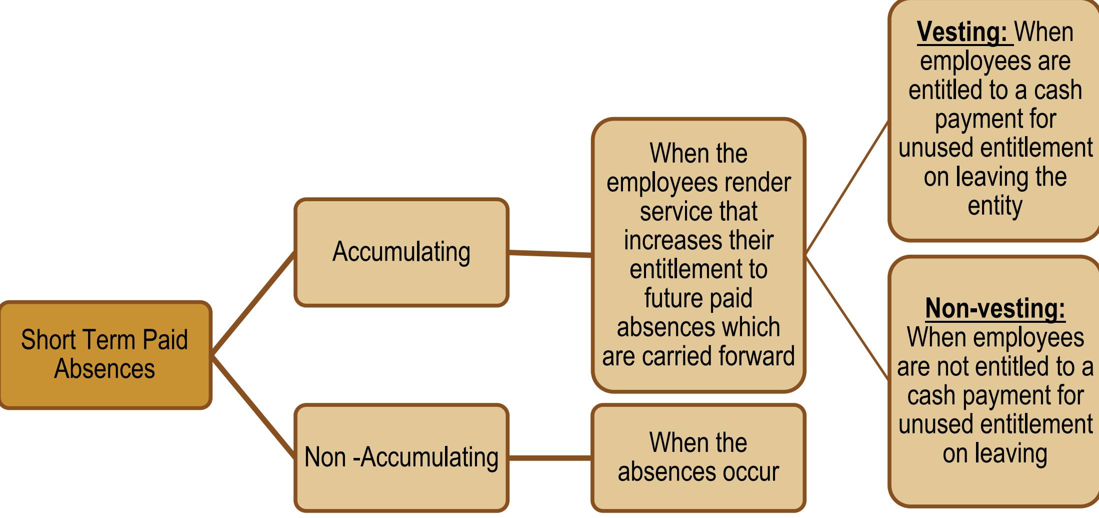
*****

1.5.2.2 Non-accumulating paid absences:

- These are the absences that do not carry forward and they will lapse if the current period's entitlement is not used in full by the employee; and
- They do not entitle employees to a cash payment for unused entitlement on leaving the entity.

Example: Sick pay (to the extent that unused past entitlement does not increase future entitlement).

- An entity shall recognise no liability or expense until the time of the absence because the employee service does not increase the amount of the benefit.



1.5.3 Profit-sharing and bonus plans

- Expected costs of profit-sharing and bonus plans shall be recognised when and only when:

(a) the entity has a present legal or constructive obligation to make such payments as a result of past events; and

(b) a reliable estimate of the obligation can be made by the entity.

❖ A present obligation exists when, and only when, an entity has no realistic alternative but to make the payments in lieu of profits and bonuses to its employees.

❖ Under some profit-sharing plans, employees receive a share of the profit only if they remain with the entity for a specified period. Such plans create a constructive obligation as employees render service that increases the amount to be paid if they remain in service until the end of the specified period. The measurement of such constructive obligations reflects the possibility that some employees may leave without receiving profit-sharing payments.

❖ An entity may have no legal obligation to pay a bonus. Nevertheless, in some cases, an entity has a practice of paying bonuses. In such cases, the entity has a constructive obligation because the entity has no realistic alternative but to pay the bonus. The measurement of the constructive obligation reflects the possibility that some employees may leave without receiving a bonus.

❖ An entity can make a reliable estimate of its legal or constructive obligation under a profit-sharing or bonus plan when, and only when:

(a) the formal terms of the plan contain a formula for determining the amount of the benefit;

(b) the entity determines the amounts to be paid before the financial statements are approved for issue; or

(c) past practice gives clear evidence of the amount of the entity's constructive obligation.

❖ An obligation under profit-sharing and bonus plans results from employee service and not from a transaction with the entity's owners. **Hence, an entity recognises the cost of profit-sharing and bonus plans not as a distribution of profit but as an expense**.

Illustration 7

Laxmi Mills is a profit-making entity and has reported profit of ` 200 crore in the financial year 20X1-20X2. According to its profit–sharing plan, it distributes and pays 5% as its portion of profit to its employees if they complete 1 year with the organisation.

Under this plan, an entity is under an obligation to pay if the employees complete a specified period with the organisation. Laxmi Mills has estimated that due to staff turnover in the organisation, the estimated pay-out would be around 4.5%.

Compute the liability and expense of the company under this plan.

Solution

The company shall recognize a liability and an expense of an amount of ₹ 9 crores for the financial year 20X1-20X2 (i.e. 4.5% of ₹ 200 crores).

*****

Illustration 8

Acer Ltd. has 350 employees (same as a year ago). The average staff attrition rates as observed during past 10 years represents 6% per annum. Acer provides the following benefits to all its employees:

Annual bonus - during past 10 years.

Acer paid bonus to all employees who were in service during the entire financial year. Bonus was paid in June following the financial year-end. Amount of bonus for 20X1-20X2 paid in June 20X2 represented ₹ 1,25,000 per employee. Acer Ltd. used to increase amount of bonus based on official inflation rate which is 8.5% for 20X2-20X3, although there was no legal obligation to increase the bonus by such inflation rate.

Determine how would Acer Ltd. recognize liabilities and expenses for these employee benefits as on 31st March, 20X3. Pass the journal entry to show the accounting treatment.

Solution

Particulars	**Amount (₹)**
Bonus paid for 20X1-20X2	1,25,000 per employee
Bonus for 20X2-20X3 - increased by inflation of 8.5%: [1,25,000 x (100% + 8.5%)]	1,35,625 per employee
No. of employees in staff during the whole year [350 x (100-6%)]	329 employees
Provision for Bonus for 20X2-20X3	**4,46,20,625**

Accounting Treatment:

Provision for Bonus for 20X2-20X3

Employee Benefits Expenses A/c	Dr.	4,46,20,625	
To Provision for Bonus 20X2-20X3			4,46,20,625

Note:

It is given that the company is under no legal obligation to increase the bonus by the official inflation rate. However, the company has been increasing the bonus by the inflation rate over the past years. This has given rise to a constructive obligation for Acer Ltd. Informal practices, such as these, give rise to a constructive obligation where the entity has no realistic alternative but to pay employee benefits. Accordingly, provision is made for the amount considering the inflation rate.

*****

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

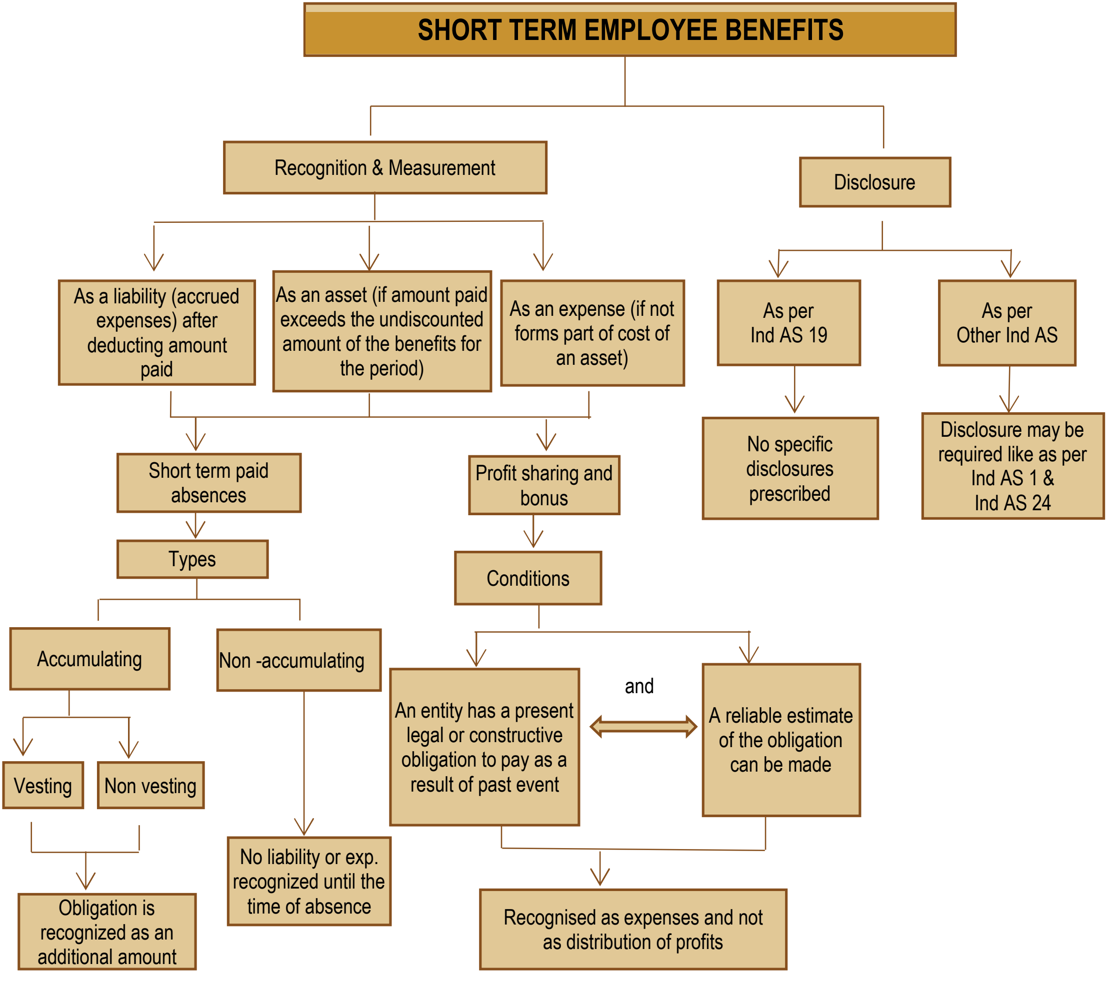
- If profit-sharing and bonus payments are **not settled wholly before the twelve months after the end of the reporting period** in which the employees render the related service, those payments are **considered as other long –term employee benefits**.

1.5.4 Disclosure

- This Standard does not require specific disclosures about short-term employee benefits.
- However, other Ind AS may require disclosures.

Examples:

- Ind AS 24 requires disclosures about employee benefits for key management personnel.
- Ind AS 1, Presentation of Financial Statements, requires disclosure of employee benefits expense.



1.6 POST-EMPLOYMENT BENEFITS

- Post-employment benefits include:

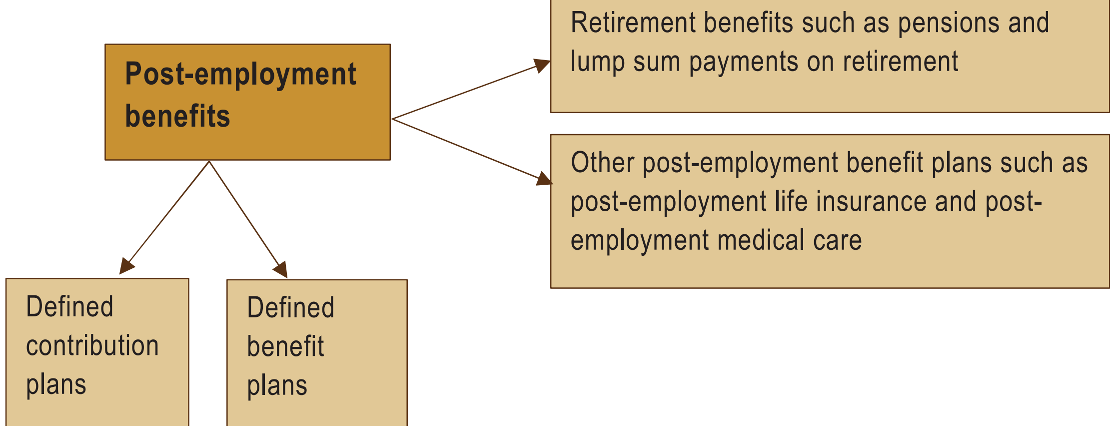
  (a) Retirement benefits such as pensions and lump sum payments on retirement; and

  (b) Other post-employment benefit such as post-employment life insurance and post-employment medical care.

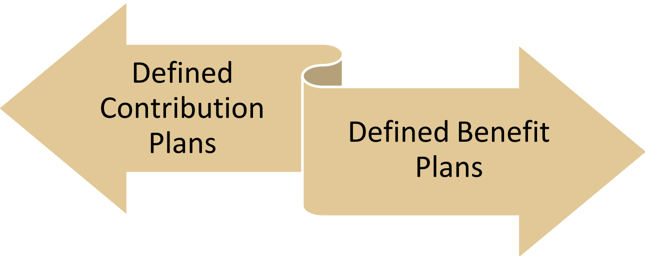
- Depending upon the economic substance of the plan which is derived from its principal terms and conditions, post-employment benefit plans are classified as

  (i) **either** defined contribution plans

  (ii) **or** defined benefit plans.



1.6.1 Classification of post-employment Benefit Plans into Defined Contribution Plan vs Defined Benefit Plans



1.6.1.1 Under defined contribution plans

(a) The entity's legal or constructive obligation is limited to the amount that it agrees to contribute to the fund.

(b) Thus, the amount of the post-employment benefits received by the employee is determined by the amount of contributions paid by an entity (and perhaps also the employee) to a post-employment benefit plan or to an insurance company, together with investment returns arising from the contributions.

(c) As a result of this, actuarial risk (which means that benefits will be less than expected) and investment risk (that assets invested will be insufficient to meet expected benefits) fall, in substance on the employee (and not on the entity like in defined benefit plan).

Exception:

There are cases where an entity's obligation is not limited to the amount that it agrees to contribute to the fund as the entity has a legal or constructive obligation. Examples of such cases are listed below:

(a) a plan benefit formula that is not linked solely to the amount of contributions and requires the entity to provide further contributions if assets are insufficient to meet the benefits in the plan benefit formula;

(b) a guarantee, either indirectly through a plan or directly, of a specified return on contributions; or

(c) informal practices that give rise to a constructive obligation.

For example, a constructive obligation may arise where an entity has a history of increasing benefits for former employees to keep pace with inflation even where there is no legal obligation to do so.

1.6.1.2 Under defined benefit plans

(a) The entity's obligation is to provide the agreed benefits to current and former employees; and

(b) Actuarial risk (that benefits will cost more than expected) and investment risk fall, in substance, on the entity (and not on the employee like in the case of defined contribution plan).

(c) Thus, if actuarial or investment experience are worse than expected, the entity's obligation may be increased.

The above differences can be summarized as follows:

S. No.	Particulars	Defined Contribution Plans	Defined Benefit Plans
1.	*Entity's obligation*	The entity's legal or constructive obligation **is limited to the amount** that it agrees to contribute to the fund.	The entity's obligation is to **provide the agreed benefits** to current and former employees.

Join us t.me/caborntofight

2.	*Risk bearer*	Actuarial risk and investment risk **fall on the employee** and not on the entity.	Actuarial risk and investment risk **fall on the entity** and not on the employee.
3.	*Change in the obligation*	Generally, no change in the contribution of an entity is made except in certain cases.	If actuarial or investment experience are worse than expected, **the entity's obligation may be increased** for providing to the employees.
4.	*Determination of the amount of post-employment benefit*	The amount of the post-employment benefits received by the employee is determined by the amount of contributions paid by an entity and employee as well.	Pre-determined / Agreed post-employment benefits are received by the employee.

Illustration 9

A company pays each employee a lump-sum one-time benefit upon retirement. This benefit is computed based on the employee's years in service in the company and the final salary prior to retirement. To cover its liabilities from this remuneration, the company contributes 3% of annual gross salaries to the fund.

Comment whether this obligation represent a defined contribution plan or a defined benefit plan and why?

Solution

Defined benefit plan

Reason: Although the Company pays contributions to the fund to cover its liabilities, amount of remuneration is determined in advance and Company will have to carry the risk in case the fund's assets are not sufficient to cover remuneration in full.

*****

Illustration 10

In accordance with applicable legislation, company contributes 12% and employees 12% of annual gross salaries to the provident and pension fund. Upon retirement, the employees will get the accumulated balance that is calculated based on employee's years of service and his average salary for past 15 years before retirement. The pension will be paid out of the state fund assets and the company has no further obligation except to make contributions.

Analyse whether this obligation represent a defined contribution plan or a defined benefit plan.

Solution

Defined contribution plan

Reason: Although employee's pension is determined in advance by the formula (and thus employees neither carry actuarial nor investment risks), Company's liability is limited to contributions to the fund. In this case, as pension will be paid out of the state fund, it is a state fund which carries all the risks.

*****

1.6.2 Multi-employer plans

- An entity shall classify a multi-employer plan as a defined contribution plan or a defined benefit plan under the terms of the plan (including any constructive obligation that goes beyond the formal terms).
- In the case of a multi-employer defined benefit plan, normally
  - The amount of contributions is decided keeping in mind the amount of benefits that an entity is required to pay in the same period and
  - The future benefits that an entity gets during the current period will be paid out of future contributions.
  - Employers have no realistic means of withdrawing from the plan without paying a contribution for the benefits earned.
  - Employees' benefits are determined by the length of their service in the entity as a future amount which is required to be paid to them. Such a plan would create actuarial risk to the entity (i.e. if the ultimate cost of benefits already earned at the end of the reporting period is more than expected, the entity will have to either increase its contributions or to persuade employees to accept a reduction in benefits).
- In case the multi-employer plan is a defined benefit plan, an entity shall:

  (a) account for its proportionate share of the

    (i) defined benefit obligation;

    (ii) plan assets; and

    (iii) cost associated with the plan

    in the same way as for any other defined benefit plan; and

  (b) disclose the information required.
- When sufficient information is not available to use defined benefit accounting for a multi-employer plan that is a defined benefit plan, an entity shall:

  (a) account for the plan as if it were a defined contribution plan;

(b) disclose:

(i) the fact that the plan is a defined benefit plan;

(ii) the reason why sufficient information is not available to enable the entity to account for the plan as a defined benefit plan; and

(iii) the expected contributions to the plan for the next annual reporting period; and

(c) to the extent that a surplus or deficit in the plan may affect the amount of future contributions, disclose:

(i) available information about that surplus or deficit;

(ii) the basis used to determine that surplus or deficit; and

(iii) the implications, if any, for the entity.

- The reasons that an entity is not able to term its plan as a defined benefit plan and has to account for a plan as multi-employer defined contribution plan, this may occur if:
  - the entity does not have access to sufficient information about the plan to satisfy the requirements of this Standard; or
  - the plan exposes the entities to actuarial risks associated with the current and former employees of other entities, with the result that there is no consistent and reliable basis for allocating the obligation, plan assets and cost to individual entities participating in the plan.
- There may be a contractual agreement between the multi-employer plan and its participants that determines how the surplus in the plan will be distributed to the participants (or the deficit funded). A participant in a multi-employer plan with such an agreement that accounts for the plan as a defined contribution plan shall recognise
  - the asset or liability that arises from the contractual agreement and
  - the resulting income or expense in profit or loss.
- In determining when to recognise, and how to measure, a liability relating to the wind-up of a multi-employer defined benefit plan, or the entity's withdrawal from a multi-employer defined benefit plan, an entity shall apply Ind AS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

Example 1

Paras Pvt. Ltd. does not have sufficient information about a defined benefit plan and thus accounts for the plan as if it were defined contribution plan.

In the plan, there is a contractual agreement between Paras Pvt. Ltd. and its participants to share the deficit amongst all. The funding valuation shows a deficit of ₹ 500 million in the plan. The plan has agreed under contract a schedule of contributions with the participating employers in the plan that will eliminate the deficit over the next 10 years. The entity's total contributions

under the contract are ₹ 30 million.

As per Ind AS 19, Paras Pvt. Ltd. should recognise a liability for the contributions adjusted for the time value of money and an equal expense in profit or loss.

1.6.3 Group administration plans

- A group administration plan is merely an aggregation of single employer plans combined to allow participating employers to pool their assets for investment purposes and reduce investment management and administration costs.
- The claims of different employers are segregated for the sole benefit of their own employees. In other words, the individual identities of the employees and their entities are preserved, unlike in case of multi-employer plans wherein the identity of the employees and the entities are lost in the common pool.
- Group administration plans pose no particular accounting problems because information is readily available to treat them in the same way as any other single employer plan. This is because such plans do not expose the participating entities to actuarial risks associated with the current and former employees of other entities.
- An entity should classify a group administration plan as a defined contribution plan or a defined benefit plan in accordance with the terms of the plan (including any constructive obligation that goes beyond the formal terms)

1.6.4 Defined benefit plans that share risks between entities under common control

- Defined benefit plans that share risks between entities under common control, for example, a parent and its subsidiaries, are not multi-employer plans.
- An entity who is participating in such a plan shall obtain information about the plan as a whole on the basis of assumptions that it applies to the plan as a whole.
- The entity shall, in its separate or individual financial statements, recognise the net defined benefit cost it charged, if there is a contractual agreement or stated policy for charging the net defined benefit cost for the whole plan to individual group entities.
- In case there is no such agreement or policy, the net defined benefit cost shall be recognised in the separate or individual financial statements of the group entity that is legally the sponsoring employer for the plan.
- The other group entities shall, in their separate or individual financial statements, recognise a cost equal to their contribution payable for the period.
- Participation in such kind of plan is a related party transaction for each individual group entity. Therefore, following **disclosures** are required by an entity in its separate or

individual financial statements:

(a) the contractual agreement or stated policy according to which net defined benefit cost has been charged by the individual entity or the fact that there is no such policy.

(b) the policy for determining the contribution to be paid by the entity.

(c) if the entity accounts for an allocation of the net defined benefit cost, then disclosure has to be made for information about the whole plan.

(d) if the entity accounts for the contribution payable for the period, the information about the plan also needs to be disclosed for the plan as a whole.

1.6.5 State plans

- A state plan is accounted for in the same way as a multi-employer plan.
- State plans are normally established by legislation to cover all entities (or all entities in a particular category, for example, a specific industry) and are operated by national or local government or by another body (for example, an autonomous agency created specifically for this purpose) which is not subject to control or influence by the reporting entity.
- Some plans established by an entity provide both compulsory benefits, as a substitute for benefits that would otherwise be covered under a state plan, and additional voluntary benefits. Such plans are not state plans.
- State plans are characterised as defined benefit or defined contribution, depending on the entity's obligation under the plan.
- Many state plans are funded on a pay-as-you- go basis which implies that contributions are set at a level that is expected to be sufficient to pay the required benefits falling due in the same period. In such kind of a case, future benefits earned during the current period will be paid out of future contributions.
- In most of the state plans, the entity has no legal or constructive obligation to pay those future benefits as its only obligation as an entity is to pay the contributions as they fall due and in case the entity does not employ members of the state plan, it will have no obligation to pay the benefits earned by its own employees in previous years. For this reason, state plans are normally defined contribution plans.

1.6.6 Insured benefits

- An entity normally pays insurance premiums for funding a post-employment benefit plan. The entity shall treat such a plan as a defined contribution plan.
- The entity shall treat the plan as a defined benefit plan in case an entity has (either directly, or indirectly through the plan) retained a legal or constructive obligation, either to pay:

(a) the employee benefits directly when they fall due; or

(b) further amounts if the insurer does not pay all future employee benefits which are relating to employee service in the current and prior periods.

❖ Where an entity is funding a post-employment benefit obligation and contributes to an insurance policy under which the entity retains a legal or constructive obligation, in this case the payment of the premiums does not amount to a defined contribution arrangement. This can be either directly or indirectly through the plan, through the mechanism for setting future premiums or through a related party relationship with the insurer. Hence the entity shall:

(a) account for a qualifying insurance policy as a plan asset; and

(b) recognise other insurance policies as reimbursement rights.

❖ The entity has no obligation to pay benefits to the employees and the insurer has sole responsibility for paying the benefits where an insurance policy is in the name of a specified plan participant or a group of plan participants and the entity does not have any legal or constructive obligation to cover any loss on the policy.

❖ The payment of fixed premiums under such kind of arrangement is a settlement of the employee benefit obligation rather than an investment to meet the obligation. Therefore, an entity treats such payments as contributions to a defined contribution plan.

1.7 ACCOUNTING FOR DEFINED CONTRIBUTION PLANS

❖ The reporting entity's obligation for each period is determined by the amounts to be contributed for that period.

❖ No actuarial assumptions are required to measure the obligation or the expense and there is no possibility of any actuarial gain or loss.

❖ The obligations are measured on an undiscounted basis.

Exception:

Discounting is done where the obligation falls due after twelve months after the end of the annual reporting period in which the employees render the related service.

1.7.1 Recognition and measurement

When an employee has rendered service to an entity during a period, the entity shall **recognise the contribution payable** to a defined contribution plan in exchange for that service:

(a) as a liability (accrued expense), after deducting any contribution already paid.

Join us t.me/caborntofight

In case the amount of contribution already paid under a defined contribution plan exceeds the contribution due for service before the end of the reporting period, an entity shall recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, a reduction in future payments or a cash refund; and

(b) as an expense if not included in the cost of an asset as per other Ind AS (for example, according to Ind AS 2 and Ind AS 16).

Where contributions to a defined contribution plan do not fall due wholly before twelve months after the end of the annual reporting period in which the employees render the related service, the contributions shall be discounted using the discount rate as specified in this Standard.

1.7.2 Disclosure

- An entity shall disclose the amount recognised as an expense for defined contribution plans.
- An entity shall disclose information about contributions to defined contribution plans for key management personnel where required as per Ind AS 24.

Illustration 11

Acer Ltd. provides lump-sum remuneration upon retirement to its employees. Remuneration is paid out of the fund to which Acer Ltd. contributes 12% of annual gross salaries. Contributions are made twice a year i.e. in November of the related financial year and in June after the financial year-end. Total annual gross salaries for 20X0-X1 amounted to ₹ 50 crores. Contribution made by Acer Ltd. in November 20X0 was ` 2.8 crores. Remuneration depends on the number of employee's service and amount of cash in the fund at retirement date (Acer Ltd. has no further obligations except for contributions).

How should this transaction appear in the financial statements of Acer Ltd. as of 31st March 20X1?

Solution

1. Calculation of accrual for contributions in 20X0-20X1:

Annual gross salaries in 20X0-20X1:	₹	50.00 crores
Amount of total contributions for 20X0-20X1 (12%):	₹	6.00 crores
Contributions already made in November 20X0:	₹	2.80 crores
Accrual (₹ 6 crores - ₹ 2.8 crores)	₹	3.20 crores

2. Accounting Treatment:

Employee Benefits Expenses Account	Dr.	6.00 crores	
To Bank Account			2.80 crores
To Contribution Payable			3.20 crores

The contribution of ₹ 6 crores will be debited to the statement profit and loss. The contribution payable of ₹ 3.20 crores will appear as a liability as at 31st March, 20X1.

*****

1.8 ACCOUNTING FOR DEFINED BENEFIT PLANS

Accounting for defined benefit plans is complex because -

- actuarial assumptions are required to measure the obligation and the expense;
- there is a possibility of actuarial gains and losses;
- the obligations are measured on a discounted basis because they may be settled many years after the employees render the related service.

Illustration 12

Dinkar Ltd., a large IT company, accounts for gratuity on payment basis, and supports such accounting policy by making the following disclosure in the Financial Statements:

"Due to high labour turnover, a large degree of uncertainty is involved in estimating the liability of gratuity. Accordingly, the management opines that as the estimates of the uncertainty would confuse the readers by complicating the financial statements, such liability would be recorded on payment basis."

The management opines that by making the above disclosures, the company is complying with the requirements of all the Ind AS, as a disclosure to the effect of the above is given. The management is also willing to specifically highlight the above aspect by making it conspicuous in the financial statements.

Is the contention of management correct as per the provisions of Ind AS?

Solution

Gratuity represents a payment being made to an employee upon retirement / resignation from the organization. The amount is determined in accordance with the provisions of the Gratuity Act, 1972, which applies to Dinkar Ltd. Since the amount is determined pursuant to a formula laid down under the statue, the gratuity payable represents a Defined Benefit Plan that is to be paid to the employees, with the actuarial risk and investment risk both belonging to the employer. Thus, Dinkar Ltd. must comply with Ind AS 19 and provide for the gratuity on an annual basis.

In estimating the liability for gratuity, there would be several assumptions involved such as

mortality rate, staff attrition rate, salary at the time of retirement / resignation, discount rate etc., all of which have to be considered by Dinkar Ltd. The complexity involved in this exercise does not provide Dinkar Ltd. with an excuse to avoid accrual accounting.

Dinkar Ltd. has stated that it would be willing to make a disclosure to the effect of the departure from Ind AS 8 requirements. In terms of Para 19 of Ind AS 1, departure is permitted in **extremely rare** circumstances wherein the management concludes that compliance with an Ind AS requirement would be so **misleading** that it would **conflict** with the objective of the Financial Statements set out in the Framework.

In the given case, compliance with Ind AS would not be a conflict, as the compliance with Ind AS 19 would ensure that the accrual assumption laid down in the Framework is complied with. Further, a disclosure cannot be a remedy for non-compliance. Therefore, the company have to state that the Ind AS have not been complied with by the company in the preparation and presentation of its Financial Statements.

Hence, the company will have to suitably modify the financial statements considering the materiality and pervasiveness of the non-compliance.

*****

1.8.1 Recognition and measurement

- Defined benefit plans can be:
  - Unfunded; or
  - Wholly or partly funded

  by contributions by an entity, and sometimes its employees, into an entity, or fund, that is legally separate from the reporting entity and from which the employee benefits are paid.
- The payment of funded benefits when they fall due depends on
  - the financial position and the investment performance of the fund; and
  - an entity's ability (and willingness) to make good any shortfall in the fund's assets.
- Therefore, the entity, in substance, underwrites the actuarial and investment risks associated with the plan.
- Hence the expense recognised for a defined benefit plan is not necessarily the amount of the contribution due for the period.

© The Institute of Chartered Accountants of India

1.8.1.1 Steps involved in accounting by an entity for defined benefit plans

Step	Details
Determine the deficit or surplus	• PUCM (Projected Unit Credit Method) • Discounting • Fair value of plan assets
Determine the amount of the net defined benefit liability (asset)	• As the amount of the deficit or surplus
Determine the amounts to be recognised in Profit or Loss	• Current service cost • Past service cost • Net interest
Determine the remeasurements of the net defined benefit liability (asset)	• Acturial Gain or Loss • Return on Plan Assets • Any Change in effect of Asset Ceiling

Step I: Determining the Deficit or Surplus

This involves:

(a) using actuarial techniques, the projected unit credit method, to make a reliable estimate of the amount of benefit that employees have earned in return for their service in the current and prior periods.

This requires an entity to -

(i) determine how much benefit is attributable to the current and prior periods and

(ii) make estimates (actuarial assumptions) about

- demographic variables (such as employee turnover and mortality); and
- financial variables (such as future increases in salaries and medical costs)

that will influence the cost of the benefit;

(b) discounting that benefit in order to determine the present value of the defined benefit obligation; and the current service cost

(c) deducting the fair value of any plan assets from the present value of the defined benefit obligation.

Step II: Determining the amount of the net defined benefit liability (asset)

Determining the amount of the net defined benefit liability (asset) as the amount of the deficit or surplus determined in step I above, adjusted for any effect of limiting a net defined benefit asset to the asset ceiling.

Step III: Determining amounts to be recognised in profit or loss:

(i) current service cost.

(ii) any past service cost and gain or loss on settlement.

(iii) net interest on the net defined benefit liability (asset).

Step IV: Determining the remeasurements of the net defined benefit liability (asset), to be recognised in other comprehensive income, comprising:

(i) actuarial gains and losses;

(ii) return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset); and

(iii) any change in the effect of the asset ceiling, **excluding** amounts included in net interest on the net defined benefit liability (asset).

In case an entity has more than one defined benefit plan, the entity applies these procedures for each material plan separately.

An entity shall determine the net defined benefit liability (asset) with sufficient regularity that the amounts recognised in the financial statements do not differ materially from the amounts that would be determined at the end of the reporting period.

1.8.2 Accounting for the constructive obligation

❖ Accounting for any constructive obligation will also be done by an entity that arises from the entity's informal practices.

❖ Constructive obligation arises due to informal practices where the entity has no realistic alternative but to pay employee benefits.

  Example - Where a change in the entity's informal practices would cause unacceptable damage to its relationship with employees

❖ The formal terms of a defined benefit plan may permit an entity to terminate its obligation under the plan. Nevertheless, it is usually difficult for an entity to terminate its obligation under a plan (without payment) if employees are to be retained.

❖ Hence accounting for post-employment benefits assumes that an entity which is currently promising such benefits will continue to do so over the remaining working lives of employees, in the absence of evidence to the contrary.

Join us t.me/caborntofight

1.8.3 Balance sheet

- An entity shall recognise the net defined benefit liability (asset) in the balance sheet.
- When an entity has a surplus in a defined benefit plan, it shall measure the net defined benefit asset **at the lower of:**

  (a) the surplus in the defined benefit plan; and

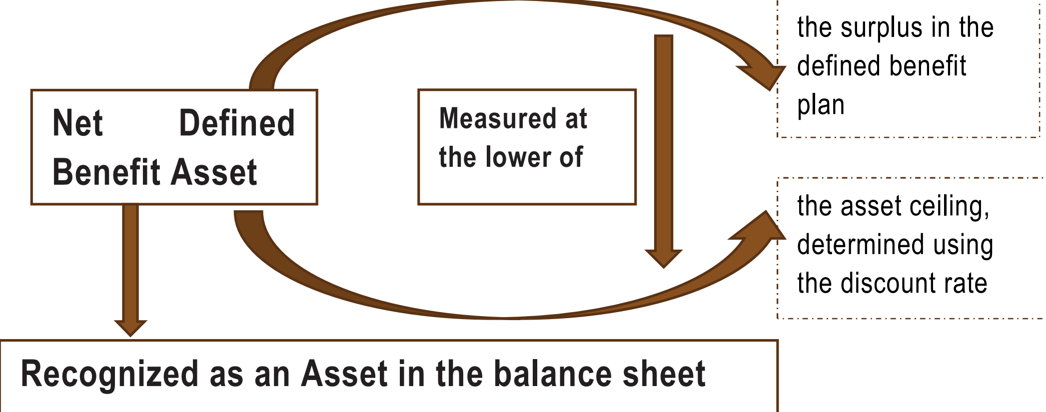
  (b) the asset ceiling, determined using the discount rate.

- A net defined benefit asset may arise where a defined benefit plan has been overfunded or in certain cases where actuarial gains are arisen. An entity recognises a net defined benefit asset in such cases because:

  (a) the entity controls a resource, which is the ability to use the surplus to generate future benefits;

  (b) that control is a result of past events (contributions paid by the entity and service rendered by the employee); and

  (c) future economic benefits are available to the entity in the form of a reduction in future contributions or a cash refund, either directly to the entity or indirectly to another plan in deficit. The asset ceiling is the present value of those future benefits.



Comparison with recognition of Deferred Tax Asset under Ind AS 12 *Income Taxes*:

As per para 24 of Ind AS 12 *Income Taxes*, a deferred tax asset shall be recognised for all deductible temporary differences to the extent that it is **probable** that taxable profit will be available against which the deductible temporary difference can be utilised.

The principle of taxable profit being available for future utilization of deductible temporary difference is essential under Ind AS 12 in order to recognise Deferred Tax Assets. However, in Ind AS 19, no such principle of establishing probability is required as the Plan

Assets represent actual investments which are held by the entity (albeit through a separate trust specially formed).

Illustration 13

How will the following information be presented in the Balance Sheet of Udyog Ltd.?

Particulars	***₹ in lakhs***
PV of Defined Benefit Obligations	*3,500*
Fair Value of Plan Assets	*3,332*

Solution

Particulars	**₹ in lakhs**
PV of Defined Benefit Obligations	3,500
Less: Fair Value of Plan Assets	(3,332)
Deficit, to be treated as Net Defined Benefit Liability under Non-current Liabilities as Provisions in the Balance Sheet	**168**

*****

Illustration 14

How will the following information be presented in the Balance Sheet of Udyog Ltd.?

Particulars	***₹ in lakhs***
PV of defined benefit obligations	*2,750*
Fair value of plan assets	*2,975*
Asset ceiling	*175*

Solution

Particulars	**₹ in lakhs**
PV of defined benefit obligations	2,750
Less: Fair value of plan assets	(2,975)
Surplus, to be treated as net defined benefit asset	**225**
Asset ceiling as per Ind AS 19	175
Least of above is surplus to be treated as net defined benefit asset under non-current assets in the Balance Sheet	**175**

*****

1.9 RECOGNITION AND MEASUREMENT: PRESENT VALUE OF DEFINED BENEFIT OBLIGATIONS AND CURRENT SERVICE COST

The cost of a defined benefit plan is influenced by many variables, such as

- final salaries;
- employee turnover and mortality;
- employee contributions; and
- medical cost trends.

Hence the ultimate cost of the plan is uncertain and this uncertainty is likely to persist over a long period of time.

In order to measure the present value of the post-employment benefit obligations and the related current service cost, it is necessary to:

(a) apply an actuarial valuation method;

(b) attribute benefit to periods of service; and

(c) make actuarial assumptions.

1.9.1 Actuarial valuation method

❖ Projected Unit Credit Method (PUCM) is used by an entity to determine the present value of its defined benefit obligations and the related current service cost and, where applicable, past service cost.

❖ The Projected Unit Credit Method (which is also sometimes known as the accrued benefit method pro-rated on service or as the benefit/years of service method) perceives each period of service as which gives rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation.

Illustration 15

AJ Ltd is engaged in the business of trading of chemicals having a net worth of ₹ 150 crores. The company's profitability is good and hence the company has introduced various benefits for its employees to keep them motivated and to ensure that they stay with the organization. The company is an associate of RJ Ltd which is listed on Bombay Stock Exchange in India.

The company initially did not have any HR function but over the last 2 years, the management set up that function and now HR department takes care of all the benefits

related to the employees and how they can be structured in a manner beneficial to both the employees and the objectives of the company.

One of the employee benefits involves a lump sum payment to employee on termination of service and that is equal to 1 per cent of final salary for each year of service. Consider the salary in year 1 is ₹ 10,000 and is assumed to increase at 7 per cent (compound) each year.

Taking a discount rate at 10 per cent per year, you are required to compute

(a) benefits attributed (year on year) and

(b) the obligation in respect of this benefit (year on year)

For an employee who is expected to leave at the end of year 5

Following assumptions may be taken to solve this:

- *There are no changes in actuarial assumptions.*
- *No additional adjustments are needed to reflect the probability that the employee may leave the entity at an earlier or later date.*

Solution

a. Computation of benefit attributed to prior years and current year:

Amount in ₹

Year	**1**	**2**	**3**	**4**	**5**
Benefit attributed to:					
- Prior years	-	131	262	393	524
- Current year (Refer W.N.1)	131	131	131	131	131
Total (i.e. current and prior years)	**131**	**262**	**393**	**524**	**655**

b. Computation of the obligation for an employee who is expected to leave at the end of year 5 (taking discount rate of 10% p.a.) Amount in ₹

Year	**1**	**2**	**3**	**4**	**5**
Opening obligation (A)	-	89	196	324	475
Interest at 10% (B = A X 10%)	-	9	20	32	47
Current service cost (C) (Refer WN 2)	89	98	108	119	131
Closing obligation D = (A+B+C)	**89**	**196**	**324**	**475**	**653**

Figures have been rounded off in the above table.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Working Notes:

1. A lump sum benefit is payable on termination of service and equal to 1 per cent of final salary for each year of service. The salary in year 1 is ₹ 10,000 and is assumed to increase at 7 per cent (compound) each year.

The year on year salary would be as follows: Amount in ₹

Year	1	2	3	4	5
Salary	10,000	10,700 (10,000 x 107%)	11,449 (10,700 x 107%)	12,250 (11,449 x 107%)	13,108 (12,250 x 107%)

Accordingly, for the purpose of above-mentioned employee benefit, 1% of final salary to be considered for each year of service would be ₹ 131.

2. Computation of current service cost: Amount in ₹

Year	1	2	3	4	5
1% salary at the end of year 5	-	-	-	-	131
PV factor at the end of each year to be considered at 10% p.a. **(E)**	0.683	0.751	0.826	0.909	1.000
PV at the end of each year	89 (131 x E)	98 (131 x E)	108 (131 x E)	119 (131 x E)	131 (131 x E)

Accordingly, for the purpose of above-mentioned employee benefit, 1% of final salary to be considered for each year of service would be ₹ 131.

*****

- An entity discounts the whole of a post-employment benefit obligation, even if part of the obligation is expected to be settled before twelve months after the reporting period.

1.9.2 Attributing benefit to periods of service

- An entity shall attribute benefit to periods of service under the plan's benefit formula, in determining the present value of its defined benefit obligations and the related current service cost, and, where applicable, past service cost.
- However, if an employee's service in later years will lead to a materially higher level of benefit than in earlier years, an entity shall attribute benefit on a straight-line basis from:

  (a) the date when service by the employee first leads to benefits under the plan (whether or not the benefits are conditional on further service) until

(b) the date when further service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.

❖ The Projected Unit Credit Method requires an entity to attribute benefit to the current period (in order to determine current service cost) and the current and prior periods (in order to determine the present value of defined benefit obligations).

An entity will attribute benefit to periods in which the obligation to provide post-employment benefits arises as employees render services in return for post-employment benefits which an entity expects to pay in future reporting periods.

❖ These kind of actuarial techniques allow an entity to measure that obligation with sufficient reliability to justify recognition of a liability.

Example 2

A defined benefit plan provides a lump-sum benefit of ₹ 200 payable on retirement for each year of service. A benefit of ₹ 200 is attributed to each year. The current service cost is the present value of ₹ 200. The present value of the defined benefit obligation is the present value of ₹ 200, multiplied by the number of years of service up to the end of the reporting period.

If the benefit is payable immediately when the employee leaves the entity, the current service cost and the present value of the defined benefit obligation reflect the date at which the employee is expected to leave. Thus, because of the effect of discounting, they are less than the amounts that would be determined if the employee left at the end of the reporting period.

❖ Employee service gives rise to an obligation under a defined benefit plan even if the benefits are conditional on future employment (***in other words they are not vested***).

❖ Employee service given the vesting date gives rise to a constructive obligation because, at the end of each successive reporting period, the amount of future service that an employee will have to render before becoming entitled to the benefit is reduced. An entity considers the probability that some employees may not satisfy any vesting requirements in measuring its defined benefit obligation.

❖ Although, certain post-employment benefits, for example, post- employment medical benefits, become payable only if a specified event occurs when an employee is no longer employed, an obligation is created when the employee renders service that will provide entitlement to the benefit if the specified event occurs.

The probability that the specified event will occur affects the measurement of the obligation but does not determine whether the obligation exists.

Illustration 16

A plan pays a benefit of ₹ 150 for each year of service. The benefits vest after ten years of service. Compute the benefit to be attributed each year?

Solution

1. A benefit of ₹ 150 is attributed to each year.

2. In each of the first ten years, the current service cost and the present value of the obligation reflect the probability that the employee may not complete ten years of service. This is because the benefits vest at a future date (i.e. after ten years of service).

*****

Illustration 17

A plan pays a benefit of ₹ 150 for each year of service, excluding service before the age of 25. The benefits vest immediately. Compute the benefit to be attributed each year?

Solution

1. No benefit is attributed to the service before the age of 25 because service before that date does not lead to benefits (conditional or unconditional).

2. A benefit of ₹ 150 is attributed to each subsequent year. There is no requirement to reflect any probability of completion as the benefits vest immediately.

*****

❖ The obligation increases till the date when further service by the employee will lead to no material amount of further benefits. Therefore, all benefit is attributed to periods ending on or before that date. Benefit is attributed to individual accounting periods under the plan's benefit formula.

However, in case an employee renders service in later years which will lead to a materially higher level of benefit than in earlier years, an entity will attribute benefit on a straight-line basis until the date when further service by the employee will lead to no material amount of further benefits. That is because the employee's service throughout the entire period will ultimately lead to benefit at that higher level.

Example 3

A plan pays a lump-sum retirement benefit of ₹ 4,000 to all employees who are still employed at the age of 55 after twenty years of service, or who are still employed at the age of 65, regardless of their length of service.

Category of Employee	Description	Benefit attributed per year
Employees who join before the age of 35	▪ These employees will be in service for 20 years at the age of 55. Accordingly, the service leads to benefits at the age of 35 and are conditional of further service. ▪ However, service beyond the age of 55 leads to no material amount of further benefits (i.e. benefit will still be the same).	▪ For these employees, the entity attributes benefit of ₹ 200 (₹ 4,000 divided by 20 years) each year from the age of 35 to the age of 55. ▪ The current service cost and the present value of the obligation should reflect the probability of an employee not completing the necessary service period.
Employees who join after the age of 35	▪ These employees will not be in service for 20 years at the age of 55 and must wait till the age of 65, regardless of the years of service. ▪ The service leads to benefits at the beginning of employment and service beyond age 65 leads to no material amount of further benefits.	▪ For these employees, the entity attributes benefit of ₹ 4,000 ÷ (65 years – whatever age when employment started may be 40, 45, 50…) to each year of service from the start until the age of 65. ▪ The current service cost and the present value of the obligation should reflect the probability of an employee not completing the necessary service period.

Illustration 18

Amra Pvt. Ltd. has a plan for its employees where it has decided to pay a lump-sum benefit of ₹ 2,000 that will vest after ten years of service. However, that plan will provide no further benefit for subsequent service.

Compute the benefit attributed for 10 years of service and for the period of service after 10 years?

Solution

1. In this case, as per the company's plan, a benefit of ₹ 200 (₹ 2,000 ÷ 10 years) is attributed to each of the first 10 years.
2. The current service cost in each of the first ten years reflects the probability that the employee may not complete ten years of service. This is because the benefits vest at a future date (i.e. after ten years of service).

No benefit is attributed to subsequent years.

*****

Illustration 19

Sanat Pvt. Ltd. has a plan for the employees where employees are entitled to a benefit of 5% of final salary for each year of service before the age of 55.

Compute the benefit attributed up to 55 years and after 55?

Solution

Benefit of 5% of estimated final salary is attributed to each year up to the age of 55. This is the date when further service by the employee will lead to no material amount of further benefits under the plan. No benefit is attributed to service after that age.

*****

Illustration 20

A post-employment medical plan reimburses 40 percent of an employee's post-employment medical costs if the employee leaves after more than ten and less than twenty years of service and 50 per cent of those costs if the employee leaves after twenty or more years of service.

Determine how will the benefit be attributed to the years of service.

Solution

1. Under the Plan's Benefit Formula, the entity should attribute 4% of the present value of the expected medical costs (40% ÷ 10 years) to each of the first ten years, and 1% (10% ÷ 10 years) to each of the second ten years.
2. For employees expected to leave within 10 years, no benefit is attributed.
3. The Current Service Cost in each year reflects the probability that the employee may not complete the necessary period of service to earn part or all of the benefits.

*****

Illustration 21

A post-employment medical plan reimburses 10 percent of an employee's post-employment medical costs if the employee leaves after more than ten and less than twenty years of service and 50 per cent of those costs if the employee leaves after twenty or more years of service.

Determine how will the benefit be attributed to the years of service.

Solution

1. Service in later years will lead to a materially higher level of benefit than in earlier year. So, for employees expected to leave after 20 or more years, the entity should attribute benefit on a straight-line basis under Para 71. Service beyond 20 years will lead to no material amount of further benefits. So, the benefit attributed to each of the first 20 years will be 2.5% of the Present Value of the Expected Medical Costs (50% ÷ 20 years).
2. For employees expected to leave between 10 and 20 years, the benefit attributed to each

Join us t.me/caborntofight

of the first 10 years is 1% (10% ÷ 10 years) of the Present Value of the expected medical costs. For these employees, no benefit is attributed to service between the end of the tenth year and the estimated date of leaving.

3. For employees expected to leave within ten years, no benefit is attributed.

4. The Current Service Cost in each year reflects the probability that the employee may not complete the necessary period of service to earn part or all of the benefits.

*****

Illustration 22

AKJ Ltd is a listed company engaged in the business of manufacturing of electronic equipment. The company has various branch offices spread out across India and has 1,000 employees.

As per the statutory requirements, gratuity shall be payable to an employee on the termination of his employment after he has rendered continuous service for not less than five years -

(a) on his superannuation, or

(b) on his retirement or resignation, or

(c) on his death or disablement due to accident or disease.

The completion of continuous service of five years shall not be necessary where the termination of the employment of any employee is due to death or disablement.

The amount payable is determined by a formula linked to number of years of service and last drawn salary. The amount payable to an employee shall not exceed ₹ 10,00,000.

Compute the amount of employee benefit, if any, attributed to each year of service.

Solution

The amount of gratuity would be attributed to each year of service and calculated as follows:

Number of employees not likely to fulfil the eligibility criteria will be ignored.

Other employees will be grouped according to period of service they are expected to render taking into account:

- mortality rate,
- disablement and
- resignation after 5 years.

Gratuity payable will be calculated in accordance with the formula prescribed in the governing statute based on the period of service and the salary at the time of termination of employment, assuming promotion, salary increases etc.

For those employees for whom the amount payable as per the formula does not exceed ₹ 10,00,000, over the expected period of service, the amount payable will be divided by the

expected period of service and the resulting amount will be attributed to each year of the expected period of service, including the period before the stipulated period of 5 years.

In case of the remaining employees, the amount as per the formula exceeds ₹ 10,00,000 over the expected period of service of 10 years (say), and the amount of the threshold of ₹ 10,00,000 is reached at the end of 8 years (assumed) i.e. ₹ 1,25,000 (₹ 10,00,000 ÷ 8 years) is attributed to each of the first 8 years. In this case, no benefit is attributed to subsequent two years. This is because service beyond 8 years will lead to no material amount of further benefits.

*****

1.9.3 Actuarial assumptions

❖ Actuarial assumptions are an entity's best estimates of the variables that will determine the ultimate cost of providing post-employment benefits.

❖ Actuarial assumptions shall be unbiased and mutually compatible.

❖ Actuarial assumptions are unbiased if they are neither imprudent nor excessively conservative.

❖ Actuarial assumptions are mutually compatible if they reflect the economic relationships between factors such as inflation, salary increment rate and discount rates.

For example, all assumptions which depend on a particular inflation level (such as assumptions about interest rates and salary and benefit increases) in any given future period assume the same inflation level in that period.

❖ Actuarial assumptions comprise:

(a) **demographic assumptions** about the future characteristics of current and former employees (and their dependants) who are eligible for benefits. Demographic assumptions deal with matters such as:

(i) mortality, both during and after employment;

(ii) rates of employee turnover, disability and early retirement;

(iii) the proportion of plan members with dependants who will be eligible for benefits;

(iv) the proportion of plan members who will select each form of payment option available under the plan terms; and

(v) claim rates under medical plans; and

(b) **financial assumptions,** dealing with items such as:

(i) the discount rate;

(ii) future salary and benefit levels;

(iii) in the case of medical benefits, future medical costs, including claim handling costs (i.e. the costs that will be incurred in processing and resolving claims, including legal and adjuster's fees); and

(iv) taxes payable by the plan on contributions relating to service before the reporting date or on benefits resulting from that service.

- An entity determines discount rate and other financial assumptions in nominal (stated) terms unless estimates in real (inflation-adjusted) terms are more reliable. For example, in a hyperinflationary economy, or where the benefit is index-linked and there is a deep market in index-linked bonds of the same currency and term.
- Financial assumptions are based on market expectations, at the end of the reporting period, for the period over which the obligations are to be settled.

1.9.3.1 Actuarial assumptions: mortality and discount rate

1. Mortality Assumptions

Entity is required to determine its mortality assumptions by reference to its best estimate of the mortality of plan members both during and after employment.

In order to estimate the ultimate cost of the benefit an entity shall takes into consideration the expected changes in mortality, for example by modifying standard mortality tables with estimates of mortality improvements.

2. Discount Rate Assumptions

- The rate which is used to discount post-employment benefit obligations (both funded and unfunded) is **determined by reference to market yields on government bonds** at the end of the reporting period.
- **Subsidiaries, associates, joint ventures and branches domiciled outside India** shall discount post-employment benefit obligations arising on account of post-employment benefit plans using the rate **determined by reference to market yields** at the end of the reporting period **on high quality corporate bonds**.
- In case, such subsidiaries, associates, joint ventures and branches are domiciled in countries **where there is no deep market in such bonds, the market yields** (at the end of the reporting period) **on government bonds** of that country **shall be used**.
- The currency and term of the government bonds shall be consistent with the currency and estimated term of the post-employment benefit obligations as the pay-outs will happen in same currency only.
- The discount rate reflects the estimated timing of benefit payments/time value of money and not the actuarial or investment risk. This also does not reflect entity-specific credit risk borne by the entity's creditors.
- Thus, practically speaking, it is achieved by an entity by applying a single weighted average discount rate that reflects the estimated timing and amount of benefit payments and the currency in which the benefits are to be paid.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- ❖ Where there is no deep market in government bonds with a sufficiently long maturity to match the estimated maturity of all the benefit payments, an entity uses current market rates of the appropriate term to discount shorter-term payments, and estimates the discount rate for longer maturities by extrapolating current market rates along the yield curve.
- ❖ **Interest cost is computed by multiplying the discount rate as determined at the start of the period by the present value of the defined benefit obligation** throughout that period and taking account of any material changes in the obligation.

1.9.3.2 Actuarial assumptions: salaries, benefits and medical costs

❖ Defined benefit obligations shall be measured on a basis that reflects:

(a) the benefits set out in the terms of the plan (or resulting from any constructive obligation that goes beyond those terms) at the end of the reporting period;

(b) estimated future salary increases;

(a) the effect of any limit on the employer's share of the cost of the future benefits;

(b) contributions from employees or third parties that reduce the ultimate cost to the entity of those benefits; and

(e) estimated future changes in the level of any state benefits that affect the benefits payable under a defined benefit plan, if, and only if, either:

(i) those changes were enacted before the end of the reporting period; or

(ii) historical data, or other reliable evidence, indicates that those state benefits will change in some predictable manner, for example, in line with future changes in general price levels or general salary levels.

❖ Estimates of future salary increases are calculated after taking account inflation, seniority, promotion and other relevant factors, such as supply and demand in the employment market.

❖ The formal terms of the plan (or a constructive obligation that goes beyond those terms) require an entity to consider change in benefits for future periods; the measurement of the obligation reflects those changes at the end of the reporting period will impact actuarial gains and losses.

For examples when:

(a) entity has a history of increasing benefits, for example, to mitigate the effects of inflation, and there is no indication that this practice will change in the future;

(b) the entity is obliged, by either the formal terms of a plan (or a constructive obligation that goes beyond those terms) or legislation, to use any surplus in the plan for the benefit of plan participants; or

Join us t.me/caborntofight

(c) benefits vary in response to a performance target or other criteria. For example, the terms of the plan may state that it will pay reduced benefits or require additional contributions from employees if the plan assets are insufficient. The measurement of the obligation reflects the best estimate of the effect of the performance target or other criteria.

- Further, future benefit changes that are not set out in formal terms of the plan (or a constructive obligation) at the end of the reporting period; will result in impacting past service cost and current service cost for the period after change to the extent of such change in benefits for the service.

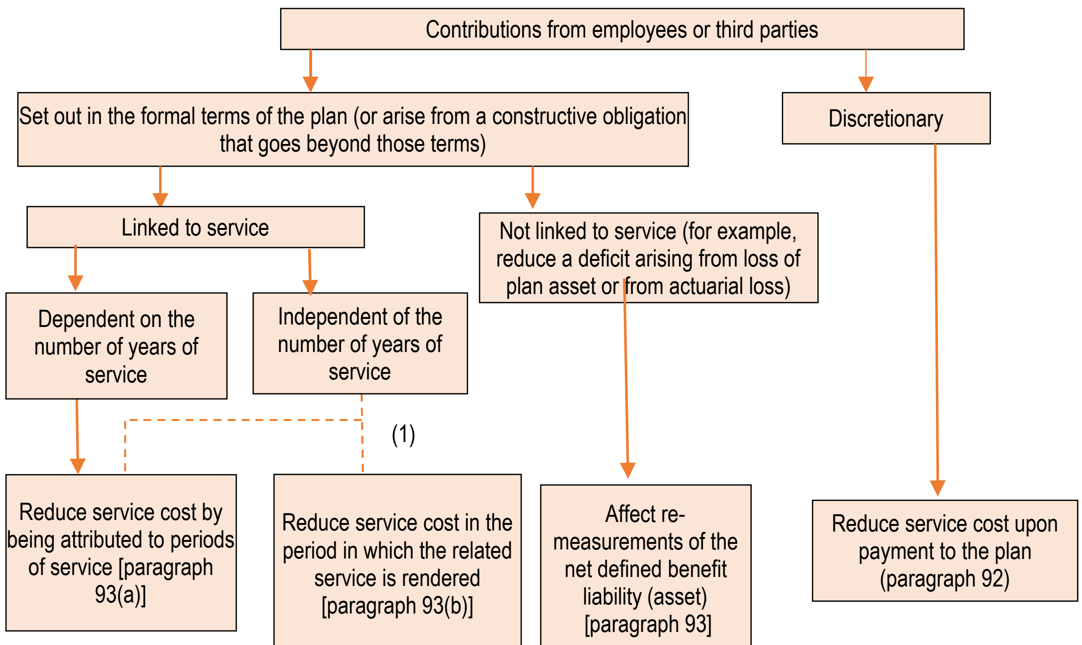
- Some post-employment benefits are linked to variables such as the level of state retirement benefits or state medical care. The measurement of such benefits reflects expected changes in such variables, based on past history and other reliable evidence.

- Assumptions about medical costs shall take into account estimated future changes in the cost of medical services, resulting from both inflation and specific changes in medical costs.

- Post-employment medical benefits measurement requires assumptions about the level and frequency of future claims and the cost of meeting those claims. Future medical costs are estimated on the basis of historical data about the entity's own experience and in case some more data is required to analyse the data, this data is gathered as historical data from other entities, insurance companies, medical providers or other sources. Estimates of future medical costs would consider the effect of technological advances, changes in health care utilisation or delivery patterns and changes in the health status of plan participants.

- The level and frequency of claims is particularly sensitive to the age, health status and sex of employees (and their dependants) and may be sensitive to other factors such as geographical location. Hence, this historical data is adjusted to the extent that the demographic mix of the population which differs from that of the population used as a basis for the historical data. Also it requires an adjustment where there is reliable evidence that historical trends will not continue.

- Some post-employment health care plans also require employees to contribute to the medical costs covered by the plan and thus estimates of future medical costs also take in account of any such contributions which are based on the terms of the plan at the end of the reporting period (or based on any constructive obligation that goes beyond those terms). Changes in those employee contributions result in past service cost or, where applicable, curtailments. The cost of meeting claims may be reduced by benefits from state or other medical providers.



(1) This dotted arrow means that an entity is permitted to choose either accounting.

1.9.3.3 Past service cost and gains and losses on settlement

❖ When determining past service cost, or a gain or loss on settlement, an entity shall remeasure the net defined benefit liability (asset) using the current fair value of plan assets and current actuarial assumptions (including current market interest rates and other current market prices) reflecting:

- the benefits offered under the plan and the plan assets before the plan amendment, curtailment or settlement; and
- the benefits offered under the plan and the plan assets after the plan amendment, curtailment or settlement.

❖ An entity need not distinguish between past service cost resulting from a plan amendment, past service cost resulting from a curtailment and a gain or loss on settlement if these transactions occur together. In some cases, a plan amendment occurs before a settlement, such as when an entity changes the benefits under the plan and settles the amended benefits later. In those cases, an entity recognises past service cost before any gain or loss on settlement.

❖ When a plan amendment, curtailment or settlement occurs, an entity shall recognise and measure any past service cost, or a gain or loss on settlement. In doing so, an entity shall not consider the effect of the asset ceiling. An entity shall then determine the effect of the asset ceiling after the plan amendment, curtailment or settlement and shall recognise any change in that effect.

- A settlement occurs together with a plan amendment and curtailment if a plan is terminated with the result that the obligation is settled and the plan ceases to exist. However, the termination of a plan is not a settlement if the plan is replaced by a new plan that offers benefits that are, in substance, the same.

1.9.3.3.1 Past service cost

- Change in the present value of the defined benefit obligation resulting from a plan amendment or curtailment is known as past service cost.
- An entity shall recognise past service cost as an expense at the earlier of the following dates:
  (a) when the plan amendment or curtailment occurs; and
  (b) when the entity recognises related restructuring costs (refer Ind AS 37 Provisions, Contingent Liabilities and Contingent Assets) or termination benefits.
- Plan amendment happens when an entity introduces, or withdraws, a defined benefit plan or changes the benefits payable under an existing defined benefit plan.
- Curtailment arises when an entity significantly reduces the number of employees covered by a plan. A curtailment may arise from an isolated event, such as the closing of a plant, discontinuance of an operation or termination or suspension of a plan.
- Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when benefits are withdrawn or changed so that the present value of the defined benefit obligation decreases).
- In case, an entity reduces benefits payable under an existing defined benefit plan and, at the same time, increases other benefits payable under the plan for the same employees, the entity treats the change as a single net change.
- Past service cost excludes the following:
  (a) the effect of differences between actual and previously assumed salary increases on the obligation to pay benefits for service in prior years (there is no past service cost because actuarial assumptions allow for projected salaries);
  (b) underestimates and overestimates of discretionary pension increases when an entity has a constructive obligation to grant such increases (there is no past service cost because actuarial assumptions allow for such increases);
  (c) estimates of benefit improvements that result from actuarial gains/ return on plan assets that have been recognised in the financial statements if the entity is obliged, by either the formal terms of a plan (or a constructive obligation that goes beyond those terms) or legislation, to use any surplus in the plan for the benefit of plan participants, even if the benefit increase has not yet been formally awarded (there is no past service cost because the resulting increase in the obligation is an actuarial loss); and

(d) the increase in vested benefits when, in the absence of new or improved benefits, employees complete vesting requirements (there is no past service cost because the entity recognised the estimated cost of benefits as current service cost as the service was rendered).

1.9.3.3.2 Gains and losses on settlement

- A settlement occurs when an entity enters into a transaction that eliminates all further legal or constructive obligation for part or all of the benefits provided under a defined benefit plan (other than a payment of benefits to, or on behalf of, employees in accordance with the terms of the plan and included in the actuarial assumptions).

  For example, a one-off transfer of significant employer obligations under the plan to an insurance company through the purchase of an insurance policy is a settlement; a lump sum cash payment, under the terms of the plan, to plan participants in exchange for their rights to receive specified post-employment benefits is not.

- The gain or loss on a settlement is the difference between:

  (a) the present value of the defined benefit obligation being settled, as determined on the date of settlement; and

  (b) the settlement price, including any plan assets transferred and any payments made directly by the entity in connection with the settlement.

- Gain or loss on the settlement of a defined benefit plan is recognised by the entity when the settlement occurs.

1.10 RECOGNITION AND MEASUREMENT: PLAN ASSETS

1.10.1 Fair value of plan assets

- The fair value of any plan assets is deducted from the present value of the defined benefit obligation in determining the deficit or surplus.

- Plan assets exclude unpaid contributions due from the reporting entity to the fund, as well as any non-transferable financial instruments issued by the entity and held by the fund. Plan assets are reduced by any liabilities of the fund that do not relate to employee benefits, for example, trade and other payables and liabilities resulting from derivative financial instruments.

- Where plan assets include qualifying insurance policies that exactly match the amount and timing of some or all of the benefits payable under the plan, the fair value of those insurance policies is deemed to be the present value of the related obligations, (subject to any reduction required if the amounts receivable under the insurance policies are not recoverable in full).

1.10.2 Reimbursements

- An entity will recognise its right to reimbursement as a separate asset when, and only when, it is virtually certain that another party will reimburse some or all of the expenditure required to settle a defined benefit obligation. The assets are measured at fair value by the entity and in all other respects, an entity shall treat that asset in the same way as plan assets. In the statement of profit and loss, the expense relating to a defined benefit plan may be presented net of the amount recognised for a reimbursement.
- Sometimes, an entity is able to look to another party, such as an insurer, to pay part or all of the expenditure required to settle a defined benefit obligation, there an entity accounts for qualifying insurance policies in the same way as for all other plan assets. When an insurance policy is not a qualifying insurance policy, that insurance policy is not a plan asset.
- Further, when an insurance policy is not a qualifying insurance policy, that insurance policy is not a plan asset. In such a scenario, an entity recognises its right to reimbursement under the insurance policy as a separate asset, rather than as a deduction in determining the defined benefit liability (asset) and in all other respects, the entity treats that asset in the same way as plan assets.
- If the right to reimbursement arises under an insurance policy that exactly matches the amount and timing of some or all of the benefits payable under a defined benefit plan, the fair value of the reimbursement right is deemed to be the present value of the related obligation.

1.11 COMPONENTS OF DEFINED BENEFIT COST

- An entity is required to recognise the components of defined benefit cost, except to the extent that another Ind AS (refer Ind AS 2 and Ind AS 16) requires or permits their inclusion in the cost of an asset, as follows:
  (a) service cost in profit or loss;
  (b) net interest on the net defined benefit liability (asset) in profit or loss; and
  (c) remeasurements of the net defined benefit liability (asset) in other comprehensive income.
- Remeasurements of the net defined benefit liability (asset) recognised in other comprehensive income shall not be reclassified to profit or loss in a subsequent period. However, the entity may transfer those amounts recognised in other comprehensive income within equity.

Current service cost

- An entity shall determine current service cost using actuarial assumptions determined at

Join us t.me/caborntofight

the start of the annual reporting period. However, if an entity remeasures the net defined benefit liability (asset), as discussed above, it shall determine current service cost for the remainder of the annual reporting period after the plan amendment, curtailment or settlement using the actuarial assumptions used to remeasure the net defined benefit liability (asset) in accordance with paragraph 99(b) of Ind AS 19 (i.e. reflecting the benefits offered under the plan and the plan assets after the plan amendment, curtailment or settlement).

1.11.1 Net interest on the net defined benefit liability (asset)

- ❖ An entity shall determine net interest on the net defined benefit liability (asset) by multiplying the net defined benefit liability (asset) by the discount rate specified for post-employment benefit obligation.
- ❖ To determine net interest in accordance with paragraph mentioned above, an entity shall use the net defined benefit liability (asset) and the discount rate determined at the start of the annual reporting period. However, if an entity remeasures the net defined benefit liability (asset), the entity shall determine net interest for the remainder of the annual reporting period after considering the benefits offered under the plan and the plan asset after the plan amendment, curtailment or settlement using:

  (a) the net defined benefit liability (asset) ; and

  (b) the discount rate used to remeasure the net defined benefit liability (asset).

  Further, in applying this paragraph, the entity shall also take into account any changes in the net defined benefit liability (asset) during the period resulting from contributions or benefit payments.
- ❖ Net interest on the net defined benefit liability (asset) can be viewed as comprising interest income on plan assets, interest cost on the defined benefit obligation and interest on the effect of the asset ceiling.
- ❖ Interest income on plan assets is a component of the return on plan assets and is determined by multiplying the fair value of the plan assets by the discount rate specified for post-employment benefit obligation. An entity shall determine the fair value of the plan assets at the start of the annual reporting period. However, if an entity remeasures the net defined benefit liability (asset), the entity shall determine interest income for the remainder of the annual reporting period after the plan amendment, curtailment or settlement using the plan assets used to remeasure the net defined benefit liability (asset) reflecting the benefits offered under the plan and the plan assets after the plan amendment, curtailment or settlement). Further, in applying this paragraph, the entity shall also consider any changes in the plan assets held during the period resulting from contributions or benefit payments.

Join us t.me/caborntofight

- The difference between the interest income on plan assets and the return on plan assets is included in the remeasurement of the net defined benefit liability (asset).
- Interest on the effect of the asset ceiling is part of the total change in the effect of the asset ceiling and is determined by multiplying the effect of the asset ceiling by the discount rate. An entity shall determine the effect of the asset ceiling at the start of the annual reporting period. However, if an entity remeasures the net defined benefit liability (asset), the entity shall determine interest on the effect of the asset ceiling for the remainder of the annual reporting period after the plan amendment, curtailment or settlement considering any change in the effect of the asset ceiling. The difference between interest on the effect of the asset ceiling and the total change in the effect of the asset ceiling is included in the remeasurement of the net defined benefit liability (asset).

1.11.2 Remeasurements of the net defined benefit liability (asset)

- Remeasurements of the net defined benefit liability (asset) comprise:
  - (a) actuarial gains and losses;
  - (b) the return on plan assets, excluding amounts included in net interest on the net defined benefit liability (asset); and
  - (c) any change in the effect of the asset ceiling, excluding amounts included in net interest on the net defined benefit liability (asset).
- Actuarial gains and losses occur from increases or decreases in the present value of the defined benefit obligation because of changes in actuarial assumptions and experience adjustments. Following are the few causes of actuarial gains and losses:
  - (a) unexpectedly high or low rates of employee turnover, early retirement or mortality or of increases in salaries, benefits (if the formal or constructive terms of a plan provide for inflationary benefit increases) or medical costs;
  - (b) the effect of changes to assumptions concerning benefit payment options;
  - (c) the effect of changes in estimates of future employee turnover, early retirement, or mortality or of increases in salaries, benefits (if the formal or constructive terms of a plan provide for inflationary benefit increases) or medical costs; and
  - (d) the effect of changes in the discount rate.
- Actuarial gains and losses does not include changes in the present value of the defined benefit obligation because of the introduction, amendment, curtailment or settlement of the defined benefit plan, or changes to the benefits payable under the defined benefit plan. Rather such changes shall result in past service cost or gains or losses on settlement.
- In measuring the return on plan assets, an entity deducts the costs of managing the plan assets and any tax payable by the plan itself, other than tax included in the actuarial

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

assumptions used to measure the defined benefit obligation. Other administration costs are not deducted from the return on plan assets.

Illustration 23

Pratap Ltd. belongs to the ship-building industry. The company reviewed an Actuarial Valuation for the first time for its pension scheme which revealed a surplus of ₹ 60 lakhs. It wants to spread the same over the next 2 years by reducing the annual contribution to ₹ 20 lakhs instead of ₹ 50 lakhs. The average remaining life of the employees is estimated to be 6 years.

Advise the Company in line with Ind AS 19.

Solution

1. **Recognition:** As per Ind AS 19, any Actuarial Gains and Losses should be recognized as a re-measurement of the Net Defined Benefit Liability / (Asset) in "Other Comprehensive Income".

2. **Measurement and Presentation:** In the given case, the amount of surplus from Pension Scheme of ₹ 60 lakhs is an Actuarial Gain and should be recognized as a "re-measurement" in "Other Comprehensive Income", and not to be adjusted from the amount of annual contribution in future years.

3. **Disclosure:** The change relating to Actuarial Valuation for the Pension Scheme requires disclosure under Ind AS 8. Disclosures required by Ind AS 19 should also be made in the financial statements.

*****

Illustration 24

RKA Private Ltd is an old company established in 19XX. The company started with a very small capital base and today it is one of the leading companies in India in its industry. The company has an annual turnover of ₹ 11,000 crores and planning to get listed in the next year.

The company has a large employee base. The company provided a defined benefit plan to its employees. Following is the information relating to the balances of the fund's assets and liabilities as at 1st April, 20X1 and 31st March, 20X2. *₹ in lacs*

Particulars	*1st April, 20X1*	*31st March, 20X2*
Present value of benefit obligation	*1,400*	*1,580*
Fair value of plan assets	*1,140*	*1,275*

For the financial year ended 31st March, 20X2, service cost was ₹ 55 lacs. The company made a contribution of an amount of ₹ 111 lacs to the plan. No benefits were paid during the year.

Consider a discount rate of 8%.

You are required to -

(a) Compute the balance(s) of the company to be included its balance sheet as on

31st March, 20X2 and amounts to be recognized in the statement of profit and loss and other comprehensive income for the year ended 31st March, 20X2.

(b) *Provide the journal entries in respect of amount(s) to be recognized.*

Solution

(a) Extract of the Balance Sheet of RKA Private Ltd as at 31st March, 20X2

	₹ in lacs
Closing net defined liability (1,580 – 1,275) lacs	305

Extract of the Statement of Profit or Loss of RKA Private Ltd for the year ended 31st March, 20X2

Particulars	₹ in lacs
Service cost	55
Net interest ***(Refer W.N.1)***	21
Profit or loss	**76**
Other comprehensive income:	
Remeasurements ***(Refer W.N.2)***	80
Total	**156**

(b) Journal entries in the books of RKA Private Ltd

Particulars		₹ in lacs	₹ in lacs
Profit & Loss	Dr.	76	
Other comprehensive income	Dr.	80	
To Cash (Contribution)			111
To Net defined benefit liability ***(Refer WN 3)***			45

Working Notes:

1. Computation of Net interest taken to the Statement of Profit or Loss

= Discount rate x Opening net defined benefit liability

= 8% x (1,400 – 1,140) lacs

= 8% x 260 lacs = 21 lacs (Rounded off to nearest lacs)

© The Institute of Chartered Accountants of India

2. Computation of Remeasurements

Defined Benefit Obligation Account

Particulars	₹ in lacs	Particulars	₹ in lacs
To Balance c/d (given) (closing balance)	1,580	By Balance b/d (given) (opening balance)	1,400
		By Current Service Cost (given)	55
		By Interest on Opening Liability (1,400 x 8%)	112
		By Actuarial loss **(bal. figure)**	13
	1,580		**1,580**

OR

Statement to calculate Actuarial gain or loss on defined benefit liability:

Particulars	₹ in lacs
Opening balance of liability	1,400
Current service cost	55
Interest on opening liability (1,400 x 8%)	112
Actuarial loss (Bal. fig)	13
Closing balance of liability	**1,580**

Plan Assets Account

Particulars	₹ in lacs	Particulars	₹ in lacs
To Balance b/d (given) (opening balance)	1,140	By Balance c/d (given) (closing balance)	1,275
To Bank Account (contribution for the year)	111		
To Surplus / Actual Return (bal. figure)	24		
	1,275		**1,275**

OR

Join us t.me/caborntofight

Statement to calculate Actual return on plan assets:

Particulars	₹ in lacs
Opening balance of asset	1,140
Cash contribution	111
Actual return (Bal. fig)	24
Closing balance of asset	**1,275**

Net interest on opening balance of plan asset = ₹ 91 lacs (i.e. ₹ 1,140 lacs x 8%) (Rounded off to nearest lacs)

Hence there is a decrease in plan assets due to remeasurement for which computation is as follows:

Actual Return – Net interest on opening plan asset

= ₹ 24 lacs – ₹ 91 lacs = ₹ 67 lacs.

Net remeasurement would be computed as follows:

Actuarial loss on liability + Loss on return = ₹ 13 lacs + ₹ 67 lacs = ₹ 80 lacs.

3. **Computation of increase/ decrease in net defined benefit liability:**

Particulars	₹ in lacs
Opening net liability (₹ 1,400 lacs – ₹ 1,140 lacs)	260
Closing net liability ₹ 1,580 lacs – ₹ 1,275 lacs)	305
Increase in liability	**45**

*****

1.12 PRESENTATION

1.12.1 Offset

- An asset relating to one plan will be offset against a liability relating to another plan when, and only when, the entity:
  - (a) has a legally enforceable right to use a surplus in one plan to settle obligations under the other plan; and
  - (b) there is an intention either to settle the obligations on a net basis, or to realise the surplus in one plan and settle its obligation under the other plan simultaneously.
- The offsetting criteria are similar to those established for financial instruments in Ind AS 32, Financial Instruments: Presentation.

Join us t.me/caborntofight

1.12.2 Current / Non-current distinction

This Standard does not specify whether an entity should distinguish current and non-current portions of assets and liabilities arising from post-employment benefits.

1.12.3 Components of defined benefit costs

This Standard does not specify how an entity should present current service cost and net interest cost on net defined liability (asset). An entity presents those components in accordance with Ind AS 1 Presentation of Financial Statements.

1.13 DISCLOSURE

An entity shall disclose information that enables users of financial statements to evaluate the nature of its defined benefit plans and the financial effects of changes in those plans during the period.

1.13.1 General

❖ An entity shall disclose information that:

  (a) explains the characteristics of its defined benefit plans and risks associated with them;

  (b) identifies and explains the amounts in its financial statements arising from its defined benefit plans; and

  (c) describes how its defined benefit plans may affect the amount, timing and uncertainty of the entity's future cash flows.

❖ If the disclosures provided in accordance with Ind AS 19 and other Ind AS are insufficient to meet the required objectives, additional information necessary to meet those objectives should be disclosed. For example, an entity might present an analysis of the present value of the defined benefit obligation that distinguishes the nature, characteristics and risks of the obligation. Such a disclosure could distinguish:

  (a) between amounts owing to active members, deferred members, and pensioners;

  (b) between vested benefits and accrued but not vested benefits; and

  (c) between conditional benefits, amounts attributable to future salary increases and other benefits.

1.13.2 Characteristics of defined benefit plans and risks associated with them

An entity shall disclose:

(a) information about the characteristics of its defined benefit plans, including:

   (i) the nature of the benefits provided by the plan (e.g. final salary defined benefit plan or contribution-based plan with guarantee);

   (ii) a description of the regulatory framework in which the plan operates (e.g. the level of any minimum funding requirements, and any effect of the regulatory framework on the plan, such as the asset ceiling); and

   (iii) a description of any other entity's responsibilities for the governance of the plan (e.g. responsibilities of trustees or of board members of the plan).

(b) a description of the risks to which the plan exposes the entity, focused on any unusual, entity specific or plan-specific risks, and of any significant concentrations of risk. For example, if plan assets are invested primarily in one class of investments (e.g. property), the plan may expose the entity to a concentration of property market risk; and

(c) a description of any plan amendments, curtailments and settlements.

1.13.3 Explanation of amounts in the financial statements

❖ An entity shall provide a reconciliation from the opening balance to the closing balance for each of the following, if applicable:

   (a) the net defined benefit liability (asset), showing separate reconciliations for:

      (i) plan assets;

      (ii) the present value of the defined benefit obligation; and

      (iii) the effect of the asset ceiling; and

   (b) any reimbursement rights. An entity shall also describe the relationship between any reimbursement right and the related obligation.

❖ Each reconciliation listed above shall show each of the following, if applicable:

   (a) current service cost;

   (b) interest income or expense;

   (c) remeasurements of the net defined benefit liability (asset), showing separately:

      (i) the return on plan assets, excluding amounts included in interest in interest income or expense;

      (ii) actuarial gains and losses arising from changes in demographic assumptions;

      (iii) actuarial gains and losses arising from changes in financial assumptions; and

      (iv) changes in the effect of limiting a net defined benefit asset to the asset ceiling, excluding amounts included in interest income or expense. An entity shall also

disclose how it determined the maximum economic benefit available, i.e. whether those benefits would be in the form of refunds, reductions in future contributions or a combination of both;

(d) past service cost and gains and losses arising from settlements. If permitted by the Standard (i.e., entity need not distinguish between past service cost resulting from a plan amendment), past service cost and gains and losses arising from settlements need not be distinguished if they occur together;

(e) the effect of changes in foreign exchange rates;

(f) contributions to the plan, showing separately those by the employer and by plan participants;

(g) payments from the plan, showing separately the amount paid in respect of any settlements; and

(h) the effects of business combinations and disposals.

❖ The fair value of the plan assets shall be disaggregated into classes that distinguish the nature and risks of those assets, subdividing each class of plan asset into those that have a quoted market price in an active market (as defined in Ind AS 113, *Fair Value Measurement*) and those that do not.

For example, and considering the level of general disclosures, an entity might distinguish between:

(i) cash and cash equivalents;

(ii) equity instruments (segregated by industry type, company size, geography etc);

(iii) debt instruments (segregated by type of issuer, credit quality, geography etc);

(iv) real estate (segregated by geography etc);

(v) derivatives (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, credit contracts, longevity swaps etc);

(vi) investment funds (segregated by type of fund);

(vii) asset-backed securities; and

(viii) structured debt.

❖ An entity shall disclose:

(a) the fair value of the entity's own transferable financial instruments held as plan assets; and

(b) the fair value of plan assets that are property occupied by, or other assets used by, the entity.

Join us t.me/caborntofight

- An entity shall disclose the significant actuarial assumptions used to determine the present value of the defined benefit obligation. Such disclosure shall be in absolute terms (e.g. as an absolute percentage, and not just as a margin between different percentages and other variables). When an entity provides disclosures in total for a grouping of plans, it shall provide such disclosures in the form of weighted averages or relatively narrow ranges.

1.13.4 Amount, timing and uncertainty of future cash flows

- An entity shall disclose:

  (a) a sensitivity analysis for each significant actuarial assumption as of the end of the reporting period, showing how the defined benefit obligation would have been affected by changes in the relevant actuarial assumption that were reasonably possible at that date;

  (b) the methods and assumptions used in preparing these sensitivity analyses and the limitations of those methods; and

  (c) changes from the previous period in the methods and assumptions used in preparing the sensitivity analyses, and the reasons for such changes.

- To provide an indication of the effect of the defined benefit plan on the entity's future cash flows, an entity shall disclose:

  (a) a description of any funding arrangements and funding policy that affect future contributions;

  (b) the expected contributions to the plan for the next annual reporting period;

  (c) information about the maturity profile of the defined benefit obligation. This will include the weighted average duration of the defined benefit obligation and may include other information about the distribution of the timing of benefit payments, such as a maturity analysis of the benefit payments.

1.13.5 Multi-employer plans

If an entity participates in a multi-employer defined benefit plan, it shall disclose:

(a) a description of the funding arrangements, including the method used to determine the entity's rate of contributions and any minimum funding requirements;

(b) a description of the extent to which the entity can be liable to the plan for other entities' obligations under the terms and conditions of the multi-employer plan; and

(c) a description of any agreed allocation of a deficit or surplus on:

  (i) wind-up of the plan; or

  (ii) the entity's withdrawal from the plan.

Join us t.me/caborntofight

(d) if the entity accounts for that plan as if it were a defined contribution plan in accordance with general principles applicable to liabilities and an entities own equity instruments, it shall disclose the following, in addition to the information required by (a)–(c) (refer section 1.13.2) and instead of the information required by paragraphs 139–147 (refer section 1.13.3 to 4):

(i) the fact that the plan is a defined benefit plan.

(ii) the reason why sufficient information is not available to enable the entity to account for the plan as a defined benefit plan.

(iii) the expected contributions to the plan for the next annual reporting period.

(iv) information about any deficit or surplus in the plan that may affect the amount of future contributions, including the basis used to determine that deficit or surplus and the implications, if any, for the entity.

(v) an indication of the level of participation of the entity in the plan compared with other participating entities. Examples of measures that might provide such an indication include the entity's proportion of the total contributions to the plan or the entity's proportion of the total number of active members, retired members, and former members entitled to benefits, if that information is available.

1.13.6 Defined benefit plans that share risks between entities under common control

If an entity participates in a defined benefit plan that shares risks between entities under common control, it shall disclose:

(a) the contractual agreement or stated policy for charging the net defined benefit cost or the fact that there is no such policy.

(b) the policy for determining the contribution to be paid by the entity.

(c) if the entity accounts for an allocation of the net defined benefit cost as mentioned in section 1.6.3 above, all the information about the plan as a whole as discussed in sections 1.13.1 to 1.13.4.

(d) if the entity accounts for the contribution payable for the period as noted in section 1.6.3 above, the relevant information about the plan as a whole as mentioned in sections 1.13.1 to 1.13.4.

(e) The information required by (c) and (d) above can be disclosed by cross-reference to disclosures in another group entity's financial statements if:

(a) that group entity's financial statements separately identify and disclose the information required about the plan; and

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(b) that group entity's financial statements are available to users of the financial statements on the same terms as the financial statements of the entity and at the same time as, or earlier than, the financial statements of the entity.

1.13.7 Disclosure requirements in other Ind AS

- Where required by Ind AS 24 *Related Party Disclosures,* an entity discloses information about:

  (a) related party transactions with post-employment benefit plans; and

  (b) post-employment benefits for key management personnel.

- Where required by Ind AS 37 *Provisions, Contingent liabilities and Contingent Assets*, an entity discloses information about contingent liabilities arising from post-employment benefit obligations.

1.14 OTHER LONG-TERM EMPLOYEE BENEFITS

- Other long-term employee benefits are those employee benefits which are not expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related service.

- Other long-term employee benefits include, For example:

  (a) long-term paid absences such as long-service or sabbatical leave;

  (b) jubilee or other long-service benefits;

  (c) long-term disability benefits;

  (d) profit-sharing and bonuses; and

  (e) deferred remuneration.

- The measurement of other long-term employee benefits is not usually subject to the same degree of uncertainty as the measurement of post-employment benefits. It is also there that the introduction of, or changes to, other long-term employee benefits rarely causes a material amount of past service cost. This method does not recognise remeasurements in other comprehensive income as required under the accounting required for post-employment benefits.

1.14.1 Recognition and measurement

- For other long-term employee benefits, an entity shall recognise the net total of the following amounts in profit or loss, except to the extent that another Standard requires or permits their inclusion in the cost of an asset:

(a) service cost;

(b) net interest on the net defined benefit liability (asset); and

(c) remeasurements of the net defined benefit liability (asset).

❖ One form of other long-term employee benefit is long-term disability benefit. If the level of benefit depends on the length of service, an obligation arises when the service is rendered.

Measurement of that obligation reflects the probability that payment will be required and the length of time for which payment is expected to be made. If the level of benefit is the same for any disabled employee regardless of years of service, the expected cost of those benefits is recognised when an event occurs that causes a long-term disability.

1.14.2 Disclosure

Though this Standard does not require specific disclosures about other long-term employee benefits, other Standards may require disclosures.

For example:

a. Where the expense resulting from such benefits is material and so would require disclosure in accordance with Ind AS 1.

b. When required by Ind AS 24, an entity discloses information about other long-term employee benefits for key management personnel.

1.15 TERMINATION BENEFITS

❖ This Standard deals with termination benefits separately from other employee benefits because the event which gives rise to an obligation is the termination of employment rather than employee service.

❖ Termination benefits results from either:

(a) an entity's decision to terminate the employment or

(b) an employee's decision to accept an entity's offer of benefits in exchange for termination of employment.

❖ Termination benefits do not include employee benefits resulting from termination of employment at the request of the employee without an entity's offer, or as a result of mandatory retirement requirements, because those benefits are post-employment benefits.

❖ Some entities provide a lower level of benefit for termination of employment at the request of the employee (in substance, a post-employment benefit) than for termination of employment at the request of the entity. The difference between the benefit provided for termination of employment at the request of the employee and a higher benefit provided at the request of the entity is a termination benefit.

Join us t.me/caborntofight

- The form of the employee benefit does not determine whether it is provided in exchange for service or in exchange for termination of the employee's employment. Termination benefits are typically lump sum payments, but sometimes also include
  - (a) enhancement of post-employment benefits, either indirectly through an employee benefit plan or directly.
  - (b) salary until the end of a specified notice period if the employee renders no further service that provides economic benefits to the entity.
- Indicators that an employee benefit is provided in exchange for services include the following:
  - (a) the benefit is conditional on future service being provided (including benefits that increase if further service is provided).
  - (b) the benefit is provided in accordance with the terms of an employee benefit plan.
- Employee benefits provided in accordance with the terms of an employee benefit plan are termination benefits if they both result from an entity's decision to terminate an employee's employment and are not conditional on future service being provided.
- Some employee benefits are provided regardless of the reason for the employee's departure. The payment of such benefits is certain (subject to any vesting or minimum service requirements) but the timing of their payment is uncertain. Although such benefits are described in some jurisdictions as termination indemnities or termination gratuities, they are post-employment benefits rather than termination benefits, and an entity accounts for them as post-employment benefits.

1.15.1 Recognition

- An entity is required to **recognise** a liability and expense for termination benefits **at the earlier of the following dates**:
  - (a) when the entity can no longer withdraw the offer of those benefits; and
  - (b) when the entity recognises costs for a restructuring which is within the scope of Ind AS 37 and involves the payment of termination benefits.
- For **termination benefits** payable **as a result of an employee's decision to accept an offer of** benefits in exchange for the **termination of employment**, the **time when an entity can no longer withdraw the offer** of termination benefits **is the earlier of**:
  - (a) when the employee accepts the offer; and
  - (b) when a restriction (e.g. a legal, regulatory or contractual requirement or other restriction) on the entity's ability to withdraw the offer takes effect.

- For termination benefits payable as a result of an entity's decision to terminate an employee's employment, the entity can no longer withdraw the offer when the entity has communicated to the affected employees a plan of termination meeting all of the following criteria:

  (a) Actions required to complete the plan indicate that it is unlikely that significant changes to the plan will be made.

  (b) The plan identifies the number of employees whose employment is to be terminated, their job classifications or functions and their locations (but the plan need not identify each individual employee) and the expected completion date.

  (c) The plan establishes the termination benefits that employees will receive in sufficient detail that employees can determine the type and amount of benefits they will receive when their employment is terminated.

- Where an entity recognises termination benefits, the entity may also have to account for a curtailment of retirement benefits or other employee benefits.

1.15.2 Measurement

An entity shall measure termination benefits on initial recognition, and shall measure and recognise subsequent changes, in accordance with the nature of the employee benefit, provided that if the termination benefits are an enhancement to post-employment benefits, the entity shall apply the requirements for post-employment benefits. Otherwise:

(a) If the termination benefits are expected to be settled wholly before twelve months after the end of the annual reporting period in which the termination benefit is recognised, the entity shall apply the requirements for short-term employee benefits.

(b) If the termination benefits are not expected to be settled wholly before twelve months after the end of the annual reporting period, the entity shall apply the requirements for other long-term employee benefits.

Because termination benefits are not provided in exchange for service, the concepts relating to the attribution of the benefit to periods of service as discussed for defined benefit plans are not relevant.

Example 4: On Termination Benefits

As a result of a recent acquisition, an entity plans to close a factory in ten months and, at that time, terminate the employment of all of the remaining employees at the factory. Because the entity needs the expertise of the employees at the factory to complete some contracts, it announces a plan of termination as follows.

Each employee who stays and renders service until the closure of the factory will receive on the termination date a cash payment of ₹ 30,000. Employees leaving before closure of the factory will receive ₹ 10,000.

© The Institute of Chartered Accountants of India

There are 120 employees at the factory. At the time of announcing the plan, the entity expects 20 of them to leave before closure. Therefore, the total expected cash outflows under the plan are ₹ 3,200,000 (i.e. (20 × ₹ 10,000) + (100 × ₹ 30,000)). As required by paragraph 160, the entity accounts for benefits provided in exchange for termination of employment as termination benefits and accounts for benefits provided in exchange for services as short-term employee benefits.

Termination benefits

The benefit provided in exchange for termination of employment is ₹ 10,000. This is the amount that an entity would have to pay for terminating the employment regardless of whether the employees stay and render service until closure of the factory or they leave before closure. Even though the employees can leave before closure, the termination of all employees' employment is a result of the entity's decision to close the factory and terminate their employment (i.e. all employees will leave employment when the factory closes). Therefore, the entity recognises a liability of ₹ 12,00,000 (i.e. 120 × ₹ 10,000) for the termination benefits provided in accordance with the employee benefit plan at the earlier of when the plan of termination is announced and when the entity recognises the restructuring costs associated with the closure of the factory.

Benefits provided in exchange for service

The incremental benefits that employees will receive if they provide services for the full ten-month period are in exchange for services provided over that period. The entity accounts for them as short-term employee benefits because the entity expects to settle them before twelve months after the end of the annual reporting period. In this example, discounting is not required, so an expense of ₹ 2,00,000 (i.e. ₹ 20,00,000 ÷ 10) is recognised in each month during the service period of ten months, with a corresponding increase in the carrying amount of the liability.

1.15.3 Disclosure

This Standard does not require specific disclosures about termination benefits, other Ind AS may require disclosures.

For example:

a. where required by Ind AS 24 an entity discloses information about termination benefits for key management personnel.

b. Ind AS 1 requires disclosure of employee benefits expense.

1.16 IND AS 19 — THE LIMIT ON A DEFINED BENEFIT ASSET, MINIMUM FUNDING REQUIREMENTS AND THEIR INTERACTION

1.16.1 Background

- Ind AS 19 limits the measurement of a net defined benefit asset to the lower of the surplus in the defined benefit plant and asset ceiling (i.e. the present value of economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan). Questions have arisen about when refunds or reductions in future contributions should be regarded as available, particularly when a minimum funding requirement exists.
- Minimum funding requirements normally stipulate a minimum amount or level of contributions that must be made to a plan over a given period. Therefore, a minimum funding requirement may limit the ability of the entity to reduce future contributions.
- Further, the limit on the measurement of a defined benefit asset may cause a minimum funding requirement to be onerous. Normally, a requirement to make contributions to a plan would not affect the measurement of the defined benefit asset or liability. This is because the contributions, once paid, will become plan assets and so the additional net liability is nil. However, a minimum funding requirement may give rise to a liability if the required contributions will not be available to the entity once they have been paid.

1.16.2 Scope

This Appendix applies to all post-employment defined benefits and other long-term employee defined benefits. For the purpose of this Appendix, minimum funding requirements are any requirements to fund a post-employment or other long-term defined benefit plan.

1.16.3 Issues

The issues addressed in this Appendix are:

(a) when refunds or reductions in future contributions should be regarded as available in accordance with the definition of the asset ceiling.

(b) how a minimum funding requirement might affect the availability of reductions in future contributions.

(c) when a minimum funding requirement might give rise to a liability.

Join us t.me/caborntofight

1.16.4 Principles

1.16.4.1 Availability of a refund or reduction in future contributions

- An entity shall determine the availability of a refund or a reduction in future contributions in accordance with the terms and conditions of the plan and any statutory requirements in the jurisdiction of the plan.
- An economic benefit is available in the form of a refund or a reduction in future contributions if the entity can realise it at some point during the life of the plan or when the plan liabilities are settled.
- The economic benefit available does not depend on how the entity intends to use the surplus. An entity shall determine the maximum economic benefit that is available from refunds, reductions in future contributions or a combination of both. An entity shall not recognise economic benefits from a combination of refunds and reductions in future contributions based on assumptions that are mutually exclusive.
- In accordance with Ind AS 1, the entity shall disclose information about the key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amount of the net asset or liability recognised in the balance sheet. This might include disclosure of any restrictions on the current realisability of the surplus or disclosure of the basis used to determine the amount of the economic benefit available.

1.16.4.2 The economic benefit available as a refund

1. The right to a refund

- A refund is available to an entity only if the entity has an unconditional right to a refund:

  (a) during the life of the plan, without assuming that the plan liabilities must be settled in order to obtain the refund (e.g., in some jurisdictions, the entity may have a right to a refund during the life of the plan, irrespective of whether the plan liabilities are settled); or

  (b) assuming the gradual settlement of the plan liabilities over time until all members have left the plan; or

  (c) assuming the full settlement of the plan liabilities in a single event (i.e., as a plan wind-up).

- An unconditional right to a refund can exist whatever the funding level of a plan at the end of the reporting period.
- If the entity's right to a refund of a surplus depends on the occurrence or non-occurrence of one or more uncertain future events not wholly within its control, the entity does not have an unconditional right and shall not recognise an asset.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

2. Measurement of the economic benefit

- ❖ An entity shall measure the economic benefit available as a refund as the amount of the surplus at the end of the reporting period (being the fair value of the plan assets less the present value of the defined benefit obligation) that the entity has a right to receive as a refund, less any associated costs.

  For instance, if a refund would be subject to a tax other than income tax, an entity shall measure the amount of the refund net of the tax.

- ❖ In measuring the amount of a refund available when the plan is wound up, an entity shall include the costs to the plan of settling the plan liabilities and making the refund.

  For example, an entity shall deduct professional fees if these are paid by the plan rather than the entity, and the costs of any insurance premiums that may be required to secure the liability on wind-up.

- ❖ If the amount of a refund is determined as the full amount or a proportion of the surplus, rather than a fixed amount, an entity shall make no adjustment for the time value of money, even if the refund is realisable only at a future date.

1.16.4.3 The economic benefit available as a contribution reduction

- ❖ The economic benefit available as a reduction in future contributions is the future service cost to the entity for each period over the shorter of the expected life of the plan and the expected life of the entity; and if there is no minimum funding requirement for contributions relating to future service. The future service cost to the entity excludes amounts that will be borne by employees.

- ❖ An entity shall determine the future service costs using assumptions consistent with those used to determine the defined benefit obligation and with the situation that exists at the end of the reporting period. Therefore, an entity shall assume no change to the benefits to be provided by a plan in the future can be assumed by the entity until the plan is amended and shall assume a stable workforce in the future unless the entity makes a reduction in the number of employees covered by the plan. In the latter case, the assumption about the future workforce shall include the reduction.

1.16.4.4 The effect of a minimum funding requirement on the economic benefit available as a reduction in future contributions

- ❖ An entity shall analyse any minimum funding requirement at a given date into contributions that are required to cover

  (a) any existing shortfall for past service on the minimum funding basis; and

  (b) future service.

  - o Contributions to cover any existing shortfall on the minimum funding basis in respect of services already received do not affect future contributions for future service. They may give rise to a liability.

- If there is a minimum funding requirement for contributions relating to the future service, the economic benefit available as a reduction in future contributions is the sum of:
  - (a) any amount that reduces future minimum funding requirement contributions for future service because the entity made a prepayment (i.e., paid the amount before being required to do so); and
  - (b) the estimated future service cost in each period less the estimated minimum funding requirement contributions that would be required for future service in those periods if there were no prepayment as described in (a).
- An entity shall estimate the future minimum funding requirement contributions for future service taking into account the effect of any existing surplus determined using the minimum funding basis but excluding the prepayment. An entity shall use assumptions consistent with the minimum funding basis and, for any factors not specified by that basis, assumptions consistent with those used to determine the defined benefit obligation and with the situation that exists at the end of the reporting period. The estimate shall include any changes expected as a result of the entity paying the minimum contributions when they are due. However, the estimate shall not include the effect of expected changes in the terms and conditions of the minimum funding basis that are not substantively enacted or contractually agreed at the end of the reporting period.
- When an entity determines the amount, if the future minimum funding requirement contributions for future service exceed the future service cost in any given period, that excess reduces the amount of the economic benefit available as a reduction in future contributions.

1.16.4.6 When a minimum funding requirement may give rise to a liability

- If an entity has an obligation under a minimum funding requirement to pay contributions to cover an existing shortfall on the minimum funding basis in respect of services already received, the entity shall determine whether the contributions payable will be available as a refund or reduction in future contributions after they are paid into the plan.
- To the extent that the contributions payable will not be available after they are paid into the plan, the entity shall recognise a liability when the obligation arises. The liability shall reduce the defined benefit asset or increase the defined benefit liability so that no gain or loss is expected.

1.17 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITY

Following is the extract from the financial statements of the listed entity 'Bharti Airtel Limited' for the financial year 2021-2022 with respect to 'Employee Benefits' and its accounting policy thereon.

25.2 Employee benefits

The details of significant employee benefits are as follows:

	For the year ended March 31,2022		For the year ended March 31,2021	
	Gratuity	Compensated absences	Gratuity	Compensated absences
Obligation:				
Balance as at beginning of the year	1949	774	1852	724
Current service cost	270	162	257	167
Interest cost	132	53	128	50
Benefits paid	(395)	(170)	(256)	(102)
Transfers	(15)	(9)	(29)	(21)
Remeasurements	33	(71)	(3)	(44)
Present value of obligation	**1,974**	**739**	**1,949**	**774**
Current portion	528	739	609	774
Non-Current portion	1446	-	1340	-

As of March 31, 2022, expected contributions for the next annual reporting period is ₹446.

Amount recognised in Other Comprehensive Income

	For the year ended March 31, 2022	For the year ended March 31, 2021
Experience losses / (gains)	62	(18)
Losses from change in demographic assumptions	22	9
(Gains) / losses from change in financial assumptions	(51)	6
Remeasurements on defined benefit plans	**33**	**(3)**

ACCOUNTING POLICY

The Company's employee benefits mainly include wages, salaries, bonuses, defined contribution plans, defined benefits plans, compensated absences, deferred compensation, and share-based payments. The employee benefits are recognized in the year in which the associated services are rendered by the Company employees. Short-term employee benefits are recognized in the Statement of Profit and Loss at undiscounted amounts during the period in which the related services are rendered.

i. Defined Contribution plans

The contributions to defined contribution plans are recognized in profit or loss as and when the services are rendered by employees. The Company has no further obligations under these plans beyond its periodic contributions.

ii. Defined benefits plans

In accordance with the local laws and regulations, all the employees in India are entitled for the Gratuity plan. The said plan requires a lump-sum payment to eligible employees

(meeting the required vesting service condition) at retirement or termination of employment, based on a pre-defined formula.

The Company provides for the liability towards the said plans on the basis of actuarial valuation carried out quarterly as at the reporting date, by an independent qualified actuary using the projected-unit-credit method.

The obligation towards the said benefits is recognized in the Balance Sheet, at the present value of the defined benefit obligations. The present value of the said obligation is determined by discounting the estimated future cash outflows, using interest rates of government bonds.

The interest expenses are calculated by applying the above-mentioned discount rate to defined benefits obligations. The interest expenses on the defined benefits obligations are recognized in the Statement of Profit and Loss. However, the related re-measurements of the defined benefits obligations are recognized directly in the other comprehensive income in the period in which they arise. The said re-measurements comprise of actuarial gains and losses (arising from experience adjustments and changes in actuarial assumptions). Re-measurements are not re-classified to the Statement of Profit and Loss in any of the subsequent periods.

a. Other long-term employee benefits

The employees of the Company are entitled to compensated absences as well as other long-term benefits. Compensated absences benefits comprise of encashment and availment of leave balances that were earned by the employees over the period of past employment.

The Company provides for the liability towards the said benefits on the basis of actuarial valuation carried out quarterly as at the reporting date, by an independent qualified actuary using the projected-unit-credit method. The related re-measurements are recognized in the Statement of Profit and Loss in the period in which they arise.

1.18 SIGNIFICANT DIFFERENCES IN IND AS 19 VIS-À-VIS AS 15

S. No.	Particulars	Ind AS 19	AS 15
1.	*Constructive Obligations*	In Ind AS 19 (paragraph 4(c), obligations arising from informal practices are referred to as constructive obligations	In AS 15 (paragraph 3(c) such obligations are simply referred to as obligations.

2.	*Definition of Employee*	Ind AS 19 the term 'employee' includes directors whether they are whole-time or not. (Paragraph 7 of Ind AS 19)	As per AS 15, the term 'employee' includes whole-time directors
3.	*Other Definitions*	Definitions of short-term employee benefits, other long-term employee benefits, and past service cost is different in Ind AS 19 (Paragraph 8 of Ind AS 19)	Different definitions are given in AS 15
4.	*Contractual Agreement between a Multi-employer Plan and its Participants*	Ind AS 19 deals with situations where there is a contractual agreement between a multi-employer plan and its participants that determines how the surplus in the plan will be distributed to the participants (or the deficit funded). (Paragraph 37 of Ind AS 19)	AS 15 does not deal with it
5.	*Participation in a Defined Benefit Plan Sharing Risks Between Various Entities under Common Control*	As per Ind AS 19, participation in a defined benefit plan sharing risks between various entities under common control is a related party transaction for each group entity and some disclosures are required in the separate or individual financial statements of an entity. (Paragraph 42 of Ind AS 19)	AS 15 does not contain similar provisions
6.	*Recognition of Past Service Cost*	As per Ind AS 19, past service cost (including curtailments) is recognised as an expense at the earlier of when the plan amendment or Curtailment occurs; and when the entity recognizes related restructuring costs or termination benefits.	As per AS 15, past service cost is recognised as an expense on a straight-line basis over the average period until the benefits become vested. If already vested, recognised as an expense immediately. Entities recognise a curtailment when it occurs. However, when curtailment is linked with a restructuring, it is accounted for at the same time as the related restructuring.

7.	*Involvement of a qualified actuary*	Para 59 of Ind AS 19 encourages, but does not require, an entity to involve a qualified actuary in the measurement of all material post-employment benefit obligations. (Paragraph 59 of Ind AS 19)	AS 15 neither requires nor specifically encourage the same.
8.	*Actuarial valuation*	Detailed actuarial valuation to determine the present value of net defined benefit liability (asset) shall be performed with sufficient regularity so that the amounts recognized in the financial statements do not differ materially from the amounts that would have been determined at the end of the reporting period. Ind AS 19 does not define sufficient regularity.	Detailed actuarial valuation to determine the present value of defined benefit obligation is carried out at least once every 3 years and fair value of plan assets are determined at each balance sheet date.
9.	*Recognition of Actuarial Gains and Losses*	Ind AS 19 requires that the same shall be recognised in other comprehensive income and not reclassified to profit or loss in a subsequent period.	AS 15 requires recognition of actuarial gains and losses immediately in the profit and loss
10.	*Financial Assumptions*	Ind AS 19 makes it clear that financial assumptions shall be based on market expectations, at the end of the reporting period, for the period over which the obligations are to be settled. (Paragraph 80 of Ind AS 19)	AS 15 does not clarify the same
11.	*Discounting of Post-employment Benefit Obligations*	As per Ind AS 19, subsidiaries, associates, joint ventures and branches domiciled outside India shall discount post-employment benefit obligations arising on account of post-employment benefit plans using the rate determined by reference to market yields at the end of the reporting period on high quality corporate bonds. In case, such subsidiaries, associates, joint ventures and branches are domiciled in countries where there is no deep market in such bonds, the	As per AS 15, the rate used to discount post-employment benefit obligations should always be determined by reference to market yields at the balance sheet date on government bond.

		market yields (at the end of the reporting period) on government bonds of that country shall be used.	
12.	*Timing of Recognition of Termination Benefits*	As per Ind AS 19 para 165, an entity shall recognise a liability and expense for termination benefits at the earlier of the following dates: (a) when the entity can no longer withdraw the offer of those benefits; and (b) when the entity recognises costs for a restructuring that Employee Benefits within the scope of Ind AS 37 and involves the payment of termination benefits.	As per AS 15 para 134, an enterprise should recognise termination benefits as a liability and an expense when, and only when: (a) the enterprise has a present obligation as a result of a past event; (b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and (c) a reliable estimate can be made of the amount of the obligation.
13.	*Guidance on Interaction of Ceiling of Asset Recognition and Minimum Funding Requirement*	Ind AS 19 gives guidance on the interaction of ceiling of asset recognition and minimum funding requirement in the case of defined benefit obligations. (Appendix B of Ind AS 19)	Such guidance is not available in AS 15.

TEST YOUR KNOWLEDGE

Questions

1. An entity has 100 employees, who are each entitled to five working days of paid sick leaves for each year. Unused sick leave may be carried forward for one calendar year. Sick leave is taken first out of the current year's entitlement and then out of any balance brought forward from the previous year (LIFO basis).

   At 31st March, 20X1, the average unused entitlement is two days per employee. The entity expects, on the basis of experience that is expected to continue, that 92 employees will take no more than five days of paid sick leaves in 20X1-20X2 and that the remaining eight employees will take an average of six and a half days each.

   The entity expects that it will pay an additional twelve days of sick pay as a result of the unused entitlement that has accumulated at 31st March, 20X1 (one and a half days each, for eight employees).

   Comment whether the entity would require to recognize any liability in respect of leaves.

2. A plan provides a monthly pension of 0.3% of final salary for each year of service. The pension is payable from the age of 65.

   Determine the current service cost.

3. A plan pays a benefit of ₹ 140 for each year of service, excluding service before the age of 25. The benefits vest immediately.

   Compute the benefit to be attributed before the age of 25 and after 25?

4. B Pvt. Ltd. has a post-employment medical plan which will reimburse 20% of an employee's post-employment medical costs if the employee leaves after more than ten and less than

Join us t.me/caborntofight

twenty years of service and 50% of those costs if the employee leaves after twenty or more years of service.

State how would you measure the benefit to be attributed for the employee service for the last 20 years, 10 and 20 years and within 10 years.

5. Cisca Pvt. Ltd. has a headcount of around 1,000 employees in the organisation in 20X0-20X1. As per the company's policy, the employees are given 35 days of privilege leaves (PL), 15 days of sick leaves (SL) and 10 days of casual leaves. Out of the total PL and sick leaves, 10 PL leaves and 5 sick leaves can be carried forward to next year. On the basis of past trends, it has been noted that 200 employees will take 5 days of PL and 2 days of SL and 800 employees will avail 10 days of PL and 5 days of SL.

   Also the company has been incurring profits since 20XX. It has decided in 20X0-20X1 to distribute profits to its employees @ 4% during the year. However, due to the employee turnover in the organisation, the expected pay-out of the Cisca Pvt. Ltd. is expected to be around 3.5%. The profits earned during 20X0-20X1 is ₹ 2,000 crores.

   Cisca Pvt. Ltd. has a post-employment benefit plan also available which is in the nature of defined contribution plan where contribution to the fund amounts to ₹ 100 crores which will fall due within 12 months from the end of accounting period.

   The company has paid ₹ 20 crores to its employees in 20X0-20X1.State what would be the treatment of the short-term compensating absences, profit-sharing plan and the defined contribution plan in the books of Cisca Pvt. Ltd. Also state what would be the treatment, if the contribution paid from defined contribution plan exceeds the contribution due. Further, determine what would be the accounting if the payment from defined contribution plan does not fall due within 12 months from the end of accounting period.

6. OPQ Ltd is a listed company having its corporate office at Nagpur. The company has a branch office at Chennai. The company has been operating in Indian market for the last 10 years.

   The company operates a pension plan that provides a pension of 2.5% of the final salary for each year of service. The benefits become vested after seven years of service.

   On 1st April, 20X8, the company increased the pension to 3% of the final salary for each year of service starting from 1st April, 20X1. On the date of the improvement, the present value of the additional benefits for service from 1st April, 20X1 to 1st April 20X8 was as follows:

   - Employees with more than seven years' service on 1st January 20X8 – ₹ 2,75,000
   - Employees with less than 7 years of service – ₹ 2,21,000 (average 4 years to go).

   Provide the accounting treatment in this case.

7. SA Pvt Ltd is engaged in the business of retail having 100 retail outlets across Northern and Southern India. The company's head office is located at Chennai.

   SA Pvt Ltd is a subsidiary of SAG Ltd. SAG Ltd is listed on the National Stock Exchange in India.

   Following information is available for SA Pvt Ltd:

   Plan Assets

   At 1st April, 20X1, the fair value of plan assets was ₹ 10,000.

   Contribution to the plan assets done on 31st March, 20X2 – ₹ 3,000

   Amount paid on 31st March, 20X2 – ₹ 300

   At 31st March, 20X2, the fair value of plan assets was ₹ 14,700

   Actual return on plan assets – ₹ 2,000

   Defined Benefit Obligation

   At 1st April, 20X1, present value of the defined benefit obligation was ₹ 12,000.

   At 31st March, 20X2, present value of the defined benefit obligation was ₹ 15,500.

   Actuarial losses on the obligation for the year ended 31st March, 20X2 were ₹ 100.

   Current Service Cost – ₹ 2,500

   Benefit paid – ₹ 300

   Discount rate used to calculate defined benefit liability - 10%.

   Suggest if there is any amount based on the above-mentioned information that would be taken to other comprehensive income (with workings). Also compute net interest on the net defined benefit liability (asset).

8. A Ltd. prepares its financial statements to 31st March each year. It operates a defined benefit retirement benefits plan on behalf of current and former employees. A Ltd. receives advice from actuaries regarding contribution levels and overall liabilities of the plan to pay benefits. On 1st April, 20X1, the actuaries advised that the present value of the defined benefit obligation was ₹ 6,00,00,000. On the same date, the fair value of the assets of the defined benefit plan was ₹ 5,20,00,000. On 1st April, 20X1, the annual market yield on government bonds was 5%. During the year ended 31st March, 20X2, A Ltd. made contributions of ₹ 70,00,000 into the plan and the plan paid out benefits of ₹ 42,00,000 to retired members. Both these payments were made on 31st March, 20X2.

   The actuaries advised that the current service cost for the year ended 31st March, 20X2 was ₹ 62,00,000. On 28th February, 20X2, the rules of the plan were amended with retrospective effect. These amendments meant that the present value of the defined benefit obligation was increased by ₹ 15,00,000 from that date.

Join us t.me/caborntofight

During the year ended 31st March, 20X2, A Ltd. was in negotiation with employee representatives regarding planned redundancies. The negotiations were completed shortly before the year end and redundancy packages were agreed. The impact of these redundancies was to reduce the present value of the defined benefit obligation by ₹ 80,00,000. Before 31st March, 20X2, A Ltd. made payments of ₹ 75,00,000 to the employees affected by the redundancies in compensation for the curtailment of their benefits. These payments were made out of the assets of the retirement benefits plan.

On 31st March, 20X2, the actuaries advised that the present value of the defined benefit obligation was ₹ 6,80,00,000. On the same date, the fair value of the assets of the defined benefit plan were ₹ 5,60,00,000.

Examine and present how the above event would be reported in the financial statements of A Ltd. for the year ended 31st March, 20X2 as per Ind AS. Finance cost is to be computed on the opening balances.

9. On 1st April 20X1, the fair value of the assets of XYZ Ltd.'s defined benefit plan were valued at ₹ 20,40,000 and the present value of the defined obligation was ₹ 21,25,000. On 31st March,20X2 the plan received contributions from XYZ Ltd amounting to ₹ 4,25,000 and paid out benefits of ₹ 2,55,000. The current service cost for the financial year ending 31st March 20X2 is ₹ 5,10,000. An interest rate of 5% is to be applied to the plan assets and obligations. The fair value of the plan assets at 31st March 20X2 was ₹ 23,80,000, and the present value of the defined benefit obligation was ₹ 27,20,000.

   Provide a reconciliation from the opening balance to the closing balance for plan assets and defined benefit obligation. Also show how much amount should be recognised in the statement of profit and loss, other comprehensive income and balance sheet?

Answers

1. At 31st March, 20X1, the average unused entitlement is two days per employee. The entity expects, on the basis of experience that is expected to continue, that 92 employees will take no more than five days of paid sick leaves in 20X1-20X2 and that the remaining eight employees will take an average of six and a half days each.

   The entity expects that it will pay an additional twelve days of sick pay as a result of the unused entitlement that has accumulated at 31st March, 20X1 (one and a half days each, for eight employees).

   Therefore, the entity would recognize a liability equal to twelve days of sick pay.

2. Benefit equal to the present value, at the expected retirement date, of a monthly pension of 0.3% of the estimated final salary payable from the expected retirement date until the expected date of death is attributed to each year of service. The current service cost is the present value of that benefit.

Join us t.me/caborntofight

The present value of the defined benefit obligation is the present value of monthly pension payments of 0.3% of final salary, multiplied by the number of years of service up to the end of the reporting period. The current service cost and the present value of the defined benefit obligation are discounted because pension payments begin at the age of 65.

3. No benefit is attributed to service before the age of 25 because service before that date does not lead to benefits (conditional or unconditional). A benefit of ₹ 140 is attributed to each subsequent year.

4. As per Ind AS 19, the benefit will be attributed till the period the employee service will lead to no material amount of benefits. And service in later years will lead to a materially higher level of benefit than in earlier years. Therefore, for employees expected to leave after twenty or more years, the entity would attribute benefit on a straight-line basis. Service beyond twenty years will lead to no material amount of further benefits. Therefore, the benefit attributed to each of the first twenty years is 2.5% (i.e. 50% divided by 20) of the present value of the expected medical costs.

For employees expected to leave between ten and twenty years, the benefit attributed to each of the first ten years is 2% (20 % divided by 10) of the present value of the expected medical costs. For these employees, no benefit is attributed to service between the end of the tenth year and the estimated date of leaving.

For employees expected to leave within ten years, no benefit is attributed.

5. (i) Cisca Pvt. Ltd. will recognise a liability in its books to the extent of 5 days of PL for 200 employees and 10 days of PL for remaining 800 employees and 2 days of SL for 200 employees and 5 days of SL for remaining 800 employees in its books as an unused entitlement that has accumulated in 20X0-20X1 as short-term compensated absences.

(ii) Cisca Pvt. Ltd. will recognise ₹ 70 crores (2,000 x 3.5%) as a liability and expense in its books of account.

(iii) When an employee has rendered service to an entity during a period, the entity shall recognise the contribution payable to a defined contribution plan in exchange for that service.

Under Ind AS 19, the amount of ₹ 80 crores will be recognised as a liability (accrued expense), after deducting any contribution already paid (100-20) and an expense in the statement of profit and loss. However, if the contribution already paid would have exceeded the contribution due for service before the end of the reporting period, an entity shall recognise that excess as an asset (prepaid expense).

Since the contributions are payable within 12 months from the end of the year in which the employees render the related service, they will not be discounted. However, where contributions to a defined contribution plan do not fall due wholly within twelve months after

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

the end of the period in which the employees render the related service, they shall be discounted using the discount rate.

6. OPQ Ltd increased the pension to 3% of the final salary for each year of service starting from 1st April, 20X1 to 1st April, 20X8.

The company would recognize the total amount of ₹ 4,96,000 (i.e. ₹ 2,75,000 + ₹ 2,21,000) immediately, as for the purpose of recognition it does not make any difference as to whether the benefits are already vested or not.

7. As per Ind AS 19, net remeasurement of ₹ 900 would be recognized in other comprehensive income.

Computation of Net remeasurement

= Remeasurement – Actuarial loss

= ₹ 1000 (Refer WN - 1) – ₹ 100 (Given in the question) = ₹ 900.

Computation of net interest expense

Particulars	Amount in ₹
Defined benefit liability as at 1st April 20X1 **(A) (Given in the question)**	12,000
Fair value of plan asset as at 1st April 20X1 **(B) (Given in the question)**	(10,000)
Net defined benefit liability **(A - B)**	2,000
Net interest expense (as it is net liability) (Refer note given below)	200

Note:

Net interest expense would be computed on net defined benefit liability using discount rate of 10% given in the question-

= Net defined benefit liability x Discount rate

= 2,000 x 10%

= ₹ 200.

Working Note:

Computation of amount of remeasurement

Particulars	₹
Actual return on plan asset for the year ended 31st March 20X2 **(C) (Given in the question)**	2,000
Less: Interest income on ₹ 10,000 held for 12 months at 10% **(D)**	(1,000)
Remeasurement **(E = C - D)**	1,000

8. All figures are ₹ in ’000.

On 31st March, 20X2, A Ltd. will report a net pension liability in the statement of financial position. The amount of the liability will be 12,000 (68,000 – 56,000).

For the year ended 31st March, 20X2, A Ltd. will report the current service cost as an operating cost in the statement of profit or loss. The amount reported will be 6,200. The same treatment applies to the past service cost of 1,500.

For the year ended 31st March, 20X2, A Ltd. will report a finance cost in profit or loss based on the net pension liability at the start of the year of 8,000 (60,000 – 52,000). The amount of the finance cost will be 400 (8,000 x 5%).

The redundancy programme represents the partial settlement of the curtailment of a defined benefit obligation. The gain on settlement of 500 (8,000 – 7,500) will be reported in the statement of profit or loss.

Other movements in the net pension liability will be reported as remeasurement gains or losses in other comprehensive income.

For the year ended 31st March, 20X2, the remeasurement loss will be 3,400 (Refer W. N.).

Working Note:

Remeasurement of gain or loss

	₹ in ’000
Liability at the start of the year (60,000 – 52,000)	8,000
Current service cost	6,200
Past service cost	1,500
Net finance cost	400
Gain on settlement	(500)
Contributions to plan	(7,000)
Remeasurement loss (balancing figure)	3,400
Liability at the end of the year (68,000 – 56,000)	12,000

9. Reconciliation of Plan assets and Defined benefit obligation

	Plan Assets ₹	**Defined benefit obligation** ₹
Fair value/present value as at 1st April 20X1	20,40,000	21,25,000
Interest @ 5%	1,02,000	1,06,250

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Current service cost		5,10,000
Contributions received	4,25,000	-
Benefits paid	(2,55,000)	(2,55,000)
Return on plan assets (gain) (assets) (balancing figure)	68,000	-
Actuarial Loss (balancing figure)	-	2,33,750
Closing balance as at 31st March, 20X2	23,80,000	27,20,000

In the Statement of Profit and loss, the following will be recognised: ₹

Current service cost	5,10,000
Net interest on net defined liability (₹ 1,06,250 – ₹ 1,02,000)	4,250

Defined benefit re-measurements recognised in Other Comprehensive Income: ₹

Loss on defined benefit obligation	(2,33,750)
Gain on plan assets	68,000
	(1,65,750)

In the Balance sheet, the following will be recognised: ₹

Net defined benefit liability (₹ 27,20,000 – ₹ 23,80,000)	3,40,000

UNIT 2: INDIAN ACCOUNTING STANDARD 37: PROVISIONS, CONTINGENT LIABILITIES AND CONTINGENT ASSETS

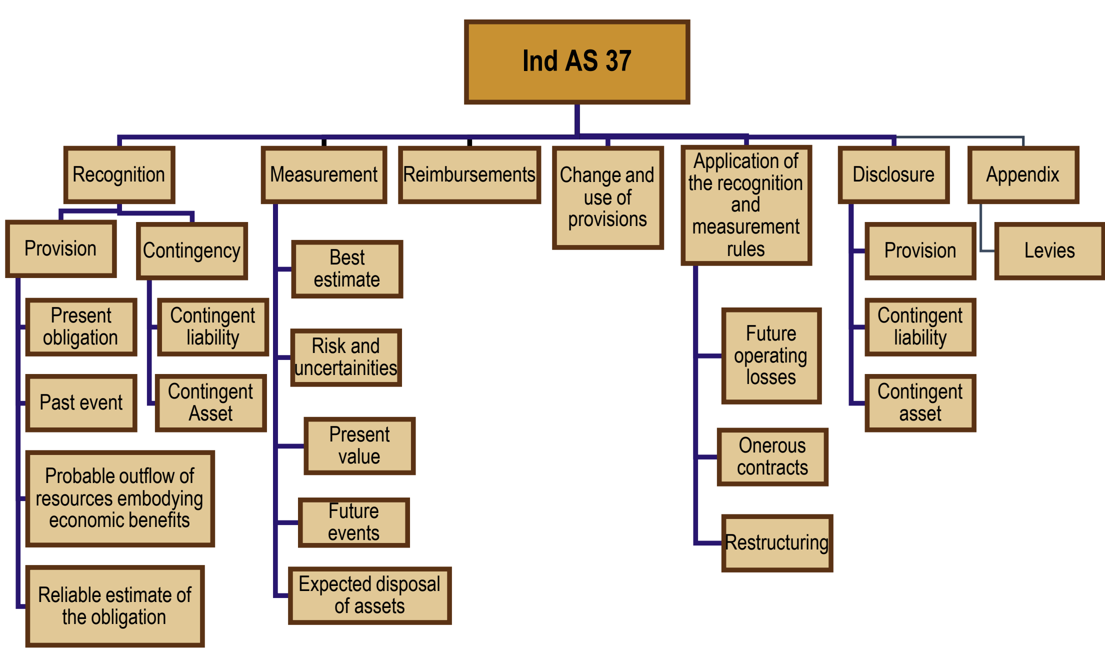
LEARNING OUTCOMES

After studying this unit, you will be able to:

- Define the terms like 'provision', 'contingent liability', 'contingent asset', obligating event, legal obligation, constructive obligation, onerous contracts and restructuring
- Appreciate the relationship between provision and contingent liability
- Recognise provision by examining present and past obligation, probability and estimate of the cash outflow.
- Apply the recognition principles of contingent assets and contingent liabilities
- Apply the recognition and measurement principles for future operating losses, Onerous contracts and restructuring
- Comply with the disclosure requirements with regard to disclosure of provisions, contingent liabilities and contingent assets as per Ind AS 37
- Differentiate between Ind AS 37 and AS 29

Join us t.me/caborntofight

UNIT OVERVIEW



2.1 OBJECTIVE

The objective of Ind AS 37 is to ensure that

- appropriate recognition criteria and measurement bases are applied to
  - provisions
  - contingent liabilities and
  - contingent assets and
- sufficient information is disclosed in the notes to enable users to understand their
  - nature
  - timing and
  - amount.

2.2 SCOPE

Ind AS 37 should be applied by all entities in accounting for provisions, contingent liabilities and contingent assets, **except:**

(a) those resulting from **executory contracts**, except where the contract is onerous; and

(b) financial instruments (including guarantees) that are within the scope of Ind AS 109, *Financial Instruments;*

(c) those covered by another Standard such as:

(i) revenue from contracts with customers covered by Ind AS 115. However, Ind AS 115 contains no specific requirement to address onerous contracts with customers. Hence, Ind AS 37 applies to such cases;

(ii) income taxes (Ind AS 12, *Income Taxes*);

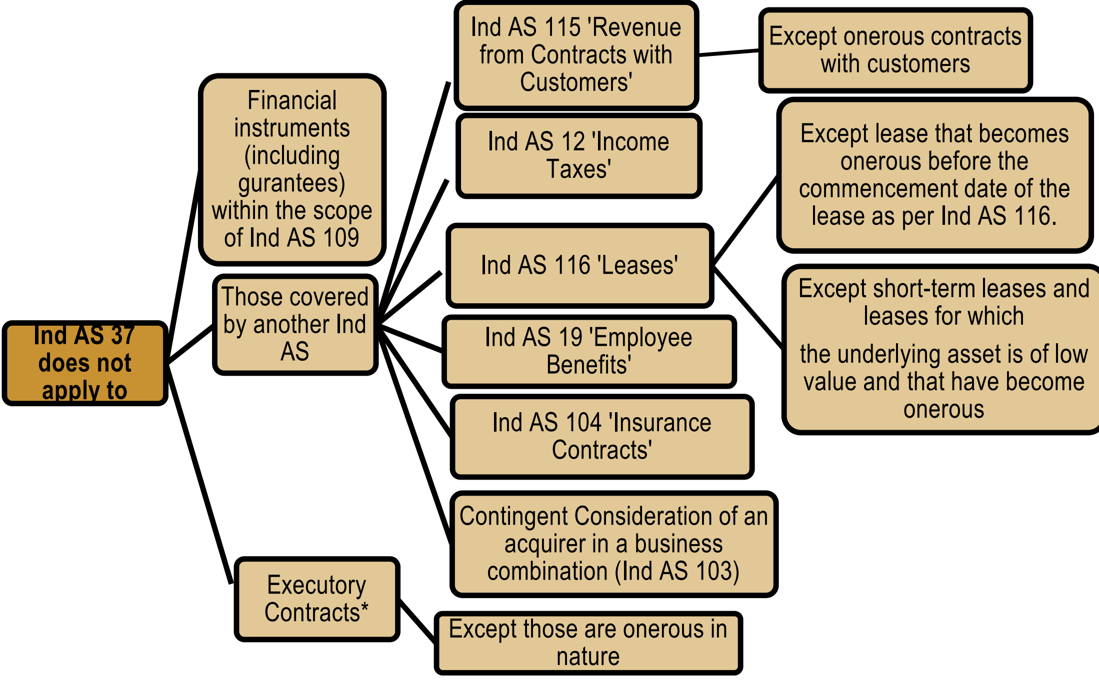
(iii) leases (Ind AS 116, *Leases*). However, this Standard applies to any lease that becomes onerous before the commencement date of the lease as defined in Ind AS 116. This Standard also applies to short-term leases and leases for which the underlying asset is of low value accounted for in accordance with paragraph 6 of Ind AS 116 and that have become onerous;

(iv) employee benefits (Ind AS 19, *Employee Benefits*); and

(v) insurance contracts (Ind AS 104, *Insurance Contracts*). However, Ind AS 37 applies to provisions, contingent liabilities and contingent assets of an insurer, other than those arising from its contractual obligations and rights under insurance contracts within the scope of Ind AS 104.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(vi) Contingent consideration of an acquirer in a business combination (Ind AS 103, *Business Combinations*)



2.2.1 Executory Contracts

Executory contracts are contracts under which

❖ neither party has performed any of its obligations or

❖ both parties have partially performed their obligations to an equal extent.

For example:

- employee contracts in respect of continuing employment;
- contracts for future delivery of services such as gas and electricity;
- obligations to pay local authority charges etc are executory contracts.

Note: Ind AS 37 is applied to executory contracts only if they are onerous. For example, a long-term purchase contract that has a higher unit cost than unit sales price.

Example 1 : Where both parties have performed their obligations to an equal extent

On 1st April 20X2, Company XYZ Limited enters into a contract with Company PQR Limited for the manufacture and delivery of 200 units of component A at five different dates in the future, i.e. 1,000 units are to be delivered in total. Payment is due on delivery of the units.

Join us t.me/caborntofight

On 1st April 20X2, the contract between Company XYZ Limited and Company PQR Limited is executory because neither party has performed any of its obligations; Company XYZ Limited has not manufactured or delivered any of the units, nor has Company PQR Limited paid for any of them.

By 1st June 20X2, Company XYZ Limited has produced and delivered 400 of the units and Company PQR Limited has paid in full for those 400 units. At this date, the contract between Company XYZ Limited and Company PQR Limited continues to be executory because both parties have partially performed their obligations to an equal extent.

By 1st September 20X2, Company XYZ Limited has produced and delivered the full 1000 units, but Company PQR Limited has only paid for 800 units in total. The contract between Company XYZ Limited and Company PQR Limited no longer meets the definition of an executory contract because the two parties have not performed under the terms of the contract to an equal extent. Company PQR Limited is required to recognise a liability for the final 200 units of component A for which it has not yet paid.

2.2.2 Provisions when relate to the recognition of revenue or expense/losses

- Some amounts treated as provisions may relate to the recognition of revenue.

  Example: Where an entity gives guarantees in exchange for a fee.

  Ind AS 37 does not address the recognition of revenue since there is a separate standard on it i.e. Ind AS 115, *Revenue from Contracts with Customers.* However, Ind AS 115 does not deal with onerous contracts with customers, so Ind AS 37 will deal with the same.

- As per Ind AS 37, provisions are liabilities of uncertain timing or amount. However, the term 'provision' is also used for certain adjustments which are made to the carrying amounts of assets.

  Example: Depreciation, impairment of assets and doubtful debts.

  The provisions which are adjustments to the carrying amounts of assets are not addressed in Ind AS 37 since other Ind AS specifies their treatment. Ind AS 37 neither prohibits nor requires capitalisation of the costs recognised when a provision is made.

- Ind AS 37 applies to provisions for restructurings (including discontinued operations). When a restructuring meets the definition of a discontinued operation, additional disclosures may be required by Ind AS 105, *Non-current Assets Held for Sale and Discontinued Operations.*

© The Institute of Chartered Accountants of India

2.3 DEFINITIONS

The following definitions are relevant for the purpose of understanding the requirements of Ind AS 37.

1. A ***provision*** is a liability of uncertain timing or amount.
2. A ***liability**** is a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits.
3. An ***obligating event*** is an event that creates a legal or constructive obligation that results in an entity having no realistic alternative to settling that obligation.

Example 2

X Ltd. entered into a contract with Y Ltd. for supply of some material. As per the terms of contract in case of breach of contract, the party who breaches the contract has to pay ₹ 50,00,000 to other party. X Ltd. breached the contract with Y Ltd. Now in this case the obligating event is the breach of contract that gave rise to present obligation and X Ltd. must settle the obligation.

4. A ***legal obligation*** is an obligation that derives from:
   (a) a contract (through its explicit or implicit terms);
   (b) legislation; or
   (c) other operation of law.

Example

In the aforesaid example regarding breach of the contract, the obligation is a legal obligation that arises from the terms of contract.

5. A ***constructive obligation*** is an obligation that derives from an entity's actions where:
   (a) by an established pattern of past practice, published policies or a sufficiently specific current statement, the entity has indicated to other parties that it will accept certain responsibilities; and
   (b) as a result, the entity has created a valid expectation on the part of those other parties that it will discharge those responsibilities.

---

* The definition of a liability in this Standard is not revised following the revision of the definition of a liability in the *Conceptual Framework for Financial Reporting under Indian Accounting Standards* issued in 2021 by the Institute of Chartered Accountants of India.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Examples 3 - 5

3. X Ltd. is engaged in the manufacture of fertilisers. Effluents discharged in the manufacturing process have polluted the river near the manufacturing plant. The residents of the nearby locality launched a massive agitation against the pollution. X Ltd. agreed to their demands to reduce the water pollution by installing the necessary Effluent Treatment Plant. However, during the year no steps are taken to install the plant. No legislation requiring the company to reduce its pollution is in existence. In this case, though there is no law but by promising to take steps to reduce pollution, X Ltd. has created a valid expectation on the part of public that it will discharge its responsibilities. So the obligation in this case is a constructive obligation.

4. An entity has prepared a formal plan for a re-organisation involving site closures and redundancies. The plan has been approved by the board at the year end, but the entity will not implement or announce the re-organisation until after the year end. There is no constructive obligation, even if there is an announcement after the entity's year end but before its financial statements are approved. The announcement is a non-adjusting post balance sheet event and there was no commitment to restructure at the year end. The entity could change its plans completely after the year end. A constructive obligation would exist if the entity has raised a valid expectation in those affected by beginning to implement the re-organisation by the end of the year (for example, by scrapping the plant or informing employees and suppliers of the re-organisation), despite the absence of a formal announcement.

5. A retail store has a generally known policy of refunding purchases by dissatisfied customers, even though it is under no legal obligation to do so. In these circumstances, the sale of its products gives rise to a constructive obligation because the entity (through its reputation for providing refunds) has created a valid expectation on the part of customers that a refund will be given if they are dissatisfied with their purchase.

6. A **contingent liability** is:

   (a) a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity; or

   (b) a present obligation that arises from past events but is not recognised because:

      (i) it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or

      (ii) the amount of the obligation cannot be measured with sufficient reliability.

Example 6

A tax case pending before the court, the liability for payment arising or not in respect of which depends on the outcome of court decision is a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.

7. A ***contingent asset*** is a possible asset that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.

Example 7

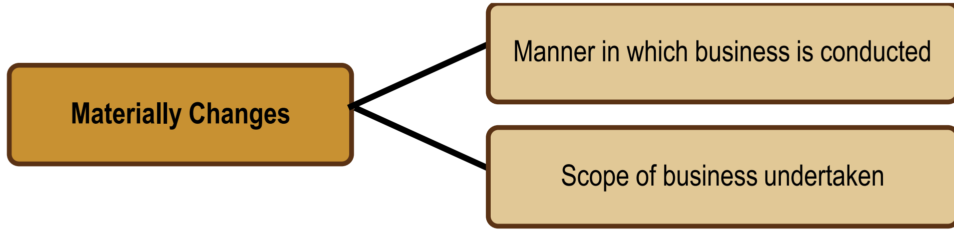
X Ltd. filed a legal suit against a supplier of goods for compensation against damages on non–supply of contracted goods. This meets the definition of a contingent asset since there is a possible asset (compensation against damages) that arose from past event (contract with the supplier) and whose existence will be confirmed by the occurrence or non-occurrence of uncertain future event not wholly within the control of the entity (i.e., the outcome of the legal suit).

8. An ***onerous contract*** is a contract in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.

9. A ***restructuring*** is a programme that is planned and controlled by management, and materially changes either:

   (a) the scope of a business undertaken by an entity; or

   (b) the manner in which that business is conducted.



2.4 PROVISIONS AND OTHER LIABILITIES

Since there is uncertainty about the timing or amount of the future expenditure required in settlement of the provisions, they are different from liabilities. By contrast:

(a) trade payables are liabilities to pay for goods or services that have been received or supplied and have been invoiced or formally agreed with the supplier; and

Join us t.me/caborntofight

(b) accruals are liabilities to pay for goods or services that have been received or supplied but have not been paid, invoiced or formally agreed with the supplier, including amounts due to employees.

Example: Amounts relating to accrued vacation pay.

Although it is sometimes necessary to estimate the amount or timing of accruals, the uncertainty is generally much less than for provisions.

Note: Accruals are often reported as part of trade and other payables, whereas provisions are reported separately.

Examples on provisions and other liabilities:

Nature of obligation	Recognition as provision as per Ind AS 37 (Yes/No)	Reasons
Amount payable for utilities like electricity, gas, etc.	No	Amount payable for utilities represents an accrual of liability to pay for services that have been received. The amount and timing of payment can be determined with a reasonable certainty. The timing for payment is known since the utility companies have fixed dates every month/period for the purpose of settlement of dues. A reliable estimate of the amount of payment can be made based on the quantum of consumption, prevailing rates or on the basis of earlier bills.
Goods or services received, but not invoiced	No	Amount payable for supply of goods and services received under a formally agreed contract represents trade payables even if invoice has not been received. In such a case, amount and timing of payment would be driven by the terms agreed with the supplier.
Financial guarantee given by the parent to lenders for loan taken by its subsidiary	No	Financial guarantees are within the scope of Ind AS 109 *Financial Instruments*

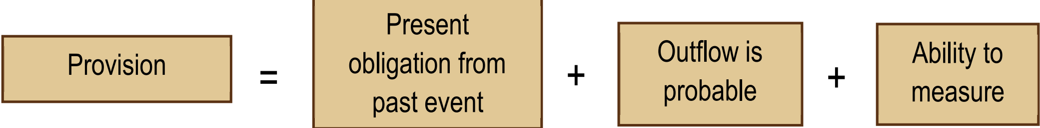
© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Warranty obligations	Yes	Warranty obligation represents the additional cost that the seller may have to incur to rectify product defects. This is in the nature of provision as there is an uncertainty associated with the amount and timing of the liability.

2.5 RELATIONSHIP BETWEEN PROVISIONS AND CONTINGENT LIABILITIES

In a general sense, all provisions are contingent because they are uncertain in timing or amount. However, Ind AS 37 distinguishes between the term 'contingent' and 'provisions'.

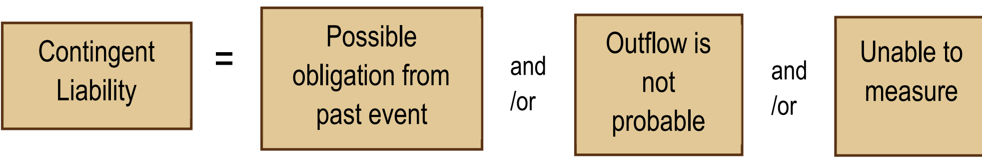
(a) **Provisions** – which **are recognised as liabilities** (assuming that a reliable estimate can be made) because they are present obligations and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligations; and



(b) **Contingent Liabilities** – which **are not recognised as liabilities** because they are either:

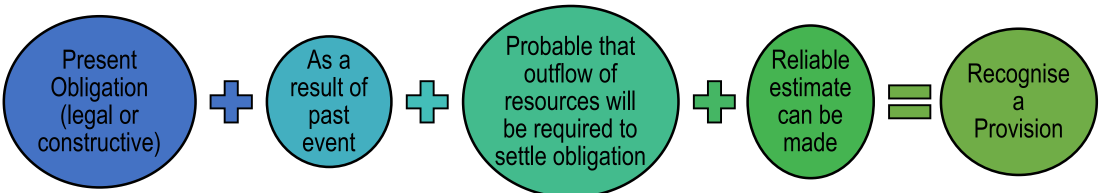
(i) **possible obligations**, as it has yet to be confirmed whether the entity has a present obligation that could lead to an outflow of resources embodying economic benefits; or

(ii) **present obligations** that do not meet the recognition criteria in Ind AS 37 (because either it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation, or a sufficiently reliable estimate of the amount of the obligation cannot be made).



2.6 RECOGNITION

2.6.1 Provisions



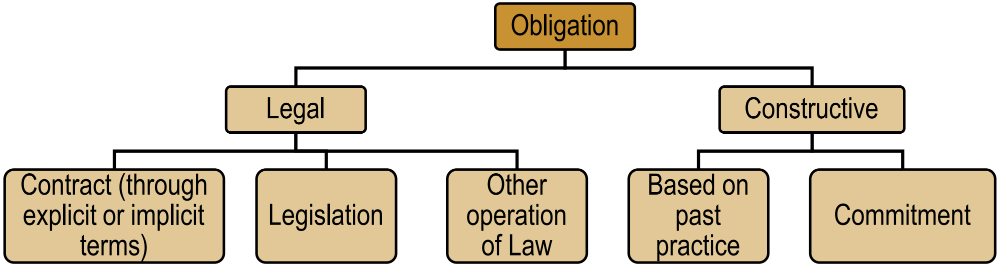
A provision should be recognised when:

(a) an entity has a **present obligation** (legal or constructive) as a result of a **past event**;

(b) it is **probable that an outflow of resources embodying economic benefits** will be required to settle the obligation; and

(c) a **reliable estimate** can be made of the amount of the obligation.

If these conditions are not met, no provision should be recognised.



2.6.1.1 Present Obligation

- In general, it is clear that there is a present obligation. Only, in rare cases it is not clear whether there is a present obligation.
- In almost all cases it will be clear whether a past event has given rise to a present obligation.

Illustration 1

ABC Limited is an automobile component manufacturer. The automobile manufacturer has specified a delivery schedule, non-adherence to which will entail a penalty. As on 31st March, 20X1, the reporting date, the manufacturer has a delivery scheduled for June 20X2. However, the manufacturer is aware that he will not be able to meet the delivery schedule in June 20X2.

Determine whether the entity has a present obligation as at 31st March, 20X1, requiring recognition of provision.

Join us t.me/caborntofight

Solution

In this case, there is no present obligation arising out of a past event as the goods are scheduled for delivery in June 20X2 and there is no delay as at 31st March, 20X1. Hence, there is no present obligation to pay the penalty in the current year. Therefore, there is no present obligation to recognise the provision.

*****

- Where it is not clear whether there is a present obligation, past event shall be evaluated.
- In such a case, an entity should take into account all available evidence, including the opinion of experts. The evidence considered includes any additional evidence provided by events after the reporting period.
- On the basis of such evidence:

  (a) where it is **probable (i.e. more likely than not) that a present obligation exists** at the end of the reporting period,

  ✓ the entity **recognises a provision** (if the recognition criteria are met); and

  (b) where it is **more likely that no present obligation exists** at the end of the reporting period,

  ✓ the entity discloses a contingent liability, if the possibility of an outflow of resources embodying economic benefits is not remote.

Note: It may be inferred that if the possibility of an outflow of resources embodying economic benefits is remote, then the entity need not disclose the contingent liability.

2.6.1.2 Past Event

- A past event that leads to a present obligation is called an obligating event. Obligating event, is the event where the entity has no realistic alternative to settling the obligation created by the event. This is the case only:

  (a) where the settlement of the obligation can be enforced by law; or

  (b) in the case of a constructive obligation, where the event (which may be an action of the entity) creates valid expectations in other parties that the entity will discharge the obligation.
- There should be a past event which lead to present obligation and give rise to a liability for which a provision is required to be made.

Example 8

1. In respect of contamination of land, it would be the original contamination.
2. In respect of Provision for dismantling or cleaning the oil rig, it would be when the oil rig is first built.

- No provision is recognised for costs that need to be incurred by an entity to operate in the future.
- The only liabilities recognised in an entity's balance sheet are those that exist at the end of the reporting period.
- It is only those obligations arising from past events existing independently of an entity's future actions (i.e., the future conduct of its business) that should be recognised as provisions.

Examples 9 & 10

9. Penalties or clean-up costs for unlawful environmental damage, both of which would lead to an outflow of resources embodying economic benefits in settlement regardless of the future actions of the entity.
10. Similarly, an entity should recognise a provision for the decommissioning costs of an oil installation or a nuclear power station to the extent that the entity is obliged to rectify damage already caused.

- In contrast, because of commercial pressures or legal requirements, an entity may intend or need to carry out expenditure to operate in a particular way in the future.
- The entity can avoid the future expenditure by its future actions (for example by changing its method of operation). In such a case, it has no present obligation for that future expenditure and no provision is recognised.

Example 11 : Fitting smoke filters in a certain type of factory.

Since, the entity can avoid the future expenditure by its future actions, for example by changing its method of operation, it has no present obligation for that future expenditure and no provision is recognised.

Example 12 : Staff retraining as a result of changes in the income tax system

The government introduces a number of changes to the income tax system. As a result of these changes, an entity in the financial services sector will need to retrain a large proportion of its administrative and sales workforce in order to ensure continued compliance with financial services regulation. At the end of the reporting period, no retraining of staff has taken place. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – There is no obligation because no obligating event (retraining) has taken place.

Conclusion – No provision is recognised.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Example 13: Legal requirement to fit smoke filters

Under new legislation, an entity is required to fit smoke filters to its factories by 30th September, 20X1. The entity has not fitted the smoke filters. It is assumed that a reliable estimate can be made of any outflows expected.

(a) At 31st March, 20X1, the end of the reporting period

Present obligation as a result of a past obligating event – There is no obligation because there is no obligating event either for the costs of fitting smoke filters or for fines under the legislation.

Conclusion – No provision is recognised for the cost of fitting the smoke filters.

(b) At 31st March, 20X2, the end of the reporting period

Present obligation as a result of a past obligating event – There is still no obligation for the costs of fitting smoke filters because no obligating event has occurred (the fitting of the filters). However, an obligation might arise to pay fines or penalties under the legislation because the obligating event has occurred (the non-compliant operation of the factory).

An outflow of resources embodying economic benefits in settlement – Assessment of probability of incurring fines and penalties by non-compliant operation depends on the details of the legislation and the stringency of the enforcement regime.

Conclusion – No provision is recognised for the costs of fitting smoke filters. However, a provision is recognised for the best estimate of any fines and penalties that are more likely than not to be imposed.

Example 14: Repairs and maintenance

Some assets require, in addition to routine maintenance, substantial expenditure every few years for major refits or refurbishment and the replacement of major components. Ind AS 16, *Property, Plant and Equipment* gives guidance on allocating expenditure on an asset to its component parts where these components have different useful lives or provide benefits in a different pattern.

Example 15: Refurbishment costs – no legislative requirement

A furnace has a lining that needs to be replaced every five years for technical reasons. At the end of the reporting period, the lining has been in use for three years. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – There is no present obligation.

Conclusion – No provision is recognised.

The cost of replacing the lining is not recognised because, at the end of the reporting period, no obligation to replace the lining exists independently of the company's future

actions—even the intention to incur the expenditure depends on the company deciding to continue operating the furnace or to replace the lining. Instead of a provision being recognised, the depreciation of the lining takes account of its consumption, i.e., it is depreciated over five years. The re-lining costs then incurred are capitalised with the consumption of each new lining shown by depreciation over the subsequent five years.

Example 16: Refurbishment costs – legislative requirement

An airline is required by law to overhaul its aircraft once every three years. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – There is no present obligation.

Conclusion – No provision is recognised.

The costs of overhauling aircraft are not recognised as a provision for the same reasons as the cost of replacing the lining is not recognised as a provision in above example on refurbishment costs. Even a legal requirement to overhaul does not make the costs of overhaul a liability, because no obligation exists to overhaul the aircraft independently of the entity's future actions—the entity could avoid the future expenditure by its future actions, for example by selling the aircraft. Instead of a provision being recognised, the depreciation of the aircraft takes account of the future incidence of maintenance costs, i.e., an amount equivalent to the expected maintenance costs is depreciated over three years.

Illustration 2

X Shipping Ltd. is required by law to overhaul its shipping fleet once in every 3 years. The company's finance team was of the view that recognising the costs only when paid would prevent matching of revenue earned all the time with certain costs of large amounts which are incurred occasional. Thereby, it has formulated an accounting policy of providing in its books of account for the future cost of maintenance (overhauls, annual inspection etc.) by calculating a rate per hours sailed on sea and accumulating a provision over time. The provision is adjusted when the expenditure is actually incurred.

Comment whether the accounting policy of X Shipping Ltd. is correct.

Solution

A provision is made for a present obligation arising out of a past event. Even a legal requirement to overhaul does not make the cost of overhaul a liability, because no obligation exists to overhaul the ships independently of the company's future actions - the company could avoid the future expenditure by its future actions for example by selling the ships. So there is no present obligation.

As per the standard, financial statements deal with the financial position of an entity at the end of its reporting period and not its possible position in the future. Therefore, no provision is recognised for costs that need to be incurred to operate in the future. The only

Join us t.me/caborntofight

liabilities recognised in an entity's balance sheet are those that exist at the end of the reporting period.

Therefore, the accounting policy of X Shipping Ltd. is not correct. The company should adopt the component approach in Ind AS 16, *Property, Plant and Equipment*, for accounting for the refurbishment cost.

*****

- An obligation always involves another party to whom the obligation is owed. It is not necessary, however, to know the identity of the party to whom the obligation is owed.
- A management or board decision does not give rise to a constructive obligation at the end of the reporting period unless the decision has been communicated before the end of the reporting period to those affected by it in a sufficiently specific manner to raise a valid expectation in them that the entity will discharge its responsibilities.
- An event that does not give rise to an obligation immediately may do so at a later date, because of changes in the law or because an act (for example, a sufficiently specific public statement) by the entity gives rise to a constructive obligation.

Example 17

An entity may not be obliged to remedy the consequences due to causing of environmental damage by it. However, the causing of the damage will become an obligating event when a new law requires the existing damage to be rectified or when the entity publicly accepts responsibility for rectification in a way that creates a constructive obligation.

- Where details of a proposed new law have yet to be finalised, an obligation would arise only when the legislation is virtually certain to be enacted as drafted. For the purpose of Ind AS 37, such an obligation is treated as a legal obligation. Differences in circumstances surrounding enactment make it impossible to specify a single event that would make the enactment of a law virtually certain. In many cases it will be impossible to be virtually certain of the enactment of a law until it is enacted.

Example 18: Contaminated land – legislation virtually certain to be enacted

An entity in the oil industry (having 31st March year-end) causes contamination but cleans up only when required to do so under the laws of the particular country in which it operates. One country in which it operates has had no legislation requiring cleaning up, and the entity has been contaminating land in that country for several years. At 31st March, 20X1, it is virtually certain that a draft law requiring a clean-up of land already contaminated will be enacted shortly after the year-end. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – The obligating event is the contamination of the land because of the virtual certainty of legislation requiring cleaning up.

An outflow of resources embodying economic benefits in settlement – Probable.

Conclusion – A provision is recognised for the best estimate of the costs of the clean-up.

Example 19: Contaminated land and constructive obligation

An entity in the oil industry (having 31st March year-end) causes contamination and operates in a country where there is no environmental legislation. However, the entity has a widely published environmental policy in which it undertakes to clean up all contamination that it causes. The entity has a record of honouring this published policy. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event- The obligating event is the contamination of the land, which gives rise to a constructive obligation because the conduct of the entity has created a valid expectation on the part of those affected by it that the entity will clean up contamination.

An outflow of resources embodying economic benefits in settlement- Probable.

Conclusion- A provision is recognised for the best estimate of the costs of clean-up.

Example 20: Offshore oilfield

An entity operates an offshore oilfield where its licensing agreement requires it to remove the oil rig at the end of production and restore the seabed. 90% of the eventual costs relate to the removal of the oil rig and restoration of damage caused by building it, and 10% arise through the extraction of oil. At the end of the reporting period, the rig has been constructed but no oil has been extracted. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – The construction of the oil rig creates a legal obligation under the terms of the license to remove the rig and restore the seabed and is thus an obligating event. At the end of the reporting period, however, there is no obligation to rectify the damage that will be caused by extraction of the oil.

An outflow of resources embodying economic benefits in settlement – Probable.

Conclusion – A provision is recognised for the best estimate of ninety per cent of the eventual costs that relate to the removal of the oil rig and restoration of damage caused by building it. These costs are included as part of the cost of the oil rig. The 10% of costs that arise through the extraction of oil are recognised as a liability when the oil is extracted.

Example 21: A Court case

After a wedding in 20X1-20X2, ten people died, possibly as a result of food poisoning from products sold by the entity. Legal proceedings are started seeking damages from the entity but it disputes liability. Up to the date of approval of the financial statements for the year to 31st March 20X2 for issue, the entity's lawyers advise that it is probable that the entity will

© The Institute of Chartered Accountants of India

not be found liable. However, when the entity prepares the financial statements for the year to 31st March 20X3, its lawyers advise that, owing to developments in the case, it is probable that the entity will be found liable. It is assumed that a reliable estimate can be made of any outflows expected.

(a) At 31st March 20X2

Present obligation as a result of a past obligating event – On the basis of the evidence available when the financial statements were approved, there is no obligation as a result of past events.

Conclusion – No provision is recognised. The matter is disclosed as a contingent liability unless the probability of any outflow is regarded as remote.

(b) At 31st March 20X3

Present obligation as a result of a past obligating event – On the basis of the evidence available, there is a present obligation.

An outflow of resources embodying economic benefits in settlement – Probable.

Conclusion – A provision is recognised for the best estimate of the amount to settle the obligation.

Illustration 3

X Chemical Ltd. is operating in the vicinity of a river since 20 years. A community living near X Chemical Ltd. claims that its operations has caused contamination of drinking water. X Chemical Ltd. has received notice from the governmental environmental agency that official investigations will be made into claims of pollution caused by the entity. If it is found that X Chemical Ltd. has caused contamination, then penalties and fine would be levied on it.

X Chemical Ltd. believes that it has implemented all environmental safety measures to an extent that it is unlikely to cause pollution. Management is not sure whether it has all the information about the entire 20 years. Therefore, neither management nor external experts are able to assess X Chemical Ltd.'s responsibility until the investigation has completed.

In such situation, how should management of X Chemical Ltd. account for a liability?

Solution

As per the standard, in the present case, the available evidence does not support a conclusion that a present obligation exists. However, there is a possible obligation which exists and will be confirmed upon completion of investigations. Therefore, management should disclose the contingent liability for potential penalties and fines that may be imposed if contamination is proved.

*****

2.6.1.3 Probable Outflow of Resources Embodying Economic Benefits

- For a liability to qualify for recognition there must be not only a present obligation but also the probability of an outflow of resources embodying economic benefits to settle that obligation.

Note: For the purpose of Ind AS 37[1], an outflow of resources or other event is regarded as probable if the event is more likely than not to occur, i.e., the probability that the event will occur is greater than the probability that it will not.

- Where it is not probable that a present obligation exists, an entity discloses a contingent liability, unless the possibility of an outflow of resources embodying economic benefits is remote.
- Where there are a number of similar obligations (e.g., product warranties or similar contracts) the probability that an outflow will be required in settlement is determined by considering the class of obligations as a whole. Although the likelihood of outflow for any one item may be small, it may well be probable that some outflow of resources will be needed to settle the class of obligations as a whole. If that is the case, a provision should be recognised (if the other recognition criteria are met).

Example 22: Warranties

A manufacturer gives warranties at the time of sale to purchasers of its product. Under the terms of the contract for sale the manufacturer undertakes to make good, by repair or replacement, manufacturing defects that become apparent within three years from the date of sale. On past experience, it is probable (i.e., more likely than not) that there will be some claims under the warranties. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – The obligating event is the sale of the product with a warranty, which gives rise to a legal obligation.

An outflow of resources embodying economic benefits in settlement – Probable for the warranties as a whole.

Conclusion – A provision is recognised for the best estimate of the costs of making good under the warranty products sold before the end of the reporting period.

2.6.1.4 Reliable Estimate of the Obligation

- The use of estimates is an essential part of the preparation of financial statements and does not undermine their reliability. This is especially true in the case of provisions, which by their nature are more uncertain than most other items in the balance sheet.

---

[1] The interpretation of 'probable' in Ind AS 37 as 'more likely than not' does not necessarily apply in other Ind AS.

- Except in extremely rare cases, an entity will be able to determine a range of possible outcomes and can therefore make an estimate of the obligation that is sufficiently reliable to use in recognising a provision.

Illustration 4

X Ltd. has entered into an agreement with its selling agent Y, in accordance with which X Ltd. has to pay a base percentage of commission on export sales and an additional commission is to be paid if the export incentives are received. As per the accounting policy of X Ltd., it recognises export incentives when actually realised, on account of the uncertainty in realising such incentives. Export incentives have not been received for the year 20X1-20X2, however X Ltd. is hopeful of receiving the export incentives in the year 20X2-20X3.

State whether in the financial statements for 20X1-20X2, should X Ltd. provide for both base commission and additional commission.

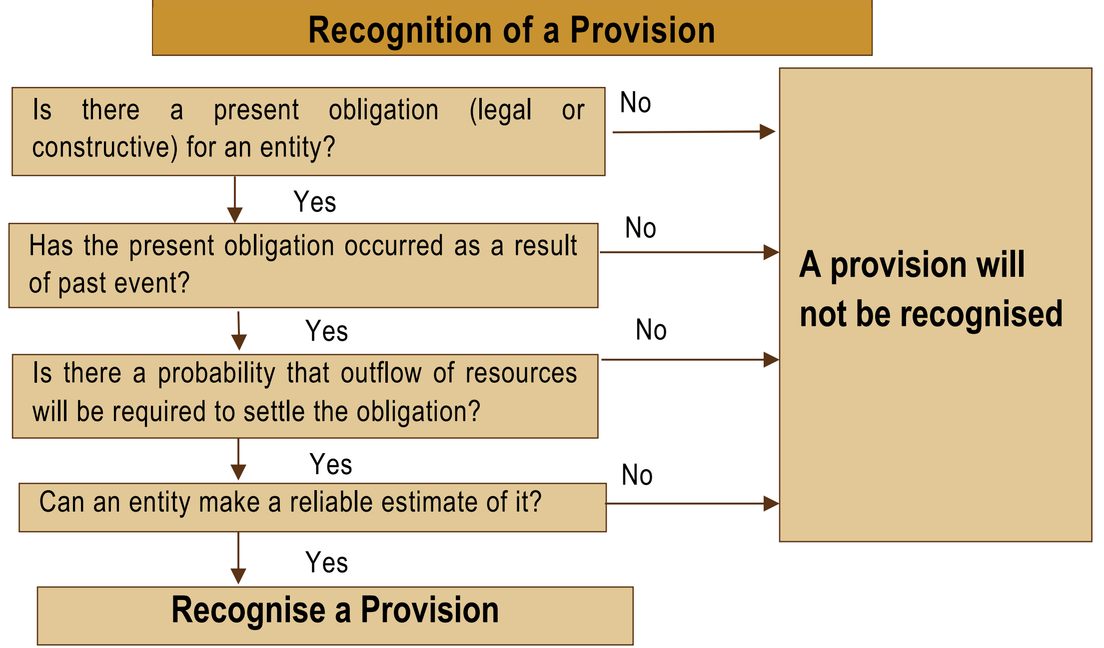
Solution

So far as the base percentage of sales commission is concerned, it is a present obligation arising out of past events. The obligating event takes place when the sales are made and also since commission is based on percentage of sale, reliable estimation can also be made. Therefore, the base percentage of sales commission should be provided.

However, in respect of additional commission, it is to be paid when the export incentives are recognised and export incentives are recognised only when it is received. Therefore, the obligating event will arise only when export incentives are received. Hence, no provision for additional commission is to be made in financial year 20X1-20X2. The expectation of X Ltd. to receive the export incentives in next year would not make any difference as on 31st March 20X2.

*****

- In the extremely rare case where no reliable estimate can be made, a liability exists that cannot be recognised. That liability is disclosed as a contingent liability.



2.6.2 Contingent Liabilities

- An entity should not recognise a contingent liability.
- A contingent liability should be disclosed, if the possibility of an outflow of resources embodying economic benefits is not remote.
- Where an entity is jointly and severally liable for an obligation, the part of the obligation that is expected to be met by other parties should be treated as a contingent liability.
- The entity should recognise a provision for the part of the obligation for which an outflow of resources embodying economic benefits is probable, except in the extremely rare circumstances where no reliable estimate can be made.
- Contingent liabilities may develop in a way not initially expected. Therefore, they are assessed continually to determine whether an outflow of resources embodying economic benefits has become probable.
- If it becomes probable that an outflow of future economic benefits will be required for an item previously dealt with as a contingent liability, a provision should be recognised in the financial statements of the period in which the change in probability occurs (except in the extremely rare circumstances where no reliable estimate can be made).

The principles describing provisions and contingent liabilities is as follows:

Where, as a result of past events, there may be an outflow of resources embodying future economic benefits in settlement of: (a) a present obligation; or (b) a possible obligation whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity.		
There is a present obligation that probably requires an outflow of resources.	**There is a possible obligation or a present obligation that may, but probably will not, require an outflow of resources.**	**There is a possible obligation or a present obligation where the likelihood of an outflow of resources is remote.**
A provision is recognised.	No provision is recognised.	No provision is recognised.
Disclosures are required for the provision.	Disclosures are required for the contingent liability.	No disclosure is required.

A contingent liability also arises in the extremely rare case where there is a liability that cannot be recognised because it cannot be measured reliably. Disclosures are required for the contingent liability.

2.6.3 Contingent Assets

- An entity should not recognise a contingent asset.
- Contingent assets usually arise from unplanned or other unexpected events that give rise to the possibility of an inflow of economic benefits to the entity.

Example

A claim that an entity is pursuing through legal processes, where the outcome is uncertain.

- Contingent assets are not recognised in financial statements since this may result in the recognition of income that may never be realised.
- However, when the realisation of income is virtually certain, then the related asset is not a contingent asset and its recognition is appropriate.
- A contingent asset should be disclosed, where an inflow of economic benefits is probable.
- Contingent assets are assessed continually to ensure that developments are appropriately reflected in the financial statements. If it has become virtually certain that an inflow of economic benefits will arise, the asset and the related income are recognised in the financial statements **of the period in which the change occurs.**

Where, as a result of past events, there is a possible asset whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity		
The inflow of economic benefits is virtually certain	**The inflow of economic benefits is probable, but not virtually certain**	**The inflow is not probable**
The asset is not contingent and its recognition is appropriate	No asset is recognised	No asset is recognised
	Disclosures are required	No disclosure is required

Tabular depiction

Likelihood of outcome	Contingent liability	Contingent asset
Virtually certain (greater than 95% probability)	Recognise the provision	Recognise the asset
Probable (50% - 95% of probability)	Recognise the provision	Disclose about the contingent asset
Possible but not probable (5% - 50% of probability)	Disclose the contingency	No disclosure permitted
Remote (less than 5% probability)	No disclosure required	No disclosure permitted

2.7 MEASUREMENT

- Best Estimate
- Risk and Uncertainity
- Present Value
- Future Events
- Expected Disposal of Assets

2.7.1 Best Estimate

❖ The amount recognised as a provision should be the best estimate of the expenditure required to settle the present obligation at the end of the reporting period.

- The estimate of the amount that an entity would rationally pay to settle or transfer the obligation gives the best estimate of the expenditure required to settle the present obligation at the end of the reporting period.
- The estimates of outcome and financial effect are determined by the judgement of the management of the entity, supplemented by experience of similar transactions and in some cases, reports from independent experts, for example, in legal cases, expert legal advice might be taken. The evidence considered includes any additional evidence provided by events after the reporting period.
- Uncertainties surrounding the amount to be recognised as a provision are dealt with by various means according to the circumstances. Where the provision being measured involves a large population of items, for example, customer refunds, warranties, etc., the obligation is estimated by weighting all possible outcomes by their associated probabilities. The name for this statistical method of estimation is 'expected value'. The provision will therefore be different depending on whether the probability of a loss of a given amount is, for example, 60% or 90%.
- Where there is a continuous range of possible outcomes, and each point in that range is as likely as any other, the mid-point of the range is used.

Illustration 5

An entity sells goods with a warranty under which customers are covered for the cost of repairs of any manufacturing defects that become apparent within the first six months after purchase. If minor defects were detected in all products sold, repair costs of ₹ 1 million would result. If major defects were detected in all products sold, repair costs of ₹ 4 million would result. The entity's past experience and future expectations indicate that, for the coming year, 75% of the goods sold will have no defects, 20% of the goods sold will have minor defects and 5% of the goods sold will have major defects.

Assess the probability of an outflow for the warranty obligations as a whole.

Solution

The expected value of the cost of repairs is:

(75% of nil) + (20% of 1m) + (5% of 4m) = ₹ 4,00,000

*****

- Where a single obligation is being measured, the individual most likely outcome may be the best estimate of the liability. However, even in such a case, the entity considers other possible outcomes.

Example 23

An entity faces a single legal claim, with a 40 per cent likelihood of success with no cost and a 60 percent likelihood of failure with a cost of ₹ 1 million. Expected value is not valid in

this case because the outcome will never be a cost of ₹ 600,000 (60 percent × ₹ 1 million); the outcome will either be nil or ₹ 1 million. Ind AS 37 indicates that the provision may be estimated at the individual most likely outcome. In this example, it is more likely that a cost of ₹ 1 million will result and, therefore, a provision for ₹ 1 million should be recognised.

❖ Where other possible outcomes are either mostly higher or mostly lower than the most likely outcome, the best estimate will be a higher or lower amount.

Examples 24 & 25

24. If an entity has an environmental obligation to clean up the drinking water that got contaminated, there might be a number of different ways to carry out this work. Each of these methods would have different probabilities of success and would cost different amounts. In such case, the entity might choose the method which has the most likely possibility of success.

25. If an entity has to rectify a serious fault in a major plant that it has constructed for a customer, the individual most likely outcome may be for the repair to succeed at the first attempt at a cost of ₹ 1,000, but a provision for a larger amount is made if there is a significant chance that further attempts will be necessary.

❖ Generally, when the most likely outcome is close to the expected value, it will be appropriate to provide for the most likely outcome because expected value provides evidence of the probable outflow of benefits.

Example 26

An entity is required to replace a major component of an asset under warranty. Each time replacement costs ₹ 1 million. From experience, there is a 30 per cent chance of a single failure, a 50 per cent chance of two failures, and a 20 per cent chance of three failures.

The most likely outcome is two failures, costing ₹ 2 million. The expected value is ₹ 1.9 million [(30 per cent x ₹ 1 million) + (50 per cent x ₹ 2 million) + (20 per cent x ₹ 3 million)]. The expected value supports the provision for the most likely outcome of ₹ 2 million.

❖ The provision should be measured before tax, as the tax consequences of the provision, and changes in it, are dealt with under Ind AS 12.

2.7.2 Risks and Uncertainties

❖ The risks and uncertainties that inevitably surround many events and circumstances should be taken into account in reaching the best estimate of a provision.

❖ Risk describes variability of outcome.

❖ A risk adjustment should be made for the amount that the entity would pay in excess of the

expected present value of outflows due to uncertainty attached with the actual outcome.

❖ A risk adjustment may increase the amount at which a liability is measured. Caution is needed in making judgements under conditions of uncertainty, so that income or assets are not overstated and expenses or liabilities are not understated. However, uncertainty does not justify the creation of excessive provisions or a deliberate overstatement of liabilities.

For example, if the projected costs of a particularly adverse outcome are estimated on a prudent basis, that outcome is not then deliberately treated as more probable than is realistically the case.

❖ Care is needed to avoid duplicating adjustments for risk and uncertainty with consequent overstatement of a provision.

❖ Risk adjustment can be accounted for in number of ways such as:

- Adding it to the expected present value of future outflows.
- Adjusting the estimates of future outflows.
- Adjusting the discount rate.

❖ Disclosure of the uncertainties surrounding the amount of the expenditure should be made.

2.7.3 Present Value

❖ Where the effect of the time value of money is material, the amount of a provision should be the present value of the expenditures expected to be required to settle the obligation.

❖ Because of the time value of money, provisions relating to cash outflows that arise soon after the reporting period are more onerous than those where cash outflows of the same amount arise later. Provisions should therefore be discounted, where the effect is material.

❖ Ind AS 37 does not require cash flows to be discounted unless this has a material effect.

❖ The expected present value of outflows are calculated as follows:

- Each outcome is discounted to its present value.
- The present value of outcomes are weighted by their associated probabilities.

❖ **The discount rate (or rates) should be a pre-tax rate (or rates)** that reflect(s) current market assessments of the time value of money and the risks specific to the liability.

❖ The discount rate(s) should not reflect risks for which future cash flow estimates have been adjusted.

Illustration 6

X Solar Power Ltd., a power company, has a present obligation to dismantle its plant after 35 years of useful life. X Solar Power Ltd. cannot cancel this obligation or transfer to third

party. X Solar Power Ltd. has estimated the total cost of dismantling at ₹ 50,00,000, the present value of which is ₹ 30,00,000. Based on the facts and circumstances, X Solar Power Ltd. considers the risk factor of 5% i.e., the risk that the actual outflows would be more from the expected present value.

State how should X Solar Power Ltd. account for the obligation.

Solution

The obligation should be measured at the present value of outflows i.e., ₹ 30,00,000. Further a risk adjustment of 5% i.e., ₹ 1,50,000 (₹ 30,00,000 x 5%) would be made.

So, the liability will be recognised at = ₹ 30,00,000 + ₹1,50,000 = ₹ 31,50,000.

Illustration 7

ABC Ltd. has an obligation to restore the seabed for the damage it has caused in the past. It has to pay ₹ 10,00,000 cash on 31st March 20X3 relating to this liability. ABC Ltd.'s management considers that 5% is an appropriate discount rate.

Calculate the amount to be provided for at 31st March 20X1 for the costs of restoring the seabed.

Solution

Discounting factor of 5% for 2nd year as on 31st March 20X1 = $(1/1.05)^2$ = 0.907

The present value of the provision as on 31st March 20X1 is = ₹ 10,00,000 x 0.907

= ₹ 9,07,000

The amount of increase in the provision resulting from unwinding of discounting to reflect the passage of time should be included as an element of borrowing cost in determining the profit or loss for the year.

The provision should be initially recognised at ₹ 9,07,000 which is the present value of ₹ 10,00,000 discounted at 5% for two years. At the end of year 1 i.e. 31st March 20X2, the provision increases to ₹ 9,52,350, and the difference of ₹ 45,350 is recognised as borrowing cost. Similarly, for the year ending 31st March 20X3, the provision will increase to 10,00,000 and the increase being recognised as borrowing cost. Consequently, at the end of year 2 the amount of provision will be equal to the amount due, i.e., ₹ 10,00,000.

Note: There may be some difference in amount due to approximation (limiting discounting factor to 3 place decimal), which can be overcome either by full scale calculation or adjustment at the end.

*****

2.7.4 Future Events

❖ Future events that may affect the amount required to settle an obligation should be

reflected in the amount of a provision where there is sufficient objective evidence that they will occur.

- Expected future events may be particularly important in measuring provisions.

  For example, an entity may believe that the cost of cleaning up a site at the end of its life will be reduced by future changes in technology.

  The amount recognised reflects a reasonable expectation of technically qualified, objective observers, taking account of all available evidence as to the technology that will be available at the time of the clean-up. Thus, it is appropriate to include, for example, expected cost reductions associated with increased experience in applying existing technology or the expected cost of applying existing technology to a larger or more complex clean-up operation than has previously been carried out. However, an entity does not anticipate the development of a completely new technology for cleaning up unless it is supported by sufficient objective evidence. It is fine to anticipate the use of existing method with the some refinement, adaptation and cost reduction, if there is sufficient evidence that such factors are likely to arise in future. However, it would not be acceptable to assume that there would be a completely new idea or a new method, which would be significantly cost effective.

- The effect of possible new legislation should be taken into consideration in measuring an existing obligation when sufficient objective evidence exists that the legislation is virtually certain to be enacted. The variety of circumstances that arise in practice makes it impossible to specify a single event that will provide sufficient, objective evidence in every case. Evidence is required both of what legislation will demand and of whether it is virtually certain to be enacted and implemented in due course. In many cases sufficient objective evidence will not exist until the new legislation is enacted.

Illustration 8

X Chemicals Ltd. engaged in the chemical industry causes environmental damage by dumping waste in the river near its factory. It does not clean up because there is no environmental legislation requiring cleaning up and X Chemicals Ltd. is causing damage for last 40 years. As at 31st March, 20X2, the State Legislature has passed a path breaking legislation requiring all polluting factories to clean-up the river water already contaminated. The formal Gazette notification of the law is pending.

Comment on how should X Chemicals Ltd. deal with this situation.

Solution

The obligating event is the contamination of water and because of the virtually certainty of legislation requiring cleaning up, an outflow of resources is certain. It is possible to arrive at best estimated cost for the cleanup activity. So, a provision should be recognised in the books of X Chemicals Ltd. for 20X1-20X2.

*****

2.7.5 Expected Disposal of Assets

- Gains on the expected disposal of assets should not be taken into account in measuring a provision, even if the expected disposal is closely linked to the event giving rise to the provision.
- Instead, an entity should recognise gains on expected disposals of assets at the time specified by the Standard dealing with the assets concerned.

Example 27

At the end of 20X1, an entity is demonstrably committed to the closure of some facilities, having drawn up a detailed plan and made appropriate announcements. The expected impact of the plan is as follows:

	20X2	20X3
Committed closure costs	₹ 10,00,000	
Gain from sale of property		₹ 2,00,000

The provision required at the end of 20X1 is ₹ 10,00,000 (ignoring discounting). The expected gain on the sale of the property is dealt with separately under the derecognition criteria in Ind AS 16.

2.8 REIMBURSEMENTS

- Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the reimbursement should be recognised when, and only when, it is virtually certain that reimbursement will be received if the entity settles the obligation. The reimbursement should be treated as a separate asset. The amount recognised for the reimbursement should not exceed the amount of the provision.
- In the statement of profit and loss, the expense relating to a provision may be presented net of the amount recognised for a reimbursement.
- Sometimes, an entity is able to look to another party to pay part or all of the expenditure required to settle a provision (for example, through insurance contracts, indemnity clauses or suppliers' warranties). The other party may either reimburse amounts paid by the entity or pay the amounts directly.
- In most cases the entity will remain liable for the whole of the amount in question so that the entity would have to settle the full amount if the third party failed to pay for any reason. In this situation, a provision should be recognised for the full amount of the liability, and a separate asset for the expected reimbursement should be recognised when it is virtually

certain that reimbursement will be received if the entity settles the liability.

- In some cases, the entity will not be liable for the costs in question if the third party fails to pay. In such a case the entity has no liability for those costs and they should not be included in the provision.
- As noted earlier, an obligation for which an entity is jointly and severally liable is a contingent liability to the extent that it is expected that the obligation will be settled by the other parties.

In various situations where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the treatment would be as follows:

Reimbursements			
Situation	**The entity has no obligation for the part of the expenditure to be reimbursed by the other party**	**Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party and it is virtually certain that reimbursement will be received if the entity settles the provision**	**Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party but the reimbursement is NOT virtually certain**
Recognition	The entity has no liability for the amount to be reimbursed. Hence no provision will be made.	• The reimbursement is recognised as a separate asset in the balance sheet • In the statement of profit and loss, the expense relating to a provision may be presented net of the amount recognised for a reimbursement. • The amount recognised for the expected reimbursement shall not exceed the liability.	The expected reimbursement is not recognised as an asset.
Disclosure	No disclosure is required.	The reimbursement is disclosed together with the amount recognised for the reimbursement.	The expected reimbursement is disclosed.

Illustration 9

X Beauty Solutions Ltd. is selling cosmetic products under its brand name 'B', but it is getting its product manufactured from Y Ltd. It has an understanding (enforceable agreement) with Y Ltd. that if the company becomes liable for any damage claims, due to any injury or harm to the

customer of the cosmetic products, 30% will be reimbursed to it by Y Ltd. During the financial year 20X1-20X2, an estimate of the claim of ₹ 30,00,000 may be payable to customers by X Beauty Solutions Ltd. How should X Beauty Solutions Ltd. account for the claim that becomes payable?

Solution

Since the understanding results in an enforceable agreement, the reimbursement of ₹ 9,00,000 (₹ 30,00,000 x 30%) shall be recognised as a reimbursement right and provision will be recognised for ₹ 30,00,000. The reimbursement right shall be treated as a separate asset and shall not be offset with the provision. In the statement of profit and loss, the expense may be presented as ₹ 21,00,000 after offsetting the reimbursement right.

*****

2.9 CHANGES IN PROVISIONS

❖ Provisions should be reviewed at the end of each reporting period and adjusted to reflect the current best estimate. If it is no longer probable that an outflow of resources embodying economic benefits will be required to settle the obligation, the provision should be reversed.

❖ Once the amount of the obligation is crystallised and there is no uncertainty associated with an obligation, the liability is no longer a provision. The same should be reclassified as an element within liabilities.

Example 28

Customer X has made a claim of ₹ 2 million for liquidated damages, the entity is disputing the amount of claim. Due to the uncertainty involved in the amount payable, the entity recognises this as a provision. After negotiation with the customer, the amount is agreed at ₹ 1.5 million. As there is no uncertainty involved relating to the amount payable, it no longer meets the definition of provision and should be reclassified to an appropriate category within liabilities.

❖ Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as borrowing cost.

Illustration 10

X Telecom Ltd. has income tax litigation pending before appellate authorities. Legal advisor's opinion is that X Telecom Ltd. will lose the case and estimated that liability of ₹ 1,00,00,000 may arise in two years. The liability is recognised on a discounted basis. The discount rate at which

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

the liability has been discounted is 10% and it is assumed that discount rate does not change over the period of 2 years.

How should X Telecom Ltd. calculate the amount of finance cost?

Solution

The discount factor of 10% for 2 years is 0.826. X Telecom Ltd. will initially recognise provision for ₹ 82,60,000 (₹ 1,00,00,000 x 0.826).

The discount factor of 10% at the end of year 1 is 0.909. At the end of year 1, provision amount would be ₹ 90,90,000 (₹ 1,00,00,000 x 0.909).

As per the standard, the difference between the two present values i.e., ₹ 8,30,000 (90,90,000-82,60,000) is recognised as a finance cost in year 1.

At the end of the Year 2, the liability would be ₹ 1,00,00,000.

The difference between the two present values i.e., ₹ 9,10,000 (₹ 1,00,00,000 - ₹ 90,90,000) is recognised as finance cost in year 2.

*****

2.10 USE OF PROVISIONS

- A provision should be used only for expenditures for which the provision was originally recognised. Repurposing of the provisions is not allowed.
- Only expenditures that relate to the original provision are set against it. Setting expenditures against a provision that was originally recognised for another purpose would conceal the impact of two different events.

2.11 APPLICATION OF THE RECOGNITION AND MEASUREMENT RULES

2.11.1 Future Operating Losses

- Provisions should not be recognised for future operating losses.
- Future operating losses do not meet the definition of a liability and the general recognition criteria set out for provisions as specified in the standard. Ind AS 37 does not permit recognition of provision for future operating losses this since they do not stem from a past event.
- An expectation of future operating losses is an indication that certain assets of the operation may be impaired. An entity should test these assets for impairment under Ind AS 36, *Impairment of Assets.*

Join us t.me/caborntofight

Illustration 11

X Packaging Ltd. has two segments, packaging division and paper division. In March 20X1, the board of directors approved and announced a formal plan to sell the paper division in June 20X1. Operating losses of the paper division are estimated to be approximately ₹ 50,00,000 during the period from 1st April, 20X1 to the expected date of disposal. Management of X Packaging Ltd. wants to include the future operating loss of ₹ 50,00,000 in a provision for restructuring in the financial statements for the period ended 31st March, 20X1.

Recommend whether X Packaging Ltd. can include these operating losses in a provision for restructuring.

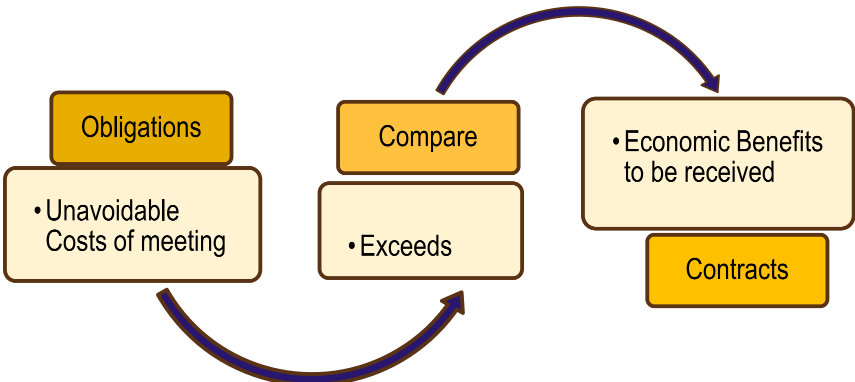
Solution

Standard states that provision should not be made for future operating losses. Since Ind AS 37 prohibits the recognition of future operating losses, so X Packaging Ltd. should not include these future operating losses in a provision for restructuring even though these losses relate to the disposal group.

*****

2.11.2 Onerous contracts

❖ If an entity has a contract that is onerous, the present obligation under the contract should be recognised and measured as a provision.



❖ Many contracts (for example, some routine purchase orders) can be cancelled without paying compensation to the other party, and therefore there is no obligation. Other contracts establish both rights and obligations for each of the contracting parties. Where events make such a contract onerous, the contract falls within the scope of Ind AS 37 and a liability exists which is recognised. Executory contracts that are not onerous fall outside the scope of Ind AS 37.

- Ind AS 37 defines an onerous contract as a contract in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it. The unavoidable costs under a contract reflect the least net cost of exiting from the contract, which is the lower of the cost of fulfilling it and any compensation or penalties arising from failure to fulfill it.

  Note: Both the incremental costs to fulfil a contract and allocation of directly attributable costs will form part of the cost used for determination of onerous contract.

- Before a separate provision for an onerous contract is established, an entity should recognise any impairment loss that has occurred on assets used in fulfilling that contract (in accordance with Ind AS 36).

Examples 29- 32

29. **Contract not onerous:** An entity has a contract to purchase one million units of gas at 23p per unit, giving a contract price of ₹ 2,30,000. The current market price for a similar contract is 16p per unit, giving a price of ₹ 1,60,000. The gas will be used to generate electricity, which will be sold at a profit. The economic benefits from the contract include the benefits to the entity of using the gas in its business and, because the electricity will be sold at a profit, the contract is not onerous.

30. **Impairment of assets:** The contract's terms and market prices are the same as in example 29. However, the electricity is sold at a loss, and the entity makes an overall operating loss. All of the gas purchased by the entity is used to generate electricity using dedicated assets. The electricity is sold to a wide range of customers. The entity first considers whether the assets used to generate electricity are impaired. To the extent that there is still a loss after the assets have been written down, a provision for an onerous contract should be recorded.

31. **Sale to third party at below purchase price:** The contract terms and market price are the same as in example 29. However, in this example, the entity sells the gas under contract, which it no longer needs, to a third party for 18p per unit (5p below cost). The entity determines that it would have to pay ₹ 55,000 to exit the purchase contract. The only economic benefit from the purchase contract costing ₹ 2,30,000 are the proceeds from the sales contract, which are ₹ 1,80,000. Therefore, a provision should be made for the onerous element of ₹ 50,000, being the lower of the cost of fulfilling the contract and the penalty cost of cancellation (₹ 55,000).

32. **Contract termination costs:** In the year ended 31st December 20X1, an entity has a contract with a third party supplier. The entity wishes to terminate this contract in 20X2 because it can enter into a cheaper contract with a new supplier, even though it will still have two years to run. It will incur a charge for terminating the contract. Does the entity have to provide in 20X1-20X2 for the contract that it will be exiting in 20X2-20X3? A provision should be recognised only if the contract is onerous. If the

goods received under the supply contract are sold at a profit, the contract is not onerous and provision should not be made in 20X1-20X2. The termination cost should be recognised as incurred in 20X2-20X3.

Illustration 12

X Metals Ltd. had entered into a non-cancellable contract with Y Ltd. to purchase 10,000 units of raw material at ₹ 50 per unit at a contract price of ₹ 5,00,000. As per the terms of contract, X Metals Ltd. would have to pay ₹ 60,000 to exit the said contract. X Metals Ltd. has discontinued manufacturing the product that would use the said raw material. For that X Metals Ltd. has identified a third party to whom it can sell the said raw material at ₹ 45 per unit.

State how should X Metals Ltd. account for this transaction in its books of account in respect of the above contract?

Solution

These circumstances do indicate an onerous contract. The only benefit to be derived from the purchase contract costing ₹ 5,00,000 are the proceeds from the sale contact, which are ₹ 4,50,000. Therefore, a provision should be made for the onerous element of ₹ 50,000, being the lower of cost of fulfilling the contract and the penal cost of cancellation of ₹ 60,000.

*****

2.11.3 Restructuring

- The following are examples of events that may fall under the definition of restructuring:
  - (a) sale or termination of a line of business;
  - (b) the closure of business locations in a country or region or the relocation of business activities from one country or region to another;
  - (c) changes in management structure, for example, eliminating a layer of management; and
  - (d) fundamental reorganisations that have a material effect on the nature and focus of the entity's operations.
- A provision for restructuring costs should be recognised only when the general recognition criteria for provisions set out the standard are met.
- A constructive obligation to restructure arises only when an entity:
  - (a) has a detailed formal plan for the restructuring identifying at least:
    - (i) the business or part of a business concerned;

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(ii) the principal locations affected;

(iii) the location, function, and approximate number of employees who will be compensated for terminating their services;

(iv) the expenditures that will be undertaken; and

(v) when the plan will be implemented; and

(b) has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

Example 33: Closure of a division – no implementation before end of the reporting period

On 12th March, 20X1 the board of an entity decided to close down a division. Before the end of the reporting period (31st March, 20X1) the decision was not communicated to any of those affected and no other steps were taken to implement the decision. it is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – There has been no obligating event and so there is no obligation.

Conclusion – No provision is recognised.

Example 34: Closure of a division – communication/ implementation before end of the reporting period

On 12th March, 20X1 (reporting date), the board of an entity decided to close down a division making a particular product. On 20th March, 20X1 a detailed plan for closing down the division was agreed by the board; letters were sent to customers warning them to seek an alternative source of supply and redundancy notices were sent to the staff of the division. It is assumed that a reliable estimate can be made of any outflows expected.

Present obligation as a result of a past obligating event – The obligating event is the communication of the decision to the customers and employees, which gives rise to a constructive obligation from that date, because it creates a valid expectation that the division will be closed.

An outflow of resources embodying economic benefits in settlement – Probable.

Conclusion – A provision is recognised at 31st March, 20X1 for the best estimate of the costs of closing the division.

❖ Evidence that an entity has started to implement a restructuring plan would be provided, for example, by dismantling plant or selling assets or by the public announcement of the main features of the plan. A public announcement of a detailed plan to restructure constitutes a

constructive obligation to restructure only if it is made in such a way and in sufficient detail (i.e., setting out the main features of the plan) that it gives rise to valid expectations in other parties such as customers, suppliers and employees (or their representatives) that the entity will carry out the restructuring.

- ❖ For a plan to be sufficient to give rise to a constructive obligation when communicated to those affected by it, its implementation needs to be planned to begin as soon as possible and to be completed in a timeframe that makes significant changes to the plan unlikely. If it is expected that there will be a long delay before the restructuring begins or that the restructuring will take an unreasonably long time, it is unlikely that the plan will raise a valid expectation on the part of others that the entity is at present committed to restructuring, because the timeframe allows opportunities for the entity to change its plans.

- ❖ A management or board decision to restructure taken before the end of the reporting period does not give rise to a constructive obligation at the end of the reporting period unless the entity has, before the end of the reporting period:

  (a) started to implement the restructuring plan; or

  (b) announced the main features of the restructuring plan to those affected by it in a sufficiently specific manner to raise a valid expectation in them that the entity will carry out the restructuring.

  If an entity starts to implement a restructuring plan, or announces its main features to those affected, only after the reporting period, disclosure is required under, Ind AS 10, Events after the Reporting Period, if the restructuring is material and non-disclosure could reasonably be expected to influence the decisions that the primary users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity.

- ❖ Although a constructive obligation is not created solely by a management decision, an obligation may result from other earlier events together with such a decision. For example, negotiations with employee representatives for termination payments, or with purchasers for the sale of an operation, may have been concluded subject only to board approval. Once that approval has been obtained and communicated to the other parties, the entity has a constructive obligation to restructure, if the conditions of the standard are met.

- ❖ In some countries, the ultimate authority is vested in a board whose membership includes representatives of interests other than those of management (e.g., employees) or notification to such representatives may be necessary before the board decision is taken. Because a decision by such a board involves communication to these representatives, it may result in a constructive obligation to restructure.

- ❖ No obligation arises for the sale of an operation until the entity is committed to the sale, i.e., there is a binding sale agreement.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Even when an entity has taken a decision to sell an operation and announced that decision publicly, it cannot be committed to the sale until a purchaser has been identified and there is a binding sale agreement. Until there is a binding sale agreement, the entity will be able to change its mind and indeed will have to take another course of action if a purchaser cannot be found on acceptable terms. When the sale of an operation is envisaged as part of a restructuring, the assets of the operation are reviewed for impairment under Ind AS 36. When a sale is only part of a restructuring, a constructive obligation can arise for the other parts of the restructuring before a binding sale agreement exists.
- A restructuring provision should include only the direct expenditures arising from the restructuring, which are those that are both:

  (a) necessarily entailed by the restructuring; and

  (b) not associated with the ongoing activities of the entity.
- A restructuring provision does not include such costs as:

  (a) retraining or relocating continuing staff;

  (b) marketing; or

  (c) investment in new systems and distribution networks.

  These expenditures relate to the future conduct of the business and are not liabilities for restructuring at the end of the reporting period. Such expenditures should be recognised on the same basis as if they arose independently of a restructuring.
- Identifiable future operating losses up to the date of a restructuring are not included in a provision, unless they relate to an onerous contract.
- Gains on the expected disposal of assets should not be taken into account in measuring a restructuring provision, even if the sale of assets is envisaged as part of the restructuring.

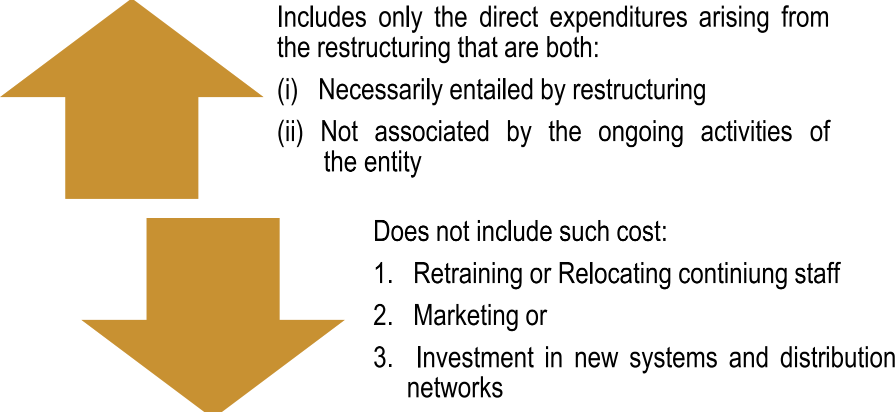


Illustration 13

X Cements Ltd. has three manufacturing units situated in three different states of India. The board of directors of X Cements Ltd., in their meeting held on 10th January, 20X1, decided to close down its operations in one particular state on account of environmental reasons. A detailed formal plan for shutting down the above unit was also formalised and agreed by the board of directors in that meeting, which specifies the approximate number of employees who will be compensated and expenditure expected to be incurred. Date of implementation of plan has also been mentioned. Meetings were also held with customers, suppliers, and workers to communicate the features of the formal plan to close down the operations in the said state, and representatives of all interested parties were present in those meetings.

Evaluate whether the actions of the board of directors create a constructive obligation that needs a provision for restructuring.

Solution

As per Ind AS 37, the conditions prescribed are:

(a) there should be detailed formal plan of restructuring;

(b) which should have raised valid expectations in the minds of those affected that the entity would carry out the restructuring by announcing the main features of its plans to restructure.

The board of directors did discuss and formalise a formal plan of winding up the operation in the above said state. This plan was communicated to the parties affected and created a valid expectation in their minds that X Cements Ltd. would go ahead with its plans to close down operations in that state. Thus, there is a constructive obligation that needs to be provided at year-end.

*****

2.12 DISCLOSURE

❖ For each class of provision, an entity should disclose:

(a) the carrying amount at the beginning and end of the period;

(b) additional provisions made in the period, including increases to existing provisions;

(c) amounts used (i.e., incurred and charged against the provision) during the period;

(d) unused amounts reversed during the period; and

Join us t.me/caborntofight

(e) the increase during the period in the discounted amount arising from the passage of time and the effect of any change in the discount rate.

Comparative information is not required to be disclosed.

- An entity should disclose the following for each class of provision:

  (a) a brief description of the nature of the obligation and the expected timing of any resulting outflows of economic benefits;

  (b) an indication of the uncertainties about the amount or timing of those outflows.

  Where necessary to provide adequate information, an entity should disclose the major assumptions made concerning future events; and

  (c) the amount of any expected reimbursement, stating the amount of any asset that has been recognised for that expected reimbursement.

- Unless the possibility of any outflow in settlement is remote, an entity should disclose for each class of contingent liability at the end of the reporting period a brief description of the nature of the contingent liability and, where practicable:

  (a) an estimate of its financial effect, measured in the standard;

  (b) an indication of the uncertainties relating to the amount or timing of any outflow; and

  (c) the possibility of any reimbursement.

- In determining which provisions or contingent liabilities may be aggregated to form a class, it is necessary to consider whether the nature of the items is sufficiently similar for a single statement about them to fulfill the requirements of the standard and

- Thus, it may be appropriate to treat as a single class of provision amounts relating to warranties of different products, but it would not be appropriate to treat as a single class amounts relating to normal warranties and amounts that are subject to legal proceedings.

- Where a provision and a contingent liability arise from the same set of circumstances, an entity makes the disclosures required by the standard in a way that shows the link between the provision and the contingent liability.

- Where an inflow of economic benefits is probable, an entity should disclose a brief description of the nature of the contingent assets at the end of the reporting period, and, where practicable, an estimate of their financial effect, measured using the principles set out for provisions in the standard.

- It is important that disclosures for contingent assets avoid giving misleading indications of the likelihood of income arising.
- Where any of the information required by the standard is not disclosed because it is not practicable to do so, that fact should be stated.
- In extremely rare cases, disclosure of some or all of the information required can be expected to prejudice seriously the position of the entity in a dispute with other parties on the subject matter of the provision, contingent liability or contingent asset. In such cases, an entity need not disclose the information, but should disclose the general nature of the dispute, together with the fact that, and reason why, the information has not been disclosed.

Illustration 14 : Warranties

A manufacturer gives warranties at the time of sale to purchasers of its three product lines. Under the terms of the warranty, the manufacturer undertakes to repair or replace items that fail to perform satisfactorily for two years from the date of sale. At the end of the reporting period, a provision of ₹ 60,000 has been recognised for the sale made during the year. The provision has not been discounted as the effect of discounting is not material.

Draft the Note.

Solution

A provision of ₹ 60,000 has been recognised for expected warranty claims on products sold during the current financial year. It is assumed that the majority of this expenditure will be incurred in the next financial year, and all will be incurred within two years from the reporting period.

*****

2.13 LEVIES (APPENDIX C OF IND AS 37)

2.13.1 Appendix C deals with

- the accounting for a liability to pay a levy if that liability is within the scope of Ind AS 37
- accounting for a liability to pay a levy whose timing and amount is certain.

2.13.2 Appendix C does not deal with

- the accounting for the costs that arise from recognising a liability to pay a levy.

Note: Entities should apply other Standards to decide whether the recognition of a liability to pay a levy gives rise to an asset or an expense.

2.13.3 What is a Levy?

A charge imposed by governments on entities in accordance with laws and/or regulations. It leads to outflow of resources embodying economic benefits

It excludes

- outflows of resources that are within the scope of other Ind AS
- fines or other penalties that are imposed for breaches of the legislation
- payment made to the government for acquiring assets or for rendering services as per the contractual agreement
- liabilities that arise from emissions trading schemes.

Note: Government' refers to government, government agencies and similar bodies whether local, national or international.

2.13.4 Accounting Principles

- If and activity triggers the payment of the levy, it will be considered as an obligating event that gives rise to a liability to pay a levy

Example 35

If the activity that triggers the payment of the levy is the generation of revenue in the current period and the calculation of that levy is based on the revenue that was generated in a previous period, the obligating event for that levy is the generation of revenue in the current period. The generation of revenue in the previous period is necessary, but not sufficient, to create a present obligation.

- Any compulsion to operate in future will not be considered as constructive obligation for an entity, to pay a levy.
- The preparation of financial statements under the going concern assumption does not imply that an entity has a present obligation to pay a levy that will be triggered by operating in a future period.

Join us t.me/caborntofight

- The liability to pay a levy is recognised progressively if the obligating event occurs over a period of time (ie if the activity that triggers the payment of the levy, as identified by the legislation, occurs over a period of time).

Example

If the obligating event is the generation of revenue over a period of time, the corresponding liability is recognised as the entity generates that revenue.

- If an obligation to pay a levy is triggered when a minimum threshold is reached, the accounting for the liability that arises from that obligation shall be consistent with the principles established in the standard.

Example

If the obligating event is the reaching of a minimum activity threshold (such as a minimum amount of revenue or sales generated or outputs produced), the corresponding liability is recognised when that minimum activity threshold is reached.

- An entity shall apply the same recognition principles in the interim financial report that it applies in the annual financial statements. As a result, in the interim financial report, a liability to pay a levy:

  (a) shall not be recognised if there is no present obligation to pay the levy at the end of the interim reporting period; and

  (b) shall be recognised if a present obligation to pay the levy exists at the end of the interim reporting period.

- An entity shall recognise an asset if it has prepaid a levy but does not yet have a present obligation to pay that levy.

2.14 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITIES

Following is the extract from the financial statements of the listed entity 'UPL Limited' for the financial year 2021 – 2022 with respect to Ind AS 37 'Provisions, Contingent Liabilities and Contingent Assets':

35. CONTINGENT LIABILITIES

The Company is involved in a number of appellate, judicial and arbitration proceedings (including those described below) concerning matters arising in the course of conduct of the Company's businesses. Some of these proceedings in respect of matters under litigation are in early stages, and in some other cases, the claims are indeterminate. A summary of claims asserted on the Group in respect of these cases have been summarised below.

Amounts in respect of claims asserted by various revenue authorities on the Company, in respect of taxes, which are in dispute, have been tabulated below:

₹ in Crores

	As at March 31, 2022	As at March 31, 2021
Disputed Income-Tax Liability (excluding interest)	26	33
Disputed Excise Duty / Service Tax liability (excluding interest)	182	186
Disputed Sales Tax/ GST liability	20	25
Disputed Custom Duty liability	22	22
Disputed Fiscal Penalty for cancellation of licenses	33	33
Claims against the Company not acknowledged as debts	1	4

The management believes that the claims made are untenable and is contesting them. As of the reporting date, the management is unable to determine the ultimate outcome of above matters. However, in the event the revenue authorities succeed with enforcement of their assessments, the Company may be required to pay some or all of the asserted claims and the consequential interest and penalties, which would reduce net income and could have a material adverse effect on net income in the respective reported period.

Management is generally unable to reasonably estimate a range of possible loss for proceedings or disputes other than those included in the estimate above, including where:

i. plaintiffs / parties have not claimed an amount of money damages, unless management can otherwise determine an appropriate amount;
ii. the proceedings are in early stages;
iii. there is uncertainty as to the outcome of pending appeals or motions or negotiations;
iv. there are significant factual issues to be resolved; and/or
v. there are novel legal issues presented.

However, in respect of the above matters, management does not believe, based on currently available information, that the outcomes of the litigation, will have a material adverse effect on the Company's standalone financial condition, though the outcomes could be material to the Group's operating results for any particular period, depending, in part, upon the operating results for such period.

(Source: Annual Report of financial year 2021 – 2022 of UPL Limited')

2.15 SIGNIFICANT DIFFERENCES IN IND AS 37 VIS-A-VIS AS 29

S. No.	Particulars	Ind AS 37	AS 29
1.	*Constructive obligations*	Ind AS 37 explicitly defines the term 'constructive obligations' and uses term in certain paragraphs.	Paragraph 11 of AS 29 included expression similar to constructive obligations in the context of explaining when the obligations arise i.e. obligation also arises from normal business practices, custom and a desire to maintain good business relations or to act in an equitable manner.
2.	*Discounting*	Ind AS 37 requires discounting the amounts of provisions, if effect of the time value of money is material.	AS 29 prohibits discounting the amounts of provisions except in case of decommissioning, restoration and similar liabilities that are recognised as cost of property, plant and equipment.
3.	*Contingent asset*	Ind AS 37 requires disclosure of contingent assets in the financial statements when the inflow of economic benefits is probable. The disclosure, however, should avoid misleading indications of the likelihood of income arising.	AS 29 prohibits disclosure of a contingent asset in the financial statements and mentions that it is usually disclosed in the report of the approving authority, where an inflow of economic benefits is probable.
4.	*Onerous Contracts*	Ind AS 37 makes it clear that before a separate provision for an onerous contract is established, an entity should recognise any impairment loss that has occurred on assets dedicated to that contract in accordance with Ind AS 36.	There is no such specific provision in the existing standard.

Join us t.me/caborntofight

5.	*Future Operating Losses*	Ind AS 37 gives an exception to this principle viz. such losses related to an onerous contract.	AS 29 states that identifiable future operating losses up to the date of restructuring are not included in a provision.
6.	*Additional guidance*	Ind AS 37 gives guidance on: (a) Rights to Interests arising from Decommissioning, Restoration and Environmental Rehabilitation Funds (b) Liabilities arising from Participating in a Specific Market — Waste Electrical and Electronic Equipment (c) Levies (imposed by government).	AS 29 does not give such guidance.

Questions

1. X Ltd. is operating in the telecom industry. During the Financial Year 20X1-20X2, the Income Tax authorities sent a scrutiny assessment notice under Section 143(2) of the Income-tax Act, 1961, in respect to return filed under Section 139 of this Act for Previous Year 20X0-20X1 (Assessment Year 20X1-20X2) and initiated assessment proceedings on account of a deduction claimed by the company which in the view of the authorities was inadmissible.

   During the financial year 20X1-20X2 itself, the assessment proceedings were completed and the assessing officer did not allow the deduction and raised a demand of ₹ 1,00,00,000 against the company. The company contested such levy and filed an appeal with the Appellate authority. At the end of the financial year 20X1-20X2, the appeal had not been heard. The company is not confident whether that the company would win the appeal. However, the company was advised by its legal counsel that on a similar matter, two appellate authorities of different jurisdictions had given conflicting judgements, one in favour of the assessee and one against the assessee. The legal counsel further stated it had 50% chance of winning the appeal.

   Advise how the company should account for these transactions in the financial year 20X1-20X2.

2. An entity is a telecom operator. Laying of cables across the world is a requirement to enable the entity to run its business. Cables are also laid under the sea and contracts are entered into for the same. By virtue of laws of the countries through which the cable passes, the entity is required to restore the sea bed at the end of the contract period.

   State the nature of obligation that the entity has in such a case.

3. U Ltd. is a large conglomerate with a number of subsidiaries. It is preparing consolidated financial statements as on 31st March 20X2 as per the notified Ind AS. The financial statements are due to be approved for issue on 15th May 20X2. Following are a few transactions that have taken place in some of its subsidiaries during the year:

   G Ltd. is a wholly owned subsidiary of U Ltd. engaged in management consultancy services. On 31st January 20X2, the board of directors of U Ltd. decided to discontinue the business of G Ltd. from 30th April 20X2. They made a public announcement of their decision on 15th February 20X2.

   G Ltd. does not have many assets or liabilities and it is estimated that the outstanding trade receivables and payables would be settled by 31st May 20X2. U Ltd. would collect any amounts still owed by G Ltd.'s customers after 31st May 20X2. They have offered the employees of G Ltd. termination payments or alternative employment opportunities.

   Following are some of the details relating to G Ltd.:

   - On the date of public announcement, it is estimated by G Ltd. that it would have to pay ₹ 540 lakhs as termination payments to employees and the costs for relocation of employees who would remain with the Group would be ₹ 60 lakhs. The actual termination payments totalling to ₹ 520 lakhs were made in full on 15th May 20X2. As per latest estimates made on 15th May 20X2, the total relocation cost is ₹ 63 lakhs.
   - G Ltd. had taken a property on lease, which was expiring on 31st March 20X6. The present value of the future lease rentals (using an appropriate discount rate) is ₹ 430 lakhs. On 15th May 20X2, G Ltd. made a payment to the lessor of ₹ 410 lakhs in return for early termination of the lease.

   The loss after tax of G Ltd. for the year ended 31st March 20X2 was ₹ 400 lakhs. G Ltd. made further operating losses totalling ₹ 60 lakhs till 30th April 20X2.

   Determine the provisions that the Company is required to make as per Ind AS 37?

4. A company manufacturing and supplying process control equipment is entitled to duty draw back if it exceeds its turnover above a specified limit. To claim duty drawback, the company needs to file application within 15 days of meeting the specified turnover. If application is not filed within stipulated time, the Department has discretionary power of giving duty draw back credit. For the year 20X1-20X2 the company has exceeded the specified limit of turnover by the end of the reporting period. However, duty drawback can be claimed on filing of application within the stipulated time or on discretion of the Department if filing of application is late. The application for duty drawback is filed on 20th April, 20X2, which is after the stipulated time of 15 days of meeting the turnover condition. Duty drawback has been credited by the Department on 28th June, 20X2 and financial statements have been approved by the Board of Directors of the company on 26th July, 20X2.

   Identify the treatment of duty drawback credit as per the given information.

Join us t.me/caborntofight

5. Entity XYZ entered into a contract to supply 1000 television sets for ₹ 2 million. An increase in the cost of inputs has resulted into an increase in the cost of sales to ₹ 2.5 million. The penalty for non- performance of the contract is expected to be ₹ 0.25 million.

   Evaluate whether the contract is onerous and also determine the amount of provision to be made in this regard.

6. Marico has an obligation to restore environmental damage in the area surrounding its factory. Expert advice indicates that the restoration will be carried out in two distinct phases; the first phase requiring expenditure of ₹ 2 million to remove the contaminated soil from the area and the second phase, commencing three years later from the end of first phase, to replant the area with suitable trees and vegetation. The estimated cost of replanting is ₹ 3.5 million. Marico uses a cost of capital (before taxation) of 10% and the expenditure, when incurred, will attract tax relief at the company's marginal tax rate of 30%. Marico has not recognised any provision for such costs in the past and today's date is 31st March 20X2. The first phase of the clean-up will commence in a few months time and will be completed on 31st March 20X3 when the first payment of ₹ 2 million will be made. Phase 2 costs will be paid three years later from the end of first phase.

   Calculate the amount to be provided at 31st March 20X2 for the restoration costs.

Answers

1. Ind AS 37 provides that in rare cases it not clear whether there is a present obligation, for example, in a lawsuit, it may be disputed either whether certain events have occurred or whether those events result in a present obligation. In such a case, an entity should determine whether a present obligation exits at the end of the reporting period by taking account of all available evidence, for example, the opinion of experts.

In the present case, the company is not confident that whether it would win the appeal. By taking into account the opinion of the legal counsel, it is not sure that whether the company would win the appeal. On the basis of such evidence, it is more likely than not that a present obligation exists at the end of the reporting period. Therefore, the entity should recognise a provision. The company should provide for a liability of ₹ 1,00,00,000.

2. Paragraph 14 of Ind AS 37 states that a provision shall be recognised when:

(a) an entity has a present obligation (legal or constructive) as a result of a past event;

(b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and

(c) a reliable estimate can be made of the amount of the obligation. If these conditions are not met, no provision shall be recognised.

Further, with regard to past event paragraph 17 of Ind AS 37 states that a past event that leads to a present obligation is called an obligating event. For an event to be an obligating event, it is necessary that the entity has no realistic alternative to settling the obligation created by the event. This is the case only:

(a) where the settlement of the obligation can be enforced by law; or

(b) in the case of a constructive obligation, where the event (which may be an action of the entity) creates valid expectations in other parties that the entity will discharge the obligation."

On the basis of the above, provision should be recognised as soon as the obligating event takes place because the entity is under legal obligation to restore the sea bed, provided the other recognition criteria stated in paragraph 14 reproduced above are met. Moreover, the amount of the provision would depend on the extent of the obligation arising from the obligating event. In the instant case, an obligating event is the laying of cables under the sea. To the extent the cables have been laid down under the sea, a legal obligation has arisen and to that extent provision for restoration of sea bed should be recognised.

3. A discontinued operation is one that is discontinued in the period or classified as held for sale at the year end. The operations of G Ltd were discontinued on 30th April 20X2 and therefore, would be treated as discontinued operation for the year ending 31st March 20X3. It does not meet the criteria for held for sale since the company is terminating its business and does not hold these for sale.

As per para 72 of Ind AS 37 'Provisions, Contingent Liabilities and Contingent Assets', restructuring includes sale or termination of a line of business. A constructive obligation to restructure arises when:

(a) an entity has a detailed formal plan for the restructuring

(b) has raised a valid expectation in those affected that it will carry out the restructuring by starting to implement that plan or announcing its main features to those affected by it.

The Board of directors of U Ltd have decided to terminate the operations of G Ltd. from 30th April 20X2. They have made a formal announcement on 15th February 20X2, thus creating a valid expectation that the termination will be implemented. This creates a constructive obligation on the company and requires provisions for restructuring.

A restructuring provision includes only the direct expenditures arising from the restructuring that are necessarily entailed by the restructuring and are not associated with the ongoing activities of the entity.

The termination payments fulfil the above condition. As per Ind AS 10 'Events after Reporting Date', events that provide additional evidence of conditions existing at the

reporting date should be reflected in the financial statements. Therefore, the company should make a provision for ₹ 520 lakhs in this respect.

The relocation costs relate to the future conduct of the business and are not liabilities for restructuring at the end of the reporting period. Hence, these would be recognised on the same basis as if they arose independently of a restructuring.

The lease would be regarded as an onerous contract. A provision would be made at the lower of the cost of fulfilling it and any compensation or penalties arising from failure to fulfil it. Hence, a provision shall be made for ₹ 410 lakhs.

Further operating losses relate to future events and do not form a part of the closure provision.

Therefore, the total provision required = ₹ 520 lakhs + ₹ 410 lakhs = ₹ 930 lakhs

4. In the instant case, the condition of exceeding the specified turnover was met at the end of the reporting period and the company was entitled for the duty drawback. However, the application for the same has been filed after the stipulated time. Therefore, credit of duty drawback was discretionary in the hands of the Department. Since the claim was to be accrued only after filing of application, its accrual will be considered in the year 20X2-20X3 only.

Accordingly, the duty drawback credit is a contingent asset as at the end of the reporting period 20X1-20X2, which will be realised when the Department credits the same.

As per para 35 of Ind AS 37, *Provisions, Contingent Liabilities and Contingent Assets*, contingent assets are assessed continually to ensure that developments are appropriately reflected in the financial statements. If it has become virtually certain that an inflow of economic benefits will arise, the asset and the related income are recognised in the financial statements of the period in which the change occurs. If an inflow of economic benefits has become probable, an entity discloses the contingent asset.

In accordance with the above, the duty drawback credit which was contingent asset for the financial year 20X1-20X2 should be recognised as asset and related income should be recognized in the reporting period in which the change occurs. i.e., in the period in which realisation becomes virtually certain, i.e., financial year 20X2-20X3.

5. Ind AS 37 *"Provisions, Contingent Liabilities and Contingent Assets"* defines an onerous contract as a contract in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.

Paragraph 68 of Ind AS 37 states that the unavoidable costs under a contract reflect the least net cost of exiting from the contract, which is the lower of the cost of fulfilling it and

© The Institute of Chartered Accountants of India

any compensation or penalties arising from failure to fulfill it.

In the instant case, cost of fulfilling the contract is ₹ 0.5 million (₹ 2.5 million – ₹ 2 million) and cost of exiting from the contract by paying penalty is ₹ 0.25 million.

In accordance with the above reproduced paragraph, it is an onerous contract as cost of meeting the contract exceeds the economic benefits.

Therefore, the provision should be recognised at the best estimate of the unavoidable cost, which is lower of the cost of fulfilling it and any compensation or penalties arising from failure to fulfill it, i.e., at ₹ 0.25 million (lower of ₹ 0.25 million and ₹ 0.5 million).

6.

Year	Cash Flow	10% Discount factor	Present Value
20X2-20X3	20,00,000	0.909	18,18,000
20X5-20X6	35,00,000	0.683	23,90,500
Provision required at 31st March 20X2			**42,08,500**

The provision is calculated using the pre-tax costs and a pre-tax cost of capital. The fact that the eventual payment will attract tax relief will be reflected in the recognition of a deferred tax asset for the deductible temporary difference (assuming that the recognition criteria for deferred tax assets are met.)

CHAPTER 9

IND AS ON ITEMS IMPACTING THE FINANCIAL STATEMENTS

UNIT 1: INDIAN ACCOUNTING STANDARD 12 : INCOME TAXES

LEARNING OUTCOMES

After studying this unit, you will be able to:

- List the objective and scope of the standard
- Define the terms used in the standard like accounting profit, taxable profit (tax loss), tax expense (tax income), current tax, deferred tax liabilities, deferred tax assets, temporary differences, taxable temporary differences, deductible temporary differences and the tax base
- Recognise current tax liabilities and current tax assets
- Recognise deferred tax liabilities and deferred tax assets
- Demonstrate when Ind AS permit or require certain assets to be carried at fair value or to be revalued
- Identify the situations where temporary difference may arise on initial recognition of an asset or liability
- Recognise deferred tax asset for all deductible temporary differences
- Evaluate the cases, when a deferred tax asset arises on initial recognition of an asset

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- Measure current tax liabilities (assets) for the current and prior periods
- Measure deferred tax assets and liabilities using the tax rates
- Identify the items recognised outside profit or loss
- Calculate the deferred tax arising from a business combination
- Calculate current and deferred tax arising from share-based payment transactions
- Account for tax assets and tax liabilities
- Offset tax assets with tax liabilities
- Present the tax expense in the Statement of Profit and Loss with respect to various transactions
- Disclose the major components of tax expense (income)
- Account for the income taxes on account of changes in the tax status of an entity or its shareholders.

UNIT OVERVIEW

Definition	• Accounting profit • Taxable profit (tax loss) • Tax expense (tax income) • Current tax • Deferred tax liabilities • Deferred tax assets • Temporary differences • Taxable temporary differences • Deductible temporary differences • Tax base
Tax Expense	• Current Tax • Deferred Tax
Current tax	• Recognition • Measurement • Accounting of Current Tax Effects • Offsetting Current Tax Assets and Current Tax Liabilities
Deferred Tax	• Compute carrying amount • Compute tax base • Compute temporary differences • Classify temporary differences • Identify exceptions • Assess (also reassess) deductible temporary differences, tax losses and tax credits • Determine the tax rate (law) • Calculate and recognise deferred tax • Accounting of deferred tax • Offsetting deferred tax assets and deferred tax liabilities
Practical Application	• Deferred tax arising from a business combination • Current and deferred tax arising from share-based payment transactions • Change in tax status of an entity or its shareholders
Disclosure	• Disclose components of tax expenses (income) • Tax related to items charged directly to equity • Tax related to items recognised in statement of other comprehensive income • Explanation of the relationship between tax expense (income) and accounting profit • Change in tax rates • Unrecognised deductible temporary differences, unused tax losses and unused tax credits • Temporary differences associated with investments in subsidiaries etc. • Amount of deferred tax liabilities (assets) or income (expense)

1.1 OBJECTIVE

There was a time in India, few decades back when the concept of zero income tax entities was prevalent. Due to various income tax benefits, these companies had no current tax liability for any income tax that was payable based on that year's accounting profit. Thus, no provision of income tax was created. Profit after tax used to be equal to profit before tax. But from accounting perspective, this was not a correct reflection of results. Quite a few of these tax benefits were primarily accelerated benefits.

For example, depreciation was deductible in taxation on written down value method (WDV) whereas in the books of accounts, entities could claim depreciation on straight line method (SLM). As everybody knows that under WDV method, in initial years' depreciation charge is greater than depreciation under SLM. This resulted into accounting profits but no taxable profits. But over the useful life of the asset, depreciation under both methods is equal. In later years, depreciation charge under SLM would be higher than in depreciation under WDV. Therefore, in later years, in such a situation, the taxable profits will be higher than the book profits. This will require a higher tax provision in books when compared to the accounting profits of that year. Basically, this differential will be due to non-provision of tax liability in an earlier year.

Example 1

An entity has acquired an asset for ₹ 10,000. The depreciation rate as per income tax is 40% on WDV basis. In books of account, entity claims depreciation on equivalent SLM basis of 16.21%. The entity has accounting and taxable profits of ₹ 20,000 from year 1 to year 4, inclusive, before any allowance of depreciation in either case.

The tax rate is 30%. Assuming no concept of deferred tax, the provision for current tax would be computed as under:

Year	1	2	3	4
Cost of the asset	10,000	10,000	10,000	10,000
Depreciation rate – WDV	40%	40%	40%	40%
Depreciation amount – WDV	4,000	2,400	1,440	864
Taxable profits before depreciation	20,000	20,000	20,000	20,000
Less: Depreciation	(4,000)	(2,400)	(1,440)	(864)
Taxable profits after depreciation	16,000	17,600	18,560	19,136
Tax rate	30%	30%	30%	30%
Tax amount	4,800	5,280	5,568	5,741

However, in the books of accounts, the situation will be as under:

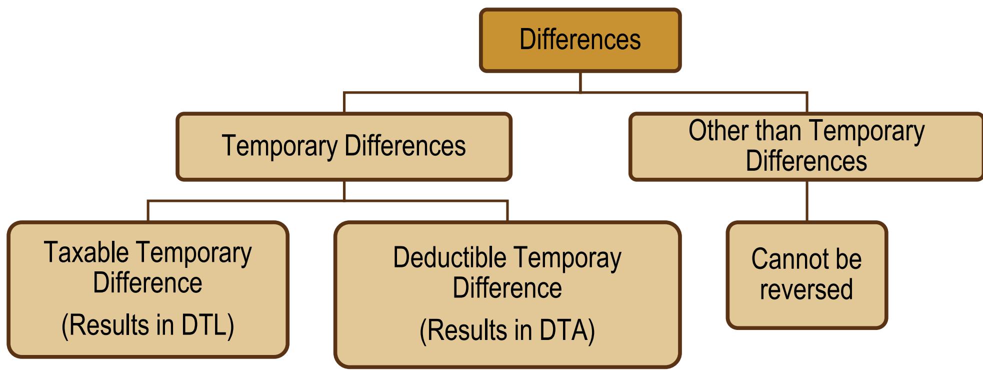
Year	1	2	3	4
(a) Cost of the asset	10,000	10,000	10,000	10,000
(b) Depreciation rate – SLM	16.21%	16.21%	16.21%	16.21%
(c) Depreciation amount – SLM	1,621	1,621	1,621	1,621
(d) Accounting profits before depreciation	20,000	20,000	20,000	20,000
(e) Less: Depreciation	(1,621)	(1,621)	(1,621)	(1,621)
(f) Accounting profits after depreciation	18,379	18,379	18,379	18,379
(g) Tax amount – as above	4,800	5,280	5,568	5,741
(h) Effective tax rate=(g)/(f)	26.12%	28.73%	30.30%	31.24%
(i) Tax @ 30% tax rate {30%*(f)}	5,514	5,514	5,514	5,514

Thus, from the above two tables, for an accountant the tax should be ₹ 5,514 in all cases as per the accounting profit. The results are distorted. You will observe that in year 3, in books, the amount of tax provision is higher by ₹ 54 (5,568 – 5,514) and in year 4, it is higher by ₹ 227 (5,741 - 5,514). This is so because in year 1 & 2, these figures are lower by ₹ 714 (5,514 – 4,800) & ₹ 234 (5,514 – 5,280). Thus, the liability that was incurred in year 1 & 2 is paid year 3 onwards. However, no provision of the differential (₹ 714 in year 1 & ₹ 234 in year 2) is made.

The provision of differential should have been made by the entity following three major accounting concepts and convention of periodicity, matching and accrual. The entity has merely deferred the payment of tax to subsequent year. This understanding and appreciation of situation gave rise to the concept of deferred tax liabilities or deferred tax assets.

In earlier years, deferred tax was recognised based on concepts of timing differences and permanent differences based on differences in accounting profits and taxable profits known as income tax liability method. This concept stands revised with this Accounting Standard which recognised deferred tax based on temporary differences that arises due to difference in the carrying value of an item of asset or liability as per books of accounts with the carrying value of that item as per income tax provisions, known as tax base. This method is known as balance sheet approach.

This Accounting Standard though titled as 'income taxes' primarily deals with deferred tax though guidance is provided on current tax.



1.2 SCOPE

- The objective of this Standard is to prescribe the accounting treatment for income taxes. Income taxes for the purpose of this Standard includes:

  (a) all domestic and foreign taxes which are based on taxable profits;

  (b) taxes, such as withholding taxes (Tax Deducted at Source), which are payable by a subsidiary, associate or joint venture on distributions to the reporting entity.

- Further, the income-tax for the purpose of this Standard could be classified as:

  (a) ***Current tax*** being current tax consequence that arises due to transactions and other events of the current period that are recognised in an entity's financial statements.

  (b) ***Deferred tax*** being future tax consequence that arises due to the future

    (i) recovery of the carrying amount of assets or

    (ii) settlement of carrying amount of the liabilities that are recognised in an entity's balance sheet. For example: Recovery of fixed assets means by way of depreciation or sale and for other assets by way of realization.

- Before we proceed further, it is essential to understand the fundamental principle in recognising deferred tax. This is enunciated in the Standard as under:

  It is inherent in the recognition of an asset or liability that the reporting entity expects to recover or settle the carrying amount of that asset or liability. If it is probable that recovery or settlement of that carrying amount will make future tax payments larger (smaller) than they would be if such recovery or settlement were to have no tax consequences, this Standard requires an entity to recognise a deferred tax liability (deferred tax asset).

  Let us try to understand the aforesaid principle with the help of an example:

Example 2

(a) Whenever an entity recognises an asset, it expects that it will recover the carrying value of that asset. For example, if an entity recognises an item of land at ₹ 1,00,000, it expects that it will be able to recover at least ₹ 1,00,000 if that land is sold sometime in the future.

(b) Assume that under the income tax provisions, if this piece of land is sold after holding it for more than one year, there will be an indexation benefit @ 10% per year. Thus, if the land is sold after one year, the cost of the land will for the purpose of taxation will be assumed at ₹ 1,10,000 (₹ 1,00,000 + 10%). If it is sold after two years, the cost of the land for the purpose of taxation will be assumed at ₹ 1,21,000 (₹ 1,10,000 + 10%).

(c) The tax rate in all years continues to be flat 30%.

(d) Thus, the recovery of the carrying value of land after two years will result into a tax saving of ₹ 6,300 i.e. 30% of 21,000 (1,21,000-1,00,000). For instance, if after two and half years, the land is sold for ₹ 1,50,000, the entity will pay a tax of ₹ 8,700 at 30% of ₹ 29,000 (₹ 1,50,000 – ₹ 1,21,000). If there would have been no indexation benefits, the tax liability would have been ₹ 15,000 at 30% of ₹ 50,000 (₹ 1,50,000 – ₹ 1,00,000). Saving in tax is of ₹ 6,300 (15,000-8,700).

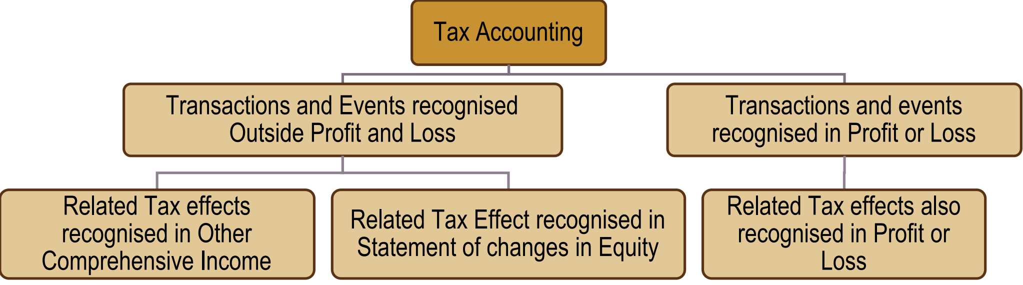
(e) In view of the above savings, the entity should recognise a deferred tax asset of ₹ 6,300 in this case in Year 1.

(f) This principle has to be applied to each item of asset or liability.

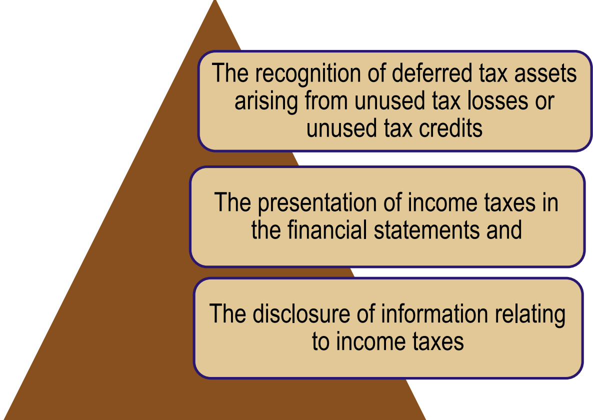
Note: There are controversial views in case of Indexation of land for a temporary difference because if the land is not going to be sold in a near future particularly in business then in such case it is not advisable to calculate temporary difference.

- The Standard also provides guidance as to where the current tax or deferred tax should be recognised, accounted and presented.

- An entity may incur a loss in the current period and set off against a profit in the earlier period. As the entity would recover a tax paid in the earlier year, the entity should recognize the benefit of tax recoverable as an asset.
- Items of current tax or defer tax recognized in profit and loss are subject to two exceptions:
  1. An item of current tax or defer tax pertaining to other comprehensive income should be recognized in other comprehensive income
  2. An item of current tax or defer tax pertaining to direct equity should be recognized in direct equity



- In addition, the Standard deals with the:
  (a) recognition of deferred tax assets arising from unused tax losses or unused tax credits;
  (b) presentation of income taxes in the financial statements; and
  (c) disclosure of information relating to income taxes.



- The Standard however, **does not deal** with the methods of accounting for government grants (see Ind AS 20, *Accounting for Government Grants and Disclosure of Government Assistance*) or investment tax credits. However, it deals with the accounting for temporary differences that may arise from such grants or investment tax credits.

1.3 DEFINITIONS

Having understood, the basic concepts of current tax and deferred tax, the following definitions needs to be appreciated:

(a) ***Accounting profit*** is profit or loss for a period before deducting tax expense.

(b) ***Taxable profit (tax loss)*** is the profit (loss) for a period, computed as per the income tax act, upon which income taxes are payable (recoverable).

(c) ***Tax expense (tax income)*** is the aggregate amount included in the determination of profit or loss for the period in respect of current tax and deferred tax.

(d) ***Current tax*** is the amount of income taxes payable (recoverable) in respect of the taxable profit (tax loss) for a period.

(e) ***Deferred tax liabilities*** are the amounts of income taxes payable in future periods in respect of taxable temporary differences.

(f) ***Deferred tax assets*** are the amounts of income taxes recoverable in future periods in respect of:

- deductible temporary differences;
- the carry forward of unused tax losses; and
- the carry forward of unused tax credits.

(g) ***Temporary differences*** are differences between the carrying amount of an asset or liability in the balance sheet and its tax base.

(h) ***Temporary differences*** may be either:

- **taxable temporary differences,** which are temporary differences that will result in taxable amounts in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled; or
- **deductible temporary differences,** which are temporary differences that will result in amounts that are deductible in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled.

Comparison with AS 22:

- ***Timing differences** are the differences between taxable income and accounting income for a period that originate in one period and are capable of reversal in one or more subsequent periods.*
- *Thus, it can be seen that while AS 22 spoke of timing differences with reference to income,*

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Ind AS 12 speaks of temporary differences with reference to carrying amounts and tax bases of assets and liabilities. In other words, AS 22 adopts a P/L approach, whereas Ind AS 12 adopts a balance sheet approach towards accounting for taxes on income.

(i) The **tax base** of an asset or liability is the carrying amount to that asset or liability for tax purposes.

To facilitate, easy understanding, this chapter has been divided as under:

(a) Part A : Tax Expense

(b) Part B : Current Tax, its Recognition, Measurement and Presentation

(c) Part C : Deferred Tax, its Recognition, Measurement and Presentation

(d) Part D : Practical Application

(e) Part E : Disclosures

1.4 PART A: TAX EXPENSE (TAX INCOME)

- Tax expense or tax income is the aggregate amount included in the determination of profit or loss for the period in respect of current tax and deferred tax.
- The following needs to be appreciated:

  (a) Tax expense could be positive or negative. Thus, there could be a tax income.

  (b) Tax expense is the aggregate of:

  - **current tax; and**
  - **deferred** tax.

1.5 PART B: CURRENT TAX, ITS RECOGNITION, MEASUREMENT AND PRESENTATION

1.5.1 Current Tax

Current tax is the amount of *income taxes* payable (recoverable) in respect of the *taxable profit (tax loss)* for a period.

1.5.2 Recognition

(a) Current tax liability

- Current tax for current and prior periods shall, to the extent unpaid, be recognised as a liability.

- The exact liability of current tax crystallises only on preparation and finalisation of financial statements at the end of the reporting period.
- Any excess of this liability over the prepaid taxes (advance tax) and withhold taxes (TDS) is to be treated as current liability. This liability may be for the current reporting period or may relate to earlier reporting periods.

(b) Current tax assets

If the amount already paid in respect of current and prior periods exceeds the amount due for those periods, the excess shall be recognised as an asset.

1.5.3 Measurement

(a) Current tax liabilities (assets) for the current and prior periods shall be measured at the amount *expected* to be paid to (recovered from) the taxation authorities, using the tax rates (and tax laws) that have been enacted.

(b) Uncertain tax position interpretations

- An entity computes its current income-taxes in accordance with the provisions contained in the taxation laws. Taxation laws provide certain benefits or require enhancements in accordance with the fiscal, economic and other policies of the country. These at times are prone to varying interpretations and settled by the appellate authorities after a considerable period from the reporting period. The taxability remains uncertain.
- Ind AS 12 requires that current tax liabilities or assets for the current period or the period should be computed based on the amount it expects to pay. It is suggested that statistical tools may be used in computing the current tax with respect to the uncertain tax interpretations.
- Thus, computation of current tax at best is an estimate. Any change in this estimate based on subsequent developments should be treated as a change in estimate in accordance with Ind AS 8.

(c) Enacted or substantive enacted

- The tax rates in computing the current tax should be based on taxation laws that have enacted or substantively enacted.
- A proposed legislation is enacted when all the formalities with respect to the legislation is completed. In India, the enactment occurs when the legislation is notified in the gazette on and from the date it comes into force as mentioned in the said gazette notification.
- Implicit in the word 'substantively enacted' is the emphasis that in the relevant situation the enactment process is not fully completed. The process of enactment of a taxation

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

law in India is as under:

— Finance bill is presented in Lok Sabha of Indian Parliament.

— It is discussed and passed by the Lok Sabha.

— It then moves to Rajya Sabha of Indian Parliament.

— It is discussed in the Rajya Sabha.

— It is then presented before the President for assent.

— It is then notified in the gazette of India.

- Now, at which stage an entity should conclude that the legislation is substantively enacted becomes a key consideration. More so, the finance bill in India is normally presented on the last day of February and is enacted by the 3rd week of May. The reporting period of most of the entities ends on 31st March and listed entities attempt to issue their financial statements within 4-6 weeks of the reporting date.

- Ind AS 12 does not provide any guidance.

- It is therefore suggested that the entity should explicitly disclose in its financial statements the accounting policy with respect to the adoption of tax rates based on the principle of 'substantive enactment'. Needless to add, the policy should be applied consistently. If material, the variation due to adoption of rates based on 'substantive enactment' should also be disclosed.

1.5.4 Accounting of Current Tax Effects

(a) The accounting of current tax effects of a transaction of an event is consistent with the accounting for that transaction or event.

(b) The current tax effects of a transaction shall follow its accounting treatment if the item is recognised in statement of profit or loss, its current tax effect will be recognised in statement of profit or loss.

(c) For further discussion on this topic, refer Accounting for Deferred Tax.

1.5.5 Offsetting Current Tax Assets and Current Tax Liabilities

(a) An entity shall offset current tax assets and current tax liabilities if, and only if, the entity:

  - has a legally enforceable right to set off the recognised amounts; and

  - intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously.

(b) Although current tax assets and liabilities are separately recognised and measured they are offset in the balance sheet subject to criteria similar to those established for financial instruments in Ind AS 32. An entity will normally have a legally enforceable right to set off a

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

current tax asset against a current tax liability when they relate to income taxes levied by the same taxation authority and the taxation laws permit the entity to make or receive a single net payment.

(c) In consolidated financial statements, a current tax asset of one entity in a group is offset against a current tax liability of another entity in the group if, and only if, the entities concerned have a legally enforceable right to make or receive a single net payment and the entities intend to make or receive such a net payment or to recover the asset and settle the liability simultaneously.

Illustration 1A

H Ltd. is a manufacturing company, wanting to calculate its taxable profit or loss for the year ended 31 March 20X8. The statement of profit and loss and other comprehensive income, the balance sheet and the notes are given below.

Tax rate for the financial year 20X7-20X8 is 30%, but the new tax rate of 32%, for the year 20X8-20X9 and beyond, has already been enacted before the year end.

Calculate taxable profit for the financial year 20X7-20X8 and the related current tax expense.

Balance Sheet as of 31 March 20X8

	₹
ASSETS	
Non-current assets	
Property, plant and equipment	*4,20,00,000*
Product development costs	*21,00,000*
Investment in subsidiary – S Ltd.	*1,54,00,000*
Current assets	
Trading investments	*72,80,000*
Trade receivables	*2,19,10,000*
Inventories	*1,06,40,000*
Cash and cash equivalents	*63,00,000*
TOTAL ASSETS	*10,56,30,000*
EQUITY & LIABILITIES	
Equity	
Share capital	*4,20,00,000*
Accumulated profits	*2,86,24,330*
Revaluation surplus	*30,80,000*

Non-current liabilities	
Deferred income - government grants	14,00,000
Liability for product warranty costs	5,60,000
Deferred tax liability (from 20X6-20X7)	7,75,670
Current liabilities	
Trade payables	2,67,40,000
Medical benefits for employees	24,50,000
TOTAL EQUITY & LIABILITIES	10,56,30,000

Extract of Statement of profit and loss for the year ended 31 March 20X8

Revenue	16,81,40,000
Cost of sales	(13,44,00,000)
Gross profit	3,37,40,000
Operating costs	(2,68,80,000)
Profit from operations	68,60,000
Finance costs	(9,10,000)
Profit before taxation	59,50,000

Notes:

1. Depreciation expense for the year financial year 20X7-20X8 allowable as per the Income Tax Rules is ₹ 72,10,000. Depreciation as allowed for the purposes of financial reporting included in operating costs is ₹ 59,50,000. Cost of PPE is ₹ 5,60,00,000 and H Ltd. deducted expenses of ₹ 1,45,60,000 in its tax returns prior to financial year 20X7-20X8. Further, as of 31 March 20X8, H Ltd. for the first time revalued its property, plant and equipment to market value of ₹ 4,20,00,000 (revaluation surplus = ₹ 30,80,000).

2. In 20X4-20X5, H Ltd. incurred product development costs of ₹ 35,00,000. These costs were recognized as an asset and amortized over period of 10 years. For tax purposes, H Ltd. deducted full product development costs when they were in 20X4-20X5.

3. Trading investments were acquired in the preceding year at a cost of ₹ 80,50,000. These investments are classified as at fair value through profit or loss and thus recognized in their fair value. Fair value adjustments are not allowable by the tax authorities.

4. Bad debt provision amounts to ₹ 45,50,000 and relates to 2 debtors: debtor A – ₹ 28,00,000 (receivable originates in 20X5-20X6 and 100% provision was recognized in the preceding year) and debtor B – ₹ 17,50,000 (receivable originates in 20X6-20X7 and 100% provision was recognized in F.Y. 20X7-20X8). Tax law allows deduction of 20% of provision for debtors

© The Institute of Chartered Accountants of India

overdue for more than 1 year, another 30% for debtors overdue for more than 2 years and remaining 50% for debtors overdue for more than 3 years.

5. *H Ltd. created a provision for inventory obsolescence in accordance with Ind AS 2 requirements. New provision created in 20X7-20X8 was ₹ 3,78,000 (total provision: ₹ 6,30,000). Being a general provision, this provision is not tax deductible.*

6. *Government grants are not taxable. Full government grant received in 20X7-20X8 is included in the balance sheet.*

7. *In 20X7-20X8, H Ltd. increased a liability for product warranty costs by ₹ 1,75,000. Product warranty costs are not tax deductible until the company pays claims. Claims paid in 20X7-20X8 amounted to ₹ 2,17,000.*

8. *During the year, H Ltd. introduced health care benefits for employees. The expenses are allowable for tax purposes only when benefits are paid but in line with Ind AS 19, recognized in profit or loss when employees provide service.*

9. *Penalties towards violation of laws included in operating expenses amount to ₹ 63,000. These are not deductible for tax purposes.*

10. *Tax law allows to deduct expenses for petrol only up to ₹ 1,40,000 per vehicle per year. H Ltd. had 4 vehicles in 20X7-20X8 and its total petrol expenses amounted to ₹ 7,21,000.*

Note: This illustration is prepared for the purposes of understanding the computation of current tax and is in no way based on the provisions of the Income Tax Act, 1961. For the purposes of Financial Reporting, the tax treatments will be given in the question.

Solution:

Calculation of current tax expense

Accounting profit	(A)	59,50,000
Add back:		
Accounting depreciation		59,50,000
Amortization of product development costs (W.N.1)		3,50,000
Revaluation of trading investments		7,70,000
Bad debt provisions - 20X7-20X8		17,50,000
Inventory obsolescence provision		3,78,000
Product warranty costs provision - 20X7-20X8		1,75,000
Provision for health care benefit costs		24,50,000
Fines and Penalties disallowed for tax purposes		63,000
Petrol over limit (W.N.3)		1,61,000
Total	(B)	120,47,000

Deduct:		
Tax depreciation		(72,10,000)
Tax allowance for bad debt provisions (W.N.2)		(11,90,000)
Product warranty costs provision - claims paid		(2,17,000)
Total	(C)	(86,17,000)
Taxable profit / loss:	(A+B-C)	93,80,000
Tax rate is 30%		
Current income tax (93,80,000 x 30%)		28,14,000

Journal Entry

Profit or loss - Current income tax expense	Dr.	28,14,000	
To Credit Current income tax liabilities			28,14,000

Working Notes:

1. **Product development costs:**

Annual amortization (₹ 35,00,000/ 10)	3,50,000

2. **Bad debt provisions:**

Debtor A - ₹ 28,00,000 from 20X5-20X6	
> 2 years - 30% deductible in 20X7-20X8	8,40,000
Debtor B - ₹ 17,50,000 from 20X6-20X7	
> 1 year - 20% deductible in 20X7-20X8	3,50,000
Total - tax deductible in 20X7-20X8	11,90,000

3. **Petrol expenses**

Actual expenses	7,21,000
Tax deductible (4 x 140,000)	5,60,000
Excess	1,61,000

*****

1.6 PART C: DEFERRED TAX, ITS RECOGNITION, MEASUREMENT AND PRESENTATION

The following steps should be followed in the recognition, measurement and presentation of deferred tax liabilities or assets:

Step 1: Compute carrying amounts of assets and liabilities

Step 2: Compute tax base

Step 3: Compute temporary differences

Step 4: Classify temporary differences into either:

- ♦ Taxable temporary difference
- ♦ Deductible temporary difference

Step 5: Identify exceptions

Step 6: Assess deductible temporary differences, tax losses and tax credits

Step 7: Determine the tax rate

Step 8: Calculate and recognise deferred tax

Step 9: Accounting of deferred tax

Step 10: Offsetting of deferred tax liabilities and deferred tax assets

These are now discussed in detail.

1.6.1 Step 1: Compute carrying amount

For the purpose of this Standard, we can define carrying amount at which an asset or liability is recognised in the balance sheet, after making necessary adjustments like depreciation, impairment, etc. In other words, carrying amount of the assets and liabilities means balance as per the ledger.

Example 3

Entity A had acquired an item of plant and machinery for ₹ 1,00,000 on 1st April, 20X1. It depreciated this item @ 10% per annum on SLM basis. For the year ended 31st March, 20X2, it provides depreciation of ₹ 10,000. The carrying amount of this item of plant and machinery as on 31st March, 20X2 is ₹ 90,000.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

1.6.2 Step 2: Compute tax base

(a) The tax base of an asset or liability is the amount attributed to that asset or liability for tax purposes.

Example 4

Entity A had acquired an item of plant and machinery for ₹ 1,00,000 on 1st April, 20X1. It depreciated this item @ 10% per annum on SLM basis. For the year ended 31st March, 20X2, it provides depreciation of ₹ 10,000. The carrying amount of this item of plant and machinery as on 31st March, 20X2 is ₹ 90,000. As per taxation laws, this item of plant and machinery has to be depreciated @ 30% per annum on WDV basis. Thus, the entity, for the purposes of taxation, computes depreciation of ₹ 30,000. The tax base of this item of plant and machinery is ₹ 70,000 (₹ 1,00,000 – ₹ 30,000).

In the above scenario, if Entity A decides to revalue the item of plant and machinery and measures it at ₹ 1,50,000, the carrying value of the item of plant and machinery will be ₹ 1,50,000. For tax purposes, if the revaluation is ignored, the tax base remains ₹ 70,000 (Initial cost ₹ 1,00,000 – ₹ 30,000).

(b) Four scenarios could be anticipated for computation of the tax base of either an asset or a liability:

- Tax base of an asset.
- Tax base of a liability.
- Items with a tax base but no carrying amount.
- Items of assets and liabilities where tax base is not apparent.

Let us examine and compute tax base under each of the four scenarios:

(i) Tax base of an asset

The principle to compute tax base of an asset is as under:

- The tax base of an asset is the amount that will be deductible for tax purposes against any taxable economic benefits that will flow to an entity when it recovers the carrying amount of the asset.
- The carrying amount of the asset could be recovered either through sale of the asset or through its use or partly through use and partly through sale. The method of recovery has to be determined at each reporting date.

Examples 5-9

5. Entity A has inventory with carrying amount of ₹ 1,00,000 as at the reporting date. It recovers the value of inventory through sale in a subsequent reporting period. The sale value is the economic benefit derived by the entity and is taxable. However, as per the matching and other concepts, against this sale the entity is entitled to deduct its cost. The cost is the carrying amount of the inventory i.e., ₹ 1,00,000. The tax base in this case is ₹ 1,00,000.

6. Entity A has acquired an item of asset for ₹ 1,00,000 for production of certain items to be sold by the entity. It is deductible equally over two years in the books of accounts. The carrying amount as the end of first reporting period is ₹ 50,000 (₹ 1,00,000 – ₹ 50,000). In the income tax, ₹ 75,000 is deductible in year 1 and balance is deductible in year 2. We have to compute its tax base as on the last day of the first reporting period. However, in income-tax, it can claim only ₹ 25,000 being 25% of the cost of the asset as 75% has already been claimed in year 1. Thus, the tax base in this case is ₹ 25,000.

7. Interest receivable has a carrying amount of 100. The related interest revenue will be taxed on a cash basis. The tax base of the interest receivable is nil.

8. An entity that follows mercantile system of accounting has trade receivables of ₹ 1,000. It creates a general bad debt allowance of ₹ 50. The carrying amount in the books of accounts of trade receivables is thus ₹ 950. However, in income-tax, general bad debt provision is not deductible. In the subsequent period, entity is able to recover only ₹ 950. The amount recovered is a taxable economic benefit. But for tax purposes, entity is entitled for a deduction of ₹ 1,000 against this recovery of trade receivable. The tax base in the current year is ₹ 1,000.

9. An entity that follows mercantile system of accounting has trade receivables of ₹ 1,000. It creates a specific bad debt of ₹ 50. The carrying amount in the books of accounts of trade receivables is thus ₹ 950. In the subsequent period, entity is able to recover only ₹ 950. Further, in income-tax, specific bad debt provision is deductible in the very year it is created. The amount recovered is a taxable economic benefit. For tax purposes, entity will be entitled for a deduction of ₹ 950 against this recovery of trade receivable. The tax base is ₹ 950.

❖ If those economic benefits will not be taxable, the tax base of the asset is equal to its carrying amount.

❖ It is quite feasible that in certain cases, the economic benefits that are derived from the recovery of an asset are not taxable. In these situations, the tax base of the asset is taken at its carrying amount.

Join us t.me/caborntofight

Examples 10 & 11

10. An entity has an investment in listed equity shares. There is no tax on gains that arise on sale of these listed equity shares. Thus, the tax base in this case will be the carrying amount of the investments.
11. An entity has given a loan of ₹ 10,000 which is the carrying amount. The repayment of loan has no tax consequences. The tax base is ₹ 10,000.

(ii) Tax base of a liability

The principle to compute tax base of a liability is as under:

- The tax base of a liability is its carrying amount, less any amount that will be deductible for tax purposes in respect of that liability in future periods.

Examples 12 & 13

12. Current liabilities include accrued expenses with a carrying amount of ₹ 100. The related expense will be deducted for tax purposes on a cash basis.

    The tax base of the accrued expenses is nil.
13. Current liabilities include accrued expenses with a carrying amount of ₹ 100. The related expense has already been deducted for tax purposes.

    The tax base of the accrued expenses is ₹ 100.

- If those liabilities are not tax deductible, the tax base of that liability is equal to its carrying amount.

Example 14

Current liabilities include accrued fines and penalties with a carrying amount of ₹ 100. Fines and penalties are not deductible for tax purposes.

The tax base of the accrued fines and penalties is ₹ 100.

- It is an other than temporary difference, as the expenses are not allowable as per income tax.

Example 15

A loan payable has a carrying amount of ₹ 100. The repayment of the loan will have no tax consequences.

The tax base of the loan is ₹ 100.

- In the case of revenue which is received in advance, the tax base of the resulting liability is its carrying amount, less any amount of the revenue that will not be taxable in future periods.

Join us t.me/caborntofight

Example 16

Current liabilities include interest revenue received in advance, with a carrying amount of ₹ 100. The related interest revenue was taxed on a cash basis.

The tax base of the interest received in advance is nil.

(iii) Items with a tax base but no carrying amount

- ❖ There are certain items that have a tax base but no carrying amount. These include items that are charged to revenue statement in the period in which they are incurred but are allowed as a deduction over a number of periods as per the taxation laws.

Examples 17 & 18

17. A Limited has been incorporated recently. It incurred ₹ 1,00,000 on its incorporation. It has been charged to revenue in the very first accounting period. The taxation laws allow deduction over a period of 5 years. The carrying amount at the end of year 1 is Nil.

    The tax base will be ₹ 80,000 (20,000 x 4) as ₹ 20,000 being 1/5th is allowable as a deduction in taxation laws over 4 years.

18. Public issue expenses. The entity may have written off the public issue expenses in the very first year. But since tax laws permit deduction over 5 years, the temporary differences will exist till complete deduction is claimed in taxation laws.

(iv) Items of assets and liabilities where tax base is not apparent

- ❖ There could be situations where it may be difficult to compute the tax base of an item. One however, knows the carrying amount. This is because of the provisions of taxation laws. Whereas in books of accounts, all or most of the revenue and gains are included as part of one single performance statement, in the taxation laws they are charged under different head.

- ❖ The taxable amount amongst other things depends under which head an item at the time of recovery may be charged. In India, income or gains are charged either as 'Salaries', 'Income from house property', 'Profits and gains of business', 'Capital Gain' & 'Income from other sources'. Further certain specific or weighted deductions are also permissible. For example, rental income is subject to a flat deduction. So how will you compute the rental income received in advance? Moreover, there are cases depending upon the substance of the transaction, the rental income is to be charged as business income. At times, reverse may be the case. Many more similar situations could be anticipated.

Example 19

Entity A has an industrial undertaking that consists of land, building, plant and machinery. It is contemplating disposing the entity. It has the option to recover the carrying amount of the entity either by disposing the entire entity as a slump sale or dispose of each asset on a piecemeal basis. Depending upon the manner of recovery and period of holding, the carrying amount may be subject to indexation benefit, the recovery may be charged either as a business profit or capital gains. Again, it could be long-term gain capital gain or short-term capital gain. As at the end of the reporting period, the entity is not sure of the manner and time of recovery.

- ❖ So, how should one proceed with the determination of the tax base? It is a matter of judgment. The Standard states that one should refer the fundamental principle as enumerated in the Standard. The principle is reproduced hereunder:

  It is inherent in the recognition of an asset or liability that the reporting entity expects to recover or settle the carrying amount of that asset or liability. If it is probable that recovery or settlement of that carrying amount will make future tax payments larger (smaller) than they would be if such recovery or settlement were to have no tax consequences, this Standard requires an entity to recognise a deferred tax liability (deferred tax asset)

- ❖ It is recommended, if material, the basis of judgment and related uncertainties should be disclosed.

(c) Tax base is determined with reference to the tax returns of each entity. This poses no problems when computing tax base of a stand-alone entity. In some jurisdiction, taxation laws, in the case of a group permits a consolidated tax return. In such cases, tax bases should be determined based on a consolidated tax return. If this is not so, then the basis should be individual tax returns. The carrying amount in both the cases shall be determined on the basis of consolidated financial statements.

Illustration 1B (in continuation to Illustration 1A):

Based on the balance sheet and notes of H Ltd. from previous example, calculate tax base of its assets and liabilities as of 31 March 20X8. Note that balance sheet has been adjusted by current tax expense and liability.

Balance Sheet as of 31 March 20X8

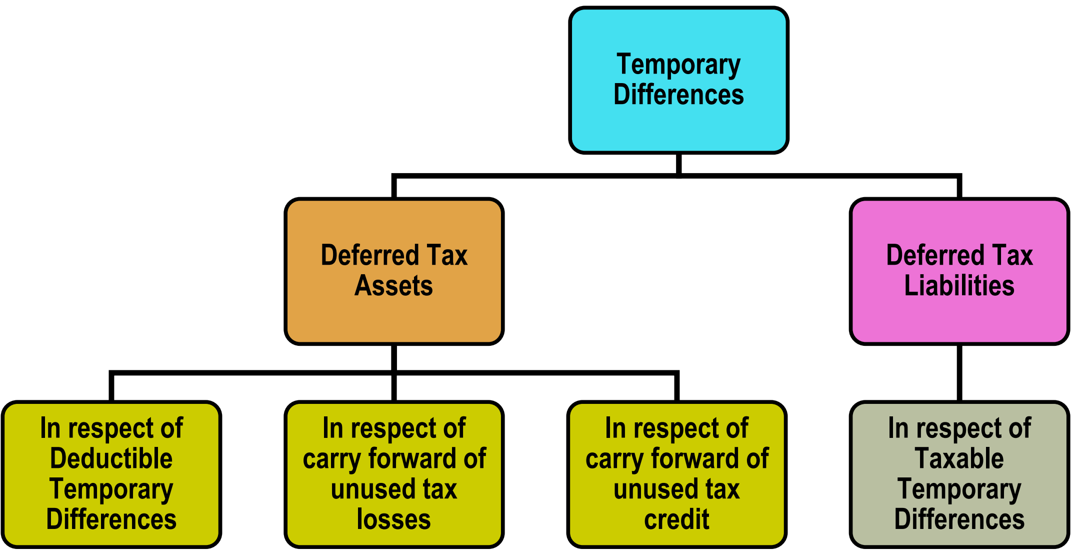
*****

1.6.3 Step 3: Compute temporary differences



(a) The term temporary difference is defined as the difference between the carrying amount of an asset or liability in the balance sheet and its tax base.

Example 20

An entity has an item of plant and machinery acquired on the first day of the reporting period for ₹ 1,00,000. It depreciates it @ 20% p.a on SLM basis. The carrying amount in balance sheet is ₹ 80,000. The taxation laws require depreciation @ 30% on WDV basis. The tax base at the end of the reporting period is ₹ 70,000. The temporary difference is ₹ 10,000 (₹ 80,000 – ₹ 70,000).

(b) The contention in favour of temporary difference is that at the end of the day, all differences between the carrying amount and tax base of an asset or liability will reverse. At most the entity may be able to delay the timing of reversal but the difference will ultimately have reversed, therefore the term 'temporary difference' is used. The cumulative impact is 'zero'.

Example 21

An entity acquires an asset on the first day of reporting period for ₹ 120 with a useful life of 6 years and no residual value. It depreciates the asset on SLM basis. The tax rate is 30%. The tax depreciation is as assumed in the computation below.

The following computations are performed.

Financial Statements

Year	1	2	3	4	5	6
Gross Block	120	120	120	120	120	120
Cumulative Depreciation	(20)	(40)	(60)	(80)	(100)	(120)
Carrying Amount	100	80	60	40	20	0

Tax Computation

Year	1	2	3	4	5	6
Tax base brought forward	120	30	20	13	8	3
Depreciation charge (assumed)	(90)	(10)	(7)	(5)	(5)	(3)
Tax base carried forward	30	20	13	8	3	0

Temporary Difference

Year	1	2	3	4	5	6
Carrying Amount	100	80	60	40	20	0
Tax base carried forward	(30)	(20)	(13)	(8)	(3)	0
Temporary difference	70	60	47	32	17	0
Cumulative impact	+70	–10	–13	–15	–15	–17
	+70	–70				

Movement in Balance Sheet

Year	1	2	3	4	5	6
Temporary difference	70	60	47	32	17	0
Deferred tax liability	21	18	14	10	5	0
Movement in provision	+21	-3	-4	-4	-5	-5
Cumulative	+21	-21				

(c) To some, it may appear that temporary differences and timing differences are one and the same term. It is not so. It can however, be said that temporary difference includes timing differences. Timing differences arise when income or expense is included in accounting profit in one period but is included in taxable profit in a different period.

(d) Examples of temporary differences in the nature of timing differences are as under.

Example 22

- Interest income recognized in income statement on a time proportion basis but recognized in taxable profit on cash basis as and when income is received.
- Depreciation used in determining taxable income may differ from that used in determining accounting profit.
- Development costs may be capitalized and amortize over future periods in determining accounting profit but deducted in determining taxable profit in the period in which they are incurred.

(e) Examples of temporary differences other than in the nature of timing differences are as under:

Example 23: Business combinations

The identifiable assets acquired and liabilities assumed in a business combination are recognised at their fair values in accordance with Ind AS 103, *Business Combinations,* but no equivalent adjustment is made for tax purposes.

With limited exceptions, the identifiable assets acquired and liabilities assumed in a business combination are recognised at their fair values at the acquisition date. Temporary differences arise when the tax bases of the identifiable assets acquired and liabilities assumed are not affected by the business combination or are affected differently.

For example, when the carrying amount of an asset is increased to fair value but the tax base of the asset remains at cost to the previous owner, a taxable temporary difference arises which results in a deferred tax liability. However, it may be noted that the resulting deferred tax liability affects goodwill.

Example 24: *Revaluation: assets are revalued and no equivalent adjustment is made for tax purposes.*

Indian Accounting Standards permit or require certain assets to be carried at fair value or to be revalued (see, for example, Ind AS 16, *Property, Plant and Equipment*, Ind AS 38, *Intangible Assets*, Ind AS 109, *Financial Instruments* and Ind AS 116 *Leases*).

In some jurisdictions, the revaluation or other restatement of an asset to fair value affects taxable profit (tax loss) for the current period. As a result, the tax base of the asset is adjusted and no temporary difference arises.

In other jurisdictions, the revaluation or restatement of an asset does not affect taxable profit in the period of the revaluation or restatement and, consequently, the tax base of the asset is not adjusted.

Nevertheless, the future recovery of the carrying amount will result in a taxable flow of economic benefits to the entity and the amount that will be deductible for tax purposes will

© The Institute of Chartered Accountants of India

differ from the amount of those economic benefits. The difference between the carrying amount of a revalued asset and its tax base is a temporary difference and gives rise to a deferred tax liability or asset.

This is true even if:

(a) the entity does not intend to dispose of the asset. In such cases, the revalued carrying amount of the asset will be recovered through use and this will generate taxable income which exceeds the depreciation that will be allowable for tax purposes in future periods; or

(b) tax on capital gains is deferred if the proceeds of the disposal of the asset are invested in similar assets. In such cases, the tax will ultimately become payable on sale or use of the similar assets.

1.6.4 Step 4: Classify temporary differences

(a) Temporary differences are to be classified into:

- ♦ Taxable temporary differences
- ♦ Deductible temporary differences

(b) Taxable temporary differences are those temporary differences that results in taxable amounts in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled.

As the name 'taxable temporary difference' suggests, these are the temporary differences that will be taxed in future. These taxable temporary differences will increase tax liabilities. All taxable temporary differences, subject to limited exceptions, give rise to deferred tax liability.

Taxable temporary difference arises where the:

- carrying amount of an asset exceeds its tax base; or
- tax base of a liability exceeds its carrying amount.

Example 25

An asset which costs ₹ 150 has a carrying amount of ₹ 100. Cumulative depreciation for tax purposes is ₹ 90 and the tax rate is 25%.

The tax base of the asset is ₹ 60 (cost of ₹ 150 less cumulative tax depreciation of ₹ 90). To recover the carrying amount of ₹ 100, the entity must earn taxable income of ₹ 100 but will only be able to deduct tax depreciation of ₹ 60. Consequently, the entity will pay income taxes of ₹ 10 (₹ 40 at 25%) when it recovers the carrying amount of the asset. The difference between the carrying amount of ₹ 100 and the tax base of ₹ 60 is a taxable temporary difference of ₹ 40.

© The Institute of Chartered Accountants of India

(c) Deductible temporary differences are those temporary differences that results in amounts that are deductible in determining taxable profit (tax loss) of future periods when the carrying amount of the asset or liability is recovered or settled.

Again, it should be noted, the name 'deductible temporary difference' suggests, these are the temporary differences that will be deducted in future when computing the tax liability. These deductible temporary differences will reduce tax liabilities. All deductible temporary differences, subject to exceptions/recognition criteria, give rise to deferred tax assets.

Deductible temporary difference arises where the:

- carrying amount of a liability exceeds its tax base; or
- tax base of an asset exceeds its carrying amount.

Example 26

An entity recognises a liability of ₹ 100 for gratuity and leave encashment expenses by creating a provision for gratuity and leave encashment. For tax purposes, any amount with regard to gratuity and leave encashment will not be deductible until the entity pays the same. The tax rate is 25%.

The tax base of the liability is nil (carrying amount of ₹ 100, less the amount that will be deductible for tax purposes in respect of that liability in future periods). In settling the liability for its carrying amount, the entity will reduce its future taxable profit by an amount of ₹ 100 and, consequently, reduce its future tax payments by ₹ 25 (₹ 100 at 25%). The difference between the carrying amount of ₹ 100 and the tax base of nil is a deductible temporary difference of ₹ 100.

(d) Based on the above discussions, a matrix as under may be drawn:

	For Assets	For Liabilities
If carrying amount > tax base	Taxable Temporary Difference ↓ Deferred Tax Liability (e.g. WDV as per books > WDV as per Income Tax)	Deductible Temporary Difference ↓ Deferred Tax Asset (e.g. Provision for Bonus as per books > Provision for Bonus as per IT)
If carrying amount < tax base	Deductible Temporary Difference ↓ Deferred Tax Asset (e.g. WDV as per books < WDV as per Income Tax)	Taxable Temporary Difference ↓ Deferred Tax Liability (e.g. Loan carrying amount as per books< Loan carrying amounts as per tax)
If carrying amount = tax base	No temporary difference	No temporary difference

(e) Further examples of taxable temporary differences:

- **Transactions that affect profit or loss**

Example 27

1. Interest revenue is received in arrears and is included in accounting profit on a time apportionment basis but is included in taxable profit on a cash basis.
2. Revenue from the sale of goods is included in accounting profit when goods are delivered but is included in taxable profit when cash is collected.

   In this case, there is also a deductible temporary difference associated with any related inventory.
3. Depreciation of an asset is accelerated for tax purposes.
4. Development costs have been capitalised and will be amortised to the statement of profit and loss but were deducted in determining taxable profit in the period in which they were incurred.
5. Prepaid expenses have already been deducted on a cash basis in determining the taxable profit of the current or previous periods.

- **Transactions that affect the balance sheet**

Example 28

1. Depreciation of an asset is not deductible for tax purposes and no deduction will be available for tax purposes when the asset is sold or scrapped.
2. A borrower records a loan at the proceeds received (which equal the amount due at maturity), less transaction costs. Subsequently, the carrying amount of the loan is increased by amortisation of the transaction costs to accounting profit using effective rate of interest. The transaction costs were deducted for tax purposes in the period when the loan was first recognised.
3. A loan payable was measured on initial recognition at the amount of the net proceeds, net of transaction costs. The transaction costs are amortised to accounting profit over the life of the loan. Those transaction costs are not deductible in determining the taxable profit of future, current or prior periods.
4. The liability component of a compound financial instrument (for example a convertible bond) is measured at a discount to the amount repayable on maturity (see Ind AS 32, *Financial Instruments: Presentation*). The discount is not deductible in determining taxable profit (tax loss).

Join us t.me/caborntofight

- **Fair value adjustments and revaluation**

Example 29

1. Financial assets are carried at fair value which exceeds cost, but no equivalent adjustment is made for tax purposes.
2. An entity revalues property, plant and equipment (under the revaluation model treatment in Ind AS 16, *Property, Plant and Equipment*) but no equivalent adjustment is made for tax purposes.

- **Business combinations and consolidation**

Example 30

1. The carrying amount of an asset is increased to fair value in a business combination and no equivalent adjustment is made for tax purposes.
2. Reductions in the carrying amount of goodwill are not deductible in determining taxable profit and the cost of the goodwill would not be deductible on disposal of the business.
3. Unrealised losses resulting from intragroup transactions are eliminated by inclusion in the carrying amount of inventory or property, plant and equipment.
4. Retained earnings of subsidiaries, branches, associates and joint ventures are included in consolidated retained earnings, but income taxes will be payable if the profits are distributed to the reporting parent.
5. Investments in foreign subsidiaries, branches or associates or interests in foreign joint ventures are affected by changes in foreign exchange rates.
6. The non-monetary assets and liabilities of an entity are measured in its functional currency but the taxable profit or tax loss is determined in a different currency.

- **Hyperinflation**

Example 31

Non-monetary assets are restated in terms of the measuring unit current at the end of the reporting period (see Ind AS 29, *Financial Reporting in Hyperinflationary Economies*) and no equivalent adjustment is made for tax purposes.

(f) Further examples of deductible temporary differences:

- **Transactions that affect profit or loss**

Example 32

1. Retirement benefit costs are deducted in determining accounting profit as service

is provided by the employee, but are not deducted in determining taxable profit until the entity pays either retirement benefits or contributions to a fund. *(note: similar deductible temporary differences arise where other expenses, such as gratuity and leave encashment or interest, are deductible on a cash basis in determining taxable profit.)*

2. Accumulated depreciation of an asset in the financial statements is greater than the cumulative depreciation allowed up to the end of the reporting period for tax purposes.

3. The cost of inventories sold before the end of the reporting period is deducted in determining accounting profit when goods or services are delivered but is deducted in determining taxable profit when cash is collected. *(it may be noted, there is also a taxable temporary difference associated with the related trade receivable.)*

4. The net realisable value of an item of inventory, or the recoverable amount of an item of property, plant or equipment, is less than the previous carrying amount and an entity therefore reduces the carrying amount of the asset, but that reduction is ignored for tax purposes until the asset is sold.

5. Preliminary expenses (or organisation or other start-up costs) are recognised as an expense in determining accounting profit but are not permitted as a deduction in determining taxable profit until a later period.

6. Income is deferred in the balance sheet but has already been included in taxable profit in current or prior periods.

7. A government grant which is included in the balance sheet as deferred income will not be taxable in future periods.

- **Fair value adjustments and revaluation**

Example 33

Financial assets are carried at fair value which is less than cost, but no equivalent adjustment is made for tax purposes.

- **Business combinations and consolidation**

Example 34

1. A liability is recognised at its fair value in a business combination, but none of the related expense is deducted in determining taxable profit until a later period.

2. Unrealised profits resulting from intragroup transactions are eliminated from the carrying amount of assets, such as inventory or property, plant or equipment, but no equivalent adjustment is made for tax purposes.

3. Investments in foreign subsidiaries, branches or associates or interests in foreign joint ventures are affected by changes in foreign exchange rates.
4. The non-monetary assets and liabilities of an entity are measured in its functional currency but the taxable profit or tax loss is determined in a different currency.

❖ Deferred tax liabilities are created for all taxable temporary differences with limited exceptions. Similarly, deferred tax assets are created for all deductible temporary differences subject to limited exceptions and recognition criteria. In Step 5 we will discuss the exceptions with respect to creation to deferred tax and in Step 6 we will discuss the recognition criteria area for deferred tax assets. However, before we proceed further, let's discuss the principle in recognising deferred tax liabilities or deferred tax asset.

❖ These are:

(a) Deferred tax liability

- A deferred tax liability shall be recognized for all taxable temporary differences, except to the extent that the deferred tax liability arises from:
  (a) the initial recognition of goodwill; or
  (b) the initial recognition of an asset or liability in a transaction which:
    (i) is not a business combination; and
    (ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss)
- However, for taxable temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures, a deferred tax liability shall be recognised in accordance with paragraph 39 of Ind AS 12.

(b) Deferred tax asset

- A deferred tax asset shall be recognized for all deductible temporary differences to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised, unless the deferred tax asset arises from the initial recognition of an asset or liability in a transaction that:
  (a) is not a business combination; and
  (b) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss).

- However, for deductible temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures, a deferred tax asset shall be recognised in accordance with paragraph 44 of Ind AS 12.

❖ From a reading of the aforesaid principles, deferred tax liabilities and deferred tax assets needs to be recognised in most of the cases. But the recognition of deferred tax liabilities or deferred tax assets are subject to exceptions with respect to the following items:

(a) the initial recognition of goodwill arising in a business combination (exception 1);

(b) the initial recognition of an asset or liability in a transaction which:

(i) is not a business combination; and

(ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss) (exception 2);

(c) temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures (exception 3).

These exceptions are discussed in Step 5.

❖ Also deferred tax assets should be created only to the extent of the probability of availability of taxable profits. In case, this probability of availability of taxable profits is missing, deferred tax assets should not be created. The profit probability recognition criterion is discussed in Step 6.

Illustration 1C (in continuation to Illustration 1A):

Based on the data from above illustration 1A of H Ltd., calculate temporary differences and deferred tax. Note from Illustration 1A: Tax rate for 20X7-20X8 is 30%, but the new tax rate of 32% for the year 20X8-20X9 and beyond has already been enacted before the year end.

Solution:

Calculation of Temporary Differences / Deferred Tax

Item	Carrying amount	Tax base	Temporary difference	Taxable / deductible	DTA / DTL at 32%
Property, plant and equipment	4,20,00,000	3,42,30,000	77,70,000	taxable	(24,86,400)
Product development costs	21,00,000	0	21,00,000	taxable	(6,72,000)
Investment in subsidiary S Ltd.	1,54,00,000	1,54,00,000	0		0
Trading investments	72,80,000	80,50,000	(7,70,000)	deductible	2,46,400

Trade receivables	2,19,10,000	2,47,10,000	(28,00,000)	deductible	8,96,000
Inventories	1,06,40,000	1,12,70,000	(6,30,000)	deductible	2,01,600
Cash and cash equivalents	63,00,000	63,00,000	0		0
Deferred income - government grants	(14,00,000)	0	(14,00,000)	**excluded**	0
Liability for product warranty costs	(5,60,000)	0	(5,60,000)	deductible	1,79,200
Trade payables	(2,67,40,000)	(2,67,40,000)	0		0
Medical benefits for employees	(24,50,000)	0	(24,50,000)	deductible	7,84,000
Deferred tax asset - total					***23,07,200***
Deferred tax liability - total					***(31,58,400)***
Deferred tax total					**(8,51,200)**

*****

1.6.5 Step 5: Identify exceptions

(a) Exception 1: The initial recognition of goodwill in the case of a business combination

- In the case of a business combination, when the consideration paid exceeds the net identifiable assets, goodwill is created.
- Technically speaking, goodwill arising in a business combination is measured as the excess of (a) over (b) below:

  (a) the aggregate of:

  (i) the consideration transferred measured in accordance with Ind AS 103, which generally requires acquisition date fair value;

  (ii) the amount of any non-controlling interest in the acquiree recognized in accordance with Ind AS 103; and

  (iii) in a business combination achieved in stages, the acquisition-date fair value of the acquirer's previously held equity interest in the acquiree.

  (b) the net of the acquisition-date amounts of the identifiable assets acquired and liabilities assumed measured in accordance with Ind AS 103.

- As per principles enunciated in this Ind AS 12, the entity has to determine the tax base of this goodwill to compute the temporary difference, either taxable or deductible, at the time of recognition and subsequently when impairment takes place. The Standard provides separate guidance for taxable temporary difference (Situation A) and deductible temporary difference (Situation B).
- **Situation A:** Where the temporary difference is in the nature of taxable temporary difference. Again, in this case, the prescribed treatment is different where good will is

not tax deductible (Situation A1) and where it is tax deductible (Situation A2).

- **(Situation A1: Where it is not tax deductible)**

(a) At the time of initial recognition of goodwill:

(i) Quite a few tax jurisdictions do not permit this goodwill as a tax deductible expense. Also, the cost of goodwill is often not deductible when a subsidiary dispose of its underlying business. Put simply, the tax base of goodwill is Nil. But the entity has a taxable temporary difference as the goodwill (an asset) has a carrying amount leading to a deferred tax liability.

(ii) The Standard does not permit the recognition of the resulting deferred tax liability as goodwill is measured as a residual and the recognition of the deferred tax liability would increase the carrying amount of goodwill, resulting into a circular type of computation.

Deferred tax liability is not recognised for goodwill since the recognition shall be done through goodwill itself. This is going to result in inflating the goodwill amount, and therefore is not permitted.

Example 35

An entity acquires a subsidiary and pays ₹ 1,00,000. The fair value of net identifiable assets is ₹ 65,000. The following entry shall be made in the books:

Entry 1:

Goodwill	Dr.	35,000	
Net Assets	Dr.	65,000	
To Consideration			1,00,000

The tax base of goodwill is Nil. Hence the taxable temporary difference is ₹ 35,000. Assuming tax rate to be 30%, deferred tax liability of ₹ 10,500 needs to be created. Now because of recognition of this deferred tax liability, the following entry needs to be passed instead of the above entry:

Entry 2:

Goodwill	Dr.	45,500	
Net assets	Dr.	65,000	
To Consideration			1,00,000
To Deferred tax liability			10,500

The temporary difference now is ₹ 45,500 and not ₹ 35,000 and the resultant

Join us t.me/caborntofight

deferred tax liability should be ₹ 13,650 (45,500 x 30%) and not ₹ 10,500. Thus, deferred tax liability in entry 2 should be increased by ₹ 3,150 which in turn will increase goodwill by a similar amount. This is going to inflate the goodwill since the impact is taken in goodwill itself.

Therefore, no deferred tax liability is to be recognised in the case of taxable temporary difference arising on the initial recognition of goodwill in a business combination in tax jurisdiction where such goodwill is not tax deductible.

(b) Subsequently at the time of impairment, if required, in the carrying amount:

(i) This goodwill as per Ind AS 103 is not amortised though tested for impairment.

(ii) Subsequent reduction in a deferred tax liability that is unrecognised because it arises from the initial recognition of goodwill is also regarded as arising from the initial recognition of goodwill and is therefore not recognised.

Example 36

In the aforesaid Example 35, after 2 years goodwill is tested for impairment and the entity recognises an impairment loss of ₹ 10,000, the amount of the taxable temporary difference relating to the goodwill is reduced from ₹ 35,000 to ₹ 25,000, with a resulting decrease in the value of the unrecognised deferred tax liability. That decrease in the value of the unrecognised deferred tax liability is also regarded as relating to the initial recognition of the goodwill and is therefore prohibited from being recognised as per this Ind AS 12.

- **Situation A2: Where it is tax deductible**

  In tax jurisdiction, where goodwill is tax deductible, deferred tax liability should be recognised for the taxable temporary difference.

- **Situation B: where the difference is in the nature of deductible difference**

  In all cases, deferred tax asset, subject to recognition criteria discussed in step 6 below, should be recognised.

- **Summary of Exception 1**

  No deferred tax liability is to be recognised for taxable temporary difference arising on goodwill arising in a business combination in tax jurisdictions where such goodwill is not tax deductible.

  In all other cases of temporary difference, either taxable or deferred, either deferred tax liability or deferred tax asset should be recognised in accordance with other provisions of this Ind AS.

Join us t.me/caborntofight

(b) Exception 2: The initial recognition of an asset or liability in a transaction which: (i) is not a business combination; and (ii) at the time of the transaction, affects neither accounting profit nor taxable profit (tax loss)

- The Standard prohibits recognition of deferred tax liability or deferred tax assets in cases of either taxable or deductible temporary difference arising in a transaction:

  (a) is not a business combination; and

  (b) does not affect neither the accounting profit nor the taxable profit.

- As per the Standard, three types of transactions of assets or liabilities could be anticipated:

  Type 1: In the nature of business combination

  In such a case, recognise deferred tax liabilities or deferred tax assets on temporary differences between the carrying amount and respective tax base of assets or liabilities except on goodwill (in certain circumstances)

  Type 2: Where the transaction impacts accounting profit (i.e. statement of profit or loss) (like sale of goods, recognition of debtors)

  In such a case, recognise any deferred tax in statement of profit or loss:

  Type 3: Where the transaction is not a business combination & does not impact accounting profit nor taxable profit, such as purchase of assets or receipt of government grants.

  This exception relates to the transaction of the third type.

Example 37

Entity A acquires a foreign made vehicle for ₹ 1,00,000 directly from the vehicle manufacturer. The transaction is not a part of any business combination. The tax laws do not permit any depreciation thereon. Also, any profits at the time of sale are not taxable or losses are not tax deductible. This vehicle thus has a tax base of Nil. There is a taxable temporary difference of ₹ 1,00,000. Assuming a tax rate of 30%, the entity should create a deferred tax liability of ₹ 30,000. But the Standard does not permit.

- The Standard implies that if the carrying amount of any asset or liability is not equal to its tax base at the time of its transaction where the transaction is:

  (i) Not in the nature of business combination.

  (ii) Not impacting either the accounting profit or the taxable profit.

  (iii) Neither deferred tax liability nor deferred tax asset should be recognised.

- The following is a brief checklist:

(i) Is the transaction in the nature of business combination?

(ii) Whether the transaction impacts accounting profit?

(iii) Whether the transaction impacts taxable profits?

(iv) Whether the carrying amount is equal to tax base?

- Depending on the answers to the checklist, deferred tax asset or liability needs to be determined in accordance with the guidance under this exception.
- Furthermore, an entity does not recognise subsequent changes in unrecognised deferred tax liability or asset as the asset is depreciated.

Example 38

Entity X acquired an intangible asset (a license) for ₹ 10 Cr that has a life of five years. The asset will be solely recovered through use. No tax deductions can be claimed, as the license is amortised or as when the license expires. No tax deductions are available on disposal. Trading profits from using the license will be taxed at 30%.

The tax base of the asset is nil, because the cost of the intangible asset is not deductible for tax purposes (either in use or on disposal). A temporary difference of ₹ 10 Cr arises; prima facie a deferred tax liability of ₹ 3 Cr should be recognized on this amount. However, no deferred tax is recognised on the asset's initial recognition. This is because the temporary difference did not arise from a business combination and did not affect accounting or taxable profit at the time of the recognition.

The asset will have a carrying amount of ₹ 8 Cr at the end of year 1. The entity will pay tax of ₹ 2.40 Cr through recovery of the asset by earning taxable amounts of ₹ 8 Cr. The deferred tax liability is not recognised, because it arises from initial recognition of an asset. Similarly, no deferred tax is recognised in later periods.

(c) Exception 3: Temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures

- Temporary differences arise when the carrying amount of investments in subsidiaries, branches and associates or interests in joint ventures (namely the parent or investor's share of the net assets of the subsidiary, branch, associate or investee, including the carrying amount of goodwill) becomes different from the tax base (which is often cost) of the investment or interest.
- Such differences may arise in a number of different circumstances, for example:

(i) the existence of undistributed profits of subsidiaries, branches, associates and joint ventures;

(ii) changes in foreign exchange rates when a parent and its subsidiary are based in different countries; and

(iii) a reduction in the carrying amount of an investment in an associate to its recoverable amount.

In consolidated financial statements, the temporary difference may be different from the temporary difference associated with that investment in the parent's separate financial statements if the parent carries the investment in its separate financial statements at cost or revalued amount.

- Should an entity recognise a deferred tax liability in these cases? The guiding principle is:

  An entity shall recognise a deferred tax liability for all taxable temporary differences associated with investments in subsidiaries, branches and associates, and interests in joint ventures, except to the extent that both of the following conditions are satisfied:

  (i) the parent, investor or venturer is able to control the timing of the reversal of the temporary difference; and

  (ii) it is probable that the temporary difference will not reverse in the foreseeable future.

  Now let us examine where the parent, investor or venture is able to control the timing of reversal of taxable temporary difference. Generally, the taxable temporary difference will get reversed on distribution of dividends.

- ***Subsidiary/branches***: As a parent controls the dividend policy of its subsidiary, it is able to control the timing of the reversal of temporary differences associated with that investment (including the temporary differences arising not only from undistributed profits but also from any foreign exchange translation differences). Furthermore, it would often be impracticable to determine the amount of income taxes that would be payable when the temporary difference reverses. Therefore, when the parent has determined that those profits will not be distributed in the foreseeable future the parent does not recognise a deferred tax liability. The same considerations apply to investments in branches.

Merged By CA - Born To Fight

Relevant Extracts from Financial Statements of selected Listed Entities are presented below:

Annual Report of Bharti Airtel Ltd. for the year ending 31 March 2022 (Page 358)

> The Group has not recognised deferred tax liability with respect to unremitted retained earnings and associated foreign currency translation reserve with respect to certain of its subsidiaries and joint ventures where the Group is in a position to control the timing of the distribution of profits and it is probable that the subsidiaries will not distribute the profits in the foreseeable future. The taxable temporary difference associated with respect to unremitted retained earnings and associated foreign currency translation reserve is ₹98,427 and ₹79,800 as of March 31, 2022 and March 31, 2021, respectively. The distribution of the same is expected to attract tax in the range of NIL to 20% depending on the tax rates applicable as of March 31, 2022 in the jurisdiction in which the respective Group entity operates.

***(Source:** Annual report for 2021-2022 of Bharti Airtel Ltd.)*

The non-monetary assets and liabilities of an entity are measured in its functional currency (see Ind AS 21, *The Effects of Changes in Foreign Exchange Rates*) in the exchange rate which give rise to temporary differences that result in a recognised deferred tax liability or (subject to recognition criteria) asset. The resulting deferred tax is charged or credited to profit or loss.

- ***Associate*:** An investor in an associate does not control that entity and is usually not in a position to determine its dividend policy. Therefore, in the absence of an agreement requiring that the profits of the associate will not be distributed in the foreseeable future, an investor recognises a deferred tax liability arising from taxable temporary differences associated with its investment in the associate. In some cases, an investor may not be able to determine the amount of tax that would be payable if it recovers the cost of its investment in an associate, but can determine that it will equal or exceed a minimum amount. In such cases, the deferred tax liability is measured at this amount.
- ***Joint Venture*:** The arrangement between the parties to a joint venture usually deals with the sharing of the profits and identifies whether decisions on such matters require the consent of all the venturers or a specified majority of the venturers. When the venturer can control the sharing of profits and it is probable that the profits will not be distributed in the foreseeable future, a deferred tax liability is not recognised.

The aforesaid discussion related to recognition of deferred tax liability on taxable temporary difference. But there could be deductible temporary differences. So what is the guiding principle for recognition of deferred tax assets on deductible temporary differences?

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- The principle is:

  An entity shall recognise a deferred tax asset for all deductible temporary differences arising from investments in subsidiaries, branches and associates, and interests in joint ventures, to the extent that, and only to the extent that, it is probable that:

  (i) the temporary difference will reverse in the foreseeable future; and

  (ii) taxable profit will be available against which the temporary difference can be utilised.

  Both the conditions have to be satisfied.

- In deciding whether a deferred tax asset is recognised for deductible temporary differences associated with its investments in subsidiaries, branches and associates, and its interests in joint ventures, an entity considers the guidance set out in Step 6 below.

1.6.6 Step 6: Assess (also reassess) deductible temporary differences, tax losses and tax credits

(a) As we are aware that deductible temporary differences reduce the taxable profits of future periods. It signifies that future tax payments will be smaller by a particular amount. However, economic benefits will flow to the entity in the form of lower tax liability in future only in case it has future profits. If there are no future profits, it means there are no tax payments which in turn mean that deductible temporary differences are of no benefit.

Illustration 2

The directors of H Ltd. wish to recognise a material deferred tax asset in relation to ₹ 250 Cr of unused trading losses which have accumulated as at 31st March 20X1. H Ltd. has budgeted profits for ₹ 80 Cr for the year ended 31st March 20X2. The directors have forecast that profits will grow by 20% each year thereafter.

However, the market is currently depressed and sales orders are at a lower level for the first quarter of 20X2 than they were for the same period in any of the previous five years. On extrapolating the sales order book, it is noted that the improvement in trading results may occur after the next couple of years to come at the position of breakeven and the budgeted profits shared by the directors of H Ltd. do not appear to be in line with the sales order book. H Ltd. operates under a tax jurisdiction which allows for trading losses to be only carried forward for a maximum of two years.

Analyse whether a deferred tax asset can be recognized in the financial statements of H Ltd. for the year ended 31st March 20X1?

Solution

In relation to unused trading losses, the carrying amount is zero since the losses have not yet been recognised in the financial statements of H Ltd. A potential deferred tax asset does arise but the determination of the tax base is more problematic.

The tax base of an asset is the amount which will be deductible against taxable economic benefits from recovering the carrying amount of the asset. Where recovery of an asset will have no tax consequences, the tax base is equal to the carrying amount. H Ltd. operates under a tax jurisdiction which only allows losses to be carried forward for two years. The maximum the tax base could be is therefore equal to the amount of unused losses for years 20X0 and 20X1 since these only are available to be deducted from future profits. The tax base though needs to be restricted to the extent that there is a probability of sufficient future profits to offset the trading losses. The directors of H Ltd. should base their forecast of the future profitability on reasonable and supportable assumptions. There appears to be evidence that this is not the case.

H Ltd. has accumulated trading losses and there is little evidence that there will be an improvement in trading results within the next couple of years. The market is depressed and sales orders for the first quarter of 20X2 are below levels in any of the previous five years.

The forecast profitability for 20X2 and subsequent growth rate therefore appear to be unrealistically optimistic.

Given that losses can only be carried forward for a maximum of two years, it is unlikely that any deferred tax asset should be recognised.

Hence, the contention of directors to recognized deferred tax assets in relation to ₹ 250 crores is not correct.

*****

Example 39

Entity A has deductible temporary difference of ₹ 1,00,000 for the financial year ended 31st March, 20X1. It anticipates a future profit of ₹ 3,00,000 in next year against which the said deductible temporary differences could be set off. The tax rate is 30%. Thus, in future the entity will pay tax on ₹ 2,00,000 (₹ 3,00,000 – ₹ 1,00,000). The tax liability is ₹ 60,000 @ 30% tax rate.

Had there been no deductible temporary difference, the tax liability would be ₹ 90,000 @ 30% on ₹ 3,00,000. Thus, there is an inflow of economic benefit of ₹ 30,000 through a lower cash outflow.

However, if there is no probability of taxable profits in future, the entity is not able to derive any economic benefit (by way of lower cash outflow in future) because of the existing of deductible temporary difference.

(b) Therefore, an entity should recognise deferred tax assets only when it is probable that taxable profits will be available against which the deductible temporary differences can be utilised. This is based on the principle of prudence and conservatism. It should be noted that the entity has to make sufficient taxable profits in future. Not making losses will not suffice.

(c) If tax law does not impose any restrictions on sources of taxable profits against which it may make deductions on the reversal of that deductible temporary difference, an entity assesses a deductible temporary difference in combination with all of its other deductible temporary differences.

(d) If tax law restricts the utilisation of losses to deduction against income of a specific type, a deductible temporary difference is assessed in combination only with other deductible temporary differences.

(e) Probable means more likely than not. The Standard provides a three step criteria to be applied in a serial order. The criterion is applied in the case of the same taxable entity assessed by the same taxation authority.

Criteria No. 1 : Existence of taxable temporary differences

The entity at the balance sheet should see whether there are sufficient taxable temporary differences whose reversal pattern matches with the reversal profile of deductible temporary differences.

Particulars	Year		
	1	2	3
Taxable temporary difference			
Opening balance	10,000	5,000	2,000
Recognised in taxable income	5,000	3,000	2,000
Closing balance	5,000	2,000	-
Deductible temporary difference			
Opening balance	8,000	4,000	1,000
Recognised in taxable income	4,000	3,000	1,000
Closing balance	4,000	1,000	-
Statement of taxable income			
Taxable temporary difference	5,000	3,000	2,000
Deductible temporary difference	4,000	3,000	1,000

The entity can recognise deferred tax assets for the entire deductible temporary differences.

Join us t.me/caborntofight

Example 40

As at 31st March, 20X1, an entity has both taxable temporary differences and deductible temporary difference with the following reversal pattern. Deductible temporary differences cannot be carried forward.

Particulars	Year		
	1	2	3
Taxable temporary difference			
Opening balance	10,000	5,000	2,000
Recognized in taxable income	5,000	3,000	2,000
Closing balance	5,000	2,000	-
Deductible temporary difference			
Opening balance	8,000	4,000	-
Recognized in taxable income	4,000	4,000	-
Closing balance	4,000	-	-
Statement of taxable income			
Taxable temporary difference	5,000	3,000	2,000
Deductible temporary difference	4,000	4,000	-

The entity can recognize deferred tax assets for the deductible temporary differences up to ₹ 7,000 (₹ 4,000 for year 1 & ₹ 3,000 for year 2) as a taxable temporary difference of that amount is available.

Criteria No. 2: Probability of future profits

The entity has to apply probability criteria on its future profitability. If it is probable that there will be sufficient taxable profits, then to the extent of available profits, deductible temporary differences should be applied for recognition of deferred tax assets.

Examples 41- 43

41. If in the aforesaid example 40, the entity expects a profit of ₹ 750 in year 2, then deferred tax asset should be created on ₹ 7,750 (₹ 4,000 + ₹ 3,000 + ₹ 750).

    However, taxable profits arising in future from future origination of deductible temporary differences should not be considered as deductible temporary differences will require future taxable profits for utilisation.

42. An entity has unutilised deductible temporary difference of ₹ 1,000 at the end of year 1 that is going to be reversed in the year 2. In year 2, taxable profits are computed because of tax disallowances of unpaid statutory liabilities of ₹ 1,000 which can be claimed as deduction only in year 3, if paid, but cannot be carried forward. The entity expects nil taxable profit in year 3. In this case, no deferred tax asset will be created.

43. An entity has unutilised deductible temporary difference of ₹ 1,000 at the end of year 1 that is going to be reversed in the year 2. In year 2, taxable profits are computed because of tax disallowances of unpaid statutory liabilities of ₹ 1,000 which can be claimed as deduction only in year 3, if paid, but cannot be carried forward. The entity expects taxable profit of ₹ 450 in year 3. In this case, deferred tax asset will be created at appropriate rate on deductible temporary difference of ₹ 450 only.

Criteria No. 3: Availability of tax planning opportunities

If even after applying criteria no. 2, still there are unrecognised deductible temporary differences, the entity endeavour to see whether any tax planning opportunities are available.

Tax planning opportunities are actions that the entity would take in order to create or increase taxable income in a particular period before the expiry of a tax loss or tax credit carry forward.

For example, in some jurisdictions, taxable profit may be created or increased by:

(i) electing to have interest income taxed on either a received or receivable basis;

(ii) deferring the claim for certain deductions from taxable profit;

(iii) selling, and perhaps leasing back, assets that have appreciated but for which the tax base has not been adjusted to reflect such appreciation; and

(iv) selling an asset that generates non-taxable income (such as, in some jurisdictions, a government bond) in order to purchase another investment that generates taxable income.

Where tax planning opportunities advance taxable profit from a later period to an earlier period, the utilisation of a tax loss or tax credit carry forward still depends on the existence of future taxable profit from sources other than future originating temporary differences.

(d) Unused tax losses and unused tax credits:

- A deferred tax asset shall be recognised for the carry forward of unused tax losses and unused tax credits to the extent that it is probable that future taxable profit will be available against which the unused tax losses and unused tax credits can be utilised.
- The criteria for recognising deferred tax assets arising from the carry forward of unused tax losses and tax credits are the same as the criteria for recognising deferred tax assets arising from deductible temporary differences. However, the existence of unused tax losses is strong evidence that future taxable profit may not be available. Therefore, when an entity has a history of recent losses, the entity recognises a deferred tax asset arising from unused tax losses or tax credits only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused

tax credits can be utilised by the entity. In such circumstances, paragraph 82 of Ind AS 12 requires disclosure of the amount of the deferred tax asset and the nature of the evidence supporting its recognition.

(e) When an entity has a history of recent losses, the entity should consider the following guidance:

- The criteria for recognising deferred tax assets arising from the carry forward of unused tax losses and tax credits are the same as the criteria for recognising deferred tax assets arising from deductible temporary differences.
- However, the existence of unused tax losses is strong evidence that future taxable profit may not be available. Therefore, when an entity has a history of recent losses, the entity recognises a deferred tax asset arising from unused tax losses or tax credits only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused tax credits can be utilised by the entity.
- In such circumstances, this Ind AS requires disclosure of the amount of the deferred tax asset and the nature of the evidence supporting its recognition.
- To assess the probability that taxable profit will be available against which the unused tax losses or unused tax credits can be utilised, the entity should consider the following:
  (i) whether the entity has sufficient taxable temporary differences relating to the same taxation authority and the same taxable entity, which will result in taxable amounts against which the unused tax losses or unused tax credits can be utilised before they expire;
  (ii) whether it is probable that the entity will have taxable profits before the unused tax losses or unused tax credits expire;
  (iii) whether the unused tax losses result from identifiable causes which are unlikely to recur; and
  (iv) whether tax planning opportunities are available to the entity that will create taxable profit in the period in which the unused tax losses or unused tax credits can be utilised.
- To the extent that it is not probable that taxable profit will be available against which the unused tax losses or unused tax credits can be utilised, the deferred tax asset is not to be recognised.

(f) Reassessment of unrecognised Deferred Tax Assets:

- At the end of each reporting period, the entity should reassess unrecognised deferred tax assets. It may need to recognise a previously unrecognised deferred tax asset to

© The Institute of Chartered Accountants of India

the extent it has now become probable that future taxable profits will be available for deferred tax assets to be recovered. For example, improvement in trading conditions may make it probable for an entity to generate sufficient taxable profits in future years to enable it to meet the recognition criteria laid down above.

(g) Uncertainty over income tax treatment

- In assessing whether and how an uncertain tax treatment affects the determination of taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates, an entity shall assume that a taxation authority will examine amounts it has a right to examine and have full knowledge of all related information when making those examinations.
- If an entity concludes it is probable that the taxation authority will accept an uncertain tax treatment, the entity shall determine the taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates consistently with the tax treatment used or planned to be used in its income tax filings.
- If an entity concludes it is not probable that the taxation authority will accept an uncertain tax treatment, the entity shall reflect the effect of uncertainty in determining the related taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates. An entity shall reflect the effect of uncertainty for each uncertain tax treatment by using either of the following methods, depending on which method the entity expects to better predict the resolution of the uncertainty:

  (a) The most likely amount—the single most likely amount in a range of possible outcomes. The most likely amount may better predict the resolution of the uncertainty if the possible outcomes are binary or are concentrated on one value.

  (b) The expected value—the sum of the probability-weighted amounts in a range of possible outcomes. The expected value may better predict the resolution of the uncertainty if there is a range of possible outcomes that are neither binary nor concentrated on one value.
- If an uncertain tax treatment affects current tax and deferred tax (for example, if it affects both taxable profit used to determine current tax and tax bases used to determine deferred tax), an entity shall make consistent judgements and estimates for both current tax and deferred tax.

Comparison to AS 22:

Para 15: *Except in the situations stated in paragraph 17, deferred tax assets should be recognised and carried forward only to the extent that there is a reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realised.*

Para 16: *While recognising the tax effect of timing differences, consideration of prudence cannot*

be ignored. Therefore, deferred tax assets are recognised and carried forward only to the extent that there is a reasonable certainty of their realisation. This reasonable level of certainty would normally be achieved by examining the past record of the enterprise and by making realistic estimates of profits for the future.

Para 17: *Where an enterprise has unabsorbed depreciation or carry forward of losses under tax laws, deferred tax assets should be recognised only to the extent that there is virtual certainty supported by convincing evidence that sufficient future taxable income will be available against which such deferred tax assets can be realised.*

Ind AS 12 and AS 22 both require exercise of prudence while recognizing deferred tax assets. However, AS 22 emphasizes on virtual certainty supported by convincing evidence for recognizing deferred tax asset, whereas Ind AS 12 requires only probable existence of taxable profit against which deductible temporary differences can be utilized. Thus, the requirement of recognizing deferred tax asset under AS 22 is very strict (virtual certainty moves towards more than 95% certainty through evidence such as a strong order book for the future, firm orders in hand etc.), whereas under Ind AS 12, the same is more realistic focusing only on probable existence of taxable profits. Ind AS 12 moves to exercise caution only in case of unused tax losses, where it specifies that deferred tax asset arising from unused tax losses or tax credits can be recognized only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused tax credits can be utilised by the entity.

1.6.7 Step 7: Determine the tax rate (law)

(a) Having determined the taxable temporary differences and deductible temporary difference that needs to be considered for recognition of deferred tax liabilities or assets respectively, we now need to determine the tax for creation to deferred tax liabilities or assets. The principal is:

Deferred tax assets and liabilities shall be measured:

(i) at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled;

(ii) based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

(b) We have already discussed above the meaning of 'enacted' or 'substantively enacted'.

The same discussion applies here also. But another key word that needs to be understood in the principle is 'expected to apply'. Since, we are dealing in the future and future is uncertain, we have to measure this uncertainty. This leads to application of judgment. The tax rates or the tax laws that will apply in future depends on various factors such as manner

of recovery of asset or settlement of liability, levels of income, distribution of profits among others. These are now discussed below.

It should however be remembered that the measurement of deferred tax liabilities and deferred tax assets shall reflect the tax consequences that would follow from the manner in which the entity expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

(c) Manner of recovery of asset or settlement of liability:

- In some jurisdictions, the manner in which an entity recovers (settles) the carrying amount of an asset (liability) may affect either or both of (a) the tax rate applicable when the entity recovers (settles) the carrying amount of the asset (liability); and (b) the tax base of the asset (liability). In such cases, an entity measures deferred tax liabilities and deferred tax assets using the tax rate and the tax base that are consistent with the expected manner of recovery or settlement.

Examples 44 & 45

44. An asset has a carrying amount of ₹ 100 and a tax base of ₹ 60. A tax rate of 20% would apply if the asset was sold and a tax rate of 30% would apply to other income.

    The entity recognises a deferred tax liability of ₹ 8 (₹ 40 at 20%) if it expects to sell the asset without further use or a deferred tax liability of ₹ 12 (₹ 40 at 30%) if it expects to retain the asset and recover its carrying amount through use.

45. An asset with a cost of ₹ 100 and a carrying amount of ₹ 80 is revalued to ₹ 150. No equivalent adjustment is made for tax purposes. Accumulated depreciation for tax purposes is ₹ 30 and the tax rate is 30%. If the asset's sale proceeds exceeds the cost (₹ 100), a gain of only ₹ 30 (being the cumulative tax depreciation of ₹ 30 claimed) will be included in taxable income but sale proceeds in excess of cost (₹ 100) will not be taxable.

    The tax base of the asset is ₹ 70 and there is a taxable temporary difference of ₹ 80 (₹ 150 the revalued amount is the carrying amount).

    If the entity expects to recover the carrying amount by using the asset, it must generate taxable income of ₹ 150, but will only be able to deduct depreciation of ₹ 70. On this basis, there is a deferred tax liability of ₹ 24 (₹ 80 at 30%).

    If the entity expects to recover the carrying amount by selling the asset immediately for proceeds of ₹ 150, the deferred tax liability is computed as follows:

(i)	Sale proceeds	₹	150
(ii)	Sale proceeds in excess of cost (₹ 100)	₹	50

(iii)	Taxable proceeds	₹ 100
(iv)	Tax base	₹ 70
(v)	Taxable temporary difference	₹ 30
(vi)	Tax rate	30%
(vii)	Deferred tax liability	₹ 9

- Thus, the measurement of deferred tax liabilities and deferred tax assets shall reflect the tax consequences that would follow from the manner in which the entity expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.
- However, an issue may arise as to how to interpret the term 'recovery' in relation to an asset that is not depreciated (non-depreciable asset) and is revalued in accordance with paragraph 31 (revaluation model) of Ind AS 16.
- **The accounting principle in this case is as under:**
    - ♦ The deferred tax liability or asset that arises from the revaluation of a non-depreciable asset in accordance with paragraph 31 of Ind AS 16 shall be measured on the basis of the tax consequences that would follow from recovery of the carrying amount of that asset through sale, regardless of the basis of measuring the carrying amount of that asset.
    - ♦ Accordingly, if the tax law specifies a tax rate applicable to the taxable amount derived from the sale of an asset that differs from the tax rate applicable to the taxable amount derived from using an asset, the former rate (tax rate applicable to the taxable amount derived from the sale of an asset) is applied in measuring the deferred tax liability or asset related to a non-depreciable asset.

(d) Levels of taxable income:

When different tax rates apply to different levels of taxable income, deferred tax assets and liabilities are measured using the average rates that are expected to apply to the taxable profit (tax loss) of the periods in which the temporary differences are expected to reverse.

(e) Distribution of dividends:

In some jurisdictions, income taxes are payable at a higher or lower rate if part or all of the net profit or retained earnings is paid out as a dividend to shareholders of the entity. In some other jurisdictions, income taxes may be refundable or payable if part or all of the net profit or retained earnings is paid out as a dividend to shareholders of the entity. *In these circumstances, current and deferred tax assets and liabilities are measured at the tax rate applicable to undistributed profits.*

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Example 46

The following example deals with the measurement of current and deferred tax assets and liabilities for an entity in a jurisdiction where income taxes are payable at a higher rate on undistributed profits (50%) with an amount being refundable when profits are distributed. The tax rate on distributed profits is 35%. At the end of the reporting period, 31st December, 20X1, the entity does not recognise a liability for dividends proposed or declared after the reporting period. As a result, no dividends are recognised in the year 20X1. Taxable income for 20X1 is ₹ 1,00,000. The net taxable temporary difference for the year 20X1 is ₹ 40,000.

The entity recognises a current tax liability and a current income tax expense of ₹ 50,000. No asset is recognised for the amount potentially recoverable as a result of future dividends. The entity also recognises a deferred tax liability and deferred tax expense of ₹ 20,000 (₹ 40,000 at 50%) representing the income taxes that the entity will pay when it recovers or settles the carrying amounts of its assets and liabilities based on the tax rate applicable to undistributed profits.

Subsequently, on 15th March, 20X2 the entity recognises dividends of ₹ 10,000 from previous operating profits as a liability.

On 15th March, 20X2, the entity recognises the recovery of income taxes of ₹ 1,500 (15% of the dividends recognised as a liability) as a current tax asset and as a reduction of current income tax expense for 20X2.

1.6.8 Step 8: Calculate and recognise deferred tax

(a) This is the simplest of all steps. Having determined the taxable temporary differences and the deductible temporary differences as per Step 6 and the applicable tax rates with reference to tax laws, one has to multiply amount determined in Step 6 with the rates determined in Step 7.

- Taxable temporary differences when multiplied with tax rates will lead to deferred tax liabilities.
- Deductible temporary differences when multiplied with rates will lead to deferred tax assets.

(b) The following should be kept in mind:

- Deferred tax liabilities or assets should not be discounted.
- The carrying amount of a deferred tax asset shall be reviewed at the end of each reporting period.
- An entity shall reduce the carrying amount of a deferred tax asset to the extent that it is no longer probable that sufficient taxable profit will be available to allow the benefit

Join us t.me/caborntofight

of part or all of that deferred tax asset to be utilised.

- Any such reduction shall be reversed to the extent that it becomes probable that sufficient taxable profit will be available.

1.6.9 Step 9: Accounting of deferred tax

(a) The accounting of deferred tax effects of a transaction of an event is consistent with the accounting for that transaction or event.

(b) A transaction and the deferred tax effects of a transaction may be accounted for in:

- Statement of profit and loss;
- Outside profit and loss account:
  - (i) In other comprehensive income such as revaluation amount in accordance with Ind AS 16, *Property, Plant and Equipment*
  - (ii) Directly in equity such as correction of an error in accordance with Ind AS 8, *Accounting Policies, Changes in Accounting Estimates and Errors.*

(c) However, the carrying amount of deferred tax assets and liabilities may change even though there is no change in the amount of the related temporary differences.

- This can result, for example, from:
  - — a change in tax rates or tax laws;
  - — a reassessment of the recoverability of deferred tax assets; or
  - — a change in the expected manner of recovery of an asset.
- In such cases, the resulting deferred tax is recognised in profit or loss, except to the extent that it relates to items previously recognised outside profit or loss.

(d) In exceptional circumstances, it may be difficult to determine the amount of current and deferred tax that relates to items recognised outside profit or loss (either in other comprehensive income or directly in equity).

- This may be the case, for example, when a change in the tax rate or other tax rules affects a deferred tax asset or liability relating (in whole or in part) to an item that was previously recognised outside profit or loss; or
- In such cases, the current and deferred tax related to items that are recognised outside profit or loss are based on a reasonable pro rata allocation of the current and deferred tax of the entity in the tax jurisdiction concerned, or other method that achieves a more appropriate allocation in the circumstances.

(e) Ind AS 16 does not specify whether an entity should transfer each year from revaluation surplus to retained earnings an amount equal to the difference between the depreciation or

amortisation on a revalued asset and the depreciation or amortisation based on the cost of that asset.

- If an entity makes such a transfer, the amount transferred is net of any related deferred tax.
- Similar considerations apply to transfers made on disposal of an item of property, plant or equipment.

(f) When an asset is revalued for tax purposes and that revaluation is related to an accounting revaluation of an earlier period, or to one that is expected to be carried out in a future period, the tax effects of both the asset revaluation and the adjustment of the tax base are recognised in other comprehensive income in the periods in which they occur.

(g) When an entity pays dividends to its shareholders, it may be required to pay a portion of the dividends to taxation authorities on behalf of shareholders. In many jurisdictions this amount is referred to as a withholding tax. Such an amount paid or payable to taxation authorities is charged to equity as a part of the dividends.

1.6.10 Step 10: Offsetting deferred tax assets and deferred tax liabilities

(a) An entity shall offset deferred tax assets and deferred tax liabilities if, and only if:

- the entity has a legally enforceable right to set off current tax assets against current tax liabilities; and
- the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same taxation authority on either:
  (i) the same taxable entity; or
  (ii) different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

(b) To avoid the need for detailed scheduling of the timing of the reversal of each temporary difference, this Standard requires an entity to set off a deferred tax asset against a deferred tax liability of the same taxable entity if, and only if, they relate to income taxes levied by the same taxation authority and the entity has a legally enforceable right to set off current tax assets against current tax liabilities.

(c) In rare circumstances, an entity may have a legally enforceable right of set off, and an intention to settle net, for some periods but not for others. In such rare circumstances, detailed scheduling may be required to establish reliably whether the deferred tax liability of one taxable entity will result in increased tax payments in the same period in which a deferred

Join us t.me/caborntofight

tax asset of another taxable entity will result in decreased payments by that second taxable entity.

Illustration 3

On 1st April 20X1, S Ltd. leased a machine over a 5 year period. The present value of lease liability is ₹ 120 Cr (discount rate of 8%) and is recognized as lease liability and corresponding Right of Use (RoU) Asset on the same date. The RoU Asset is depreciated under straight line method over the 5 years. The annual lease rentals are ₹ 30 Cr payable starting 31st March 20X2. The tax law permits tax deduction on the basis of payment of rent.

Assuming tax rate of 30%, you are required to explain the deferred tax consequences for the above transaction for the year ended 31st March 20X2.

Solution

A temporary difference effectively arises between the value of the machine for accounting purposes and the amount of lease liability, since the rent payment is eligible for tax deduction.

Tax base of the machine is nil as the amount is not eligible for deduction for tax purposes.

Tax base of the lease liability is nil as it is measured at carrying amount less any future tax deductible amount

Recognition of deferred tax on 31st March 20X2:

Carrying amount in balance sheet	
RoU Asset (120 Cr – 24 Cr (Depreciation))	₹ 96.00 Dr
Lease Liability (120 Cr + 9.60 Cr (120 Cr x 8%) - 30 Cr)	₹ 99.60 Cr
Net Amount	**₹ 3.60 Cr**
Tax Base	₹ 0.00 Cr
Temporary Difference (deductible)	₹ 3.60 Cr
Deferred Tax asset to be recognized (₹ 3.60 Cr x 30%)	₹ 1.08 Cr

*****

1.7 PART D: PRACTICAL APPLICATION

1.7.1 Deferred tax arising from a business combination

(a) As discussed above, temporary differences may arise in a business combination. In accordance with Ind AS 103, an entity recognises any resulting deferred tax assets (to the extent that they meet the recognition criteria) or deferred tax liabilities as identifiable assets and liabilities at the acquisition date. Consequently, those deferred tax assets and deferred

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

tax liabilities affect the amount of goodwill or the bargain purchase gain the entity recognises. However, in accordance with this Ind AS, in certain circumstances, an entity does not recognise deferred tax liabilities arising from the initial recognition of goodwill.

Illustration 4

On 1st April 20X1, A Ltd. acquired 12 Cr shares (representing 80% stake) in B Ltd. by means of a cash payment of ₹ 25 Cr. It is the group policy to value the non-controlling interest in subsidiaries at the date of acquisition at fair value. The market value of an equity share in B Ltd. at 1st April 20X1 can be used for this purpose. On 1st April 20X1, the market value of a B Ltd. share was ₹ 2.00

On 1st April 20X1, the individual financial statements of B Ltd. showed the net assets at ₹ 23 Cr.

The directors of A Ltd. carried out a fair value exercise to measure the identifiable assets and liabilities of B Ltd. at 1st April 20X1. The following matters emerged:

- *Property having a carrying value of ₹ 15 Cr at 1st April 20X1 had an estimated market value of ₹ 18 Cr at that date.*
- *Plant and equipment having a carrying value of ₹ 11 Cr at 1st April 20X1 had an estimated market value of ₹ 13 Cr at that date.*
- *Inventory in the books of B Ltd. is shown at a cost of ₹ 2.50 Cr. The fair value of the inventory on the acquisition date is ₹ 3 Cr.*

The fair value adjustments have not been reflected in the individual financial statements of B Ltd. In the consolidated financial statements, the fair value adjustments will be regarded as temporary differences for the purposes of computing deferred tax. The rate of deferred tax to apply to temporary differences is 20%.

Assume that the current book value (prior to fair valuation exercise under Ind AS 103) equals the tax base.

Calculate the deferred tax impact on above and calculate the goodwill arising on acquisition of B Ltd.

Solution

Computation of Net Assets of B Ltd.

As per books	₹ 23.00 Cr
Add: Fair value differences not recognized in books of B Ltd.:	
Property (18 Cr – 15 Cr)	₹ 3.00 Cr
Plant and Equipment (13 Cr – 11 Cr)	₹ 2.00 Cr

Join us t.me/caborntofight

Merged By CA - Born To Fight

Inventory (3 Cr – 2.5 Cr)	₹ 0.50 Cr
	₹ 28.5 Cr
Less: Deferred tax liability on fair value difference @ 20%	
[(3 Cr + 2 Cr + 0.50 Cr) x 20%]	(₹ 1.10 Cr)
Total Net Assets at Fair Value	₹ 27.40 Cr
Computation of Goodwill:	
Purchase Consideration	₹ 25.00 Cr
Add: Non-Controlling Interest [{(12 Cr x (20% / 80%)} x ₹ 2 per share]	₹ 6.00 Cr
	₹ 31.00 Cr
Less: Net Assets at Fair Value	(₹ 27.40 Cr)
Goodwill on acquisition date	₹ 3.60 Cr

*****

(b) As a result of a business combination, the probability of realising a pre-acquisition deferred tax asset of the acquirer could change. An acquirer may consider it probable that it will recover its own deferred tax asset that was not recognised before the business combination. For example, the acquirer may be able to utilise the benefit of its unused tax losses against the future taxable profit of the acquiree. Alternatively, as a result of the business combination it might no longer be probable that future taxable profit will allow the deferred tax asset to be recovered. In such cases, the acquirer recognises a change in the deferred tax asset in the period of the business combination but does not include it as part of the accounting for the business combination. Therefore, the acquirer does not take it into account in measuring the goodwill or bargain purchase gain it recognises in the business combination.

(c) The potential benefit of the acquiree's income tax loss carry forwards or other deferred tax assets might not satisfy the criteria for separate recognition when a business combination is initially accounted for but might be realised subsequently. An entity shall recognise acquired deferred tax benefits that it realises after the business combination as follows:

- Acquired deferred tax benefits recognised within the measurement period that result from new information about facts and circumstances that existed at the acquisition date shall be applied to reduce the carrying amount of any goodwill related to that acquisition. If the carrying amount of that goodwill is zero, any remaining deferred tax benefits shall be recognised in other comprehensive income and accumulated in equity as capital reserve or recognised directly in capital reserve, depending on whether paragraph 34 or paragraph 36A of Ind AS 103 would have applied had the measurement period adjustments been known on the date of acquisition itself.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- All other acquired deferred tax benefits realised shall be recognised in profit or loss (or, if this Standard so requires, outside profit or loss).

1.7.2 Current and deferred tax arising from share-based payment transactions

(a) In some tax jurisdictions, an entity receives a tax deduction (i.e., an amount that is deductible in determining taxable profit) that relates to remuneration paid in shares, share options or other equity instruments of the entity. The amount of that tax deduction may differ from the related cumulative remuneration expense and may arise in a later accounting period. For example, in some jurisdictions, an entity may recognise an expense for the consumption of employee services received as consideration for share options granted, in accordance with Ind AS 102, *Share- based Payment*, and not receive a tax deduction until the share options are exercised, with the measurement of the tax deduction based on the entity's share price at the date of exercise.

(b) As with the preliminary expenses, the difference between the tax base of the employee services received to date (being the amount permitted as a deduction in future periods under taxation laws), and the carrying amount of nil, is a deductible temporary difference that results in a deferred tax asset. If the amount permitted as a deduction in future periods under taxation laws is not known at the end of the period, it shall be estimated, based on information available at the end of the period. For example, if the amount permitted as a deduction in future periods under taxation laws is dependent upon the entity's share price at a future date, the measurement of the deductible temporary difference should be based on the entity's share price at the end of the period.

(c) As noted above, in (a), the amount of the tax deduction or estimated future tax deduction, measured in accordance with paragraph (b) above may differ from the related cumulative remuneration expense. This Standard requires that current and deferred tax should be recognised as income or an expense and included in profit or loss for the period, except to the extent that the tax arises from (a) a transaction or event that is recognised, in the same or a different period, outside profit or loss, or (b) a business combination. If the amount of the tax deduction (or estimated future tax deduction) exceeds the amount of the related cumulative remuneration expense, this indicates that the tax deduction relates not only to remuneration expense but also to an equity item. In this situation, the excess of the associated current or deferred tax should be recognised directly in equity.

Illustration 5

On 1st April 20X1, P Ltd. had granted 1 Cr share options worth ₹ 4 Cr s(fair value) ubject to a two-year vesting period. The income tax law permits a tax deduction at the exercise date of the intrinsic value of the options. The intrinsic value of the options at 31st March 20X2 was ₹ 1.60 Cr and at 31st March 20X3 was ₹ 4.60 Cr. The increase in the fair value of the options on 31st March 20X3 was not foreseeable at 31st March 20X2. The options were exercised at 31st March 20X3.

Give the accounting for the above transaction for deferred tax for period ending 31st March, 20X2 and 31st March, 20X3. Assume that there are sufficient taxable profits available in future against any deferred tax assets. Tax rate of 30% is applicable to P Ltd.

Solution:

On 31st March 20X2:

The tax benefit is calculated as under:

Carrying amount of Share based payment	₹ 0.00 Cr
Tax Base of Share based payment (₹ 1.60 Cr x ½)	₹ 0.80 Cr
Temporary Difference (Carrying amount – tax base)	₹ 0.80 Cr
Deferred Tax Asset recognized (Temporary Difference x Tax rate)	
(0.80 Cr x 30%)	₹ 0.24 Cr

Journal Entry for above:

Deferred Tax Asset	Dr.	₹ 0.24 Cr	
To Tax Expense			₹ 0.24 Cr

(Being DTA recognized on equity option)

On 31st March 20X3:

The options have been exercised and a current tax benefit will be available to the entity on the basis of intrinsic value of ₹ 4.60 Cr. Initially recognized deferred tax asset will no longer be required.

The accounting entry will be done as under:

Tax Expense	Dr	₹ 0.24 Cr	
To Deferred Tax Asset			₹ 0.24 Cr

(Being DTA reversed on the exercise of the option)

*****

1.7.3 Change in tax status of an entity or its shareholders

(a) A change in the tax status of an entity or of its shareholders may have consequences for an entity by increasing or decreasing its tax liabilities or assets. This may, for example, occur upon the public listing of an entity's equity instruments or upon the restructuring of an entity's equity. It may also occur upon a controlling shareholder's move to a foreign country. As a result of such an event, an entity may be taxed differently; it may for example gain or lose tax incentives or become subject to a different rate of tax in the future.

(b) A change in the tax status of an entity or its shareholders may have an immediate effect on the entity's current tax liabilities or assets. The change may also increase or decrease the deferred tax liabilities and assets recognised by the entity, depending on the effect the change in tax status has on the tax consequences that will arise from recovering or settling the carrying amount of the entity's assets and liabilities.

(c) The issue is how an entity should account for the tax consequences of a change in its tax status or that of its shareholders.

(d) The accounting principles that should be adopted in this situation are as under:

- A change in the tax status of an entity or its shareholders does not give rise to increases or decreases in amounts recognised outside profit or loss.
- The current and deferred tax consequences of a change in tax status shall be included in profit or loss for the period,
  - unless those consequences relate to transactions and events that result,
  - in the same or a different period,
  - in a direct credit or charge to the recognised amount of equity or in amounts recognised in other comprehensive income.
- Those tax consequences that relate to changes in the recognised amount of equity, in the same or a different period (not included in profit or loss), shall be charged or credited directly to equity.
- Those tax consequences that relate to amounts recognised in other comprehensive income shall be recognised in other comprehensive income.

1.8 PART E: DISCLOSURES

This Ind AS not only deals with recognition and measurement of income-taxes but also requires quite a few disclosures with respect to these income tax. These are discussed as under.

1.8.1 Disclosure 1: Disclose components of tax expenses (income)

(a) Each of the major components of tax expense (income) is to be disclosed separately.

(b) As we know, tax expense (tax income) is the aggregate amount included in the determination of profit or loss for the period in respect of current tax and deferred tax. The tax expense (income) related to profit or loss or loss from ordinary activities shall be presented in statement of profit or loss.

Join us t.me/caborntofight

(c) The components of tax expense (income) include:

- current tax expense (income);
- any adjustments recognised in the period for current tax of prior periods;
- the amount of deferred tax expense (income) relating to the origination and reversal of temporary differences;
- the amount of deferred tax expense (income) relating to changes in tax rates or the imposition of new taxes;
- the amount of the benefit arising from a previously unrecognised tax loss, tax credit or temporary difference of a prior period that is used to reduce current tax expense;
- the amount of the benefit from a previously unrecognised tax loss, tax credit or temporary difference of a prior period that is used to reduce deferred tax expense;
- deferred tax expense arising from the write-down, or reversal of a previous write-down, of a deferred tax asset; and
- the amount of tax expense (income) relating to those changes in accounting policies and errors that are included in profit or loss in accordance with Ind AS 8, because they cannot be accounted for retrospectively.

1.8.2 Disclosure 2: Tax related to items charged directly to equity

(a) Indian Accounting Standards require or permit particular items to be credited or charged directly to equity.

(b) Examples of such items are:

- an adjustment to the opening balance of retained earnings resulting from either a change in accounting policy that is applied retrospectively or the correction of an error (see Ind AS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*); and
- amounts arising on initial recognition of the equity component of a compound financial instrument (see paragraph 23).

(c) The current and deferred tax relating to these items have to be recognised and accounted for directly in equity.

(d) This Ind AS requires disclosure of the aggregate current and deferred tax relating to items that are charged or credited directly to equity.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

1.8.3 Disclosure 3: Tax related to items recognised in statement of other comprehensive income

(a) Indian Accounting Standards require or permit particular items to be recognised in other comprehensive income.

(b) Examples of such items are:

- a change in carrying amount arising from the revaluation of property, plant and equipment (see Ind AS 16); and
- exchange differences arising on the translation of the financial statements of a foreign operation (see Ind AS 21).

(c) The current and deferred tax relating to these items have to be recognised and accounted for in the statement of other comprehensive income.

(d) This Ind AS requires disclosure of the amount of income tax relating to each component of other comprehensive income.

1.8.4 Disclosure 4: Explanation of the relationship between tax expense (income) and accounting profit

(a) In ideal situation, if accounting profit is say ₹ 100 and tax rate is 30%, the tax expense should be ₹ 30. But this is seldom the case due to differences in accounting principles and standards vis–a–vis tax laws.

(b) Therefore, this Standard requires an explanation to be disclosed of the relationship between tax expense (income) and accounting profit in either or both of the following forms:

- a numerical reconciliation between tax expense (income) and the product of accounting profit multiplied by the applicable tax rate(s), disclosing also the basis on which the applicable tax rate(s) is (are) computed; or
- a numerical reconciliation between the average effective tax rate (tax expense divided by the accounting profit) and the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed.

Example 47

An entity has made an accounting profit of ₹ 1,00,000. The tax rate is 30%. In computing the accounting profit, a penalty of ₹ 10,000 has been considered which is not tax deductible. There are no other tax impacts. In this case, the taxable profits are ₹ 1,10,000 (₹ 1,00,000 + ₹ 10,000) and tax expense @ 30% is ₹ 33,000.

The two types of disclosures are as under:

Join us t.me/caborntofight

Particulars	Amount (₹)
Accounting profit	1,00,000
Tax at the applicable tax rate of 30%	30,000
Tax effect of expenses that are not deductible in determining taxable profits:	
Penalties	3,000
Tax expense	33,000

The effective tax rate is as per the national income-tax rate.

Particulars	%
Applicable tax rate	30
Tax effect of expenses that are not deductible in determining taxable profits - Penalties	3
Average effective tax rate	33

The effective tax rate is as per the national income-tax rate.

(c) These disclosures enable users of financial statements to understand whether the relationship between tax expense (income) and accounting profit is unusual and to understand the significant factors that could affect that relationship in the future. The relationship between tax expense (income) and accounting profit may be affected by such factors as revenue that is exempt from taxation, expenses that are not deductible in determining taxable profit (tax loss), the effect of tax losses and the effect of foreign tax rates.

(d) In explaining the relationship between tax expense (income) and accounting profit, an entity uses an applicable tax rate that provides the most meaningful information to the users of its financial statements. Often, the most meaningful rate is the domestic rate of tax in the country in which the entity is domiciled, aggregating the tax rate applied for national taxes with the rates applied for any local taxes which are computed on a substantially similar level of taxable profit (tax loss).

52. Income tax expense

Reconciliation of tax expense and the accounting profit multiplied by India's domestic tax rate for March 31, 2022 and March 31, 2021

Particulars	Year ended March 31, 2022	Year ended March 31, 2021
Accounting loss before income tax	**(17,254.85)**	**(9,983.02)**
Loss before income tax multiplied by standard rate of corporate tax in India 25.168% (March 31, 2021: 25.168%)	(4,342.65)	(2,512.53)
Effects of:		
Non-deductible expenses for tax purposes	(824.72)	(485.40)
Set-off of brought forward losses	5167.37	2,997.92
Net effective income tax	-	-

(Source: Annual report for 2021-2022 of SpiceJet Ltd.)

(e) However, for an entity operating in several jurisdictions, it may be more meaningful to aggregate separate reconciliations prepared using the domestic rate in each individual jurisdiction. The following example illustrates how the selection of the applicable tax rate affects the presentation of the numerical reconciliation.

Example 48

In 20X2, an entity has accounting profit in its own jurisdiction (country A) of ₹ 1,500 (20X1:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

₹ 2,000) and in country B of ₹ 1,500 (20X1: ₹ 500). The tax rate is 30% in country A and 20% in country B. In country A, expenses of ₹ 100 (20X1: ₹ 200) are not deductible for tax purposes.

The following reconciliation will be prepared:

Particulars	Amount (₹)	
	20X2	20X1
Accounting profit	3,000	2,500
Tax at the domestic rate of 30%	900	750
Tax effect of expenses that are not deductible for tax purposes	30	60
Effect of lower tax rates in country B	(150)	(50)
Tax expense	780	760

Relevant Extracts from Financial Statements of selected Listed Entities are presented below:

Annual Report of Bharti Airtel Ltd. for the year ending 31st March 2022 (Page 357):

The impact of different tax rates is disclosed separately in Consolidated Financial Statements whose extract is given below [10th line item with amounts of ₹ 2,594 and ₹ (13,887)]:

The reconciliation between the amount computed by applying the statutory income tax rate to the loss before tax and the income tax charge is summarised below

	For the year ended March 31, 2022	For the year ended March 31, 2021
Profit / (loss) before tax (from continuing and discontinued operations)	124,831	(31,184)
Enacted tax rates in India	25.168%	25.168%
Tax expense @ Company's domestic tax rate 25.168%	31,418	(7,849)
Effect of:		
Share of profits in associates and joint ventures	(6,093)	(1,728)
Tax holiday	1,913	542
Adjustments in respect of previous years	(420)	(481)
Effect of changes in tax rate including MAT	-	85,369
Additional taxes / taxes for which no credit is allowed	158	690
Difference in tax rate applicable to group companies	2,594	(13,887)
Adjustment in respect of tax amnesty scheme	-	(20,280)
Losses against which no deferred tax asset recognised	-	36,690
Expense / (income) not deductible / (taxable) (net)	6,823	(8,262)
Tax on undistributed retained earnings of subsidiaries / joint venture	8,745	2,908
Items for which no deferred tax has been recognised	(2,866)	16,746
Settlement of various disputes	385	765
Tax on common control transactions	-	(9)
Others	(878)	1,241
Income tax expense	**41,779**	**92,456**

(Source: Annual report for 2021-2022 of Bharti Airtel Ltd.)

Illustration 6

A Ltd.'s profit before tax according to Ind AS for Year 20X1-20X2 is ₹ 100 thousand and taxable profit for year 20X1-20X2 is ₹ 104 thousand. The difference between these amounts arose as follows:

1. *On 1st February, 20X2, it acquired a machine for ₹ 120 thousand. Depreciation is charged on the machine on a monthly basis for accounting purpose. Under the tax law, the machine will be depreciated for 6 months. The machine's useful life is 10 years according to Ind AS as well as for tax purposes.*
2. *In the year 20X1-20X2, expenses of ₹ 8 thousand were incurred for charitable donations. These are not deductible for tax purposes.*

Prepare necessary entries as at 31st March 20X2, taking current and deferred tax into account. The tax rate is 25%. Also prepare the tax reconciliation in absolute numbers as well as the tax rate reconciliation.

Solution

Current tax= Taxable profit x Tax rate = ₹ 104 thousand x 25% = ₹ 26 thousand.

Computation of Taxable Profit:

	₹ in thousand
Accounting profit	100
Add: Donation not deductible	8
Less: Excess Depreciation (6-2)	(4)
Total Taxable profit	104

		₹ in thousand	₹ in thousand
Profit & loss A/c	Dr.	26	
To Current Tax			26

Deferred tax:

Machine's carrying amount according to Ind AS is ₹ 118 thousand (₹ 120 thousand – ₹ 2 thousand)

Machine's carrying amount for taxation purpose = ₹ 114 thousand (₹ 120 thousand – ₹ 6 thousand)

Deferred Tax Liability = ₹ 4 thousand x 25%

	₹ in thousand	
Profit & loss A/c Dr.	1	
To Deferred Tax Liability		1

Tax reconciliation in absolute numbers:

	₹ in thousand
Profit before tax according to Ind AS	100
Applicable tax rate @ 25%	
Tax	25
Expenses not deductible for tax purposes (₹ 8 thousand x 25%)	2
Tax expense (Current and deferred)	27

Tax rate reconciliation

Applicable tax rate	25%
Expenses not deductible for tax purposes	2%
Average effective tax rate	27%

*****

1.8.5 Disclosure 5: Change in tax rates

(a) The applicable tax rates may change due to variety of reasons. There could be a change in the manner of recovery of the asset. The tax laws may have changed. There could be a change in the structure of the entity.

(b) In case there are changes in the applicable tax rate(s) compared to the previous accounting period, an explanation has to be provided.

1.8.6 Disclosure 6: Unrecognised deductible temporary differences, unused tax losses and unused tax credits

(a) The Standard lays down criteria for recognising deferred tax assets on deductible temporary differences, unused tax losses and unused tax credits. For example, whether a sufficient taxable temporary difference is available, is there a probability of future profits and are there any tax planning opportunities.

(b) If the laid down recognition criteria could not be met, no deferred tax asset is recognised on these deductible temporary differences, unused tax losses and unused tax credits.

Join us t.me/caborntofight

Merged By CA - Born To Fight

(c) The Standard requires the amount (and expiry date, if any) of deductible temporary differences, unused tax losses, and unused tax credits for which no deferred tax asset is recognised in the balance sheet, to be disclosed.

Relevant Extracts from Financial Statements of selected Listed Entities are presented below:

A. *Annual Report of SpiceJet Ltd. for the year ending 31st March 2022 (Page 111):*

Brought forward losses and unabsorbed depreciation for which no deferred tax assets have been recognized are attributable to the following:

Particulars	As at March 31, 2022	As at March 31, 2021

1.8.7 Disclosure 7: Temporary differences associated with investments in subsidiaries etc.

(a) The aggregate amount of temporary differences associated with investments in subsidiaries, branches and associates and interests in joint ventures, for which deferred tax liabilities have not been recognised should be disclosed.

(b) It would often be impracticable to compute the amount of unrecognised deferred tax liabilities arising from investments in subsidiaries, branches and associates and interests in joint ventures. Therefore, this Standard requires an entity to disclose the aggregate amount of the underlying temporary differences but does not require disclosure of the deferred tax liabilities.

(c) Nevertheless, where practicable, entities are encouraged to disclose the amounts of the unrecognised deferred tax liabilities because financial statement users may find such information useful.

Relevant Extracts from Financial Statements of selected Listed Entities are presented below:

A Annual Report of SpiceJet Ltd. for the year ending 31 March 2022 (Page 111):

Brought forward losses and unabsorbed depreciation for which no deferred tax assets have been recognized are attributable to the following:

Particulars	As at March 31, 2022	As at March 31, 2021

(Source: Annual report for 2021-2022 of Larsen and Toubro Ltd.)

1.8.8 Disclosure 8: Amount of deferred tax liabilities (assets) or income (expenses)

(a) As per the criteria laid down in the Standard, deferred tax liabilities have to be recognised for taxable temporary differences and deferred tax assets have to be recognised for deductible temporary differences, unused tax losses and unused tax credits.

(b) Where deferred taxes have been recognised, the following should be disclosed in respect of each type of temporary difference, and in respect of each type of unused tax losses and unused tax credits:

- the amount of the deferred tax assets and liabilities recognised in the balance sheet for each period presented;
- the amount of the deferred tax income or expense recognised in profit or loss, if this is not apparent from the changes in the amounts recognised in the balance sheet.

Join us t.me/caborntofight

1.8.9 Disclosure 9: Discontinued operations

The following should be disclosed in respect of discontinued operations, the tax expense relating to:

(i) the gain or loss on discontinuance; and

(ii) the profit or loss from the ordinary activities of the discontinued operation for the period, together with the corresponding amounts for each prior period presented.

1.8.10 Disclosure 10: Dividend tax

(a) At times dividends relating to the reporting period are proposed or declared after the reporting date but before the financial statements are approved for issue. These are disclosed but not recognised in financial statements.

(b) In such a situation, an entity should disclose the amount of income tax consequences of dividends to shareholders of the entity that were proposed or declared before the financial statements were approved for issue, but are not recognised as a liability in the financial statements.

1.8.11 Disclosures 11: In case of business combination

The following should be disclosed:

- if a business combination in which the entity is the acquirer causes a change in the amount recognised for its pre-acquisition deferred tax asset, the amount of that change; and
- if the deferred tax benefits acquired in a business combination are not recognised at the acquisition date but are recognised after the acquisition date, a description of the event or change in circumstances that caused the deferred tax benefits to be recognised.

1.8.12 Disclosure 12: Deferred tax asset and evidence thereto where based on future taxable profits

An entity shall disclose the amount of a deferred tax asset and the nature of the evidence supporting its recognition, when:

- the utilization of the deferred tax asset is dependent on future taxable profits in excess of the profits arising from the reversal of existing taxable temporary differences; and
- the entity has suffered a loss in either the current or preceding period in the tax jurisdiction to which the deferred tax asset relates.

© The Institute of Chartered Accountants of India

1.8.13 Disclosure 13: Tax consequences of distribution of dividends

(a) As discussed above, in some tax jurisdiction tax rates depend on the fact whether dividend is distributed or not.

(b) In these circumstances, an entity shall disclose the nature of the potential income tax consequences that would result from the payment of dividends to its shareholders. In addition, the entity shall disclose the amounts of the potential income tax consequences practicably determinable and whether there are any potential income tax consequences not practicably determinable.

(c) The aforesaid disclosure requirement requires an entity to disclose the nature of the potential income tax consequences that would result from the payment of dividends to its shareholders. An entity also discloses the important features of the income tax systems and the factors that will affect the amount of the potential income tax consequences of dividends.

(d) However, it would sometimes not be practicable to compute the total amount of the of the total amount may be easily determinable. For example, in a consolidated group, a parent and some of its subsidiaries may have paid income taxes at a higher rate on undistributed profits and be aware of the amount that would be refunded on the payment of future dividends to shareholders from consolidated retained earnings. In this case, that refundable amount is disclosed.

(e) If applicable, the entity also discloses that there are additional potential income tax consequences not practicably determinable. In the parent's separate financial statements, if any, the disclosure of the potential income tax consequences relates to the parent's retained earnings.

(f) An entity required to provide the disclosures referred above is also required to provide disclosures related to temporary differences associated with investments in subsidiaries, branches and associates or interests in joint ventures. In such cases, an entity considers this in determining the information to be disclosed under this requirement. For example, an entity ay be required to disclose the aggregate amount of temporary differences associated with investments in subsidiaries for which no deferred tax liabilities have been recognised. If it is impracticable to compute the amounts of unrecognised deferred tax liabilities, there may be amounts of potential income tax consequences of dividends not practicably determinable related to these subsidiaries.

1.8.14 Disclosure 14: Tax related contingencies

An entity discloses any tax-related contingent liabilities and contingent assets in accordance with Ind AS 37, *Provisions, Contingent Liabilities and Contingent Assets*. Contingent liabilities and contingent assets may arise, for example, from unresolved disputes with the taxation authorities.

Merged By CA - Born To Fight

1.8.15 Disclosure 15: Change in tax rates or tax laws

Where changes in tax rates or tax laws are enacted or announced after the reporting period, an entity discloses any significant effect of those changes on its current and deferred tax assets and liabilities (see Ind AS 10, *Events after the Reporting Period*).

Relevant Extracts from Financial Statements of selected Listed Entities are presented below:

Annual Report of SpiceJet Ltd. for the year ending 31st March 2020 (Page 415):

[NOTE 44]

Disclosure pursuant to Ind AS 12 "Income Taxes" (contd.)

(b) Reconciliation of tax expense and the accounting profit multiplied by domestic tax rate applicable in India:

₹ crore

Sr. No.	Particulars	2019-20	2018-19
(1)	Profit before tax from:		
	Continuing Operations	6985.91	9219.46
	Discontinued Operations	865.38	812.40
		7851.29	10031.86
(2)	Corporate tax rate as per Income tax Act, 1961	25.17%	34.94%

Illustration 7

An entity has a deductible temporary difference of ₹ 50,000. It has no taxable temporary differences against which it can be offset. The entity is also not anticipating any future profits. However, it can implement a tax planning strategy which can generate profits up to ₹ 60,000. The cost of implementing this tax planning strategy is ₹ 12,000. The tax rate is 30%. Compute the deferred tax asset that should be recognised.

Solution

The entity should recognise a deferred tax asset of ₹ 14,400 @ 30% of ₹ 48,000 (₹ 60,000 – ₹ 12,000).

The balance deferred tax asset of ₹ 600 @ 30% on ₹ 2,000 (₹ 50,000 – ₹ 48,000) shall remain unrecognised.

*****

Illustration 8

A Limited recognises interest income in its books on accrual basis. However, for income tax purposes the method is 'cash basis'. On 31st December, 20X1, it has interest receivable of ₹ 10,000 and the tax rate was 25%. On 28th February, 20X2, the finance bill is introduced in the legislation that changes the tax rate to 30%. The finance bill is enacted as Act on 21st May, 20X2.

Discuss the treatment of deferred tax in case the reporting date of A Limited's financial statement is 31st December, 20X1 and these are approved for issued on 31st May, 20X2.

Solution

The difference of ₹ 10,000 between the carrying value of interest receivable of ₹ 10,000 and its tax base of NIL is a taxable temporary difference.

A Limited has to recognise a deferred tax liability of ₹ 2,500 (₹ 10,000 x 25%) in its financial statements for the reporting period ended on 31st December, 20X1.

It will not recognise the deferred tax liability @ 30% because as on 31st December, 20X1, this tax rate was neither substantively enacted or enacted on the reporting date. However, if the effect of this change is material, A Limited should disclose this difference in its financial statements.

*****

Illustration 9

A Ltd prepares financial statements to 31st March each year. The rate of income tax applicable to A Ltd is 20%. The following information relates to transactions, assets and liabilities of A Ltd during the year ended 31st March 20X2:

(i) A Ltd has a 40% shareholding in L Ltd. A Ltd purchased this shareholding for ₹ 45 Cr. The shareholding gives A Ltd significant influence over L Ltd but not control and therefore A Ltd.

accounts for its interest in L Ltd using the equity method. The equity method carrying value of A Ltd's investment in L Ltd was ₹ 70 Cr on 31st March 20X1 and ₹ 75 Cr on 31st March 20X2. In the tax jurisdiction in which A Ltd operates, profits recognised under the equity method are taxed if and when they are distributed as a dividend or the relevant investment is disposed of.

(ii) A Ltd. measures its head office building using the revaluation model. The building is revalued every year on 31st March. On 31st March 20X1, carrying value of the building (after revaluation) was ₹ 40 Cr and its tax base was ₹ 22 Cr. During the year ended 31st March 20X2, A Ltd charged depreciation in its statement of profit or loss of ₹ 2 Cr and claimed a tax deduction for tax depreciation of ₹ 1.25 Cr. On 31st March 20X2, the building was revalued to ₹ 45 Cr. In the tax jurisdiction in which A Ltd operates, revaluation of property, plant and equipment does not affect taxable income at the time of revaluation.

Basis the above information, you are required to compute:

(a) The deferred tax liability of A Ltd at 31st March 20X2

(b) The charge or credit to both profit or loss and other comprehensive income relating to deferred tax for the year ended 31st March 20X2

Solution:

(A) Deferred Tax Liability as at 31st March 20X2

Investment in L Ltd:

Carrying Amount	=	₹ 75 Cr
Tax base	=	₹ 45 Cr (Purchase cost)
Temporary Difference	=	₹ 30 Cr

Since carrying amount is higher than the tax base, the temporary difference is recognized as a taxable temporary difference. Using the tax rate of 20%, a deferred tax liability of ₹ 6 Cr is recognized:

Head office building

Carrying Amount	=	₹ 45 Cr (Revalued amount on 31st March 20X2)
Tax base	=	₹ 20.75 Cr (22 Cr – 1.25 Cr)
Temporary Difference	=	₹ 24.25 Cr

Since carrying amount is higher than the tax base, the temporary difference is recognized as a taxable temporary difference. Using the tax rate of 20%, a deferred tax liability of ₹ 4.85 Cr is created.

Total Deferred Tax Liability ₹ 6 Cr + ₹ 4.85 Cr = ₹ 10.85 Cr

(B) Charge to Statement of Profit or Loss for the year ended 31st March 20X2:

Investment in L Ltd.

Particulars	Carrying amount	Tax Base	Temporary Difference
Opening Balance (1st April 20X1)	₹ 70 Cr	₹ 45 Cr	₹ 25 Cr
Closing Balance (31st March 20X2)	₹ 75 Cr	₹ 45 Cr	₹ 30 Cr
Net Change			₹ 5 Cr
Increase in Deferred Tax Liability (20% tax rate)			₹ 1 Cr

Considering the increase in the value of investment arising through Statement of Profit or Loss, the accounting for the increase in deferred tax liability is made as under:

Tax expense (Profit or Loss Statement)	Dr	₹ 1 Cr	
To Deferred Tax Liability			₹ 1 Cr

(Being increase in deferred tax liability recognized)

Head Office Building:

The deferred tax liability at 31st March 20X1 is ₹ 3.6 Cr (20% x {₹ 40 Cr – ₹ 22 Cr}).

At 31st March 20X2, prior to revaluation, the carrying amount of the property is ₹ 38 Cr and its tax base is ₹ 20.75 Cr (₹ 22 Cr – ₹ 1.25 Cr). The deferred tax liability at this point is ₹ 3.45 Cr (20% x {₹ 38 Cr – ₹ 20.75 Cr}).

The reduction in this liability is ₹ 0.15 Cr (₹ 3.6 Cr – ₹ 3.45 Cr). This would be credited to income tax expense in arriving at profit or loss.

Post revaluation, the carrying value of the building becomes ₹ 45 Cr and the tax base stays the same. Therefore, the new deferred tax liability is ₹ 4.85 Cr (20% x (₹ 45 Cr – ₹ 20.75 Cr)). The increase in the deferred tax liability of ₹ 1.4 Cr (₹ 4.85 Cr – ₹ 3.45 Cr) is charged to other comprehensive income.

*****

Illustration 10

K Ltd prepares consolidated financial statements to 31st March each year. During the year ended 31st March 20X2, K Ltd entered into the following transactions:

(a) On 1st April 20X1, K Ltd purchased an equity investment for ₹ 2,00,000. The investment was designated as fair value through other comprehensive income. On 31st March 20X2, the fair value of the investment was ₹ 2,40,000. In the tax jurisdiction in which K Ltd operates, unrealised gains and losses arising on the revaluation of investments of this nature are not

taxable unless the investment is sold. K Ltd has no intention of selling the investment in the foreseeable future.

(b) On 1st August 20X1, K Ltd sold products to A Ltd, a wholly owned subsidiary operating in the same tax jurisdiction as K Ltd, for ₹ 80,000. The goods had cost to K Ltd for ₹ 64,000. By 31st March 20X2, A Ltd had sold 40% of these goods, selling the remaining during next year.

(c) On 31st October 20X1, K Ltd received ₹ 2,00,000 from a customer. This payment was in respect of services to be provided by K Ltd from 1st November 20X1 to 31st July 20X2. K Ltd recognised revenue of ₹ 1,20,000 in respect of this transaction in the year ended 31st March 20X2 and will recognise the remainder in the year ended 31st March 20X3. Under the tax jurisdiction in which K Ltd operates, ₹ 2,00,000 received on 31st October 20X1 was included in the taxable profits of K Ltd for the year ended 31st March 20X2.

Explain and show how the tax consequences (current and deferred) of the three transactions would be reported in its statement of profit or loss and other comprehensive income for the year ended 31st March 20X2. Assume tax rate to be 25%.

Solution:

(a) Because the unrealised gain on revaluation of the equity investment is not taxable until sold, there are no current tax consequences. The tax base of the investment is ₹ 2,00,000. The revaluation creates a taxable temporary difference of ₹ 40,000 (₹ 2,40,000 – ₹ 2,00,000).

This creates a deferred tax liability of ₹ 10,000 (₹ 40,000 x 25%). The liability would be non-current. The fact that there is no intention to dispose of the investment does not affect the accounting treatment. Because the unrealised gain is reported in other comprehensive income, the related deferred tax expense is also reported in other comprehensive income.

(b) When K Ltd sold the products to A Ltd, K Ltd would have generated a taxable profit of ₹ 16,000 (₹ 80,000 – ₹ 64,000). This would have created a current tax liability for K Ltd and the group of ₹ 4,000 (₹ 16,000 x 25%). This liability would be shown as a current liability and charged as an expense in arriving at profit or loss for the period.

In the consolidated financial statements the carrying value of the unsold inventory would be ₹ 38,400 (₹ 64,000 x 60%). The tax base of the unsold inventory would be ₹ 48,000 (₹ 80,000 x 60%). In the consolidated financial statements there would be a deductible temporary difference of ₹ 9,600 (₹ 38,400 – ₹ 48,000) and a potential deferred tax asset of ₹ 2,400 (₹ 9,600 x 25%). This would be recognised as a deferred tax asset since A Ltd is expected to generate sufficient taxable profits against which to utilise the deductible temporary difference. The resulting credit would reduce consolidated deferred tax expense in arriving at profit or loss.

(c) The receipt of revenue in advance on 1st October 20X1 would create a current tax liability of ₹ 50,000 (₹ 200,000 x 25%) as at 31st March 20X2. The carrying value of the revenue received in advance at 31st March 20X2 is ₹ 80,000 (₹ 200,000 – ₹ 120,000). Its tax base is

nil. The deductible temporary difference of ₹ 80,000 would create a deferred tax asset of ₹ 20,000 (₹ 80,000 x 25%). The asset can be recognised because K Ltd has sufficient taxable profits against which to utilise the deductible temporary difference.

1.9 SIGNIFICANT CHANGES IN IND AS 12 VIS-À-VIS AS 22

S. No.	Particulars	Ind AS 12	AS 22
1.	*Approach for creating Deferred Tax*	Ind AS 12 is based on balance sheet approach. It requires recognition of tax consequences of differences between the carrying amounts of assets and liabilities and their tax base.	AS 22 is based on income statement approach. It requires recognition of tax consequences of differences between taxable income and accounting income. For this purpose, differences between taxable income and accounting income are classified into permanent and timing differences.
2.	*Limited Exceptions for Recognition of Deferred Tax Asset*	As per Ind AS 12, subject to limited exceptions, deferred tax asset is recognised for all deductible temporary differences to the extent that it is probable that taxable profit will be available against which the deductible temporary difference can be utilised. The criteria for recognising deferred tax assets arising from the carry forward of unused tax losses and tax credits are the same that for recognising deferred tax assets arising from deductible temporary differences. However, the existence of unused tax losses is strong evidence that future	As per AS 22, deferred tax assets are recognised and carried forward only to the extent that there is a reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realised. Where deferred tax asset is recognised against unabsorbed depreciation or carry forward of losses under tax laws, it is recognised only to the extent that there is virtual certainty supported by convincing evidence that sufficient future taxable income will be available

		taxable profit may not be available. Therefore, when an entity has a history of recent losses, the entity recognises a deferred tax asset arising from unused tax losses or tax credits only to the extent that the entity has sufficient taxable temporary differences or there is convincing other evidence that sufficient taxable profit will be available against which the unused tax losses or unused tax credits can be utilised by the entity.	against which such deferred tax assets can be realised. AS 22 explains what may be considered as virtual certainty supported by convincing evidence.
3.	*Recognition of Current and Deferred Tax*	As per Ind AS 12, current and deferred tax are recognised as income or an expense and included in profit or loss for the period, except to the extent that the tax arises from a transaction or event which is recognised outside profit or loss, either in other comprehensive income or directly in equity, in those cases tax is also recognised in other comprehensive income or in equity, as appropriate.	AS 22 does not specifically deal with this aspect.
4.	*Investments in subsidiaries, associates and joint ventures*	As per Ind AS 12, deferred tax liability is recognised for all taxable temporary differences associated with investments in subsidiaries, associates and joint ventures, if certain conditions are satisfied.	AS 22 does not deal with this aspect.
5.	*Elimination of profit and losses resulting from the intra- group transactions*	As per Ind AS 12, deferred tax should be recognised on temporary differences that arise from the elimination of	As per AS 22, deferred tax in consolidated financials are a simple aggregation of the

		profit and losses resulting from the intra- group transactions.	deferred tax recognised by the group entities.
6.	*DTA/DTL arising out of Revaluation of Assets*	Ind AS 12 requires that deferred tax asset/liability arising from revaluation of non-depreciable assets shall be measured on the basis of tax consequences from the sale of asset rather than through use.	AS 22 does not deal with this aspect.
7.	*Changes in Entities Tax Status or that of its Shareholders*	Ind AS 12 provides guidance as to how an entity should account for the tax consequences of a change in its tax status or that of its shareholders.	AS 22 does not deal with this aspect.
8.	*Guidance for Recognition of Deferred Tax in a Tax Holiday Period*	Ind AS 12 does not specifically deal with these situations.	AS 22 specifically provides guidance regarding recognition of deferred tax in the situations of Tax Holiday under Sections 80-IA and 80-IB and Tax Holiday under Sections 10A and 10B of the Income Tax Act, 1961. Similarly, AS 22 provides guidance regarding recognition of deferred tax asset in case of loss under the head 'capital gains'
9.	*In case of a company paying tax under section 115JB.*	Ind AS 12 does not specifically deal with this aspect.	AS 22 specifically provides guidance regarding tax rates to be applied in measuring deferred tax assets/liabilities in a situation where a company pays tax under section 115JB.
10.	*Guidance on Uncertainty Over Income Tax Treatment*	Ind AS 12 gives special guidance on it.	AS 11 gives no such guidance.

Questions

1. An asset which cost ₹ 150 has a carrying amount of ₹ 100. Cumulative depreciation for tax purposes is ₹ 90 and the tax rate is 25%. Calculate the tax base and the corresponding deferred tax or liability, if any.

2. On 1st April 20X1, ABC Ltd acquired 100% shares of XYZ Ltd for ₹ 4,373 crore. By 31st March, 20X5, XYZ Ltd had made profits of ₹ 5 crore, which remain undistributed. Based on the tax legislation in India, the tax base investment in XYZ Ltd is its original cost. Show deferred tax treatment.

3. ABC Ltd. acquired 30% of the shares in PQR Ltd. on 1st January, 20X1 for ₹ 1,000 crore. By 31st March, 20X5, PQR Ltd. had made profits of ₹ 50 crore (ABC Ltd.'s share), which remained undistributed. Based on the tax legislation in India, the tax base of the investment in PQR Ltd. is its original cost. Show deferred tax treatment.

4. A company had purchased an asset at ₹ 1,00,000. Estimated useful life of the asset is 5 years and depreciation rate is 20% SLM. Depreciation rate for tax purposes is 25% SLM. The operating profit is ₹ 1,00,000 for all the 5 years. Tax rate is 30% for the next 5 years. Calculate the Book Value as per financial and tax purposes and then DTL.

5. A Ltd. acquired B Ltd. The following assets and liabilities are acquired in a business combination:

₹ 000's

	Fair Value	Carrying amount	Temporary Difference
Plant and Equipment	250	260	(10)
Inventory	120	125	(5)

Debtors	200	210	(10)
	570	595	(25)
9% Debentures	(100)	(100)	
	470	495	
Consideration paid	500	500	
Goodwill	30	5	(25)

Assume tax rate as 30%.

Calculate deferred tax asset assuming that the carrying amount is the tax base and prepare the journal entries.

6. B Limited is a newly incorporated entity. Its first financial period ends on 31st March, 20X1. As on the said date, the following temporary differences exist:

   (a) Taxable temporary differences relating to accelerated depreciation of ₹ 9,000. These are expected to reverse equally over next 3 years.

   (b) Deductible temporary differences relating to preliminary expenses of ₹ 4,000 expected to reverse equally over next 4 years.

   It is expected that B Limited will continue to make losses for next 5 years. Tax rate is 30%. Losses can be carried forward but not backwards.

   Discuss the treatment of deferred tax as on 31st March, 20X1.

7. X Ltd. prepares consolidated financial statements to 31st March each year. During the year ended 31st March 20X2, the following events affected the tax position of the group:

   (i) Y Ltd., a wholly owned subsidiary of X Ltd., made a loss adjusted for tax purposes of ₹ 30,00,000. Y Ltd. is unable to utilise this loss against previous tax liabilities. Income-tax Act does not allow Y Ltd. to transfer the tax loss to other group companies. However, it allows Y Ltd. to carry the loss forward and utilise it against company's future taxable profits. The directors of X Ltd. do not consider that Y Ltd. will make taxable profits in the foreseeable future.

   (ii) Just before 31st March, 20X2, X Ltd. committed itself to closing a division after the year end, making a number of employees redundant. Therefore, X Ltd. recognised a provision for closure costs of ₹ 20,00,000 in its statement of financial position as at 31st March, 20X2. Income-tax Act allows tax deductions for closure costs only when the closure actually takes place. In the year ended 31st March 20X3, X Ltd. expects to make taxable profits which are well in excess of ₹ 20,00,000. On 31st March, 20X2, X Ltd. had taxable temporary differences from other sources which were greater than ₹ 20,00,000.

Join us t.me/caborntofight

(iii) During the year ended 31st March, 20X1, X Ltd. capitalised development costs which satisfied the criteria in paragraph 57 of Ind AS 38 'Intangible Assets'. The total amount capitalised was ₹ 16,00,000. The development project began to generate economic benefits for X Ltd. from 1st January, 20X2. The directors of X Ltd. estimated that the project would generate economic benefits for five years from that date. The development expenditure was fully deductible against taxable profits for the year ended 31st March, 20X2.

(iv) On 1st April, 20X1, X Ltd. borrowed ₹ 1,00,00,000. The cost to X Ltd. of arranging the borrowing was ₹ 2,00,000 and this cost qualified for a tax deduction on 1st April, 20X1. The loan was for a three-year period. No interest was payable on the loan but the amount repayable on 31st March, 20X4 will be ₹ 1,30,43,800. This equates to an effective annual interest rate of 10%. As per the Income-tax Act, a further tax deduction of ₹ 30,43,800 will be claimable when the loan is repaid on 31st March, 20X4.

Explain and show how each of these events would affect the deferred tax assets / liabilities in the consolidated balance sheet of X Ltd. group at 31st March, 20X2 as per Ind AS. Assume the rate of corporate income tax is 20%.

8. PQR Ltd., a manufacturing company, prepares consolidated financial statements to 31st March each year. During the year ended 31st March, 20X2, the following events affected the tax position of the group:

- QPR Ltd., a wholly owned subsidiary of PQR Ltd., incurred a loss adjusted for tax purposes of ₹ 30,00,000. QPR Ltd. is unable to utilise this loss against previous tax liabilities. Income-tax Act does not allow QPR Ltd. to transfer the tax loss to other group companies. However, it allows QPR Ltd. to carry the loss forward and utilise it against company's future taxable profits. The directors of PQR Ltd. do not consider that QPR Ltd. will make taxable profits in the foreseeable future.

- During the year ended 31st March, 20X2, PQR Ltd. capitalised development costs which satisfied the criteria as per Ind AS 38 'Intangible Assets'. The total amount capitalised was ₹ 16,00,000. The development project began to generate economic benefits for PQR Ltd. from 1st January, 20X2. The directors of PQR Ltd. estimated that the project would generate economic benefits for five years from that date. The development expenditure was fully deductible against taxable profits for the year ended 31st March, 20X2.

- On 1st April, 20X1, PQR Ltd. borrowed ₹ 1,00,00,000. The cost to PQR Ltd. of arranging the borrowing was ₹ 2,00,000 and this cost qualified for a tax deduction on 1st April 20X1. The loan was for a three-year period. No interest was payable on the loan but the amount repayable on 31st March 20X4 will be ₹ 1,30,43,800. This equates to an effective annual interest rate of 10%. As per the Income-tax Act, a further tax deduction of ₹ 30,43,800 will be claimable when the loan is repaid on 31st March, 20X4.

Merged By CA - Born To Fight

Explain and show how each of these events would affect the deferred tax assets / liabilities in the consolidated balance sheet of PQR Ltd. group at 31st March, 20X2 as per Ind AS. The rate of corporate income tax is 30%.

9. An entity is finalising its financial statements for the year ended 31st March, 20X2. Before 31st March, 20X2, the government announced that the tax rate was to be amended from 40 per cent to 45 per cent of taxable profit from 30th June, 20X2.

The legislation to amend the tax rate has not yet been approved by the legislature. However, the government has a significant majority and it is usual, in the tax jurisdiction concerned, to regard an announcement of a change in the tax rate as having the substantive effect of actual enactment (i.e. it is substantively enacted).

After performing the income tax calculations at the rate of 40 per cent, the entity has the following deferred tax asset and deferred tax liability balances:

Deferred tax asset	₹ 80,000
Deferred tax liability	₹ 60,000

Of the deferred tax asset balance, ₹ 28,000 related to a temporary difference. This deferred tax asset had previously been recognised in OCI and accumulated in equity as a revaluation surplus.

The entity reviewed the carrying amount of the asset in accordance with para 56 of Ind AS 12 and determined that it was probable that sufficient taxable profit to allow utilisation of the deferred tax asset would be available in the future.

Show the revised amount of Deferred tax asset & Deferred tax liability and present the necessary journal entries.

10. On 1st January 20X2, entity H acquired 100% share capital of entity S for ₹ 15,00,000. The book values and the fair values of the identifiable assets and liabilities of entity S at the date of acquisition are set out below, together with their tax bases in entity S's tax jurisdictions. Any goodwill arising on the acquisition is not deductible for tax purposes. The tax rates in entity H's and entity S's jurisdictions are 30% and 40% respectively.

Acquisitions	**Book values ₹'000**	**Tax base ₹'000**	**Fair values ₹'000**
Land and buildings	600	500	700
Property, plant and equipment	250	200	270
Inventory	100	100	80
Accounts receivable	150	150	150
Cash and cash equivalents	130	130	130

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Accounts payable	(160)	(160)	(160)
Retirement benefit obligations	(100)	-	(100)

You are required to calculate the deferred tax arising on acquisition of Entity S. Also calculate the Goodwill arising on acquisition.

Answers

1. The tax base of the asset is ₹ 60 (cost of ₹ 150 less cumulative tax depreciation of ₹ 90). To recover the carrying amount of ₹ 100, the entity must earn taxable income of ₹ 100, but will only be able to deduct tax depreciation of ₹ 60. Consequently, the entity will pay income taxes of ₹ 10 (₹ 40 at 25%) when it recovers the carrying amount of the asset. The difference between the carrying amount of ₹ 100 and the tax base of ₹ 60 is a taxable temporary difference of ₹ 40. Therefore, the entity recognises a deferred tax liability of ₹ 10 (₹ 40 at 25%) representing the income taxes that it will pay when it recovers the carrying amount of the asset.

2. A taxable temporary difference of ₹ 5 crore exists between the carrying value of the investment in XYZ at the reporting date of ₹ 4,378 crore (₹ 4,373 crore + ₹ 5 crore) and its tax base of ₹ 4,373 crore. Since a parent, by definition, controls a subsidiary, it will be able to control the reversal of this temporary difference, for example - through control of the dividend policy of the subsidiary. Therefore, deferred tax on such temporary difference is generally not provided unless it is probable that the temporary will reverse in the foreseeable future.

3. A taxable temporary difference of ₹ 50 crore therefore exists between the carrying value of the investment in PQR at the reporting date of ₹ 1,050 crore (₹ 1,000 crore + ₹ 50 crore) and its tax base of ₹ 1,000 crore. As ABC Ltd. does not completely control PQR Ltd. it is not in a position to control the dividend policy of PQR Ltd. As a result, it cannot control the reversal of this temporary difference and deferred tax is provided on temporary differences arising on investments in PQR Ltd. i.e.₹ 50 crore.

4. Calculation of the Book Value as per financial and tax purposes.

Financial Accounting: **₹ 000's**

Year	1	2	3	4	5
Gross Block	100	100	100	100	100
Accumulated Depreciation	20	40	60	80	100
Carrying Amount	80	60	40	20	0

© The Institute of Chartered Accountants of India

Tax Accounting: ₹ 000's

Year	1	2	3	4	5
Gross Block	100	100	100	100	100
Accumulated Depreciation	25	50	75	100	100
Carrying Amount	75	50	25	0	0

Calculation of DTL: ₹ 000's

Year	1	2	3	4	5
Carrying Amount	80	60	40	20	0
Tax Base	75	50	25	0	0
Difference	5	10	15	20	0
Deferred Tax Liability (Difference x 30%)	1.5	3	4.5	6	0

5. In this case there is a Deferred Tax Asset as the Tax base of assets acquired is higher by 25,000. DTA would be ₹ 7,500 (25,000 x 30%)

Journal entry:

Plant and equipment	Dr	250	
Inventory	Dr	120	
Debtors	Dr	200	
Goodwill	Dr	22.5 (30- 7.5)	
DTA	Dr	7.5	
To 9% Debentures			100
To Bank			500

6. The year-wise anticipated reversal of temporary differences is as under:

Particulars	Year ending on 31st March, 20X2	Year ending on 31st March, 20X3	Year ending on 31st March, 20X4	Year ending on 31st March, 20X5
Reversal of taxable temporary difference relating to accelerated depreciation over next 3 years (₹ 9,000/3)	3,000	3,000	3,000	Nil
Reversal of deductible temporary				

Join us t.me/caborntofight

difference relating to preliminary expenses over next 4 years (₹ 4,000/4)	1,000	1,000	1,000	1,000

B Limited will recognise a deferred tax liability of ₹ 2,700 on taxable temporary difference relating to accelerated depreciation of ₹ 9,000 @ 30%.

However, it will limit and recognise a deferred tax asset on reversal of deductible temporary difference relating to preliminary expenses reversing up to year ending 31st March, 20X4 amounting to ₹ 900 (₹ 3,000 @ 30%). No deferred tax asset shall be recognized for the reversal of deductible temporary difference for the year ending on 31st March, 20X5 as there are no taxable temporary differences. Further, the outlook is also a loss. However, if there are tax planning opportunities that could be identified for the year ending on 31st March, 20X5 deferred tax asset on the remainder of ₹ 1,000 (₹ 4,000 – ₹ 3,000) of deductible temporary difference could be recognised at the 30% tax rate.

7. (i) The tax loss creates a potential deferred tax asset for the group since its carrying value is nil and its tax base is ₹ 30,00,000.

However, no deferred tax asset can be recognised because there is no prospect of being able to reduce tax liabilities in the foreseeable future as no taxable profits are anticipated.

(ii) The provision creates a potential deferred tax asset for the group since its carrying value is ₹ 20,00,000 and its tax base is nil.

This deferred tax asset can be recognised because X Ltd. is expected to generate taxable profits in excess of ₹ 20,00,000 in the year to 31st March, 20X3.

The amount of the deferred tax asset will be ₹ 4,00,000 (₹ 20,00,000 x 20%).

This asset will be presented as a deduction from the deferred tax liabilities caused by the (larger) taxable temporary differences.

(iii) The development costs have a carrying value of ₹ 15,20,000 (₹ 16,00,000 – (₹ 16,00,000 x 1/5 x 3/12)).

The tax base of the development costs is nil since the relevant tax deduction has already been claimed.

The deferred tax liability will be ₹ 3,04,000 (₹ 15,20,000 x 20%). All deferred tax liabilities are shown as non-current.

(iv) The carrying value of the loan at 31st March, 20X2 is ₹ 1,07,80,000 (₹ 1,00,00,000 – ₹ 2,00,000 + (₹ 98,00,000 x 10%)).

The tax base of the loan is ₹ 1,00,00,000.

This creates a deductible temporary difference of ₹ 7,80,000 (₹ 1,07,80,000 – ₹ 1,00,00,000) and a potential deferred tax asset of ₹ 1,56,000 (₹ 7,80,000 x 20%).

Due to the availability of taxable profits next year (see part (ii) above), this asset can be recognised as a deduction from deferred tax liabilities.

8. Impact on consolidated balance sheet of PQR Ltd. group at 31st March, 20X2

- The tax loss creates a potential deferred tax asset for the PQR Ltd. group since its carrying value is nil and its tax base is ₹ 30,00,000. However, no deferred tax asset can be recognised because there is no prospect of being able to reduce tax liabilities in the foreseeable future as no taxable profits are anticipated.
- The development costs have a carrying value of ₹ 15,20,000 (₹ 16,00,000 – (₹ 16,00,000 x 1/5 x 3/12)). The tax base of the development costs is nil since the relevant tax deduction has already been claimed. The deferred tax liability will be ₹ 4,56,000 (₹ 15,20,000 x 30%). All deferred tax liabilities are shown as non-current.
- The carrying value of the loan at 31st March, 20X2 is ₹ 1,07,80,000 (₹ 1,00,00,000 – ₹ 200,000 + (₹ 98,00,000 x 10%)). The tax base of the loan is 1,00,00,000. This creates a deductible temporary difference of ₹ 7,80,000 and a potential deferred tax asset of ₹ 2,34,000 (₹ 7,80,000 x 30%).

9. Calculation of Deductible temporary differences:

Deferred tax asset	=	₹ 80,000
Existing tax rate	=	40%
Deductible temporary differences	=	80,000/40%
	=	₹ 2,00,000

Calculation of Taxable temporary differences:

Deferred tax liability	=	₹ 60,000
Existing tax rate	=	40%
Deductible temporary differences	=	60,000 / 40%
	=	₹ 1,50,000

Of the total deferred tax asset balance of ₹ 80,000, ₹ 28,000 is recognized in OCI

Hence, Deferred tax asset balance of Profit & Loss is ₹ 80,000 - ₹ 28,000 = ₹ 52,000

Deductible temporary difference recognized in Profit & Loss is ₹ 1,30,000 (52,000 / 40%)

Deductible temporary difference recognized in OCI is ₹ 70,000 (28,000 / 40%)

The adjusted balances of the deferred tax accounts under the new tax rate are:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Deferred tax asset		₹
Previously credited to OCI-equity	₹ 70,000 x 0.45	31,500
Previously recognised as Income	₹ 1,30,000 x 0.45	58,500
		90,000
Deferred tax liability		
Previously recognized as expense	₹ 1,50,000 x 0.45	67,500

The net adjustment to deferred tax expense is a reduction of ₹ 2,500. Of this amount, ₹ 3,500 is recognised in OCI and ₹ 1,000 is charged to P&L.

The amounts are calculated as follows:

	Carrying amount at 45%	Carrying amount at 40%	Increase (decrease) in deferred tax expense
Deferred tax assets			
Previously credited to OCI-equity	31,500	28,000	(3,500)
Previously recognised as Income	58,500	52,000	(6,500)
	90,000	80,000	(10,000)
Deferred tax liability			
Previously recognized as expense	67,500	60,000	7,500
Net adjustment			(2,500)

An alternative method of calculation is:		₹
DTA shown in OCI	₹ 70,000 x (0.45 - 0.40)	3,500
DTA shown in Profit or Loss	₹ 1,30,000 x (0.45-0.40)	6,500
DTL shown in Profit or Loss	₹ 1,50,000 x (0.45 -0.40)	7,500

Journal Entries

		₹	₹
Deferred tax asset	Dr.	3,500	
OCI –revaluation surplus			3,500
Deferred tax asset	Dr.	6,500	
Deferred tax expense			6,500

Deferred tax expense Dr.	7,500	
Deferred tax liability		7,500

Alternatively, a combined journal entry may be passed as follows:

	₹	₹
Deferred tax asset Dr.	10,000	
Deferred tax expense Dr.	1,000	
To OCI –revaluation surplus		3,500
To Deferred tax liability		7,500

10. Calculation of Net assets acquired (excluding the effect of deferred tax liability):

Net assets acquired	**Tax base ₹'000**	**Fair values ₹'000**
Land and buildings	500	700
Property, plant and equipment	200	270
Inventory	100	80
Accounts receivable	150	150
Cash and cash equivalents	130	130
Total assets	1,080	1,330
Accounts payable	(160)	(160)
Retirement benefit obligations	-	(100)
Net assets before deferred tax liability	920	1,070

Calculation of deferred tax arising on acquisition of entity S and goodwill

	₹ '000	**₹ '000**
Fair values of S's identifiable assets and liabilities (excluding deferred tax)		1,070
Less: Tax base		(920)
Temporary difference arising on acquisition		150
Net deferred tax liability arising on acquisition of entity S (₹ 1,50,000 @ 40%)		60
Purchase consideration		1,500

Join us t.me/caborntofight

Less: Fair values of entity S's identifiable assets and liabilities (excluding deferred tax)	1,070	
Deferred tax liability	(60)	(1,010)
Goodwill arising on acquisition		490

Note: Since, the tax base of the goodwill is nil, taxable temporary difference of ₹ 4,90,000 arises on goodwill. However, no deferred tax is recognised on the goodwill. The deferred tax on other temporary differences arising on acquisition is provided at 40% and not 30%, because taxes will be payable or recoverable in entity S's tax jurisdictions when the temporary differences will be reversed.

Merged By CA - Born To Fight

UNIT 2 : INDIAN ACCOUNTING STANDARD 21 : THE EFFECTS OF CHANGES IN FOREIGN EXCHANGE RATES

LEARNING OUTCOMES

After studying this unit, you will be able to:

- Describe the objective and scope of the standard
- Define the terms used in the standard like closing rate, exchange difference, exchange rate, fair value, foreign currency, foreign operation, functional currency, monetary items, group, net investment in a foreign operation, presentation currency and spot exchange rate
- Report foreign currency transactions in the functional currency
- Report at the end of subsequent reporting periods foreign currency monetary and non-monetary items
- Recognise and account for the exchange differences
- Apply the translation procedures in case of change in functional currency
- Recognise the presentation currency and translate the items into it from the functional currency
- Incorporate the results and financial position of a foreign operation on translation
- Apply the provisions of translation in case of consolidation
- Deal with the disposal or partial disposal of a foreign operation
- Compute tax effects of all exchange differences
- Comply with the disclosure requirements given in the standard

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

UNIT OVERVIEW

Accounting for Foreign Currency Transactions

- Initial Recognition at the Transaction Date
- Subsequent Recognition at the end of each Reporting Period

Recognition of Foreign Exchange Gains and Losses

- Monetary
- Non-Monetary Items
- Net Investment in a Foreign Operation
- Change in Functional Currency

Presentation and Disclosure

- Tax effect
- Other items

2.1 OBJECTIVE

The objective of the Standard is to address the accounting for foreign activities which include:

- transactions in foreign currencies; or
- foreign operations.

Considering that an entity may present its financial statements in a foreign currency, the Standard also seeks to prescribe how to translate financial statements into a presentation currency.

In this context, the Standard defines ***foreign currency*** as a currency other than the functional currency of the entity.

1. ***Functional currency*** is the currency of the primary economic environment in which the entity operates.

In this regard, the primary economic environment will normally be the one in which it primarily generates and expends cash i.e. it operates. The functional currency is normally the currency of the country in which the entity is located. It might, however, be a different currency.

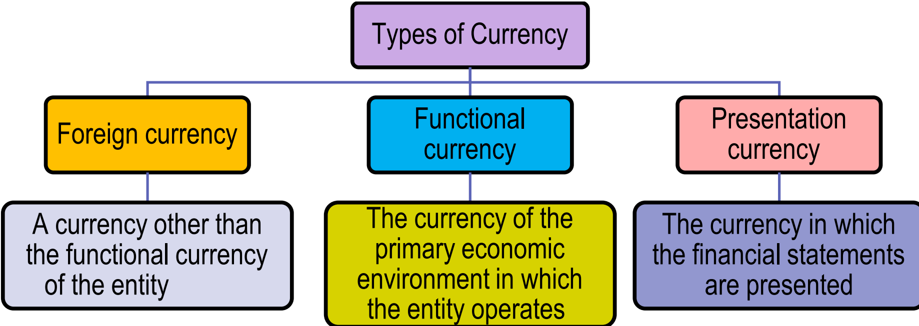
2. ***Foreign operation*** has been defined as an entity that is a subsidiary, associate, joint venture or branch of a reporting entity, the activities of which are based or conducted in a country or currency other than those of the reporting entity.

3. ***Presentation currency*** is the currency in which the financial statements are presented, the presentation currency may be different from the entity's functional currency.

4. **Spot exchange rate** is the exchange rate for immediate delivery.

5. **Closing rate** is the spot exchange rate at the end of the reporting period.

6. **Exchange difference** is the difference resulting from translating a given number of units of one currency into another currency at different exchange rates is the exchange rate for immediate delivery.



2.2 SCOPE

- Ind AS 21 shall be applied:

  (a) in accounting for transactions and balances in foreign currencies, except for derivative transactions and balances covered by Ind AS 109.

  Foreign currency derivatives not covered by Ind AS 109 (e.g., some foreign currency derivatives that are embedded in other contracts) are within the scope of this Standard.

  The Standard also applies for translation of amounts relating to derivatives from functional currency to presentation currency.

  (b) in translating the results and financial position of foreign operations that are included in the financial statements of the entity by consolidation, proportionate consolidation or the equity method; and

  (c) in translating an entity's results and financial position into a presentation currency.

- Ind AS 21 **does not apply** to:

  (a) hedge accounting for foreign currency items, including the hedging of a net investment in a foreign operation; Ind AS 109 should be applied for hedge accounting;

  (b) presentation of cash flows from transactions in a foreign currency or to translation of cash flows of a foreign operation in the statement of cash flows (Refer Ind AS 7, Statement of Cash Flows); and

  (c) long term foreign currency monetary items for which an entity has opted for the exemption as per Ind AS 101. Such an entity may continue to apply the accounting policy as opted for such long term foreign currency monetary items.

2.3 FUNCTIONAL CURRENCY

- An entity measures its assets, liabilities, equity, income and expenses in its functional currency.
- All transactions in currencies other than the functional currency are foreign currency transactions.

Ind AS 21 requires each entity to determine its functional currency.

- In determining its functional currency, an entity emphasises the currency that determines the pricing of the transactions that it undertakes, rather than focusing on the currency in which those transactions are denominated.
- The following are the factors that may be considered in determining an appropriate functional currency (**Primary indicators**):

(a) the currency:

i. that mainly influences sales prices for its goods and services. This will often be the currency in which sales prices are denominated and settled; and

ii. of the country whose competitive forces and regulations mainly determine the sales prices of its goods and services.

(b) the currency that mainly influences labour, material and other costs of providing goods and services. This will often be the currency in which these costs are denominated and settled.

- Other factors that may provide supporting evidence to determine an entity's functional currency are (**Secondary indicators**):

(a) the currency in which funds from financing activities (i.e. issuing debt and equity instruments) are generated; and

(b) the currency in which receipts from operating activities are usually retained.

- **If an entity is a foreign operation**, additional factors are set out in this Standard which should be considered to determine whether its functional currency is the same as that of the reporting entity of which it is a subsidiary, branch, associate or joint venture:

(a) Whether the activities of foreign operations are carried out as an extension of that reporting entity, rather than being carried out with a significant degree of autonomy;

An example of the former is when the foreign operation only sells goods imported from the reporting entity and remits the proceeds to it.

An example of the latter is when the foreign operations accumulates cash and other monetary items, incurs expenses, generates income and arranges borrowings, all substantially in its local currency.

(b) Whether the transactions with the reporting entity are a high or a low proportion of the foreign operation's activities;

(c) Whether cash flows from the activities of the foreign operations directly affect the cash flows of the reporting entity and are readily available for remittance to it.

(d) Whether cash flows from the activities of the foreign operation are sufficient to service existing and normally expected debt obligation without funds being made available by the reporting entity.

These factors also demonstrate whether the entity is integral to the reporting entity or not. In practice, the functional currency of a foreign operation that is integral to the parent / reporting entity will usually be the same as that of the parent / reporting entity.

- Determining an entity's functional currency depends on the facts and circumstances.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- When the above indicators are mixed and the functional currency is not obvious, the management will be required to use its judgement to determine the functional currency that most faithfully represents the economic effects of the underlying transactions, events and conditions. As part of this approach, management has to give priority to the primary indicators before considering the other indicators, which are designed to provide additional supporting evidence to determine an entity's functional currency.

Illustration 1

Future Ltd. sells a revitalising energy drink that is sold throughout the world. Sales of the energy drink comprise over 90% of the revenue of Future Ltd. For convenience and consistency in pricing, sales of the energy drink are denominated in USD. All financing activities of Future Ltd. are in its local currency (L$), although the company holds some USD cash reserves. Almost all of the costs incurred by Future Ltd. are denominated in L$.

Determine the functional currency of Future Ltd.

Solution

The functional currency of Future Ltd. is L$ looking at the primary indicators. The facts presented indicate that the currency that mainly influence the cost of producing the energy drink is the L$. As stated in the fact pattern, pricing of the product in USD is done for convenience and consistency purposes; there is no indication that the sales price is influenced by the USD.

*****

Illustration 2

Small India Private Limited (Small), a subsidiary of Big Inc., takes orders from Indian customers for Big Inc's merchandise and then bills and collects for the sale of the merchandise in Rupees. Small also has a local warehouse in India to facilitate timely delivery and ensures that it remits to its parent all cash flows that it generates as the operations of Small are primarily financed by Big Inc. Big Inc is based out of US and has its functional currency as USD.

Determine the functional currency of Small India Private Limited.

Solution

Small, although based in India with its cash flows generated in India, is essentially a "pass through company" established by its parent. Small is totally reliant on Big Inc. for financing and goods to be sold, despite the fact that goods are sold within India and in Rupees (₹). Therefore, Small is not a self-contained entity in India, rather an entity that is dependent on its parent.

Due to this dependence of Small on its parent company, it can be said that the primary economic environment for Small is that of US and thus, its functional currency should also be USD.

Join us t.me/caborntofight

Merged By CA - Born To Fight

Hence all the transactions of Small which are denominated in any currency other than USD should be recorded in USD at the spot rate and any changes in the exchange rate would result in an exchange gain or loss to be taken to the statement of profit or loss.

*****

Illustration 3

A is an Oman based company having a foreign operation, B, in India. The foreign operation was primarily set up to execute a construction project in India. The functional currency of A is OMR.

78% of entity B's finances have been raised in USD by way of contribution from A. B's bank accounts are maintained in USD as well as Rupees (₹). Cash flows generated by B are transferred to A on a monthly basis in USD in respect of repayment of finance received from A.

Revenues of B are in USD. Its competitors are globally based. Tendering for the construction project happened in USD.

B incurs 70% of the cost in Rupees (₹) and remaining 30% costs in USD.

Comment since B is located in India, can it presume its functional currency to be Rupees (₹).

Solution

No, B cannot presume Rupees (₹) to be its functional currency on the basis of its location. It needs to consider various factors listed in Ind AS for determination of functional currency.

Primary indicators:

1. the currency that mainly influences

   (a) sales prices for its goods and services. This will often be the currency in which sales prices are denominated and settled; and of the country whose competitive forces and regulations mainly determine the sales prices of its goods and services.

   (b) labour, material and other costs of providing goods and services. This will often be the currency in which these costs are denominated and settled.

2. Other factors that may provide supporting evidence to determine an entity's functional currency are (**Secondary indicators**):

   (a) the currency in which funds from financing activities (i.e. issuing debt and equity instruments) are generated; and

   (b) the currency in which receipts from operating activities are usually retained.

3. **If an entity is a foreign operation**, additional factors set out in Ind AS 21 should be considered to determine whether its functional currency is the same as that of the reporting entity of which it is a subsidiary, branch, associate or joint venture:

   (a) Whether the activities of foreign operations are carried out as an extension of that reporting entity, rather than being carried out with a significant degree of autonomy;

(b) Whether the transactions with the reporting entity are a high or a low proportion of the foreign operation's activities;

(c) Whether cash flows from the activities of the foreign operations directly affect the cash flows of the reporting entity and are readily available for remittance to it.

(d) Whether cash flows from the activities of the foreign operation are sufficient to service existing and normally expected debt obligation without funds being made available by the reporting entity.

On the basis of additional factors mentioned in point 3 above, B cannot be said to have functional currency same as that of A Ltd.

Hence primary and secondary indicators should be used for the determination of functional currency of B giving priority to primary indicators. The analysis is given below:

- Its significant revenues and competitive forces are in USD.
- Its significant portion of cost is incurred in Rupees (₹). Only 30% costs are in USD.
- 78% of its finances have been raised in USD.
- It retains its operating cash flows partially in USD and partially in Rupees (₹).

Keeping these factors in view, USD should be considered as the functional currency of B.

*****

Illustration 4

S Ltd is a company based out of India which got listed on Bombay Stock Exchange in the financial year ended 31st March, 20X1. Since then, the company's operations have increased considerably. The company was engaged in the business of trading of motorcycles. The company only deals in imported motorcycles. These motorcycles are imported from US.

After importing the motorcycles, these are sold across India through its various distribution channels. The company had only private customers earlier, but the company also started corporate tie-up and increased its customer base to corporates also. The purchase of the motorcycles are in USD because the vendor(s) from whom these motorcycles are purchased those are all located in US.

All other operating expenses of the company are incurred in India only because of its location and they generally happen to be in Rupees (₹).

Currently, its customers are both corporate and private in the ratio of 70:30 approximately. The USD denominated prices of motorcycles in India are different from those in other countries.

The company is also expecting that in the coming years, its customers base will increase significantly in India and the current proportion may also change.

Currently, the invoices are raised to the corporate customers in USD for the purpose of hedging. However, private customers don't accept the same arrangement and hence invoices are raised to them in Rupees (₹).

Determine the functional currency of the company.

Solution

The functional currency of S Ltd is Rupees (₹).

Following factors need to be considered for determination of functional currency:

Primary indicators

1. the currency that mainly influences

(a) sales prices for its goods and services. This will often be the currency in which sales prices are denominated and settled; and of the country whose competitive forces and regulations mainly determine the sales prices of its goods and services.

(b) labour, material and other costs of providing goods and services. This will often be the currency in which these costs are denominated and settled.

2. Other factors that may provide supporting evidence to determine an entity's functional currency are (**Secondary indicators**):

(a) the currency in which funds from financing activities (i.e. issuing debt and equity instruments) are generated; and

(b) the currency in which receipts from operating activities are usually retained.

Primary and secondary indicators should be used for the determination of functional currency of S Ltd. giving priority to primary indicators.

The analysis is given below:

Ind AS 21 gives greater emphasis to the currency of the economy that determines the pricing of transactions, as opposed to the currency in which transactions are denominated.

Sales prices for motorcycles are mainly influenced by the competitive forces and regulations in India. The market for motorcycles depends on the economic situation in India and the company is in competition with importers of other motor cycle brands.

Even though 70% of the revenue of the company is denominated in USD, Indian economic conditions are the main factors affecting the prices. This is evidenced by the fact that USD denominated sales prices in India are different from USD denominated sales prices for the same motorcycles in other countries.

Management is able to determine the functional currency because the revenue is clearly influenced by the Indian economic environment and expenses are mixed.

On the basis of above analysis, Rupees (₹) should be considered as the functional currency of the company.

*****

2.4 ACCOUNTING FOR FOREIGN CURRENCY TRANSACTIONS

2.4.1 Initial recognition at the transaction date

- A foreign currency transaction is a transaction that is denominated or requires settlement in a foreign currency (i.e., a currency other than the functional currency of the entity), including transactions arising when an entity:

  (a) buys or sells goods or services whose price is denominated in a foreign currency;

  (b) borrows or lends funds with amounts denominated in a foreign currency; or

  (c) otherwise acquires or disposes of assets, or incurs or settles liabilities, denominated in a foreign currency.

- A foreign currency transaction is initially recorded by translation in the entity's functional currency at the exchange rate on the transaction date.

  For practical reasons, a rate that approximates the actual exchange rate is often used.

Example

An average rate for a week or a month might be used for all transactions in each foreign currency occurring during that period.

However, if exchange rates fluctuate significantly, the use of the average rate for a period is inappropriate.

2.4.2 Monetary vs non-monetary items

S. No.	Particulars	Monetary items	Non-monetary item
1.	Units of currency	Units of currency held and assets and liabilities to be received or paid are in a fixed or determinable number of units of currency.	There is no fixed or determinable number of units of currency

- **Examples of monetary items** include:
  - pensions and other employee benefits to be paid in cash;
  - provisions that are to be settled in cash;
  - lease liabilities;

- ♦ cash dividends that are recognised as a liability;
- ♦ contract to receive (or deliver) a variable number of the entity's own equity instruments or a variable amount of assets in which the fair value* to be received (or delivered) equals a fixed or determinable number of units of currency.
- ♦ Most debt securities are considered as monetary items because their contractual cash flows are fixed or determinable.

Note: Fair value is the price that would be recovered to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

- **Examples of non-monetary items** include**:**
  - ♦ amounts prepaid for goods and services and income received in advance, on the basis that no money will be paid or received in the future;
  - ♦ goodwill;
  - ♦ intangible assets;
  - ♦ inventories;
  - ♦ property, plant and equipment;
  - ♦ right-of-use assets;
  - ♦ provisions that are to be settled by the delivery of a non-monetary asset.

2.4.3 Subsequent recognition at the end of each reporting period

- At the reporting date, assets and liabilities denominated in a foreign currency are translated as follows:

  (a) **monetary items** are translated at the exchange rate at the reporting date i.e., closing rate;

  (b) **non-monetary items measured at historical cost** are translated at the exchange rate at the date of the transaction; and

  (c) **non-monetary items measured at fair value in a foreign currency** are translated at the exchange rate on the date the fair value was determined.

- The carrying amount of the item is determined applying the relevant Accounting Standard.

Example

Property, plant and equipment may be measured at fair value or historical cost as per Ind AS 16, *Property, Plant and Equipment*.

The carrying amount so determined, be it on the basis of historical cost or fair value, if in foreign currency, is translated into the functional currency in accordance with this Standard.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- In some cases, the carrying amount of items is determined by comparing two or more amounts e.g.:
  - ♦ Inventories - measured at lower of cost and net realisable value.
  - ♦ Asset subject to impairment loss - lower of an asset's carrying amount and its recoverable amount.

  If such an asset is non-monetary and measured in a foreign currency, the carrying amount is determined by comparing:

  (a) the cost or carrying amount, as appropriate, translated at the exchange rate at the date when that amount was determined (i.e. the rate at the date of the transaction for an item measured in terms of historical cost); and

  (b) the net realisable value or recoverable amount, as appropriate, translated at the exchange rate at the date when that value was determined (eg. the closing rate at the end of the reporting period).

  The above may result in an impairment loss being recognised in the functional currency but not in the foreign currency, or vice versa.

Example 1

A foreign currency asset amounting to Euro 2,00,000 is recorded at the date of purchase when the exchange rate was ₹ 52 at ₹ 104 lacs.

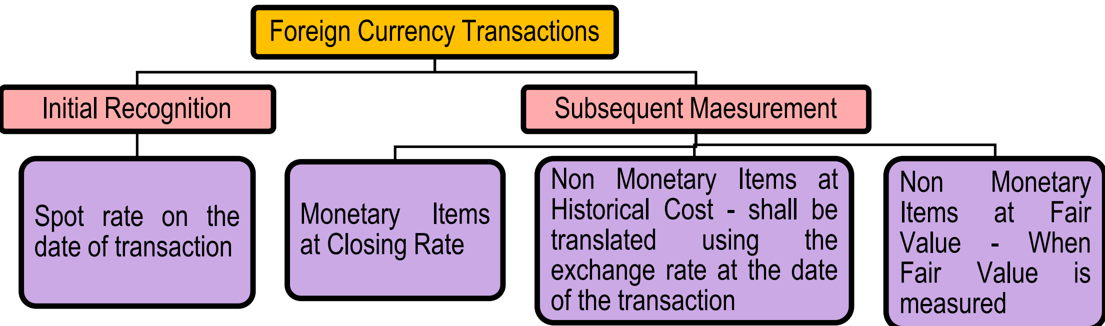
The recoverable amount of the asset on the reporting date is calculated as Euro 1,75,000. The exchange rate on the date of valuation was ₹ 60 to a Euro.

The carrying value of the foreign currency asset will be determined based on the recoverable amount of the asset converted into functional currency at the exchange rate on valuation date which is ₹ 105 lacs.

The impairment loss of Euro 25,000 in foreign currency is not recognised.

- Where a country has multiple exchange rates, the rate used is that at which the future cash flows represented by the transaction or balance could have been settled if those cash flows had occurred at the measurement date. If exchangeability between two currencies is temporarily lacking, the rate used is the first subsequent rate at which exchanges could be made.

Join us t.me/caborntofight



2.4.4 Recognition of foreign exchange gains and losses

- Exchange difference is the difference resulting from translating a given number of units of one currency into another currency at different exchange rates.
- When the transaction occurs and settles within the same accounting period, all the exchange difference is recognized in that period. However, when the transaction is settled in a subsequent accounting period, the exchange difference is recognised in each period till settlement date based on change in exchange rates during each period.

2.4.4.1 Monetary items

Exchange differences arising on the settlement of monetary items or on translating monetary items are recognised in profit or loss, except:

(i) for accounting of exchange difference as required by application of hedge accounting under Ind AS 109. For example - Ind AS 109 requires that exchange differences on monetary items that qualify as hedging instruments in a cash flow hedge should be recognised initially in other comprehensive income to the extent that the hedge is effective;

(ii) for monetary items that in substance form part of the reporting entity's net investment in a foreign operation (discussed below);

(iii) for long-term foreign currency monetary items in case the entity has exercised the option for recognising exchange differences on such items in equity (discussed below).

2.4.4.2 Non-monetary items

- Ind AS requires certain gains and losses to be recognised in other comprehensive income.

  For example, revaluation gain or loss on property, plant and equipment is recognised in other comprehensive income as per Ind AS 16. When such an asset is measured in a foreign currency and its revalued amount is translated as per this Standard using the rate at the date the fair value was determined, the resulting exchange gain or loss is also recognised in other comprehensive income.

Join us t.me/caborntofight

- If the gain or loss on a non-monetary item is recognised in profit or loss, any exchange component of that gain or loss is also recognized in profit or loss.

2.4.4.3 Net investment in a foreign operation

- **Net investment in a foreign operation** is the amount of the reporting entity's interest in the net assets of that operation.
- A monetary item receivable from or payable to a foreign operation may form part of the net investment in a foreign operation if the settlement of the monetary item is neither planned nor likely to occur in the foreseeable future.

  A loan to a foreign entity which is repayable on demand might seem to be a short-term item, rather than part of capital. However, if there is demonstrably no intent or expectation to demand repayment (e.g., the short-term loan is getting rolled over continuously, whether or not the foreign subsidiary is able to repay it), the loan has the same economic effect as that of a capital contribution.

  On the other hand, when there is a long-term loan with a fixed maturity period (say, 10 to 15 years) it does not automatically qualify to be treated as being part of the net investment simply because it is of a long duration, unless management has expressed its intention to renew the loan at maturity and accordingly, the period of repayment is not foreseeable.

  It lies on the management to document its intention to renew by auditable evidence, such as board minutes. Otherwise, in the absence of management's intention to renew, the loan's maturity date implies that its settlement is planned in the foreseeable future.
- Such monetary items may include long-term receivables or loans but do not include trade receivables or trade payables.
- Exchange differences arising on a monetary item that forms part of a reporting entity's net investment in a foreign operation (i.e. a subsidiary, associate or joint venture) should be treated as follows:
  - ♦ Such exchange differences are recognised in profit or loss in the separate financial statements of the reporting entity and/or the individual financial statements of the foreign operation, as appropriate:
    - ❖ If such an item is denominated in the functional currency of the reporting entity, an exchange difference arises in the foreign operation's individual financial statements.
    - ❖ If such an item is denominated in the functional currency of the foreign operation, an exchange difference arises in the reporting entity's separate financial statements.
    - ❖ If such an item is denominated in a currency other than the functional currency of either the reporting entity or the foreign operation, an exchange difference arises

in the reporting entity's separate financial statements and in the foreign operation's individual financial statements.

- In the financial statements that include the foreign operation and the reporting entity (e.g., consolidated financial statements when the foreign operation is a subsidiary, associate or joint venture), such exchange differences are recognised initially in other comprehensive income and then reclassified from equity to profit or loss on disposal of the net investment.

Illustration 5

Functional currency of parent P is EURO while the functional currency of its subsidiary S is USD. P sells inventory to S and a transaction for the same was made for USD 300 during the year. At the year end, a balance of the same amount is outstanding as receivable from S. It has been observed that such balance amount has been continuing as receivable from S year on year and even though the payments in respect of these balances are expected to be received in the foreseeable future but if we look at the year-end then we see this balance as outstanding every year.

In addition to the trading balances between P and S, P has lent an amount of USD 500 to S that is not expected to be repaid in the foreseeable future.

Analyse whether the exchange difference, if any, should be recognised in the profit and loss.

Solution

The exchange gain or loss will arise in the books of accounts of P in respect of its trading balance with S and the same should be recognised in profit or loss. This being a balance for in the nature of trade receivable for P, it would not be considered as its net investment in a foreign operation (i.e. S).

The amount lent by P should be regarded as its net investment in S (i.e. foreign operation). Thus, the exchange gain or loss incurred by P on the USD 500 loan should be recognised in profit or loss in P's separate financial statements and in other comprehensive income in its consolidated financial statements.

*****

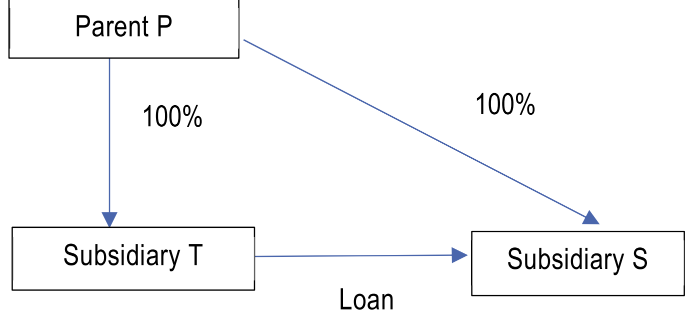
Illustration 6

In the above illustration, suppose that for tax reasons, the 'permanent' funding (i.e. loan amount) extended to S is made via another entity in the group, T, rather than from P directly. That is, on the directions of P, T gives the loan to S. T is also a subsidiary of P.

Demonstrate where should the exchange difference, if any, be recognised.

Join us t.me/caborntofight

Solution



Any exchange difference in respect of the loan is recognised in other comprehensive income in the consolidated financial statements because from the group's point of view the funding relates to an investment in a foreign operation. This is the case irrespective of the currency in which the loan is denominated. So, if the loan is denominated in T's functional currency, and this is different from that of S, then exchange differences still should be recognised in other comprehensive income in the consolidated financial statements.

*****

2.4.5 Change in functional currency

- Once an entity has determined its functional currency, it is not changed unless there is a change in the relevant underlying transactions, events and conditions.
- If circumstances change and a change in functional currency is appropriate, then the change is accounted for prospectively from the date of the change.

For example, a change in the currency that mainly influences the sales price of goods and services may lead to a change in an entity's functional currency.

- For accounting the effect of a change in functional currency prospectively:
  - ♦ All items are translated into the new functional currency using the exchange rate at the date of the change. The resulting translated amounts for non-monetary items are treated as their historical cost.
  - ♦ Exchange differences arising from the translation of a foreign operation previously recognised in other comprehensive income are not reclassified from equity to profit or loss until the disposal of the operation.
  - ♦ Exchange gain or loss from long-term monetary items accumulated in equity (where such option is exercised) are not transferred to profit or loss immediately on change of the entity's functional currency; the balance would be transferred to profit or loss as per the manner provided by the option.

- Since entities prefer to present financial statements in their functional currency, a change in functional currency may be accompanied by a change in presentation currency. The choice of presentation currency represents an accounting policy, and any change should be applied retrospectively in accordance with Ind AS 8, unless impracticable. This means that the change should be treated as if the new presentation currency had always been the entity's presentation currency, with comparative amounts being restated into the new presentation currency.

2.5 USE OF A PRESENTATION CURRENCY OTHER THAN THE FUNCTIONAL CURRENCY

2.5.1 Translation to the presentation currency

- An entity measures items in its financial statements; but it may decide to present its financial statements in a currency or currencies other than its functional currency.

  For example, an entity with Rupees (₹) functional currency may choose to present its financial statements in US Dollar because of its reporting requirement in US.

- There can be situations wherein a group comprises operations with a number of functional currencies. Under Ind AS 21, there is no concept of a "group" functional currency. Rather the group has a presentation currency only. Each entity in the group prepares financial statements in its own functional currency and translates these financial statements into the group's presentation currency (if different) for consolidation purposes.

- The results and financial position of an entity whose functional currency is not the currency of a hyperinflationary economy are translated into a different presentation currency as follows:

  (a) **assets and liabilities** for each balance sheet presented (i.e., including comparatives) are translated **at the closing rate** at the date of that balance sheet;

  (b) **income and expenses** are translated at exchange rates at the dates of relevant transactions; **average rates** for the period if often used if they are a reasonable approximation;

  (c) all **resulting exchange differences** should be **recognised in other comprehensive income** as they have little or no direct effect on the present and future cash flows from operations and are presented in a separate component of equity (generally referred to as the foreign currency translation reserve or currency translation adjustment) until disposal of the foreign operation;

  (d) cash flows are translated at exchange rates at the dates of the relevant transactions, although an appropriate average rate may be used.

Join us t.me/caborntofight

- When the exchange differences relate to a foreign operation that is consolidated but not wholly-owned, accumulated exchange differences arising from translation and attributable to non-controlling interests are allocated to, and recognized as a part of, non-controlling interest in the consolidated balance sheet.
- The results and financial position of an entity whose functional currency is the currency of a hyperinflationary economy shall be translated into a different presentation currency as follows:

  (a) all amounts (i.e. assets, liabilities, equity items, income and expenses, including comparatives) shall be translated at the closing rate at the date of the most recent balance sheet, except that

  (b) when amounts are translated into the currency of a non-hyperinflationary economy, comparative amounts shall be those that were presented as current year amounts in the relevant prior year financial statements (ie not adjusted for subsequent changes in the price level or subsequent changes in exchange rates).

  - When an entity's functional currency is the currency of a hyperinflationary economy, the entity shall restate its financial statements in accordance with Ind AS 29 before applying the translation method set out above, except for comparative amounts that are translated into a currency of a non-hyperinflationary economy.

2.6 TRANSLATION OF FOREIGN OPERATIONS

- The guidance provided on determining an entity's functional currency equally applies to determine the functional currency of a foreign operation of the entity.
- Effectively, the translation procedures those for translating foreign operations are the same as those followed when an entity presents its financial statements in a presentation currency that is different from its functional currency:

  (a) assets and liabilities are translated at the exchange rate at the reporting date;

  (b) items of income and expense are translated at exchange rates at the dates of the relevant transactions, although appropriate average rates may be used;

  (c) the resulting exchange differences are recognised in other comprehensive income and are presented in a separate component of equity (generally referred to as the foreign currency translation reserve or currency translation adjustment) until disposal of the foreign operation; and

  (d) cash flows are translated at exchange rates at the dates of the relevant transactions, although an appropriate average rate may be used.

Join us t.me/caborntofight

- In addition to the exchange difference as stated above, the foreign currency translation reserve may include exchange differences arising from loans that form part of the parent's net investment in the foreign operation and gains and losses related to hedges of a net investment in a foreign operation.

2.7 DIFFERENCE IN THE REPORTING DATES

- When there is difference in the year end of foreign operation and that of the reporting entity, the foreign operation often prepares additional statements as of the same date as the reporting entity's financial statements.
- When such financial statements are not prepared, Ind AS 110 allows the use of a different date provided that the difference is no greater than three months and adjustments are made for the effects of any significant transactions or other events that occur between the different dates.
- In such a case, the assets and liabilities of the foreign operation are translated at the exchange rate at the end of the reporting period of the foreign operation.
- Adjustments are made for significant changes in exchange rates up to the end of the reporting period of the reporting entity in accordance with Ind AS 110.
- A similar approach is used in applying the equity method to associates and joint ventures in accordance with Ind AS 28, *Investment in Associates and Joint Ventures.*

2.8 INTRA-GROUP TRANSACTIONS

- Although intra-group balances are eliminated on consolidation, any related foreign exchange gains or losses will not be eliminated. This is because the group has a real exposure to a foreign currency since one of the entities will need to obtain or sell foreign currency in order to settle the obligation or realise the proceeds received.
- Accordingly, in the consolidated financial statements of the reporting entity, the exchange difference arising on such intra group transactions is recognised in the statement of profit or loss account, unless it arises from a monetary item that forms part of a reporting entity's net investment in a foreign operation in which case it is taken to other comprehensive income.
- A Group may have intra-group transactions like sale and purchase of various assets such as property, plant and equipment, intangible assets or inventory. These transactions could result in intra-group profits or losses. At the time of consolidation, these profits / losses are eliminated until the profit or loss is realized i.e. when the asset is sold outside the group, depreciated, amortised or written off as per the requirements of Ind AS 110. The elimination of intra-group profits / losses arising from such transactions, like sales between entities that are consolidated,

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

should be based on the spot rate i.e. the exchange rate of the date of the sale.

Example 2

Parent P has USD as its functional currency and Subsidiary S has Euro as its functional currency. P, whose reporting date is 31st March, lends USD 100 to S on 30th September, 20X1. S converted the loan amount received into Euro on receipt.

	USD		EURO
Exchange rate at 30th September, 20X1	1	=	1.5
Exchange rate at 31st March, 20X2	1	=	2.0

Entries in the books of account of S

Date	Particulars		Debit (EURO)	Credit (EURO)
30th September, 20X1	Bank A/c	Dr.	150	
	To Intra-group payable			150
	(To recognize intra-group loan)			
31st March, 20X2	Exchange loss A/c	Dr.	50	
	To Intra-group payable			50
	(To recognize exchange loss on intra-group loan)			

In S's second entry, the liability is remeasured at 31st March, 20X2 and a translation loss is recorded.

Entries in the books of account of P

Date	Particulars		Debit (USD)	Credit (USD)
30th September,20X1	Intra group receivable	Dr.	100	
	To Cash			100
	(To recognize intra-group loan on issue)			

On consolidation at 31st March, 20X2, the receivable and payable (in respect of Intra-group receivable and payable) will be eliminated. However, an exchange loss equivalent to EURO 50 for the year ended 31st March, 20X2 will remain on consolidation. This is appropriate because S will need to obtain USD in order to repay the liability. Therefore, the group has a foreign currency exposure. The exchange loss will be taken to consolidated profit or loss, unless the loan forms part of P's net investment in S in which case it will be transferred to other comprehensive income at the time of consolidation.

Illustration 7

The functional and presentation currency of parent P is USD while the functional currency of its subsidiary S is EURO. P sold goods having a value of USD 100 to S when the exchange rate was USD 1 = Euro 2. At year-end, the amount is still due, and the exchange rate is USD 1 = Euro 2.2.

Advise how should the exchange difference, if any, be accounted for in the consolidated financial statements.

Solution

At year-end, S should restate its accounts payable to EURO 220, recognising a loss of Euro 20 in its profit or loss. Thus, in the books of S, the balance payable to P will appear at EURO 220 while in the books of P the balance receivable from S will be USD 100.

For consolidation purposes, the assets and liabilities of S will be translated to USD at the closing rate.

At the time of consolidation, USD 100 which will get eliminated against the receivable in the books of P but the exchange loss of EURO 20 recorded in the subsidiary's statement of profit or loss has no equivalent gain in the parent's financial statements. Therefore, exchange loss of EURO 20 will remain in the consolidated statement of profit or loss.

The reason for this is that the intra-group balance represents a commitment to translate Euro into USD and this is similar to holding a foreign currency asset in the books of the parent company. i.e. the subsidiary would be required to buy USD to settle the obligation to the parent, so the Group has an exposure to foreign currency risk.

*****

Illustration 8

M Ltd is engaged in the business of manufacturing of bottles for pharmaceutical companies and non-pharmaceutical companies. It has a wholly owned subsidiary, G Ltd, which is engaged in the business of pharmaceuticals. G Ltd purchases the pharmaceutical bottles from its parent company. The demand of G Ltd is very high and hence to cater to its shortfall, G Ltd also purchases the bottles from other companies. Purchases are made at the competitive prices.

M Ltd sold pharmaceuticals bottles to G Ltd for Euro 12 lacs on 1st February, 20X1. The cost of these bottles was ₹ 830 lacs in the books of M Ltd at the time of sale. At the year-end i.e. 31st March, 20X1, all these bottles were lying as closing stock and payable with G Ltd.

Euro is the functional currency of G Ltd. while Indian Rupee is the functional currency of M Ltd.

Following additional information is available:

Exchange rate on 1st February, 20X1	*1 Euro = ₹ 83*
Exchange rate on 31st March, 20X1	*1 Euro = ₹ 85*

© The Institute of Chartered Accountants of India

Provide the accounting treatment for the above in books of M Ltd. and G Ltd. Also show its impact on consolidated financial statements. Support your answer by Journal entries, wherever necessary, in the books of M Ltd.

Solution

Accounting treatment in the books of M Ltd (Functional Currency Rupees (₹))

M Ltd will recognize sales of ₹ 996 lacs (12 lacs Euro x 83)

Profit on sale of inventory = 996 lacs – 830 lacs = ₹ 166 lacs.

On balance sheet date receivable from G Ltd. will be translated at closing rate i.e. 1 Euro = ₹ 85. Therefore, unrealised forex gain will be recorded in standalone profit and loss of ₹ 24 lacs. (i.e. (85 - 83) x 12 Lacs)

Journal Entries

	₹ (in Lacs)	₹ (in Lacs)
G Ltd. A/c Dr.	996	
To Sales		996
(Being revenue recorded on initial recognition)		
G Ltd. A/c Dr.	24	
To Foreign exchange difference (unrealised)		24
(Being foreign exchange difference recorded at year end)		

Accounting treatment in the books of G Ltd (Functional currency EURO)

G Ltd will recognize purchases on 1st February, 20X1 of Euro 12 lacs which will also be its closing stock at year end.

Journal Entry

	(in Euros)	(in Euros)
Purchases Dr.	12 lakhs	
To M Ltd.		12 lakhs

Accounting treatment in the consolidated financial statements

Receivable and payable in respect of above-mentioned sale / purchase between M Ltd and G Ltd will get eliminated.

The closing stock of G Ltd will be recorded at lower of cost or NRV.

	Euro (in lacs)	Rate	₹ (in lacs)
Cost	12	83	**996**
NRV (Assumed Same)	12	85	1020

Therefore, no write off is required.

The amount of closing stock of ₹ 996 lacs includes two components–

- Cost of inventory for ₹ 830 lacs; and
- Profit element of ₹ 166 lacs; and

At the time of consolidation, the second element amounting to ₹ 166 lacs will be eliminated from the closing stock.

Journal Entry

	₹ (in Lacs)	₹ (in Lacs)
Consolidated P&L A/c Dr.	166	
To Inventory		166
(Being profit element of intragroup transaction eliminated)		

*****

2.8.1 Dividends

If a subsidiary pays a dividend to the parent during the year the parent should record the dividend at the rate ruling when the dividend was declared. An exchange difference will arise in the parent's own financial statements if the exchange rate moves between the declaration date and the date the dividend is actually received. This exchange difference is required to be recognised in profit or loss and will remain there on consolidation.

The same will apply if the subsidiary declares a dividend to its parent on the last day of its financial year and this is recorded at the year-end in both entities' financial statements. There is no problem in that year as both the intragroup balances and the dividends will eliminate on consolidation with no exchange differences arising. However, as the dividend will not be received until the following year an exchange difference will arise in the parent's financial statements in that year if exchange rates have moved in the meantime. Again, this exchange difference should remain in consolidated profit or loss as it is no different from any other exchange difference arising on intragroup balances resulting from other types of intragroup transactions. It should not be recognised in other comprehensive income.

It may seem odd that the consolidated results can be affected by exchange differences on inter-company dividends. However, once the dividend has been declared, the parent now effectively has a functional currency exposure to assets that were previously regarded as part of the net investment. In order to minimise the effect of exchange rate movements entities should, therefore, arrange for inter-company dividends to be paid on the same day the dividend is declared, or as soon after the dividend is declared as possible.

2.9 GOODWILL AND FAIR VALUE ADJUSTMENTS ARISING FROM A BUSINESS COMBINATION

- Any goodwill and any fair value adjustments to the carrying amounts of assets and liabilities arising on a foreign operation's acquisition are treated as assets and liabilities of the foreign operation.
- Hence, they are expressed in the functional currency of the foreign operation and should be translated at the closing exchange rate as is the case for other assets and liabilities.

2.10 DISPOSAL OR PARTIAL DISPOSAL OF FOREIGN OPERATIONS

2.10.1 Full disposal

- A disposal may arise, for example, through sale, liquidation or repayment of share capital. On disposal of the foreign operation, the cumulative exchange differences relating to that foreign operation recognised in other comprehensive income and accumulated in equity are reclassified from equity to profit or loss (reclassification adjustment) when the gain or loss on disposal is recognised.
- On disposal of a subsidiary that includes a foreign operation, the cumulative amount of the exchange differences related to that foreign operation that have been attributed to the non-controlling interests is derecognised, but it is not reclassified to profit or loss.
- In addition to the disposal of an entity's entire interest in a foreign operation, the following partial disposals are accounted for as disposals:
  - ♦ when the partial disposal involves the loss of control of a subsidiary that includes a foreign operation, regardless of whether the entity retains a non-controlling interest (NCI) in its former subsidiary after the partial disposal; and
  - ♦ when the retained interest after the partial disposal of an interest in a joint arrangement or a partial disposal of an interest in an associate that includes a foreign operation is a financial asset that includes a foreign operation.

Example 3

Parent P owns 100 percent of foreign subsidiary S. P sells 70 percent of its investment and loses control of S. The entire balance in the foreign currency translation reserve in respect of S is reclassified to profit or loss.

2.10.2 Partial disposal

A partial disposal of an entity's interest in a foreign operation is any reduction in an entity's ownership interest in a foreign operation, except for those reductions that are accounted for as disposals.

In the case of the partial disposal of a subsidiary that includes a foreign operation, the entity re-attributes the proportionate share of the cumulative amount of the exchange differences recognised in other comprehensive income to the NCI in that foreign operation.

In any other partial disposal of a foreign operation, the entity reclassifies to profit or loss only the proportionate share of the cumulative amount of the exchange differences recognised in other comprehensive income.

Examples 4 & 5

4. Parent P owns 100 percent of foreign subsidiary S. P sells 10 percent of its investment and retains control over S. Therefore, 10 percent of the balance in the foreign currency translation reserve is reclassified to NCI.

5. Parent P owns 35 percent of foreign associate B. P sells a 5 percent stake and retains significant influence over B. Therefore, one-seventh (5/35) of the balance in the foreign currency translation reserve is reclassified to profit or loss.

A write-down of the carrying amount of a foreign operation, either because of its own losses or because of an impairment recognised by the investor, does not constitute a partial disposal. Accordingly, no part of the foreign exchange gain or loss recognised in other comprehensive income is reclassified to profit or loss at the time of a write-down.

2.11 TAX EFFECT OF ALL EXCHANGE DIFFERENCES

Ind AS 12, Income Taxes, applies to tax effects of gains and losses on foreign currency transactions and exchange differences arising on translating the results and financial position of an entity (including a foreign operation) into a different currency.

© The Institute of Chartered Accountants of India

2.12 DISCLOSURES

Ind AS 21 requires following disclosures:

(a) amount of exchange differences recognised in profit or loss except for those arising on financial instruments measured at fair value through profit or loss in accordance with Ind AS 109;

(b) net exchange differences recognised in other comprehensive income and accumulated in a separate component of equity, along with the reconciliation of the amount at the beginning and end of the period;

(c) when the presentation currency is different from the functional currency - that fact shall be stated, together with disclosure of the functional currency and the reason for using a different presentation currency;

(d) in case of change in functional currency of either the reporting entity or a significant foreign operation:

   (i) fact of such change;

   (ii) reason for the change and;

   (iii) date of change in functional currency;

(e) if presentation currency is different from functional currency, the financial statements can be described as complying with Ind AS only if all Ind AS including the translation method of this Standard is complied with.

   However, if an entity presents its financial statements or supplementary financial information in a currency other than its functional or presentation currency:

   (i) the information should be clearly identified as supplementary information to distinguish it from the information that complies with Ind AS;

   (ii) the currency in which the supplementary information is displayed should be disclosed; and

   (iii) the entity's functional currency and the method of translation used to determine the supplementary information should be disclosed.

2.13 EXTRACTS OF FINANCIAL STATEMENTS OF LISTED ENTITIES

Following is the extract from the financial statements of the listed entity 'Tata Consultancy Services Limited' for the financial year 2021-2022 with respect to Ind AS 21 'The Effects of Changes in Foreign Exchange Rates'.

Basis of preparation

The functional currency of the Company and its Indian subsidiaries is the Indian Rupee (`). The functional currency of foreign subsidiaries is the currency of the primary economic environment in which the entity operates. Foreign currency transactions are recorded at exchange rates prevailing on the date of the transaction. Foreign currency denominated monetary assets and liabilities are retranslated at the exchange rate prevailing on the balance sheet dates and exchange gains and losses arising on settlement and restatement are recognised in the statement of profit and loss. Non-monetary assets and liabilities that are measured in terms of historical cost in foreign currencies are not retranslated.

Foreign currency translation reserve

The exchange differences arising from the translation of financial statements of foreign operations with functional currency other than Indian Rupee is recognised in other comprehensive income and is presented within equity in the foreign currency translation reserve.

(Source: Annual Report for 2021-2022 of Tata Consultancy Services Limited)

2.14 SIGNIFICANT DIFFERENCES IN IND AS 21 VIS-À-VIS AS 11

S. No.	Particulars	Ind AS 21	AS 11
1.	*Forward Exchange Contracts and other similar Financial Instruments*	Excludes from its scope forward exchange contracts and other similar financial instruments, which are treated in accordance with Ind AS 109.	AS 11 deals with accounting for forward exchange contracts (except forward exchange contracts entered into to hedge the foreign currency risks of future transactions in respect of which firm commitments are

Join us t.me/caborntofight

			made or which are highly probable forecast transactions).
2.	*Exchange Differences arising on Translation of Certain Long-term Monetary Items from Foreign Currency to Functional Currency*	Ind AS 21 does not give the above option. However, Ind AS 21 does not apply to long-term foreign currency monetary items recognised in the financial statements before the beginning of the first Ind AS financial reporting period as per the previous GAAP, i.e. AS 11. However, as provided in Ind AS 101, such an entity may continue to apply the accounting policy so opted for such long-term foreign currency monetary items as per the previous GAAP.	AS 11, gives an option to recognise exchange differences arising on translation of certain long-term monetary items from foreign currency to functional currency directly in equity, to be transferred to profit or loss over the life of the relevant liability/asset if such items are not related to acquisition of depreciable capital assets; where such items are related to acquisition of depreciable capital assets, the foreign exchange differences can be recognised as part of the cost of the asset. (paragraphs 46 and 46A of AS 11)
3.	*Approach for Translation*	Ind AS 21 is based on functional currency approach. An entity is required to determine its functional currency which can be different from its presentation currency based on factors envisaged in the standard.	Under AS 11 there is no concept of functional currency. The method used to translate the financial statements of a foreign operation depends on the classification of foreign operation (integral foreign operation or non-integral foreign operation).
4.	*Presentation Currency*	As per Ind AS 21, presentation currency can be different from local currency and it gives detailed guidance in this regard.	AS 11 does not explicitly state so.
5.	*Exchange differences on monetary items,*	As per Ind AS 21 (paragraph 32), exchange differences on	As per AS 11, exchange differences on monetary items,

	forming part of net investment in a foreign operation	monetary items, that in substance, form part of net investment in a foreign operation, are recognised in profit or loss in the period in which they arise in the separate financial statements and in other comprehensive income in the consolidated financial statements and reclassified from equity to profit or loss on disposal of the net investment.	that in substance, form part of net investment in a foreign operation, are recognised in 'Foreign Currency Translation Reserve' both in the separate and consolidated financial statements until the disposal of the net investment, at which time income or expense on the same are recognised in profit or loss.
6.	*Guidance on foreign Currency Transactions and Advance Consideration*	Ind AS 21 includes Appendix B which gives guidance on foreign Currency Transactions and Advance Consideration	AS 11 does not contain such guidance.

FOR SHORTCUT TO IND AS WISDOM: SCAN ME!

TEST YOUR KNOWLEDGE

Questions

1. Parent P acquired 90 percent of subsidiary S some years ago. P now sells its entire investment in S for ₹ 1,500 lakhs. The net assets of S are 1,000 and the NCI in S is ₹ 100 lakhs. The cumulative exchange differences that have arisen during P's ownership are gains of ₹ 200 lakhs, resulting in P's foreign currency translation reserve in respect of S having a credit balance of ₹ 180 lakhs, while the cumulative amount of exchange differences that have been attributed to the NCI is ₹ 20 lakhs

   Calculate P's gain on disposal in its consolidated financial statements.

2. Entity A, whose functional currency is Rupees (₹), has a foreign operation, Entity B, with a Euro functional currency. Entity B issues to A perpetual debt (i.e. it has no maturity) denominated in euros with an annual interest rate of 6 per cent. The perpetual debt has no issuer call option or holder put option. Thus, contractually it is just an infinite stream of interest payments in Euros.

   Analyse in A's consolidated financial statements, whether the perpetual debt can be considered in accordance with para 15 of Ind AS 21, a monetary item "for which settlement is neither planned nor likely to occur in the foreseeable future" (i.e. part of A's net investment in B), with the exchange gains and losses on the perpetual debt therefore being recorded in equity?

3. Infotech Global Ltd. has a functional currency of USD and needs to translate its financial statements into the functional and presentation currency of Infotech Inc. (L$).

   The following balances appear in the books of Infotech Global Ltd. at the year-end prior to translation:

	USD	L$
Property, plant and equipment	50,000	

Receivables	9,35,000	
Total assets	**9,85,000**	
Issued capital	50,000	30,055
Opening retained earnings	28,000	15,274
Profit & Loss A/c (Profit for the year)	20,000	
Accounts payable	8,40,000	
Accrued liabilities	47,000	
Total equity and liabilities	**9,85,000**	

Translate the above balances of Infotech Global Ltd. into L$ ready for consolidation by Infotech Inc. (Share capital and opening retained earnings have been pre-populated.)

Prepare a working of the cumulative balance of the foreign currency translation reserve.

Additional information:

Relevant exchange rates are:

Rate at beginning of the year L$ 1 = USD 1.22

Average rate for the year L$ 1 = USD 1.175

Rate at end of the year L$ 1 = USD 1.13

4. On 30th January, 20X1, A Ltd. purchased a machinery for $ 5,000 from USA supplier on credit basis. A Ltd.'s functional currency is Rupees. The exchange rate on the date of transaction is 1 $ = ₹ 60. The fair value of the machinery determined on 31st March, 20X1 is $ 5,500. The exchange rate on 31st March, 20X1 is 1$ = ₹ 65. The payment to overseas supplier done on 31st March 20X2 and the exchange rate on 31st March 20X2 is 1$ = ₹ 67. The fair value of the machinery remains unchanged for the year ended on 31st March 20X2. Tax rate is 30%. A Ltd. follows revaluation method in respect of Plant & Machinery.

   Pass the Journal entries for the year ended on 31st March 20X1 and year 20X2 according to Ind AS 21.

5. On 1st January, 20X2, P Ltd. purchased a machine for $ 2 lakhs. The functional currency of P Ltd. is Rupees. At that date the exchange rate was $1= ₹ 68. P Ltd. is not required to pay for this purchase until 30th June, 20X2. Rupees strengthened against the $ in the three months following purchase and by 31st March, 20X2 the exchange rate was $1 = ₹ 65. CFO of P Ltd. feels that these exchange fluctuations wouldn't affect the financial statements because P Ltd. has an asset and a liability denominated in rupees, which was initially the same amount. He also feels that P Ltd. depreciates this machine over four years so the future year-end amounts won't be the same.

Join us t.me/caborntofight

Examine the impact of this transaction on the financial statements of P Ltd. for the year ended 31st March, 20X2 as per Ind AS.

6. Supplier, A Ltd., enters into a contract with a customer, B Ltd., on 1st January, 20X2 to deliver goods in exchange for total consideration of USD 50 million and receives an upfront payment of USD 20 million on this date. The functional currency of the supplier is Rupees (₹). The goods are delivered and revenue is recognised on 31st March, 20X2. USD 30 million is received on 1st April, 20X2 in full and final settlement of the purchase consideration.

   The exchange rates on 1st January, 20X2 and 31st March, 20X2 are ₹ 72 per USD and ₹ 75 per USD respectively.

   State the date of transaction for advance consideration and recognition of revenue. Also state the amount of revenue in Rupees (₹) to be recognized on the date of recognition of revenue.

7. Global Limited, an Indian company acquired on 30th September, 20X1 70% of the share capital of Mark Limited, an entity registered as company in Germany. The functional currency of Global Limited is Rupees and its financial year end is 31st March, 20X2.

   (i) The fair value of the net assets of Mark Limited was 23 million EURO and the purchase consideration paid is 17.5 million EURO on 30th September, 20X1.

   The exchange rates as at 30th September, 20X1 was ₹ 82 / EURO and at 31st March, 20X2 was ₹ 84 / EURO.

   Determine the value at which the goodwill has to be recognised in the financial statements of Global Limited as on 31st March, 20X2, when NCI is valued at proportionate share of fair value of net assets of Mark Limited.

   (ii) Mark Limited sold goods costing 2.4 million EURO to Global Limited for 4.2 million EURO during the year ended 31st March, 20X2. The exchange rate on the date of purchase by Global Limited was ₹ 83 / EURO and on 31st March, 20X2 was ₹ 84 / EURO. The entire goods purchased from Mark Limited are unsold as on 31st March, 20X2.

   Determine the unrealised profit to be eliminated in the preparation of consolidated financial statements.

8. On 1st April, 20X1, Makers Ltd. raised a long term loan from foreign investors. The investors subscribed for 6 million Foreign Currency (FCY) loan notes at par. It incurred incremental issue costs of FCY 2,00,000. Interest of FCY 6,00,000 is payable annually on 31st March, starting from 31st March, 20X2. The loan is repayable in FCY on 31st March, 20X7 at a premium and the effective annual interest rate implicit in the loan is 12%. The appropriate measurement basis for this loan is amortised cost. Relevant exchange rates are as follows:

   - 1st April, 20X1 - FCY 1 = ₹ 2.50.

- 31st March, 20X2 – FCY 1 = ₹ 2.75.
- Average rate for the year ended 31st Match, 20X2 – FCY 1 = ₹ 2.42. The functional currency of the group is Indian Rupee.

Advise the appropriate accounting treatment for the foreign currency loan in the books of Makers Ltd. for the financial year 20X1-20X2. Also calculate the initial measurement amount for the loan, finance cost for the year, closing balance and exchange gain / loss.

Answers

1. P's gain on disposal in its consolidated financial statements would be calculated in the following manner:

	(₹ in Lakhs)
Sale proceeds	1,500
Net assets of S	(1,000)
NCI derecognised	100
Foreign currency translation reserve	180
Gain on disposal	780

2. Yes, as per Ind AS 21 net investment in a foreign operation is the amount of the reporting entity's interest in the net assets of that operation.

As per para 15 of Ind AS 21, an entity may have a monetary item that is receivable from or payable to a foreign operation. An item for which settlement is neither planned nor likely to occur in the foreseeable future is, in substance, a part of the entity's net investment in that foreign operation. Such monetary items may include long-term receivables or loans. They do not include trade receivables or trade payables.

Analysis on the basis of above mentioned guidance

Through the origination of the perpetual debt, A has made a permanent investment in B. The interest payments are treated as interest receivable by A and interest payable by B, not as repayment of the principal debt. Hence, the fact that the interest payments are perpetual does not mean that settlement is planned or likely to occur. The perpetual debt can be considered part of A's net investment in B.

In accordance with para 15 of Ind AS 21, the foreign exchange gains and losses should be recorded in equity at the consolidated level because settlement of that perpetual debt is neither planned nor likely to occur.

3. **Translation of the balances for the purpose of consolidation**

	USD	Rate	L$
Property, plant and equipment	50,000	1.13	44,248
Receivables	9,35,000	1.13	8,27,434
Total assets	**9,85,000**		**8,71,682**
Issued capital	50,000	—	30,055
Opening retained earnings	28,000	—	15,274
Profit for the year	20,000	1.175	17,021
Accounts payable	8,40,000	1.13	7,43,363
Accrued liabilities	47,000	1.13	41,593
Total equity and liabilities USD	**9,85,000**		**8,47,306**
Foreign Currency Translation Reserve (Refer WN-1)			**24,376**
Total equity and liabilities L$			**8,71,682**

Working Note

1 **Cumulative balance of the FCTR**

Particulars	Actual translated amount in L$	Amount (Refer WN-2)	Difference
	A	B	B-A
Issued capital	30,055	44,248	14,193
Opening retained earnings	15,274	24,779	9,505
Profit for the year	17,021	17,699	678
	62,350	**86,726**	**24,376**

2 **Translated amount if the same conversion rate is applied to following items as applied on other items**

			Translated amount
Issued capital	50,000	1.13	44,248
Opening retained earnings	28,000	1.13	24,779
Profit for the year	20,000	1.13	17,699
	98,000		**86,726**

4. **Journal Entries**

Purchase of Machinery on credit basis on 30th January 20X1:

	₹	₹
Machinery A/c ($ 5,000 x ₹ 60) Dr.	3,00,000	
To Creditors-Machinery A/c		3,00,000
(Initial transaction will be recorded at exchange rate on the date of transaction)		

Exchange difference arising on translating monetary item on 31st March 20X1:

	₹	₹
Profit & Loss A/c [($ 5,000 x ₹ 65) – ($ 5,000 x ₹ 60)] Dr.	25,000	
To Creditors-Machinery A/c		25,000
Machinery A/c Dr.	30,000	
To Revaluation Surplus (OCI)		30,000
[Being Machinery revalued to USD 5,500; (₹ 60 x ($ 5,500 - $ 5,000)]		
Machinery A/c Dr.	27,500	
To Revaluation Surplus (OCI)		27,500
(Being Machinery measured at the exchange rate on 31.3.20X1 [$ 5,500 x (₹ 65 - ₹ 60)]		
Revaluation Surplus (OCI) Dr.	17,250	
To Deferred Tax Liability		17,250
(DTL created @ of 30% of the total OCI amount)		

Exchange difference arising on translating monetary item and settlement of creditors on 31st March 20X2:

	₹	₹
Creditors-Machinery A/c ($ 5,000 x ₹ 65) Dr.	3,25,000	
Profit & loss A/c [(5,000 x (₹ 67 -₹ 65)] Dr.	10,000	
To Bank A/c		3,35,000
Machinery A/c [{$ 5,500 x (₹ 67 - ₹ 65)}] Dr.	11,000	

To Revaluation Surplus (OCI)			11,000
Revaluation Surplus (OCI)	Dr.	3,300	
To Deferred Tax Liability			3,300
(DTL created @ of 30% of the total OCI amount)			

5. As per Ind AS 21 'The Effects of Changes in Foreign Exchange Rates' the asset and liability would initially be recognised at the rate of exchange in force at the transaction date ie 1st January, 20X2. Therefore, the amount initially recognised would be ₹ 1,36,00,000 ($ 2,00,000 x ₹ 68).

The liability is a monetary item, so it is retranslated using the rate of exchange in force at 31st March, 20X2. This makes the closing liability of ₹ 1,30,00,000 ($ 2,00,000 x ₹ 65).

The gain on re-translation of ₹ 6,00,000 (₹ 1,36,00,000 – ₹ 1,30,00,000) is recognised in the Statement of profit and loss.

The machine is a non-monetary asset carried at historical cost. Therefore, it continues to be translated using the rate of ₹ 68 to $ 1.

Depreciation of ₹ 8,50,000 (₹ 1,36,00,000 x ¼ x 3/12) would be charged to profit or loss for the year ended 31st March, 20X2.

The closing balance in property, plant and equipment would be ₹ 1,27,50,000 (₹ 1,36,00,000 – ₹ 8,50,000). This would be shown as a non-current asset in the balance sheet.

6. This is the case of Revenue recognised at a single point in time with multiple payments. As per the guidance given in Appendix B to Ind AS 21:

A Ltd. will recognise a non-monetary contract liability amounting ₹ 1,440 million, by translating USD 20 million at the exchange rate on 1st January, 20X2 ie ₹ 72 per USD.

A Ltd. will recognise revenue at 31st March, 20X2 (that is, the date on which it transfers the goods to the customer).

A Ltd. determines that the date of the transaction for the revenue relating to the advance consideration of USD 20 million is 1st January, 20X2. Applying paragraph 22 of Ind AS 21, A Ltd. determines that the date of the transaction for the remainder of the revenue as 31st March, 20X2.

On 31st March, 20X2, A Ltd. will:

- derecognise the non-monetary contract liability of USD 20 million and recognise USD 20 million of revenue using the exchange rate as at 1st January, 20X2 ie ₹ 72 per USD; and

Join us t.me/caborntofight

- recognise revenue and a receivable for the remaining USD 30 million, using the exchange rate on 31st March, 20X2 ie ₹ 75 per USD.
- the receivable of USD 30 million is a monetary item, so it should be translated using the closing rate until the receivable is settled.

7. (i) Para 47 of Ind AS 21 requires that goodwill arose on business combination shall be expressed in the functional currency of the foreign operation and shall be translated at the closing rate in accordance with paragraphs 39 and 42. In this case the amount of goodwill in EURO will be as follows:

Net identifiable asset	Dr.	23 million	
Goodwill (bal. fig.)	Dr.	1.4 million	
To Bank			17.5 million
To NCI (23 x 30%)			6.9 million

Thus, goodwill on reporting date would be 1.4 million EURO x ₹ 84 =₹ 117.6 million

(ii)

Particulars	EURO in million
Sale price of Inventory	4.20
Unrealised Profit [a]	1.80

Exchange rate as on date of purchase of Inventory [b]` 83 / Euro

Unrealized profit to be eliminated [a x b]` 149.40 million

As per para 39 of Ind AS 21 "income and expenses for each statement of profit and loss presented (ie including comparatives) shall be translated at exchange rates at the dates of the transactions".

In the given case, purchase of inventory is an expense item shown in the statement profit and loss. Hence, the exchange rate on the date of purchase of inventory is taken for calculation of unrealized profit which is to be eliminated while preparation of financial statements.

8. Initial carrying amount of loan in books

Loan amount received = 60,00,000 FCY

Less: Incremental issue costs = 2,00,000 FCY

58,00,000 FCY

Ind AS 21, "The Effect of Changes in Foreign Exchange Rates" states that foreign currency transactions are initially recorded at the rate of exchange in force when the transaction was

first recognized.

Loan to be converted in Rupees (₹) = 58,00,000 FCY x ₹ 2.50/FCY

= ₹ 1,45,00,000

Therefore, the loan would initially be recorded at ₹ 1,45,00,000.

Calculation of amortized cost of loan (in FCY) at the year end:

Period	Opening Financial Liability (FCY) A	Interest @ 12% (FCY) B	Cash Flow (FCY) C	Closing Financial Liability (FCY) A+B-C
20X1-20X2	58,00,000	6,96,000	6,00,000	58,96,000

The finance cost in FCY is 6,96,000

The finance cost would be recorded at an average rate for the period since it accrues over a period of time.

Hence, the finance cost for financial year 20X1-20X2 in Rupees (₹) is ₹ 16,84,320 (6,96,000 FCY x ₹ 2.42 / FCY)

The actual payment of interest would be recorded at 6,00,000 x 2.75 = ₹ 16,50,000

The loan balance is a monetary item, so it is translated at the rate of exchange at the reporting date.

So, the closing loan balance in Rupees (₹) is 58,96,000 FCY x ₹ 2.75 / FCY = ₹ 1,62,14,000

The exchange differences that are created by this treatment are recognized in profit and loss.

In this case, the exchange difference is

₹ [1,62,14,000 - (1,45,00,000 + 16,84,320 – 16,50,000)] = ₹ 16,79,680.

This exchange difference is taken to profit and loss.

CHAPTER 10

IND AS ON DISCLOSURES IN THE FINANCIAL STATEMENTS

UNIT 1: INDIAN ACCOUNTING STANDARD 24: RELATED PARTY DISCLOSURES

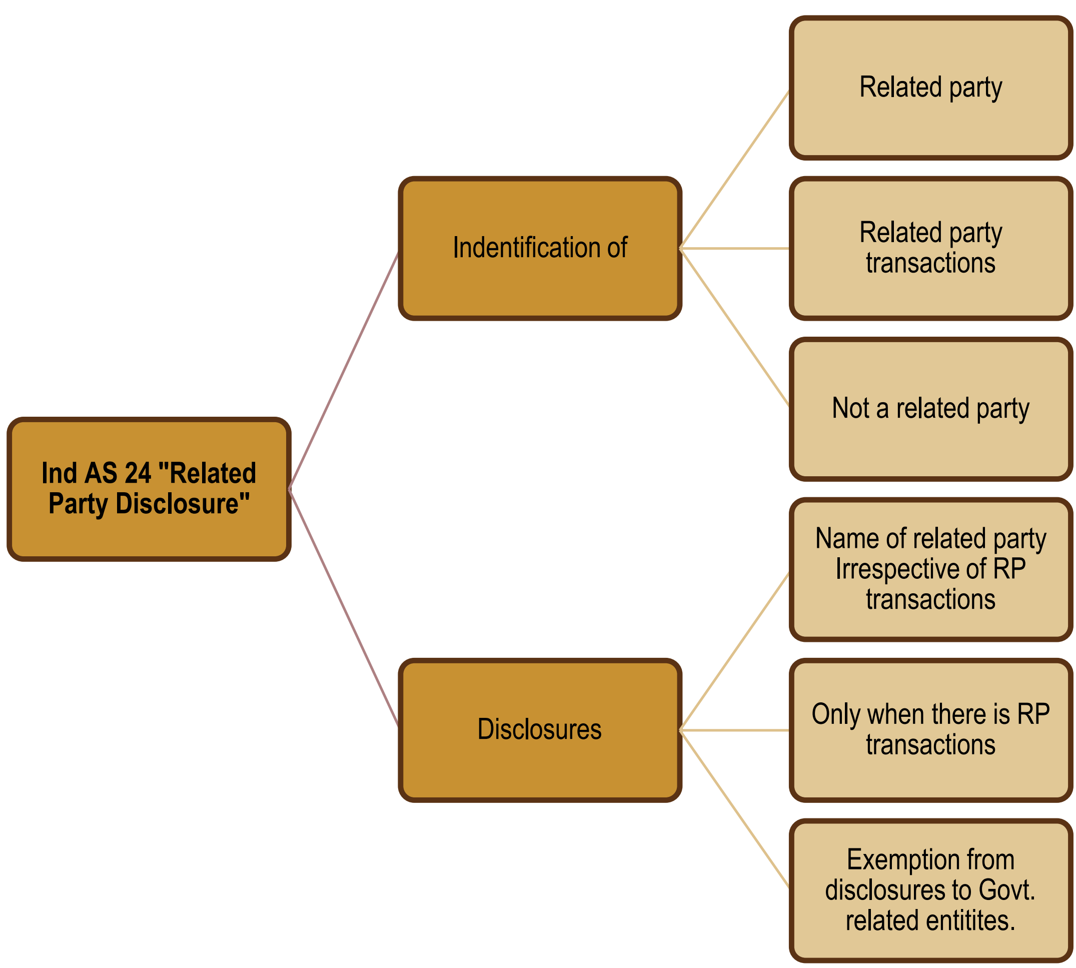
LEARNING OUTCOMES

After studying this unit, you will be able to:

- Understand the objective, scope and purpose of related party disclosures in the financial statements
- Define the terms related party, related party transactions, close members of the family of a person, key management personnel, government related entity and other related terms.
- Ensure the necessary disclosures to be made by an entity in its financial statements.
- Analyse the effect of related party transactions in the financial position & profit or loss due to existence of such related parties.
- Understand the significant differences between Ind AS 24 and AS 18.

Join us t.me/caborntofight

UNIT OVERVIEW



1.1 INTRODUCTION

An entity in the course of its commerce and business enters into numerous transactions and gets impacted by various related party relationships. It is a normal feature of commerce and business to have related party relationships. Entities frequently carry on their business activities through subsidiaries, joint ventures or associates. The entity has the ability to affect the financial and operating policy of a subsidiary generally as it has control over it. In the case of joint venture, it has joint control whereas in the case of an associate it has significant influence.

It is quite probable that related party relationship may have an effect on the profit or loss and financial position of an entity. The effect gets manifested through:

(a) Transactions that are entered between related parties may not be entered with unrelated parties;

- **Example :** An entity may sell goods to its parent at cost. It may not sell goods at cost to an unrelated party.

(b) Transactions with unrelated parties get influenced because of related party relationships.

- **Example :** S Limited, a subsidiary of H Limited, in steel manufacturing used to purchase billets from UR Limited. H Limited acquires 100% stake in FS Limited who also manufactures billets. FS Limited is now a fellow subsidiary of S Limited. H Limited instructs S Limited not to purchase billets from UR Limited but from FS Limited.

Therefore, the users of the financial statements of any entity should have:

(a) the knowledge of:

- related party relationships of an entity;
- entity's transactions, outstanding balances, commitments etc. with such related parties;

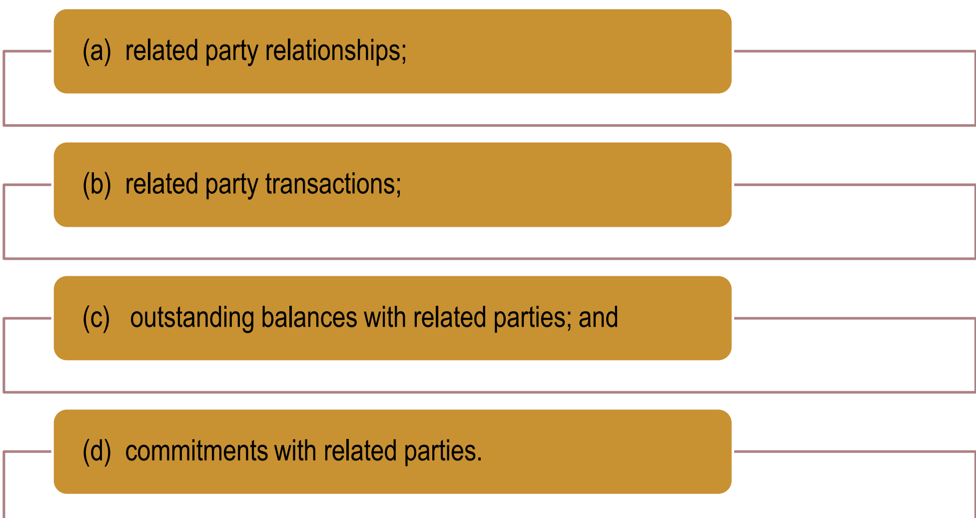
(b) as it may affect the user's assessments:

- of operations of the entity and
- the risks and opportunities faced by the entity.

Join us t.me/caborntofight

1.2 OBJECTIVE

The objective of the Standard is to ensure that the financial statements of an entity contains necessary disclosures with respect to:



The disclosures are necessary so that users' attention could be drawn to the possibility that financial statements may be affected by such related party relationships and other items as mentioned above.

1.3 SCOPE

The Standard has to be applied in:

(a) identifying related party relationships;	(b) identifying related party transactions;	(c) identifying outstanding balances between an entity and its related parties;
(d) identifying commitments between an entity and its related parties;	(e) identifying the circumstances in which disclosures of above items is to be made; and	(f) determining the disclosures to be made about the above items.

The disclosures are to be made in:

(a) Individual financial statements of the entity.

Merged By CA - Born To Fight

(b) Consolidated and separate financial statements of a parent, venturer or an investor prepared in accordance with Ind AS 110 'Consolidated Financial Statements' or Ind AS 27, 'Separate Financial Statements'.

- Related party transactions and outstanding balances with other entities in a group are disclosed in an entity's financial statements, however, intra-group related party transactions and outstanding balances are eliminated in the preparation of consolidated financial statements of the group.

Exception:

If the above intra group related party transactions & outstanding balances between investment entity and its subsidiary are measured at fair value through profit or loss, then not eliminated.

- Disclosures not required when either
  - ♦ such disclosures are in conflict with the entity's duties of confidentiality in terms of a statute, regulator or similar competent authority governing the entity; or
  - ♦ the entity is prohibited by the statute, regulator or similar competent authority to disclose certain information otherwise required to be disclosed as per this Standard.

Example 1

Banks are obliged by law to maintain confidentiality in respect of their customers' transactions and this Standard would not override the obligation to preserve the confidentiality of customers' dealings.

1.4 DEFINITIONS

The following definitions are relevant for understanding the Standard:

1. A **related party** is (i) a person or (ii) an entity that is related to the reporting entity.

2. A **reporting entity** in this Standard is an entity that is preparing its financial statements.

Thus two types of related party relationships are envisaged.

- ♦ One relationship is between the reporting entity and a person or persons.
- ♦ The other relationship is between the reporting entity and another entity or entities.

Note: The Standard clarifies that in considering each possible related party relationship, the attention should be directed to the substance of the relationship and not merely the legal form.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

1.4.1 Understanding relationship between the reporting entity and a person(s)

3. A person or a close member of that person's family is related to a reporting entity if that person:

(a) has control or joint control over the reporting entity;

(b) has significant influence over the reporting entity; or

(c) is a member of the key management personnel of

- the reporting entity or
- a parent of the reporting entity.

4. Close members of the family of a person are the one who may be expected to influence or be influenced by that person in their dealings with the entity. It includes:

(a) that person's children, spouse or domestic partner, brother, sister, father and mother;

(b) children of that person's spouse or domestic partner; and

(c) dependents of that person or that person's spouse or domestic partner.

5. A parent is an entity that controls one or more entities and present consolidated financial statements.

Examples 2-5

2. Mr. A holds 51% in equity share capital of A Limited. A Limited has no other form of share capital. As Mr. A controls A Limited, he is a related party.

3. Mrs. A is wife of Mr. A. Mr. A holds 51% of equity shares of A Limited. A Limited has no other form of share capital. Mr. A controls A Limited. Since Mr. A is a related party, Mrs. A is also a related party of A Limited.

4. Mr. D is a director of A Limited. Being a member of key management personnel of A Limited, he is related to A Limited.

5. Mr. D is a director of H Limited. S Limited is a subsidiary of H Limited. Mr. D is related to S Limited.

1.4.2 Understanding relationship between the reporting entity and another entity/entities

6. An entity is related to a reporting entity if any of the following conditions applies:

(a) The entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others).

Example 6

SA Limited and SB Limited are subsidiaries of H Limited. SA Limited, SB Limited and H Limited are related to each other.

(b) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

Example 7

AS Limited is an associate of S Limited. S Limited is a subsidiary of H Limited. SH Limited is another subsidiary of H Limited. AS Limited and SH Limited are related parties.

(c) Both entities are joint ventures of the same third party.

Example 8

H Limited has entered into 2 joint ventures, JHA Limited (joint venture with A Limited) and JHB Limited (joint venture with B Limited). JHA Limited and JHB Limited are related parties.

(d) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

Example 9

JH Limited is a joint venture of H Limited. AH limited is an associate of H Limited. JH Limited and AH Limited are related parties.

(e) The entity is a post-employment benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity.

(f) The entity is controlled or jointly controlled by a person identified in 3 above.

Example 10

Mr. A controls A Limited (the reporting entity). He also controls B Limited. A Limited and B Limited are related to each other.

(g) A person identified in 3(a) above has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

Example 11

Mr. A controls A Limited (the reporting entity). He is a non-executive director in B Limited. A Limited and B Limited are related parties.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(h) The entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or to the parent of the reporting entity.

Example 12

A Ltd is a parent company with 3 subsidiary companies- B Ltd. C Ltd & D Ltd. It also has an associate company E Ltd. Subsidiary F Ltd of E Ltd provides key management personnel services to A Ltd. F Ltd. is in a related party relationship with A, B, C D & E Ltd.

The aforesaid definition is wide and exhaustive. It is quite possible that the identification of related parties may become an onerous task. The standard, therefore, as has been stated above, lays emphasis on the substance of the relationship rather than legal form.

7. **Control** exists when the investor is exposed or has rights to variable returns from its involvement with the investee and has the ability to affect those returns through its power over investee.

8. **Joint Control** is the contractually agreed sharing of control of an arrangement which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

9. **Significant influence** is the power to participate in the financial and operating policy decisions of the investee, but is not control of those policies.

The terms 'control', 'joint control' and 'significant influence' are discussed in detail in chapters on Ind AS 110, *Consolidated Financial Statements,* Ind AS 111 J*oint Arrangements*' & Ind AS 28, *Investments in Associates & Joint Ventures.*

10. **Key management personnel** are those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity.

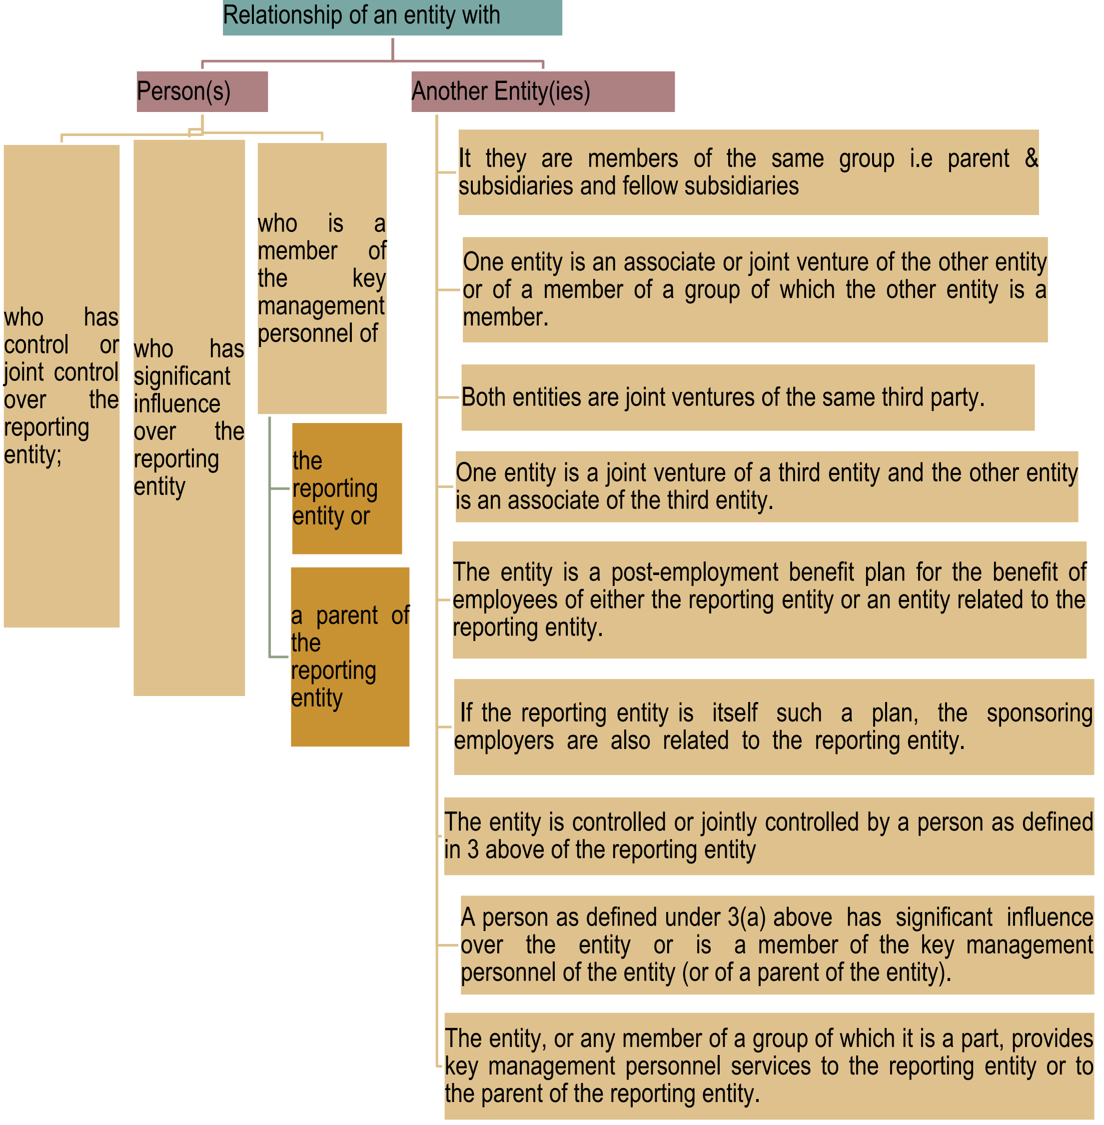
Analysis:

The definition includes executive as well as non-executive directors who have responsibility for the management and direction of a significant part of the business. It is not necessary that these people should have the 'director' designation. The term also includes members of the management committee(s), if those committee(s) have the authority for planning, directing and controlling the entity's activities.

The Standard further states that in the definition of a related party, an associate includes subsidiaries of the associate and a joint venture includes subsidiaries of the joint venture.

Example 13

R Limited has an associate B Limited. B Limited has a subsidiary S Limited, a joint venture J Limited and an associate A Limited. R Limited is the reporting entity. It identifies B Limited and S Limited as its related parties. J Limited and A Limited are not related parties of R Limited.



1.4.3 Understanding who are not related parties

The Standard clarifies that certain relationships are not related party relationships. These are as follows:

(a) Two entities are not related parties simply because they have a director or other member of key management personnel in common or because a member of key management personnel of one entity has significant influence over the other entity.

Merged By CA - Born To Fight

Examples 14 & 15

14. Mr. A is a director in X Limited. He is also a director in Y Limited. He has no other interest in either of these companies. There are no transactions between these two entities. X Limited and Y Limited are not related parties.

15. Mr. A is a director in X Limited. He is also a director in Y Limited. He has no other interest in either of these companies. Y Limited purchases the entire production of X Limited. The transactions are always at arm's length. X Limited and Y Limited may be related parties as it is quite possible that Y Limited may be able to exercise control/significant control over X Limited. As per this Standard substance is more important than mere legal form. Further information and analysis are required here to conclude; by virtue of the transaction only, it cannot be said that they are related parties.

(b) Two venturers are not related parties simply because they share joint control over a joint venture.

Example 16

JV Limited is an equal joint venture of J Limited and V Limited. J Limited and V Limited are not related parties.

(c) (i) providers of finance, (ii) trade unions, (iii) public utilities, and (iv) departments and agencies of a government that does **not** control, jointly control or significantly influence the reporting entity, are not related parties simply by virtue of their normal dealings with an entity (even though they may affect the freedom of action of an entity or participate in its decision-making process).

Example 17

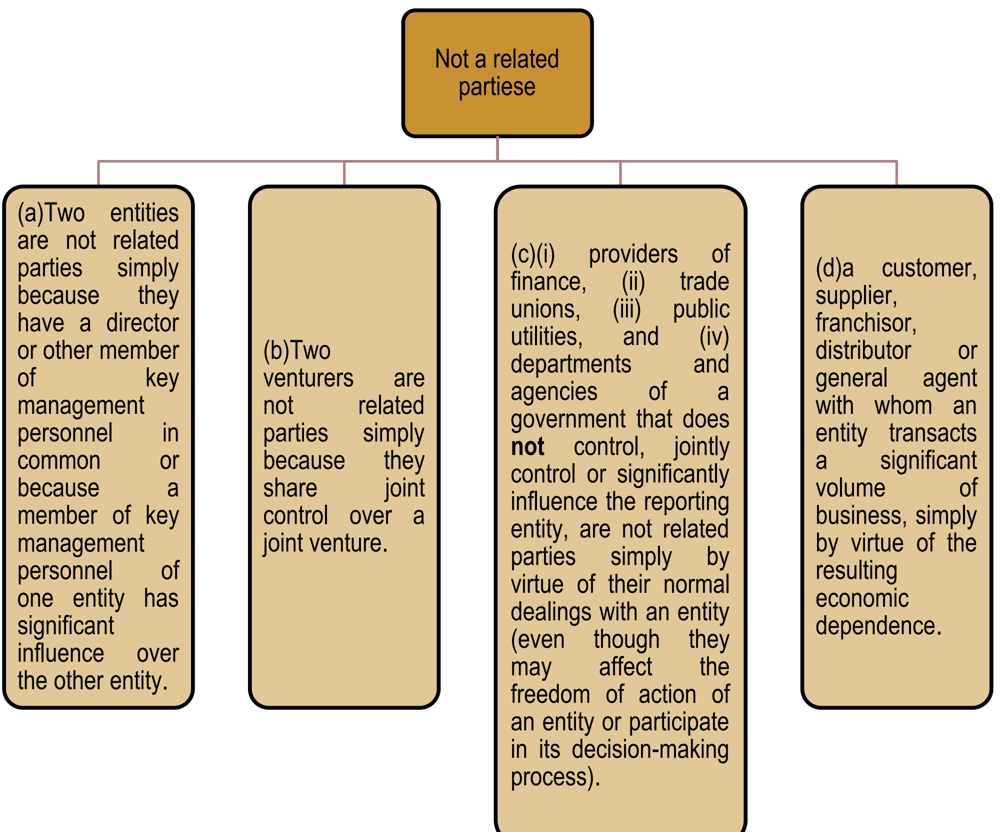
A Bank and B Bank has provided finance to XY Limited. By virtue of loan agreement, they occupy a non-executive observer seat on the Board of Directors of XY Limited. A Bank and B Bank are not related parties of XY Limited.

(d) a customer, supplier, franchisor, distributor or general agent with whom an entity transacts a significant volume of business, simply by virtue of the resulting economic dependence.

Example 18

A Limited is an auto ancillary of an automobile company. It supplies all its production to the automobile company. Automobile company has no other interest in A Limited. A Limited and automobile company are not related parties.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight



1.4.4 Understanding related party transactions

11. A **related party transaction** is a transfer of resources, services or obligations between a reporting entity and a related party, regardless of whether a price is charged.

Examples

(a) purchases or sales of goods (finished or unfinished);

(b) purchases or sales of property and other assets;

(c) rendering or receiving of services;

(d) leases;

(e) transfers of research and development;

(f) transfers under licence agreements;

(g) transfers under finance arrangements (including loans and equity contributions in cash or in kind);

(h) provision of guarantees or collateral;

(i) commitments to do something if a particular event occurs or does not occur in the future, including executory contracts1 (recognised and unrecognised);

(j) settlement of liabilities on behalf of the entity or by the entity on behalf of that related party; and

(k) management contracts including for deputation of employees.

Note: It is not necessary for any consideration to be passed for the related party transactions.

Also, participation by a parent or subsidiary in a defined benefit plan that shares risks between group entities is a transaction between related parties.

1.4.5 Other Important Definitions

12. **Compensation** includes all employee benefits (as defined in Ind AS 19, *Employee Benefits*) including employee benefits to which Ind AS 102, *Share-based Payments,* applies. Employee benefits are all forms of consideration paid, payable or provided by the entity, or on behalf of the entity, in exchange for services rendered to the entity. It also includes such consideration paid on behalf of a parent of the entity in respect of the entity. Compensation includes:

(a) short-term employee benefits, monetary such as wages, salaries and social security contributions, paid annual leave and paid sick leave, profit-sharing and bonuses (if payable within twelve months of the end of the period) and non—monetary benefits (such as medical care, housing, cars and free or subsidised goods or services) for current employees;

(b) post-employment benefits such as pensions, other retirement benefits, post-employment life insurance and post-employment medical care;

(c) other long-term employee benefits, including long service leave or sabbatical leave, jubilee or other long service benefits, long-term disability benefits and, if they are not payable wholly within twelve months after the end of the period, profit-sharing, bonuses and deferred compensation;

(d) termination benefits; and

(e) share-based payment.

13. **Government** refers to government, government agencies and similar bodies whether local, national or international.

14. A **government-related entity** is an entity that is controlled, jointly controlled or significantly influenced by a government.

1.5 DISCLOSURES

The disclosure requirements can be broadly classified into two categories.

(a) Category 1 requires disclosures of relationships even though there are no related party transactions between the disclosed related parties.

(b) Category 2 requires disclosures of relationships and transactions only when there are related party transactions.

1.5.1 Disclosure- Relationships between parent and subsidiaries

The following disclosures of relationships, if exist, must be made irrespective of the fact whether there have been related party transactions by the entity:

- Under this an entity is required to disclose the name of its parent and, if different, the ultimate controlling party. It may be noted that the ultimate controlling party may be a person.

Example 19

S4 Limited (reporting entity) is a subsidiary of S3 Limited. S3 Limited is a subsidiary of S2 Limited. S2 Limited is a subsidiary of S1 Limited. S1 Limited is a subsidiary of H Limited. S4 Limited, S3 Limited, S2 Limited and S1 Limited must disclose the name and relationship with S3 Limited, S2 Limited and S1 Limited respectively and with H Limited.

- If neither the entity's parent nor the ultimate controlling party produces consolidated financial statements available for public use, the name of the next most senior parent that does so shall also be disclosed.

Examples 20 & 21

20. S4 Limited (reporting entity) is a subsidiary of S3 Limited. S3 Limited is a subsidiary of S2 Limited. S2 Limited is a subsidiary of S1 Limited. S1 Limited is a subsidiary of H Limited. Only S2 Limited and S1 Limited produces consolidated financial statements for public use. S4 Limited must disclose the name and relationship with S3 Limited, S2 Limited, S1 Limited and H Limited.

21. S4 Limited (reporting entity) is a subsidiary of S3 Limited. S3 Limited is a subsidiary of S2 Limited. S2 Limited is a subsidiary of S1 Limited. S1 Limited is a subsidiary of H Limited. S3 Limited, S2 Limited, S1 Limited and H Limited all produces consolidated financial statements for public use. S4 Limited must disclose the name and relationship with S3 Limited and H Limited.

- The disclosure of relationship between a parent and its subsidiary (reporting entity) is important because the existence of control relationship may prevent the reporting entity

Merged By CA - Born To Fight

from being independent in making its financial and operating decisions. The disclosure of the name of the related party and the nature of the related party relationship where control exists may sometimes be at least as relevant in appraising an entity's prospects as are the operating results and the financial position presented in its financial statements. Such a related party may establish the entity's credit standing, determine the source and price of its raw materials, and determine to whom and at what price the product is sold.

- The Standard clarifies that the requirement to disclose related party relationships between a parent and its subsidiaries is in addition to the disclosure requirements in Ind AS 110, *Consolidated Financial Statements,* Ind AS 28, *Investments in Associates,* and *Joint Ventures*.

1.5.2 Category 2 Disclosure

Under this category, two types of disclosures are required. The first requires disclosures related to compensation to key management personnel. The second requires other disclosures where there have been related party transactions during the year.

1.5.2.1 Disclosures of compensation to key management personnel

An entity is required to disclose

(i) total compensation to key management personnel and

(ii) Compensation for each of the following categories:

   (a) short–term employee benefits;

   (b) post–employment benefits;

   (c) other long-term benefits;

   (d) termination benefits;

   (e) share–based payments.

If an entity obtains key management personnel services from another entity (the 'management entity'), the entity is not required to apply the requirements to the compensation paid or payable by the management entity to the management entity's employees or directors.

1.5.2.2 Disclosures where there have been related party transactions during the year

- Where an entity has had related party transactions during the periods covered by the financial statements, it shall disclose, in addition to disclosures listed above, the following for the users to understand the potential effect of these relationships and transactions on the financial statements:

   (a) the nature of the related party relationship;

Join us t.me/caborntofight

(b) the information about these related party transactions and outstanding balances, including commitments.

- The disclosures, at a minimum, shall include:

  (a) the amount of the transactions;

  (b) the amount of outstanding balances, including commitments, and:

    - their terms and conditions, including whether they are secured, and the nature of the consideration to be provided in settlement; and
    - details of any guarantees given or received;

  (c) provisions for doubtful debts related to the amount of outstanding balances; and

  (d) the expense recognized during the period in respect of bad or doubtful debts due from related parties.

- Amounts incurred by the entity for the provision of key management personnel services that are provided by a separate management entity shall be disclosed.

- The aforesaid disclosures shall be made separately for each of the following categories:

  (a) the parent;

  (b) entities with joint control or significant influence over the entity;

  (c) subsidiaries;

  (d) associates;

  (e) joint ventures in which the entity is a joint venturer;

  (f) key management personnel of the entity or its parent; and

  (g) other related parties.

- The classification of amounts payable to, and receivable from, related parties in the different categories is an extension of the disclosure requirements in Ind AS 1, *Presentation of Financial Statements,* for information to be presented either in the balance sheet or in the notes. The categories are extended to provide a more comprehensive analysis of related party balances and apply to related party transactions.

- However, disclosures that related party transactions were made on terms equivalent to those that prevail in arm's length transactions should be made only if such terms can be substantiated.

- Items of a similar nature may be disclosed in aggregate except when separate disclosure is necessary for an understanding of the effects of related party transactions on the financial statements of the entity.

Join us t.me/caborntofight

Merged By CA - Born To Fight

- Disclosure of details of particular transactions with individual related parties would frequently be too voluminous to be easily understood. Accordingly, items of a similar nature may be disclosed in aggregate by type of related party. However, this is not done in such a way as to obscure the importance of significant transactions.

Example 22

Purchases or sales of goods are not aggregated with purchases or sales of fixed assets. Nor a material related party transaction with an individual party is clubbed in an aggregated disclosure.

Following is the extract from the financial statements of the listed entity 'ITC Limited' for the financial year 2021-2022 with respect to 'Related Party disclosure as per Ind AS 24'.

29. Related Party Disclosures

1. **ENTERPRISES WHERE CONTROL EXISTS:**

* Includes rent pertaining to leases classified as Right of Use Assets.

The amounts outstanding are unsecured and will be settled in cash.

† Post employment benefits are actuarially determined on overall basis and hence not separately provided.

‡ During the year, the Company granted Stock Options to eligible employees, including Executive Directors and KMPs, under its Employee Stock Option Schemes at market price (within the meaning of the Securities and Exchange Board of India (Share Based Employee Benefits and Sweat Equity) Regulations, 2021). The Company has also granted Employee Stock Appreciation Linked Reward Units (ESAR Units) to the aforesaid persons in the previous years under the ITC Employee Cash Settled Stock Appreciation Linked Reward Plan. Since such Stock Options and ESAR Units are not tradable, no perquisite or benefit is immediately conferred upon the employee by grant of such Stock Options/ESAR Units, and accordingly the said grants have not been considered as remuneration. However, in accordance with Ind AS-102, the Company has recorded employee benefits expense by way of share based payments to employees of ₹ [illegible] Crores for the year ended 31st March, 2022 (2021 - ₹ [illegible] Crores), of which ₹ [illegible] Crores (2021 - ₹ [illegible] Crores) is attributable to Executive Directors and KMPs.

(Source: Annual Report for 2021-2022 of 'ITC Limited')

1.6 EXEMPTION TO GOVERNMENT–RELATED ENTITIES

- A reporting entity is exempt from the disclosure requirements in relation to (i) related party transactions (ii) outstanding balances and (iii) commitments with:

  (a) a government that has control, joint control or significant influence over the reporting entity; and

  (b) another entity that is a related party because the same government has control, joint – control or significant influence over both the reporting entity and the other entity.

- However, in case the reporting entity opts to apply the exemption, it shall disclose:

  (a) the name of the government;

  (b) the nature of the government's relationship with the entity (whether the government has control, joint control or significant influence over the entity);

  (c) to enable the users of the entity's financial statements to understand the effect of related party transactions on its financial statements, the following information in sufficient details:

  - the nature and amount of each individually significant transaction;
  - for other transactions that are not significant individually but are significant when aggregated, either a qualitative or quantitative indication of their extent.

- Thus, the reporting entity is expected to apply its judgment to determine the level of details it is required to disclose as per above. To enable the reporting entity to arrive at decision, it shall consider:

  (a) the closeness of the related party relationship;

  (b) whether the transaction is significant in size;

  (c) whether the transaction is carried out on non-market terms;

  (d) whether these are outside the normal day to day business operations, such as purchase and sales of businesses

  (e) whether they are disclosed to regulatory or supervisory authorities;

  (f) whether they are reported to senior management;

  (g) whether they are subject to shareholder approval.

Following is the extract from the financial statements of the listed entity 'Cochin Shipyard Limited' for the financial year 2021-2022 with respect to 'Related Party disclosure as per Ind AS 24'.

Nature of transaction - Transaction with other related parties

As CSL is a Government company under the control of Ministry of Shipping (MoS), the Company has availed exemption from detailed disclosures prepared under Ind AS 24 with respect to related party transactions with Government and Government related entities. However, as required under Ind AS 24, following are the individually significant transactions:

Transactions/balances with Government and Government related entities by the parent company.

(₹ in Lakhs)

Particulars	As at March 31, 2022	As at March 31, 2021
Secondment to subsidiary - Hooghly Cochin Shipyard Ltd.(HCSL)	0.00	6.15
Secondment to subsidiary - Udupi Cochin Shipyard Limited	0.00	13.05
Investment in NCDs issued by subsidiary - HCSL	7500.00	4400.00
Investment in NCDs issued by subsidiary - UCSL	1000.00	-
Investment in Right Issue in subsidiary - HCSL	2800.00	2800.00

(Source: Annual Report for 2021-2022 of 'Cochin Shipyard Limited')

Disclosure requirements when exemption applies

In Entity A's financial statements, an example of disclosure to comply for **individually** significant transactions could be:

- **Example** of disclosure for individually significant transaction carried out on non-market terms

Example 23

On 15 January, 20X1 Entity A, a utility company in which Government G indirectly owns 75 per cent of outstanding shares, sold a 10-hectare piece of land to another government-related utility company for ₹ 5 million. On 31, December 20X0 a plot of land in a similar location, of a similar size and with similar characteristics, was sold for ₹ 3 million. There had not been any appreciation or depreciation of the land in the intervening period. See note X [of the financial statements] for disclosure of government assistance as required by Ind AS 20, *Accounting for Government Grants and Disclosure of Government Assistance,* and notes Y and Z [of the financial statements] for compliance with other relevant Indian Accounting Standards.

- **Example** of disclosure for individually significant transaction because of **size** of transaction

Example 24

In the year ended December 20X1 Government G provided Entity A, a utility company in which Government G indirectly owns 75 per cent of outstanding shares, with a loan equivalent to 50 percent of its funding requirement, repayable in quarterly instalments over the next five years. Interest is charged on the loan at a rate of 3 per cent, which is comparable to that charged on Entity A's bank loans.* See notes Y and Z [of the financial statements] for compliance with other relevant Indian Accounting Standards.

- **Example** of disclosure of collectively significant transactions in Entity A's financial statements, an example of disclosure to comply with for **collectively** significant transactions could be:

Example 25

Government G, indirectly, owns 75 per cent of Entity A's outstanding shares. Entity A's significant transactions with Government G and other entities controlled, jointly controlled or significantly influenced by Government G are [a large portion of its sales of goods and purchases of raw materials] or [about 50 per cent of its sales of goods and about 35 per cent of its purchases of raw materials]. The company also benefits from guarantees by Government G of the company's bank borrowing. See note X [of the financial statements] for disclosure of government assistance as required by Ind AS 20, *Accounting for Government Grants and Disclosure of Government Assistance,* and notes Y and Z [of the financial statements] for compliance with other relevant Indian Accounting Standards.

1.7 SIGNIFICANT DIFFERENCES IN IND AS 24 VIS-A-VIS AS 18

S. No.	Particulars	Ind AS 24	AS 18
1.	*Definition of Relative*	Ind AS 24 uses the term "a close member of the family of a person".	AS 18 uses the term "relatives of an individual"
		Definition of close members of family as per Ind AS 24 includes those family members, who may be expected to influence, or be influenced by, that person in their dealings with the entity, including:	AS 18 covers the spouse, son, daughter, brother, sister, father and mother who may be expected to influence, or be influenced by, that individual in

*If the reporting entity had concluded that this transaction constituted government assistance it would have needed to consider the disclosure in Ind AS 20.

S. No.	Particulars	Ind AS 24	AS 18
		(a) that person's children, spouse or domestic partner, brother, sister, father and mother; (b) children of that person's spouse or domestic partner; and (c) dependents of that person or that person's spouse or domestic partner. Hence, the definition as per Ind AS 24 is much wider.	his/her dealings with the reporting enterprise.
2.	*State Controlled Enterprise:*	Ind AS 24, has extended coverage of Government Enterprises, as it defines a government-related entity as "an entity that is controlled, jointly controlled or significantly influenced by a government." Further, "Government refers to government, government agencies and similar bodies whether local, national or international."	AS 18 defines state-controlled enterprise as *"an enterprise which is under the control of the Central Government and/or any State Government(s)"*.
3.	*Key Management Personnel*	Ind AS 24 covers KMP of the parent as well. Ind AS 24 also covers the entity, or any member of a group of which it is a part, providing key management personnel services to the reporting entity or to the parent of the reporting entity. Further definition of KMP under Ind AS 24 specifically includes Directors whether executive or not and also those KMP who control the entity indirectly.	AS 18 covers key management personnel (KMP) of the entity only
4.	*Related Parties in case of Joint*	Under Ind AS 24 there is extended coverage in case of joint	As per AS 18, co-venturers or co-associates

S. No.	Particulars	Ind AS 24	AS 18
	Venture	ventures. Two entities are related to each other in both their financial statements, if they are either co-venturers or one is a venturer and the other is an associate.	are not related to each other.
5.	*Effect of influences which do not lead to transactions*	Ind AS 24 does not specifically mention this.	AS 18 mentions that where there is an inherent difficulty for management to determine the effect of influences which do not lead to transactions, disclosure of such effects is not required. (Paragraph 18 of AS 18)
6.	*Post-employment Benefits*	Ind AS 24 specifically includes post-employment benefit plans for the benefit of employees of an entity or its related entity as related parties.	AS 18 does not specifically cover entities that are post-employment benefit plans, as related parties.
7.	*Next Most Senior Parent*	Ind AS 24 requires an additional disclosure as to the name of the next most senior parent which produces consolidated financial statements for public use. (Paragraph 13 of Ind AS 24)	AS 18 has no such requirement.
8.	*Disclosure for Compensation*	Ind AS 24 requires extended disclosures for compensation of KMP under different categories viz. short-term employee benefits, post-employment benefits, other long-term benefits, termination benefits, share-based payments.	AS 18 does not specifically require
9.	*Disclosure of 'Amount of the Transactions' vs 'Volume of the Transactions*	Ind AS 24 requires "the amount of the transactions" need to be disclosed. (Paragraph 18 (a) of Ind AS 24)	AS 18 gives an option to disclose the "Volume of the transactions either as an amount or as an appropriate proportion".

S. No.	Particulars	Ind AS 24	AS 18
			(Paragraph 23(iv) of AS 18)
10.	*Government Related Entities:*	Ind AS 24 requires disclosures of certain information by the government related entities.	AS 18 exempts the disclosure of such information.
11.	*Clarification of Control, Substantial Interest and Significant Influence*	Ind AS 24 neither defines these terms nor it includes such clarificatory text and allows respective standards to deal with the same.	AS 18 includes definition and clarificatory text, primarily with regard to control, substantial interest (including 20% threshold), significant influence (including 20% threshold).

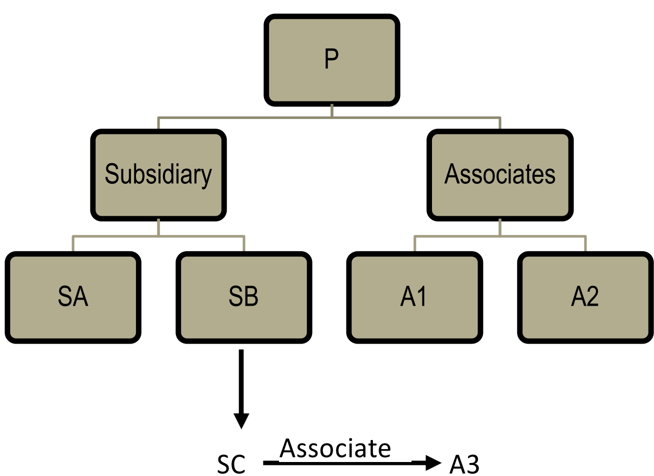
Note: It is strongly advised to draw the diagrams of related party relationships for the following illustrations to test the understanding of the subject matter.

Illustration 1 : Associates and subsidiaries

Entity P Limited has a controlling interest in subsidiaries SA Limited and SB Limited and SC Limited. SC Limited is a subsidiary of SB Limited. P Limited also has significant influence over associates A1 Limited and A2 Limited. Subsidiary SC Limited has significant influence over associate A3 Limited

Examine related party relationships of various entities.

Solution



- In Separate Financial Statements of P Limited: SA Limited, SB Limited, SC Limited, A1 Limited, A2 Limited and A3 Limited are all related parties.
- In the Individual Financial Statements of SA Limited: P Limited, SB Limited, SC Limited, A1 Limited, A2 Limited and A3 Limited are all related parties.
- In the Individual Financial Statements of SB Limited: P Limited, SA Limited, SC Limited, A1 Limited, A2 Limited and A3 Limited are all related parties.
- In the Individual Financial Statements of SC Limited: P Limited, SA Limited, SB Limited, A1 Limited, A2 Limited and A3 Limited are all related parties.
- In the Individual Financial Statements of associates A1 Limited, A2 Limited and A3 Limited; P Limited, SA Limited, SB Limited and SC Limited are related parties.
- A1 Limited, A2 Limited and A3 Limited are not related to each other.
- For Parent's consolidated financial statements: A1 Limited, A2 Limited and A3 Limited are related to the Group

*****

Illustration 2 : Key management personnel

Mr. X has a 100% investment in A Limited. He is also a member of the key management personnel (KMP) of C Limited. B Limited has a 100% investment in C Limited.

Required

(a) Examine related party relationships from the perspective of C Ltd. for A Ltd.

(b) Examine related party relationships from the perspective of C Ltd. for A Ltd. if Mr. X is a KMP of B Ltd. and not C Ltd.

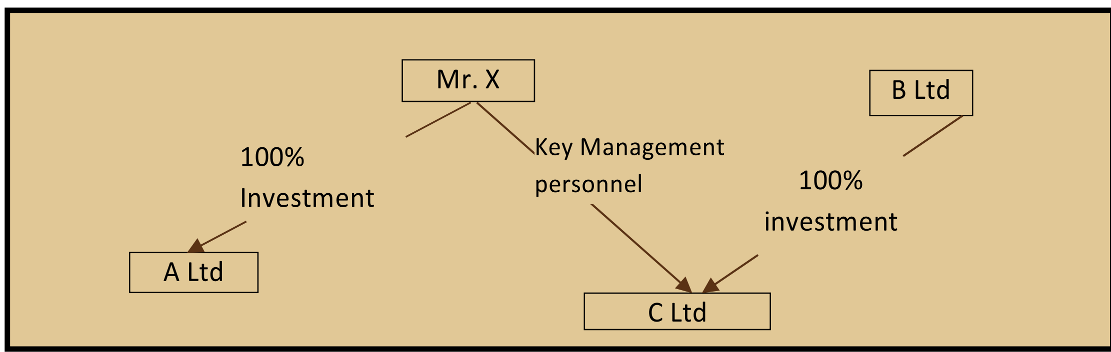
(c) Will the outcome in (a) & (b) would be different if Mr. X has joint control over A Ltd.

(d) Will the outcome in (a) & (b) would be different if Mr. X has significant influence over A Ltd.

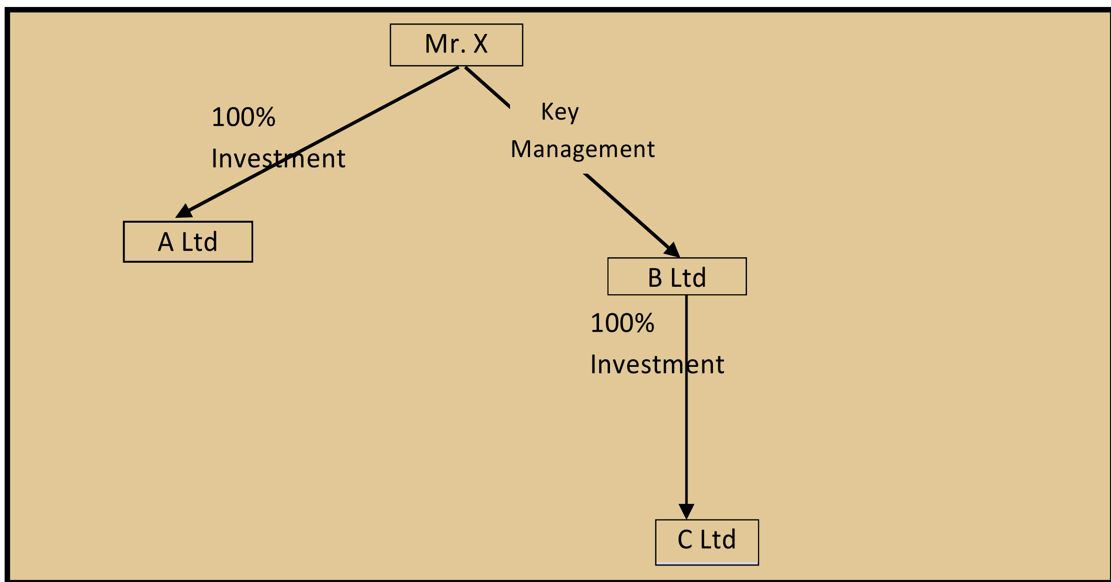
Solution

(a) A Ltd. is related to C Ltd. because Mr. X controls A Ltd. and is a member of KMP of C Ltd.

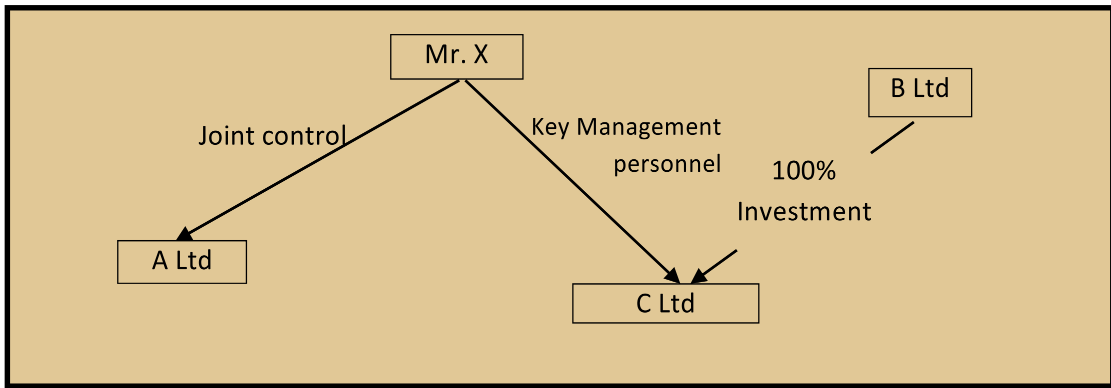
Join us t.me/caborntofight



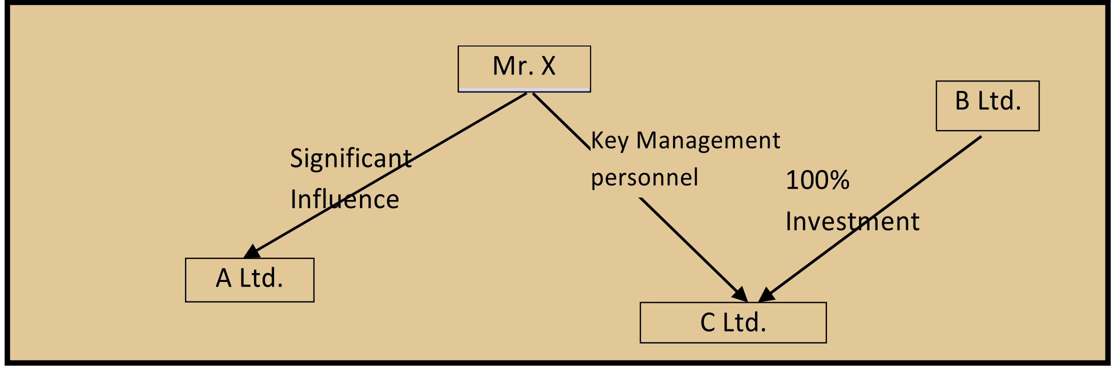
(b) Still A Ltd. will be related to C Ltd.



(c) No, Still A Ltd. will be related to C Ltd.



(d) Yes, A Ltd. is not controlled by Mr. X. Therefore, despite Mr. X being KMP of C Ltd., A Ltd., having significant influence of Mr. X, will not be considered as related party of C Ltd.



*****

Illustration 3 : Person as investor

Mr. X has an investment in A Limited and B Limited.

Required

(i) Examine when can related party relationship be established

(a) from the perspective of A Limited's financial statements:

(b) from the perspective of B Limited's financial statements:

(ii) Will A Limited and B Limited be related parties if Mr. X has only significant influence over both A Limited and B Limited

Solution

(i) (a) If Mr. X controls or jointly controls A Limited, B Limited is related to A Limited when Mr. X has control, joint control or significant influence over Entity B.

(b) If Mr. X controls or jointly controls A Limited, A Limited is related to Entity B when Mr. X has control, joint control or significant influence over Entity B.

(ii) No, A Ltd. & B Ltd., will not be considered as related party since no direct or indirect control is exercised on each other in any of the manner.

*****

Illustration 4 : Partial exemption for government related entities

Government G directly controls Entity 1 and Entity 2. It indirectly controls Entity A and Entity B through Entity 1, and Entity C and Entity D through Entity 2. Person X is a member of the key management personnel in Entity 1.

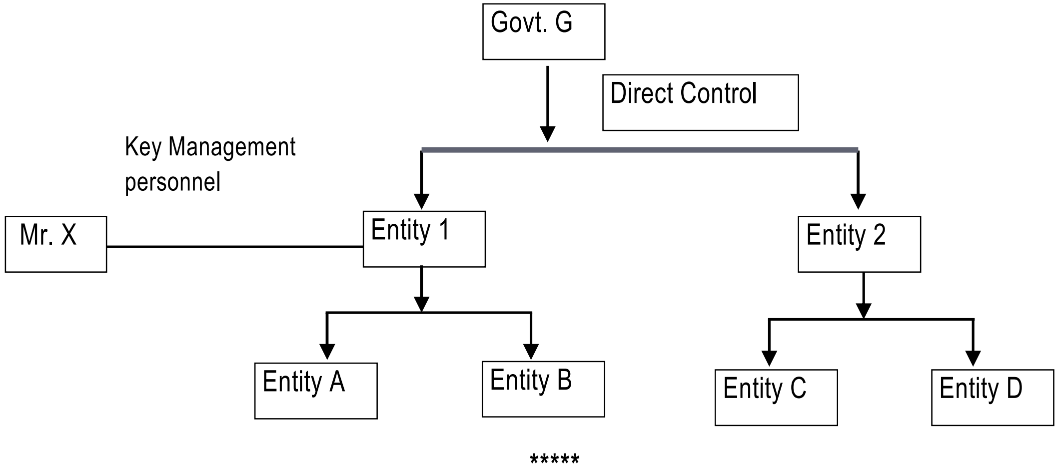
Examine the entity to whom the exemption for disclosure to be given and for transaction with whom.

Solution

For Entity A's financial statements, the exemption of Ind AS 24 applies to:

(a) transactions with Government G; and

(b) transactions with Entities 1 and 2 and Entities B, C and D. However, that exemption does not apply to transactions with Person X.



*****

Illustration 5

Power Limited is a producer of electricity. Transmission Limited regularly purchases electricity from Power Limited. Power Limited whose financial year ends on March 31, 20X2, acquired 100% shareholding of Transmission Limited on July 15, 20X1. However, the entire shareholding is disposed of on March 21, 20X2. Power Limited and Transmission Limited had transactions when Transmission Limited was a subsidiary of Power Limited and also in the period when it was not a subsidiary of Power Limited.

For which period, related party disclosure should Power Limited make in its financial statements for the year ended March 31, 20X2 with respect to transactions with Transmission Limited.

Solution

Power Limited should in its financial statements for the year ended March 31, 20X2 make related party disclosures for the period from July 15, 20X1 to March 21, 20X2 when Transmission Limited was its subsidiary.

Questions

1. Mr. X is a domestic partner of Ms. Y. Mr. X has an investment in A Limited and Ms. Y has an investment in B Limited.

   Required

   (a) Examine when can a related party relationship is established, from the perspective of A Limited's financial statements:

   (b) Examine when can related party relationship is established, from the perspective of B Limited's financial statements:

   (c) Will A Limited and B Limited be related parties if Mr. X has only significant influence over A Limited and Ms. Y also has significant influence over B Limited:

2. A Limited has both (i) joint control over B Limited and (ii) joint control or significant influence over C Limited

   Required

   (a) Examine related party relationship from the perspective of C Limited's financial statements.

   (b) Examine related party relationship from the perspective of B Limited's financial statements.

3. ABC Ltd. is a long-standing customer of XYZ Ltd. Mrs. P whose husband is a director in XYZ Ltd. purchased a controlling interest in entity ABC Ltd. on 1st June, 20X1. Sales of products from XYZ Ltd. to ABC Ltd. in the two-month period from 1st April 20X1 to 31st May 20X1 totalled ₹ 8,00,000. Following the share purchase by Mrs. P, XYZ Ltd. began to supply the products at a discount of 20% to their normal selling price and allowed ABC Ltd. three months' credit (previously ABC Ltd. was only allowed one month's credit,

XYZ Ltd.'s normal credit policy). Sales of products from XYZ Ltd. to ABC Ltd. in the ten-month period from 1st June 20X1 to 31st March 20X2 totalled ₹ 60,00,000. On 31st March 20X2, the trade receivables of XYZ Ltd. included ₹ 18,00,000 in respect of amounts owing by ABC Ltd.

Analyse and show (where possible by quantifying amounts) how the above event would be reported in the financial statements of XYZ Ltd. for the year ended 31st March 20X2 as per Ind AS. You are required to mention the disclosure requirements as well.

4. Mr. Atul is an independent director of a company X Ltd. He plays a vital role in the Management of X Ltd. and contributes in major decision making process of the organisation. X Ltd. pays sitting fee of ₹ 2,00,000 to him for every Board of Directors' (BOD) meeting he attends. Throughout the year, X Ltd. had 5 such meetings which was attended by Mr. Atul.

   Similarly, a non-executive director, Mr. Naveen also attended 5 BOD meetings and charged ₹ 1,50,000 per meeting. The Accountant of X Ltd. believes that they being not the employees of the organisation, their fee should not be disclosed as per related party transaction in accordance with Ind AS 24.

   Examine whether the sitting fee paid to independent director and non-executive director is required to be disclosed in the financial statements prepared as per Ind AS?

5. Mr. X, is the financial controller of ABC Ltd., a listed entity which prepares consolidated financial statements in accordance with Ind AS. Mr. X has recently produced the final draft of the financial statements of ABC Ltd. for the year ended 31st March, 20X2 to the managing director Mr. Y for approval. Mr. Y, who is not an accountant, had raised following query from Mr. X after going through the draft financial statements:

   One of the notes to the financial statements gives details of purchases made by ABC Ltd. from PQR Ltd. during the period 20X1-20X2. Mr. Y owns 100% of the shares in PQR Ltd. However, he feels that there is no requirement for any disclosure to be made in ABC Ltd.'s financial statements since the transaction is carried out on normal commercial terms and is totally insignificant to ABC Ltd., as it represents less than 1% of ABC Ltd.'s purchases.

   Provide answers to the query raised by the Managing Director Mr. Y as per Ind AS.

6. Uttar Pradesh State Government holds 60% shares in PQR Limited and 55% shares in ABC Limited. PQR Limited has two subsidiaries namely P Limited and Q Limited. ABC Limited has two subsidiaries namely A Limited and B Limited. Mr. KM is one of the Key management personnel in PQR Limited. ·

   (a) Determine the entity to whom exemption from disclosure of related party transactions is to be given. Also examine the transactions and with whom such exemption applies.

   (b) What are the disclosure requirements for the entity which has availed the exemption?

7. S Ltd., a wholly owned subsidiary of P Ltd is the sole distributor of electricity to consumers in a specified geographical area. A manufacturing facility of P Ltd is located in the said geographical area and, accordingly, P Ltd is also a consumer of electricity supplied by S Ltd. The electricity tariffs for the geographical area are determined by an independent rate-setting authority and are applicable to all consumers of S Ltd, including P Ltd.

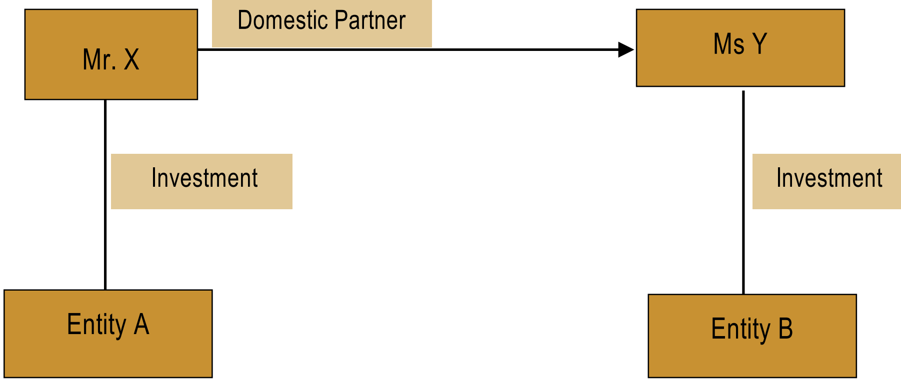
   Whether the above transaction is required to be disclosed as a related party transaction as per Ind AS 24 in the financial statements of S Ltd.? What should be the disclosures in this regard?

Answers

1. (a) If Mr. X controls or jointly controls A Limited, B Limited is related to A Limited when Ms. Y has control, joint control or significant influence over B Limited.

(b) If Mr. X controls or jointly controls A Limited, A Limited is related to B Limited when Ms. Y has control, joint control or significant influence over B Limited.

(c) No, significant influence does not lead to direct/indirect control between the A Ltd. & B Ltd. i.e., if Mr. X has significant influence (but not control or joint control) over Entity A and Ms. Y has significant influence (but not control or joint control) over Entity B, Entities A and B are not related to each other.



If Mr X is a member of the key management personnel of Entity A and Ms Y is a member of the key management personnel of Entity B, Entities A and B are not, in the absence of any other indicator of a related party relationship, related to each other.

2. (a) C Limited is related to B Limited and A Limited

(b) B Limited is related to C Limited and A Limited.

3. XYZ Ltd. would include the total revenue of ₹ 68,00,000 (₹ 60,00,000 + ₹8,00,000) from ABC Ltd. received / receivable in the year ended 31st March 20X2 within its revenue and show ₹ 18,00,000 within trade receivables at 31st March 20X2.

Join us t.me/caborntofight

Mrs. P would be regarded as a related party of XYZ Ltd. because she is a close family member of one of the key management personnel of XYZ Ltd.

From 1st June 20X1, ABC Ltd. would also be regarded as a related party of XYZ Ltd. because from that date ABC Ltd. is an entity controlled by another related party.

Because ABC Ltd. is a related party with whom XYZ Ltd. has transactions, then XYZ Ltd. should disclose:

– The nature of the related party relationship.

– The revenue of ₹ 60,00,000 from ABC Ltd. since 1st June 20X1.

– The outstanding balance of ₹ 18,00,000 at 31st March 20X2.

In the current circumstances it may well be necessary for XYZ Ltd. to also disclose the favourable terms under which the transactions are carried out.

4. As per paragraph 9 of Ind AS 24, Related Party Disclosures, "Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity."

Accordingly, key management personnel (KMP) includes any director of the entity who are having authority and responsibility for planning, directing and controlling the activities of the entity. Hence, independent director Mr. Atul and non-executive director Mr. Naveen are covered under the definition of KMP in accordance with Ind AS.

Also as per paragraph 7 and 9 of Ind AS 19, 'Employee Benefits', an employee may provide services to an entity on a full-time, part-time, permanent, casual or temporary basis. For the purpose of the Standard, Employees include directors and other management personnel. So, they should not be reported as related party.

Therefore, contention of the Accountant is wrong that they are not employees of X Ltd.

Paragraph 17 of Ind AS requires disclosure about employee benefits for key management personnel. Therefore, an entity shall disclose key management personnel compensation in total i.e. disclosure of directors' fee of (₹ 10,00,000 + ₹ 7,50,000) ₹ 17,50,000 is to be made as employees benefits (under various categories).

Since short-term employee benefits are expected to be settled wholly before twelve months after the end of the annual reporting period in which the employees render the related services, the sitting fee paid to directors will fall under it (as per Ind AS 19) and is required to be disclosed in accordance with the paragraph 17 of Ind AS 24.

5. Ongoing through the queries raised by the Managing Director Mr. Y, the financial controller Mr. X explained the notes and reasons for their disclosures as follows:

Related parties are generally characterised by the presence of control or influence between the two parties.

Ind AS 24 'Related Party Disclosures' identifies related parties as, *inter alia*, key management personnel and companies controlled by key management personnel. On this basis, PQR Ltd. is a related party of ABC Ltd.

The transaction is required to be disclosed in the financial statements of ABC Ltd. since Mr. Y is Key Management personnel of ABC Ltd. Also at the same time, it owns 100% shares of PQR Ltd. i.e. he controls PQR Ltd. This implies that PQR Ltd. is a related party of ABC Ltd.

Where transactions occur with related parties, Ind AS 24 requires that details of the transactions are disclosed in Notes to the financial statements. This is required even if the transactions are carried out on an arm's length basis.

Transactions with related parties are material by their nature, so the fact that the transaction may be numerically insignificant to ABC Ltd. does not affect the need for disclosure.

6. **(a)** As per para 18 of Ind AS 24, 'Related Party Disclosures', if an entity had related party transactions during the periods covered by the financial statements, it shall disclose the nature of the related party relationship as well as information about those transactions and outstanding balances, including commitments, necessary for users to understand the potential effect of the relationship on the financial statements.

However, as per para 25 of the standard a reporting entity is exempt from the disclosure requirements in relation to related party transactions and outstanding balances, including commitments, with:

(i) a government that has control or joint control of, or significant influence over, the reporting entity; and

(ii) another entity that is a related party because the same government has control or joint control of, or significant influence over, both the reporting entity and the other entity

According to the above paras, for Entity P's financial statements, the exemption in paragraph 25 applies to:

(i) transactions with Government Uttar Pradesh State Government; and

(ii) transactions with Entities PQR and ABC and Entities Q, A and B.

Similar exemptions are available to Entities PQR, ABC, Q, A and B, with the transactions with UP State Government and other entities controlled directly or indirectly by UP State Government. However, that exemption does not apply to

transactions with Mr. KM. Hence, the transactions with Mr. KM needs to be disclosed under related party transactions.

(b) It shall disclose the following about the transactions and related outstanding balances referred to in paragraph 25:

(a) the name of the government and the nature of its relationship with the reporting entity (ie control, joint control or significant influence);

(b) the following information in sufficient detail to enable users of the entity's financial statements to understand the effect of related party transactions on its financial statements:

(i) the nature and amount of each individually significant transaction; and

(ii) for other transactions that are collectively, but not individually, significant, a qualitative or quantitative indication of their extent.

7. As per paragraph 9(b)(i) of Ind AS 24, each parent, subsidiary and fellow subsidiary in a 'group' is related to the other members of the group. Thus, in the case under discussion, P Ltd is a related party of S Ltd from the perspective of financial statements of S Ltd.

Paragraph 11 of Ind AS 24 states as follows:

"In the context of this Standard, the following are not related parties:

(a) two entities simply because they have a director or other member of management personnel in common or because a member of key management personnel of one entity has significant influence over the other entity.

(b) two joint venturers simply because they share joint control of a joint venture.

(c) (i) providers of finance,(ii) trade unions, (iii) public utilities, and (iv) departments and agencies of a government that does not control, jointly control or significantly influence the reporting entity, simply by virtue of their normal dealings with an entity (even though they may affect the freedom of action of an entity or participate in its decision-making process).

(d) a customer, supplier, franchisor, distributor or general agent with whom an entity transacts a significant volume of business, simply by virtue of the resulting economic dependence."

Being engaged in distribution of electricity, S Ltd is a public utility. Had the only relationship between S Ltd and P Ltd been that of a supplier and a consumer of electricity, P Ltd would not have been regarded as a related party of S Ltd. However, as per the facts of the given case, this is not the only relationship between S Ltd and P Ltd. Apart from being a supplier of electricity to P Ltd., S Ltd is also a subsidiary of P Ltd; this is a relationship that is covered within the related party relationships to which the disclosure

requirements of the standard apply. In view of the above, the supply of electricity by S Ltd to P Ltd is a related party transaction that attracts the disclosure requirements contained in paragraph 18 and other relevant requirements of the standard. This is notwithstanding the fact that P Ltd is charged the electricity tariffs determined by an independent rate-setting authority (i.e., the terms of supply to P Ltd are at par with those applicable to other consumers)

Ind AS 24 does not exempt an entity from disclosing related party transactions merely because they have been carried out on an arm's length basis.

UNIT 2 : INDIAN ACCOUNTING STANDARD 33 : EARNINGS PER SHARE

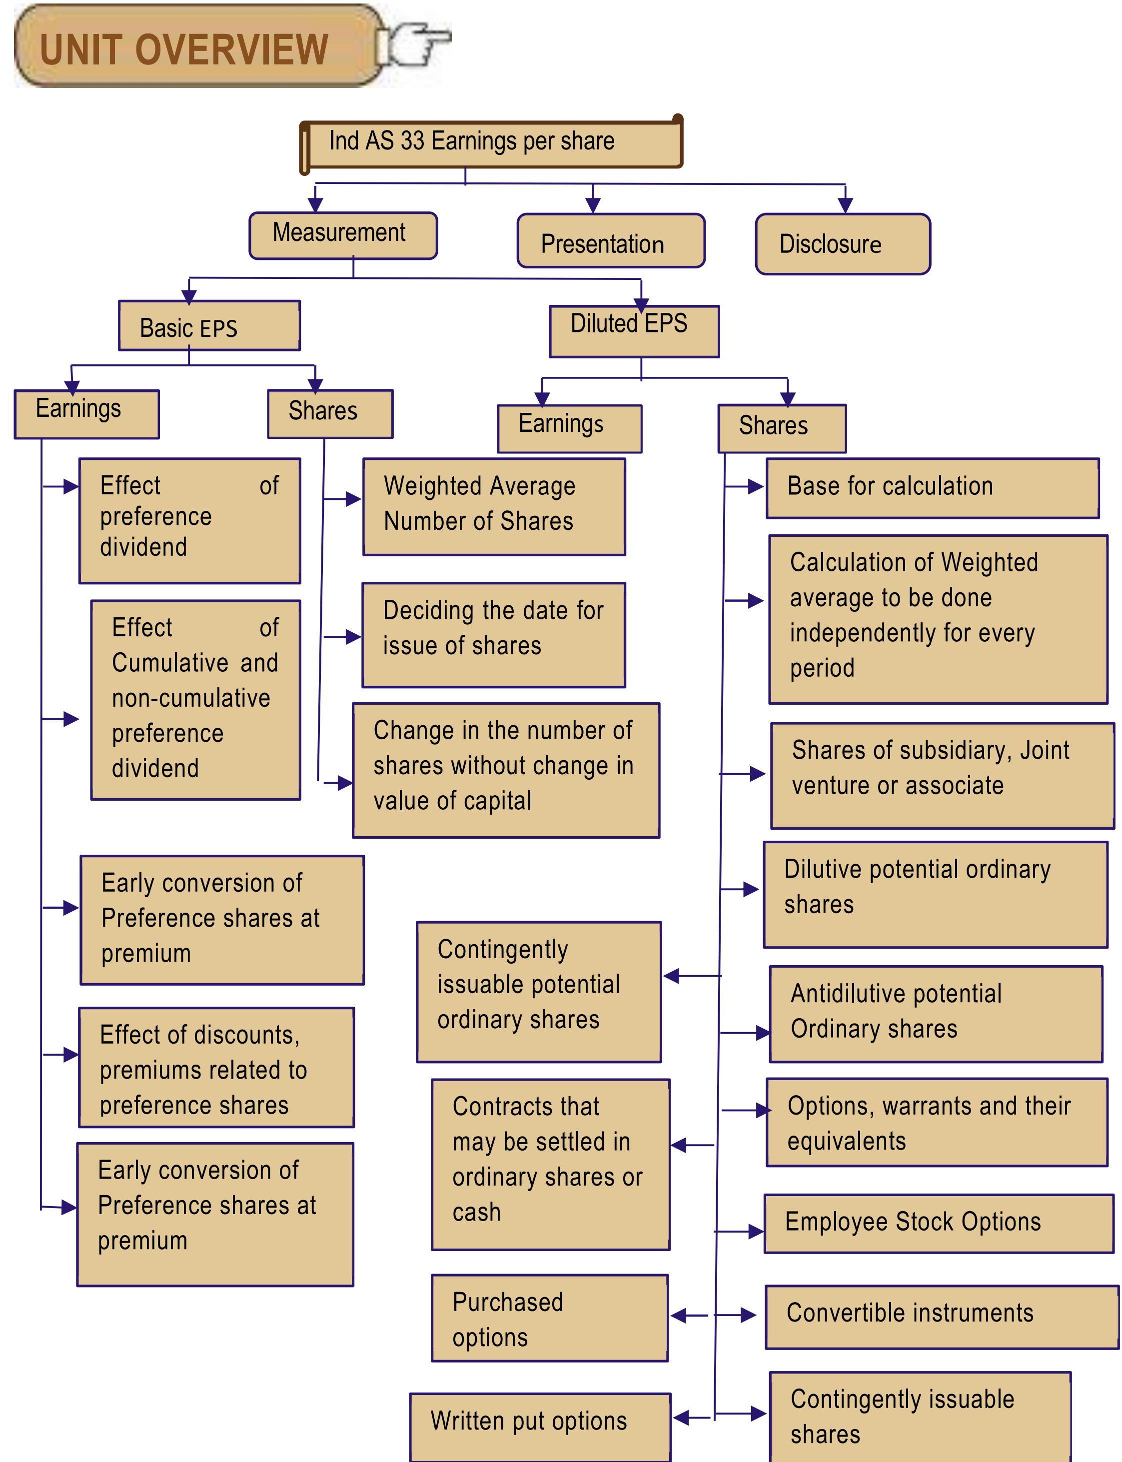
LEARNING OUTCOMES

After studying this unit, you will be able to:

- Understand the objectives behind calculation and disclosure of EPS
- Define the terms used in the Standard such as basic EPS, dilution, anti-dilution, contingent share agreement, potential ordinary shares, etc.
- Work out the basic EPS after considering the important points for calculation of earnings and weighted average number of shares
- Determine the diluted EPS after considering the important points for calculation of diluted earnings and weighted average number of shares
- Deal with various peculiar situations of potential ordinary shares, contingently convertible shares, etc.
- Disclose the information regarding EPS in the financial statements

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

UNIT OVERVIEW



2.1 INTRODUCTION

Earnings per share (EPS) is an important measure of the performance of the company. The equity shareholders (ordinary shareholders as per Ind AS 33) invest their money in the entity as owners of the company. They undertake business risks and financial risks along with all allied systematic and non-systematic risks of the company. Generally, they would expect a higher return as compared to a debt-holder considering the risks involved on their investments.

EPS is a ratio that is widely used by financial analysts, investors and other users to gauge an entity's profitability. Its purpose is to indicate how effective an entity has been in using the resources provided by the ordinary shareholders, and to assess the entity's current net earnings. EPS also forms the basis for calculating the price-earnings ratio, which is widely used by investors and analysts to value shares.

2.2 OBJECTIVE

To prescribe principles for the determination and presentation of earnings per share:

Ind AS 33 provides detailed guidelines and lays down the principles about how to calculate earnings, weighted average number of shares and basic and diluted earnings per share, to facilitate performance comparisons between:

(i) different entities in the same reporting period:

For example, if one needs to check whether Hero Motocorp Limited is doing better than Baja Auto Limited in terms of profitability, EPS can be considered to be a measure for comparison of performance.

(ii) different reporting periods for the same entity:

One can check the performance of a company over last 5 years using EPS as a benchmark.

2.2.1 Limitation of EPS

Earnings per share data may have **limitations** because of different accounting policies that companies might have used for determining 'earnings'.

Join us t.me/caborntofight

2.3 SCOPE

- This Ind AS shall apply to companies (that have issued ordinary shares) to which Ind AS notified under the Companies Act apply. In Indian context, the term 'ordinary shares' is equivalent to 'equity shares'.
- An entity that discloses earnings per share shall calculate and disclose earnings per share in accordance with this Standard.
- When an entity presents both consolidated financial statements and separate financial statements prepared in accordance with Ind AS 110, *Consolidated Financial Statements*, and Ind AS 27, *Separate Financial Statements,* respectively, the disclosures required by this Standard shall be presented both in the consolidated financial statements and separate financial statements. In consolidated financial statements such disclosures shall be based on consolidated information and in separate financial statements such disclosures shall be based on information given in separate financial statements.

The above mentioned provisions are summarised below in the following table:

Sr. No.	Type of Financial statements	EPS disclosure required	EPS computation should be based on
1	Consolidated	Yes	Information given in consolidated financial statements only
2	Separate	Yes	Information given in separate financial statements only

2.4 DEFINITIONS

1. An ***ordinary share*** is an equity instrument that is subordinate to all other classes of equity instruments. Ordinary shares participate in profit for the period only after other types of shares such as preference shares have participated. An entity may have more than one class of ordinary shares. Ordinary shares of the same class have the same rights to receive dividends.

   In accordance with Ind AS 32, *Financial Instruments: Presentation*, an equity instrument is defined as a contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.

2. A ***potential ordinary share*** is a financial instrument or other contract that may entitle its holder to ordinary shares.

Examples of potential ordinary shares are:

(a) financial liabilities or equity instruments, including preference shares, that are convertible into ordinary shares;

(b) options and warrants;

(c) shares that would be issued upon the satisfaction of conditions resulting from contractual arrangements, such as the purchase of a business or other assets.

Contracts that might result in the issue of ordinary shares of the entity to the holder of the contract, at the option of the issuer or the holder, are potential ordinary shares.

Example 1

ABC & Co has issued preference shares with the option to convert these into an equal number of ordinary shares in 2 years' time. They represent potential ordinary shares, even though it is not certain whether the preference shareholders will convert them into equity shares (since it will depend on the prices of each class of shares at that time). If the price of the ordinary share is higher than that of the preference shares, the holders will convert, and will make a profit. If the price is lower, they will not.

3. ***Options, warrants and their equivalents*** are financial instruments that give the holder the right to purchase ordinary shares.

4. ***Put options*** on ordinary shares are contracts that give the holder the right to sell ordinary shares at a specified price for a given period.

5. ***Dilution*** is a reduction in earnings per share or an increase in loss per share resulting from the assumption that convertible instruments are converted, that options or warrants are exercised, or that ordinary shares are issued upon the satisfaction of specified conditions.

6. ***Antidilution*** is an increase in earnings per share or a reduction in loss per share resulting from the assumption that convertible instruments are converted, that options or warrants are exercised, or that ordinary shares are issued upon the satisfaction of specified conditions.

Example 2

ABC Ltd. has interest paying debt which are convertible into ordinary shares at the option of the entity. On conversion, ABC Ltd. will save on the interest costs and in return will have to issue additional shares. In case the EPS of ABC Ltd. increases on conversion, the convertible debt would be considered as anti-dilutive. However, if the conversion will decrease the EPS, it would be considered as dilutive.

7. ***A contingent share agreement*** is an agreement to issue shares that is dependent on the satisfaction of specified conditions.

Example 3

ABC Ltd. has provided share options to its employees under a ESOP scheme. As per the scheme, the employees have to provide 3 years' services to the company for being eligible to share options at a discounted price. This is a contingent share agreement.

8. ***Contingently issuable ordinary shares*** are ordinary shares issuable for little or no cash or other consideration upon the satisfaction of specified conditions in a contingent share agreement.

Example 4

ABC Ltd. acquires XYZ Ltd.'s business in exchange for ABC Ltd.'s shares. If the share price falls by more than 25% within 6 months of the business combination, ABC Ltd. will issue more shares (for free) to XYZ Ltd., as a compensation.

2.5 MEASUREMENT

Measurement can be divided into following categories:

a. Measurement of basic earnings per share
   - Measurement of earnings
   - Measurement of weighted average number of shares

b. Measurement of diluted earnings per share
   - Measurement of earnings for diluted EPS
   - Measurement of number of shares for diluted EPS

c. Measurement in case of dilutive potential ordinary shares

d. Measurement in case of options, warrants and their equivalents

e. Measurement in case of convertible instruments

f. Measurement in case of contingently issuable shares

g. Measurement in case of contracts that may be settled in ordinary shares or cash

h. Measurement in case of purchased options and written put options

i. Dealing with retrospective adjustments

2.6 MEASUREMENT OF BASIC EARNINGS PER SHARE

2.6.1 Meaning and Formula

1. Meaning

An entity shall calculate basic earnings per share for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.

The objective of basic earnings per share information is to provide a measure of the interests of each ordinary share of a parent entity in the performance of the entity over the reporting period.

2. Formula

Basic earnings per share shall be calculated by dividing profit or loss for the period attributable to ordinary equity holders of the parent entity (the numerator) by the weighted average number of ordinary (equity) shares outstanding during the period (the denominator). It can be expressed mathematically as follows:

$$\frac{\text{Profit/Loss attributable to Equity share holders}}{\text{Weighted average number of Equity shares outstanding during the period}}$$

2.6.2 Measurement of Earnings

- For the purpose of calculating basic earnings per share, the amounts attributable to ordinary equity holders of the parent entity in respect of:

  (a) profit or loss from continuing operations attributable to the parent entity; and

  (b) profit or loss attributable to the parent entity

  shall be the amounts in (a) and (b) adjusted for the after-tax amounts of preference dividend, differences arising on the settlement of preference shares, and other similar effects of preference shares classified as equity.

  An entity that has preference shares in issue, will classify those shares as financial liabilities or equity in accordance with the principles under Ind AS 32. An adjustment is required to the profit or loss for the period, to arrive at the profit or loss attributable to ordinary equity holders for the purpose of calculating EPS, if preference shares are classified as equity. Any dividends and other appropriations would be debited directly to equity under Ind AS 32. Any dividends or other appropriations for preference shares classified as liabilities should be accounted for as finance

costs in arriving at profit or loss for the period. No adjustment is required for the purpose of calculating EPS.

- Where any item of income or expense, which is otherwise required to be recognised in profit or loss in accordance with Ind AS, is debited or credited to securities premium account/other reserves, the amount in respect thereof shall be deducted from profit or loss from continuing operations for the purpose of calculating basic earnings per share.
- All items of income and expense attributable to ordinary equity holders of the parent entity that are recognised in a period, including tax expense and dividends on preference shares classified as liabilities are included in the determination of profit or loss for the period attributable to ordinary equity holders of the parent entity.
- The amount of dividends declared in respect of the year should be deducted in arriving at the profit attributable to ordinary shareholders for preference dividends that are non-cumulative.
- The dividend for the period should be taken into account, whether or not it has been declared for cumulative preference dividends. If an entity is unable to pay or declare a cumulative preference dividend, the undeclared amount of the cumulative preference dividend (net of tax, if applicable) should still be deducted in arriving at earnings for the purpose of the EPS calculation. The amount paid is not deducted in arriving at earnings for the purpose of the EPS calculation in the period in which arrears of cumulative preference dividends are paid.
- Preference shares that provide for a low initial dividend to compensate an entity for selling the preference shares at a discount, or an above-market dividend in later periods to compensate investors for purchasing preference shares at a premium, are sometimes referred to as increasing rate preference shares. Any original issue discount or premium on increasing rate preference shares is amortised to retained earnings using the effective interest method and treated as a preference dividend for the purposes of calculating earnings per share (irrespective of whether such discount or premium is debited or credited to securities premium account in view of requirements of any law).

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

Example 1 Increasing rate preference shares

Reference: Ind AS 33, paragraphs 12 and 15

Entity D issued non-convertible, non-redeemable class A cumulative preference shares of Rs. 100 par value on 1 January 20X1. The class A preference shares are entitled to a cumulative annual dividend of Rs. 7 per share starting in 20X4.

At the time of issue, the market rate dividend yield on the class A preference shares was 7 per cent a year. Thus, Entity D could have expected to receive proceeds of approximately Rs. 100 per class A preference share if the dividend rate of Rs. 7 per share had been in effect at the date of issue.

In consideration of the dividend payment terms, however, the class A preference shares were issued at Rs. 81.63 per share, ie at a discount of Rs. 18.37 per share. The issue price can be calculated by taking the present value of Rs. 100, discounted at 7 per cent over a three-year period.

Because the shares are classified as equity, the original issue discount is amortised to retained earnings using the effective interest method and treated as a preference dividend for earnings per share purposes. To calculate basic earnings per share, the following imputed dividend per class A preference share is deducted to determine the profit or loss attributable to ordinary equity holders of the parent entity:

Year	Carrying amount of class A preference shares 1 January	Imputed[(a)] Dividend	Carrying amount[(b)] of class A preference shares 31 December	*Dividend paid*
	Rs.	Rs.	Rs.	Rs.
20X1	81.63	5.71	87.34	–
20X2	87.34	6.12	93.46	–
20X3	93.46	6.54	100.00	–
Thereafter:	100.00	7.00	107.00	(7.00)

(a) at 7 %
(b) This is before dividend payment.

2.6.2.1 Redemption/Repurchase of preference shares at premium

Preference shares may be repurchased under an entity's tender offer to the holders. The excess of the fair value of the consideration paid to the preference shareholders over the carrying amount of the preference shares represents a return to the holders of the preference shares and a charge to retained earnings for the entity. This amount is deducted in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Example 5

ABC Ltd. had issued preference shares at ₹ 100 each 10 years ago. Now ABC Ltd. buys back the shares for ₹ 120 each. ₹ 20 premium for each share is charged to retained earnings. No amount is recorded in the statement of profit and loss for this transaction. However, for EPS purposes, ₹20 for each share is charged to the statement of profit or loss for the period of the transaction.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

2.6.2.2 Early conversion of Preference shares at premium

Early conversion of convertible preference shares may be induced by an entity through favourable changes to the original conversion terms or the payment of additional consideration. The excess of the fair value of the ordinary shares or other consideration paid over the fair value of the ordinary shares issuable under the original conversion terms is a return to the preference shareholders and is deducted in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Illustration 1

ABC Ltd. issues 9% preference shares of fair value of ₹ 10 each on 1.4.20X1. Total value of the issue is ₹ 10,00,000. The shares are issued for a period of 5 years and would be redeemed at the end of 5th year. The shares are to be redeemed at ₹ 11 each.

At the end of the year 3, i.e. on 31.3.20X4, company finds that it has earned good returns than expected over last three years and can make the redemption of preference shares early. To compensate the shareholders for two years of dividend which they need to forego, company decided to redeem the shares at ₹ 12 each instead of original agreement of ₹ 11. Comment on the impact of early conversion of preference shares at a premium on earnings for the year 20X3-20X4 attributable to ordinary equity holders of ABC Ltd. for basic EPS.

Ignore the applicability of the standards on Financial Instruments (i.e., ignore EIR; further, the additional payment to be made can be met from Securities Premium/Reserves as Premium on Redemption) and answer on the basis of Ind AS 33 only.

Solution

In the given situation, ₹ 1 per share is the excess payment made by the company amounting to ₹ 1,00,000 in all. The amount of ₹ 1,00,000 will be deducted from the earnings of the year 20X3-20X4 while calculating the basic EPS of year 20X3-20X4.

*****

2.6.2.3 Excess payment to Preference share holders

Any excess of the carrying amount of preference shares over the fair value of the consideration paid to settle them is added in calculating profit or loss attributable to ordinary equity holders of the parent entity.

Illustration 2

An entity has following preference shares in issue at the end of 20X4:

- ***5% redeemable, non-cumulative preference shares:** These shares are classified as liabilities. During the year, an amount of Rs. 1,00,000 (computed using the coupon rate of 5% - Rs. 20,00,000 x 5%) was paid to the preference shareholders*
- ***Increasing-rate, cumulative, non-redeemable preference shares issued at a discount in 20X0, with a cumulative dividend rate from 20X5 of 10%:** The shares were issued at a discount*

© The Institute of Chartered Accountants of India

to compensate the holders, because dividend payments will not commence until 20X5. The accrual for the discount in the current year, calculated using the effective interest method amounted to, say, ₹ 18,000. These shares are classified as equity – ₹ 200,000.

- ***8% non-redeemable, non-cumulative preference shares:*** *At the beginning of the year, the entity had ₹ 100,000 8% preference shares outstanding but, at 30 June 20X4, it repurchased ₹ 50,000 of these at a discount of ₹ 1,000 – ₹ 50,000.*
- ***7% cumulative, convertible preference shares (converted in the year):*** *These shares were classified as equity, until their conversion into ordinary shares at the beginning of the year. No dividend was accrued in respect of the year, although the previous year's dividend was paid immediately prior to conversion. To induce conversion, the terms of conversion of the 7% convertible preference shares were also amended, and the revised terms entitled the preference shareholders to an additional 100 ordinary shares on conversion with a fair value of ₹ 300 – Nil.*

The profit after tax for the year 20X4 is ₹ 150,000.

Determine the adjustments for the purpose of calculating EPS.

Solution

Adjustments for the purpose of calculating EPS are made as follows:

Particulars	Amount (₹)	Amount (₹)
Profit after tax		150,000
Amortisation of discount on issue of increasing-rate preference shares (Refer Note 1)	(18,000)	
Discount on repurchase of 8% preference shares (Refer Note 2)	1,000	
Premium to induce Conversion	(30,000)	(47,000)
Profit attributable to ordinary equity holders for basic EPS (Refer Note 3-5)		1,03,000

Notes:

1. The original discount on issue of the increasing-rate preference shares is treated as amortised to retained earnings and treated as preference dividends for EPS purposes and adjusted against profit attributable to the ordinary equity holders. There is no adjustment in respect of dividend, because these do not commence until 20X5. Instead, the finance cost is represented by the amortisation of the discount in the dividend-free period. In future years, the accrual for the dividend of ₹ 20,000 will be deducted from profits.
2. The discount on repurchase of the 8% preference shares has been credited to equity so should be added to profit.

3. The dividend on the 5% preference shares has been charged to the income statement, because the preference shares are treated as liabilities, so no adjustment is required for it from the profit.

4. No accrual for the dividend on the 8% preference shares is required, because they are non-cumulative. If a dividend had been declared for the year, it would have been deducted from profit for the purpose of calculating basic EPS, because the shares are treated as equity and the dividend would have been charged to equity in the financial statements.

5. The 7% preference shares are convertible and hence correctly classified as equity. Accordingly, the additional amount paid (100 additional shares x fair value ₹ 300 per share = ₹ 30,000) to induce conversion would be taken to Equity Share Capital and Retained Earnings or Securities Premium, as the case may be (transaction with 'owners'). Therefore, this excess amount paid would require to be deducted from the Net Profit to arrive at Net Profit attributable to Equity Shareholders.

It may be noted that as per Sections 53 and 55 of the Companies Act, 2013, a company cannot issue shares at discount or any irredeemable preference shares. However, the above illustration has been given only to explain the concept given in Ind AS.

*****

The changes given in the above two questions do not consider the impact of the Companies Act, 2013. Since Ind AS is based on IFRS which ignores country-specific statutory requirements and instead opts for a principle-based approach, solutions are given accordingly. However, the statute gains precedence over Ind AS, and hence the same needs to be followed practically.

Here, in this paper of Financial Reporting, the discussion has been restricted to the concepts of Ind AS provisions.

2.6.3 Shares

2.6.3.1 Weighted Average Number of Shares

- For the purpose of calculating basic earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares outstanding during the period.

  The weighted average number of ordinary shares outstanding during the period is the number of ordinary shares outstanding at the beginning of the period, adjusted by the number of ordinary shares bought back or issued during the period *multiplied by a time-weighting factor.*

- The time-weighting factor is the number of days that the shares are outstanding as a proportion of the total number of days in the period; a reasonable approximation of the weighted average is adequate in many circumstances.

Weighted average number of equity shares:

Ordinary shares outstanding at the beginning	xxxx
Less: Ordinary shares bought back during the period*	xxxx
Add: Ordinary shares issued during the period*	xxxx
Ordinary shares outstanding during the period	**xxxx**

*to be multiplied by time-weighting factor. The time-weighting factor is the number of days that the shares are outstanding as a proportion of the total number of days in the period.

Illustration 3

Following is the data for company XYZ in respect of number of equity shares during the financial year 20X1-20X2. Find out the number of shares for the purpose of calculation of basic EPS as per Ind AS 33.

S. No.	Date	Particulars	No of shares
1	1-Apr-20X1	Opening balance of outstanding equity shares	100,000
2	15-Jun-20X1	Issue of equity shares	75,000
3	8-Nov-20X1	Conversion of convertible preference shares in Equity	50,000
4	22-Feb-20X2	Buy back of shares	(20,000)
5	31-Mar-20X2	Closing balance of outstanding equity shares	205,000

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

The closing balance of the outstanding shares is 2,05,000 by a normal addition and subtraction. But as per weighted average concept, one need to find out for how many days each type of shares was actually held during the year.

The shares which were there on 1st April 20X1, were held for the whole year. Therefore, weighted average number of such shares will be given by the formula:

No of shares x no of days the shares were held during the year / 365

= 1,00,000 x 365 / 365 = 1,00,000

But the shares which were issued on 15th June 20X1, were held for only 290 days. Therefore, the weighted average number of shares will be 75,000 x 290 / 365 = 59,589.

Following the above formula, the weighted average number of shares for calculation of EPS for the year 20X1-20X2 will be as follows:

Sr. No.	Date	Particulars	No of shares	No of days shares were outstanding	Weighted average no of shares
1	1-Apr-20X1	Opening balance of outstanding equity shares	1,00,000	365	1,00,000
2	15-Jun-20X1	Issue of equity shares	75,000	290	59,589
3	8-Nov-20X1	Conversion of convertible preference shares in Equity	50,000	144	19,726
4	22-Feb-20X2	Buy back of shares	(20,000)	(38)*	(2,082)
5	31-Mar-20X2	Closing balance of outstanding equity shares	2,05,000		1,77,233

* These shares had already been considered in the shares issued. The same has been deducted assuming that the bought back shares have been extinguished immediately.

*****

From the above illustration, one can notice that the date of issue/ conversion/ repurchase/ transaction affecting the addition or deletion in number of shares is very crucial for calculation of weighted average number of shares.

Join us t.me/caborntofight

2.6.3.2 Deciding the date for issue of shares

- Shares are usually **included** in the weighted average number of shares **from the date consideration is receivable** (which is generally the date of their issue), for example:

  (a) ordinary shares issued in **exchange for cash** are included from the date when **cash is receivable**;

  (b) ordinary shares issued on the **voluntary reinvestment of dividend** on ordinary or preference shares are included from the date when **dividend are reinvested**;

  (c) ordinary shares issued as a result of the **conversion of a debt instrument** to ordinary shares are included from the date that **interest ceases to accrue**;

  (d) ordinary shares issued **in place of interest or principal** on other financial instruments are included from the date that **interest ceases to accrue**;

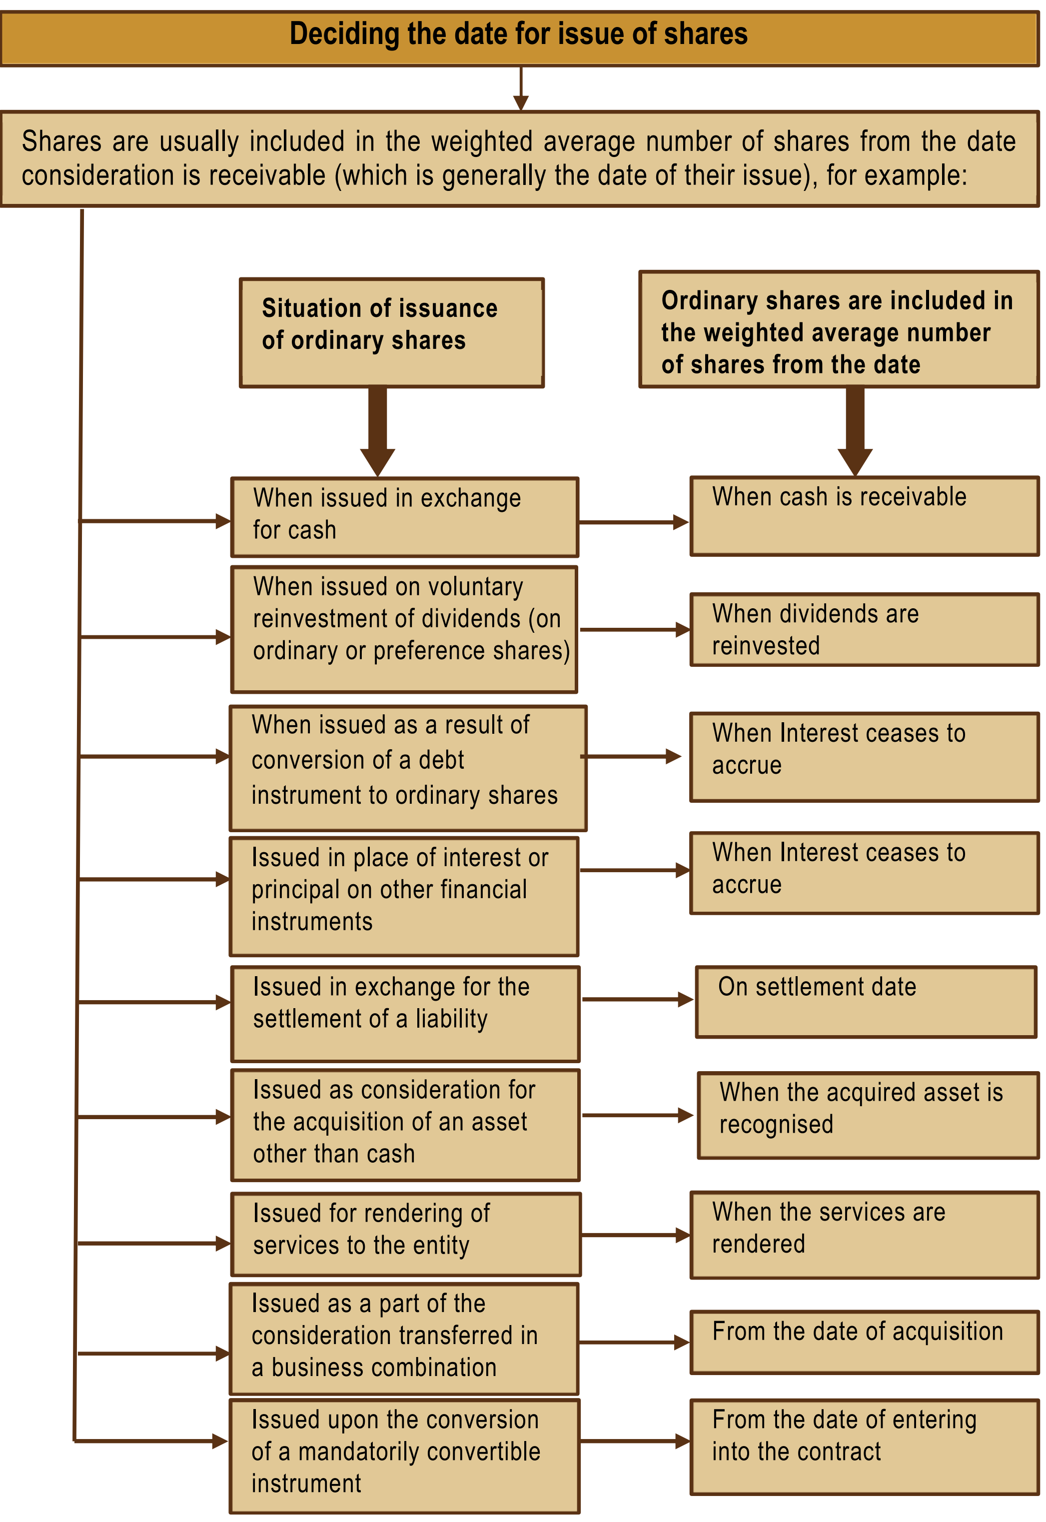
  (e) ordinary shares issued in **exchange for the settlement of a liability** of the entity are included from the **settlement date**;

  (f) ordinary shares issued as **consideration for the acquisition** of an asset other than cash are included from the **date on which the acquisition is recognised**; and

  (g) ordinary shares issued for the **rendering of services** to the entity are included from the date on which as the **services are rendered**.

- Ordinary shares issued as part of the consideration transferred in a business combination are included in the weighted average number of shares from the acquisition date of the business. This is because the acquirer incorporates into its statement of profit and loss the acquiree's profits and losses from that date.

- Entities often issue instruments that are convertible into ordinary shares that may be either mandatorily convertible or convertible at the option of the issuer or holder. The issue of ordinary shares is solely dependent on the passage of time for a mandatorily convertible instrument. Ordinary shares that are issuable on the conversion of a mandatorily convertible instrument should be included in basic EPS from the date the contract is entered into.



Deciding the date for issue of shares
Shares are usually included in the weighted average number of shares from the date consideration is receivable (which is generally the date of their issue), for example:
Situation of issuance of ordinary shares
Ordinary shares are included in the weighted average number of shares from the date
When issued in exchange for cash
When cash is receivable
When issued on voluntary reinvestment of dividends (on ordinary or preference shares)
When dividends are reinvested
When issued as a result of conversion of a debt instrument to ordinary shares
When Interest ceases to accrue
Issued in place of interest or principal on other financial instruments
When Interest ceases to accrue
Issued in exchange for the settlement of a liability
On settlement date
Issued as consideration for the acquisition of an asset other than cash
When the acquired asset is recognised
Issued for rendering of services to the entity
When the services are rendered
Issued as a part of the consideration transferred in a business combination
From the date of acquisition
Issued upon the conversion of a mandatorily convertible instrument
From the date of entering into the contract

2.6.3.3 Contingently issuable shares

- Contingently issuable shares are treated as outstanding and are included in the calculation of basic earnings per share only from the date when all necessary conditions are satisfied (i.e. the events have occurred).
- Shares that are issuable solely after the passage of time are not contingently issuable shares, because the passage of time is a certainty.
- Outstanding ordinary shares that are contingently returnable (ie subject to recall) are not treated as outstanding and are excluded from the calculation of basic earnings per share until the date the shares are no longer subject to recall.

Example 6

ABC Ltd. acquires a company in 20X1 for consideration paid in shares. If the profits for calendar years 20X1 and 20X2 meet budget, ABC Ltd. will issue more shares to the vendor in February 20X3. These additional shares will be included in the weighted-average calculation from 1 January 20X3 (considering reporting date as December end), if the targets are met.

2.6.3.4 Change in the number of shares without change in value of capital

- The weighted average number of ordinary shares outstanding during the period and for all periods presented shall be adjusted for events, other than the conversion of potential ordinary shares, that have changed the number of ordinary shares outstanding without a corresponding change in resources.
- There are certain events, which will not change the total equity of the company. Still the number of outstanding equity shares will undergo a change.
- Ordinary shares may be issued, or the number of ordinary shares outstanding may be reduced, without a corresponding change in resources. Examples include:

  (a) a capitalisation or bonus issue (sometimes referred to as a stock dividend);

  (b) a bonus element in any other issue, for example a bonus element in a rights issue to existing shareholders;

  (c) a share split; and

  (d) a reverse share split (consolidation of shares).

- In a capitalisation or bonus issue or a share split, ordinary shares are issued to existing shareholders for no additional consideration. Therefore, the number of ordinary shares outstanding is increased without an increase in resources. The number of ordinary shares outstanding before the event is adjusted for the proportionate change in the number of ordinary shares outstanding as if the event had occurred at the beginning of the earliest period presented.

Join us t.me/caborntofight

Example 7

On a two-for-one bonus issue, the number of ordinary shares outstanding before the issue is multiplied by three to obtain the new total number of ordinary shares, or by two to obtain the number of additional ordinary shares.

- We have seen above that for calculation of weighted average number of shares, the date of issue/contract etc. is very important. However, in case of bonus shares where the number of shares change without the change in the resources, the date will be considered from the beginning of the earliest period presented, irrespective of the fact of the date of actual capitalisation of the reserves.

Illustration 4

On 31 March, 20X2, the issued share capital of a company consisted of ₹ 100,000,000 in ordinary shares of ₹ 25 each and ₹ 500,000 in 10% cumulative non-redeemable preference shares (classified as equity) of Re 1 each. On 1 October, 20X2, the company issued 1,000,000 ordinary shares fully paid by way of capitalisation of reserves in the proportion 1:4 for the year ended 31 March, 20X3.

Profit for 20X1-20X2 and 20X2-20X3 is ₹ 450,000 and ₹ 550,000 respectively.

Calculate the basic EPS for 20X1-20X2 and 20X2-20X3.

Solution

	20X2-20X3 ₹'000	20X1-20X2 ₹'000
Calculation of earnings		
Profit for the year	550	450
Less: Preference shares dividend	(50)	(50)
Earnings (A)	500	400

	No. of shares in '000	No. of shares in '000
Number of ordinary shares		
Shares in issue for full year	4,000	4,000
Capitalisation issue at 1 October 20X2	1,000	1,000
Number of shares (B)	5,000	5,000
Earnings per ordinary share (A/B)	10 Paise	8 Paise*

*The comparative EPS for 20X1-20X2 can alternatively be calculated by adjusting the previously disclosed EPS in 20X1-20X2 (in this example, 10 Paise) by the following factor:

Number of shares before the bonus issue/ Number of shares after the bonus issue

*Adjusted EPS for 20X1-20X2 10 Paise x (4,000/ 5,000) = 8 Paise

*****

Illustration 5

X Ltd.

1 January *1,000,000 shares in issue*

28 February *Issued 200,000 shares at fair value*

31 August *Bonus issue 1 share for 3 shares held*

30 November *Issued 250,000 shares at fair value*

Calculate the number of shares which would be used in the basic EPS calculation. Consider reporting date as December end.

Solution

Period	Calculations	Weighted average number of shares
1 January - 28 February	1,000,000 × 2 / 12 × 4 / 3	222,222
1 March - 31 August	1,200,000 × 6 / 12 × 4 / 3	800,000
1 September - 30 November	1,600,000 × 3 / 12	400,000
1 December - 31 December	1,850,000 × 1 / 12	154,167
		1,576,389

*****

2.6.3.5 Rights issues

Entities might raise additional capital by issuing shares to existing shareholders, on a pro rata basis to their existing holdings, in the form of a rights issue. The rights shares can either be offered at the current market price or at a price that is below the current market price. Ordinary shares might be issued during the year by way of a rights issue at a discount to the market price. The weighting calculation should reflect the fact that the discount is effectively a bonus (stock dividend) given to the shareholders in the form of shares for no consideration. This bonus element should be factored into the calculation of the weighted average number of shares. A rights issue is equivalent to a capitalisation issue of part of the shares for no consideration and an issue of the remainder of the shares at full market price. The notional capitalisation issue reflects the bonus element inherent in the rights issue and is measured by the following fraction:

$$\frac{\text{Fair value per share immediately before the excersice of rights}}{\text{Theoretical ex-rights fair value per share}}$$

where,

Theoretical ex-rights fair value per share

Fair value of all outstanding shares before exercise of right + Total amount received from exercise of rights

No of shares outstanding after the exercise of rights

Illustration 6

At 31 December 20X1, the issued share capital of a company consisted of 1.8 million ordinary shares of ₹ 10 each, fully paid. The profits for the year ended 31 December 20X1 and 20X2 amounted to ₹ 630,000 and ₹ 875,000 respectively. On 31 March 20X2, the company made a rights issue on a 1 for 4 basis at ₹ 30. The market price of the shares immediately before the rights issue was ₹ 60.

Calculate EPS.

Solution

Calculation of theoretical ex rights price:

	Number of shares		₹
Initial holding	4	Market Value (4 x 60)	240
Rights taken up	1	Cost (1 x 30)	30
New holding	**5**	**Theoretical price**	**270**

Theoretical ex rights price = 270/5 = ₹ 54

Calculation of bonus element

The bonus element of the rights issue is given by the fraction:

Market price before rights issue/Theoretical ex-rights price =60 / 54 = 10/9

This corresponds to a bonus issue of 1 for 9. The bonus ratio will usually be greater than 1 (that is, the market price of the shares immediately prior to the exercise of rights is greater than the theoretical ex-rights price). If the ratio is less than 1, it might indicate that the market price has fallen significantly during the rights period, which was not anticipated when the rights issue was announced. In this situation, the rights issue should be treated as an issue of shares for cash at full market price.

© The Institute of Chartered Accountants of India

It can be demonstrated, using the figures in the illustration, that a rights issue of 1 for 4 at ₹ 30 is equivalent to a bonus issue of 1 for 9 combined with an issue of shares at full market price of ₹ 54 per share. Consider an individual shareholder holding 180 shares:

	Number of shares (in '000s)	Value	₹ *(in million)*
Original holding	1,800	Value at ₹60 per share	108.00
Rights shares (1:4)	450	Value at ₹30 per share	13.50
Holding after rights issue	2,250	Value at ₹54 per share	121.50

The additional 450 thousand rights shares at ₹30 can be shown to be equivalent to a bonus issue of 1 for 9 on the original holding, followed by an issue of 1:8 at full market price of ₹54 following the bonus issue, as follows:

	Number of shares (in '000s)	Value	₹ *(in million)*
Original holding	1,800	Value at ₹60 per share	108.00
Bonus issue of 1 for 9	200	Value Nil	nil
	2000	**Value at ₹ 54 per share**	**108.00**
Issue of 1 for 8 at full price (450-200)	250	Value at ₹ 54 per share	13.50
Total holding	**2250**	**Value at ₹54 per share**	**121.50**

The shareholder is therefore indifferent as to whether the entity makes a rights issue of 1 for 4 at ₹ 30 per share, or a combination of a bonus issue of 1 for 9 followed by a rights issue of 1 for 8 at full market price of ₹ 54 per share.

Having calculated the bonus ratio, the ratio should be applied to adjust the number of shares in issue before the rights issue, both for the current year and for the previous year. Therefore, the weighted average number of shares in issue for the current and the previous period, adjusted for the bonus element, would be:

Weighted average number of shares:

	20X2	20X1
No of actual shares in issue before rights	1,800,000	1,800,000
Correction for bonus issue (1:9)	200,000	200,000
Deemed no of shares in issue before right issue	2,000,000	2,000,000

(1.8 million x 10/9 for the whole year)

The no of shares after the rights issue would be

= 1.8 million x 5/4 = 2,250,000

Therefore, the weighted average number of shares would be

2.0 million for the whole year		2,000,000
1.8 million x 10/9 x 3/12 (before rights issue)	500,000	-
2.25 million x 9/12 (after rights issue)	1,687,500	-
Weighted average number	**2,187,500**	**2,000,000**
	20X2	**20X1**
Calculation of earnings		**(as previously stated)**
Profits for the year	₹ 875,000	₹ 630,000
Weighted average number	2,187,500	1,800,000
Basic EPS	**40p**	**35p**
Basic EPS for 20X1 (as restated)		₹ 630,000 / 2,000,000
		= **31.50p**

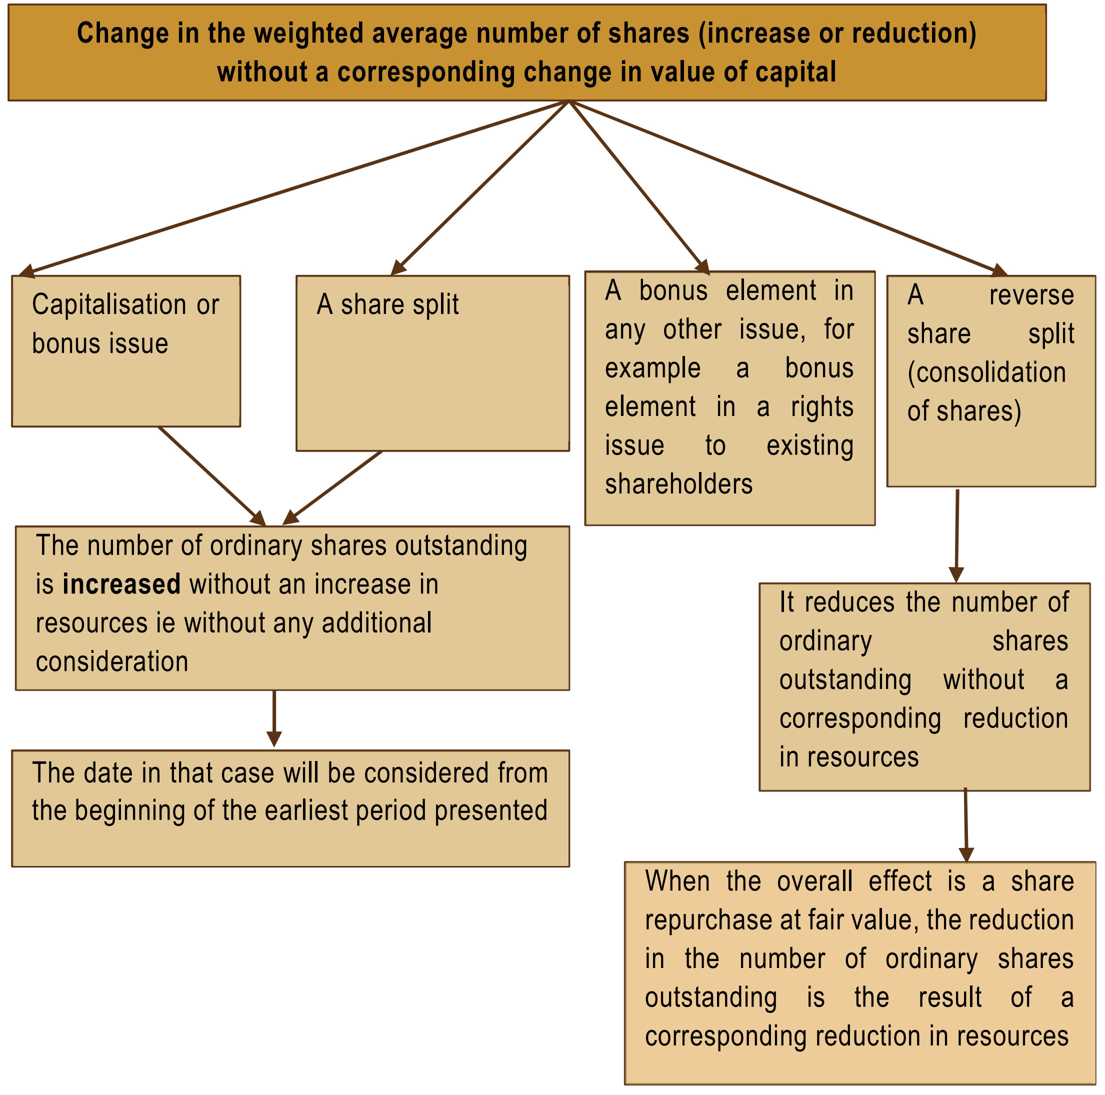
In practice, the restated EPS for 20X1 can also be calculated by adjusting the EPS figure of the previous year by the reciprocal of the bonus element factor:

* 35p x 9/10 = 31.50 p

*****

A consolidation of ordinary shares generally reduces the number of ordinary shares outstanding without a corresponding reduction in resources. However, when the overall effect is a share repurchase at fair value, the reduction in the number of ordinary shares outstanding is the result of a corresponding reduction in resources.

An example is a share consolidation combined with a special dividend. The weighted average number of ordinary shares outstanding for the period in which the combined transaction takes place is adjusted for the reduction in the number of ordinary shares from the date the special dividend is recognised.



2.7 DILUTED EARNINGS PER SHARE

2.7.1 Scope, meaning and formula

- An entity shall calculate diluted earnings per share amounts for profit or loss attributable to ordinary equity holders of the parent entity and, if presented, profit or loss from continuing operations attributable to those equity holders.
- For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, and the weighted average number of shares outstanding, for the effects of all dilutive potential ordinary shares.

- The objective of diluted earnings per share is consistent with that of basic earnings per share—to provide a measure of the interest of each ordinary share in the performance of an entity—while giving effect to all dilutive potential ordinary shares outstanding during the period. As a result:
  - ✓ profit or loss attributable to ordinary equity holders of the parent entity is increased by the after-tax amount of dividend and interest recognised in the period in respect of the dilutive potential ordinary shares and is adjusted for any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares; and
  - ✓ the weighted average number of ordinary shares outstanding is increased by the weighted average number of additional ordinary shares that would have been outstanding assuming the conversion of all dilutive potential ordinary shares.

  The formula can be mathematically expressed as follows:

$$\frac{\text{Profit/Loss attributable to Equity share holders when dilutive potential shares are converted into ordinary shares}}{\text{Weighted average number of Equity shares + Weighted average number of dilutive potential ordinary shares}}$$

2.7.2 Earnings

- For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, by the after-tax effect of:
  (a) any dividend or other items related to dilutive potential ordinary shares is deducted in arriving at profit or loss attributable to ordinary equity holders of the parent entity;
  (b) any interest recognised in the period related to dilutive potential ordinary shares; and
  (c) any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares.
- After the potential ordinary shares are converted into ordinary shares, the new ordinary shares are entitled to participate in profit or loss attributable to ordinary equity holders of the parent entity. Therefore, profit or loss attributable to ordinary equity holders of the parent entity is adjusted for the items in (a)-(c) above and any related taxes. The expenses associated with potential ordinary shares include transaction costs and discounts accounted for in accordance with the effective interest method under Ind AS 109.

Illustration 7

Entity A has in issue 25,000 4% debentures with a nominal value of ₹ 1. The debentures are convertible to ordinary shares at a rate of 1:1 at any time until 20X9. The entity's management receives a bonus based on 1% of profit before tax.

Entity A's results for 20X2 showed a profit before tax of ₹ 80,000 and a profit after tax of ₹ 64,000 (for simplicity, a tax rate of 20% is assumed in this question).

Calculate Earnings for the purpose of diluted EPS.

Solution

For the purpose of calculating diluted EPS, the earnings should be adjusted for the reduction in the interest charge that would occur if the debentures were converted, and for the increase in the management bonus payment that would arise from the increased profit.

	Amount (₹)
Profit after tax	64,000
Add: Reduction in interest cost (25,000 × 4%) (*Refer Note*)	1,000
Less: Tax expense (1,000 × 20%)	(200)
Less: Increase in management bonus (1,000 × 1%)	(10)
Add: Tax benefit (10 × 20%)	2
Earnings for the purpose of diluted EPS	**64,792**

Note : For simplicity, this illustration does not classify the components of the convertible debenture as liabilities and equity, as required by Ind AS 32.

*****

2.7.3 Shares

2.7.3.1 Base for calculation

For the purpose of calculating diluted earnings per share, the number of ordinary shares shall be the weighted average number of ordinary shares ***plus*** the weighted average number of ordinary shares that would be issued on the conversion of all the dilutive potential ordinary shares into ordinary shares. Dilutive potential ordinary shares shall be deemed to have been converted into ordinary shares at the beginning of the period or, if later, the date of the issue of the potential ordinary shares.

2.7.3.2 Calculation of Weighted average to be done independently for every period

- Dilutive potential ordinary shares shall be determined independently for each period presented. The number of dilutive potential ordinary shares included in the year-to-date period is not a weighted average of the dilutive potential ordinary shares included in each interim computation.
- Potential ordinary shares are weighted for the period they are outstanding. Potential ordinary shares that are cancelled or allowed to lapse during the period are included in the calculation of diluted earnings per share only for the portion of the period during which they are outstanding. Potential ordinary shares that are converted into ordinary shares during the period are included in the calculation of diluted earnings per share from the beginning of the period to the date of conversion; from the date of conversion, the resulting ordinary shares are included in both basic and diluted earnings per share.
- All potential ordinary shares are assumed converted into ordinary shares at the beginning of the period or, if not in existence at the beginning of the period, at the date of issue of the

potential ordinary shares. The date of issue is the date the financial instrument was issued or the granting of the rights by which they are generated. This is sometimes referred to as the 'if converted' method.

- The conversion into ordinary shares should be determined from the terms of the financial instrument or the rights granted. This determination should assume the most advantageous conversion rate or exercise price from the standpoint of the holder of the potential ordinary shares.
- Only potential ordinary shares that are dilutive are considered in the calculation of diluted EPS. Potential ordinary shares should be treated as dilutive only when their conversion to ordinary shares would decrease profit per share or increase loss per share from continuing operations attributable to ordinary equity holders.
- The effects of anti-dilutive potential ordinary shares are ignored in calculating diluted EPS. An entity might have a number of different types of potential ordinary shares in issue. Each one would need to be considered separately rather than in aggregate.
- Convertible preference shares are dilutive where the amount of dividend on such shares, declared or accrued in the period per ordinary share obtainable on conversion, is below basic EPS for continuing operations. If the amount exceeds basic EPS, the convertible preference shares are anti-dilutive.

Illustration 8

ABC Ltd. has 1,000,000 ₹ 1 ordinary shares and 1,000 ₹ 100 10% convertible bonds (issued at par), each convertible into 20 ordinary shares on demand, all of which have been in issue for the whole of the reporting period.

ABC Ltd.'s share price is ₹ 4.50 per share and earnings for the period are ₹ 500,000. The tax rate applicable to the entity is 21%.

Calculate basic EPS, earnings per incremental share for the convertible bonds and diluted EPS.

Ignore the requirements of Financial Instruments (Ind AS 109) for the purpose of this question.

Solution

Basic EPS is ₹ 0.50 per share (ie 500,000/1,000,000)

The earnings per incremental share for the convertible bonds is calculated as follows:

Earnings effect = No. of bonds x nominal value x interest cost x (1 – applicable tax rate)

= 1,000 x 100 x 10% x (1- 0.21) = ₹ 7,900.

Incremental shares calculation

Assume all bonds are converted to shares, even though this converts ₹ 100 worth of bonds into 20 shares worth only ₹ 90 and is therefore not economically rational.

This gives 1000 x 20 = 20,000 additional shares.

Earnings per incremental share = ₹ 7,900 / 20,000 = ₹ 0.395

Diluted EPS = (₹ 500,000 + ₹ 7,900) / (1,000,000 + 20,000) = ₹ 0.498 per share.

*****

Illustration 9

At 30 June 20X1, the issued share capital of an entity consisted of 1,500,000 ordinary shares of ₹ 1 each. On 1 October 20X1, the entity issued ₹ 1,250,000 of 8% convertible loan stock for cash at par. Each ₹ 100 nominal value of the loan stock may be converted, at any time during the years ended 20X6 to 20X9, into the number of ordinary shares set out below:

30 June 20X6: 135 ordinary shares;

30 June 20X7: 130 ordinary shares;

30 June 20X8: 125 ordinary shares; and

30 June 20X9: 120 ordinary shares.

If the loan stocks are not converted by 20X9, they would be redeemed at par.

The written equity conversion option is accounted for as a derivative liability and marked to market through profit or loss. The change in the options' fair value reported in 20X2 and 20X3 amounted to losses of ₹ 2,500 and ₹ 2,650 respectively. It is assumed that there are no tax consequences arising from these losses.

The profit before interest, fair value movements and taxation for the year ended 30 June 20X2 and 20X3 amounted to ₹ 825,000 and ₹ 895,000 respectively and relate wholly to continuing operations. The rate of tax for both periods is 33%.

Calculate Basic and Diluted EPS.

Solution

	20X3	20X2
Trading results	₹	₹
A. Profit before interest, fair value movements and tax	895,000	825,000
B. Interest on 8% convertible loan stock (20X2: 9/12 × ₹100,000)	(100,000)	(75,000)
C. Change in fair value of embedded option	(2,650)	(2,500)
Profit before tax	792,350	747,500
Taxation @ 33% on (A-B)	(262,350)	(247,500)
Profit after tax	**530,000**	**500,000**

Calculation of basic EPS		
Number of equity shares outstanding	1,500,000	1,500,000
Earnings	₹ 530,000	₹ 500,000
Basic EPS	35 paise	33 paise

Calculation of diluted EPS

Test whether convertibles are dilutive:

The saving in after-tax earnings, resulting from the conversion of ₹ 100 nominal of loan stock, amounts to ₹ 100 × 8% × 67% + ₹ 2,650/12,500 = ₹ 5.36 + ₹ 0.21 = ₹ 5.57.

There will then be 135 extra shares in issue.

Therefore, the incremental EPS is 4 paise (ie. ₹ 5.57/135). As this incremental EPS is less than the basic EPS at the continuing level, it will have the effect of reducing the basic EPS of 35 paise. Hence the convertibles are dilutive.

	20X3	20X2
Adjusted earnings	₹	₹
Profit for basic EPS	530,000	500,000
Add: Interest and other charges on earnings saved	102,650	77,500
as a result of the conversion	(100,000 + 2,650)	(75000+ 2500)
Less: Tax relief thereon	(33,000)	(24,750)
Adjusted earnings for equity	**599,650**	**552,750**

Adjusted number of shares

From the conversion terms, it is clear that the maximum number of shares issuable on conversion of ₹ 1,250,000 loan stock after the end of the financial year would be at the rate of 135 shares per ₹ 100 nominal (that is, 1,687,500 shares).

	20X3	20X2
Number of equity shares for basic EPS	1,500,000	1,500,000
Maximum conversion at date of issue 1,687,500 × 9/12		1,265,625
Maximum conversion after balance sheet date	1,687,500	–
Adjusted shares	**3,187,500**	**2,765,625**
Adjusted earnings for equity	₹ 599,650	₹ 552,750
Diluted EPS (approx.)	**19 paise**	**20 paise**

Note: Since Effective Interest Rate is not given, splitting of the convertible loan into liability and equity components as envisaged under Ind AS 109 cannot be done. However, since fair values of derivatives are given, the same is considered for accounting at FVTPL.

*****

2.7.3.3 Shares of subsidiary, joint venture or associate

A subsidiary, joint venture or associate may issue to parties other than the parent or investors with joint control of, or significant influence over, the investee potential ordinary shares that are convertible into either ordinary shares of the subsidiary, joint venture or associate, or ordinary shares of the parent or investors with joint control of, or significant influence (the reporting entity) over, the investee. If these potential ordinary shares of the subsidiary, joint venture or associate have a dilutive effect on the basic earnings per share of the reporting entity, they are included in the calculation of diluted earnings per share.

2.7.3.4 Options, warrants and their equivalents

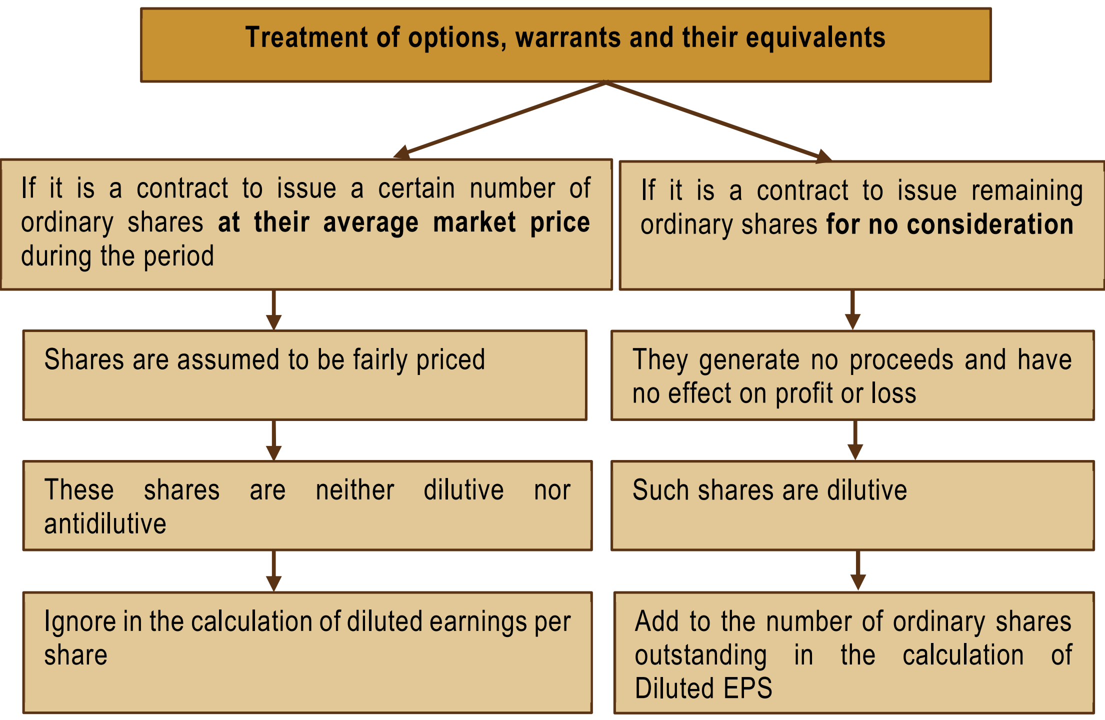
- For the purpose of calculating diluted earnings per share, an entity shall assume the exercise of dilutive options and warrants of the entity. The assumed proceeds from these instruments shall be regarded as having been received from the issue of ordinary shares at the average market price of ordinary shares during the period. The difference between the number of ordinary shares issued and the number of ordinary shares that would have been issued at the average market price of ordinary shares during the period shall be treated as an issue of ordinary shares for no consideration.

- Options and warrants are dilutive when they would result in the *issue of ordinary shares for less than the average market price of ordinary shares during the period.* The amount of the dilution is the average market price of ordinary shares during the period minus the issue price. Therefore, to calculate diluted earnings per share, potential ordinary shares are treated as consisting of both the following:

  (a) a contract to issue a certain number of the ordinary shares at their average market price during the period. Such ordinary shares are assumed to be fairly priced and to be neither dilutive nor antidilutive. They are ignored in the calculation of diluted earnings per share.

  (b) a contract to issue the remaining ordinary shares for no consideration. Such ordinary shares generate no proceeds and have no effect on profit or loss attributable to ordinary shares outstanding. Therefore, such shares are dilutive and are added to the number of ordinary shares outstanding in the calculation of diluted earnings per share.

Join us t.me/caborntofight



Examples 8-10

8. ABC Ltd. has issued 20 lacs shares. It has also issued 1 lac warrants convertible into shares at ₹ 45 per share. The average market price of shares during the current period was ₹ 45.

   Such shares are assumed to be fairly priced, and to be neither dilutive, nor anti-dilutive. They are ignored in the calculation of diluted earnings per share.

9. ABC Ltd. has issued 20 lacs shares. It has also issued 1 lac warrants convertible into shares at ₹ 30 per share. The average market price of shares during the current period was ₹ 37. ₹ 7 (i.e. ₹ 37 - ₹ 30) is the dilution per share of the warrants.

   Such shares generate no proceeds and have no effect on profit attributable to the ordinary shares outstanding. They are dilutive and are added to the number of shares outstanding in the calculation of diluted earnings per share.

10. In 20X1, ABC Ltd. issued some staff share options that can be exercised after 3 years' service. They are treated as outstanding on the grant date in 20X1 for diluted earnings per share purposes.

Illustration 10

At 31 December 20X7 and 20X8, the issued share capital of an entity consisted of 4,000,000 ordinary shares of ₹ 25 each. The entity has granted options that give holders the right to subscribe for ordinary shares between 20Y6 and 20Y9 at ₹ 70 per share. Options outstanding at 31 December 20X7 and 20X8 were 630,000. There were no grants, exercises or lapses of options during the year. The profit after tax, attributable to ordinary equity holders for the years ended 31

December 20X7 and 20X8, amounted to ₹ 500,000 and ₹ 600,000 respectively (wholly relating to continuing operations).

Average market price of share:

Year ended 31 December 20X7 = ₹ 120

Year ended 31 December 20X8 = ₹ 160

Calculate basic and diluted EPS.

Solution

	20X8	20X7
Calculation of basic EPS		
Profit after tax	₹ 600,000	₹ 500,000
Number of share	4,000,000	4,000,000
Basic EPS (approx.)	15 paise	13 paise.
Calculation of diluted EPS		
Adjusted number of shares		
Number of shares under option:		
Issued at full market price:		
(630,000 × 70) ÷ 120		367,500
(630,000 × 70) ÷ 160	275,625	
Issued at nil consideration — dilutive	354,375	262,500
Total number of shares under option	630,000	630,000
Number of equity shares for basic EPS	4,000,000	4,000,000
Number of dilutive shares under option	354,375	262,500
Adjusted number of shares (A)	4,354,375	4,262,500
Profit after tax (B)	₹ 600,000	₹ 500,000
Diluted EPS (B/A)	14 paise	12 paise

Note: *If options had been granted or exercised during the period, the number of 'nil consideration' shares in respect of these options would be included in the diluted EPS calculation on a weighted average basis for the period prior to exercise.*

*****

- **Options and warrants have a dilutive effect only when the average market price of ordinary shares during the period exceeds the exercise price** of the options or warrants (i.e. they are 'in the money'). Previously reported earnings per share are not retroactively adjusted to reflect changes in prices of ordinary shares.

- For share options and other share-based payment arrangements to which Ind AS 102, *Share-based Payment,* applies, the issue price and the exercise price shall include the fair value (measured in accordance with Ind AS 102) of any goods or services to be supplied to the entity in the future under the share option or other share-based payment arrangement.

2.7.3.5 Employee Stock Options

Employee share options with fixed or determinable terms and non-vested ordinary shares are treated as options in the calculation of diluted earnings per share, even though they may be contingent on vesting. They are treated as outstanding on the grant date. Performance-based employee share options are treated as contingently issuable shares because their issue is contingent upon satisfying specified conditions in addition to the passage of time.

Illustration 11- Effects of share options on diluted earnings per share

Profit attributable to ordinary equity holders of the parent entity for year 20X1	*₹ 1,200,000*
Weighted average number of ordinary shares outstanding during year 20X1	*500,000 shares*
Average market price of one ordinary share during year 20X1	*₹ 20.00*
Weighted average number of shares under option during year 20X1	*100,000 shares*
Exercise price for shares under option during year 20X1	*₹ 15.00*
Calculate basic and diluted EPS.	

Solution

Calculation of earnings per share

	Earnings	***Shares***	***Per share***
Profit attributable to ordinary equity holders of the parent entity for year 20X1	₹ 1,200,000		
Weighted average shares outstanding during year 20X1		500,000	
Basic earnings per share			**₹ 2.40**
Weighted average number of shares under option		100,000	
Weighted average number of shares that would have been issued at average market price: (100,000 × ₹ 15.00) ÷ ₹ 20.00	Refer Note	(75,000)	
Diluted earnings per share	**₹ 1,200,000**	**525,000**	**₹ 2.29**

Note: Earnings have not increased because the total number of shares has increased only by the number of shares (25,000) deemed to have been issued for no consideration.

*****

2.7.3.6 Convertible instruments

- The dilutive effect of convertible instruments shall be reflected in diluted earnings per share.
- Convertible preference shares are antidilutive whenever the amount of the dividend on such shares declared in or accumulated for the current period per ordinary share obtainable on conversion exceeds basic earnings per share. Similarly, convertible debt is antidilutive whenever its interest (net of tax and other changes in income or expense) per ordinary share obtainable on conversion exceeds basic earnings per share.
- The redemption or induced conversion of convertible preference shares may affect only a portion of the previously outstanding convertible preference shares. In such cases, any excess consideration is attributed to those shares that are redeemed or converted for the purpose of determining whether the remaining outstanding preference shares are dilutive. The shares redeemed or converted are considered separately from those shares that are not redeemed or converted.

2.7.3.7 Contingently issuable shares

- As in the calculation of basic earnings per share, contingently issuable ordinary shares are treated as outstanding and included in the calculation of diluted earnings per share if the conditions are satisfied (i.e. the events have occurred). Contingently issuable shares are included from the beginning of the period (or from the date of the contingent share agreement, if later). If the conditions are not satisfied, the number of contingently issuable shares included in the diluted earnings per share calculation is based on the number of shares that would be issuable if the end of the period were the end of the contingency period. Restatement is not permitted if the conditions are not met when the contingency period expires.
- If attainment or maintenance of a specified amount of earnings for a period is the condition for contingent issue and if that amount has been attained at the end of the reporting period but must be maintained beyond the end of the reporting period for an additional period, then the additional ordinary shares are treated as outstanding, if the effect is dilutive, when calculating diluted earnings per share. In that case, the calculation of diluted earnings per share is based on the number of ordinary shares that would be issued if the amount of earnings at the end of the reporting period were the amount of earnings at the end of the contingency period. Because earnings may change in a future period, the calculation of basic earnings per share does not include such contingently issuable ordinary shares until the end of the contingency period because not all necessary conditions have been satisfied.
- The number of ordinary shares contingently issuable may depend on the future market price of the ordinary shares. In that case, if the effect is dilutive, the calculation of diluted earnings per share is based on the number of ordinary shares that would be issued if the market price at the end of the reporting period were the market price at the end of the contingency period.

© The Institute of Chartered Accountants of India

If the condition is based on an average of market prices over a period of time that extends beyond the end of the reporting period, the average for the period of time that has lapsed is used. Because the market price may change in a future period, the calculation of basic earnings per share does not include such contingently issuable ordinary shares until the end of the contingency period because not all necessary conditions have been satisfied.

- The number of ordinary shares contingently issuable may depend on future earnings and future prices of the ordinary shares. In such cases, the number of ordinary shares included in the diluted earnings per share calculation is based on both conditions (ie earnings to date and the current market price at the end of the reporting period). Contingently issuable ordinary shares are not included in the diluted earnings per share calculation unless both conditions are met.
- In other cases, the number of ordinary shares contingently issuable depends on a condition other than earnings or market price (for example, the opening of a specific number of retail stores). In such cases, assuming that the present status of the condition remains unchanged until the end of the contingency period, the contingently issuable ordinary shares are included in the calculation of diluted earnings per share according to the status at the end of the reporting period.
- Contingently issuable potential ordinary shares (other than those covered by a contingent share agreement, such as contingently issuable convertible instruments) are included in the calculation of diluted earnings per share as follows:
  - ✓ An entity determines whether the potential ordinary shares may be assumed to be issuable on the basis of the conditions specified for their issue in accordance with the contingent ordinary share provisions; and
  - ✓ if those potential ordinary shares are to be reflected in diluted earnings per share, an entity determines their impact on the calculation of diluted earnings per share by following the provisions for options and warrants, the provisions for convertible instruments, the provisions for contracts that may be settled in ordinary shares or cash, or other provisions, as appropriate.
- However, exercise or conversion is not assumed for the purpose of calculating diluted earnings per share unless exercise or conversion of similar outstanding potential ordinary shares that are not contingently issuable is assumed.

Illustration 12- Contingently issuable shares

Ordinary shares outstanding during 20X1	*1,000,000 (there were no options, warrants or convertible instruments outstanding during the period)*

An agreement related to a recent business combination provides for the issue of additional ordinary shares based on the following conditions:

	5,000 additional ordinary shares for each new retail site opened during 20X1
	1,000 additional ordinary shares for each ₹ 1,000 of consolidated profit in excess of ₹ 2,000,000 for the year ended 31 December 20X1
Retail sites opened during the year:	*one on 1 May 20X1*
	one on 1 September 20X1
Consolidated year-to-date profit attributable to ordinary equity holders of the parent entity:	*₹ 1,100,000 as of 31 March 20X1*
	₹ 2,300,000 as of 30 June 20X1
	₹ 1,900,000 as of 30 September 20X1 (including a ₹ 450,000 loss from a discontinued operation)
	₹ 2,900,000 as of 31 December 20X1

Calculate basic and diluted EPS on quarterly as well as annual basis.

Solution

Basic earnings per share					
	First quarter	***Second quarter***	***Third quarter***	***Fourth quarter***	***Full year***
Numerator (₹)	1,100,000	1,200,000	(400,000)	1,000,000	2,900,000
Denominator:					
Ordinary shares outstanding	1,000,000	1,000,000	1,000,000	1,000,000	1,000,000
Retail site contingency	–	3,333[6]	6,667[7]	10,000	5,000[8]
Earnings contingency[9]	–	–	–	–	–
Total shares	1,000,000	1,003,333	1,006,667	1,010,000	1,005,000

6 5,000 shares × $^{2}/_{3}$

7 5,000 shares + (5,000 shares × $^{1}/_{3}$)

8 (5,000 shares × $^{8}/_{12}$) + (5,000 shares × $^{4}/_{12}$)

9 The earnings contingency has no effect on basic earnings per share because it is not certain that the condition is satisfied until the end of the contingency period. Profits for the year are determined /

Join us t.me/caborntofight

finalized on after Q4 / year is completed, i.e. in the year 20X2. Thus, the earliest when these shares can be actually issued is on 1 Jan 20X2.

Diluted earnings per share					
	First quarter	***Second quarter***	***Third quarter***	***Fourth quarter***	***Full year***
Numerator (₹)	1,100,000	1,200,000	(400,000)	1,000,000	2,900,000
Denominator:					
Ordinary shares outstanding	1,000,000	1,000,000	1,000,000	1,000,000	1,000,000
Retail site contingency	–	5,000	10,000	10,000	10,000
Earnings contingency	–[10]	300,000[11]	–[12]	900,000[13]	900,000
Total shares	1,000,000	1,305,000	1,010,000	1,910,000	1,910,000
Diluted earnings per share (₹)	1.10	0.92	(0.40)[14]	0.52	1.52

10 Company A does not have year-to-date profit exceeding ₹ 2,000,000 at 31 March 20X1. The Standard does not permit projecting future earnings levels and including the related contingent shares.

11 Each quarter is treated as an independent reporting period and hence if the conditions are fulfilled during the quarter, the contingent shares are considered for Diluted EPS right from the beginning of the reporting period i.e., the quarter in the said case. [(₹ 2,300,000 – ₹ 2,000,000) ÷ 1,000] × 1,000 shares = 300,000 shares.

12 Year-to-date profit is less than ₹ 2,000,000.

13 [(₹ 2,900,000 – ₹ 2,000,000) ÷ 1,000] × 1,000 shares = 900,000 shares.

14 Because the loss during the third quarter is attributable to a loss from a discontinued operation, the antidilution rules do not apply. The control number (ie profit or loss from, continuing operations attributable to the equity holders of the parent entity) is positive. Accordingly, the effect of potential ordinary shares is included in the calculation of diluted earnings per share.

*****

2.7.3.8 Entity with discontinued operations

An entity that reports a discontinued operation should use income from continuing operations, adjusted for preferred dividends and similar adjustments, if any, as the "control number" in determining whether potential common shares are dilutive. That is, the same number of potential common shares used in computing the diluted per-share amount of income from continuing operations should be used in computing all other reported diluted per-share amounts even if the effect will be anti-dilutive compared to their respective basic per-share amounts.

Illustration 13

Assume the following facts for Company XY:

- *Income from continuing operations:* *INR 30,00,000*
- *Loss from discontinued operations:* *(INR 36,00,000)*
- *Net loss:* *(INR 6,00,000)*

- *Weighted average Number of shares outstanding* *10,00,000*
- *Incremental common shares outstanding relating to stock options* *2,00,000*

(a) You are required to calculate the basic and diluted EPS for Company XY from the above information.

(b) Assume, if in above case, Loss from continued operations is ₹ 10,00,000 and income from discontinued operations is ₹ 36,00,000 calculate the diluted EPS.

Solution:

(a) Step 1:

Basic EPS = Profit for the year / Weighted average Number of shares outstanding

Basic EPS (Continued Operations) = Profit from continued operations / Weighted average Number of shares outstanding

= ₹ 30,00,000 / 10,00,000 = ₹ 3.00

Basic Loss per share (Discontinued operations) = Loss from discontinued operations / Weighted average Number of shares outstanding

= ₹ (36,00,000) / 10,00,000 = (₹ 3.60)

Overall Basic Loss per share = (₹ 6,00,000) / 10,00,000 = ₹ (0.60) (i)

Step 2: Calculation of Diluted EPS

Diluted EPS = Profit for the year / Adjusted Weighted average Number of shares outstanding

EPS (Continued Operations) = Profit from continued operations / Adjusted Weighted average Number of shares outstanding

= ₹ 30,00,000 / 12,00,000 = ₹ 2.50

Loss per share (Discontinued operations) = Loss from discontinued operations / Adjusted weighted average number of shares outstanding

= ₹ (36,00,000) / 12,00,000 = (₹ 3.00)

Overall Diluted Loss per share = ₹ 6,00,000 / 12,00,000 = ₹ (0.50) (ii)

The income from continuing operations is the control number, there is a dilution in basic EPS for income from continuing operations (reduction of EPS from ₹ 3.00 to ₹ 2.50). Therefore, even though there is an anti-dilution [Loss per share reduced from ₹ 0.60 (i) to ₹ 0.50 (ii) above], diluted loss per share of ₹ 0.50 is reported.

(b) In case of loss from continuing operations, the potential shares are excluded since including those shares would result into anti-dilution effect on the **control number** (loss from continuing operations). Therefore, the diluted EPS will be calculated as under:

Diluted EPS = Profit for the year / Adjusted weighted average number of shares outstanding

Overall Profit = Loss from continuing operations + Gain from discontinued operations

= ₹ (10,00,000) + ₹ 36,00,000

= ₹ 26,00,000

Weighted average number of shares outstanding = 10,00,000

Diluted EPS = ₹ 2.60

The dilutive effect of the potential common shares on EPS for income from discontinued operations and net income would not be reported because of the loss from continuing operations.

*****

2.7.3.9 Contracts that may be settled in ordinary shares or cash

- When an entity has issued a contract that may be settled in ordinary shares or cash at the entity's option, the entity shall presume that the contract will be settled in ordinary shares, and the resulting potential ordinary shares shall be included in diluted earnings per share if the effect is dilutive.
- When an issued contract that may be settled in ordinary shares or cash at the entity's option may give rise to an asset or a liability, or a hybrid instrument with both an equity and a liability component under Ind AS 32, the entity should adjust the numerator (profit or loss attributable to ordinary equity holders) for any changes in the profit or loss that would have resulted during the period if the contract had been classified wholly as an equity instrument.
- For contracts that may be settled in ordinary shares or cash at the holder's option, the more dilutive of cash settlement and share settlement shall be used in calculating diluted earnings per share.

An example of a contract that may be settled in ordinary shares or cash is a debt instrument that, on maturity, gives the entity the unrestricted right to settle the principal amount in cash or in its own ordinary shares.

Another example is a written put option that gives the holder a choice of settling in ordinary shares or cash.

Illustration 14

An entity issues 2,000 convertible bonds at the beginning of Year 1. The bonds have a three-year term and are issued at par with a face value of ₹ 1,000 per bond, giving total proceeds of ₹ 2,000,000. Interest is payable annually in arrears at a nominal annual interest rate of 6 per

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

cent. Each bond is convertible at any time up to maturity into 250 ordinary shares. The entity has an option to settle the principal amount of the convertible bonds in ordinary shares or in cash.

When the bonds are issued, the prevailing market interest rate for similar debt without a conversion option is 9 per cent. At the issue date, the market price of one ordinary share is ₹ 3. Income tax is ignored. Entity has accounted for the convertible instrument using the principles of Financial Instruments.

Interest @ 6% for the year has already been adjusted in the profit attributable to shareholders.

Calculate basic and diluted EPS when

Profit attributable to ordinary equity holders of the parent entity Year 1	*₹ 1,000,000*
Ordinary shares outstanding	*1,200,000*
Convertible bonds outstanding	*2,000*

Solution

Assumption: Entity intends to settle only interest in cash

Allocation of proceeds of the bond issue:	
Liability component (Refer Note 1)	₹ 303,755
Equity component	₹ 1,696,245
	₹ 2,000,000

The liability and equity components would be determined in accordance with Ind AS 32. These amounts are recognised as the initial carrying amounts of the liability and equity components. The amount assigned to the issuer conversion option equity element is an addition to equity and is not adjusted.

Basic earnings per share Year 1:

$$\frac{₹1,000,000}{1,200,000} = ₹\ 0.83 \text{ per ordinary share}$$

Diluted earnings per share Year 1:

It is presumed that the issuer will settle the contract by the issue of ordinary shares. The dilutive effect is therefore calculated in accordance with the Standard.

$$\frac{₹1,000,000 + ₹27,338}{1,200,000 + 500,000} = ₹\ 0.60 \text{ per ordinary share}$$

Notes:

1. This represents the present value of the interest discounted at 9% – ₹ 120,000 payable annually in arrears for three years. ₹ 2,000,000 assumed to be settled in equity since option is with the entity will not form part of liability.

2. Profit is adjusted for the accretion of ₹ 27,338 (₹303,755 x 9%) of the liability because of the passage of time.

3. 500,000 ordinary shares = 250 ordinary shares x 2,000 convertible bonds.

*****

2.7.3.10 Purchased options

- Contracts such as purchased put options and purchased call options (ie options held by the entity on its own ordinary shares) are not included in the calculation of diluted earnings per share because including them would be antidilutive. The put option would be exercised only if the exercise price were higher than the market price and the call option would be exercised only if the exercise price were lower than the market price.

2.7.3.11 Written put options

- Contracts that require the entity to repurchase its own shares, such as written put options and forward purchase contracts, are reflected in the calculation of diluted earnings per share if the effect is dilutive. If these contracts are 'in the money' during the period (ie the exercise or settlement price is above the average market price for that period), the potential dilutive effect on earnings per share shall be calculated as follows:

  (a) it shall be assumed that at the beginning of the period sufficient ordinary shares will be issued (at the average market price during the period) to raise proceeds to satisfy the contract;

  (b) it shall be assumed that the proceeds from the issue are used to satisfy the contract (ie to buy back ordinary shares); and

  (c) the incremental ordinary shares (the difference between the number of ordinary shares assumed issued and the number of ordinary shares received from satisfying the contract) shall be included in the calculation of diluted earnings per share.

Written put options

Example 11

Assume that an entity has 160 written put options outstanding on 160 of its ordinary shares, with an exercise price of ₹ 10 per option. The put obligation is therefore ₹ 1,600. The average market price of the entity's ordinary shares is ₹ 8 for the period. In calculating diluted EPS, the entity assumes that it issues 200 ordinary shares at ₹ 8 per share to raise the proceeds necessary to satisfy the put option. The difference between the 200 ordinary shares assumed to be issued and the 160 ordinary shares that would have been received on exercise of the option (that is, 40 shares) is added to the denominator (number of shares) in calculating the diluted EPS. No adjustments are made to the numerator (profit attributable to ordinary shareholders), because the shares are deemed issued for nil proceeds.

2.8 RETROSPECTIVE ADJUSTMENTS

- Diluted EPS of any prior period presented should not be restated for changes in the assumptions used (such as for contingently issuable shares) or for the conversion of potential ordinary shares (such as convertible debt) outstanding at the end of the previous period. These factors are already taken into account in calculating the basic and, where applicable, the diluted EPS for the current period. Prior period's EPS data should be restated for the effects of errors and adjustments resulting from changes to accounting policies accounted for retrospectively.
- Basic and diluted EPS figures for the current period and for prior periods should include bonus issues, share splits, share consolidations and other similar events occurring during the period that change the number of shares in issue without a corresponding change in the resources of the entity (that is, retrospective application).

2.9 PRESENTATION

- An entity shall present in the statement of profit and loss basic and diluted earnings per share for profit or loss from continuing operations attributable to the ordinary equity holders of the parent entity and for profit or loss attributable to the ordinary equity holders of the parent entity for the period for each class of ordinary shares that has a different right to share in profit for the period. An entity shall present basic and diluted earnings per share with equal prominence for all periods presented.
- Earnings per share is presented for every period for which a statement of profit and loss is presented. If diluted earnings per share is reported for at least one period, it shall be reported for all periods presented, even if it equals basic earnings per share. If basic and diluted earnings per share are equal, dual presentation can be accomplished in one line in the statement of profit and loss.
- If a company does not have any potential ordinary shares, then the company's basic and diluted EPS will be same. In such a case, the company need not disclose Basic EPS and Diluted EPS separately. It may disclose basic and diluted EPS as follows (illustrative numbers only):

	20X1	20X0
Basic and Diluted EPS	3.60	2.45

- An entity that reports a discontinued operation shall disclose the basic and diluted amounts per share for the discontinued operation either in the statement of profit and loss or in the notes.

An entity shall present basic and diluted earnings per share, even if the amounts are negative (ie a loss per share).

Join us t.me/caborntofight

2.10 DISCLOSURE

- An entity shall disclose the following:

  (a) The amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to profit or loss attributable to the parent entity for the period. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.

  (b) the weighted average number of ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.

  (c) instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future but were not included in the calculation of diluted earnings per share because they are antidilutive for the period(s) presented.

  (d) a description of ordinary share transactions or potential ordinary share transactions (other than those arising from capitalisation, bonus issue, share split or reverse share split), that occur after the reporting period and that would have changed significantly the number of ordinary shares or potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

  Examples of transactions in this para include:

  (a) an issue of shares for cash;

  (b) an issue of shares when the proceeds are used to repay debt or preference shares outstanding at the end of the reporting period;

  (c) the redemption of ordinary shares outstanding;

  (d) the conversion or exercise of potential ordinary shares outstanding at the end of the reporting period into ordinary shares;

  (e) an issue of options, warrants, or convertible instruments; and

  (f) the achievement of conditions that would result in the issue of contingently issuable shares. Earnings per share amounts are not adjusted for such transactions occurring after the reporting period because such transactions do not affect the amount of capital used to produce profit or loss for the period.

- Financial instruments and other contracts generating potential ordinary shares may incorporate terms and conditions that affect the measurement of basic and diluted earnings per share. These terms and conditions may determine whether any potential ordinary shares are dilutive and, if so, the effect on the weighted average number of shares outstanding and any consequent adjustments to profit or loss attributable to ordinary equity holders. The

© The Institute of Chartered Accountants of India

disclosure of the terms and conditions of such financial instruments and other contracts is encouraged, if not otherwise required.

- If an entity discloses, in addition to basic and diluted earnings per share, amounts per share using a reported component of the statement of profit and loss other than one required by this Standard, such amounts shall be calculated using the weighted average number of ordinary shares determined in accordance with this Standard.
- Basic and diluted amounts per share relating to such a component shall be disclosed with equal prominence and presented in the notes. An entity shall indicate the basis on which the numerator(s) is (are) determined, including whether amounts per share are before tax or after tax. If a component of the statement of profit and loss is used that is not reported as a line item in the statement of profit and loss, a reconciliation shall be provided between the component used and a line item that is reported in the statement of profit and loss.

2.11 ADDITIONAL TOPICS

2.11.1 Participating equity instruments and two-class ordinary shares

- The equity of some entities includes:
  (a) instruments that participate in dividend with ordinary shares according to a predetermined formula (for example, two for one) with, at times, an upper limit on the extent of participation (for example, up to, but not beyond, a specified amount per share).
  (b) a class of ordinary shares with a different dividend rate from that of another class of ordinary shares but without prior or senior rights.
- For the purpose of calculating diluted earnings per share, conversion is assumed for those instruments that are convertible into ordinary shares if the effect is dilutive. For those instruments that are not convertible into a class of ordinary shares, profit or loss for the period is allocated to the different classes of shares and participating equity instruments in accordance with their dividend rights or other rights to participate in undistributed earnings. To calculate basic and diluted earnings per share:
  (a) profit or loss attributable to ordinary equity holders of the parent entity is adjusted (a profit reduced and a loss increased) by the amount of dividend declared in the period for each class of shares and by the contractual amount of dividend (or interest on participating bonds) that must be paid for the period (for example, unpaid cumulative dividend).
  (b) the remaining profit or loss is allocated to ordinary shares and participating equity instruments to the extent that each instrument shares in earnings as if all of the profit or loss for the period had been distributed. The total profit or loss allocated to each class of equity instrument is determined by adding together the amount allocated for dividend and the amount allocated for a participation feature.

(c) the total amount of profit or loss allocated to each class of equity instrument is divided by the number of outstanding instruments to which the earnings are allocated to determine the earnings per share for the instrument.

- For the calculation of diluted earnings per share, all potential ordinary shares assumed to have been issued are included in outstanding ordinary shares.

Illustration 15

An entity has two classes of shares in issue:

- *5,000 non-convertible preference shares*
- *10,000 ordinary shares*

The preference shares are entitled to a fixed dividend of ₹ 5 per share before any dividends are paid on the ordinary shares. Ordinary dividends are then paid in which the preference shareholders do not participate. Each preference share then participates in any additional ordinary dividend above ₹ 2 at a rate of 50% of any additional dividend payable on an ordinary share.

The entity's profit for the year is ₹ 100,000, and dividends of ₹ 2 per share are declared on the ordinary shares.

Compute the allocation of earnings for the purpose of calculation of Basic EPS when an entity has ordinary shares & participating equity instruments that are not convertible into ordinary shares.

Solution

The calculation of basic EPS is as follows:

	₹	₹
Profit		100,000
Less: Dividends payable for the period:		
Preference (5,000 × ₹ 5)	25,000	
Ordinary (10,000 × ₹ 2)	20,000	(45,000)
Undistributed earnings		55,000

Allocation of undistributed earnings:

Allocation per ordinary share = A

Allocation per preference share = B where B = 50% of A

(A × 10,000) + (50% × A × 5,000) = ₹ 55,000

A = 55,000 / (10,000 + 2,500) = ₹ 4.4

B = 50% of A i.e. B = ₹ 2.2

Join us t.me/caborntofight

Dividend per share are:	Preference shares ₹ per share	Ordinary shares ₹ per share
Distributed earnings	5.00	2.00
Undistributed earnings	2.20	4.40
Totals	**7.20**	**6.40**

Proof: (5,000 × ₹ 7.2) + (10,000 × ₹ 6.4) = ₹100,000

*****

Illustration 16

(This illustration does not illustrate the classification of the components of convertible financial instruments as liabilities and equity or the classification of related interest and dividends as expenses and equity as required by Ind AS 32).

Profit for the year	*₹ 100,000*
Ordinary shares outstanding	*10,000*
Non-convertible preference shares	*6,000*
Non-cumulative annual dividend on preference shares (before any dividend is paid on ordinary shares)	*₹ 5.50 per share*
After ordinary shares have been paid a dividend of ₹ 2.10 per share, the preference shares participate in any additional dividends on a 20:80 ratio with ordinary shares.	

Compute the allocation of earnings for the purpose of calculation of Basic EPS when an entity has ordinary shares & participating equity instruments that are not convertible into ordinary shares.

Solution

Dividends on preference shares paid (6000 x ₹ 5.50 per share)	₹ 33,000
Dividends on ordinary shares paid (10,000 x ₹ 2.10 per share)	₹ 21,000

Basic earnings per share is calculated as follows:	₹	₹
Profit attributable to equity holders of the parent entity		100,000
Less: Dividend paid:		
Preference	33,000	
Ordinary	21,000	(54,000)
Undistributed earnings		46,000

Allocation of undistributed earnings:	
Allocation per ordinary share = A	
Allocation per preference share = B; B = $^1/_4$ A	
	(A x 10,000) + ($^1/_4$ x A x 6,000) = ₹ 46,000
	A = ₹ 46,000 ÷ (10,000 + 1,500)
	A = ₹ 4.00
	B = $^1/_4$ A
	B = Re. 1.00

Dividend per share:		
	Preference shares	**Ordinary shares**
Distributed earnings	₹ 5.50	₹ 2.10
Undistributed earnings	₹ 1.00	₹ 4.00
Totals	**₹ 6.50**	**₹ 6.10**

*****

2.11.2 Partly paid shares

- Where ordinary shares are issued but not fully paid, they are treated in the calculation of basic earnings per share as a fraction of an ordinary share to the extent that they were entitled to participate in dividend during the period relative to a fully paid ordinary share.
- To the extent that partly paid shares are not entitled to participate in dividend during the period they are treated as the equivalent of warrants or options in the calculation of diluted earnings per share. The unpaid balance is assumed to represent proceeds used to purchase ordinary shares. The number of shares included in diluted earnings per share is the difference between the number of shares subscribed and the number of shares assumed to be purchased.

Illustration 17

An entity issues 100,000 ordinary shares of Re 1 each for a consideration of ₹ 2.50 per share. Cash of ₹ 1.75 per share was received by the balance sheet date. The partly paid shares are entitled to participate in dividends for the period in proportion to the amount paid.

Calculate number of shares for calculation of Basic EPS.

Solution

The number of ordinary share equivalents that would be included in the basic EPS calculation on a weighted basis is as follows:

(100,000 × ₹ 1.75) / ₹ 2.50 = 70,000 shares.

NOTE 35 EARNINGS PER EQUITY SHARE

Basic earnings per share is computed by dividing the net profit for the period attributable to the equity shareholders of the Company by the weighted average number of equity shares outstanding during the period. The weighted average number of equity shares outstanding during the period and for all periods presented is adjusted for events, such as bonus shares, other than the conversion of potential equity shares that have changed the number of equity shares outstanding, without a corresponding change in resources.

For the purpose of calculating diluted earnings per share, the net profit for the period attributable to equity shareholders and the weighted average number of shares outstanding during the period is adjusted for the effects of all dilutive potential equity shares.

	Year ended 31st March, 2022	Year ended 31st March, 2021
Earnings Per Share has been computed as under:		
Profit for the year	8,818	7,954
Weighted average number of equity shares outstanding during the year	2,34,95,87,637	2,34,95,42,101
Earnings Per Share (₹) - Basic (Face value of ₹1 per share)	₹37.53	₹33.85

2.13 SIGNIFICANT DIFFERENCES BETWEEN IND AS 33 AND AS 20

S. No.	Particulars	Ind AS 33	AS 20
1.	*Additional disclosures*	Disclosure is required for instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future but were not included in the calculation of diluted earnings per share because	Certain additional disclosures required under Ind AS not required here.

		they are anti-dilutive for the periods presented.	
2.	*Mandatorily convertible instrument*	Ordinary shares to be issued upon conversion of a mandatorily convertible instrument are included in the calculation of basic EPS from the date the contract is entered into.	No specific requirement as in Ind AS.
3.	*Shares issuable after a passage of time*	Ordinary shares that are issuable solely after a passage of time are not treated as contingently issuable shares because passage of time is a certainty.	No specific guidance.
4.	*Contingently returnable shares*	Outstanding ordinary shares that are contingently returnable are not treated as outstanding and are ignored in the calculation of basic EPS until the shares are no longer subject to recall.	No guidance on contingently returnable shares.

Questions

1. ABC Ltd

1 January 20X1	Shares in issue 1,000,000
31 March 20X1	(a) Rights issue 1 for 5 at 90 paise
	(b) Fair value of shares ₹ 1 (cum-rights price)

Calculate the number of shares for use in the EPS calculation for the calendar year.

2.

1 January	Shares in issue	1,000,000
	5% Convertible bonds	₹ 100,000

(terms of conversion 120 ordinary shares for ₹ 100)

31 March Holders of ₹ 25,000 bonds converted to ordinary shares.

Profit for the year ended 31 December ₹ 200,000

Tax rate 30%.

Calculate basic and diluted EPS. Ignore the need to split the convertible bonds into liability and equity elements.

3.

1 January	Shares in issue	1,000,000
	Profit for the year ended 31 December	₹ 100,000
	Average fair value during period	₹ 8

The company has in issue 200,000 options to purchase equal ordinary shares

Exercise price ₹ 6

Calculate the diluted EPS for the period.

Join us t.me/caborntofight

4. Calculate Basic EPS for period ending 20X0, 20X1 and 20X2, when

	20X0	20X1	20X2
Profit attributable to ordinary equity holders of the parent entity	₹ 1,100	₹ 1,500	₹ 1,800

Shares outstanding before rights issue	500 shares
Rights issue	One new share for each five outstanding shares
Exercise price	₹ 5.00
Date of rights issue	1 January 20X1
Last date to exercise rights	1 March 20X1
Market price of one ordinary share immediately before exercise on 1st March 20X1:	₹ 11.00
Reporting date	31 December

5. Calculate Subsidiary's and Group's Basic EPS and Diluted EPS, when

Parent:	
Profit attributable to ordinary equity holders of the parent entity	₹ 12,000 (excluding any earnings of, or dividends paid by, the subsidiary)
Ordinary shares outstanding	10,000
Instruments of subsidiary owned by the parent	800 ordinary shares
	30 warrants exercisable to purchase ordinary shares of subsidiary
	300 convertible preference shares
Subsidiary:	
Profit	₹ 5,400
Ordinary shares outstanding	1,000
Warrants	150, exercisable to purchase ordinary shares of the subsidiary
Exercise price	₹ 10
Average market price of one ordinary share	₹ 20
Convertible preference shares	400, each convertible into one ordinary share
Dividends on preference shares	₹ 1 per share
No inter-company eliminations or adjustments were necessary except for dividends.	

Ignore income taxes. Also, ignore classification of the components of convertible financial instruments as liabilities and equity or the classification of related interest and dividends as expenses and equity as required by Ind AS 32.

6. CAB Limited is in the process of preparation of the consolidated financial statements of the group for the year ending 31st March, 20X3 and the extract of the same is as follows:

Particulars	Attributable to CAB Limited	Non-controlling interest	Total (₹ in '000)
Profit for the year	39,000	3,000	42,000
Other Comprehensive Income	5,000	Nil	5,000
Total Comprehensive Income	44,000	3,000	47,000

The long-term finance of the company comprises of the following:

(i) 20,00,00,000 equity shares at the beginning of the year and the company has issued 5,00,00,000 shares on 1st July, 20X2 at full market value.

(ii) 8,00,00,000 irredeemable preference shares. These shares were in issue for the whole of the year ended 31st March, 20X3. The dividend on these preference shares is discretionary.

(iii) ₹ 18 crores of 6% convertible debentures issued on 1st April, 20X1 and repayable on 31st March, 20X5 at par. Interest is payable annually. As an alternative to repayment at par, the holder on maturity can elect to exchange their convertible debentures for 10 crores ordinary shares in the company. On 1st April, 20X1, the prevailing market interest rate for four-year convertible debentures which had no right of conversion was 8%. Using an annual discount rate of 8%, the present value of ₹ 1 payable in four years is 0.74 and the cumulative present value of ₹ 1 payable at the end of years one to four is 3.31.

In the year ended 31st March, 20X3, CAB Limited declared an ordinary dividend of 0.10 paise per share and a dividend of 0.05 paise per share on the irredeemable preference shares.

Compute the following:

- the finance cost of convertible debentures and its closing balance as on 31st March, 20X3 to be presented in the consolidated financial statements.
- the basic and diluted earnings per share for the year ended 31st March, 20X3.

Assume that income tax is applicable to CAB Limited and its subsidiaries at 25%.

3. Diluted EPS

	Number of Shares	Profit (₹)	EPS
Basic	1,000,000	100,000	0.10
Dilution (Refer W.N.)	50,000	–	–
	1,050,000	100,000	0.095

Working Notes:

Proceeds of issue	(200,000 × ₹ 6)	=	1,200,000
Number that would have been issued at Fair value (1,200,000 / ₹ 8)=			150,000
Number actually issued			200,000
Number for "free" (200,000 – 150,000)			50,000

4. Calculation of theoretical ex-rights value per share

$$\frac{\text{Fair value of all outstanding shares before the exercise of rights + total amount received from exercise of rights}}{\text{Number of shares outstanding before exercise + number of shares issued in the exercise}}$$

$$\frac{(₹11.00 \times 500 \text{ shares}) + (₹5.00 \times 100 \text{ shares})}{500 \text{ shares} + 100 \text{ shares}}$$

Theoretical ex-rights value per share = ₹10.00

Calculation of adjustment factor

$$\frac{\text{Fair value per share before exercise of rights}}{\text{Theoretical ex-rights value per share}} \quad \frac{₹\ 11.00}{₹\ 10.00} = 1.10$$

Calculation of basic earnings per share

	20X0	20X1	20X2
20X0 Basic EPS as originally reported: ₹1,100 / 500 shares	₹ 2.20		
20X0 Basic EPS restated for rights: ₹1,100 / (500 shares x 1.1)	₹ 2.00		
20X1 Basic EPS including effects of rights issue: {₹1,500 / [(500 x 1.1 x 2/12) + (600x10/12)]}		₹ 2.54	
20X2 Basic EPS: ₹ 1,800 / 600 shares		₹ 3.00	

5. Subsidiary's earnings per share

Basic EPS ₹ 5.00 calculated: $\frac{₹\ 5{,}400\ (a) - ₹ 400\ (b)}{1{,}000\ (c)}$

Diluted EPS ₹ 3.66 calculated: $\frac{₹\ 5{,}400\ (d)}{(1{,}000 + 75\ (e) + 400(f))}$

Notes:

(a) Subsidiary's profit attributable to ordinary equity holders.

(b) Dividends paid by subsidiary on convertible preference shares.

(c) Subsidiary's ordinary shares outstanding.

(d) Subsidiary's profit attributable to ordinary equity holders (₹ 5,000) increased by ₹ 400 preference dividends for the purpose of calculating diluted earnings per share.

(e) Incremental shares from warrants, calculated: [(₹ 20 – ₹ 10) ÷ ₹ 20] × 150.

(f) Subsidiary's ordinary shares assumed outstanding from conversion of convertible preference shares, calculated: 400 convertible preference shares × conversion factor of 1.

Consolidated earnings per share

Basic EPS ₹ 1.63 calculated: $\frac{₹\ 12{,}000(a) + ₹\ 4{,}300(b)}{10{,}000(c)}$

Diluted EPS ₹ 1.61 calculated: $\frac{₹\ 12{,}000 + ₹\ 2{,}928(d) + ₹\ 55(e) + ₹\ 1{,}098(f)}{10{,}000}$

(a) Parent's profit attributable to ordinary equity holders of the parent entity.

(b) Portion of subsidiary's profit to be included in consolidated basic earnings per share, calculated: (800 × ₹ 5.00) + (300 × Re 1.00).

(c) Parent's ordinary shares outstanding.

(d) Parent's proportionate interest in subsidiary's earnings attributable to ordinary shares, calculated: (800 ÷ 1,000) × (1,000 shares × ₹ 3.66 per share).

(e) Parent's proportionate interest in subsidiary's earnings attributable to warrants, calculated: (30 ÷ 150) × (75 incremental shares × ₹ 3.66 per share).

Join us t.me/caborntofight

(f) Parent's proportionate interest in subsidiary's earnings attributable to convertible preference shares, calculated: (300 ÷ 400) × (400 shares from conversion × ₹ 3.66 per share).

6. Calculation of the liability and equity components on 6% Convertible debentures:

Present value of principal payable at the end of 4th year (₹ 1,80,000 thousand x 0.74)

= ₹ 1,33,200 thousand

Present value of interest payable annually for 4 years (₹ 1,80,000 thousand x 6% x 3.31)

= ₹ 35,748 thousand

Total liability component = ₹ 1,68,948 thousand

Therefore, equity component = ₹ 1,80,000 thousand – ₹ 1,68,948 thousand = ₹ 11,052 thousand

Calculation of finance cost and closing balance of 6% convertible debentures

Year	Opening balance ₹ in '000	Finance cost @ 8% ₹ in '000	Interest paid @ 6% ₹ in '000	Closing balance ₹ in '000
	a	b = a x 8%	c	d = a + b - c
31.3.20X2	1,68,948	13,515.84	10,800	1,71,663.84
31.3.20X3	1,71,663.84	13,733.11	10,800	1,74,596.95

Finance cost of convertible debentures for the year ended 31.3. 20X3 is ₹ **13,733.11 thousand** and closing balance as on 31.3. 20X3 is ₹ **1,74,596.95** thousand.

Calculation of Basic EPS **₹ in '000**

Profit for the year	39,000
Less: Dividend on preference shares (80,000 thousand x ₹ 0.05)	(4,000)
Profit attributable to equity shareholders	35,000

Weighted average number of shares = 20,00,00,000 + {5,00,00,000 x (9/12)}

= 23,75,00,000 shares or 2,37,500 thousand shares

Basic EPS = ₹ 35,000 thousand / 2,37,500 thousand shares

= ₹ 0.147

Merged By CA - Born To Fight

Calculation of Diluted EPS **₹ in ’000**

Particulars		₹ in ’000
Profit for the year		39,000
Less: Dividend on preference shares (80,000 x 0.05)		(4,000)
		35,000
Add: Finance cost (as given in the above table)	13,733.11	
Less: Tax @ 25%	(3,433.28)	10,299.83
		45,299.83

Weighted average number of shares

= 20,00,00,000 + {5,00,00,000 x (9/12)} + 10,00,00,000

= 33,75,00,000 shares or 3,37,500 thousand shares

Diluted EPS = ₹ 45,299.83 thousand / 3,37,500 thousand shares

= ₹ 0.134

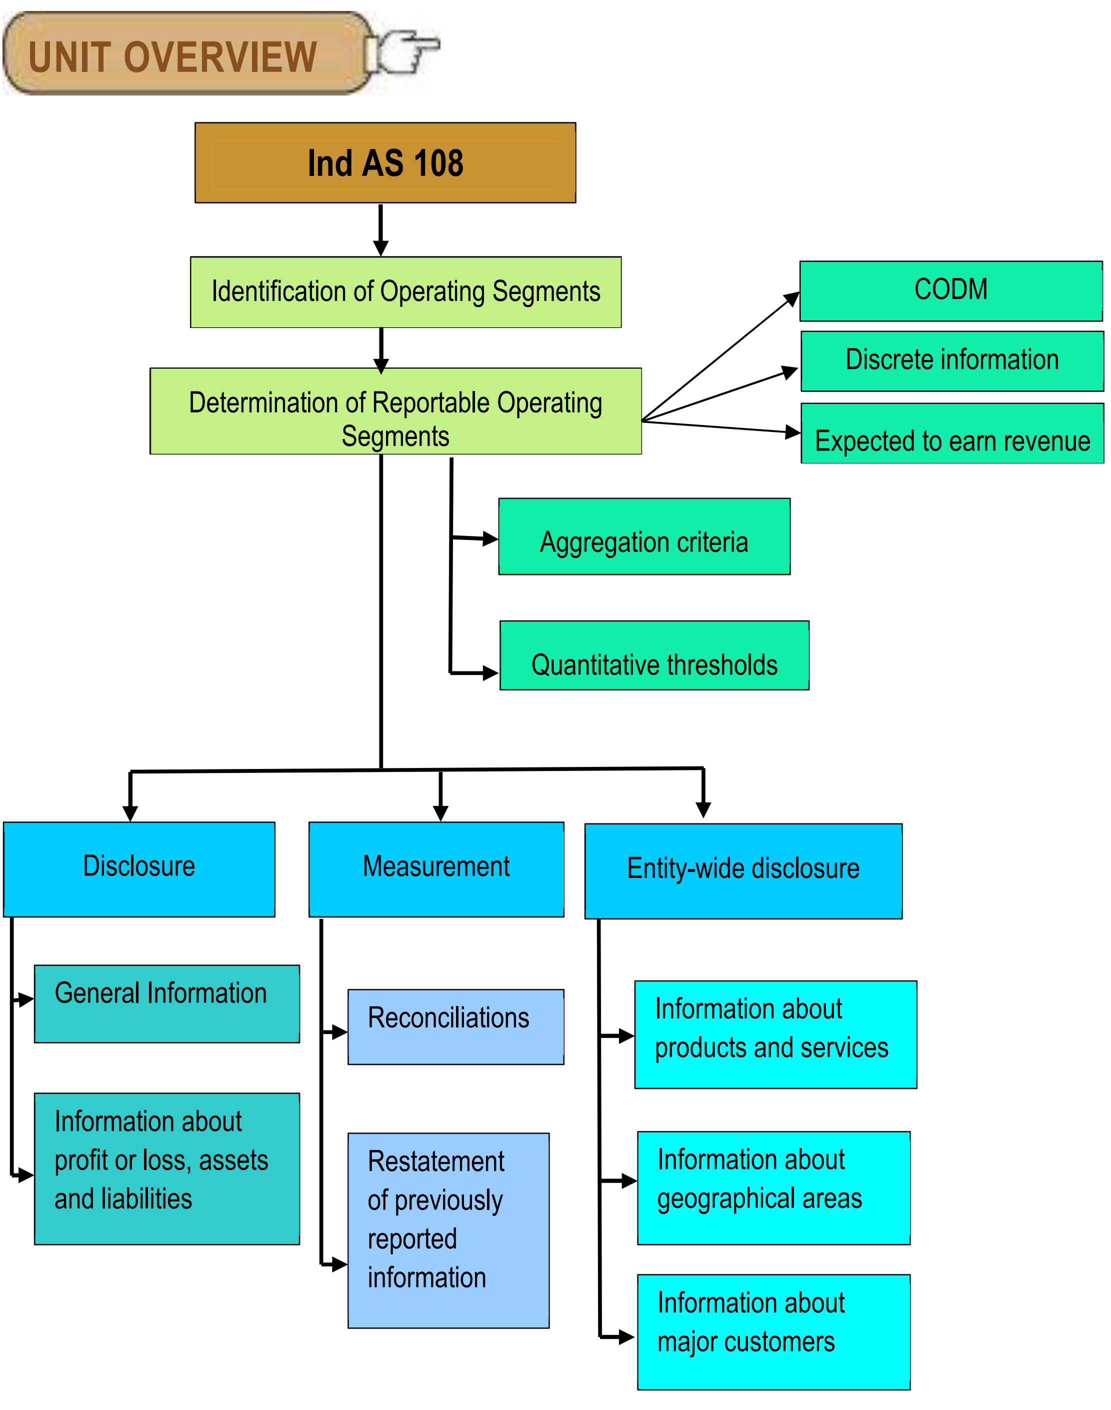
UNIT 3
INDIAN ACCOUNTING STANDARD 108 : OPERATING SEGMENTS

LEARNING OUTCOMES

After studying this unit, you will be able to:

- Explain the meaning of 'operating segments'
- Define the 'chief operating decision maker' (CODM)
- Identify the reportable segments and the application of aggregation criteria
- Comply with the disclosure requirement under Ind AS 108 with regard to operating segments
- Differentiate between Ind AS 108 and AS 17



UNIT OVERVIEW
Ind AS 108
Identification of Operating Segments
Determination of Reportable Operating Segments
CODM
Discrete information
Expected to earn revenue
Aggregation criteria
Quantitative thresholds
Disclosure
Measurement
Entity-wide disclosure
General Information
Information about profit or loss, assets and liabilities
Reconciliations
Restatement of previously reported information
Information about products and services
Information about geographical areas
Information about major customers

3.1 CORE PRINCIPLE

An entity should disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates.

Ind AS 108 requires an entity to disclose information to enable the stakeholders to have insight into the entity's operations from the same perspective as that of its management. For instance, in case of an entity engaged in multiple lines of business / business activities (e.g., engineering, financial services and IT), the users of financial statements must have the information about the performance of each of its 'business activities' as perceived by management in order to make better and more informed decisions about their investments in the entity as a whole.

Similarly, an entity may be operating across multiple economic environments. 'Economic Environments' in general, are those factors which have an impact on the working of any business. These factors could include political and economic macro-systems, trade cycles, economic resources, statutory environment, income levels, industrial growth rates and many other such factors. These are dynamic in nature and are in a continuous state of change.

In view of these complexities, Ind AS 108 requires disclosure of information in a manner which enables users to make informed decisions based on their assessment of the economic environments in which the different businesses of an entity operate.

3.2 SCOPE

Ind AS 108 should apply to companies to which Indian Accounting Standards notified under the Companies Act, 2013 apply.

If an entity that is not required to apply Ind AS 108 but chooses to disclose information about segments that does not comply with Ind AS 108, it should not describe the information as segment information.

If a financial report contains both the consolidated financial statements of a parent that is within the scope of Ind AS 108 as well as the parent's separate financial statements, segment information is required only in the consolidated financial statements.

Extract from: Hindustan Unilever Limited's Annual Report for 2021-2022

NOTE 46

The Company has presented segment information in the consolidated financial statements which are presented in the same annual report. Accordingly, in terms of Paragraph 4 of Ind AS 108 'Operating Segments', no disclosures related to segments are presented in these standalone financial statements.

3.3 OPERATING SEGMENTS

An operating segment is a component of an entity:

(a) that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity);

(b) whose operating results are regularly reviewed by the entity's chief operating decision maker (CODM) to make decisions about resources to be allocated to the segment and assess its performance; and

(c) for which discrete financial information is available.

An operating segment may engage in business activities for which it has yet to earn revenues, for example, start-up operations may be operating segments before earning revenues.

A perusal of the above requirements for identifying an operating segment differs with requirements contained in Accounting Standard (AS) 17, *Segment Reporting*. According to AS 17, identification of business segment is determined by considering risk and returns derived from an identical product or service or group of related products and services. Similarly, identification of geographical segment is determined by considering the risk and returns from products and services within a particular economic environment.

Ind AS 108, however, requires the consideration of earning of revenues and incurring of expenses from a business activity, the operating results of which are regularly reviewed by entity's CODM and discrete financial information is available. It may be noted that AS 17 follows the approach of risk and return for determination of a business and geographical segment. Ind AS 108, however, follows the management approach meaning thereby that whichever business activity is considered by the management as a separate source of revenue will be considered as an operating segment, the operating results of which are regularly reviewed by CODM to make decision about resources allocation and performance measurement.

Under this approach, not only would enterprises be likely to report more detailed information but the knowledge obtained of the structure of an enterprise's internal organisation is valuable in itself because it highlights segments based on such structure. This approach results in the following significant advantages:

- An ability to see an enterprise "through the eyes of management" enhances a user's ability to predict actions or reactions of management that can significantly affect the enterprise's prospects for future cash flows.
- Information about those segments is generated for management's use and hence the incremental cost of providing information for external reporting would be relatively low.

Illustration 1

ABC Ltd. manufactures and sells healthcare products, and food and grocery products. Three products namely A, B & C are manufactured. Product A is classified as healthcare product and product B & C are classified as food and grocery products. Products B & C are similar products. Discrete financial information is available for each manufacturing locations and for the selling activity of each product. There are two-line managers responsible for manufacturing activities of products A, B & C. Manager X manages product A and Manager B manages products B & C. The operating results of health care products (product A) and food and grocery products (products B & C) are regularly reviewed by the CODM.

Identify reportable segments of ABC Ltd.

Solution

In this situation both the healthcare, and food and grocery product line meet the criteria for operating segments set out above. Therefore, it is likely that ABC Ltd.'s operating segments would be classified as being (i) healthcare and (ii) food and grocery segments.

Not every part of an entity is necessarily an operating segment or part of an operating segment. For example, a corporate headquarters or some functional departments may not earn revenues or may earn revenues that are only incidental to the activities of the entity and would not be operating segments. For the purposes of Ind AS 108, an entity's post-employment benefit plans are not operating segments.

*****

3.3.1 Functions that are integral to business

In case of a company, where the activities of a function are an integral part of company's business (for example, research and development function for a pharmaceuticals or software company), this can be considered as an operating function provided that there is discrete information available that is regularly reviewed by the CODM.

3.3.2 Discontinued operations – whether an operating segment

If the discontinued operation

— continues to engage in business activities;

— whose operating results are reviewed by the CODM; and

— there is discrete information available to support the review

Then, it would meet the definition of an operating segment.

The term 'chief operating decision maker' (CODM) identifies a function, not necessarily a manager with a specific title. That function is to allocate resources to and assess the

Join us t.me/caborntofight

performance of the operating segments of an entity. Often the CODM of an entity is its chief executive officer or chief operating officer but, for example, it may be a group of executive directors or others.

For many entities, the three characteristics of operating segments clearly identify its operating segments. However, an entity may produce reports in which its business activities are presented in a variety of ways. If the CODM uses more than one set of segment information, other factors may identify a single set of components as constituting an entity's operating segments, including the nature of the business activities of each component, the existence of managers responsible for them, and information presented to the board of directors.

Illustration 2

The CEO along with other Board members do a review of financial information about various business segments and take decisions on the basis of discrete information available for these segments and are correctly identified as ***Chief Operating Decision Maker (CODM).*** *Review of only revenue information is done for decision making about those segments by the CODM. As per CODM, many segments require minimal costs due to centralization of costs.*

Analyse whether the review of only the revenue related information is sufficient for these segments to be considered as operating segments for the purposes of Ind AS 108 'Operating Segments'.

Solution

Many entities would be considering the decision making for segments on the basis of revenue growth – especially the ones aggressively trying to build a market share. Common examples would be businesses in the technology sector or those creating or launching new products from time to time. For them, the decision making for different regional segments would need revenue growth and related information for further investment decisions.

Merely examining revenue data by CODM without taking into account the corresponding expenses involved in generating that revenue may not provide adequate insights for determining how to allocate resources and measure the performance of a segment.

However, in the instant case, the logic given by the CODM is that since many segments require minimal costs (due to centralization of costs), therefore, revenue-only data is a fair representation of the operating results.

In the above case, review of the information that is based only on revenue data may be appropriate to consider that the segment meets the definition of an operating segment.

*****

Whether a committee of non-executive directors (NEDs) is likely to be the CODM.

NEDs are not usually involved in resource allocation decisions, other than at a very high level. Their role is primarily related to governance than a management role. Accordingly, it may be difficult to establish if they would meet the definition of the CODM.

However, a function (Board of directors), might include non-executive directors whose sole responsibility is governance. Such a function would be a CODM if the most significant operating, as well as strategic, decisions are made by that function, even if those non-executive directors do not participate in implementing such decisions.

Overlapping sets of components

Generally, an operating segment has a segment manager who is directly accountable to and maintains regular contact with the CODM to discuss operating activities, financial results, forecasts, or plans for the segment. The term 'segment manager' identifies a function, not necessarily a manager with a specific title. The chief operating decision maker also may be the segment manager for some operating segments. A single manager may be the segment manager for more than one operating segment. If the characteristics apply to more than one set of components of an organisation but there is only one set for which segment managers are held responsible, that set of components constitutes the operating segments.

The characteristics may apply to two or more overlapping sets of components for which managers are held responsible. That structure is sometimes referred to as a matrix form of organisation. For example, in some entities, some managers are responsible for different product and service lines worldwide, whereas other managers are responsible for specific geographical areas. The CODM regularly reviews the operating results of both sets of components, and financial information is available for both. In that situation, the entity should determine which set of components constitutes the operating segments by reference to the core principle.

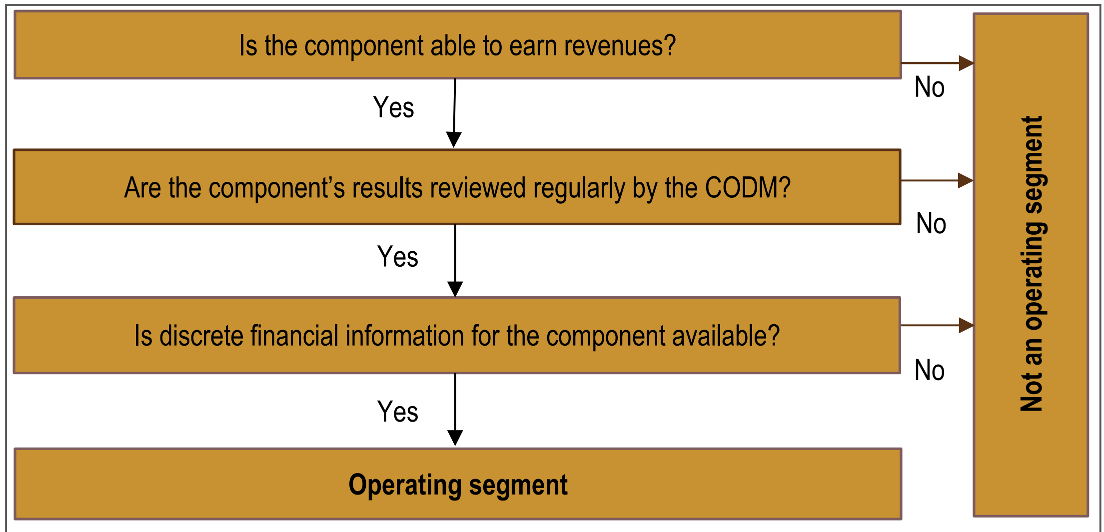


Illustration 3

X Ltd. is engaged in the manufacture and sale of two distinct type of products A & B. X Ltd. supplies the product in the domestic market in India as well as in Singapore. There are two regional managers responsible for manufacturing activities of product A & B worldwide and also two other managers responsible for different geographical areas. For internal reporting purposes, X Ltd. provides information product-wise and as per the geographical location of the company. The CODM regularly reviews the operating results of both sets of components.

Comment, how should X Ltd. identify its operating segments.

Solution

In this situation, both the geographical sales areas and product areas may meet the criteria for operating segment. However, in such situation, it is more difficult to determine clearly which set of components should be identified as the entity's operating segments. In such situation the entity should determine which set of components constitutes the operating segments by reference to the core principle. The core principle is that the entity should disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates. The entity should also assess whether the identified operating segments could realistically represent the level at which the CODM is assessing performance and allocating resources.

Therefore, X Ltd. should consider all the above factors and apply judgement to determine which component should be disclosed as operating segment.

*****

Illustration 4

CODM of XY Ltd. receives and reviews multiple sets of information when assessing the businesses' overall performance to take a decision on resources allocation. It receives the information as under:

- *Level 1 Report: Summary report for all 4 regions*
- *Level 2 Report: Summary report for 20 Sub-regions within those regions*
- *Level 3 Report: Detailed report for 50 Branches within the sub-regions*

State what factors and level should be considered for determining an operating segment.

Solution

We need to consider multiple factors (including but not limited to below):

— The process that CODM may use to assess the performance (Key Financial Matrix, KPIs, Ratio etc.);

— Identify the segment managers and their responsibility areas;

— The process of budgeting for resource allocations.

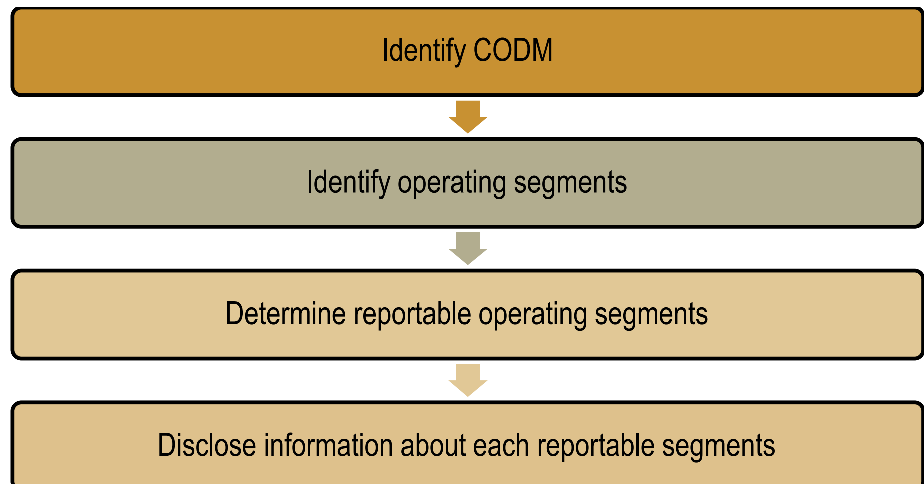
3.4 REPORTABLE SEGMENTS

An entity should report separately information about each operating segment that:

(a) has been identified or results from aggregating two or more of those segments; and

(b) exceeds the quantitative thresholds.

Standard specifies other situations in which separate information about an operating segment should be reported.



3.5 AGGREGATION CRITERIA

Operating segments often exhibit similar long-term financial performance if they have similar economic characteristics. For example, similar long-term average gross margins for two operating segments would be expected if their economic characteristics were similar. Two or more operating segments may be aggregated into a single operating segment if aggregation is consistent with the core principle of Ind AS 108, the segments have similar economic characteristics, and the segments are similar in each of the following respects:

(a) the nature of the products and services;

(b) the nature of the production processes;

(c) the type or class of customer for their products and services;

(d) the methods used to distribute their products or provide their services; and

(e) if applicable, the nature of the regulatory environment, for example, banking, insurance or public utilities.

© The Institute of Chartered Accountants of India

Illustration 5

XY Ltd. has operations in France, Italy, Germany, UK and India. It wishes to apply aggregation criteria on geographical basis.

State, how will the aggregation criteria apply for reporting segments in the given scenario.

Solution

XY Ltd. needs to assess and prove that each country possesses the same economic characteristics. Factors including exchange control regulations, currency risks and economic conditions are required to be considered.

Considering above factors, it may be possible to aggregate the results of France, Italy and Germany (falling within EU region) and results of UK and India may be separately reported (no aggregation is permitted).

*****

Two or more operating segments may be aggregated into a single operating segment if

All

- aggregation is consistent with the core principle of this Ind AS
- the segments have similar economic characteristics
- the segments are similar in respect to

All

- the nature of the products and services
- the nature of the production processes
- the type or class of customer for their products and services
- the methods used to distribute their products or provide their services
- the nature of the regulatory environment, if applicable

Illustration 6

X Ltd. is engaged in the business of manufacturing and selling papers. Varieties of paper like adhesive paper, anti-rust paper, antique paper, art paper etc., are manufactured and sold by X Ltd.

State whether X Ltd. should classify these papers into different segments.

Solution

Two or more operating segments may be aggregated into a single operating segment if the segments have similar economic characteristics, and the segments are similar with respect to various factors like nature of the product and production process, type of customers, method of distribution and regulatory requirement.

In case of X Ltd., so far as varieties of paper concerned, if all factors such as nature of the product and production process, type of customers, method of distribution and regulatory requirement are common, there is no need to create different segments for each type of paper.

*****

Illustration 7

T Ltd is engaged in transport sector, running a fleet of buses at different routes. T Ltd has identified 3 operating segments:

- *Segment 1: Local Route*
- *Segment 2: Inter-city Route*
- *Segment 3: Contract Hiring*

The characteristics of each segment are as under:

Segment 1: *The local transport authority awards the contract to ply the buses at different routes for passengers. These contracts are awarded following a competitive tender process; the ticket price paid by passengers are controlled by the local transport authority. T Ltd would charge the local transport authority on a per kilometer basis.*

Segment 2: *T Ltd operates buses from one city to another, prices are set by T Ltd on the basis of services provided (Deluxe, Luxury or Superior).*

Segment 3: *T Ltd also leases buses to schools under a long-term arrangement.*

*While Segment 1 has been showing significant decline in profitability, Segment 2 is performing well in respect of higher revenues and improved margins. The management of the company is not sure why is the segment information relevant for users when they should only be concerned about the returns from overall business. They would like to aggregate the Segment 1 and Segment 2 for reporting under '**Operating Segment'***

Required:

State whether it is appropriate to aggregate Segments 1 and 2 with reference to Ind AS 108 'Operating Segments'; and also discuss, in the above context, whether disclosure of segment information is relevant to an investor's appraisal of financial statements.

Solution

Ind AS 108 '**Operating Segments'** requires operating segments to be aggregated to present a reportable segment if the segments have similar economic characteristics, and the segments are similar in each of the following aggregation criteria:

(a) The nature of the products and services

(b) The nature of the production process

(c) The type or class of customer for their products and services

(d) The methods used to distribute their products or provide their services

(e) If applicable, the nature of the regulatory environment

While the products and services are similar, the customers for those products and services are different.

In Segment 1, the decision to award the contract is in the hands of the local authority, which also sets prices and pays for the services. The company is not exposed to passenger revenue risk, since a contract is awarded by competitive tender.

On the other hand, in the inter-city segment, the customer determines whether a bus route is economically viable by choosing whether or not to buy tickets. T Ltd sets the ticket prices but will be affected by customer behavior or feedback. T Ltd is exposed to passenger revenue-risk, as it sets prices which customers may or may not choose to pay.

Operating Segment provides information that makes the financial statements more useful to investors. In making the investment decisions, investors and creditors consider the returns they are likely to make on their investment. This requires assessment of the amount, timing and uncertainty of the future cash flows of T Ltd as well as of management's stewardship of T Ltd's resources. How management derives profit is therefore relevant information to an investor.

Inappropriately aggregating segments reduces the usefulness of segment disclosures to investors. Ind AS 108 requires information to be disclosed that is not readily available elsewhere in the financial statements, therefore it provides additional information which aids an investor's understanding of how the business operates and is managed.

In T Ltd.'s case, if the segments are aggregated, then the increased profits in segment 2 will hide the decreased profits in segment 1. However, the fact that profits have sharply declined in segment 1 would be of interest to investors as it may suggest that future cash flows from this segment are at risk.

It is not mandatory to aggregate segments. An entity, if desires, can disclose separately information about segments that meet all the criteria. However, with regard to upper limit on number of segments to be reported, the entity should consider whether a practical limit has been reached.

*****

Join us t.me/caborntofight

3.6 QUANTITATIVE THRESHOLDS

An entity should report separately information about an operating segment that meets any of the following quantitative thresholds:

(a) Its reported revenue, including both sales to external customers and intersegment sales or transfers, is 10% or more of the combined revenue, internal and external, of all operating segments.

(b) Its reported profit or loss is 10% or more, in absolute amount, of the greater, in absolute amount, of

(i) the combined reported profit of all operating segments that did not report a loss and

(ii) the combined reported loss of all operating segments that reported a loss.

(c) Its assets are 10% or more of the combined assets of all operating segments. Operating segments that do not meet any of the quantitative thresholds may be considered reportable and separately disclosed, if management believes that information about the segment would be useful to users of the financial statements.

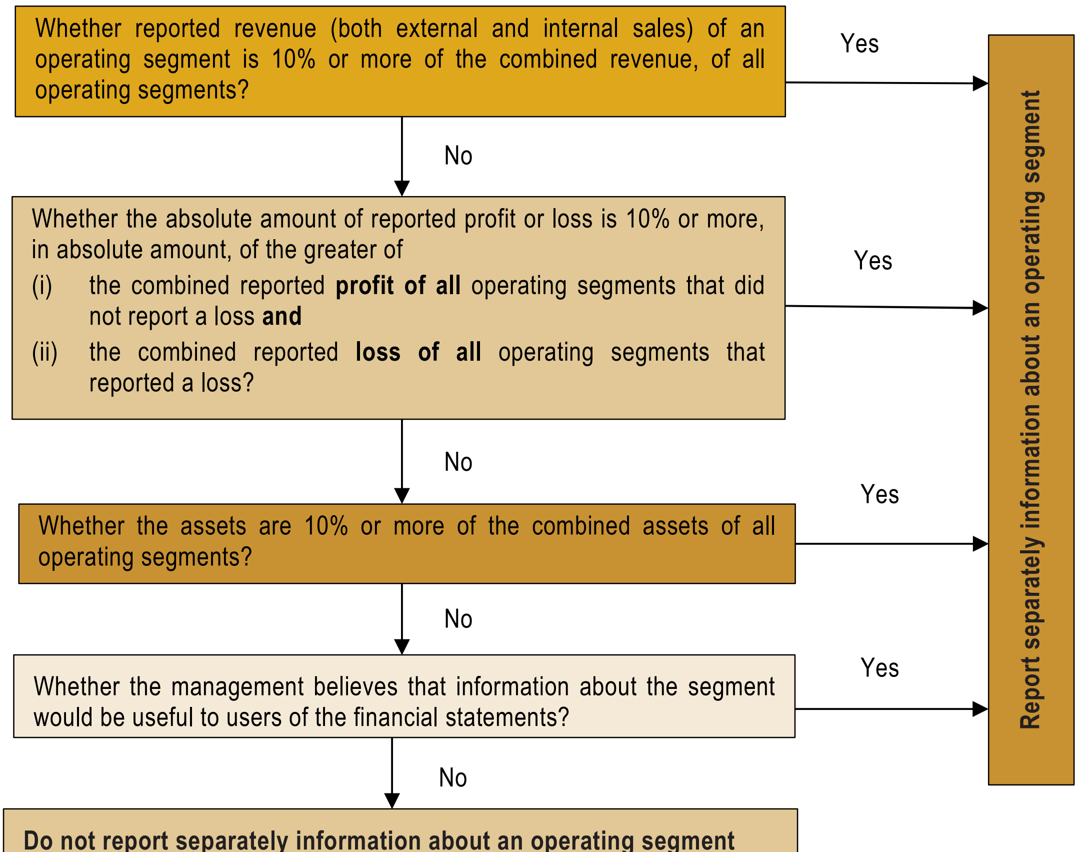


Illustration 8

X Ltd. has identified the following business components.

Segment	*Revenue (₹)*		*Profit (₹)*	*Assets (₹)*
	External	*Internal*		
Pharma	*97,00,000*	*Nil*	*20,00,000*	*55,00,000*
FMCG	*Nil*	*4,00,000*	*2,50,000*	*25,00,000*
Ayurveda	*3,00,000*	*Nil*	*2,00,000*	*4,00,000*
Others	*8,00,000*	*41,00,000*	*5,50,000*	*6,00,000*
Total for the entity	*1,08,00,000*	*45,00,000*	*30,00,000*	*90,00,000*

Which of the segments would be reportable as per the criteria prescribed in Ind AS108?

Solution

Quantitative thresholds are calculated below:

Segments	Pharma	FMCG	Ayurveda	Others
% segment sales to total sales	63.40	2.61	1.96	32.03
% segment profit to total profits	66.67	8.33	6.67	18.33
% segment assets to total assets	61.11	27.78	4.44	6.67

Segment Pharma would separately reportable since they meet all three size criteria, though any one criteria is required. FMCG segment does not satisfy the revenue and profit test but does satisfy the asset test. So it would be separately reportable. Ayurveda segment does not meet any threshold. It may not be classified as reportable segment.

*****

An entity may combine information about operating segments that do not meet the quantitative thresholds with information about other operating segments that do not meet the quantitative thresholds to produce a reportable segment only if the operating segments have similar economic characteristics and share a majority of the aggregation criteria.

If the total external revenue reported by operating segments constitutes less than 75% of the entity's revenue, additional operating segments should be identified as reportable segments (even if they do not meet the criteria) until at least 75% of the entity's revenue is included in reportable segments.

Note

- External revenue of reportable segments must be ≥ 75% of total revenue of the entity.
- Operating segments that do not meet any of the quantitative thresholds may be considered reportable, and separately disclosed, if information about the segment is useful to users.

Non-reportable segments – After the appropriate aggregation and requisite tests are done (i.e. 10% tests done and 75% test met), information about other business activities and operating segments that are not reportable should be combined and disclosed in an 'all other segments' category separately from other reconciling items in the reconciliations. The sources of the revenue included in the 'all other segments' category should be described.

If management judges that an operating segment identified as a reportable segment in the immediately preceding period is of continuing significance, information about that segment should continue to be reported separately in the current period even if it no longer meets the criteria for reputability.

If an operating segment is identified as a reportable segment in the current period in accordance with the quantitative thresholds, segment data for a prior period presented for comparative purposes should be restated to reflect the newly reportable segment as a separate segment, even if that segment did not satisfy the criteria for reportability in the prior period, unless the necessary information is not available and the cost to develop it would be excessive.

There may be a practical limit to the number of reportable segments that an entity separately discloses beyond which segment information may become too detailed. Although no precise limit has been determined, as the number of segments that are reportable increases above ten, the entity should consider whether a practical limit has been reached.

Illustration 9

An entity has branches in different parts of the country – catering to different customers and selling local made products (a product of one region is not sold in any other region). No region or product contributes more than 5% to total revenue of the entity.

Discuss how many segments are reportable.

Solution

Under the quantitative threshold, external revenue of reportable segments must be ≥ 75% of total revenue of the entity. Considering above case, minimum 15 operating segments need to be reportable (75% [threshold] / 5% {revenue}).

*****

3.7 DISCLOSURE

An entity should disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates.

An entity should disclose the following for each period for which a statement of profit and loss is presented:

Join us t.me/caborntofight

(a) general information;

(b) information about reported segment profit or loss, including specified revenues and expenses included in reported segment profit or loss, segment assets, segment liabilities and the basis of measurement; and

(c) reconciliations of the totals of segment revenues, reported segment profit or loss, segment assets, segment liabilities and other material segment items to corresponding entity amounts.

Reconciliations of the amounts in the balance sheet for reportable segments to the amounts in the entity's balance sheet are required for each date at which a balance sheet is presented. Information for prior periods should be restated.

3.7.1 General Information

An entity should disclose the following general information:

(a) factors used to identify the entity's reportable segments, including the basis of organisation (for example, whether management has chosen to organise the entity around differences in products and services, geographical areas, regulatory environments, or a combination of factors and whether operating segments have been aggregated); and

(b) the judgements made by management in applying the aggregation criteria. This includes a brief description of the operating segments that have been aggregated in this way and the economic indicators that have been assessed in determining that the aggregated operating segments share similar economic characteristics; and

(c) types of products and services from which each reportable segment derives its revenues.

3.7.1.1 Factors that management used to identify the entity's reportable segments

Diversified Company's reportable segments are strategic business units that offer different products and services. They are managed separately because each business requires different technology and marketing strategies. Most of the businesses were acquired as individual units, and the management at the time of the acquisition was retained.

3.7.1.2 Description of the types of products and services from which each reportable segment derives its revenues

Diversified Company has five reportable segments: car parts, motor vessels, software, electronics and finance. The car parts segment produces replacement parts for sale to car parts retailers. The motor vessels segment produces small motor vessels to serve the offshore oil industry and similar businesses. The software segment produces application software for sale to computer manufacturers and retailers. The electronics segment produces integrated circuits and related products for sale to computer manufacturers. The finance segment is responsible for portions of the company's financial operations including financing customer purchases of

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

products from other segments and property lending operations.

Extract from Annual Report for 2021-2022 of Hindustan Unilever Limited

NOTE 46 SEGMENT INFORMATION

The Operating Segment is the level at which discrete financial information is available. Business segments are identified considering:

a) the nature of products and services

b) the differing risks and returns

c) the internal organisation and management structure, and

d) the internal financial reporting systems.

3.7.2 Information about profit or loss, assets and liabilities

An entity should report a measure of profit or loss for each reportable segment. An entity should report a measure of total assets and liabilities for each reportable segment if such amounts are regularly provided to CODM. An entity should also disclose the following about each reportable segment if the specified amounts are included in the measure of segment profit or loss reviewed by the CODM, or are otherwise regularly provided to the CODM, even if not included in that measure of segment profit or loss:

(a) revenues from external customers;

(b) revenues from transactions with other operating segments of the same entity;

(c) interest revenue;

(d) interest expense;

(e) depreciation and amortisation;

(f) material items of income and expense disclosed in accordance with Ind AS 1, *Presentation of Financial Statements*;

(g) the entity's interest in the profit or loss of associates and joint ventures accounted for by the equity method;

(h) income tax expense or income; and

(i) material non-cash items other than depreciation and amortisation.

An entity should report interest revenue separately from interest expense for each reportable segment unless a majority of the segment's revenues are from interest and the CODM relies primarily on net interest revenue to assess the performance of the segment and make decisions about resources to be allocated to the segment. In that situation, an entity may report that segment's interest revenue net of its interest expense and disclose that it has done so.

© The Institute of Chartered Accountants of India

An entity should disclose the following about each reportable segment if the specified amounts are included in the measure of segment assets reviewed by the CODM or are otherwise regularly provided to the CODM, even if not included in the measure of segment assets:

(a) the amount of investment in associates and joint ventures accounted for by the equity method; and

(b) the amounts of additions to non-current assets (For assets classified according to a liquidity presentation, non-current assets are assets that include amounts expected to be recovered more than twelve months after the reporting period) other than financial instruments, deferred tax assets, net defined benefit assets (in accordance with Ind AS 19, *Employee Benefits*) and rights arising under insurance contracts.

The following table illustrates a suggested format for disclosing information about segment profit or loss, assets and liabilities. The same type of information is required for each year for which a statement of profit and loss is presented. Diversified Company does not allocate tax expense (tax income) or non-recurring gains and losses to reportable segments. In addition, not all reportable segments have material non-cash items other than depreciation and amortisation in profit or loss. The amounts in this illustration are assumed to be the amounts in reports used by the CODM.

Information about reportable segment profit or loss, assets and liabilities

	Car parts ₹	Motor vessels ₹	Software ₹	Electronics ₹	Finance ₹	All others ₹	Total ₹
Revenue from external customers	3,000	5,000	9,500	12,000	5,000	1,000[(a)]	35,500
Inter-segment revenues	-	-	3,000	1,500	-	-	4,500
Interest revenue	450	800	1,000	1,500	-	-	3,750
Interest expense	350	600	700	1,100	-	-	2,750
Net interest revenue[(b)]	-	-	-				1,000
Depreciation and amortisation	200	100	50	1,500	1,100	-	2,950
Reportable Segment profit	200	70	900	2,300	500	100	4,070
Other material Non-cash item:							
Impairment of assets	-	200	-	-	-	-	200
Reportable segment assets	2,000	5,000	3,000	12,000	57,000	2,000	81,000

Expenditures for reportable segment non- current assets	300	700	500	800	600	-	2,900
Reportable segment liabilities	1,050	3,000	1,800	8,000	30,000		43,850

[(a)]Revenues from segments below the quantitative thresholds are attributable to four operating segments of Diversified Company. Those segments include a small property business, an electronics equipment rental business, a software consulting practice and a warehouse leasing operation. None of those segments has ever met any of the quantitative thresholds for determining reportable segments.

[(b)]The finance segment derives a majority of its revenue from interest. Management primarily relies on net interest revenue, not the gross revenue and expense amounts, in managing that segment. Therefore, only the net amount is disclosed.

Extract from Annual Report for 2021-2022 of Hindustan Unilever Limited

Segment revenue relating to each of the above domestic business segments includes Income from Services provided to group companies, where applicable. Segment results relate to profit from continuing operations before other income, finance costs, exceptional items and tax

*In addition to the above, ₹15 crores (2020-21: ₹60 crores) of accelerated depreciation has been charged to exceptional items under a restructuring project.

3.8 MEASUREMENT

The amount of each segment item reported should be the measure reported to the CODM for the purposes of making decisions about allocating resources to the segment and assessing its performance. Adjustments and eliminations made in preparing an entity's financial statements and allocations of revenues, expenses, and gains or losses should be included in determining reported segment profit or loss only if they are included in the measure of the segment's profit or loss that is used by the chief operating decision maker. Similarly, only those assets and liabilities that are included in the measures of the segment's assets and segment's liabilities that are used by the chief operating decision maker should be reported for that segment. If amounts are allocated to reported segment profit or loss, assets or liabilities, those amounts should be allocated on a reasonable basis.

If the CODM uses only one measure of an operating segment's profit or loss, the segment's assets or the segment's liabilities in assessing segment performance and deciding how to allocate resources, segment profit or loss, assets and liabilities should be reported at those measures. If the CODM uses more than one measure of an operating segment's profit or loss, the segment's assets or the segment's liabilities, the reported measures should be those that management believes are determined in accordance with the measurement principles most consistent with those used in measuring the corresponding amounts in the entity's financial statements.

An entity should provide an explanation of the measurements of segment profit or loss, segment assets and segment liabilities for each reportable segment. At a minimum, an entity should disclose the following:

(a) the basis of accounting for any transactions between reportable segments;

(b) the nature of any differences between the measurements of the reportable segments' profits or losses and the entity's profit or loss before income tax expense or income and discontinued operations (if not apparent from the reconciliations). Those differences could include accounting policies and policies or allocation of centrally incurred costs that are necessary for an understanding of the reported segment information;

(c) the nature of any differences between the measurements of the reportable segments' assets and the entity's assets (if not apparent from the reconciliations. Those differences could include accounting policies and policies for allocation of jointly used assets that are necessary for an understanding of the reported segment information;

(d) the nature of any differences between the measurements of the reportable segments' liabilities and the entity's liabilities (if not apparent from the reconciliations. Those differences could include accounting policies and policies for allocation of jointly utilised liabilities that are necessary for an understanding of the reported segment information;

(e) the nature of any changes from prior periods in the measurement methods used to determine reported segment profit or loss and the effect, if any, of those changes on the measure of segment profit or loss; and

(f) the nature and effect of any asymmetrical allocations to reportable segments. For example, an entity might allocate depreciation expense to a segment without allocating the related depreciable assets to that segment.

Illustration 10

GH Ltd. has four distinct operating segments. The management of GH is concerned as it is unsure on how common costs be reasonably allocated to different operating segments. They intend to allocate management charges, interest costs of internal funding, cost of management of properties and pension costs.

Analyse, whether such costs need to conform to the accounting policies as used to prepare the financial statements.

Solution

Ind AS 108 does not prescribe any specific basis but suggests that a reasonable basis to be used in allocation of common costs. Here, it may not be reasonable to allocate management charges to most profitable segment. However, it may be reasonable to charge interest costs of internal funding on the basis of actual usage over time, even if majority of funds are used for running a loss-making segment.

A reasonable manner of allocation of above costs could be:

Management Charges: These may be allocated based on Net Assets invested or Revenue earned by the segments. It needs to be understood if there is an operating segment which is yet

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

to earn revenue, it would fail to have any costs being allocated.

Interest costs: As mentioned above, these may be allocated on the basis of actual usage and time.

Cost of management of properties: Based on value of property used at each segment.

Pension costs: Based on salary expenses of each segment.

*****

Measurement of operating segment profit or loss, assets and liabilities

The accounting policies of the operating segments are the same as those described in the significant accounting policies except that pension expense for each operating segment is recognised and measured based on cash payments to the pension plan. Diversified Company evaluates performance based on profit or loss from operations before tax expense not including non-recurring gains and losses and foreign exchange gains and losses.

Diversified Company accounts for inter-segment sales and transfers as if the sales or transfers were to third parties, i.e., at current market prices.

3.8.1 Reconciliations

An entity should provide reconciliations of all of the following:

(a) the total of the reportable segments' revenues to the entity's revenue;

(b) the total of the reportable segments' measures of profit or loss to the entity's profit or loss before tax expense (tax income) and discontinued operations. However, if an entity allocates to reportable segments items such as tax expense (tax income), the entity may reconcile the total of the segments' measures of profit or loss to the entity's profit or loss after those items;

(c) the total of the reportable segments' assets to the entity's assets if the segment assets are reported;

(d) the total of the reportable segments' liabilities to the entity's liabilities if segment liabilities are reported; and

(e) the total of the reportable segments' amounts for every other material item of information disclosed to the corresponding amount for the entity.

All material reconciling items should be separately identified and described. For example, the amount of each material adjustment needed to reconcile reportable segment profit or loss to the entity's profit or loss arising from different accounting policies should be separately identified and described.

Merged By CA - Born To Fight

The following illustrate reconciliations of reportable segment revenues, profit or loss, assets and liabilities to the entity's corresponding amounts. Reconciliations also are required to be shown for every other material item of information disclosed. The entity's financial statements are assumed not to include discontinued operations. The entity recognises and measures pension expense of its reportable segments on the basis of cash payments to the pension plan, and it does not allocate certain items to its reportable segments.

Reconciliation of reportable segment revenues, profit or loss, assets and liabilities

Revenues	**₹**
Total revenues for reportable segments	39,000
Other revenues	1,000
Elimination of intersegment revenues	(4,500)
Entity's revenues	35,500
Profit or Loss	**₹**
Total profit or loss for reportable segments	3,970
Other profit or loss	100
Elimination of intersegment profits	(500)
Unallocated amounts:	
Litigation settlement received	500
Other corporate expenses	(750)
Adjustment to pension expense in consolidation	(250)
Income before income tax expense	3,070
Assets	**₹**
Total assets for reportable segments	79,000
Other assets	2,000
Elimination of receivable from corporate headquarters	(1,000)
Other unallocated amounts	1,500
Entity's assets	81,500
Liabilities	**₹**
Total liabilities for reportable segments	43,850
Unallocated defined benefit pension liabilities	25,000
Entity's liabilities	68,850

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Other material items	Reportable Segment totals ₹	Adjustments ₹	Entity totals ₹
Interest revenue	3,750	75	3,825
Interest expenses	2,750	(50)	2,700
Net interest revenue (finance segment only)	1,000	-	1,000
Expenditure for assets	2,900	1,000	3,900
Depreciation and amortisation	2,950	-	2,950
Impairment of assets	200	-	200

The reconciling item to adjust expenditures for assets is the amount incurred for the corporate headquarters building, which is not included in segment information. None of the other adjustments are material.

3.9 RESTATEMENT OF PREVIOUSLY REPORTED INFORMATION

If an entity changes the structure of its internal organisation in a manner that causes the composition of its reportable segments to change, the corresponding information for earlier periods, including interim periods, should be restated unless the information is not available and the cost to develop it would be excessive. The determination of whether the information is not available and the cost to develop it would be excessive should be made for each individual item of disclosure. Following a change in the composition of its reportable segments, an entity should disclose whether it has restated the corresponding items of segment information for earlier periods.

If an entity has changed the structure of its internal organisation in a manner that causes the composition of its reportable segments to change and if segment information for earlier periods, including interim periods, is not restated to reflect the change, the entity should disclose in the year in which the change occurs segment information for the current period on both the old basis and the new basis of segmentation, unless the necessary information is not available and the cost to develop it would be excessive.

3.10 ENTITY-WIDE DISCLOSURES

Some entities' business activities are not organised on the basis of differences in related products and services or differences in geographical areas of operations. Such an entity's reportable segments may report revenues from a broad range of essentially different products

and services, or more than one of its reportable segments may provide essentially the same products and services. Similarly, an entity's reportable segments may hold assets in different geographical areas and report revenues from customers in different geographical areas, or more than one of its reportable segments may operate in the same geographical area. Certain information required should be provided only if it is not provided as part of the reportable segment information required by Ind AS 108.

3.10.1 Information about products and services

An entity should report the revenues from external customers for each product and service, or each group of similar products and services, unless the necessary information is not available and the cost to develop it would be excessive, in which case that fact should be disclosed. The amounts of revenues reported should be based on the financial information used to produce the entity's financial statements.

Extract from Annual Report for 2021-2022 of Hindustan Unilever Limited

Segment-wise Revenue from operations

The Company has following major segments:-

(a) Home Care include Fabric Solutions, Home and Hygiene, etc
(b) Beauty & Personal Care include Skin Cleansing, Skin Care, Hair Care, etc
(c) Foods & Refreshment include Tea, Health Food Drinks and Coffee, etc
(d) Others include Exports, Consignment, etc

	Year ended 31st March, 2022	Year ended 31st March, 2021
Home Care	16,578	13,959
Beauty & Personal Care	19,460	17,964
Foods & Refreshment	14,105	13,204
Others (includes Exports, Consignment, etc.)	1,050	869
Total	**51,193**	**45,996**

3.10.2 Information about geographical areas

An entity should report the following geographical information, unless the necessary information is not available and the cost to develop it would be excessive:

(a) revenues from external customers

(i) attributed to the entity's country of domicile and

(ii) attributed to all foreign countries in total from which the entity derives revenues. If revenues from external customers attributed to an individual foreign country are material, those revenues should be disclosed separately. An entity should disclose the basis for attributing revenues from external customers to individual countries; and

(b) non-current assets (For assets classified according to a liquidity presentation, non-current assets are assets that include amounts expected to be recovered more than twelve months after the reporting period) other than financial instruments, deferred tax assets, post-employment benefit assets, and rights arising under insurance contracts (i) located in the entity's country of domicile and (ii) located in all foreign countries in total in which the entity holds assets. If assets in an individual foreign country are material, those assets should be disclosed separately.

The amounts reported should be based on the financial information that is used to produce the entity's financial statements. If the necessary information is not available and the cost to develop it would be excessive, that fact should be disclosed. An entity may provide, in addition to the information required by this paragraph, subtotals of geographical information about groups of countries.

The following illustrates the geographical information required (Because Diversified Company's reportable segments are based on differences in products and services, no additional disclosures of revenue information about products and services are required.)

Geographical Information	Revenue(a) ₹	Non-Current Assets ₹
United States	19,000	11,000
Canada	4,200	-
China	3,400	6,500
Japan	2,900	3,500
Other countries	6,000	3,000
Total	35,500	24,000

Revenue are attributed to countries on the basis of the customer's location.

Extract from Annual Report for 2021-2022 of Hindustan Unilever Limited

Additional Information by Geographies

Although the Group's operations are managed by product area, we provide additional information based on geographies.

	Year ended 31st March, 2022	Year ended 31st March, 2021
Revenue by Geographical Market		
India	50,327	45,283
Outside India	2,119	1,745
	52,446	**47,028**
Carrying Amount of Segment Assets		
India	60,771	59,256
Outside India	549	407
	61,320	**59,663**

3.10.3 Information about major customers

An entity should provide information about the extent of its reliance on its major customers. If revenues from transactions with a single external customer amount to 10% or more of an entity's revenues, the entity should disclose that fact, the total amount of revenues from each such customer, and the identity of the segment or segments reporting the revenues. The entity need not disclose the identity of a major customer or the amount of revenues that each segment reports from that customer. For the purposes of Ind AS 108, a group of entities known to a reporting entity to be under common control should be considered a single customer. However, judgement is required to assess whether a government (including government agencies and similar bodies whether local, national or international) and entities known to the reporting entity to be under the control of that government are considered a single customer. In assessing this, the reporting entity should consider the extent of economic integration between those entities.

The following illustrates the information about major customers. Neither the identity of the customer nor the amount of revenues for each operating segment is required.

Revenues from one customer of Diversified Company's software and electronics segments represent approximately ₹ 5,000 of the Company's total revenues.

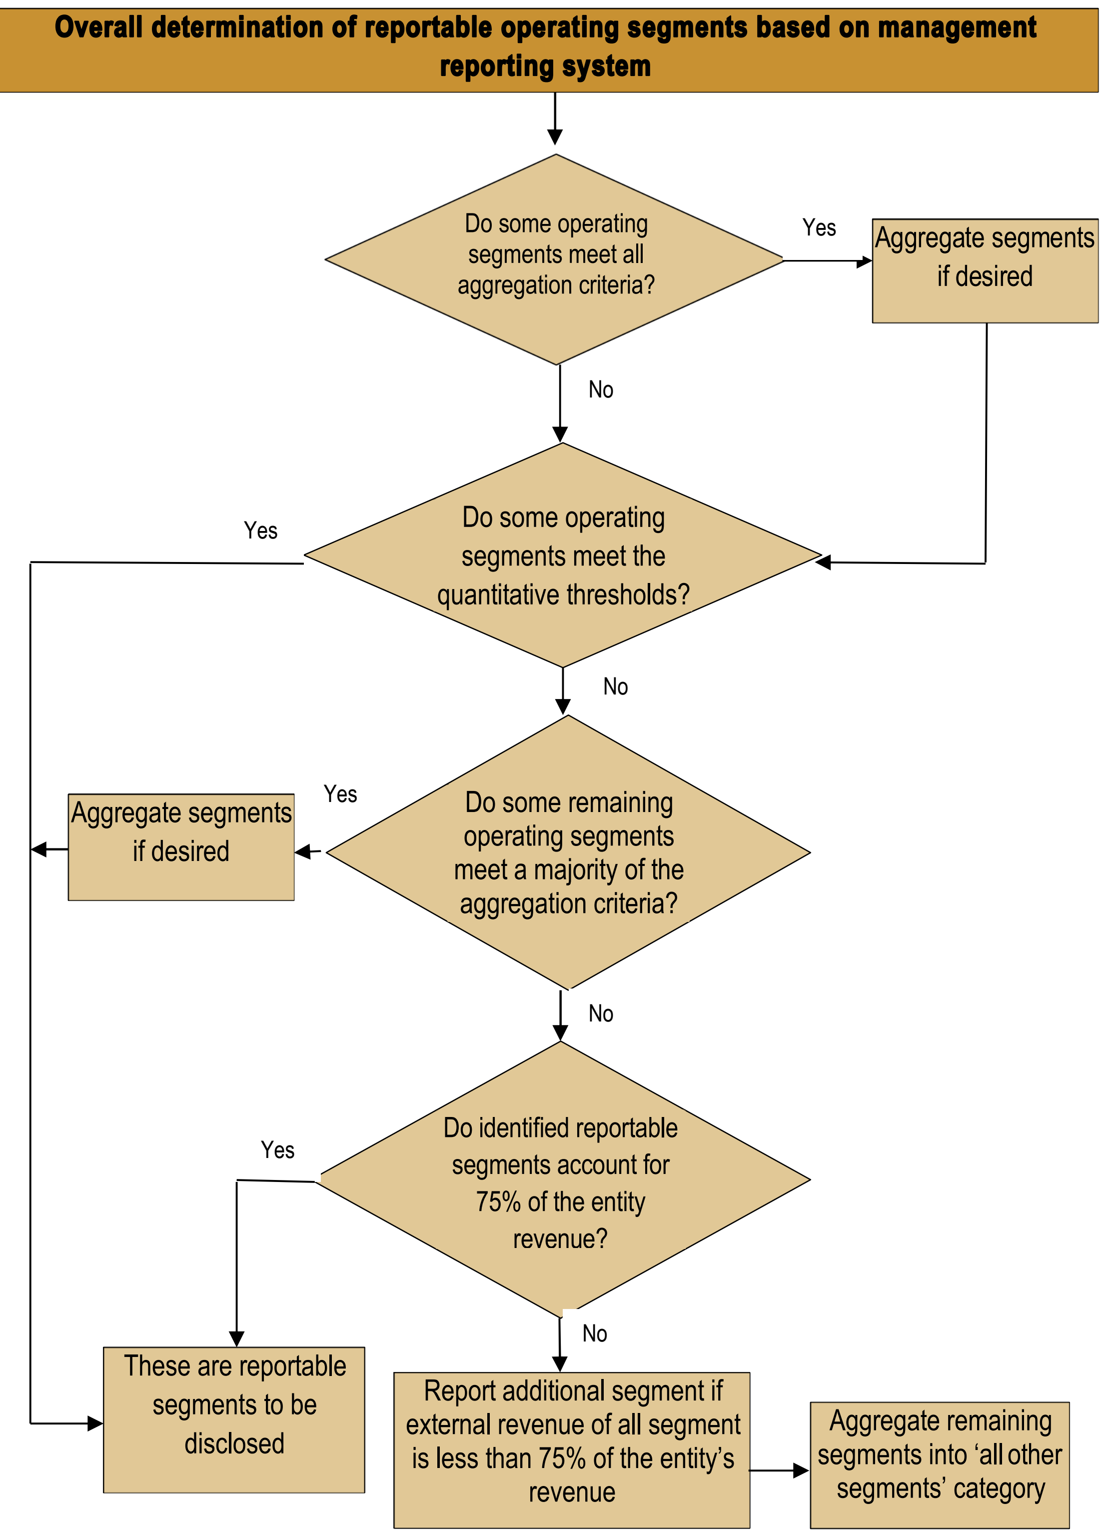
Extract from Annual Report for 2021-22 of Hindustan Unilever Limited

Revenue from major customers

The Group is not reliant on revenues from transactions with any single external customer and does not receive 10% or more of its revenues from transactions with any single external customer.

Diagram to assist in identifying reportable segments

The following diagram illustrates how to apply the main provisions for identifying reportable segments as defined in Ind AS 108.



Overall determination of reportable operating segments based on management reporting system
Do some operating segments meet all aggregation criteria?
Yes
Aggregate segments if desired
No
Do some operating segments meet the quantitative thresholds?
Yes
No
Do some remaining operating segments meet a majority of the aggregation criteria?
Yes
Aggregate segments if desired
No
Do identified reportable segments account for 75% of the entity revenue?
Yes
No
These are reportable segments to be disclosed
Report additional segment if external revenue of all segment is less than 75% of the entity's revenue
Aggregate remaining segments into 'all other segments' category

3.11 SIGNIFICANT DIFFERENCES IN IND AS 108 *VIS-A-VIS* AS 17

S. No.	Particulars	Ind AS 108	AS 17
1.	*Approach for identification of segments*	Identification of segments under Ind AS 108 is based on 'management approach' i.e., operating segments are identified based on the internal reports regularly reviewed by the entity's chief operating decision maker.	AS 17 requires identification of two sets of segments; one based on related products and services, and the other on geographical areas based on the risks and returns approach. One set is regarded as primary segments and the other as secondary segments.
2.	*Basis for reporting the segments*	Ind AS 108 requires that the amounts reported for each operating segment should be measured on the same basis as that used by the chief operating decision maker for the purposes of allocating resources to the segments and assessing its performance. It does not define the terms segment revenue, segment expense, segment result, segment assets and segment liabilities.	AS 17 requires segment information to be prepared in conformity with the accounting policies adopted for preparing and presenting the financial statements. Accordingly, AS 17 defines segment revenue, segment expense, segment result, segment assets and segment liabilities.
3.	*Aggregation criteria*	Ind AS 108 specifies aggregation criteria for aggregation of two or more segments and also requires the related disclosures in this regard.	AS 17 does not deal specifically with this aspect.
4.	*Disclosure in case of single reporting segment*	Ind AS 108 requires certain disclosures even in case of entities having single reportable segment.	AS 17 states that in case there is neither more than one business segment nor more than one geographical segment,

			segment information as per this standard is not required to be disclosed. However, this fact shall be disclosed by way of footnote.
5.	*Disclosure of Interest*	Ind AS 108 requires separate disclosures about interest revenue and interest expense of each reportable segment, therefore, these aspects have not been specifically dealt with.	As per AS 17, interest expense relating to overdrafts and other operating liabilities identified to a particular segment should not be included as a part of the segment expense. It also provides that in case interest is included as a part of the cost of inventories and those inventories are part of segment assets of a particular segment, such interest should be considered as a segment expense. These aspects are specifically dealt with keeping in view that the definition of 'segment expense' given in AS 17 excludes interest.
6.	*Disclosure basis*	Ind AS 108 requires disclosures of revenues from external customers for each product and service. Regarding geographical information, it requires the disclosure of revenues from customers in the country of domicile and in all foreign countries, non-current assets in the country of domicile and all foreign countries. It also requires disclosure of information about major customers.	Disclosures in AS 17 are based on the classification of the segments as primary or secondary segments. Disclosure requirements for primary segments are more detailed as compared to secondary segments.

TEST YOUR KNOWLEDGE

Questions

1. X Ltd. has identified 4 operating segments for which revenue data is given below:

	External Revenue (₹)	Internal Revenue (₹)	Total (₹)
Segment A	30,00,000	Nil	30,00,000
Segment B	6,50,000	Nil	6,50,000
Segment C	8,50,000	1,00,000	9,50,000
Segment D	5,00,000	49,00,000	54,00,000
Total Revenue	**50,00,000**	**50,00,000**	**1,00,00,000**

Additional information:

Segment C is a new business unit and management expect this segment to make a significant contribution to external revenue in coming years.

Which of the segments would be reportable under the criteria identified in Ind AS 108?

2. X Ltd. operates in coating industry. Its business segments comprise **Coating** (consisting of decorative, automotive, industrial paints and related activities) and **Others** (consisting of chemicals, polymers and related activities). Certain information for financial year 20X1-20X2 is given below: **(₹ in lakhs)**

Segments	External Revenue (including GST)	GST	Other operating income	Result	Asset	Liabilities
Coating	2,00,000	5,000	40,000	10,000	50,000	30,000
Others	70,000	3,000	15,000	4,000	30,000	10,000

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Additional information:

1. Unallocated income net of expenses is ₹ 30,00,00,000
2. Interest and bank charges is ₹ 20,00,00,000
3. Income tax expenses is ₹ 20,00,00,000 (current tax ₹ 19,50,00,000 and deferred tax ₹ 50,00,000)
4. Unallocated Investments are ₹ 1,00,00,00,000 and other assets are ₹ 1,00,00,00,000.
5. Unallocated liabilities, Reserves & surplus and share capital are ₹ 2,00,00,00,000, ₹ 3,00,00,00,000 & ₹ 1,00,00,00,000 respectively.
6. Depreciation amounts for coating & others are ₹ 10,00,00,000 and ₹ 3,00,00,000 respectively.
7. Capital expenditure for coating and others are ₹ 50,00,00,000 and ₹ 20,00,00,000 respectively.
8. Revenue from outside India is ₹ 6,20,00,00,000 and segment asset outside India ₹ 1,00,00,00,000.

Based on the above information, comment how X Ltd. would disclose information about reportable segment revenue, profit or loss, assets and liabilities for financial year 20X1-20X2.

3. An entity uses the weighted average cost formula to assign costs to inventories and cost of goods sold for financial reporting purposes, but the reports provided to the chief operating decision maker use the First-In, First-Out (FIFO) method for evaluating the performance of segment operations.

   State the cost formula to be used for Ind AS 108 disclosure purposes.

4. ABC Limited has 5 operating segments namely A, B, C, D and E. The profit / loss of respective segments for the year ended 31st March, 20X1 are as follows:

Segment	Profit/(Loss) (₹ in crore)
A	780
B	1,500
C	(2,300)
D	(4,500)
E	6,000
Total	**1,480**

Based on the quantitative thresholds, state which of the above segments A to E would be considered as reportable segments for the year ending 31st March, 20X1.

Answers

1. Threshold amount is ₹ 10,00,000 (₹ 1,00,00,000 × 10%).

Segment A exceeds the quantitative threshold (₹ 30,00,000 > ₹ 10,00,000) and hence reportable segment.

Segment D exceeds the quantitative threshold (₹ 54,00,000 > ₹ 10,00,000) and hence reportable segment.

Segment B & C do not meet the quantitative threshold amount and may not be classified as reportable segment.

However, the total external revenue generated by these two segments A & D represent only 70% [(₹ 35,00,000 / 50,00,000) x 100] of the entity's total external revenue. If the total external revenue reported by operating segments constitutes less than 75% of the entity total revenue, additional operating segments should be identified as reportable segments until at least 75% of the revenue is included in reportable segments.

In case of X Ltd., it is given that Segment C is a new business unit and management expect this segment to make a significant contribution to external revenue in coming years. In accordance with the requirement of Ind AS 108, X Ltd. designates this start-up segment C as a reportable segment, making the total external revenue attributable to reportable segments 87% [(₹ 43,50,000/ 50,00,000) x 100] of total entity revenues.

In this situation, Segments A, C and D will be reportable segments and Segment B will be shown as other segment.

Alternatively, segment B can be considered as a reportable segment as well as it meets the definition of operating segment. If Segment B is considered as reportable segment:

External revenue reported: ₹ 30,00,000 + ₹ 6,50,000 + ₹ 5,00,000 = ₹ 41,50,000

% of Total External Revenue = ₹ 41,50,000 / ₹ 50,00,000 = 83%

Accordingly, Segments A, B and D will be reportable segments and Segment C will be shown as other segment.

2. Segment information

(A) Information about operating segment

(1) the company's operating segments comprise:

Coatings: consisting of decorative, automotive, industrial paints and related activities.

Others: consisting of chemicals, polymers and related activities.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

(2) Segment revenues, results and other information. (₹ in Lakhs)

	Revenue	Coating	Others	Total
1.	**External Revenue (gross)**	**2,00,000**	**70,000**	**2,70,000**
	GST	(5,000)	(3,000)	(8,000)
	Total Revenue (net)	1,95,000	67,000	2,62,000
	Other Operating Income	40,000	15,000	55,000
	Total Revenue	2,35,000	82,000	3,17,000
2.	**Results**			
	Segment results	10,000	4,000	14,000
	Unallocated income (net of unallocated expenses)			3,000
	Profit from operation before interest, taxation and exceptional items			**17,000**
	Interest and bank charges			(2,000)
	Profit before exceptional items			**15,000**
	Exceptional items			Nil
	Profit before taxation			**15,000**
	Income Taxes			
	-Current taxes			(1,950)
	-Deferred taxes			(50)
	Profit after taxation			**13,000**
3.	**Other Information**			
(a)	**Assets**			
	Segment Assets	50,000	30,000	80,000
	Investments			10,000
	Unallocated assets			10,000
	Total Assets			**1,00,000**
(b)	**Liabilities and Shareholder's funds**			
	Segment liabilities	30,000	10,000	40,000
	Unallocated liabilities			20,000
	Share capital			10,000

	Reserves and surplus			30,000
	Total liabilities and shareholder's funds			**1,00,000**
(c)	**Others**			
	Capital Expenditure	(5,000)	(2,000)	(7,000)
	Depreciation	(1,000)	(300)	(1,300)
Geographical Information				**(₹ in lakhs)**
		India (₹)	**Outside India (₹)**	**Total (₹)**
	Revenue	2,55,000	62,000	3,17,000
	Segment assets	90,000	10,000	1,00,000
	Capital expenditure	7,000		7,000

Notes:

(i) The operating segments have been identified in line with the Ind AS 108, taking into account the nature of product, organisation structure, economic environment and internal reporting system.

(ii) Segment revenue, results, assets and liabilities include the respective amounts identifiable to each of the segments. Unallocable assets include unallocable non-current assets and other current assets. Unallocable liabilities include unallocable current liabilities and net deferred tax liability.

(iii) Corresponding figures for previous year have not been provided. However, in a practical scenario the corresponding figures would need to be given.

3. The entity should use First-in-first-out (FIFO) method for its Ind AS 108 disclosures, even though it uses the weighted average cost formula for measuring inventories for inclusion in its financial statements. Where chief operating decision maker uses only one measure of segment asset, same measure should be used to report segment information. Accordingly, in the given case, the method used in preparing the financial information for the chief operating decision maker should be used for reporting under Ind AS 108.

However, reconciliation between the segment results and results as per financial statements needs to be given by the entity in its segment report.

4. With regard to quantitative thresholds to determine reportable segment relevant in context of instant case, paragraph 13(b) of Ind AS 108 may be noted which provides as follows:

"The absolute amount of its reported profit or loss is 10 per cent or more of the greater, in absolute amount, of (i) the combined reported profit of all operating segments that did not

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

report a loss and (ii) the combined reported loss of all operating segments that reported a loss."

In compliance with Ind AS 108, the segment profit/loss of respective segment will be compared with the greater of the following:

(i) All segments in profit, i.e., A, B and E – Total profit ₹ 8,280 crores.

(ii) All segments in loss, i.e., C and D – Total loss ₹ 6,800 crores.

Greater of the above – ₹ 8,280 crores.

Based on the above, reportable segments will be determined as follows:

Segment	Profit/(Loss) (₹ in crore)	As absolute % of ₹ 8,280 crore	Reportable segment
A	780	9%	No
B	1,500	18%	Yes
C	(2,300)	28%	Yes
D	(4,500)	54%	Yes
E	6,000	72%	Yes
Total	**1,480**		

Hence B, C, D, E are reportable segments.

CHAPTER 11

ACCOUNTING AND REPORTING OF FINANCIAL INSTRUMENTS

LEARNING OUTCOMES

After studying this chapter, you will be able to:

- Define financial asset, financial liability and equity
- Examine the scope of financial instruments and items excluded from scope of financial instruments
- Understand the application of these definitions and scope to different forms of instruments
- Determine whether the financial instruments such as preference shares, debentures and bonds will be classified under “equity” or “financial liabilities” or components thereof will be classified under both
- Apply necessary accounting principles for determining when a financial liability can be offset with a financial asset
- Apply accounting principles for recognition of financial assets and financial liabilities
- Classify financial asset and financial liability
- Determine the accounting treatment for regular way purchase or sale of financial assets

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- Measure financial assets initially and subsequently
- Measure financial liability initially and subsequently
- Reclassify the financial instrument and deal with the accounting aspect upon reclassification
- Acquire the conceptual understanding of "derivatives" and "embedded derivatives",
- Identify the situations in which embedded derivatives need to be separated and
- Deal with the Accounting principles in the situations in which embedded derivatives are so separated
- Identify the hedged items
- Designate the items as hedged items/instruments
- Qualify instruments for hedge accounting
- Determine the criteria for qualifying the items as hedge items and its accounting.
- Determine whether or not a transfer qualifies for derecognition and accounting treatment in various situations
- Apply accounting principles for derecognition of financial liabilities, including evaluating practical complexities involved in exchange of financial instruments or parts thereof
- Disclose necessary details regarding financial instruments as per the standards

Join us t.me/caborntofight

Merged By CA - Born To Fight

CHAPTER OVERVIEW

The chapter is divided into 7 units-

a) **Unit 1 'Financial Instruments: Scope and Definitions'** deals with a brief introduction of financial instruments, definitions of financial instrument, financial asset, financial liability and equity instrument. It also discusses the contracts which are included and excluded from the scope of the standards on Financial Instruments.

b) **Unit 2 'Classification and Measurement of Financial Assets and Financial Liabilities'**, deals with criterias for classification, measurement (initially and subsequently), reclassification of financial assets and financial liabilities. It further discusses impairment of financial assets.

c) **Unit 3 'Financial Instruments: Equity and Financial Liabilities'** covers the analysis of the definition of financial liabilities and equity. It also deliberates critical features in differentiating a financial liability from an equity instrument and delves into various aspects which help in determining the liability as financial liability. The unit also explains when an instrument is a compound financial instrument. It also analyses treasury shares, interest, dividends, losses and gains. Finally, it elucidates offsetting a financial asset and financial liability.

d) **Unit 4 'Derivatives and Embedded Derivatives'** defines the two derivatives with examples and the manner of separating the embedded derivatives from the host contract alongwith the characteristics differences and deals with the accounting thereof.

e) **Unit 5 'Recognition and Derecognition of Financial Instruments'** covers guidance prescribed in the standard on initial recognition of financial instruments. It also takes into account, the timings of recognition and accounting treatment under various situations. Later on, it discusses the derecognition of financial instruments and situations under which derecognition will be considered or not. The unit also covers the extinguishment and modification of financial liabilities and accounting of debt for equity swaps.

f) **Unit 6 'Hedge Accounting'** covers identification and designation of hedge items, criteria qualifying an item as hedge item and accounting thereof.

g) **Unit 7 'Disclosures'** covers disclosure requirements as stated in the standard.

UNIT 1: FINANCIAL INSTRUMENTS: SCOPE AND DEFINITIONS

1.1 INTRODUCTION

With the changing landscape of Indian economy and more liberalisation, raising funds in national and international markets through different forms of instruments has gathered momentum. As companies expand their horizon, investors at the same time are getting cautious to invest through different means to achieve their intended objective, which could have fixed return like a debt instrument or a residual share in net assets like equity or both. Several type of instruments are issued like convertible preference shares, FCCBs, foreign currency loans, debt syndication arrangements, loans from group companies, etc. by borrowing entities for raising funds. Accounting treatment of these instruments in the books, with introduction of Indian Accounting Standards (Ind AS) is important for us to understand to reflect proper financial reporting for users of financial statements that provides relevant and faithful representation of the financial performance, financial position, and cash flows of the reporting entity.

MCA notified following Ind AS to deal with accounting of financial instruments:

- Ind AS 109 – Financial instruments
- Ind AS 32 – Financial instruments: Presentation
- Ind AS 107 – Financial Instruments: Disclosures

These Ind AS are largely aligned with the prevailing guidance in IFRS which require classification of a financial instrument based on substance of the arrangement between the parties rather than their legal form and the definition of financial asset, financial liability and equity. Further, recognition and measurement criteria are also driven based on classification of such instruments.

1.2 WHAT ARE FINANCIAL INSTRUMENTS?

A **financial instrument** is any **contract** that gives rise to a **financial asset** of one entity and a **financial liability** or **equity instrument** of another entity.

- Here, a ***contract*** refers to an agreement between two or more parties that has clear economic consequences and which parties usually are bound to adhere, usually because the agreement is enforceable by law.
- Contracts need not be in writing and may take a variety of forms.
- An important point to note is any assets or liabilities that are not contractual are not financial liabilities or financial assets. For eg.: income taxes are a statutory obligation and not arising from contract, constructive obligations as defined in Ind AS 37 – Provisions,

Contingent Liabilities and Contingent Assets do not arise from contracts and hence, are not financial liabilities, etc.

- Financial instruments include:
  (a) Primary instruments (such as receivables, payables and equity instruments) and
  (b) Derivative financial instruments (such as financial options, futures and forwards, interest rate swaps and currency swaps).

While the examples above provide an indication of what financial instruments comprise, let's understand the definition of each of these type of financial instruments in greater detail.

1.3 WHAT IS A FINANCIAL ASSET?

A **'financial asset'** is any asset that is:

(a) **Cash**;

(b) An equity instrument of another entity;

(c) A **contractual right**:

   (i) to receive cash or another financial asset from another entity; or

   (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially favorable to the entity; or

(d) a contract that will or may be settled in **entity's own equity instruments** and is:

   (i) a non-derivative for which the entity is or may be obliged to receive a variable number of entity's own equity instruments; or

   (ii) a derivative that will or may be settled other than by exchange of fixed amount of cash or another financial asset for a fixed number of entity's own equity instruments. For this purpose, entity's own equity instruments do not include puttable financial instruments classified as equity instruments, instruments that impose on the entity an obligation to deliver to another party a pro-rata share of net assets of the entity on liquidation and are classified as equity instruments, or instruments that are themselves contracts for future receipt or delivery of entity's own equity instruments.

On the basis of the above definition, a financial asset can be either of the following –

Financial asset	Common examples ❖ Cash ❖ Trade receivables ❖ Investments in bonds and deposits ❖ Investment in equity instruments ❖ Loans receivable, etc.

Join us t.me/caborntofight

- On the basis of the above definition, some of the key elements to understand:

Cash	❖ Currency (cash) is a financial asset because it represents the medium of exchange and is therefore the basis on which all transactions are measured and recognised in financial statements. ❖ A deposit of cash with bank or other financial institution represents a contractual right of the depositor to obtain cash from the institution or to draw a cheque or similar instrument against the balance in favour of a creditor in payment of a financial liability.
Contractual right to receive cash or other financial asset	❖ A contractual right or contractual obligation to receive, deliver or exchange financial instruments is itself a financial instrument. A chain of contractual rights or contractual obligations meets the definition of a financial instrument if it will ultimately lead to the receipt or payment of cash or to the acquisition or issue of an equity instrument. Common examples of contractual right to receive cash and corresponding financial liability representing other party's contractual obligation to deliver cash in future are: 1. Trade receivables; 2. Loans and Notes receivable 3. Deposits made; 4. Investment in bonds, etc. ❖ The ability to exercise a contractual right or to satisfy a contractual obligation may be absolute or it may be contingent on occurrence of one or more future events, not wholly within the control of either party to the contractual arrangement. ❖ A contingent right and obligation meets the definition of financial asset and financial liability, even though such assets and liabilities are not always recognized in the financial statements. For eg.: A lender may be provided with a financial guarantee by a party ('guarantor') on behalf of borrower, entitling to recover the outstanding dues from the guarantor if the borrower were to default, etc. It may be noted that paragraph 2 of Ind AS 37, 'Provisions, Contingent Liabilities and Contingent Assets' excludes from its scope financial instruments within the scope of Ind AS 109. Therefore, financial guarantee contracts cannot be disclosed as contingent liability.

- **Physical assets, right-of-use assets and intangible assets**
  - Physical assets (such as inventories, property, plant and equipment), right-of-use assets and intangible assets (such as patents and trademarks) are not financial assets.
  - Control of such physical assets, right-of-use assets and intangible assets creates an opportunity to generate an inflow of cash or another financial asset, but it does not give rise to a present right to receive cash or another financial asset.
- **Prepaid expenses**
  - Assets (such as prepaid expenses) for which the future economic benefit is the receipt of goods or services, rather than the right to receive cash or another financial asset, are not financial assets.
  - Similarly, items such as deferred revenue and most warranty obligations are not financial liabilities because the outflow of economic benefits associated with them is the delivery of goods and services rather than a contractual obligation to pay cash or another financial asset.
- **'Perpetual' debt instruments**

  Perpetual debt instruments such as 'perpetual' bonds, debentures and capital notes) normally provide the holder with the contractual right to receive payments on account of interest at fixed dates extending into indefinite future, either with no right to receive a return of principal or a right to a return of principal under terms that make it very unlikely or very far in the future.

Example 1

Evaluate the financial assets.

S. No.	Particulars	Whether FA or not	Remarks
1	Investment in bonds debentures	FA	• Contractual right to receive cash.
2	Loans and receivables	FA	• Contractual right to receive cash.
3	Deposits given	FA	• Contractual right to receive cash.
4	Trade & other receivables	FA	• Contractual right to receive cash.
5	Cash and cash equivalents	FA	• Specifically covered in the definition.
6	Bank balance	FA	• Contractual right to receive cash.

S. No.	Particulars	Whether FA or not	Remarks
7	Investments in equity shares	FA	• Equity instrument of another entity.
8	Perpetual debt instruments Eg. perpetual bonds, debentures and capital notes.	FA	• Such instruments provide the contractual right to receive interest for indefinite future or a right to return of principal under terms that make it very unlikely or very far in the future.
9	Physical assets Eg. inventories, property, plant and equipment etc.	No	• Control of such assets does not create a present right to receive cash or another financial asset.
10	Right to use assets Eg. Lease vehicle etc.	No	• Control of such assets does not create a present right to receive cash or another financial asset.
11	Intangibles Eg. Patents, trademark etc.	No	• Control of such assets does not create a present right to receive cash or another financial asset.
12	Prepaid expenses Eg. Prepaid insurance, prepaid rent etc.	No	• These instruments provide future economic benefit in the form of goods or services, rather than the right to receive cash.
13	Advance given for goods and services	No	• These instruments provide future economic benefit in the form of goods or services, rather than the right to receive cash.

Illustration 1: Trade receivables

A Ltd. makes sale of goods to customers on credit of 45 days. The customers are entitled to earn a cash discount @ 2% per annum if payment is made before 45 days and an interest @ 10% per annum is charged for any payments made after 45 days.

Evaluate whether such trade receivable are financial assets or not.

Solution

A financial asset is an asset where there is a contractual right to receive cash or another financial asset from another entity.

Join us t.me/caborntofight

In the above case, A Ltd. has the contractual right to receive cash /bank from its trade receivable recorded in its books of accounts, after the expiry of credit period of 45 days or earlier after passing discounts of 2 % per annum.

Hence, trade receivables would meet the definition of financial assets.

It may be noted that contractual right to receive cash includes contractual right to receipt of money in bank account or any wallet account.

*****

Illustration 2: Deposits

Z Ltd. (the 'Company') makes sale of goods to customers on credit. Goods are carried in large containers for delivery to the dealers' destinations. All dealers are required to deposit a fixed amount of ₹ 10,000 as security for the containers, which is returned only when the contract with Company terminates. The deposits carry 8% per annum which is payable only when the contract terminates.

If the containers are returned by the dealers in broken condition or any damage caused, then appropriate adjustments shall be made from the deposits at the time of settlement.

How would such deposits be treated in books of the dealers?

Solution

A financial asset is an asset where there is a contractual right to receive cash or another financial asset from another entity.

In the above case, such security deposits are receivable in cash at the end of contract period between the dealer and the Company.

Hence, they meet the definition of financial assets.

*****

1.4 WHAT IS A FINANCIAL LIABILITY?

- A **financial liability** is any liability that is:

  (a) A **contractual obligation**:

    (i) To deliver cash or other financial asset to another entity; or

    (ii) To exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity;

Or

Join us t.me/caborntofight

Merged By CA - Born To Fight

(b) A contract that will or may be settled in entity's **own equity instruments** and is:

(i) A **non-derivative** for which the entity is or may be obliged to deliver a **variable** number of entity's own equity instruments; or

(ii) a **derivative** that will or may be settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

For this purpose, rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. Also, for these purposes the entity's own equity instruments do not include puttable financial instruments that are classified as equity instruments, instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation and are classified as equity instruments, or instruments that are contracts for the future receipt or delivery of the entity's own equity instruments.

As an exception, following type of instruments that meets the definition of a financial liability may still be classified as an equity instrument if they have certain features and meets specific conditions in paragraphs 16A and 16B or paragraphs 16C and 16D of Ind AS 32. The definition of financial liability includes a carve-out from IAS 32 that the variablilty due to foreign currency shall be ignored while classifying a foreign currency convertible bond as equity or liability or compound financial instrument.

For details, refer Unit 3 – Equity and Financial Liabilities.

Financial liability

Common examples

- Loans and borrowings
- Payables for purchase of goods & services
- Finance lease liabilities
- Redeemable instruments like preference shares, debentures, etc.
- Guarantee given for repayment of debt upon borrower's default

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Example 2

Evaluate the financial Liability.

S. No.	Particulars	Whether FL or not	Remarks
1	Loans payable or bank loan	FL	• Contractual obligation to pay cash.
2	Trade and other payables	FL	• Contractual obligation to pay cash
3	Bills payable / acceptance	FL	• Contractual obligation to pay cash.
4	Deposits received	FL	• Contractual obligation to pay cash.
5	Mandatory redeemable preferences shares	FL	Contractual obligation to pay cash.
6	Financial guarantee given (Also see the scope section to understand when financial guarantee contract can be regarded as insurance contract)	FL	• Contractual obligation to pay cash, due to the occurrence of certain events.

Illustration 3: Perpetual debt instruments

A Ltd. issues a bond at principal amount of CU 1000 per bond. The terms of bond require annual payments in perpetuity at a stated interest rate of 8 per cent applied to the principal amount of CU 1,000. Assuming 8 per cent to be the market rate of interest for the instrument when it was issued, the issuer assumes a contractual obligation to make a stream of future interest payments having a fair value (present value) of CU1,000 on initial recognition.

Evaluate the financial instrument in the hands of both the holder and the issuer.

Solution

A financial asset is an asset where there is a contractual right to receive cash or another financial asset from another entity.

- For the Holder – There is right to receive cash in future. Hence, it will be classified as a financial asset
- For the Issuer – There is contractual obligation to pay cash in future. However, the instrument is redeemed at the option of A Ltd. or on liquidation of A Ltd. Therefore, the instrument has characteristics of both equity and financial liability. Such an

Merged By CA - Born To Fight

instrument is regarded as compound financial instrument (Ref. para 28 of Ind AS 32). See Unit 3 to understand accounting for compound financial instrument.

*****

Illustration 4: Creditors for sale of goods

A Ltd. (the 'Company') makes purchase of steel for its consumption in normal course of business. The purchase terms provide for payment of goods at 30 days credit and interest payable @ 12% per annum for any delays beyond the credit period.

Analyse whether the transaction leads to any financial instruments and if yes, then what is the nature of that financial instrument?

Solution

A financial liability is any liability where there is a contractual obligation to deliver cash or other financial asset to another entity.

In the above case, A Ltd. has entered into a contractual arrangement for purchase of goods at a fixed consideration payable to the creditor. A contractual arrangement that provides for payment in fixed amount of cash to another entity meets the definition of financial liability.

*****

Illustration 5: Contract for exchange on unfavorable conditions

A Ltd. (the 'Company') makes a borrowing for INR 10 lacs from RBC Bank, with bullet repayment of INR 10 lacs and an annual interest rate of 12% per annum. Now, Company defaults at the end of 5th year and consequently, a rescheduling of the payment schedule is made beginning 6th year onwards. The Company is required to pay INR 1,300,000 at the end of 6th year for one time settlement, in lieu of defaults in payments made earlier.

(a) Does the above instrument meet definition of financial liability? Please explain.

(b) Analyse the differential amount to be exchanged for one-time settlement.

Solution

(a) A Ltd. has entered into an arrangement wherein against the borrowing, A Ltd. has contractual obligation to make stream of payments (including interest and principal). This meets definition of financial liability.

(b) Let's compute the amount required to be settled and any differential arising upon one time settlement at the end of 6th year –

- Loan principal amount = ₹ 10,00,000
- Amount payable at the end of 6th year = ₹ 12,54,400 [10,00,000 x 1.12 x 1.12 (Interest for 5th & 6th year in default plus principal amount)]
- One time settlement = INR 13,00,000
- Additional amount payable = ₹ 45,600

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

The above represents a contractual obligation to pay cash against settlement of a financial liability under conditions that are unfavorable to A Ltd. (owing to additional amount payable in comparison to amount that would have been paid without one time settlement). Hence the rescheduled arrangement meets definition of 'financial liability'.

*****

1.5 WHAT IS AN EQUITY INSTRUMENT?

- As per Ind AS 32.11 – An **equity instrument** is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities.
- As per Ind AS 32.16 – An instrument is an equity instrument if, and only if, both conditions (a) and (b) below are met:

  (a) The instrument includes **no contractual obligation**:

  (i) to deliver cash or another financial asset to another entity; or

  (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the issuer.

  (b) If the instrument will or may be settled in the **issuer's own equity instruments**, it is:

  (i) a **non-derivative** that includes no contractual obligation for the issuer to deliver a variable number of its own equity instruments; or

  (ii) a **derivative** that will be settled only by the issuer exchanging a fixed amount of cash or another financial asset for a fixed number of its own equity instruments. For this purpose, rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. Also, for these purposes the issuer's own equity instruments do not include instruments that have all the features and meet the conditions described in paragraphs 16A and 16B or paragraphs 16C and 16D, or instruments that are contracts for the future receipt or delivery of the issuer's own equity instruments.

  A contractual obligation, including one arising from a derivative financial instrument, that will or may result in the future receipt or delivery of the issuer's own equity instruments, but does not meet conditions (a) and (b) above, is not an equity instrument.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

Equity	❖ Equity instruments issued ❖ Warrants to issue fixed number of shares at fixed price against each warrant ❖ Other instruments convertible into fixed number of equity shares for fixed amount per share, etc.

- The **key characteristics** of an equity instrument have been further explained as follows:

No contractual obligation	❖ A key characteristic of equity instruments is that they carry no contractual obligation throughout for any payment or distribution towards the holders of such instruments. ❖ However, following type of instruments as an exception are 'equity' classified even if they contain an obligation to deliver cash or other financial asset, provided certain requisite criteria are met – 1. puttable financial instruments that meet certain conditions 2. an instrument, or a component of an instrument, that contains an obligation for the issuing entity to deliver to the holder a pro rata share of the net assets of the issuing entity only on its liquidation. The nature of these instruments and the criteria to be met for equity classification are explained in greater detail in Unit 3 – Financial Instruments : Equity and Financial Liabilities.
Settlement in own equity instruments	❖ Settlement in own equity instruments is equity classified only if it's a fixed-for-fixed transaction, ie, issue of fixed number of shares and involves a fixed amount of cash or other financial asset. ❖ Where an entity enters into a non-derivative contract to issue a fixed number of its own equity instruments in exchange for a fixed amount of cash (or another financial asset), it is an equity instrument of the entity. But this does not apply for instruments that are equity classified being a puttable instrument or other instrument entitling the holder to pro-rata share in net assets that meet specified criteria (refer Unit 3 – Equity and Financial Liabilities). ❖ However, if such a contract contains an obligation for the entity to pay cash (or another financial asset), it also gives rise to a liability for the present value of the redemption amount. For example: a forward contract entered into by an entity to repurchase fixed number of its own shares for a fixed amount of cash gives rise to a financial liability to be recorded at present value of redemption amount.

- An issuer of non-puttable ordinary shares assumes a liability when it formally acts to make a distribution and becomes legally obliged to the shareholders to do so. This may be the case following the declaration of a dividend or when the entity is being wound up and any assets remaining after the satisfaction of liabilities become distributable to shareholders.

Example 3

When a Company proposes dividend in its board meeting, no obligation arises because it becomes payable only post approval by shareholders in the annual general meeting. However, when the dividend is approved by shareholders in annual general meeting, the Company has taken an obligation to distribute dividend to its shareholders and hence it's a contractual obligation meeting the definition of financial liability.

- **Examples** of equity instruments include:
    - Non-puttable ordinary shares, for eg.: equity shares issued by companies
    - Some puttable instruments (if they meet requisite criteria and are not classified as financial liabilities);
    - Some instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation (if they meet requisite criteria and are not classified as financial liabilities);
    - Some types of preference shares (where repayment and distribution is at the discretion of the Issuer);
    - Warrants or written call options that allow the holder to subscribe for or purchase a fixed number of non-puttable ordinary shares in the issuing entity in exchange for a fixed amount of cash or another financial asset.
- Basis the above definition of equity and characteristics of such instruments, let's evaluate some typical form of instruments that may be issued and how are they classified –
    - **Preference shares**

      Preference shares is a class of shares issued by Indian companies, whose terms may provide for redemption at a pre-determined amount with a fixed return which may be cumulative or discretionary. In determining whether a preference share is a financial liability or an equity instrument, an issuer assesses the particular rights attached to the share to determine whether it exhibits the fundamental characteristic of a financial liability or an equity instrument, as explained below:

Merged By CA - Born To Fight

(A) Redeemable preference shares:

<table>
<tr><th>Redemption terms</th><th>Evaluation under Ind AS 32</th></tr>
<tr><td>Redemption at a specified date</td><td rowspan="2">This contains a financial liability because the issuer has an obligation to transfer financial assets to the holder of the share. The potential inability of an issuer to satisfy an obligation to redeem a preference share when contractually required to do so, whether because of a lack of funds, a statutory restriction or insufficient profits or reserves, does not negate the obligation. Hence, classified as 'financial liability'.</td></tr>
<tr><td>Redemption at option of Holder</td></tr>
<tr><td>Redemption at option of Issuer</td><td>An option of the issuer to redeem shares for cash does not satisfy the definition of a financial liability because the issuer does not have a present obligation to transfer financial assets to the shareholders. Hence, classified as 'equity instrument'.
An obligation may arise, however, when the issuer of the shares exercises its option, usually by formally notifying the shareholders of an intention to redeem the shares, at which time this instrument shall be reclassified from 'equity' to 'financial liability'.</td></tr>
</table>

(B) Non-redeemable preference shares

Non-redeemable preference shares may be issued by foreign subsidiaries or foreign branches or foreign associates or foreign joint operations or foreign joint ventures. In this case, appropriate classification is determined by the other rights that attach to them. Classification is based on an assessment of the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

- When distributions to holders of the preference shares, whether cumulative or non-cumulative, are at the discretion of the issuer, the shares are equity instruments.
- The classification of a preference share as an equity instrument or a financial liability is not affected by, for example:

  (a) a history of making distributions;

  (b) an intention to make distributions in the future

  (c) a possible negative impact on the price of ordinary shares of the issuer if distributions are not made (because of restrictions on paying dividends

Join us t.me/caborntofight

on the ordinary shares if dividends are not paid on the preference shares)

(d) the amount of the issuer's reserves

(e) an issuer's expectation of a profit or loss for a period; or

(f) an ability or inability of the issuer to influence the amount of its profit or loss for the period.

Hence, the contractual terms determine the nature of instrument. Any historical trend or ability of the Issuer does not affect the classification of an instrument as 'equity' or 'financial liability'.

(C) Distributions on preference shares

Other than the terms for redemption of financial instrument, another important point for consideration is whether the Company has an obligation to make payments of dividend ie, whether dividend on such preference shares are cumulative or non-cumulative.

- **Where dividends are at the discretion of the issuer –**this is akin to an equity instrument. However, where the instrument itself is redeemable, the obligation to pay still exists but only to the extent of the redemption value and not dividends on such shares unless they are declared.

- **Where dividends are cumulative but payable only on liquidation**–One needs to assess the key terms of the instrument to check if the entity has a contractual obligation:

  (a) Where no contractual obligation exists to pay– such preference shares may themselves be irredeemable and the dividend on such shares even if cumulative, the entity may be under no obligation to pay unless upon liquidation – then such preference shares may be classified as equity.

  (b) Where contractual obligation exists – In cases where the preference shares are not redeemable, it is like an equity instrument. But if they are entitled to dividend which is payable such that entity does not have an unconditional right to defer payment, then this provides the shareholders with a lender's return on the amount invested. This obligation is also not negated if the entity is unable to pay such dividend for lack of funds or insufficient distributable profits. Therefore, the obligation to pay dividend meets the definition of financial liability. The instrument in such cases shall have two components – financial

liability represented by dividend and equity component represented by the issue price, such instruments are overall classified as 'compound financial instruments' and each of the components as mentioned above are accounted separately.

Illustration 6: Preference shares with non-cumulative dividend

Silver Ltd. issued irredeemable preference shares with face value of ₹ 10 each and premium of ₹ 90. These shares carry dividend @ 8% per annum, however dividend is paid only when Silver Ltd declares dividend on equity shares. Analyse the nature of this instrument.

Solution

In the above case, two main characteristics of the preference shares are:

(i) Preference shares carry dividend, which is payable only when Company declares dividend on equity shares

(ii) Preference share are irredeemable.

Analysing the definition of equity, an instrument meets definition of equity if:

(a) It contains no contractual obligation to pay cash; and

(b) Where an instrument shall be settled in own equity instruments, it's a non-derivative contract that will be settled only by issue of fixed number of shares or a derivative contract that will be settled by issue of fixed number of shares for a fixed amount of cash.

In the above instrument, there is no contractual obligation on the Company to pay cash since –

(i) Face value is not redeemable (except in case of liquidation); and

(ii) Dividend is payable only if Company declares dividend on equity shares. Since dividend on equity shares is discretionary and the Company can choose not to pay, Company has an unconditional right to avoid payment of cash on preference shares also.

Hence preference shares meet definition of equity instrument.

*****

- **Contracts settled in own equity instruments but classified as 'financial liability' (where equity instrument is treated as currency) –**

Terms	Evaluation under Ind AS 32
Non derivative contract	• A contract that will be settled in a variable number of entity's own shares whose value equals a fixed amount is a financial liability, because the entity is under an obligation to pay a fixed amount, that is settled through equity instruments (similar to settlement in currency).

	• Similarly, a contract that will be settled in a fixed number of the entity's own shares, but the rights attaching to those shares will be varied so that the settlement value equals a fixed amount or an amount based on changes in an underlying variable, is a financial asset or a financial liability.
Derivative contract	• A contract that will be settled in a variable number of the entity's own shares whose value equals an amount based on changes in an underlying variable (eg a commodity price) is a financial asset or a financial liability. • An example is a written option to buy gold that, if exercised, is settled net in the entity's own instruments by the entity delivering as many of those instruments as are equal to the value of the option contract.

Illustration 7: Non-derivative contract to be settled in own equity instruments

A Ltd. invests in compulsorily convertible preference shares (CCPS) issued by its subsidiary – B Ltd. at ₹ 1,000 each (₹ 10 face value + ₹ 990 premium). Under the terms of the instrument, each CCPS is compulsorily convertible into one equity share of B Ltd at the end of 5 years. Such CCPS carry dividend @ 12% per annum, payable only when declared at the discretion of B Ltd. Evaluate this under definition of financial instrument.

Solution

B Ltd. has issued CCPS which provide for –

(a) Conversion into fixed number of equity shares, ie, one equity share for every CCPS

(b) Non-cumulative dividends.

Applying the definition of 'equity' under Ind AS 32 –

(a) There is no contractual obligation to deliver cash or other financial asset. Dividends are payable only when declared and hence, at the discretion of the Issuer – B Ltd., thereby resulting in no contractual obligation over B Ltd.

(b) Conversion is into a fixed number of equity shares.

Hence it meets definition of equity instrument and shall be classified as such in books of B Ltd.

*****

Illustration 8: Settlement in variable number of shares

Target Ltd. took a borrowing from Z Ltd. for ₹ 10,00,000. Z Ltd. enters into an arrangement with Target Ltd. for settlement of the loan against issue of a certain number of equity shares of Target Ltd. whose value equals ₹ 10,00,000. For this purpose, fair value per share (to determine

total number of equity shares to be issued) shall be determined based on the market price of the shares of Target Ltd. at a future date, upon settlement of the contract. Evaluate this under definition of financial instrument.

Solution

In the above scenario, Target Ltd. is under an obligation to issue variable number of equity shares equal to a total consideration of ₹ 10,00,000. Hence equity shares are used as currency for purpose of settlement of an amount payable by Target Ltd.

Since this is variable number of shares to be issued in a non-derivative contract for fixed amount of cash, it tantamounts to use of equity shares as 'currency' and hence this contract meets the definition of financial liability in books of Target Ltd.

*****

1.6 COMPARISON OF FINANCIAL ASSETS, FINANCIAL LIABILITIES AND EQUITY

Sl. No.	Financial Assets	Financial liabilities	Equity
1	Cash	-	-
2	An equity instrument of another entity.	-	-
3.	**A contractual right** To receive cash or another financial asset from another entity Or	**A contractual obligation** To deliver cash or another financial asset to another entity Or	**No contractual obligation** To deliver cash or another financial asset to another entity. Or
3	To exchange financial assets or financial liabilities with another entity under conditions that are **potentially favourable** to the entity.	To exchange financial assets or financial liabilities with another entity under conditions that are **potentially unfavourable** to the entity.	To exchange financial assets or financial liabilities with another entity.
4	A contract that will or may be settled in the entity's own equity instruments.	A contract that will or may be settled in the entity's own equity instruments including derivative and non-derivative **(Variable no. of shares. and Fixed for Fixed criterion not met).**	A contract that will or may be settled in the entity's own equity **instruments (Fixed for Fixed criterion met).**

1.7 SCOPE OF FINANCIAL INSTRUMENTS

Scope of financial instruments excludes the following:

(a) Interests in subsidiaries, associates and joint ventures that are accounted for in accordance with Ind AS 110 *Consolidated Financial Statements*, Ind AS 27 *Separate Financial Statements* or Ind AS 28 *Investments in Associates and Joint Ventures*. However, in some cases, Ind AS 110, Ind AS 27 or Ind AS 28 require or permit an entity to account for an interest in a subsidiary, associate or joint venture in accordance with some or all of the requirements of this Standard. Entities shall also apply this Standard to derivatives on an interest in a subsidiary, associate or joint venture unless the derivative meets the definition of an equity instrument of the entity in Ind AS 32 *Financial Instruments: Presentation*.

(b) Rights and obligations under leases to which Ind AS 116 Leases applies. However,

   (i) finance lease receivables (i.e. net investments in finance leases) and operating lease receivables recognised by a lessor are subject to the derecognition and impairment requirements of Ind AS 109;

   (ii) lease liabilities recognised by a lessee are subject to the derecognition requirements in paragraph 3.3.1 of Ind AS 109; and

   (iii) derivatives that are embedded in leases are subject to the embedded derivatives requirements of Ind AS 109.

(c) employers' rights and obligations under employee benefit plans, to which Ind AS 19 *Employee Benefits* applies.

(d) rights and obligations arising under (i) an insurance contract as defined in Ind AS 104 *Insurance Contracts*, other than an issuer's rights and obligations arising under an insurance contract that meets the definition of a financial guarantee contract, or (ii) a contract that is within the scope of Ind AS 104 because it contains a discretionary participation feature.

   - However, this Standard applies to a derivative that is embedded in a contract within the scope of Ind AS 104 if the derivative is not itself a contract within the scope of Ind AS 104.

   - Moreover, if an issuer of financial guarantee contracts has previously asserted explicitly that it regards such contracts as insurance contracts and has used accounting that is applicable to insurance contracts, the issuer may elect to apply either this Standard or Ind AS 104 to such financial guarantee contracts. The issuer may make that election contract by contract, but the election for each contract is irrevocable.

(e) Any forward contract between an acquirer and a selling shareholder to buy or sell an acquiree that will result in a business combination within the scope of Ind AS 103 *Business Combinations* at a future acquisition date. The term of the forward contract should not exceed a reasonable period normally necessary to obtain any required approvals and to complete the transaction.

(f) Loan commitments other than those loan commitments described below –

- loan commitments that the entity designates as financial liabilities at fair value through profit or loss. An entity that has a past practice of selling the assets resulting from its loan commitments shortly after origination shall apply this Standard to all its loan commitments in the same class.

- loan commitments that can be settled net in cash or by delivering or issuing another financial instrument. These loan commitments are derivatives. A loan commitment is not regarded as settled net merely because the loan is paid out in instalments (for example, a mortgage construction loan that is paid out in instalments in line with the progress of construction).

- commitments to provide a loan at a below-market interest rate

However, an issuer of loan commitments shall apply the impairment requirements of this Standard to loan commitments that are not otherwise within the scope of this Standard. Also, all loan commitments are subject to the derecognition requirements of this Standard.

(g) Financial instruments, contracts and obligations under share-based payment transactions to which Ind AS 102 *Share-based Payment* applies, except for contracts to buy non-financial items as described below.

(h) Rights to payments to reimburse the entity for expenditure that it is required to make to settle a liability that it recognises as a provision in accordance with Ind AS 37 *Provisions, Contingent Liabilities and Contingent Assets*, or for which, in an earlier period, it recognised a provision in accordance with Ind AS 37.

(i) Rights and obligations within the scope of Ind AS 115 *Revenue from Contracts with Customers* that are financial instruments, except for those that Ind AS 115 specifies are accounted for in accordance with this Standard.

© The Institute of Chartered Accountants of India

Summary of the transaction outside the scope Financial Instruments:

Sl. No.	Particulars	Covered under Ind AS 109	Covered under Ind AS 32	Under Ind AS 107	Applicable Ind AS
1	Interest in subsidiaries (At Costs)	No	No	No	Ind AS 27
2	Interests in associates (At Costs)	No	No	No	Ind AS 27
3	Interest in joint ventures (At Costs)	No	No	No	Ind AS 27
4	Rights and obligations under leases	No	No	Yes	Ind AS 116
5	Employers' rights and obligations under employee benefit plans	No	No	No	Ind AS 19
6	Rights and obligations under an insurance contract	No	No	No	Ind AS 104
7	Forward contract arising within the scope of business combination	No	No	Yes	Ind AS 107
8	Loan commitment other than covered under Ind AS 109 and Ind AS 32	No	No	Yes	Ind AS 107
9	Shared based payments	No	No	No	Ind AS 102
10	Reimbursement right in respect of provision	No	No	Yes	Ind AS 37 and Ind AS 107
11	Rights and obligations under revenue for contracts with customers	No	No	Yes	Ind AS 115 and Ind AS 107

1.8 CONTRACTS TO BUY OR SELL NON-FINANCIAL ITEMS (‘OWN USE EXEMPTION’)

- Contracts to buy or sell non-financial items are outside the scope of ‘financial instruments’, except for the following:

  (a) Contracts to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments, as if the contracts were financial instruments, with the exception of contracts that were entered into and continue to be held for the purpose of the receipt or delivery of a non-financial item in accordance with the entity's expected purchase, sale or usage requirements.

Join us t.me/caborntofight

Merged By CA - Born To Fight

(b) A contract to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments that are irrevocably designated as measured at fair value through profit or loss (even if it was entered into for the purpose of the receipt or delivery of a non-financial item in accordance with the entity's expected purchase, sale or usage requirements). This designation is available only at inception of the contract and only if it eliminates or significantly reduces a recognition inconsistency (sometimes referred to as an 'accounting mismatch') that would otherwise arise from not recognising that contract because it is excluded from the scope of this Standard applying the scope exclusion in (a) above.

(c) A written option to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments, where such a contract was not entered into for the purpose of receipt or delivery of the non-financial item in accordance with entity's expected purchase, sale or usage requirements.

- There are various ways in which a contract to buy or sell non-financial items can be settled net in cash or another financial instrument or by exchanging financial instruments. These include:

  (a) when the terms of the contract permit either party to settle it net in cash or another financial instrument or by exchanging financial instruments;

  (b) when the ability to settle net in cash or another financial instrument, or by exchanging financial instruments, is not explicit in the terms of the contract, but the entity has a practice of settling similar contracts net in cash or another financial instrument or by exchanging financial instruments (whether with the counterparty, by entering into offsetting contracts or by selling the contract before its exercise or lapse);

  (c) when, for similar contracts, the entity has a practice of taking delivery of the underlying and selling it within a short period after delivery for the purpose of generating a profit from short-term fluctuations in price or dealer's margin; and

  (d) when the non-financial item that is the subject of the contract is readily convertible to cash.

Example 4

ABC Ltd. enters into a contract to buy 100 tonnes of cocoa beans at 1,000 per tonne for delivery in 12 months. On the settlement date, the market price for cocoa beans is 1,500 per tonne. If the contract cannot be settled net in cash and this contract is entered for delivery of cocoa beans in line with ABC Ltd.'s expected purchase/ usage requirements, then own-use exemption applies.

In such case, the contract is considered to be an executory contract outside the scope of Ind AS 109 and hence shall not be accounted as a derivative.

UNIT 2: CLASSIFICATION AND MEASUREMENT OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES

2.1 RECOGNITION AND SUBSEQUENT MEASUREMENT

All financial assets and financial liabilities are measured at their fair values upon initial recognition. Classification of the financial assets and financial liabilities drives their initial and subsequent measurement.

2.2 FINANCIAL ASSETS: KEY ELEMENTS TO DETERMINE CLASSIFICATION

Key essential elements that determine classification of financial assets are:

(A) Business model (BM) test:

- An entity's business model refers to how an entity manages its financial assets in order to generate cash flows.

Factors determining BM	❖ An entity's business model for managing financial assets is a matter of fact and not merely an assertion. It is typically observable through the activities that the entity undertakes to achieve the objective of the business model and an entity will need to use judgement when it assesses its business model for managing financial assets. ❖ This assessment is not determined by a single factor or activity. Instead, the entity must consider all relevant evidence that is available. Such relevant evidence includes, but is not limited to: (a) how the performance of business model and the financial assets held within that business model are evaluated & reported to the entity's key management personnel; (b) the risks that affect the performance of the business model (and the financial assets held within that business model) and, in particular, the way in which those risks are managed; and (c) how managers of the business are compensated (for example, whether the compensation is based on the fair value of the assets managed or on the contractual cash flows collected).

Level of aggregation of assets for determining BM	❖ An entity's business model is determined at a level that reflects how groups of financial assets are managed together to achieve a particular business objective and not based on management's intentions for an individual instrument. Accordingly, this condition is not an instrument-by-instrument approach to classification and should be determined at a higher level of aggregation. ❖ However, a single entity may have more than one business model for managing its financial instruments. Consequently, classification need not be determined at the reporting entity level. For example, an entity may hold a portfolio of investments that it manages in order to collect contractual cash flows and another portfolio of investments that it manages in order to trade to realise fair value changes.
Determining basis of realisation of contractual cash flows	❖ Entity's business model determines whether cash flows will result from collecting contractual cash flows, selling financial assets or both. Consequently, this assessment is not performed on the basis of scenarios that the entity does not reasonably expect to occur, such as so-called 'worst case' or 'stress case' scenarios. ❖ For example, if an entity expects that it will sell a particular portfolio of financial assets only in a stress case scenario, that scenario would not affect the entity's assessment of the business model for those assets if the entity reasonably expects that such a scenario will not occur.
Difference in actual realisation from BM	If cash flows are realised in a way that is different from the entity's expectations at the date that the entity assessed the business model (for example, if the entity sells more or fewer financial assets than it expected when it classified the assets), that does not give rise to a prior period error in the entity's financial statements nor does it change the classification of the remaining financial assets held in that business model (ie those assets that the entity recognised in prior periods and still holds) as long as the entity considered all relevant information that was available at the time that it made the business model assessment.

- **Financial assets held for trading:**

  Financial assets held for trading are defined as those that:

  (a) are acquired or incurred principally for the purpose of sale or repurchase in the near term;

  (b) on initial recognition are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking; or

  (c) are derivatives (except for those that are financial guarantee contracts or are designated effective hedging instruments).

  Trading generally reflects active and frequent buying and selling, and financial instruments held for trading are normally used with the objective of generating a profit from short-term fluctuations in price or a dealer's margin.

Illustration 1

An entity holds investments to collect their contractual cash flows. The funding needs of the entity are predictable and the maturity of its financial assets is matched to the entity's estimated funding needs.

The entity performs credit risk management activities with the objective of minimising credit losses. In the past, sales have typically occurred when the financial assets' credit risk has increased such that the assets no longer meet the credit criteria specified in the entity's documented investment policy. In addition, infrequent sales have occurred as a result of unanticipated funding needs.

Reports to key management personnel focus on the credit quality of the financial assets and the contractual return. The entity also monitors fair values of the financial assets, among other information.

Evaluate the business model.

Solution

- Although the entity considers, among other information, the financial assets' fair values from a liquidity perspective (ie the cash amount that would be realised if the entity needs to sell assets), the entity's objective is to hold the financial assets in order to collect the contractual cash flows.

- Sales would not contradict that objective if they were in response to an increase in the assets' credit risk, for example if the assets no longer meet the credit criteria specified in the entity's documented investment policy. Infrequent sales resulting from unanticipated funding needs (eg in a stress case scenario) also would not contradict that objective, even if such sales are significant in value.

Hence the business model of the company is to collect contractual cash flows and not realisation from sale of financial assets.

*****

Illustration 2

An entity's business model is to purchase portfolios of financial assets, such as loans. Those portfolios may or may not include financial assets that are credit impaired.

If payment on the loans is not made on a timely basis, the entity attempts to realise the contractual cash flows through various means—for example, by contacting the debtor by mail, telephone or other methods. The entity's objective is to collect the contractual cash flows and the entity does not manage any of the loans in this portfolio with an objective of realising cash flows by selling them.

In some cases, the entity enters into interest rate swaps to change the interest rate on particular financial assets in a portfolio from a floating interest rate to a fixed interest rate.

Evaluate the business model.

Solution

The objective of the entity's business model is to hold the financial assets in order to collect the contractual cash flows. The same analysis would apply even if the entity does not expect to receive all of the contractual cash flows (eg some of the financial assets are credit impaired at initial recognition).

Moreover, the fact that the entity enters into derivatives to modify the cash flows of the portfolio does not in itself change the entity's business model.

*****

Illustration 3

Entity B sells goods to customers on credit. Entity B typically offers customers up to 60 days following the delivery of goods to make payment in full. Entity B collects cash in

© The Institute of Chartered Accountants of India

accordance with the contractual cash flows of trade receivables and has no intention to dispose of the receivables.

Evaluate the business model.

Solution

Entity's B objective is to collect contractual cash flows from trade receivables and therefore, trade receivables meet the business model test for the purpose of classifying the financial assets at amortised cost.

*****

Illustration 4

An entity anticipates capital expenditure in a few years. The entity invests its excess cash in short and long-term financial assets so that it can fund the expenditure when the need arises. Many of the financial assets have contractual lives that exceed the entity's anticipated investment period.

The entity will hold financial assets to collect the contractual cash flows and, when an opportunity arises, it will sell financial assets to re-invest the cash in financial assets with a higher return. The managers responsible for the portfolio are remunerated based on the overall return generated by the portfolio.

Evaluate the business model.

Solution

The objective of the business model is achieved by both collecting contractual cash flows and selling financial assets. The entity will make decisions on an ongoing basis about whether collecting contractual cash flows or selling financial assets will maximise the return on the portfolio until the need arises for the invested cash.

In contrast, consider an entity that anticipates a cash outflow in five years to fund capital expenditure and invests excess cash in short-term financial assets. When the investments mature, the entity reinvests the cash in new short-term financial assets. The entity maintains this strategy until the funds are needed, at which time the entity uses the proceeds from the maturing financial assets to fund the capital expenditure. Only sales that are insignificant in value occur before maturity (unless there is an increase in credit risk). The objective of this contrasting business model is to hold financial assets to collect contractual cash flows.

*****

Illustration 5

An entity has a business model with the objective of originating loans to customers and subsequently selling those loans to a securitisation vehicle. The securitisation vehicle issues instruments to investors. The originating entity controls the securitisation vehicle and thus consolidates it.

The securitisation vehicle collects the contractual cash flows from the loans and passes them on to its investors. In the consolidated balance sheet, loans continue to be recognised because they are not derecognised by the securitisation vehicle.

Evaluate the business model.

Solution

The entity originating loans to customers has the objective of realising contractual cash flows on the loan portfolio only through sale to securitisation vehicle. However, the consolidated group originates loans with the objective of holding them to collect the contractual cash flows.

- Hence, the consolidated financial statements provide for a business model with the objective of collecting contractual cash flows by holding to maturity.
- And in separate financial statements of the entity originating loans to customers, business model is to collect cash flows through sale only.

*****

Illustration 6

A financial institution holds financial assets to meet liquidity needs in a 'stress case' scenario (eg, a run on the bank's deposits). The entity does not anticipate selling these assets except in such scenarios. The entity monitors the credit quality of the financial assets and its objective in managing the financial assets is to collect the contractual cash flows. The entity evaluates the performance of the assets on the basis of interest revenue earned and credit losses realised.

However, the entity also monitors the fair value of the financial assets from a liquidity perspective to ensure that the cash amount that would be realised if the entity needed to sell the assets in a stress case scenario would be sufficient to meet the entity's liquidity needs. Periodically, the entity makes sales that are insignificant in value to demonstrate liquidity.

Evaluate the business model.

Solution

The objective of the entity's business model is to hold the financial assets to collect contractual cash flows. The analysis would not change –

- If during a previous stress case scenario the entity had sales that were significant in value in order to meet its liquidity needs; or
- Recurring sales activity that is insignificant in value is not inconsistent with holding financial assets to collect contractual cash flows.

If the entity is required by its regulator to routinely sell financial assets to demonstrate that the assets are liquid, and the value of the assets sold is significant, the entity's business model is not to hold financial assets to collect contractual cash flows. Whether a third party imposes the requirement to sell the financial assets, or that activity is at the entity's discretion, is not relevant to the analysis.

In contrast, if an entity holds financial assets to meet its everyday liquidity needs and meeting that objective involves frequent sales that are significant in value, the objective of the entity's business model is not to hold the financial assets to collect contractual cash flows.

*****

(B) Contractual cash flows characteristics test:

Ind AS 109 requires an entity to classify a financial asset on the basis of its contractual cash flow characteristics if the financial asset is held –

i. within a business model whose objective is to hold assets to collect contractual cash flows; or

ii. within a business model whose objective is achieved by both collecting contractual cash flows and selling financial assets.

To do so, an entity is required to determine whether the asset's contractual cash flows are solely payments of principal and interest on the principal amount outstanding for the currency in which the financial asset is denominated.

- The key characteristics of cash flows to test if they are solely payments of principal and interest are as follows:

What is principal?	❖ Principal is the fair value of the financial asset at initial recognition. ❖ However, that principal amount may change over the life of the financial asset (for example, if there are repayments of principal).

Merged By CA - Born To Fight

Components of 'interest element'	**Contractual cash flows that are solely payments of principal and interest on the principal amount outstanding are consistent with a basic lending arrangement**. An originated or a purchased financial asset can be a basic lending arrangement irrespective of whether it is a loan in its legal form. ❖ In a basic lending arrangement, consideration for the time value of money and credit risk are typically the most significant elements of interest. ❖ However, in such an arrangement, interest can also include – ❖ consideration for other basic lending risks (for example, liquidity risk); ❖ costs (for example, administrative costs) associated with holding the financial asset for a particular period of time; and ❖ profit margin that is consistent with a basic lending arrangement. ❖ In extreme economic circumstances, interest can be negative if, for example, the holder of a financial asset either explicitly or implicitly pays for the deposit of its money for a particular period of time (and that fee exceeds the consideration that the holder receives for the time value of money, credit risk and other basic lending risks and costs). ❖ However, contractual terms that introduce exposure to risks or volatility in the contractual cash flows that is unrelated to a basic lending arrangement, such as exposure to changes in equity prices or commodity prices, do not give rise to contractual cash flows that are solely payments of principal & interest. ❖ Leverage is a contractual cash flow characteristic of some financial assets, that increases the variability of the contractual cash flows with the result that they do not have the economic characteristics of interest. Stand-alone option, forward and swap contracts are examples of financial assets that include such leverage. Thus, such contracts cannot be said to have contractual cash flows that are only payments of principal & interest and hence, cannot be subsequently measured at amortised cost or fair value through other comprehensive income.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Following are **examples** of contractual terms that result in contractual cash flows that are solely payments of principal and interest on the principal amount outstanding:

(a) a variable interest rate on a financial instrument, where this rate consists of consideration for –

- time value of money,
- credit risk associated with the principal amount outstanding during a particular period of time (the consideration for credit risk may be determined at initial recognition only, and so may be fixed); and
- other basic lending risks and costs, as well as a profit margin.

This is because this variable interest rate is only to provide the lender with a return through 'interest' based on present market factors and no other form of return on the principal amount of the financial instrument. So, it has characteristics of return similar to one on a basic lending arrangement and thus, meets definition of contractual cash flows that are solely payments of principal and interest.

(b) a contractual term that permits the issuer (ie the debtor) to prepay a debt instrument or permits the holder (ie the creditor) to put a debt instrument back to the issuer before maturity and the prepayment amount substantially represents unpaid amounts of principal and interest on the principal amount outstanding, which may include reasonable additional compensation for the early termination of the contract;

Reasonable additional compensation' implies that the party choosing to exercise its option to terminate the contract compensates the other party.

Exception

Some prepayment options could result in other party being forced to accept negative compensation – e.g. the lender receives an amount less than the unpaid amounts of principal and interest if the borrower chooses to prepay.

Earlier, these instruments were measured at FVTPL. However, now after amendment, such financial assets could be measured at amortised cost or at FVOCI if they meet the other relevant requirements of Ind AS 109.

To be eligible for the exception, the fair value of the prepayment feature would have to be insignificant on initial recognition of the asset. If this is impracticable to assess based on the facts and circumstances that existed on initial recognition of the asset, then the exception would not be available. Also, financial assets prepayable at current fair value would be measured at FVTPL. The same would apply if the prepayment amount includes the fair value cost to terminate a

Merged By CA - Born To Fight

hedging instrument if the amount is inconsistent with the current Ind AS 109 prepayment rules. (The measurement principles given here have been explained in detail in the subsequent sections).

(c) a contractual term that permits the issuer or the holder to extend the contractual term of a debt instrument (ie an extension option) and the terms of the extension option result in contractual cash flows during the extension period that are solely payments of principal and interest on the principal amount outstanding, which may include reasonable additional compensation for the extension of the contract.

Illustration 7

Instrument A is a bond with a stated maturity date. Payments of principal and interest on the principal amount outstanding are linked to an inflation index of the currency in which the instrument is issued. The inflation link is not leveraged and the principal is protected.

Evaluate the Contractual cash flows characteristics test

Solution

The contractual cash flows are solely payments of principal and interest on the principal amount outstanding. Linking payments of principal and interest on the principal amount outstanding to an unleveraged inflation index resets the time value of money to a current level. In other words, the interest rate on the instrument reflects 'real' interest. Thus, the interest amounts are consideration for the time value of money on the principal amount outstanding.

However, if the interest payments were indexed to another variable such as the debtor's performance (eg the debtor's net income) or an equity index, the contractual cash flows are not payments of principal and interest on the principal amount outstanding (unless the indexing to the debtor's performance results in an adjustment that only compensates the holder for changes in the credit risk of the instrument, such that contractual cash flows are solely payments of principal and interest). That is because the contractual cash flows reflect a return that is inconsistent with a basic lending arrangement.

*****

Illustration 8

Instrument F is a bond that is convertible into a fixed number of equity instruments of the issuer. Analyse the nature of cash flows.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

The holder would analyse the convertible bond in its entirety. The contractual cash flows are not payments of principal and interest on the principal amount outstanding because they reflect a return that is inconsistent with a basic lending arrangement; ie the return is linked to the value of the equity of the issuer.

*****

Illustration 9

Instrument H is a perpetual instrument but the issuer may call the instrument at any point and pay the holder the par amount plus accrued interest due.

Instrument H pays a market interest rate but payment of interest cannot be made unless the issuer is able to remain solvent immediately afterwards. Deferred interest does not accrue additional interest. Analyse the nature of cash flows.

Solution

The contractual cash flows are not payments of principal and interest on the principal amount outstanding. That is because the issuer may be required to defer interest payments and additional interest does not accrue on those deferred interest amounts. As a result, interest amounts are not consideration for the time value of money on the principal amount outstanding.

If interest accrued on the deferred amounts, the contractual cash flows could be payments of principal and interest on the principal amount outstanding.

*****

Illustration 10

Instrument D is loan with recourse and is secured by collateral. Does the collateral affect the nature of contractual cash flows?

Solution

The fact that a loan is collateralised (since with recourse) does not in itself affect the analysis of whether the contractual cash flows are solely payments of principal and interest on the principal amount outstanding. The collateral is only a security to recover dues.

*****

Join us t.me/caborntofight

Illustration 11

Instrument G is a loan that pays an inverse floating interest rate (ie the interest rate has an inverse relationship to market interest rates). Analyse the nature of cash flows.

Solution

Here, interest on the instrument has an inverse relationship to the market rate of interest. Hence, it is unlike a basic lending arrangement which normally comprises of interest payable on any funds lent, as a consideration for the time value of money, credit risk and profit margin normally existing in such arrangements. This arrangement with an inverse floating interest rate provides the lender with a return which may be higher or lower to the market rate of interest and hence, is not necessarily a consideration for the time value of money on the principal amount outstanding.

Thus, these do not represent contractual cash flows that are solely payments of principal and interest on the principal amount outstanding.

*****

2.3 FINANCIAL ASSETS: CLASSIFICATION – OVERALL CONCEPT

Categorisation of financial assets (FA) is determined based on the business model that determines how cash flows of the financial asset are collected and the contractual cash flow characteristics; and can be:

(a) Measured at **Amortised cost**

(b) Measured at fair value through comprehensive income (**FVOCI**)

(c) Measured at fair value through profit or loss (**FVTPL**).

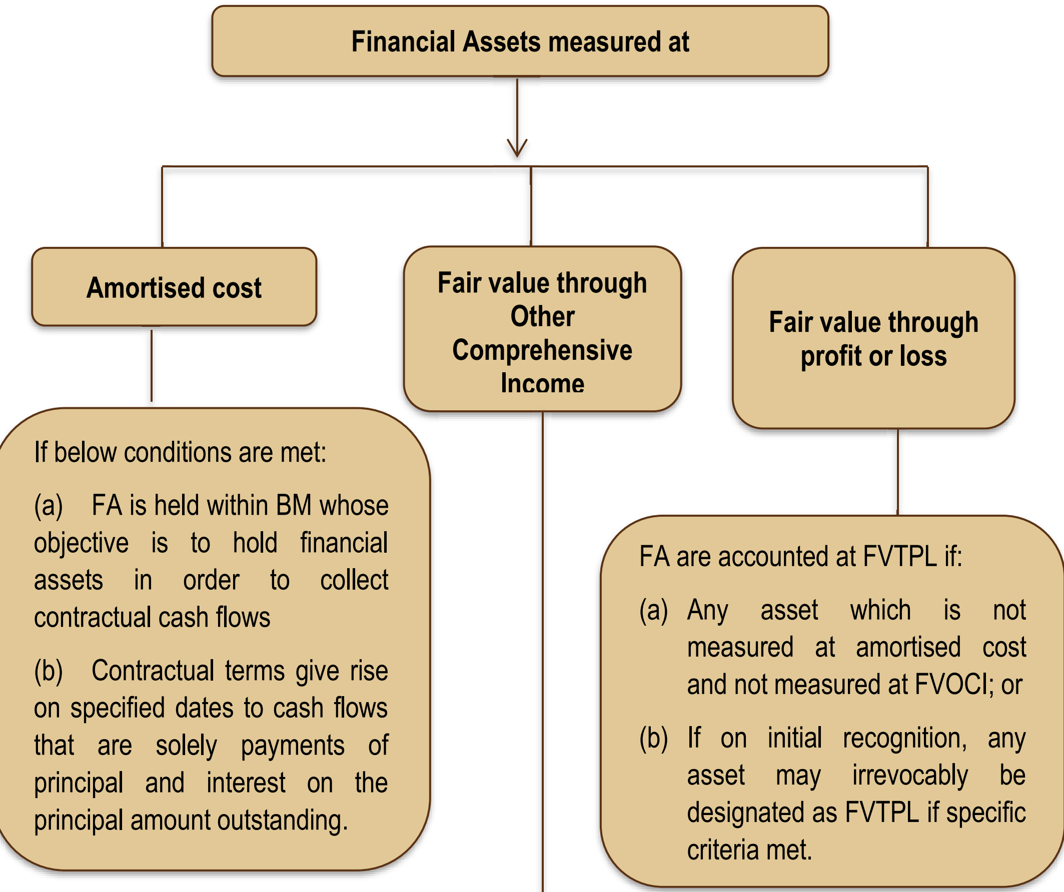
- As per Ind AS 109.4.1.1 – Except for financial assets designated as fair value through profit or loss (refer Ind AS 109.4.1.5), an entity shall classify financial assets as subsequently measured at amortised cost, fair value through other comprehensive income or fair value through profit or loss on the basis of both:

  (a) Entity's **business model** (BM) for managing the financial assets and

  (b) **Contractual cash flow** characteristics of the financial asset.

Merged By CA - Born To Fight

- Categorisation of financial assets has been broadly laid out in the below flow chart:



❖ FA shall be measured at FVOCI if below conditions are met:

(a) FA is held within BM whose objective is achieved both by collecting contractual cash flows and selling FA

(b) Contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding

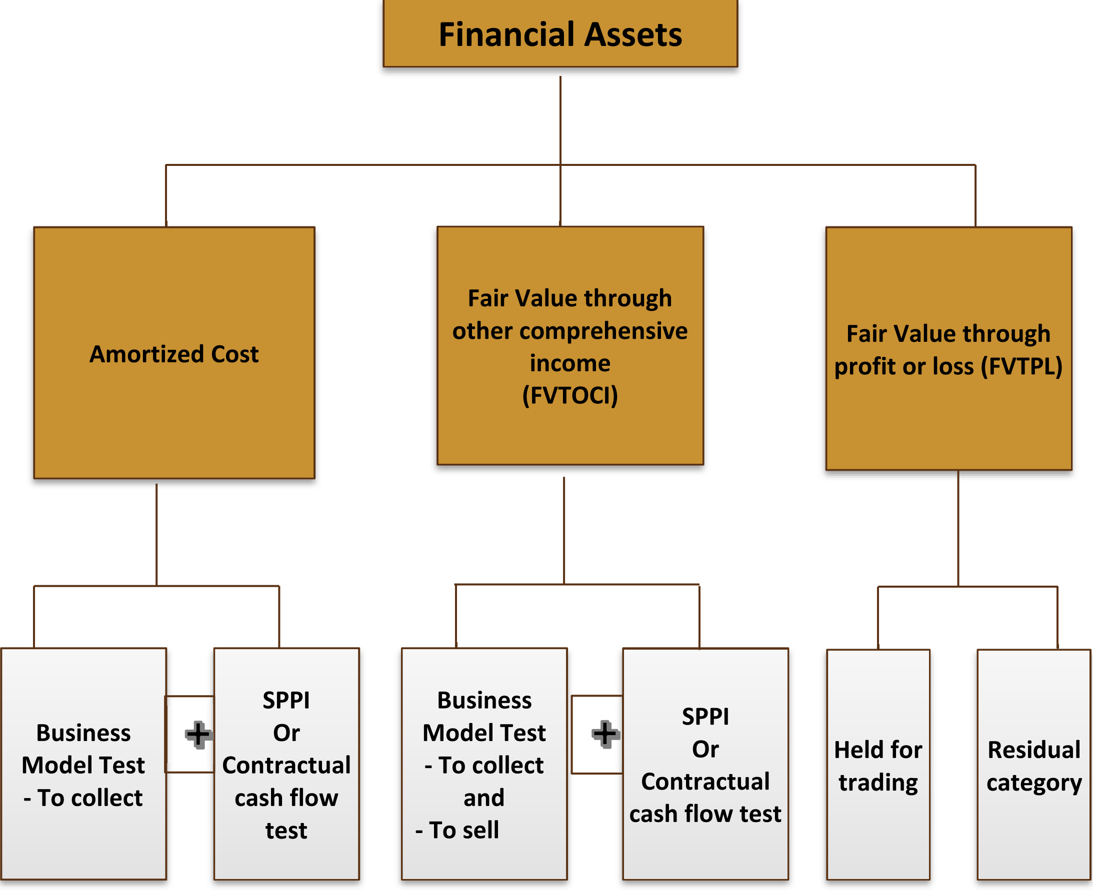
❖ Equity instruments that are not held for trading and contingent consideration in business combination for which the entity makes an irrevocable election, on initial recognition, to carry at fair value through OCI

Join us t.me/caborntofight

- **Exception to classification based on above criteria mentioned in para 109.4.1.1 – Option to designate at fair value through profit or loss:**

  An entity may, at initial recognition, irrevocably designate a financial asset as measured at fair value through profit or loss if doing so eliminates or significantly reduces a measurement or recognition inconsistency (sometimes referred to as an **'accounting mismatch'**) that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases

  The decision of an entity to designate a financial asset or financial liability as at fair value through profit or loss is similar to an accounting policy choice (although, unlike an accounting policy choice, it is not required to be applied consistently to all similar transactions). When an entity has such a choice, paragraph 14(b) of IAS 8 requires the chosen policy to result in the financial statements providing reliable and more relevant information about the effects of transactions, other events and conditions on the entity's financial position, financial performance or cash flows.



1. Financial Assets at Amortised cost

- **What is Amortised cost**
  - **Amortised cost** is the amount at which the financial asset is measured at initial recognition minus the principal repayments, plus or minus the cumulative amortisation using the **effective interest method** of any difference between that initial amount and the maturity amount and, for financial assets, adjusted for any loss allowance.
  - **In applying effective interest method –**

    (a) Entity identifies fees that are an integral part of the effective interest rate of a financial instrument. Fees that are an integral part of the effective interest rate of a financial instrument are treated as an adjustment to the effective interest rate, unless the financial instrument is measured at fair value, with the change in fair value being recognised in profit or loss. In those cases, the fees are recognised as revenue or expense when the instrument is initially recognised.

    (b) Such fees adjusted in effective interest rate are then amortised over then expected life of the instrument. However, a shorter period may be used if such fee adjusted in effective interest rate pertains to such shorter period.

- **Financial asset (FA) shall be classified at amortised cost if it meets both of following criteria:**

  1. **'Hold-to-collect' business model test -** Objective is to hold the financial asset in order to collect contractual cash flows;

     AND

  2. **'SPPI' contractual cash flow characteristics test -** Contractual terms give rise to cash flows that are **Solely Payments of Principal and Interest (SPPI)** on the principal amount outstanding.

- **Examples of Financial assets classified and accounted for at amortised cost:**
  - Trade receivables
  - Investments in government bonds (not held for trading)
  - Investments in term deposits (at standard interest rates)
  - Loan receivables with 'basic' features

  Investment in Equity instrument can never be classified at amortized cost.

Merged By CA - Born To Fight

Illustration 12 : Hold-to-collect' business model test

An entity purchased a debt instrument for 1,00,000.

The instrument pays interest of 6,000 annually and has 10 years to maturity when purchased. The entity intends to hold the asset to collect the contractual cash flows.

Evaluate the business model test.

Solution

Entity's objective is to hold the asset to collect the contractual cash flows and not to sell the assets before the maturity period.

Thus, the debt instrument would meet the 'hold-to-collect' business model test.

*****

Illustration 13 : Hold-to-collect' business model test

An entity purchased a debt instrument for 1,00,000.

The instrument pays interest of 6,000 annually and has 10 years to maturity when purchased. The entity intends to hold the asset to collect the contractual cash flows.

Six years have passed and the entity is suffering a liquidity crisis and needs to sell the asset to raise funds.

Evaluate the business model test.

Solution

Since the sale of financial assets was not expected on initial classification and therefore, does not affect the classification (i.e. there is no retrospective reclassification).

Thus, the debt instrument would still meet the 'hold-to-collect' business model test.

*****

Illustration 14 : SPPI or contractual cash flow test

SPPI test for loan with zero interest and no fixed repayment terms

Parent H Ltd. provides a loan to its Subsidiary S Ltd. The loan is classified as a current liability in Subsidiary S's financial statements and has the following terms:

– Interest free loan.

– No fixed repayment terms

– Repayable on demand of Parent H Ltd.

Does the loan meet the 'SPPI' or contractual cash flows characteristic test?

Join us t.me/caborntofight

Solution

Yes. The terms for the repayment of the principal amount of the loan on demand satisfies the criterion of SPPI.

*****

Illustration 15 : SPPI Test for loan with zero interest repayable in ten years

Parent H Ltd. provides a loan of INR 100 million to Subsidiary B. The loan has the following terms:

– No interest

– Repayable in ten years.

Does the loan meet the 'SPPI' or contractual cash flows characteristic test?

Solution

Yes. The terms for the repayment of the principal amount of the loan in 10 years satisfies the criterion of SPPI.

*****

Illustration 16 : SPPI Test for loan with interest rate

Entity A Ltd. lends Entity B Ltd. INR 5 million for ten years, subject to the following terms:

– Interest is based on the prevailing variable market interest rate.

– Variable interest rate is capped at 10%.

– Repayable in ten years.

Does the loan meet the 'SPPI' or contractual cash flows characteristic test?

Solution

Contractual cash flows of both a fixed rate instrument and a floating rate instrument are payments of principal and interest as long as the interest reflects consideration for the time value of money and credit risk.

Therefore, a loan that contains a combination of a fixed and variable interest rate meets the contractual cash flow characteristics test.

*****

Illustration 17: Trade receivables – Amortised cost

H Ltd. makes sale of goods to customers on credit of 60 days. The customers are entitled to earn a cash discount @ 5% per annum if payment is made before 60 days and an interest @ 12% per annum is charged for any payments made after 60 days. Company does not have a policy of selling its debtors and holds them to collect contractual cash flows.

Evaluate the financial instrument.

Solution

In the above case, since H Ltd. has a contractual right to receive cash flows from its customers and therefore such trade receivable are financial assets for H Ltd.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Further, H Ltd. business model test to collect will satisfy as the objective is to hold its trade receivable to collect contractual cash flows till the end of maturity period and such trade receivable recorded in books represents contractual cash flows that are solely payments of principal and interest if paid beyond credit period.

Hence such trade receivables are classified at amortised cost.

*****

Illustration 18: Security Deposits – Amortized Costs

A Ltd. (the 'Company') has obtained the premises from B Ltd. on lease to carry on its business. The lease contract period is 5 years. As per the lease agreement, A Ltd. has paid security deposits to B Ltd. amounting to ₹ 10 Lac which is refundable after the expiry of lease agreement.

How would such deposits be treated in books of the A Ltd. ?

Solution

In the above case, since A Ltd. has a contractual right to receive cash flows from its Lessor, B Ltd. and therefore such security deposits receivable are financial assets for A Ltd.

Further, A Ltd. business model test to collect will be satisfied as the objective is to hold its security deposits receivable to collect contractual cash flows till the end of maturity period. And such trade receivable recorded in books represents contractual cash flows that are solely payments of principal and interest.

Hence such security deposits receivables are classified at amortised cost.

*****

2. Financial Assets at Fair Value at Other Comprehensive Income

A. Accounting for debt instruments when it is classified as FVOCI

- **Financial asset (FA) is measured at fair value through OCI (FVOCI) if it meets both of following criteria:**
  1. **'Hold-to-collect and sell' business model test -** Objective is achieved by both holding the financial asset in order to collect contractual cash flows and selling the financial asset i.e. Intention of the entity is to sell the instrument before the investment matures.

     AND

  2. **'SPPI' contractual cash flow characteristics test -** Contractual terms give rise to cash flows that are Solely Payments of Principal and Interest (SPPI) on the principal amount outstanding.
- **Examples of FA classified and accounted for at FVOCI:**
  - ♦ Investments in government bonds where the investment period is likely to be shorter than its maturity period.
  - ♦ Investments in corporate bonds where the investment period is likely to be shorter than its maturity period.

Illustration 19 : Hold-to-collect' or 'hold-to-collect & sell' business model test

Entity A has surplus funds – INR 50 million

A has not yet found suitable investment opportunity so it buys medium dated (5 year maturity) high quality government bonds in order to generate interest income.

If a suitable investment opportunity arises before the maturity date, the entity will sell the bonds and use the proceeds for the acquisition of a business operation. It is likely that a suitable business opportunity will be found before maturity date.

Whether the investment opportunity will meet the 'hold-to-collect' or 'hold-to-collect & sell business model test?

Solution

Government bonds would not meet the 'hold-to-collect' business model test because it is considered likely that the bonds will be sold well before their contractual maturity.

However, it is likely that such investment would meet the 'hold-to-collect and sell' business model test.

*****

B. Equity instrument when it is classified as FVOCI

- Ind AS 109 requires all equity investments to be measured at fair value. The default approach is that all changes in fair value of instruments to be recognised in profit or loss.
- However, for equity investments that are not held for trading, entities can make an irrevocable election at initial recognition to classify the instruments as at FVOCI, with all subsequent changes in fair value being recognised in other comprehensive income.
- Under FVOCI category, fair value changes are recognised in OCI while dividends are recognised in profit or loss.
- On disposal of the investment the cumulative change in fair value is required to remain in OCI and is not reclassified to profit or loss. However, entities have the ability to transfer amounts between reserves within equity (i.e. between the FVOCI reserve and retained earnings).

3. Financial Assets at profit and loss

- **Fair value through profit or loss (FVTPL) is the residual category in Ind AS 109.**
- **Financial asset (FA) classified and measured at FVTPL if FA is:**
  - A held-for-trading financial asset
  - A debt instrument that does not qualify to be measured at amortised cost or FVOCI
  - An equity investment which the entity has not elected to classify as at FVOCI

- **Examples of Financial assets classified and accounted for at fair value through profit or loss (FVTPL):**
  - ♦ Derivatives that have not been designated in a hedging relationship, e.g.:
    - Interest rate swaps
    - Commodity futures/option contracts
    - Foreign exchange futures/option contracts
  - ♦ Investments in shares where the entity has not elected to account for at FVOCI.

2.4 FINANCIAL ASSETS: MEASUREMENT

Measurement of financial assets is driven by their classification and can be broadly explained with the help of following diagrammatic presentation:

Measurement of Financial Assets

Initial measurement

Fair value –
❖ Normally evidenced by the transaction price (ie, fair value of consideration given or received)
❖ Where part of consideration is for other than the financial instrument, then entity shall measure fair value of the financial instrument

Subsequent measurement

FA measured at Amortised cost

Fair value at initial recognition
❖ Principal repayments
❖ Cumulative interest using EIR*

❖ Interest. Dividend recorded in P&L
❖ Gains/ losses also recorded in P&L

FA measured at fair value [FVTPL/ FVOCI]

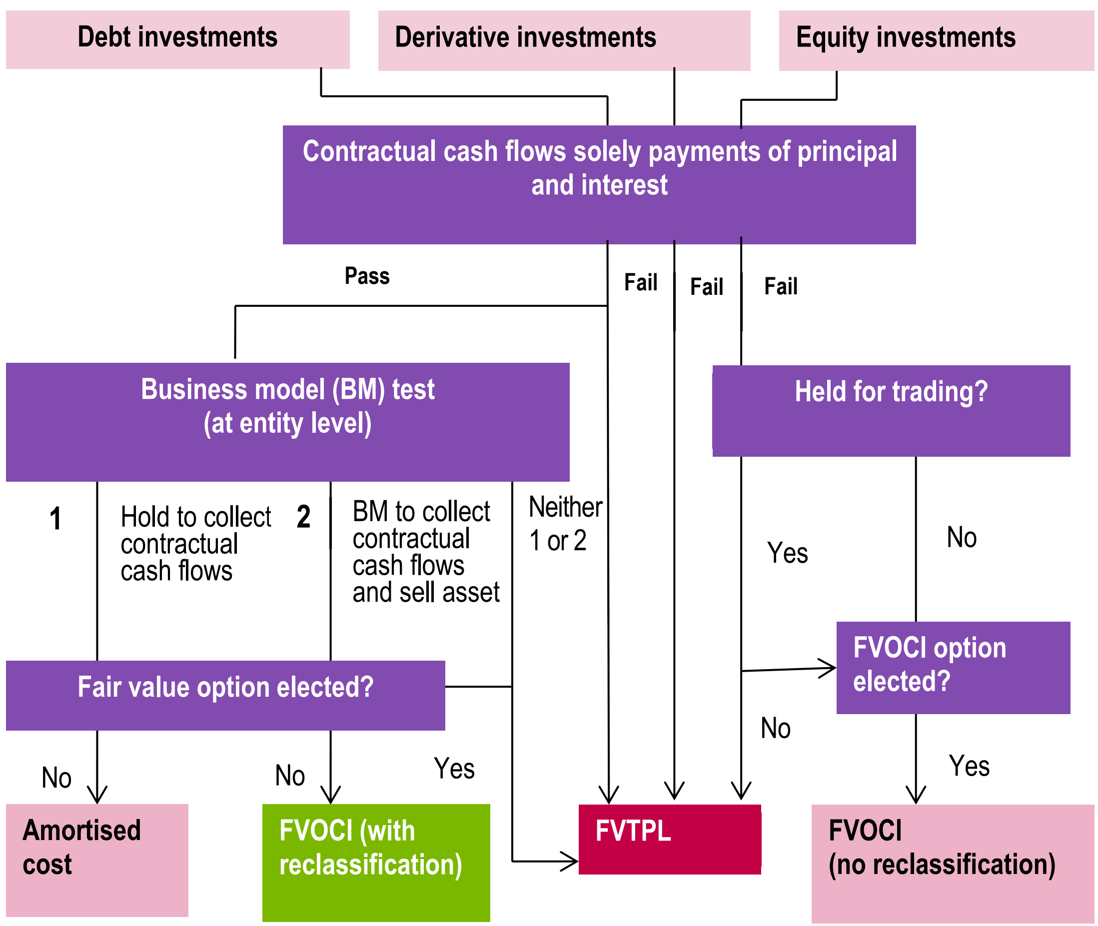
❖ Fair value determined periodically
❖ For equity instruments – cost may represent fair value in some situations

For FVTPL/FVOCI debt instruments–
❖ Interest / Dividend recorded in P&L
❖ Gains/ losses also recorded in P&L

For FVOCI equity instruments –
❖ Dividend recorded in P&L Gains / losses recorded in OCI

*EIR – Effective interest rate method

Based on the above mentioned guidance, the decision tree for classification of financial assets can be understood with the help of following flow chart:



Accounting for transaction costs for the purpose of Effective interest rate method

Fees that are integral part of effective interest rate	Fees that are not an integral part of effective interest rate
(a) **Origination fee** received by the entity relating to the creation or acquisition of a financial asset. Such fees may include compensation for activities such as evaluating the borrower's financial condition, evaluating and recording guarantees, collateral and other security arrangements, negotiating the terms of the instrument, preparing and processing documents and closing the transaction. These fees are an integral part of generating an involvement with the resulting financial instrument.	(a) **Fee** charged for **servicing a loan**;

Fees that are integral part of effective interest rate	Fees that are not an integral part of effective interest rate
(b) **Commitment fee** received by the entity **to originate a loan where it is probable that the entity will enter into a specific lending arrangement.** These fees are regarded as compensation for an ongoing involvement with the acquisition of a financial instrument. If the commitment expires without the entity making the loan, the fee is recognised as revenue on expiry.	(b) **Commitment fee** to originate a loan when it is **unlikely that a specific lending arrangement will be entered into**;
(c) **Origination fee** paid on issuing financial asset measured at amortised cost. These fees are an integral part of generating an involvement with a financial liability. An entity distinguishes fees and costs that are an integral part of the effective interest rate for the financial liability from origination fees and transaction costs relating to the right to provide services, such as investment management services.	(c) **Loan syndication fee** received by an entity that arranges a loan and retains no part of the loan package for itself (or retains a part at the same effective interest rate for comparable risk as other participants).

Illustration 20

ABC Bank gave loans to a customer – Target Ltd. that carry fixed interest rate @ 10% per annum for a 5 year term and 12% per annum for a 3 year term. Additionally, the bank charges processing fees @1% of the principal amount borrowed. Target Ltd borrowed loans as follows:

- 10 lacs for a term of 5 years

- 8 lacs for a term of 3 years.

Compute the fair value upon initial recognition of the loan in books of Target Ltd. and how will loan processing fee be accounted?

Solution

The loans from ABC Bank carry interest @ 10% and 12% for 5 year term and 3 year term respectively. Additionally, there is a processing fee payable @ 1% on the principal amount on date of transaction. It is assumed that ABC Bank charges all customers in a similar manner and hence this is representative of the market rate of interest.

Amortised cost is computed by discounting all future cash flows at market rate of interest. Further, any transaction fees that are an integral part of the transaction are adjusted in the effective interest rate and recognised over the term of the instrument.

Hence loan processing fees shall be reduced from the principal amount to arrive the value on day 1 upon initial recognition.

Join us t.me/caborntofight

Fair value (5 year term loan) = 10,00,000 – 10,000 (1% x 10,00,000) = 9,90,000

Fair value (3 year term loan) = 8,00,000 – 8,000 (1% x 8,00,000) = 7,92,000.

Now, effective interest rate shall be higher than the interest rate of 10% and 12% on 5 year loan and 3 year loan respectively, so that the processing fees gets recognised as interest over the respective term of loans.

*****

- **Fair value**

  Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

  Per Ind AS 113.B2 – The objective of a fair value measurement is to estimate the price at which an orderly transaction to sell the asset or to transfer the liability would take place between market participants at the measurement date under current market conditions. A fair value measurement requires an entity to determine all the following:

  (a) the particular asset or liability that is the subject of the measurement (consistently with its unit of account);

  (b) for a non-financial asset, the valuation premise that is appropriate for the measurement (consistently with its highest and best use);

  (c) the principal (or most advantageous) market for the asset or liability.

  (d) the valuation technique(s) appropriate for the measurement, considering the availability of data with which to develop inputs that represent the assumptions that market participants would use when pricing the asset or liability and the level of the fair value hierarchy within which the inputs are categorised.

  Now, we go on to understand the key aspects of initial and subsequent measurement along with how classification of assets affects their measurement as explained in detail below:

2.5 FINANCIAL ASSETS: INITIAL MEASUREMENT

Fair value of a financial instrument at initial recognition is **normally the transaction price** (,ie, fair value of consideration given or received).

- **Instrument at off-market terms:** Sometimes certain type of instruments may be exchanged at off market terms (,ie, different from market terms for a similar instrument if exchanged between market participants),

  - For example, a long-term loan or receivable that carries no interest while similar instruments if exchanged between market participants carry interest, then fair value for such loan receivable will be lower from its transaction price owing to the loss of interest that the holder bears. In such cases where part of the consideration given or

Merged By CA - Born To Fight

received is for something other than the financial instrument, an entity shall measure the fair value of the financial instrument.

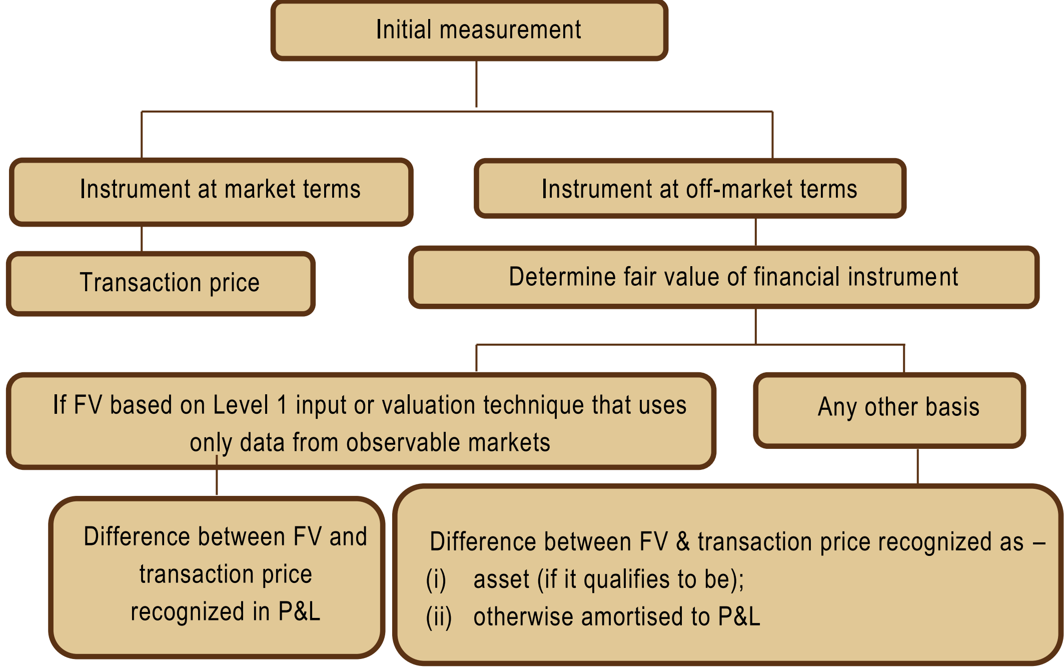
- In the aforementioned example, the fair value of the long-term loan or receivable can be measured as the present value of all future cash receipts discounted using the prevailing market rate(s) of interest for a similar instrument (similar as to currency, term, type of interest rate and other factors) with a similar credit rating. The additional amount lent is an expense or a reduction of income unless it qualifies for recognition as some other type of asset.

- **Transaction costs:**

  - Transaction costs include fees and commission paid to agents (including employees acting as selling agents), advisers, brokers and dealers, levies by regulatory agencies and security exchanges, and transfer taxes and duties. Transaction costs do not include debt premiums or discounts, financing costs or internal administrative or holding costs.
  - Any transaction costs incurred for acquisition of the financial asset or issue of financial liability are adjusted upon initial recognition while determining fair value, if the financial asset or financial liability is not classified as subsequently measured at fair value through profit or loss.
  - If an entity originates a loan that bears an off-market interest rate (eg 5 per cent when the market rate for similar loans is 8 per cent), and receives an upfront fee as compensation, the entity recognises the loan at its fair value, ie net of the fee it receives.

    The decision tree for the aforementioned basis to be applied in establishing fair value at initial recognition can be understood with following diagrammatic presentation:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight



- **Specific transactions:**

  - **Determining amortised cost for financial assets carrying floating rate of interest:**

    Per Application Guidance in Appendix B – B.5.4.5 – For floating rate financial instruments, periodic re-estimation of cash flows to reflect movements in market rates of interest alters the effective interest rate. To calculate the effective interest in each relevant period, the effective interest rate is applied to the amortised cost of the asset or liability at the previous reporting date. However, if the floating rate financial asset or financial liability is initially recognised at an amount equal to the principal receivable or payable on maturity, then this periodic re-estimation does not have a significant effect on the carrying amount of the asset or liability.

    Therefore, in such cases, for practical reasons the carrying amount of a floating rate instrument would not generally need to be adjusted at each repricing date because the impact would not generally be significant. In such case –

    (a) Interest income or expense is recognised based on the current market rate.

    (b) For a floating rate financial asset or financial liability that is initially recognised at a discount or premium, the interest income or expense is recognised based on the current market rate plus or minus amortisation or accretion of the discount or premium.

Merged By CA - Born To Fight

- **Revision of estimated cash flows:**

  Per Application Guidance in Appendix B to Ind AS 109 – B.5.4.6 – If there is a change in the timing or amount of estimated future cash flows (other than due to impairment) –

  - It shall adjust the gross carrying amount of the financial asset or amortised cost of a financial liability (or group of financial instruments) to reflect actual and revised estimated contractual cash flows.

  - The entity recalculates the gross carrying amount of the financial asset or amortised cost of the financial liability as the present value of the estimated future contractual cash flows that are discounted at the financial instrument's **original effective interest rate** (or credit-adjusted effective interest rate for purchased or originated credit-impaired financial assets)

  Then the carrying amount of the instrument (or group of financial instruments) is adjusted in the period of change to reflect the actual and/or revised estimated cash flows, with a corresponding gain or loss being recognised in profit or loss.

  This approach to changes in estimated cash flows should apply to changing prepayment expectations and other estimates of cash flows under the current terms of the financial instrument but not to a renegotiation of the contractual terms of an instrument.

- **Interest income after impairment recognition**

  If a financial asset or a group of similar financial assets has been written down as a result of an impairment loss –

  - Then interest income is thereafter recognised using the rate of interest used to discount the future cash flows for the purpose of measuring the impairment loss.

  - For assets measured at amortised cost, this interest rate would be the original effective interest rate.

- **Loans between group companies**

  (a) Repayable on demand:

  As per Ind AS 113.47 – The fair value of a financial liability with a demand feature - e.g. a demand deposit - is not less than the amount payable on demand, discounted from the first date that the entity could be required to repay the amount. Accordingly –

  - The fair value of an interest-free loan liability of which the lender can demand repayment of the face value at any time - i.e. a loan repayable on demand - is not less than its face value.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- This would evenly apply from the perspective of the lender, since a market participant acting in its best interest would be assumed to maximize value by demanding immediate repayment and hence, the fair value shall be equal to the amount payable on demand in books of lender.

(b) No fixed maturity:

If a loan has no fixed maturity date and is available in perpetuity, then in measuring its fair value, discounting should reflect these terms because a market participant acting in its best interest would not assume repayment of the loan. Similarly, the asset holder or lender would also measure fair value that should reflect a market participant's assumptions about the timing of the future cash flows.

In both of above cases–

- Any difference between the amount lent and the fair value of the instrument on initial recognition is recognized as a gain or a loss unless it qualifies for recognition as an asset or a liability.
- If a low-interest loan is given in anticipation of a right to receive goods or services at favourable prices, then the right may be recognised as an asset if it qualifies for recognition as an asset, for example: prepaid expenses, etc.

♦ **Demand deposits**

The fair value of a financial liability with a demand feature - e.g. a demand deposit - is not less than the amount payable on demand, discounted from the first date that the entity could be required to repay the amount.

Hence, fair value of a demand deposit would be the amount payable on demand in books of the party making the deposit (ie, holder of financial asset) as well as in books of entity accepting the deposit (ie, bearer of financial liability).

Illustration 21: Deposits carrying off-market rate of interest:

Containers Ltd provides containers for use by customers for multiple purposes. The containers are returnable at the end of the service contract period (3 years) between Containers Ltd and its customers. In addition to the monthly charge, there is a security deposit that each customer makes with Containers Ltd for ₹ 10,000 per container and such deposit is refundable when the service contract terminates. Deposits do not carry any interest. Analyse the fair value upon initial recognition in books of customers leasing containers. Market rate of interest for 3 year loan is 7% per annum.

Solution

In the above case, lessee (ie, customers leasing the containers) make interest free deposits, which are refundable at the end of 3 years. Now, this money if it was to lent to a third party would fetch interest @ 7% per annum.

Hence, discounting all future cash flows (ie, ₹ 10,000)

Fair value on initial recognition = 10,000 / $(1+0.07)^3$ = 8,163.

Differential on day 1 = 10,000 – 8,163 = 1,837

The differential on day 1 shall be treated as follows:

- **Scenario 1 –** If fair valuation is determined using level 1 inputs or other observable inputs, difference on day 1 recognised in profit or loss
- **Scenario 2 –** If fair valuation is determined using other inputs, difference on day 1 shall be recognised in profit or loss unless it meets definition of an asset or liability.

However, in case of security deposits level 1 fair value is not available. Therefore, in the above case, the fair valuation is made based on unobservable inputs and hence applying scenario 2, difference can be recognised as an asset if it meets the definition. Now, since the lessee gets to use the containers in return for making an interest free deposit plus monthly charges, the lost interest representing day 1 difference between value of deposit and its fair value is like ‘'prepaid lease rent' and can be recognised as such. Prepaid rent (ROU Asset) shall be charged off to profit or loss in a straight lined manner as depreciation as per Ind AS 16.

*****

2.6 FINANCIAL ASSETS: SUBSEQUENT MEASUREMENT

- As defined in the flow chart above, the subsequent measurement of financial assets is based on their classification as defined below:

(A) Assets measured at amortised cost

- ♦ Assets are classified as measured at amortised cost if below conditions are met (as explained in paragraph – Financial assets: classification):
  - (a) Financial asset is held with BM whose objective is to hold financial assets in order to collect contractual cash flows; and
  - (b) Contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding
- ♦ Where assets are classified as 'amortised cost' –
  - They are initially measured at fair value plus or minus transaction costs as explained above
  - Subsequently, the carrying value is adjusted for principal repayments and interest accrued using effective interest rate, as explained earlier.

(B) Assets measured at fair value

- For assets not carried at amortised cost, they shall be carried at fair value. Such assets can be categorised into –

  i. **Measured at fair value through other comprehensive income (FVOCI)**; if–

  (a) Following criteria are satisfied:

  - FA is held with BM whose objective is achieved both by collecting contractual cash flows and selling FA; and
  - Contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding

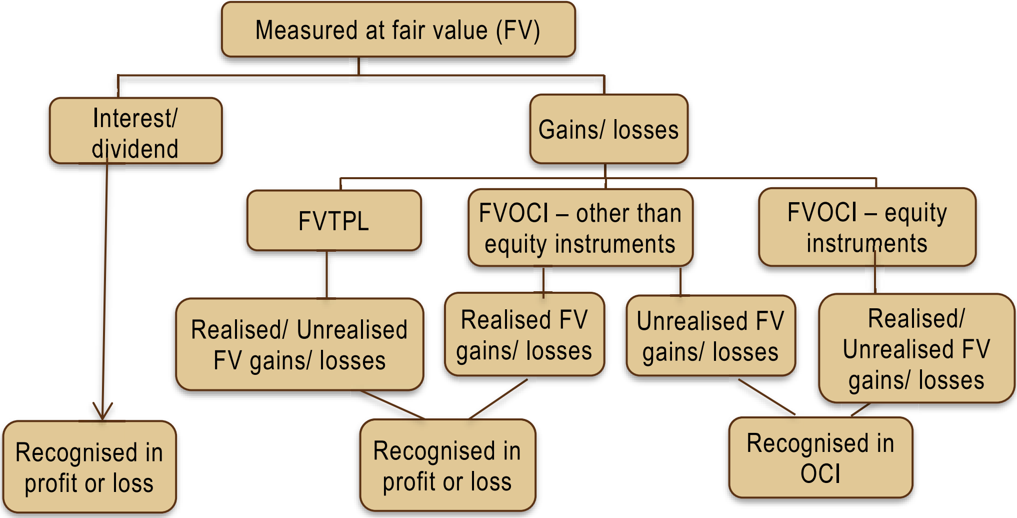
  Or

  (b) An equity instrument, which otherwise shall be carried at fair value through profit or loss may be irrevocably recognised at fair value through other comprehensive income,

  ii. **Measured at fair value through profit or loss (FVTPL):**

  All assets not classified as 'measured at amortised cost' or 'measured at fair value through OCI' shall be classified in this category.

Incomes and/ or expenses on assets measured at fair value shall be recognised as follows:



- If a financial instrument that was previously recognised as a financial asset is measured at fair value through profit or loss and its fair value decreases below zero, it is a financial liability measured at fair value.

- **Equity instruments – where FV not determinable**

  - All investments in equity instruments and contracts on those instruments must be measured at fair value. However, in limited circumstances, cost may be an appropriate estimate of fair value. That may be the case if insufficient more recent information is available to measure fair value, or if there is a wide range of possible fair value measurements and cost represents the best estimate of fair value within that range

  - **Indicators that cost might not be representative of fair value include:**

    (a) a significant change in the performance of the investee compared with budgets, plans or milestones.

    (b) changes in expectation that the investee's technical product milestones will be achieved.

    (c) a significant change in the market for the investee's equity or its products or potential products.

    (d) a significant change in the global economy or the economic environment in which the investee operates.

    (e) a significant change in the performance of comparable entities, or in the valuations implied by the overall market.

    (f) internal matters of the investee such as fraud, commercial disputes, litigation, changes in management or strategy.

    (g) evidence from external transactions in the investee's equity, either by the investee (such as a fresh issue of equity), or by transfers of equity instruments between third parties.

  - The list above is not exhaustive. An entity shall use all information about the performance and operations of the investee that becomes available after the date of initial recognition. To the extent that any such relevant factors exist, they may indicate that cost might not be representative of fair value. In such cases, the entity must measure fair value.

  - Cost is never the best estimate of fair value for investments in quoted equity instruments (or contracts on quoted equity instruments).

Join us t.me/caborntofight

Illustration 22: Accounting for transaction costs on initial and subsequent measurement of a financial asset measured at fair value with changes through other comprehensive income:

An entity acquires a financial asset for CU 100 plus a purchase commission of CU 2. Initially, the entity recognises the asset at CU 102. The reporting period ends one day later, when the quoted market price of the asset is CU 100. If the asset were sold, a commission of CU 3 would be paid. How would transaction costs be accounted in books of the entity?

Solution

- On that date, the entity measures the asset at CU 100 (without regard to the possible commission on sale) and recognises a loss of CU 2 in other comprehensive income.
- If the financial asset is measured at fair value through other comprehensive income in accordance with Ind AS 109.4.1.2A, the transaction costs are amortised to profit or loss using the effective interest method.

*****

Illustration 23: Determining fair value upon initial measurement

The shareholders of Company C provide C with financing in the form of loan notes to enable it to acquire investments in subsidiaries. The loan notes will be redeemed solely out of dividends received from these subsidiaries and become redeemable only when C has sufficient funds to do so. In this context, 'sufficient funds' refers only to dividend receipts from subsidiaries. Analyse the initial measurement of loan notes.

Solution

In this case –

Loan notes are repayable only when C earns returns in form of dividends from subsidiaries. Hence, C cannot be forced to obtain additional external financing or to liquidate its investments to redeem the shareholder loans. Consequently, the loan notes are not considered payable on demand.

Accordingly –

- Loan notes shall be initially measured at their fair value, being the present value of the expected future cash flows, discounted using a market-related rate. The amount and timing of the expected future cash flows should be determined on the basis of the expected dividend flow from the subsidiaries. Also, the valuation would need to take

Merged By CA - Born To Fight

into account possible early repayments of principal and corresponding reductions in interest expense.

- Since the loan notes are interest-free or bear lower-than-market interest, there will be a difference between the nominal value of the loan notes - i.e. the amount granted - and their fair value on initial recognition. Because the financing is provided by shareholders, acting in the capacity of shareholders, the resulting credit should be reflected in equity as a shareholder contribution in C's balance sheet. Conversely, in books of shareholders, the difference between amount invested and its fair value shall be recorded as 'investment in C Ltd' being representative of the underlying relationship between shareholders and C Ltd.

*****

Illustration 24 : Use of cost v/s fair value determination for equity instruments

Silver Ltd. has made an investment in optionally convertible preference shares (OCPS) of a Company – Bronze Ltd. at ₹ 100 per share (face value ₹ 100 per share). Silver Ltd. has an option to convert these OCPS into equity shares in the ratio of 1:1 and if such option not exercised till end of 9 years, then the shares shall be redeemable at the end of 10 years at a premium of 20%.

Analyse the measurement of this investment in books of Silver Ltd.

Solution

The classification assessment for a financial asset is done based on two characteristics:

i. Whether the contractual cash flows comprise cash flows that are solely payments of principal and interest on the principal outstanding

ii. Entity's business model (BM) for managing financial assets – Whether the Company's BM is to collect cash flows; or a BM that involves realisation of both contractual cash flows & sale of financial assets;

In all other cases, the financial assets are measured at fair value through profit or loss.

In the above case, the Holder can realise return either through conversion or redemption at the end of 10 years, hence it does not indicate contractual cash flows that are solely payments of principal and interest. Therefore, such investment shall be carried at fair value through profit or loss. Accordingly, the investment shall be measured at fair value periodically with gain/ loss recorded in profit or loss.

Illustration 25 : Accounting for assets at amortised cost

A Ltd has made a security deposit whose details are described below. Make necessary journal entries for accounting of the deposit in the first year and last year. Assume market interest rate for a deposit for similar period to be 12% per annum.

Particulars	*Details*
Date of Security Deposit (Starting Date)	*1-Apr-20X1*
Date of Security Deposit (Finishing Date)	*31-Mar-20X6*
Description	*Lease*
Total Lease Period	*5 years*
Discount rate	*12.00%*
Security deposit (A)	*10,00,000*
Present value factor at the 5th year	*0.567427*

Solution

The above security deposit is an interest free deposit redeemable at the end of lease term for ₹ 10,00,000. Hence, this involves collection of contractual cash flows and shall be accounted at amortised cost.

Upon initial measurement –

Particulars	Details
Security deposit (A)	10,00,000
Total Lease Period (Years)	5
Discount rate	12.00%
Present value factor of 5th year end	0.56743
Present value of deposit at beginning (B)	5,67,427
Prepaid lease payment at beginning (A-B)	4,32,573

Journal Entries

Year – 1 beginning

Particulars		Amount	Amount
Security deposit A/c	Dr.	5,67,427	
Right-of-Use Asset	Dr.	4,32,573	
To Bank A/c			10,00,000

Subsequently, every annual reporting year, interest income shall be accrued @ 12% per annum and prepaid expenses shall be amortised on straight line basis over the lease term.

Year 1 end

Particulars		Amount	Amount
Security deposit A/c (5,67,427 x 12%)	Dr.	68,091	
To Interest income A/c			68,091

At the end of 5th year, the security deposit shall accrue ₹ 10,00,000 and prepaid lease expenses shall be fully amortised (i.e. depreciated as per Ind AS 116, this prepaid lease rent would be shown as ROU asset). Journal entry for realisation of security deposit –

Particulars		Amount	Amount
Security deposit A/c	Dr.	1,07,143	
To Interest income A/c			1,07,143
Bank A/c	Dr.	10,00,000	
To Security deposit A/c			10,00,000

*****

Illustration 26 : Accounting for assets at FVTPL

A Ltd. invested in equity shares of C Ltd. on 15th March for ₹ 10,000. Transaction costs were ₹ 500 in addition to the basic cost of ₹ 10,000. On 31 March, the fair value of the equity shares was ₹ 11,200 and market rate of interest is 10% per annum for a 10 year loan. Pass necessary journal entries. Analyse the measurement principle and pass necessary journal entries.

Solution

The above investment is in equity shares of C Ltd and hence, does not involve any contractual cash flows that are solely payments of principal and interest. Hence, these equity shares shall be measured at fair value through profit or loss. Also, an irrecoverable option exists to designate such investment as fair value through other comprehensive income.

Journal Entries

Particulars		Amount	Amount
Upon initial recognition –			
Investment in equity shares of C Ltd.	Dr.	10,000	
Transaction cost	Dr.	500	
To Bank A/c			10,500

Illustration 27: Accounting for assets at FVOCI

Metallics Ltd. has made an investment in equity instrument of a company – Castor Ltd. for 19% equity stake. Significant influence not exercised. The investment was made for ₹ 5,00,000 for 10,000 equity shares on 01 April 20X1. On 30 June 20X1 the fair value per equity share is ₹ 45. The Company has taken an irrevocable option to measure such investment at fair value through other comprehensive income.

Solution

The Company has made an irrecoverable option to carry its investment at fair value through other comprehensive income. Accordingly, the investment shall be initially recognised at fair value and all subsequent fair value gains/ losses shall be recognised in other comprehensive income (OCI).

Illustration 28: Accounting for assets at Amortised Cost

XYZ Ltd. is a company incorporated in India. It provides INR 10,00,000 interest free loan to its wholly owned Indian subsidiary (ABC). There are no transaction costs.

How should the loan be accounted for, in the separate financial statements of XYZ, individual financial statements of ABC and consolidated financial statements of the group?

Consider the following scenarios:

a) *The loan is repayable on demand.*

b) *The loan is repayable after 3 years. The current market rate of interest for similar loan is 10% p.a. for both holding and subsidiary.*

c) *The loan is repayable when ABC has funds to repay the loan.*

Solution

Ind AS 109 requires that a financial assets and liabilities are recognized on initial recognition at its fair value, as adjusted for the transaction cost. In accordance with Ind AS 113 Fair Value Measurement, the fair value of a financial liability with a demand feature (e.g., a demand deposit) is not less than the amount payable on demand, discounted from the first date that the amount could be required to be paid.

Using the guidance, the loan will be accounted for as below in various scenarios:

Scenario (a)

Since the loan is repayable on demand, it has fair value equal to cash consideration given. The parent and subsidiary recognize financial asset and liability, respectively, at the amount of loan given. Going forward, no interest is accrued on the loan.

Upon repayment, both the parent and the subsidiary reverse the entries made at origination.

Join us t.me/caborntofight

Scenario (b)

Both parent and subsidiary recognize financial asset and liability, respectively, at fair value on initial recognition. The difference between the loan amount and its fair value is treated as an equity contribution to the subsidiary. This represents a further investment by the parent in the subsidiary.

Accounting in the books of XYZ Ltd (Parent)

	Period of interest - for 2nd year	1
	Closing value at the end of year 2	9,09,091
	Interest for 2nd year	82,645
4	**Computation of interest for Year 3**	
	Value of loan as at the beginning of Year 3	9,09,091
	Rate	10%
	Period of interest - for 3rd year	1
	Closing value at the end of year 3	10,00,000
	Interest for 3rd year	90,909

Scenario (c)

Generally, a loan, which is repayable when funds are available, can't be stated to be repayable on demand. Rather, the entities need to estimate repayment date and determine its measurement accordingly. If the loan is expected to be repaid in three years, its measurement will be the same as in scenario (b).

In the Consolidated Financial Statements (CFS), the loan and interest income/expense will get eliminated as intra-group transaction in all three scenarios. Hence the above accounting will not have any impact in the CFS. However, if the loan is in foreign currency, exchange difference will continue to impact the statement of profit and loss in accordance with the requirements of Ind AS 21.

*****

2.7 FINANCIAL LIABILITIES: CLASSIFICATION

- Upon initial recognition, all financial liabilities are measured at fair value. Subsequently, per Ind AS 109.4.2.1 – the classification of financial liabilities shall be as follows:

  (A) Measured at amortised cost

  (B) Measured at fair value through profit or loss:

  - Liabilities that meet the definition of "held for trading"
  - Contingent consideration recognized by an acquirer in a business combination

  (C) Designated at fair value through profit or loss

  (D) Other specific measurement basis (with changes recognized in profit or loss):

Merged By CA - Born To Fight

- financial liabilities that arise when a transfer of a financial asset does not qualify for derecognition or when the continuing involvement approach applies: refer paragraph 3.2.15 or 3.2.17 of Ind AS 109
- financial guarantee contracts and commitments to provide a loan at a below-market interest rate are subsequently measured at higher of:
  - the amount of the loss allowance, and
  - the amount initially recognised less, when appropriate, the cumulative amount of income recognised in accordance with the principles of Ind AS 115."

Irrespective of above classification, any financial liabilities may be designated at fair value through profit or loss if:

i. It eliminates or significantly reduces a measurement or recognition inconsistency (**'accounting mismatch'**) that would otherwise arise from measuring assets or liabilities; or their gains on a different basis; or

ii. A group of financial liabilities and financial assets is managed and its performance is evaluated on fair value basis, in accordance with a documented risk management or investment strategy, and information about that group is provided internally on that basis to the entity's key management personnel.

- **Financial assets and financial liabilities held for trading:**
  - Financial assets and liabilities held for trading are defined as those that:

    (a) are acquired or incurred principally for the purpose of sale or repurchase in the near term;

    (b) on initial recognition are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking; or

    (c) are derivatives (except for those that are financial guarantee contracts or are designated effective hedging instruments).

    Trading generally reflects active and frequent buying and selling, and financial instruments held for trading are normally used with the objective of generating a profit from short-term fluctuations in price or a dealer's margin.
  - In addition to derivatives that are not accounted for as hedging instruments, financial liabilities held for trading include:

    (a) obligations to deliver financial assets borrowed by a short seller (i.e. an entity that sells financial assets it has borrowed and does not yet own);

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(b) financial liabilities that are incurred with an intention to repurchase them in the near term, such as quoted debt instruments that the issuer may buy back in the near term depending on changes in fair value; and

(c) financial liabilities that are part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent pattern of short-term profit-taking.

However, the fact that a liability is used merely to fund trading activities does not in itself make that liability one that is held for trading.

Illustration 29 : Trade creditors at market terms

A Company purchases its raw materials from a vendor at a fixed price of ₹ 1,000 per tonne of steel. The payment terms provide for 45 days of credit period, after which an interest of 18% per annum shall be charged. How would the creditors be classified in books of the Company?

Solution

In the above case, creditors for purchase of steel shall be carried at amortised cost, ie, fair value of amount payable upon initial recognition plus interest (if payment is delayed). Here, fair value upon initial recognition shall be the price per tonne. The transaction price is representative of fair value.

*****

Illustration 30

An entity is about to purchase a portfolio of ***fixed rate assets*** *that will be* ***financed by fixed rate debentures****. Both financial assets and financial liabilities are subject to the same interest rate risk that gives rise to opposite changes in fair value that tend to offset each other. Provide your comments.*

Solution

The fixed rate assets provide for contractual cash flows and based on business model of the entity, such fixed rate assets may be classified as 'amortised cost' (if entity collects contractual cash flows) or fair value through other comprehensive income (FVOCI) (if entity manages through collecting contractual cash and sale of financial assets).

In the absence of fair value option, the entity can classify the fixed rate assets as FVOCI with gains and losses on changes in fair value recognised in other comprehensive income and fixed rate debentures at amortised cost. However, reporting both assets and liabilities at fair value through profit and loss, ie, FVTPL corrects the measurement inconsistency and produces more relevant information.

Hence, it may be appropriate to classify the entire group of fixed rate assets and fixed rate debentures at fair value through profit or loss (FVTPL).

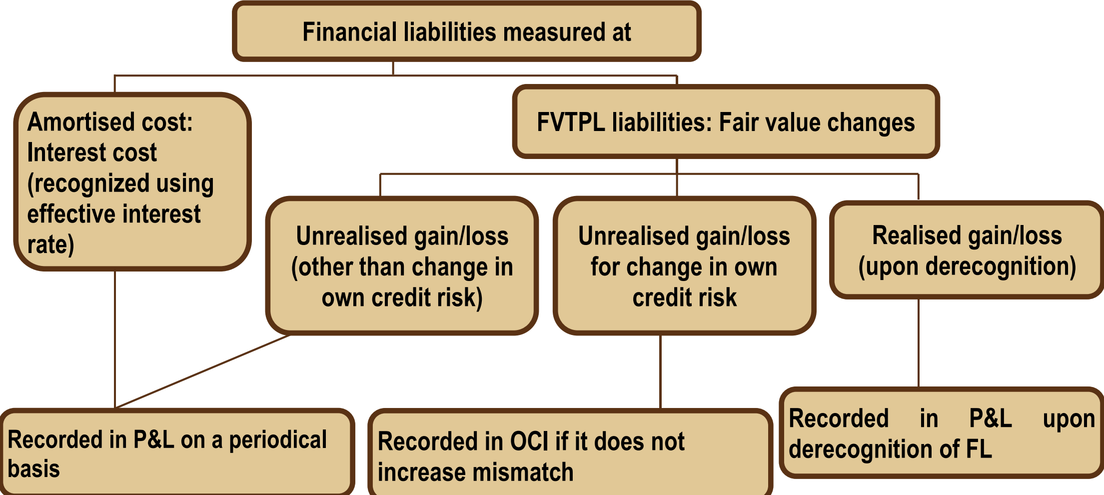
2.8 FINANCIAL LIABILITIES: MEASUREMENT

- Measurement of financial liabilities is driven by their classification upon initial recognition as follows:



- **Specific transactions – restructuring of financial liability**

  If the terms of a financial liability are modified substantially, resulting in an extinguishment of the old financial liability, then the old liability is derecognised and the restructured financial instrument is treated as a new financial liability. If a modification of a financial liability results in derecognition of the financial liability, then the effective interest rate of the new financial liability is calculated based on the revised terms of the financial liability at the date of the modification. In this case, any costs or fees incurred are recognised as part of the gain or loss on extinguishment and do not adjust the carrying amount of the new liability.

  If the exchange or modification is not accounted for as an extinguishment, then any costs and fees incurred are recognised as an adjustment to the carrying amount of the liability. For changes in future cash flows, the entity shall revised the amortised cost of the financial liability to reflect revised future cash flows by discounting them to their present value at the original effective interest rate. The difference between the carrying value and revised amortised cost is recognized as a gain or loss in profit or loss.

  Modification is considered to be substantial if the discounted present value of the cash flows under the new terms including any fees paid net of any fees received and discounted using the original effective interest rate is at least 10% different from the discounted present value of the remaining cash flows of the original financial liability. Only fees paid or

received between the borrower and the lender including fees paid or received by either the borrower or lender on the other's behalf are considered in this 10% test.

Illustration 31: Issue of borrowings with fixed rate of interest

A Ltd has borrowed from RBC Bank ₹ 10,000 at a fixed interest of 10% per annum. Loan processing fees were additionally paid for ₹ 500 and loan is payable after 5 years in bullet repayment of principal. Details are as follows:

Particulars	Details
Loan amount	*₹ 10,000*
Date of loan (Starting Date)	*1-Apr-20X1*
Date of repayment of principal amount (Finishing Date)	*31-March-20X6*
Interest rate	*10.00%*
Interest charge	*Interest to be charged and paid yearly*
Upfront fees	*₹ 500*

How would loan be accounted in books of A Ltd?

Solution

The loan taken by A Ltd shall be measured at amortised cost as follows:

- Initial measurement – At transaction price less processing fees

  = 10,000 – 500 = 9,500

- Subsequently – interest to be accrued using effective rate of interest as follows:

Year end	Opening balance	Interest @ 11.42%	Repayment of interest & principal	Closing balance
1	9,500	1,085	1,000	9,585
2	9,585	1,095	1,000	9,679
3	9,679	1,105	1,000	9,785
4	9,785	1,117	1,000	9,902
5	9,902	1,098*	11,000	-

* Difference due to approximation

Computation of IRR

IRR would be the rate using which the present value of cash flow should come out to be ₹ 9,500 i.e. (₹ 10,000 less ₹ 500).

For this, we should first compute present value of cashflows using any two rates as follows:

Join us t.me/caborntofight

Year end	Opening balance	Repayment/Cashflows	Closing balance	PVF @ 10%	Present Value at 10% rate	PVF @ 13%	Present Value at 13% rate
1	9,500	1,000	8,500	0.909	909	0.885	885
2	8,500	1,000	7,500	0.826	826	0.783	783
3	7,500	1,000	6,500	0.751	751	0.693	693
4	6,500	1,000	5,500	0.683	683	0.613	613
5	5,500	11,000	(5,500)	0.621	6,830	0.543	5,970*
					10,000		**8,945**

*Difference is due to approximation

Taking 10% as discount rate, present value (PV) comes out to be ₹ 10,000.

If rate is increased by 3% over a base rate of 10%, PV decreases by ₹ 1,055 (i.e. ₹ 10,000 less ₹ 8945).

To decrease PV by ₹ 1,055, rate should be increased = 3%

To decrease PV by Re.1, rate should be increased = $\frac{3\%}{1,055}$

To decrease PV by ₹ 500, rate should be increased = 3% x (500/1,055)

= 1.42%

This would mean that the discount rate to get present value of cashflows equivalent to ₹ 9,500 should be 11.42% (i.e. 10% + 1.42%).

Illustration 32: Issue of borrowings with fixed rate of interest

A Ltd has made a borrowing from RBC Bank for ₹ 10,000 at a fixed interest of 12% per annum. Loan processing fees were additionally paid for ₹ 500 and loan is payable 4 half-yearly instalments of ₹ 2,500 each. Details are as follows:

Particulars	*Details*
Loan amount	*₹ 10,000*
Date of loan (Starting Date)	*1-Apr-20X1*
Date of loan (Finishing Date)	*31-March-20X3*
Description of repayment	*Repayment of loan starts from 30-Sept-20X1 (To be paid half yearly)*
Installment amount	*₹ 2,500*
Interest rate	*12.00%*

Interest charge	*Interest to be charged quarterly*
Upfront fees	*₹ 500*

How would loan be accounted in books of A Ltd?

Consider IRR is 16.60% p.a.

Solution

The loan taken by A Ltd shall be measured at amortised cost as follows:

- Initial measurement – At transaction price less processing fees

  = 10,000 – 500 = 9,500

- Subsequently – interest to be accrued using effective rate of interest as follows:

Date	Amount of Loan	Re-payment	Upfront fees paid	Amount of Interest	Days	IRR Calcula-tion	Revised Interest computed	Loan Balance
1-Apr-20X1	10,000	-	500	-	-	9,500	-	-
30-Jun-20X1	-	-	-	300	90	(300)	389	9,589
30-Sep-20X1	-	2500	-	300	92	(2,800)	401	7,190
31-Dec-20X1	-	-	-	225	92	(225)	301	7,266
31-Mar 20X2	-	2500	-	225	90	(2,725)	297	4,838
30-Jun-20X2	-	-	-	150	91	(150)	200	4,888
30-Sep-20X2	-	2500	-	150	92	(2,650)	204	2,442
31-Dec-20X2	-	-	-	75	92	(75)	102	2,473
31-Mar-20X3	-	2500	-	75	91	(2,575)	102	-
					IRR	**16.60%**

Illustration 33: Accounting treatment of processing fees belonging to undisbursed loan amount

X Ltd. had taken 6 year term loan in April 20X0 from bank and paid processing fees at the time of sanction of loan.

The term loan is disbursed in different tranches from April 20X0 to April 20X6. On the date of transition to Ind AS, i.e. 1.4.20X5, it has calculated the net present value of term loan disbursed upto 31.03.20X5 by using effective interest rate and proportionate processing fees has been adjusted in disbursed amount while calculating net present value.

What will be the accounting treatment of processing fees belonging to undisbursed term loan amount?

Solution

Processing fee is an integral part of the effective interest rate of a financial instrument and shall be included while calculating the effective interest rate.

(a) Accounting treatment in case future drawdown is probable

It may be noted that to the extent there is evidence that it is probable that the undisbursed term loan will be drawn down in the future, the processing fee is accounted for as a transaction cost under Ind AS 109, i.e., the fee is deferred and deducted from the carrying value of the financial liabilities when the draw down occurs and considered in the effective interest rate calculations.

(b) Accounting treatment in case future drawdown is not probable

If it is not probable that the undisbursed term loan will be drawn down in the future, then the fees is recognised as an expense on a straight-line basis over the term of the loan.

*****

Illustration 34: Accounting treatment of prepayment premium and processing fees for obtaining new loan to prepay old loan

PQR Limited had obtained term loan from Bank A in 20X1-20X2 and paid loan processing fees and commitment charges.

In May 20X5, PQR Ltd. has availed fresh loan from Bank B as take-over of facility i.e. the new loan is sanctioned to pay off the old loan taken from Bank A. The company paid prepayment premium to Bank A to clear the old term loan and paid processing fees to Bank B for the new term loan.

Whether the prepayment premium and the processing fees both will be treated as transaction cost (as per Ind AS 109, Financial Instruments) of obtaining the new loan, in the financial statements of PQR Ltd?

Solution

(a) Accounting treatment of prepayment premium

Ind AS 109, provides that if an exchange of debt instruments or modification of terms is accounted for as an extinguishment, any costs or fees incurred are recognised as part of the gain or loss on the extinguishment in the statement of profit and loss.

Since the original loan was prepaid, the prepayment would result in extinguishment of the original loan. The difference between the CV of the financial liability extinguished and the consideration paid shall be recognised in profit or loss as per Ind AS 109.

Accordingly, the prepayment premium shall be recognised as part of the gain or loss on extinguishment of the old loan.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(b) Accounting treatment of unamortised processing fee of old loan

Processing fees are not amortised separately from the loan. Processing fees are part of EIR and therefore are amortised with the loan. Therefore, the accounting treatment of unamortised processing fee will be the same as for the loan that is derecognised from financial liability and recognised in profit or loss. In other words, unamortised processing fee related to the old loan will also be required to be charged to the statement of profit and loss.

(c) Accounting treatment of processing fee for new loan

Transaction costs are "Incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument."

It is assumed that the loan processing fees solely relates to the origination of the new loan (i.e. does not represent loan modification/renegotiation fees). Hence, the processing fees paid to avail fresh loan from Bank B will be considered as transaction cost in the nature of origination fees of the new loan and will be included while calculating effective interest rate as per Ind AS 109.

*****

Illustration 35: Accounting treatment of share held as stock in trade

A share broking company is dealing in sale/purchase of shares for its own account and therefore is having inventory of shares purchased by it for trading.

How will these instruments be accounted for in the financial statements?

Solution

Ind AS 2, Inventories, states that this Standard applies to all inventories, except financial instruments (Ind AS 32, Financial Instruments: Presentation and Ind AS 109, Financial Instruments).

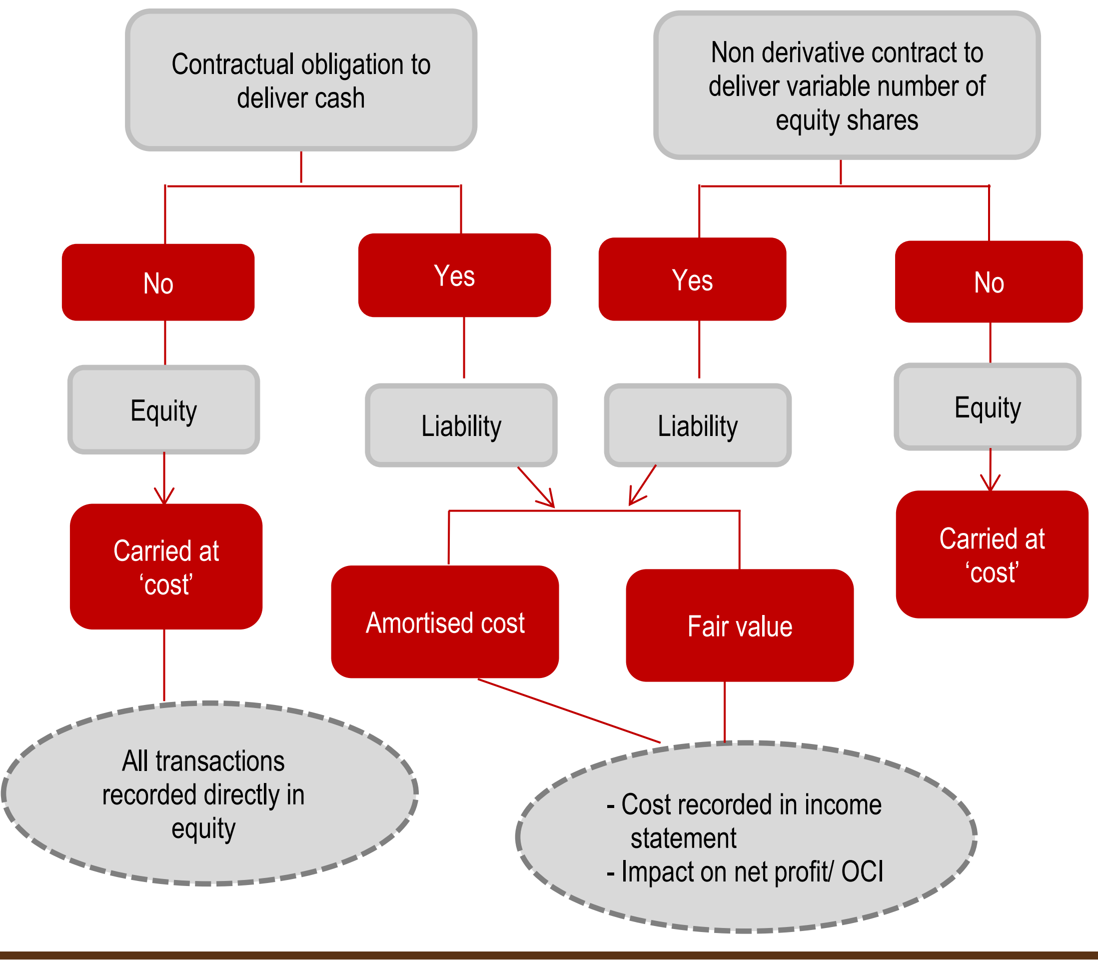
Accordingly, the principles of recognising and measuring financial instruments are governed by Ind AS 109, its presentation is governed by Ind AS 32 and disclosures are in accordance with Ind AS 107, Financial Instruments: Disclosures, even if these instruments are held as stock-in trade by a company.

Further Ind AS 101, First-time Adoption of Indian Accounting Standards does not provide any transitional relief from the application of the above standards.

Accordingly, in the given case, the relevant requirements of Ind AS 109, Ind AS 32 and Ind AS 107 shall be applied retrospectively.

*****

Difference between measurement requirements of financial liability and equity and their comparison can be understood with the help of following diagrammatic presentation –



2.9 RECLASSIFICATION OF FINANCIAL ASSETS AND FINANCIAL LIABILITIES

Per Ind AS 109.4.4.1 – An entity shall reclassify financial assets, *only* if the entity changes its business model for managing those financial assets.

- **Such changes are expected to be very infrequent.** Such changes are determined by the entity's senior management as a result of external or internal changes and must be significant to the entity's operations and demonstrable to external parties. Accordingly, a change in an entity's business model will occur only when an entity either begins or ceases to perform an activity that is significant to its operations; for example, when the entity has acquired, disposed of or terminated a business line.

- **Examples** of a change in business model include the following:

  (a) An entity has a portfolio of commercial loans that it holds to sell in the short term. The entity acquires a company that manages commercial loans and has a business model that holds the loans in order to collect the contractual cash flows. The portfolio of commercial loans is no longer for sale, and the portfolio is now managed together with the acquired commercial loans and all are held to collect the contractual cash flows.

  (b) A financial services firm decides to shut down its retail mortgage business. That business no longer accepts new business and the financial services firm is actively marketing its mortgage loan portfolio for sale.

- **Accounting for reclassification of financial assets:**

  ♦ A change in the objective of the entity's business model must be effected before the reclassification date. For example, if a financial services firm decides on 15 February to shut down its retail mortgage business and hence must reclassify all affected financial assets on 1 April (ie the first day of the entity's next reporting period), the entity must not accept new retail mortgage business or otherwise engage in activities consistent with its former business model after 15 February.

  ♦ If an entity reclassifies any financial asset, it must do so **prospectively from reclassification date.**

  ♦ The entity shall **not restate** any previously recognised gains, losses (including impairment gains or losses) or interest.

- **Following are not changes in business model:**

  (a) a change in intention related to particular financial assets (even in circumstances of significant changes in market conditions);

  (b) the temporary disappearance of a particular market for financial assets;

  (c) a transfer of financial assets between parts of the entity with different business models.

- **Following changes in circumstances are not reclassifications:**

  (a) an item that was previously a designated and effective hedging instrument in a cash flow hedge or net investment hedge no longer qualifies as such;

  (b) an item becomes a designated and effective hedging instrument in a cash flow hedge or net investment hedge; and

  (c) changes in measurement for a financial instrument, if the entity takes credit derivative that is measured at fair value through profit or loss to manage the credit risk of all, or part of such financial instrument and consequently, the underlying financial instrument is also designated at fair value through profit or loss.

- **Financial liabilities are not permitted to be reclassified.**

  Illustrative examples:

  - **Case 1:** Amortised cost to FVTPL
    - It is measured at fair value on reclassification date.
    - Any gain or loss arising from difference between the previous amortised cost of the financial asset and fair value is recognised in profit or loss.

Illustration 36

Bonds for ₹ 1,00,000 reclassified as FVTPL. Fair value on reclassification is ₹ 90,000. Pass the required journal entry.

Solution

Particulars		Amount	Amount
Bonds at FVTPL	Dr.	90,000	
Loss on reclassification	Dr.	10,000	
To Bonds at amortised cost			1,00,000

*****

  - **Case 2:** Amortised cost to FVOCI
    - It is measured at fair value on reclassification date.
    - Any gain or loss arising from difference between the previous amortised cost of the financial asset and fair value is recognised in other comprehensive income
    - Effective interest rate and measurement of expected credit losses are not adjusted as a result of reclassification.

Illustration 37

Bonds for ₹ 1,00,000 reclassified as FVOCI. Fair value on reclassification is ₹ 90,000. Pass the required journal entry.

Solution

Particulars		Amount	Amount
Bonds at FVOCI	Dr.	90,000	
OCI (Loss on reclassification)	Dr.	10,000	
To Bonds at amortised cost			1,00,000

*****

- **Case 3:** FVTPL to Amortised cost
  - It is measured at fair value on reclassification date and this fair value becomes the new gross carrying amount. Effective interest rate is computed based on this new gross carrying amount.
  - Any gain or loss arising from difference between the previous amortised cost of the financial asset and fair value is recognised in profit or loss.

Illustration 38

Bonds for ₹ 100,000 reclassified as Amortised cost. Fair value on reclassification is ₹ 90,000. Pass the required journal entry.

Solution

Particulars		Amount	Amount
Bonds at Amortised cost	Dr.	90,000	
Loss on reclassification	Dr.	10,000	
To Bonds at FVTPL			1,00,000

*****

- **Case 4:** FVTPL to FVOCI
  - The financial asset continues to be measured at fair value.
  - The effective interest rate is determined on the basis of fair value of asset at reclassification date.

Illustration 39

Bonds for ₹ 100,000 reclassified as FVOCI. Fair value on reclassification is ₹ 90,000. Pass the required journal entry.

Solution

Particulars		Amount	Amount
Bonds at FVOCI	Dr.	90,000	
Loss on reclassification	Dr.	10,000	
To Bonds at FVTPL			1,00,000

*****

- **Case 5:** FVOCI to Amortised cost
  - The financial asset is measured at fair value on reclassification date.
  - However, cumulative gain or loss previously recognised in other comprehensive income (OCI) is removed from equity and adjusted against fair value of financial asset at reclassification date.

- As a result, the financial asset is measured at reclassification date as if it had always been measured at amortised cost. This adjustment affects OCI but does not affect profit or loss and therefore, is not a reclassification adjustment.
- Effective interest rate and measurement of expected credit losses are not adjusted as a result of reclassification.

Illustration 40

Bonds for ₹ 100,000 reclassified as Amortised cost. Fair value on reclassification is ₹ 90,000 and ₹ 10,000 loss was recognised in OCI till date of reclassification. Pass required journal entry.

Solution

Particulars	Amount	Amount
Bonds at FVOCI Dr.	10,000	
To OCI - Loss on reclassification		10,000
[Being loss recognized in OCI now reversed prior to reclassification]		
Bonds (Amortised cost) Dr.	1,00,000	
To Bonds at FVOCI		1,00,000
[Being bonds reclassified from FVOCI to Amortised cost]		

*****

- **Case 6:** FVOCI to FVTPL
  - The financial asset continues to be measured at fair value.
  - The cumulative gain or loss previously recognised in other comprehensive income (OCI) is reclassified from equity to profit or loss as a reclassification adjustment at the reclassification date.

Illustration 41

Bonds for ₹ 100,000 reclassified as FVTPL. Fair value on reclassification is ₹ 90,000. Pass the required journal entry.

Solution

Particulars	Amount	Amount
P&L - Loss on reclassification Dr.	10,000	
To Bonds at FVTOCI		10,000
Bonds at FVTPL Dr.	90,000	
To Bonds at FVOCI		90,000

*****

2.10 IMPAIRMENT

- **Scope of impairment**

  An entity shall recognise a loss allowance for expected credit losses on the following:

  (a) a financial asset that is measured at amortised cost

  (b) a financial asset that is measured at fair value through other comprehensive income

  (c) a lease receivable,

  (d) a contract asset or a loan commitment; and

  (e) a financial guarantee contract

- **The impairment model does not apply to:**

  (a) All financial assets that are equity instruments (because these are measured either at FVTPL or FVTOCI),

  (b) Financial assets that are debt instruments and are measured as at FVTPL,

  (c) Any other financial instrument measured as at FVTPL.

- **What is a credit loss allowance?**

  ♦ For financial assets, a credit loss is the present value of the difference between:

  (a) the contractual cash flows that are due to an entity under the contract; and

  (b) the cash flows that the entity expects to receive (i.e,, cash short falls) discounted at original effective interest rate (or credit adjusted effective interest rate in case of purchased or originated credit-impaired financial assets).

  ♦ An entity shall estimate cash flows by considering all contractual terms of the financial instrument (for eg.: prepayment, extension, call and similar options) through the expected life of the financial instrument.

  ♦ The cash flows that are considered shall include cash flows from sale of collateral held or other credit enhancements that are integral to the contractual terms. There is a presumption that the expected life of the financial instrument can be estimated reliably. In those rare cases when it is no possible to reliably estimate the expected life of a financial instrument, the entity shall use the remaining contractual term of the financial instrument.

Merged By CA - Born To Fight

- **Different approaches for impairment of financial assets.**

  (a) General Approach

  - The general approach requires an entity to recognise, at each reporting date, an impairment loss allowance using either 12 month ECL or lifetime ECL.
  - 12 month ECL typically results in lower impairment since it focuses only on probability of default (PD) within next 12 month period, as against PD over the life of an instrument.
  - The use of ECL depends on whether there has been a significant increase in credit risk on the instrument since its initial recognition.
  - This approach is applicable to all financial instruments covered by impairment requirements of Ind AS 109, except instruments covered in the following two approaches.

  (b) Simplified Approach

  - This approach does not require an entity to track changes in credit risk. Rather, each entity recognises impairment loss allowance based on lifetime ECLs at each reporting date, right from its initial recognition.
  - The application of simplified approach is mandatory for trade receivables or any contractual right to receive cash or another financial asset that result from transactions that are within the scope of Ind AS 115 having no significant financing component.

  (c) Purchased or originated credit-impaired (POCI) financial assets approach

  - This approach is applicable to financial assets which are credit impaired on purchase/origination.

- **What is 12-month expected credit losses and lifetime expected credit losses?**

  - Lifetime expected credit loss is the expected credit losses that result from all possible default events over the expected life of a financial instrument.
  - 12-Month expected credit loss is the portion of the lifetime expected credit losses that represent the expected credit losses that result from default events on a financial instrument that are possible within the 12 months after the reporting date.

- **How the entity determine whether it should apply 12-month ECL or lifetime ECL?**

  The decision tree to be applied in determining whether the entity needs to provide for 12-month expected credit losses or life time expected credit losses is applied as follows:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Three Stage Model for Impairment			
Particular	Stage 1	Stage 2	Stage 3
	Initial Recognition	Significant increase in credit risk	Credit Impaired
Credit Risk	Low	Moderate to High	Significant
ECL Model	12 Month ECL	Life-time ECL	Life-time ECL
Interest recognition	Interest on gross carrying amount	Interest on gross carrying amount	Interest on amortised cost

- **Appendix A of Ind AS 109 defines gross carrying amount of a financial asset as** the amortised cost of a financial asset, before adjusting for any loss allowance.
- **Appendix A of Ind AS 109 defines amortised cost of a financial asset or financial liability as** the amount at which the financial asset or financial liability is measured at initial recognition minus the principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount and, for financial assets, adjusted for any loss allowance.
- **Determining whether credit risk has increased significantly:**

  Ind AS 107 defines **credit risk** as 'the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation'.

  ♦ When determining whether the recognition of lifetime expected credit losses is required, an entity shall consider reasonable and supportable information that is available without undue cost or effort and that may affect the credit risk on a financial instrument.

  ♦ The following non-exhaustive list of information may be relevant in assessing changes in credit risk:

  (a) significant changes in internal price indicators of credit risk as a result of a change in credit risk since inception, including, but not limited to, the credit spread that would result if a particular financial instrument or similar financial instrument with the same terms and the same counterparty were newly originated or issued at the reporting date.

  (b) other changes in the rates or terms of an existing financial instrument that would be significantly different if the instrument was newly originated or issued at the reporting date (such as more stringent covenants, increased amounts of collateral or guarantees, or higher income coverage) because of changes in the credit risk of the financial instrument since initial recognition.

(c) significant changes in external market indicators of credit risk for a particular financial instrument or similar financial instruments with the same expected life. Changes in market indicators of credit risk include, but are not limited to:

i. the credit spread;

ii. the credit default swap prices for the borrower;

iii. the length of time or the extent to which the fair value of a financial asset has been less than its amortised cost; and

iv. other market information related to the borrower, such as changes in the price of a borrower's debt and equity instruments.

(d) an actual or expected significant change in the financial instrument's external credit rating.

(e) an actual or expected internal credit rating downgrade for the borrower or decrease in behavioural scoring used to assess credit risk internally.

(f) existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant change in the borrower's ability to meet its debt obligations, such as an actual or expected increase in interest rates or an actual or expected significant increase in unemployment rates

(g) an actual or expected significant change in the operating results of the borrower, for eg.: actual or expected declining revenues or margins, increasing operating risks, working capital deficiencies, decreasing asset quality, increased balance sheet leverage, liquidity, management problems or changes in the scope of business or organisational structure, etc. that results in a significant change in the borrower's ability to meet its debt obligations

(h) significant increases in credit risk on other financial instruments of the same borrower

(i) an actual or expected significant adverse change in the regulatory, economic, or technological environment of the borrower

(j) significant changes in the value of the collateral supporting the obligation or in the quality of third-party guarantees or credit enhancements;

(k) a significant change in the quality of the guarantee provided by a shareholder (or an individual's parents) if the shareholder (or parents) have an incentive and financial ability to prevent default by capital or cash infusion

(l) significant changes, such as reductions in financial support from a parent entity or other affiliate or an actual or expected significant change in the quality of

© The Institute of Chartered Accountants of India

credit enhancement, that are expected to reduce the borrower's economic incentive to make scheduled contractual payments

(m) expected changes in the loan documentation including an expected breach of contract that may lead to covenant waivers or amendments, interest payment holidays, interest rate step-ups, requiring additional collateral or guarantees, or other changes to the contractual framework of the instrument

(n) significant changes in the expected performance and behaviour of the borrower, including changes in the payment status of borrowers in the group

(o) changes in the entity's credit management approach in relation to the financial instrument; ie based on emerging indicators of changes in the credit risk of the financial instrument, the entity's credit risk management practice is expected to become more active or to be focused on managing the instrument, including the instrument becoming more closely monitored or controlled, or the entity specifically intervening with the borrower.

(p) Other past due information.

- **30 days past due rebuttable presumption:**

  Regardless of the way in which an entity assesses significant increases in credit risk, there is a rebuttable presumption that the credit risk on a financial asset has increased significantly since initial recognition when contractual payments are more than 30 days past due.

  - An entity can rebut this presumption if the entity has reasonable and supportable information that is available without undue cost or effort, that demonstrates that the credit risk has not increased significantly since initial recognition even though the contractual payments are more than 30 days past due.
  - When an entity determines that there have been significant increases in credit risk before contractual payments are more than 30 days past due, the rebuttable presumption does not apply.

- **What is credit impaired financial assets:**

  - ♦ A financial asset is credit-impaired when one or more events that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired include observable data about the following events:

    (a) Significant financial difficulty of the issuer or the borrower;

    (b) Breach of contract, such as a default or past due event;

© The Institute of Chartered Accountants of India

Merged By CA - Born To Fight

(c) Lender(s) of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concession(s) that the lender(s) would not otherwise consider;

(d) It is becoming probable that the borrower will enter bankruptcy or other financial reorganisation;

(e) the disappearance of an active market for that financial asset because of financial difficulties; or

(f) the purchase or origination of a financial asset at a deep discount that reflects the incurred credit losses.

It may not be possible to identify a single discrete event-instead, the combined effect of several events may have caused financial assets to become credit-impaired.

- **Measurement of expected credit losses:**
  - ♦ An entity shall measure expected credit losses of a financial instrument in a way that reflects:

    (a) an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes;

    (b) the time value of money; and

    (c) reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions.

  - ♦ When measuring expected credit losses, an entity need not necessarily identify every possible scenario. However, it shall consider the risk or probability that a credit loss occurs by reflecting the possibility that a credit loss occurs and the possibility that no credit loss occurs, even if the possibility of a credit loss occurring is very low.
  - ♦ The maximum period to consider when measuring expected credit losses is the maximum contractual period (including extension options) over which the entity is exposed to credit risk and not a longer period, even if that longer period is consistent with business practice.
  - ♦ A**n entity may use practical expedients when measuring expected credit losses.**
    - An example of a practical expedient is the calculation of the expected credit losses on trade receivables using a provision matrix. The entity would use its historical credit loss experience for trade receivables to estimate the 12-month expected credit losses or the lifetime expected credit losses on the financial assets as relevant. A provision matrix might, for example, specify fixed provision rates depending on the number of days that a trade receivable is past due (for

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

example, 1 per cent if not past due, 2 per cent if less than 30 days past due, 3 per cent if more than 30 days but less than 90 days past due, 20 per cent if 90–180 days past due etc).

- Depending on the diversity of its customer base, the entity would use appropriate groupings if its historical credit loss experience shows significantly different loss patterns for different customer segments. Examples of criteria that might be used to group assets include geographical region, product type, customer rating, collateral or trade credit insurance and type of customer (such as wholesale or retail).

Illustration 42 :12 month expected credit loss – Probability of default approach

Entity A originates a single 10 year amortising loan for CU1 million. Taking into consideration the expectations for instruments with similar credit risk (using reasonable and supportable information that is available without undue cost or effort), the credit risk of the borrower, and the economic outlook for the next 12 months, Entity A estimates that the loan at initial recognition has a probability of default (PoD) of 0.5 per cent over the next 12 months. Entity A also determines that changes in the 12-month PoD are a reasonable approximation of the changes in the lifetime PoD for determining whether there has been a significant increase in credit risk since initial recognition. Loss given default (LGD) is estimated as 25% of the balance outstanding. Calculate loss allowance.

Solution

At reporting date, no change in 12-month POD and entity assesses that there is no significant increase in credit risk since initial recognition – therefore lifetime ECL is not required to be recognised.

Particulars	Details
Loan	₹ 1,000,000 (A)
LGD	25% (B)
PoD – 12 months	0.5% (C)
Loss allowance (for 12-months ECL)	₹ 1,250 (A*B*C)

*****

Illustration 43: 12 month expected credit loss – Loss rate approach

Bank A originates 2,000 bullet loans with a total gross carrying amount of CU 500,000. Bank A segments its portfolio into borrower groups (Groups X and Y) on the basis of shared credit risk characteristics at initial recognition. Group X comprises 1,000 loans with a gross carrying amount per client of CU 200, for a total gross carrying amount of CU 200,000. Group Y comprises 1,000 loans with a gross carrying amount per client of CU 300, for a total gross carrying amount of CU 300,000. There are no transaction costs and the loan contracts include no options (for example, prepayment or call options), premiums or discounts, points paid, or other fees. Calculate loss rate when

Merged By CA - Born To Fight

Group	Historic per annum average defaults	Present value of observed loss assumed
X	4	CU 600
Y	2	CU 450

Solution

- Bank A measures expected credit losses on the basis of a loss rate approach for Groups X and Y. In order to develop its loss rates, Bank A considers samples of its own historical default and loss experience for those types of loans.
- In addition, Bank A considers forward-looking information, and updates its historical information for current economic conditions as well as reasonable and supportable forecasts of future economic conditions. Historically, for a population of 1,000 loans in each group, Group X's loss rates are 0.3 per cent, based on four defaults, and historical loss rates for Group Y are 0.15 per cent, based on two defaults.

	Number of clients in sample	Estimated per client gross carrying amount at default	Total estimated gross carrying amount at default	Historic per annum average defaults	Estimated total gross carrying amount at default	Present value of observed loss assumed	Loss rate
Group	A	B	C = A × B	D	E = B × D	F	G = F ÷ C
X	1,000	CU 200	CU 2,00,000	4	CU 800	CU 600	0.3%
Y	1,000	CU 300	CU 3,00,000	2	CU 600	CU 450	0.15%

*****

Illustration 44: Life time expected credit losses (provision matrix for short term receivables)

Company M, a manufacturer, has a portfolio of trade receivables of CU 30 million in 20X1 and operates only in one geographical region. The customer base consists of a large number of small clients and the trade receivables are categorised by common risk characteristics that are representative of the customers' abilities to pay all amounts due in accordance with the contractual terms. The trade receivables do not have a significant financing component in accordance with Ind AS 115. In accordance with paragraph 5.5.15 of Ind AS 109 the loss allowance for such trade receivables is always measured at an amount equal to lifetime expected credit losses.

Please use the following information of debtors outstanding:

	Gross carrying amount
Current	*CU 15,000,000*
1–30 days past due	*CU 7,500,000*
31–60 days past due	*CU 4,000,000*

Join us t.me/caborntofight

61–90 days past due	*CU 2,500,000*
More than 90 days past due	*CU 1,000,000*
	CU 30,000,000

Company M uses following default rates for making provisions:

	Current	***1–30 days past due***	***31–60 days past due***	***61–90 days past due***	***More than 90 days past due***
Default rate	*0.3%*	*1.6%*	*3.6%*	*6.6%*	*10.6%*

Determine the expected credit losses for the portfolio

Solution

To determine the expected credit losses for the portfolio, Company M uses a provision matrix. The provision matrix is based on its historical observed default rates over the expected life of the trade receivables and is adjusted for forward-looking estimates. At every reporting date the historical observed default rates are updated and changes in the forward-looking estimates are analysed. In this case it is forecast that economic conditions will deteriorate over the next year.

On that basis, Company M estimates the following provision matrix:

	Current	**1–30 days past due**	**31–60 days past due**	**61–90 days past due**	**More than 90 days past due**
Default rate	0.3%	1.6%	3.6%	6.6%	10.6%

The trade receivables from the large number of small customers amount to CU 30 million and are measured using the provision matrix.

	Gross carrying amount	**Lifetime expected credit loss allowance (Gross carrying amount x lifetime expected credit loss rate)**
Current	CU 15,000,000	CU 45,000
1–30 days past due	CU 7,500,000	CU 120,000
31–60 days past due	CU 4,000,000	CU 144,000
61–90 days past due	CU 2,500,000	CU 165,000
More than 90 days past due	CU 1,000,000	CU 106,000
	CU 30,000,000	**CU 580,000**

*****

QUICK RECAP

- The classification and measurement of financial instruments are summarized as below :

	Financial Assets			Financial Liabilities		Equity
Classification	**Amortised Cost**	**FVTOCI**	**FVTPL**	**Amortised Cost**	**FVTPL**	**-**
Basis of Classification	▪ BM test to collect ▪ SPPI test	▪ BM test to collect & sell ▪ SPPI test	▪ Held for trading (SPPI or BM test fail)	▪ Default criterial	▪ If held for trading ▪ Entity elects FVTPL (using fair value option)	-
Initial recognition	▪ Fair Value plus or minus transaction costs	▪ Fair Value plus or minus transactio n costs	▪ Fair Value	▪ Fair Value plus or minus transaction costs	▪ Fair Value	▪ Fair Value
Subsequent recognition	▪ Amortised Cost	▪ Fair Value	▪ Fair Value	▪ Amortised cost	▪ Fair Value	▪ No Re-measur ement

- Financial asset (FA) will be classified as amortised cost if the objective is to hold the financial asset in order to collect contractual cash flows and contractual terms give rise to cash flows that are Solely Payments of Principal and Interest (SPPI) on the principal amount outstanding.
- Contractual terms give rise to cash flows that are Solely Payments of Principal and Interest on the principal amount outstanding. Contractual cash flows must be consistent with a basic lending arrangement. In respect of Interest element, factors such as time value of money, Credit risk, Liquidity, profit margin, service or administrative costs etc. should be considered. Contractual cash flows linked to features such as changes in equity or commodity prices, would not pass the SPPI test because they introduce exposure to risks or volatility. SPPI Test will be met if there is a prepayment penalty i.e. additional compensation for early termination or extension of contract.

Join us t.me/caborntofight

- An entity may have one of the following models for its debt instruments :
  - (a) Hold to collect contractual cash flows
  - (b) Hold to collect contractual cash flows and selling financial assets
  - (c) Other business model – Actively buying & Selling
- Financial asset (FA) in debt instruments is measured at fair value through OCI (FVTOCI) if it meets both 'Hold-to-collect and sell' business model test and 'SPPI' contractual cash flow characteristics test.
- In respect of Financial asset (FA) in equity instruments, Ind AS 109 requires all equity investments to be measured at fair value. All changes in fair value to be recognised in profit or loss. However, Entities can make an irrevocable election at initial recognition to classify the instruments as at FVOCI. Such option is available instrument by instrument i.e. (item by item) and all subsequent changes in fair value being recognised in OCI. Dividends received on equity investments to be recognised in profit or loss.
- Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial instrument

UNIT 3: FINANCIAL INSTRUMENTS: EQUITY AND FINANCIAL LIABILITIES

3.1 INTRODUCTION

Ind AS 32 lays down the accounting principles for classifying a financial instrument issued by an entity as either a financial liability or equity or both (a compound instrument). The classification of a financial instrument is governed by the substance of a contract and not its legal form.

As you would see in the following paragraphs, classification of a financial instrument into financial liability or equity or compound involves analysis of each component of a contract. Incorrect classification results in misstatement of financial statements and significantly affects the financial ratios that are derived therefrom.

3.2 DEFINITIONS – FINANCIAL LIABILITY AND EQUITY

It is important to read paragraphs 11 and 16 of Ind AS 32 together to identify the accounting principles that distinguish a financial liability instrument from an equity instrument.

Before we look at the two definitions in a comparative format, it is important to highlight here that the classification of a financial instrument under Ind AS 32 is done from the perspective of the issuer and not from the perspective of the holder.

Financial liability (Ind AS 32.11)	Equity (Ind AS 32.16)
A financial instrument that fulfils **either of (A) or (B)** below: ***Condition (A)***: An instrument that **is a contractual obligation**: i. to deliver cash or another financial asset to another entity; or ii. to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity	A financial instrument that fulfils **both (A) and (B)** below: ***Condition (A)***: An instrument that contains **no contractual obligation**: i. to deliver cash or another financial asset to another entity; or ii. to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity

© The Institute of Chartered Accountants of India

Condition (B): An instrument that will or may be settled in the entity's own equity instruments and is: i. a non-derivative **<u>for which the entity is or may be obliged</u>** to deliver a variable number of the entity's own equity instruments; or ii. a derivative that will or may be settled **<u>other than by</u>** the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.	***Condition (B)***: An instrument that will or may be settled in the entity's own equity instruments and is: i. a non-derivative **<u>that includes no contractual obligation for the issuer</u>** to deliver a variable number of the entity's own equity instruments; or ii. a derivative that will or may be settled **<u>only by</u>** the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

As can be seen from the table above, the two definitions are mirror images of each other. In the following paragraphs, we will discuss each of these aspects in detail.

Importance of the phrase "contract" and "contractual"

It is important to know that 'contract' and 'contractual' refer to an agreement between two or more parties that has clear economic consequences that the parties have little, if any, discretion to avoid, usually because the agreement is enforceable by law. Contracts, and thus financial instruments, may take a variety of forms and need not be in writing [Ind AS 32.13]. Liabilities that are not contractual (such as income taxes that are created as a result of statutory requirements imposed by governments) are not financial liabilities. Accounting for income taxes is dealt with in Ind AS 12. Similarly, constructive obligations, as defined in Ind AS 37 Provisions, Contingent Liabilities and Contingent Assets, do not arise from contracts and are not financial liabilities.

Items such as deferred revenue and most warranty obligations are not financial liabilities because the outflow of economic benefits associated with them is the delivery of goods and services rather than a contractual obligation to pay cash or another financial asset. [Ind AS 32.AG11]

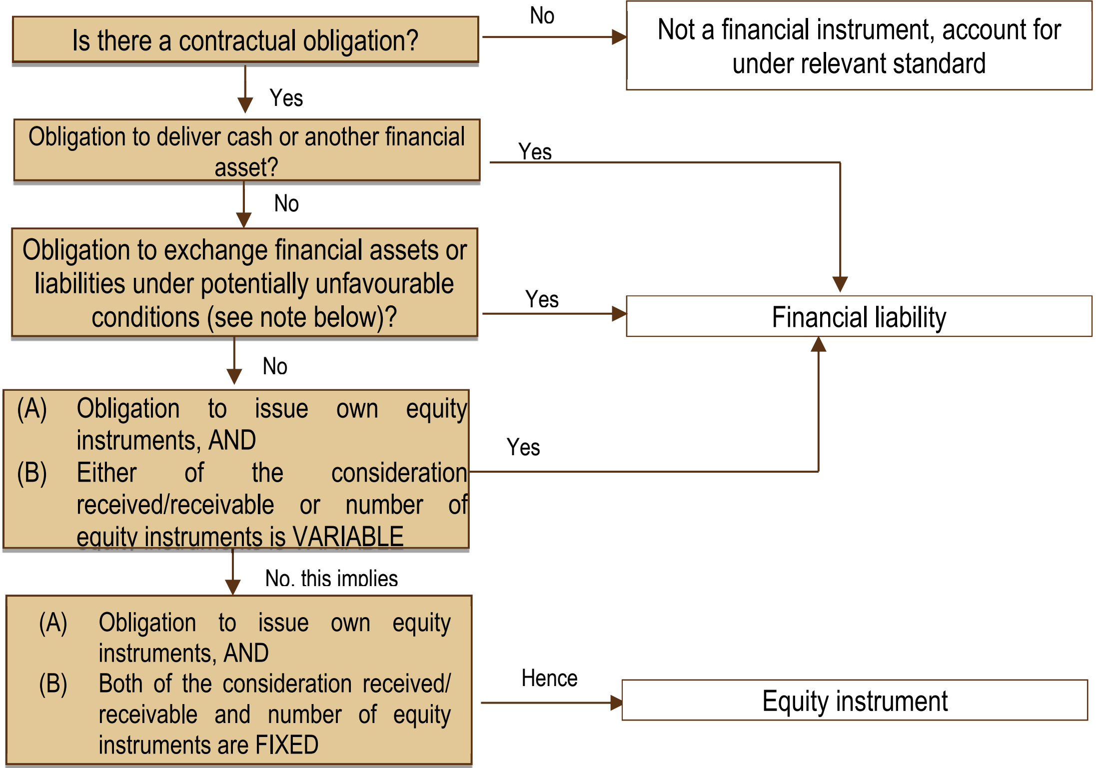
It should also be remembered that the requirement to satisfy a contractual obligation may be absolute, or it may be contingent on the occurrence of a future event. For example, a financial guarantee is a contractual obligation of the guarantor to pay the lender, if the borrower defaults [Ind AS 32.AG8].

Analysis of the definitions

The following points must be remembered in determination of classification of a financial instrument as a financial liability or equity:

- ***Evaluation of components***- it is not always that the entire instrument is either a financial liability or equity. The issuer makes this determination for each component part of a contract in accordance with 'substance' thereof and definitions given above [Ind AS 32.15].
- ***Contract is supreme*** **-** The evaluation of 'substance' does not override or contravene the contractual terms.
- ***Contract cannot override laws*** **-** The entity must consider all of the terms and conditions of the financial instrument in determining its classification as a financial liability or equity. Those terms and conditions include relevant local laws, regulations and the entity's governing charter in effect at the date of classification, but not expected future amendments to those laws, regulations or charter.

The flowchart below summarises the distinction between the definitions of a financial liability and equity:



Note: Potential unfavourable conditions

Example 1

PQR Ltd. issues a call option (i.e. an option to buy) to ABC Ltd. to subscribe to PQR Ltd.'s equity shares at a price of ₹ 100 per share. The call option is to be settled on a 'net' basis i.e. without physical delivery of shares. If at the balance sheet date, market value of equity share of

PQR Ltd. is ₹ 110 per share, PQR Ltd. will be obliged to pay ₹ 10 to settle the option. Such a condition is potentially unfavourable to PQR Ltd. and hence ₹ 10 represents a financial liability for PQR Ltd.

3.3 OBLIGATION TO DELIVER CASH

A critical feature in differentiating a financial liability from an equity instrument is the existence of a contractual obligation of the issuer either to deliver cash or another financial asset to the holder or to exchange financial assets or financial liabilities with the holder under conditions that are potentially unfavourable to the issuer (Ind AS 32.17).

There are very limited exceptions to this principle in the form of "puttable instruments" and "obligations arising on liquidation". We will discuss these exceptions in the subsequent paragraphs, "Puttable instruments and obligations arising on liquidation".

The financial instrument is a financial liability even when the amount of cash or other financial assets is determined on the basis of an index or other item that has the potential to increase or decrease. [Ind AS 32.18(b)]

Subject to certain exceptions as mentioned above, if an entity does not have an unconditional right to avoid delivering cash or another financial asset to settle a contractual obligation, the obligation meets the definition of a financial liability. (Ind AS 32.19)

A financial instrument that does not explicitly establish a contractual obligation to deliver cash or another financial asset may establish an obligation indirectly through its terms and conditions. (Ind AS 32.20)

Illustration 1: Redeemable preference shares with mandatory dividend

A Ltd. (issuer) issues preference shares to B Ltd (holder). Those preference shares are redeemable at the end of 10 years from the date of issue and entitle the holder to a cumulative dividend of 15% p.a. The rate of dividend is commensurate with the credit risk profile of the issuer. Examine the nature of the financial instrument.

Solution

This instrument provides for mandatory fixed dividend payments and redemption by the issuer for a fixed amount at a fixed future date. Since there is a contractual obligation to deliver cash (for both dividends and repayment of principal) to the preference shareholder that cannot be avoided, the instrument is a financial liability in its entirety.

*****

Merged By CA - Born To Fight

Illustration 2 : Redeemable debentures with discretionary dividend

X Co. Ltd. (issuer) issues debentures to Y Co. Ltd. (holder). Those debentures are redeemable at the end of 10 years from the date of issue. Interest of 15% p.a. is payable at the discretion of the issuer. The rate of interest is commensurate with the credit risk profile of the issuer. Examine the nature of the financial instrument.

Solution

This instrument has two components – (1) mandatory redemption by the issuer for a fixed amount at a fixed future date, and (2) interest payable at the discretion of the issuer.

The first component is a contractual obligation to deliver cash (for repayment of principal with or without premium, as per terms) to the debenture holder that cannot be avoided. This component of the instrument is a financial liability.

The second component of interest payable is discretion of the issuer and hence will be classified as equity. This is also discussed in detailed in the compound financial instrument section (Also refer Illustration 27 in the subsequent section).

*****

Illustration 3: Perpetual loan with mandatory interest

P Co. Ltd. (issuer) takes a loan from Q Co. Ltd. (holder). The loan is perpetual and entitles the holder to fixed interest of 8% p.a. Examine the nature of the financial instrument.

Solution

This instrument has two components – (1) mandatory interest by the issuer for a fixed amount at a fixed future date, and (2) perpetual nature of the principal amount.

The first component is a contractual obligation to deliver cash (for payment of interest) to the lender that cannot be avoided. This component of the instrument is a financial liability.

*****

Illustration 4: Restriction on the ability of an entity to satisfy a contractual obligation

Does the lack of access to foreign currency or the need to obtain approval for payment from a regulatory authority, will lead to contractual obligation?

Solution

Lack of access to foreign currency or the need to obtain approval for payment from a regulatory authority, does not negate the entity's contractual obligation or the holder's contractual right under the instrument.

*****

Illustration 5: Optionally convertible redeemable preference shares

D Ltd. issues preference shares to G Ltd. The holder has an option to convert these preference shares to equity instruments of the issuer anytime up to a period of 10 years. If the option is not exercised by the holder, the preference shares are redeemed at the end of 10 years. Examine the nature of the financial instrument.

Solution

This instrument has two components – (1) contractual obligation that is conditional on holder exercising its right to redeem, and (2) conversion option with the holder.

The first component is a financial liability because the entity does not have the unconditional right to avoid delivering cash.

*****

In the section "Compound financial instruments", we will also analyse the other component – the conversion option with the holder and we will explain the nature of the instrument in its entirety.

Illustration 6: Settlement alternative is non-financial obligation

LMN Ltd. issues preference shares to PQR Ltd. These preference shares are redeemable at the end of 5 years from the date of issue.

The instrument also provides a settlement alternative to the issuer whereby it can transfer a particular commercial building to the holder, whose value is estimated to be significantly higher than the cash settlement amount. Examine the nature of the financial instrument.

Solution

Such preference shares are financial liability because the entity can avoid a transfer of cash or another financial asset only by settling the non-financial obligation.

*****

3.3.1 Puttable instruments and obligations arising on liquidation – Exceptions to classification as 'financial liability' for instruments settled in cash or another financial asset

Let us analyse this in the following two contexts:

A. Mutual funds and unit trusts, wherein the redemption amount is equal to a proportionate share in the net assets of the entity

B. Limited life entities like special purpose vehicles (SPV) for execution of an infrastructure project

First, let us look at one definition which is relevant for our discussion – "Puttable instrument" is a financial instrument that gives the holder:

- the right to put the instrument back to the issuer for cash or another financial asset, or
- is automatically put back to the issuer on the occurrence of an uncertain future event or the death or retirement of the instrument holder.

[The phrase "put back to the issuer" refers to redemption of the instrument. If the holder has a right, but not an obligation to require the issuer to redeem the instrument, it is referred to as "put option".]

As discussed above, financial instruments that contain an obligation of the issuer to deliver cash or another financial asset are classified as financial liabilities. As per this principle, the following shall be classified as financial liabilities:

- Puttable instruments (see context A above in Section 3.3.1), and
- Instruments that create an obligation only on liquidation of the entity (see context B above). Liquidation may be certain to occur and outside issuer's control or uncertain to occur and at the option of holder.

However, Ind AS 32 contains an exception whereby such instruments are classified as "equity", despite the fact that they otherwise meet all the conditions for "financial liability". This exception applies if **all** of the following conditions are fulfilled by the instrument (Ind AS 32.16A, 16B, 16C and 16D):

1. It **entitles the holder to a pro rata share of the entity's net assets in the event of the entity's liquidation**. In other words, the instrument should not entitle its holder to a higher or lower share of entity's net assets upon liquidation.

   The logic behind this requirement is that entitlement to a pro rata share of the entity's net assets on liquidation is equivalent to having a residual interest in the assets of an entity.

   Illustration 7: Cap on amount payable on liquidation

   ABC Ltd. has two classes of puttable shares – Class A shares and Class B shares. On liquidation, Class B shareholders are entitled to a pro rata share of the entity's residual assets up to a maximum of ₹ 10,000,000.

   There is no limit to the rights of the Class A shareholders to share in the residual assets on liquidation. Examine the nature of the financial instrument.

   Solution

   The cap of ₹ 10,000,000 means that Class B shares do not have entitlement to a pro rata share of the residual assets of the entity on liquidation. They cannot therefore be classified as equity.

*****

Join us t.me/caborntofight

2. It is in the class of instruments that is **subordinate to all other classes of instruments**, that is, in its present form, it has no priority over other claims to the entity's assets **on liquidation** (entity will need to assume liquidation on date of classification).

Illustration 8: Investment manager's share in a mutual fund

Mutual Fund X has an Investment Manager Y. At the inception of the fund, Y had invested a nominal or token amount in units of X. Such units rank last for repayment in the event of liquidation. Accordingly, they constitute the most subordinate class of instruments. Examine the nature of the financial instrument.

Solution

The units held by Y holders are classified as equity as they are most subordinate class of instruments and will be entitled to residual interest.

However, the units held by other unit holders are classified as financial liability as they are not the most subordinate class of instruments – they are entitled to pro rate share of net assets on liquidation, and their claim has a priority over claims of Y.

It may be noted that the most subordinate class of instruments may consist of two or more legally separate types of instruments.

*****

3. (a) In case of puttable instruments, all financial instruments in the most subordinate class have **identical features**: For example, they must all be puttable, and the formula or other method used to calculate the repurchase or redemption price is the same for all instruments in that class.

Illustration 9: Differential voting rights

T Motors Ltd. has issued puttable ordinary shares and puttable 'A' ordinary shares whereby holders of ordinary shares are entitled to one vote per share whereas holders of 'A' ordinary shares are not entitled to any voting rights. The holders of two classes of shares are equally entitled to receive share in net assets upon liquidation. Examine whether the financial instrument will be classified as equity.

Solution

Neither of the two classes of puttable shares can be classified as equity, as they do not have identical features due to the difference in voting rights. It is not possible for T Motors Ltd. to achieve equity classification of the ordinary shares by designating them as being more subordinate than the 'A' ordinary shares, as this does not reflect the fact that the two classes of share are equally entitled to share in entity's residual assets on liquidation.

*****

Join us t.me/caborntofight

Merged By CA - Born To Fight

(b) In contrast to the above, in case of instruments that impose on the entity an obligation to deliver pro rata share of net assets only on liquidation, all financial instruments in the most subordinate class have such identical contractual obligation.

4. In case of puttable instruments, apart from the contractual obligation for the issuer to repurchase or redeem the instrument for cash or another financial asset, there are **no other contractual obligations**:

   - to deliver cash or another financial asset, or
   - to settle in variable number of entity's own equity instruments

   In other words, there are no other features of the instrument which could satisfy the definition of "financial liability".

Illustration 10: Conversion into a variable number of equity instruments

S Ltd. has issued a class of puttable ordinary shares to T Ltd. Besides the put option (which is consistent with other classes of ordinary shares), T Ltd. is also entitled to convert the class of ordinary shares held by it into equity instruments of S Ltd. whose number will vary as per the market value of S Ltd. Examine whether the financial instrument will be classified as equity.

Solution

The shares cannot qualify for equity classification in their entirety as in addition to the put option there is also a contractual obligation to settle the instrument in variable number of entity's own equity instruments.

*****

5. In case of puttable instruments, the **total expected cash flows attributable to the instrument** over the life of the instrument are based substantially on the:

   - profit or loss,
   - change in the recognised net assets or
   - change in the fair value of the recognised and unrecognised net assets

   of the entity over the life of the instrument (excluding any effects of the instrument).

   In other words, if the cash flows are attributable to any factors other than the three listed above, for example, an index, the puttable instrument will fail the equity classification.

6. The issuer must have **no other financial instrument or contract** that has:

   - total cash flows on same terms as (5) above, with
   - the effect of substantially restricting or fixing the residual return to the puttable instrument holders.

Join us t.me/caborntofight

The intent behind this "anti-abuse" clause is to ensure that puttable instruments are not artificially structured to satisfy conditions (1) to (5) above and at the same time the holder of that puttable instrument also holds another financial instrument or has entered into another contract with the issuer whose cash flows indirectly restrict or fix the return on puttable instrument.

However, "another financial instrument" held by or "another contract" entered into, by the holder of puttable instrument, in its capacity as non-owner of puttable instrument, does not affect the classification of the puttable instrument.

Illustration 11: Management fee contract between issuer and puttable instrument holder

P Ltd. has issued puttable ordinary shares to Q Ltd. Q Ltd. has also entered into an asset management contract with P Ltd. whereby Q Ltd. is entitled to 50% of the profit of P Ltd. Normal commercial terms for similar contracts will entitle the service provider to only 4%-6% of the net profits. Examine whether the financial instrument will be classified as equity.

Solution

The puttable ordinary shares cannot qualify for equity classification as (a) in addition to the put option, there is another contract between the issuer (P Ltd.) and holder of puttable instrument (Q Ltd.) whose cash flows are based substantially on profit or loss of issuer, (b) whose contractual terms are not similar to a contract between a non-instrument holder and issuer and (c) it has the effect of substantially restricting return on puttable ordinary shares.

*****

If the terms of asset management contract were assessed to be similar to terms of a contract between a non-instrument holder and the issuer, it would not have precluded equity classification for puttable shares, provided other conditions are met.

To summarise, the following conditions are required to be fulfilled in each of the two contexts set out at the beginning of this paragraphs:

- **Puttable instruments** (see context A above in Section 3.3.1) – conditions (1) to (6)
- **Instruments that create an obligation only on liquidation of the entity** (see context B above) – conditions (1) to (3) and condition (6).

3.3.1.1 Reclassification

- **Date of classification** of a financial instrument as an equity instrument in accordance with exceptions mentioned above – from the date when the instrument has all the features and meets the conditions set out above (Ind AS 32.16E).
- **Date of reclassification** of a financial instrument – from the date when the instrument ceases to have all the features or meet all the conditions set out above (Ind AS 32.16E).

For example, if an entity redeems all its issued non-puttable instruments and any puttable instrument that remain outstanding have all the features and meet all the conditions mentioned above, the entity shall reclassify the puttable instruments as equity instruments from the date when it redeems the non-puttable instruments.

- **Accounting for reclassification** (Ind AS 32.16F):

Reclassification from	Reclassification to	Measurement	Recognition of difference in carrying amount and measurement of reclassified instrument
Financial liability	Equity	Carrying value at date of reclassification	-N.A.-
Equity	Financial liability	Fair value at date of reclassification	In equity

Illustration 12 : Issue of variable number of shares against issue of CCPS

A Ltd. issued compulsorily convertible preference shares (CCPS) at ₹ 100 each (₹ 10 face value + ₹ 90 premium per share) for ₹ 10,00,000. These are convertible into equity shares at the end of 10 years, where the number of equity shares to be issued shall be determined based on fair value per equity share to be determined at the time of conversion.

Evaluate if this is financial liability or equity? What if the conversion ratio was fixed at the time of issue of such preference shares?

Solution

i. As per Ind AS 32, non-derivative contracts which will be settled against issue of variable number of own equity shares meet the definition of financial liability.

   In this case, A Ltd. has issued CCPS which are convertible into variable number of shares. Hence, it is akin to use of own equity shares as currency for settlement of the liability of CCPS issued. Accordingly, it meets the definition of financial liability.

   Measurement –

   Initial measurement – This shall be measured at fair value on date of transaction. Since A Ltd shall give shares worth ₹ 10 lacs at the end of 10 years which is equal to the amount borrowed on day 1, the liability is recognised at fair value, determined by discounting future settlement of the borrowed amount. For difference arising on day 1 between amount borrowed and that recognised as liability using level 3 inputs, it is deferred and recognised on a systematic basis over the period of liability.

   Subsequent measurement – Such liability shall be carried at fair value through profit or loss.

ii. Per Ind AS 109, a non-derivative contract that involves issue of fixed number of equity shares shall be classified as equity.

Join us t.me/caborntofight

In this case, if the conversion of CCPS was into a fixed number of equity shares at the end of 10 years, then it meets the definition of equity and hence, shall be classified as 'equity instrument'.

An equity instrument is carried at cost and no further adjustments made to its carrying value after initial recognition.

*****

3.3.2 Obligation to purchase own equity instruments

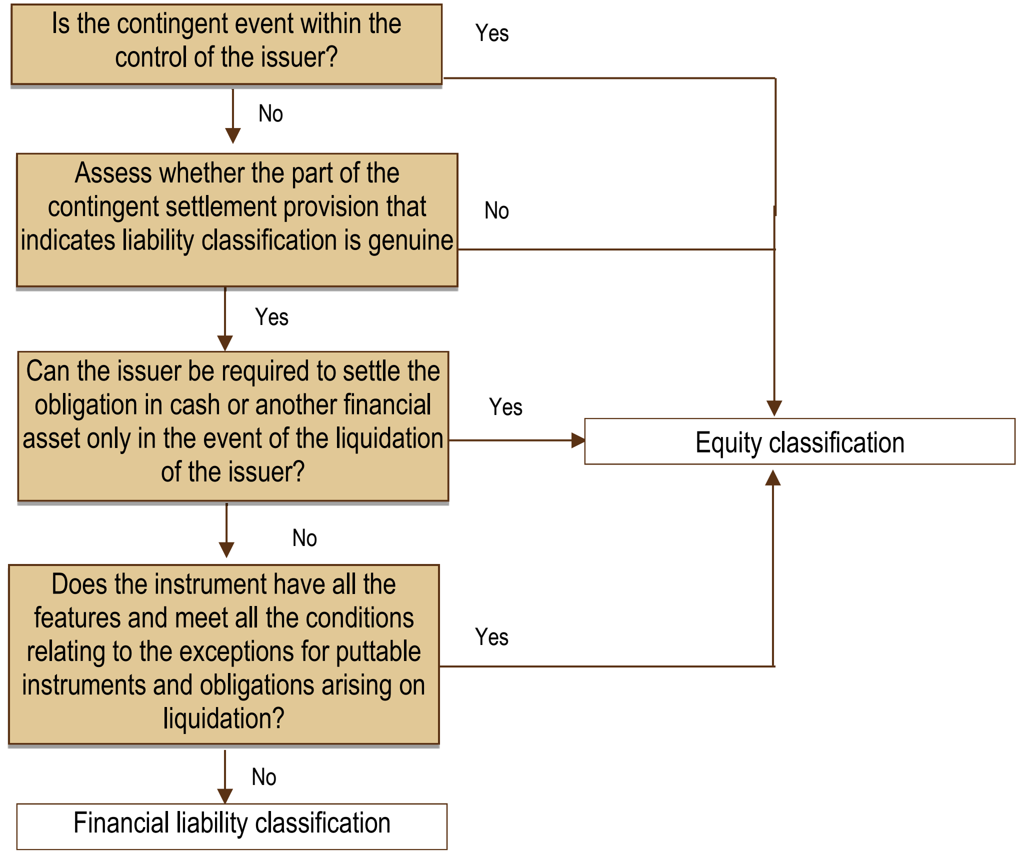
With the exception of the circumstances described above (paragraphs 16A and 16B or paragraphs 16C and 16D of Ind AS 32), a contract that contains an obligation for an entity to purchase its own equity instruments for cash or another financial asset gives rise to a financial liability for the present value of the redemption amount. This is the case even for derivatives over equity instruments that meet the fixed for fixed test and would be equity in the absence of this rule. (Ind AS 32.23)

3.3.3 Contingent settlement provisions

A financial instrument may require an entity to deliver cash or another financial asset, or settle it in some other way that would require it to be classified as a financial liability, but only in the event of the occurrence or non-occurrence of some uncertain future event. The 'event' may be within the control of the issuer or of the holder, or beyond the control of both. These types of contractual arrangements are referred to as 'contingent settlement provisions'.

The flowchart below explains the classification process for contingent settlement provisions:

Join us t.me/caborntofight



3.3.4 Written put options over non-controlling interests

In consolidated financial statements, an entity presents non-controlling interests — ie the interests of other parties in the equity and income of its subsidiaries – in accordance with Ind AS 1 and Ind AS 110. When classifying a financial instrument (or a component of it) in consolidated financial statements, an entity considers all terms and conditions agreed between members of the group and the holders of the instrument in determining whether the group as a whole has an obligation to deliver cash or another financial asset in respect of the instrument or to settle it in a manner that results in liability classification.

When a subsidiary in a group issues a financial instrument and a parent or other group entity agrees additional terms directly with the holders of the instrument (eg a guarantee), the group may not have discretion over distributions or redemption. Although the subsidiary may appropriately classify the instrument without regard to these additional terms in its individual financial statements, the effect of other agreements between members of the group and the holders of the instrument is considered in order to ensure that consolidated financial statements reflect the contracts and transactions entered into by the group as a whole.

To the extent that there is such an obligation or settlement provision, the instrument (or the component of it that is subject to the obligation) is classified as a financial liability in consolidated financial statements. (Ind AS 32.AG29)

3.4 SETTLEMENT IN ENTITY'S OWN EQUITY INSTRUMENTS

A financial instrument is classified as a liability not just when there is an obligation to deliver cash or another financial asset. It is **sometimes** so classified even when the entity's obligation is to settle the instrument through delivery of its own equity instruments.

Let us evaluate two alternate situations for an instrument that is convertible at the option of the issuer:

Illustration 13: Conversion into a number of equity instruments equivalent to a fixed value

CBA Ltd. issues convertible debentures to RQP Ltd. for a subscription amount of ₹ 100 crores. Those debentures are convertible after 5 years into equity shares of CBA Ltd. using a pre-determined formula. The formula is:

$$\frac{100 \text{ crores} \times (1+10\%)^{\wedge}5}{\text{Fair value on date of conversion}}$$

Examine the nature of the financial instrument.

Solution

Such a contract is a financial liability of the entity even though the entity can settle it by delivering its own equity instruments. It is not an equity instrument because the entity uses a variable number of its own equity instruments as a means to settle the contract. The underlying thought behind this conclusion is that the entity is using its own equity instruments 'as currency'.

*****

Illustration 14: Conversion into a fixed number of equity instruments

DF Ltd. issues convertible debentures to JL Ltd. for a subscription amount of ₹ 100 crores. Those debentures are convertible after 5 years into 15 crore equity shares of ₹ 10 each.

Examine the nature of the financial instrument.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

This contract is an equity instrument because changes in the fair value of equity shares arising from market related factors do not affect the amount of cash or other financial assets to be paid or received, or the number of equity instruments to be received or delivered.

*****

From the above two situations, we can conclude as below:

- A contract is not an equity instrument solely because it may result in the receipt or delivery of the entity's own equity instruments. **If an entity has a contractual right or obligation to receive or deliver a number of its own shares or other equity instruments that varies so that the fair value of the entity's own equity instruments to be received or delivered equals the amount of the contractual right or obligation, such a contract is a financial liability**. Such a contractual right or obligation may be for a fixed amount or an amount that fluctuates in part or in full in response to changes in a variable other than the market price of the entity's own equity instruments (eg an interest rate, a commodity price or a financial instrument price). (Ind AS 32.21). The number of equity instruments to be delivered could vary as a result of entity's own share price. [Ind AS 32.AG27(d)]
- **A contract that will be settled by the entity (receiving or) delivering a fixed number of its own equity instruments in exchange for a fixed amount of cash or another financial asset is an equity instrument**. (Ind AS 32.22)

The above requirements are summarised in the table below:

S. No.	Consideration for financial instrument	Number of own equity instruments to be issued in settlement	Classification and rationale
1	Fixed	Variable	Financial liability – own equity instruments are being used as currency to settle an obligation for a fixed amount
2	Fixed	Fixed	Equity – issuer does not have an obligation to pay cash and holder is not exposed to any variability
3	Variable	Fixed	Financial liability – though issuer does not have an obligation to pay cash, but holder is exposed to variability

4	Variable	Variable	Financial liability – though issuer does not have an obligation to pay cash, but both parties are exposed to variability

The principle at ***serial number 2 in table above*** is also called **"fixed for fixed" test** i.e. fixed amount of cash or other financial asset for fixed number of own equity instruments.

Another point to note is a fine distinction highlighted in the definition of financial liability and equity, as mentioned in the paragraph "Definitions – financial liability and equity". Being mirror images of each other.

Illustration 15: Written option for a fixed or variable number of equity instruments

ST Ltd. purchases an option from AT Ltd. entitling the holder to subscribe to fixed number of equity shares of issuer at a fixed exercise price of ₹ 50 per share at any time during a period of 3 months. Holder paid an initial premium of ₹ 2 per option. Examine whether the financial instrument will be classified as equity.

Solution

For the issuer AT Ltd., this option is an equity instrument as it will be settled by the exchange of a fixed amount of cash for a fixed number of its own equity instruments.

If, on the other hand, if the exercise price of the option was variable, say benchmarked to an index or a variable, the written option will be classified as a "financial liability" in the books of the issuer, AT Ltd.

*****

For discussion on derivative instruments, refer Unit 4: Derivatives and Embedded derivatives.

In the above illustration, if the instrument is classified as "equity instrument", any consideration received (such as the premium received for a written option or warrant on the entity's own shares) is added directly to equity. It must also be noted that changes in the fair value of an equity instrument are not recognised in the financial statements. (Ind AS 32.22)

On the contrary, if the derivative instrument (i.e. the written option) is classified as "financial liability", any consideration received is measured initially at fair value and subsequently also at fair value, with fair value changes recognised in profit or loss. ***For detailed discussion on measurement of financial liabilities, refer Unit 2***.

The chart below summarises the discussion above:

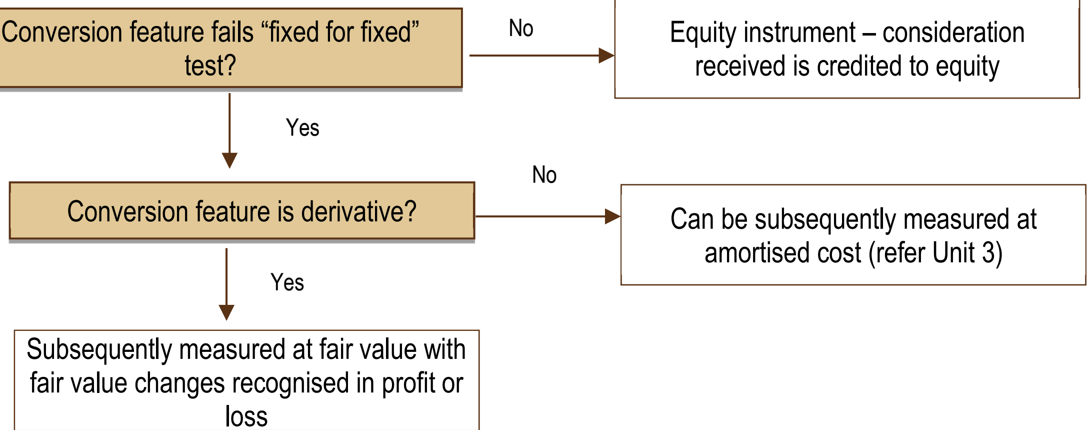


Illustration 16: Written option with multiple exercise prices

WC Ltd. writes an option in favour of GT Ltd. wherein the holder can purchase issuer's equity instruments at prices that fluctuate in response to the share price of issuer.

As per the terms, if the share price of issuer is less than ₹ 50 per share, option can be exercised at ₹ 40 per share. If the share price is equal to or more than ₹ 50 per share, option can be exercised at ₹ 60 per share. Explain the nature of the financial instrument.

Solution

As the contract will be settled by delivery of fixed number of instruments for a variable amount of cash, it is a financial liability.

*****

Illustration 17: Share swap arrangements

Acquirer Ltd. enters into an arrangement with shareholders of Target Ltd. wherein Acquirer Ltd. will purchase shares of Target Ltd. in a share swap arrangement against a variable amount of cash i.e. market value of Target Ltd.'s equity shares. The share swap ratio is agreed as 1:5 i.e. 1 equity share of Acquirer Ltd. for every 5 equity shares held in Target Ltd. Examine whether the financial instrument will be classified as equity.

Solution

Such arrangements will not meet the condition for classification as "equity instrument" since the contract will be settled by delivery of fixed number of Acquirer Ltd.'s own equity instruments against a variable amount of cash i.e. market value of Target Ltd.'s equity shares.

Such a contract will likely result in a derivative liability or asset for both the parties.

*****

Illustration 18: Conversion ratio changes with time

On 1 January 20X1, NKT Ltd. subscribes to convertible preference shares of VT Ltd. The conversion ratio varies as below:

Conversion upto 31 March 20X1: 1 equity share of VT Ltd. for each preference share held

Conversion upto 30 June 20X1: 1.5 equity share of VT Ltd. for each preference share held

Conversion upto 31 December 20X1: 2 equity share of VT Ltd. for each preference share held.

Examine whether the financial instrument will be classified as equity.

Solution

The convertible preference shares can be classified as "equity instrument" in the books of the issuer, VT Ltd. The conversion ratio doesn't change corresponding to any underlying variable, it only varies in response to passage of time which is a certain event and hence fixed.

*****

Illustration 19: Conversion ratio changes to protect rights of convertible instrument holders

On 1 January 20X1, HT Ltd. subscribes to convertible preference shares of RT Ltd. The preference shares are convertible in the ratio of 1:1.

The terms of the instrument entitle HT Ltd. to proportionately more equity shares of RT Ltd. in case of a stock split or bonus issue. Examine whether the financial instrument will be classified as equity.

Solution

The convertible preference shares can be classified as "equity instrument" in the books of the issuer, RT Ltd. The variability in the conversion ratio is only to protect the rights of the holder of convertible instrument vis-à-vis other equity shareholders.

The conversion was always intended to be in a fixed ratio and hence the holder is exposed to the change in equity value. The variability is brought in to maintain holder's exposure in line with other holders.

*****

Illustration 20: Conversion ratio changes if issuer subsequently issues shares to others at a lower price

On 1 January 20X1, PG Ltd. subscribes to convertible preference shares of BG Ltd. at ₹ 100 per preference share. The preference shares are convertible in the ratio of 10:1 i.e. 10 equity shares for each preference share held. On a fully diluted basis, PG Ltd. is entitled to 30% stake in BG Ltd.

If subsequent to the issuance of these convertible preference shares, BG Ltd. issues any equity instruments at a price lower than ₹ 10 per share, conversion ratio will be changed to

compensate PG Ltd. for dilution in its stake below the expected dilution at a price of ₹ 10 per share. Examine the nature of the financial instrument.

Solution

The convertible preference shares will be classified as "financial liability" in the books of the issuer, BG Ltd. The variability in the conversion ratio underwrites the return on preference shares and not just protects the rights of convertible instrument holders vis-à-vis equity shareholders.

*****

Illustration 21: Conversion ratio is variable in a narrow range

On 1 January 20X1, NG Ltd. subscribes to convertible preference shares of AG Ltd. at ₹ 100 per preference share. On a fully diluted basis, NG Ltd. is entitled to 30% stake in AG Ltd.

The preference shares are convertible at fair value, subject to, NG Ltd.'s stake not going below 15% and not going above 40%. Examine the nature of the financial instrument.

Solution

The convertible preference shares will be classified as "financial liability" in the books of the issuer, AG Ltd. The variability in the conversion ratio underwrites the return on preference shares to an extent and also restricts that return. The preference shareholder is not entitled to residual net assets of the issuer.

In certain situations, an instrument is convertible only at the option of issuer. While such instruments provide the issuer with an unconditional right to avoid payment of cash, it is important to understand the economic substance of the option. It is also very important to determine whether the option is exercised by the issuer or by shareholders acting in their capacity as instrument holders.

For example, if the convertible instrument is held by the equity shareholders of the issuer and the conversion requires unanimous consent of all the shareholders, it would be inappropriate to consider that the issuer has an unconditional right to avoid payment of cash. In this situation, it would be more relevant to consider the rights of the instrument holders in their capacity as equity shareholders of the issuer.

*****

Illustration 22: Conversion ratio changes under independent scenarios

On 1 January 20X1, STAL Ltd. subscribes to convertible preference shares of ATAL Ltd.

The preference shares are convertible as below:

Convertible 1:1 if another strategic investor invests in the issuer within one year

Convertible 1.5:1: if a prospectus filing is successfully completed within 2 years

Convertible 2:1: if a binding agreement for sale of majority stake by equity shareholders is entered into within 3 years

Convertible 3:1: if none of these events occur in 3 years' time.

Examine whether the financial instrument will be classified as equity.

Solution

In this case the four events can be viewed as discrete because the achievement of each one of these can occur independently of the other (as they relate to different periods). The arrangement can therefore be considered to be economically equivalent to four separate contracts. The price per share and the amount of shares to be issued is fixed in each of these discrete periods, with each event relating to a different year and therefore a separate risk. The "fixed for fixed" test is therefore met.

The instrument is therefore classified as "equity instrument".

*****

Illustration 23: Conversion ratio changes under inter-dependent scenarios

On 1 January 20X1, RHT Ltd. subscribes to convertible preference shares of RDT Ltd.

The preference shares are convertible as below:

Convertible 1:1 if another strategic investor invests at an enterprise valuation (EV) of USD 100 million.

Convertible 1.5:1: if another strategic investor invests at EV of USD 150 million

Convertible 2:1: if another strategic investor invests at EV of USD 200 million

Convertible 3:1: if no strategic investment is made within a period of 3 years

Examine the nature of the financial instrument.

Solution

The four events are interdependent because the second event cannot be met without also meeting the first event, and the third event cannot be met unless the first two are met.

Therefore, this contract should be treated as a single instrument when applying the "fixed for fixed" test. The test is then failed because the number of shares to be exchanged for cash are variable.

*****

3.4.1 Settlement Options

When a derivative financial instrument gives one party a choice over how it is settled, it is a financial asset or a financial liability unless all of the settlement alternatives would result in it being an equity instrument. (Ind AS 32.26)

Merged By CA - Born To Fight

For instance - a share option that the issuer can decide to settle net in cash or by exchanging its own shares for cash is a financial liability.

3.4.2 Settlement by delivery of instruments that meet conditions for exceptions to classification as financial liability

If the entity's own equity instruments to be received, or delivered, by the entity upon settlement of a contract are:

- puttable financial instruments with all the features and meeting the conditions described in paragraphs 16A and 16B of Ind AS 32 (as discussed above), or
- instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation with all the features and meeting the conditions described in paragraphs 16C and 16D of Ind AS 32 (as discussed above),

the contract is a financial asset or a financial liability.

This includes a contract that will be settled by the entity receiving or delivering a fixed number of such instruments in exchange for a fixed amount of cash or another financial asset. (Ind AS 32.22A)

3.4.3 Rights issues, options or warrants to acquire entity's own equity instruments for any currency

Rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. (Ind AS 32.11).

Carve out from IFRS: Equity conversion option embedded in a foreign currency convertible bond

Ind AS 32 considers the equity conversion option embedded in a convertible bond denominated in foreign currency to acquire a fixed number of entity's own equity instruments as an equity instrument if the exercise price is fixed in any currency.

As per IFRS

As per accounting treatment prescribed under IAS 32, equity conversion option in case of foreign currency denominated convertible bonds is considered a derivative liability which is embedded in the bond. Gains or losses arising on account of change in fair value of the derivative need to be recognised in the statement of profit and loss as per IAS 32.

Carve out

In Ind AS 32, an exception has been included to the definition of 'financial liability' in paragraph 11 (b) (ii), whereby conversion option in a convertible bond denominated in foreign currency to

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

acquire a fixed number of entity's own equity instruments is classified as an equity instrument if the exercise price is fixed in any currency.

Reasons

This treatment as per IAS 32 is not appropriate in instruments, such as, FCCBs since the number of shares convertible on the exercise of the option remains fixed and the amount at which the option is to be exercised in terms of foreign currency is also fixed; merely the difference in the currency should not affect the nature of derivative, i.e., the option. Further, the fair value of the option is based on the fair value of the share prices of the company. If there is decrease in the share price, the fair value of derivative liability would also decrease which would result in recognition of gain in the statement of profit and loss. This would bring unintended volatility in the statement of profit and loss due to volatility in share prices. This will also not give a true and fair view of the liability as in this situation, when the share prices fall, the option will not be exercised. However, it has been considered that if such option is classified as equity, fair value changes would not be required to be recognised. Accordingly, the exception has been made in definition of financial liability in Ind AS 32.

Let's understand this carve-out using an illustration:

Illustration 24: Foreign currency convertible bond

Entity A issues a bond with face value of USD 100 and carrying a fixed coupon rate of 6% p.a. Each bond is convertible into 1,000 equity shares of the issuer. Examine the nature of the financial instrument.

Solution

While the number of equity shares is fixed, the amount of cash is not. The variability in cash arises on account of fluctuation in exchange rate of INR-USD. Such a foreign currency convertible bond (FCCB) will qualify the definition of "financial liability".

However, Ind AS 32.11 provides, "the equity conversion option embedded in a convertible bond denominated in foreign currency to acquire a fixed number of the entity's own equity instruments is an equity instrument if the exercise price is fixed in any currency." Accordingly, FCCB will be treated as an "equity instrument".

But one cannot ignore the fixed coupon rate of 6% which is an obligation to deliver cash and therefore, financial liability. Accordingly, FCCBs under Ind AS 32 shall be classified as compound financial instruments if the interest liability is to be delivered in cash or shares in lieu of cash.

3.5 COMPOUND FINANCIAL INSTRUMENTS

So far we have discussed two broad aspects of classification:

- Obligations to deliver cash – generally, instruments with such obligations are classified as "financial liability"
- Settlement in own equity instruments – generally, instruments with such provisions are classified as "equity"

There are several exceptions to the general principles stated above, as we have seen in several illustrations discussed so far.

Let us now study those instruments which have features of both a financial liability and equity instrument. Such instruments are called "compound financial instruments". This topic is aimed at discussing the accounting treatment of such instruments and practical complexities that are arise due to issuance of such instruments.

The following illustrations demonstrate the identification of separate components of a financial instrument and determining whether it is a compound financial instrument.

Illustration 25: Redeemable debentures with discretionary dividend (continued from Illustration 2)

X Co. Ltd. (issuer) issues debentures to Y Co. Ltd. (holder). Those debentures are redeemable at the end of 10 years from the date of issue. Interest of 15% p.a. is payable at the discretion of the issuer. The rate of interest is commensurate with the credit risk profile of the issuer. Examine the nature of the financial instrument.

Solution

This instrument has two components – (1) mandatory redemption by the issuer for a fixed amount at a fixed future date, and (2) interest payable at the discretion of the issuer.

The first component is a contractual obligation to deliver cash (for repayment of principal with or without premium, as per terms) to the debenture holder that cannot be avoided. This component of the instrument is a financial liability.

The other component, discretionary interest is an equity feature because issuer can avoid payment of cash or another financial asset in this respect.

Therefore, this instrument is concluded to be a compound financial instrument.

*****

Illustration 26: Perpetual loan with mandatory interest (continued from Illustration 3)

P Co. Ltd. (issuer) takes a loan from Q Co. Ltd. (holder). The loan is perpetual and entitles the holder to fixed interest of 8% p.a. Examine the nature of the financial instrument.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

This instrument has two components – (1) mandatory interest by the issuer for a fixed amount at a fixed future date, and (2) perpetual nature of the principal amount.

The first component is a contractual obligation to deliver cash (for payment of interest) to the lender that cannot be avoided. This component of the instrument is a financial liability.

The other component, perpetual principal, is an equity feature because issuer is not required to pay cash or another financial asset in this respect.

Therefore, this instrument is concluded to be a compound financial instrument.

*****

Illustration 27: Optionally convertible redeemable preference shares (continued from Illustration 5)

D Ltd. issues preference shares to G Ltd. The holder has an option to convert these preference shares to equity instruments of the issuer anytime up to a period of 10 years. If the option is not exercised by the holder, the preference shares are redeemed at the end of 10 years. Examine the nature of the financial instrument.

Solution

This instrument has two components – (1) contractual obligation that is conditional on holder exercising its right to redeem, and (2) conversion option with the holder.

The first component is a financial liability because the entity does not have the unconditional right to avoid delivering cash.

The other component, conversion option with the holder, is an equity feature if the "fixed for fixed" test is satisfied. If the conversion option does not fulfil that test, say, because the conversion ratio varies in response to an underlying variable, it is a derivative liability.

Such an instrument is called a "hybrid instrument".

*****

3.5.1 Split accounting for compound financial instruments

Ind AS 109 deals with the measurement of financial assets and financial liabilities. Equity instruments are instruments that evidence a residual interest in the assets of an entity after deducting all of its liabilities. Therefore, when the initial carrying amount of a compound financial instrument is allocated to its equity and liability components:

- the equity component is assigned the residual amount i.e.
  - fair value of the instrument as a whole, *less*
  - the amount separately determined for the liability component.

- The sum of the carrying amounts assigned to the liability and equity components on initial recognition is always equal to the fair value that would be ascribed to the instrument as a whole.
- No gain or loss arises from initially recognising the components of the instrument separately.

(Ind AS 32.31)

In Illustrations 26 and 27 above, split accounting is performed by first determining the carrying amount of the liability component. This is done by measuring the net present value of the discounted cash flows of interest and/or principal, ignoring the possibility of exercise of the conversion option, if any. The discount rate is the market rate at the time of inception for a similar liability that does not have an associated equity component. The carrying amount of the equity instrument represented by perpetual principal in Illustration 26 and conversion option in Illustration 27 is then determined by deducting the fair value of the financial liability from the fair value of the compound financial instrument as a whole.

Illustration 28: Perpetual loan with mandatory interest (continued from Illustration 3)

P Co. Ltd. (issuer) takes a loan from Q Co. Ltd. (holder) for ₹ 12 lakhs. The loan is perpetual and entitles the holder to fixed interest of 8% p.a. The rate of interest commensurate with credit risk profile of the issuer is 12% p.a. Calculate the value of the liability and equity components.

Solution

The values of the liability and equity components are calculated as follows:

Present value of interest payable in perpetuity (₹ 96,000 discounted at 12%) = ₹ 800,000

Therefore, equity component = fair value of compound instrument, say, ₹ 1,200,000 less financial liability component i.e. ₹ 800,000 = ₹ 400,000.

In subsequent years, the profit and loss account is charged with interest of 12% on the debt instrument.

*****

Illustration 29: Optionally convertible redeemable preference shares (continued from Illustration 27)

On 1 July 20X1, D Ltd. issues preference shares to G Ltd. for a consideration of ₹ 10 lakhs. The holder has an option to convert these preference shares to a fixed number of equity instruments of the issuer anytime up to a period of 3 years. If the option is not exercised by the holder, the preference shares are redeemed at the end of 3 years. The preference shares carry a fixed

coupon of 6% p.a. and is payable every year. The prevailing market rate for similar preference shares, without the conversion feature, is 9% p.a.

Calculate the value of the liability and equity components.

Solution

The values of the liability and equity components are calculated as follows:

Present value of principal payable at the end of 3 years (₹ 10 lakhs discounted at 9% for 3 years) = ₹ 772,183

Present value of interest payable in arrears for 3 years (₹ 60,000 discounted at 9% for each of 3 years) = ₹ 151,878

Total financial liability = ₹ 924,061

Therefore, equity component = fair value of compound instrument, say, ₹ 1,000,000 less financial liability component i.e. ₹ 924,061 = ₹ 75,939.

In subsequent years, the profit and loss account is charged with interest of 9% on the debt instrument.

*****

3.5.2 Separation of non-equity embedded derivatives

Sometimes, the issuer also has the option to early redeem the instrument mentioned in Illustration 29. Such an option is issuer's call option. This call option is considered an embedded derivative which is a financial liability. The value of any derivative features (such as a call option) embedded in the compound financial instrument other than the equity component (such as an equity conversion option) is included in the liability component. (Ind AS 32.31)

Illustration 30: Optionally convertible preference shares with issuer's redemption option

D Ltd. issues preference shares to G Ltd. for a consideration of ₹ 10 lakhs. The holder has an option to convert these preference shares to a fixed number of equity instruments of the issuer anytime up to a period of 3 years. If the option is not exercised by the holder, the preference shares are redeemed at the end of 3 years. The preference shares carry a coupon of RBI base rate plus 1% p.a. and is payable at the end of every year.

The prevailing market rate for similar preference shares, without the conversion feature or issuer's redemption option, is RBI base rate plus 4% p.a. On the date of contract, RBI base rate is 9% p.a.

Calculate the value of the liability and equity components.

Join us t.me/caborntofight

Merged By CA - Born To Fight

Solution

The values of the liability and equity components are calculated as follows:

Present value of principal payable at the end of 3 years (₹ 10 lakhs discounted at 13% for 3 years) = ₹ 6,93,050

Present value of interest payable in arrears for 3 years (₹ 100,000 discounted at 13% for each of 3 years) = ₹ 2,36,115

Paragraph AG 31 of Ind AS 32 states that a common form of compound financial instruments is a debt instrument with an embedded conversion option, such as a bond convertible into ordinary shares of the issuer, and without any other embedded derivatives features.

The liability component = Present value of principal + Present value of Interest

= ₹ 6,93,050 + ₹ 2,36,115 = ₹ 9,29,165

Equity Component = ₹ 10,00,000 – ₹ 9,29,165 = ₹ 70,835

*****

Illustration 31: Instrument convertible only at the option of issuer

XYZ Ltd. issues optionally convertible debentures with the following terms:

The debentures carry interest at the rate of 7% p.a.

Issuer has option to either:

Convert the instrument into a fixed number of its own shares at any time, or redeem the instrument in cash at any time. The redemption price is the fair value of the fixed number of shares into which the instrument would have converted if it had been converted.

The holder has no conversion or redemption options.

Debentures have a tenor of 12 years and, if not converted or redeemed earlier, will be repaid in cash at maturity, including accrued interest, if any.

Examine the nature of the financial instrument.

Solution

The issuer has the ability to convert the debentures into a fixed number of its own shares at any time. The issuer, therefore, has the ability to avoid making a cash payment or settling the debentures in a variable number of its own shares. Therefore, such a financial instrument is likely to be classified as equity.

Join us t.me/caborntofight

However, it must be noted that mere existence of a right to avoid payment of cash is not conclusive. The instrument is to be accounted for as per its substance and hence it needs to be seen whether the conversion option is substantive.

In this particular situation, the issuer will need to determine whether it is favourable to exercise the conversion option or redemption option. In case of latter, the instrument will be classified as a financial liability (a hybrid instrument, whose measurement is dealt with in a subsequent section).

Practical situations do arise wherein the issuer has an option or obligation to issue own equity instruments only in particular circumstances i.e. the instrument is contingently convertible.

*****

3.5.3 Conversion or early settlement of compound financial instruments

3.5.3.1 Conversion

Classification of the liability and equity components of a convertible instrument is not revised as a result of a change in the likelihood that a conversion option will be exercised, even when exercise of the option may appear to have become economically advantageous to some holders. Holders may not always act in the way that might be expected because, for example, the tax consequences resulting from conversion may differ among holders. Furthermore, the likelihood of conversion will change from time to time. The entity's contractual obligation to make future payments remains outstanding until it is extinguished through conversion, maturity of the instrument or some other transaction. (Ind AS 32.30)

On conversion of a convertible instrument at maturity, the entity:

- derecognises the liability component and
- recognises it as equity.
- original equity component remains as equity (although it may be transferred from one line item within equity to another).
- there is no gain or loss on conversion at maturity.

3.5.3.2 Early settlement

When an entity extinguishes a convertible instrument before maturity through an early redemption or repurchase in which the original conversion privileges are unchanged, the entity allocates the consideration paid and any transaction costs for the repurchase or redemption to the liability and equity components of the instrument at the date of the transaction. The method used in allocating the consideration paid and transaction costs to the separate components is

consistent with that used in the original allocation to the separate components of the proceeds received by the entity when the convertible instrument was issued. (Ind AS 32.AG33)

In other words, the issuer:

- starts by **allocating the settlement price to the remaining liability** i.e. it determines the fair value of the remaining liability using a discount rate that is based on circumstances at the settlement date (this rate may differ from the rate used for the original allocation), and
- allocates the residual settlement amount to the equity component.

As per Ind AS 32.AG34, once the allocation of the consideration is made, any resulting gain or loss is treated in accordance with accounting principles applicable to the related component, as follows:

a) the amount of gain or loss relating to the liability component is recognised in profit or loss; and

b) the amount of consideration relating to the equity component is recognised in equity.

Illustration 32: Optionally convertible redeemable preference shares (continued from Illustration 29)

The amortisation schedule of the instrument is set out below:

Dates	*Cash flows*	*Finance cost at effective interest rate*	*Liability*	*Equity*
1July 20X1	*1,000,000*	*-*	*9,24,061*	*75,939*
30 June 20X2	*(60,000)*	*83,165*	*9,47,226*	*75,939*
30 June 20X3	*(60,000)*	*85,250*	*9,72,476*	*75,939*
30 June 20X4	*(10,60,000)*	*87,524*	*-*	*75,939*

Assume that D Ltd. has an early redemption option to prepay the instrument at ₹ 11 lakhs and on 30 June 20X3, it exercises that option. At 30 June 20X3, the interest rate has changed. At that time, D Ltd. could have issued a one-year (i.e. maturity 30 June 20X4) non-convertible instrument at 5%. Calculate the value of the liability and equity components.

Solution

Ind AS 32 requires that the amount paid (of ₹ 11 lakhs) is split by the same method as is used in the initial recording. However, at 30 June 20X3, the interest rate has changed. At that time, D Ltd. could have issued a one-year (i.e. maturity 30 June 20X4) non-convertible instrument at 5%.

The split will be made as below:

Particulars	Amount (₹)
Present value of principal payable at 30 June 20X4 in one year's time (₹ 10 lakhs discounted at 5% for one year)	9,52,381
Present value of interest payable (₹ 60,000 discounted at 5% for one year)	57,142
Total liability component	10,09,523
Consideration paid	11,00,000
Residual – equity component	90,477

Accordingly, the difference between consideration allocated to liability component (₹ 10,09,523) less carrying amount of financial liability on date of redemption i.e. 30 June 20X3 (₹ 9,72,476), amounting to ₹ 37,047 is recognised in profit or loss.

The residual i.e. consideration allocated to equity component is recognised in equity.

*****

An entity may amend the terms of a convertible instrument to induce early conversion, for example by offering a more favourable conversion ratio or paying other additional consideration in the event of conversion before a specified date.

The difference, at the date the terms are amended, between:

- the fair value of the consideration the holder receives on conversion of the instrument under the revised terms and
- the fair value of the consideration the holder would have received under the original terms is recognised as a loss in profit or loss.

3.6 TREASURY SHARES

If an entity reacquires its own equity instruments:

- Consideration paid for those instruments ('treasury shares') shall be deducted from equity. An entity's own equity instruments are not recognised as a financial asset regardless of the reason for which they are reacquired.
- Consideration received shall be recognised directly in equity.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- No gain or loss shall be recognised in profit or loss on the purchase, sale, issue or cancellation of an entity's own equity instruments

In the consolidated financial statements, consideration for treasury shares acquired and held by other members of the consolidated group, is deducted from equity.

It may be noted that when an entity holds its own equity on behalf of others, eg a financial institution holding its own equity on behalf of a client, there is an agency relationship and as a result those holdings are not included in the entity's balance sheet.

3.7 INTEREST, DIVIDENDS, LOSSES AND GAINS

The accounting principles related to transactions arising consequent to recognition of financial instruments are summarised below (Ind AS 32.35-41):

- The classification of a financial instrument as a financial liability or an equity instrument determines whether interest, dividends, losses and gains relating to that instrument are recognised as income or expense in profit or loss.
  - Interest, dividends, losses and gains relating to a financial instrument or a component that is a financial liability shall be recognised as income or expense in profit or loss.
  - Distributions to holders of an equity instrument shall be recognised by the entity directly in equity.
- **Transaction costs:**
  - Equity transaction – accounted for as a deduction from equity to the extent they are incremental costs directly attributable to the equity transaction that otherwise would have been avoided. The costs of an equity transaction that is abandoned are recognised as an expense.
  - Compound financial instrument – allocated to the liability and equity components of the instrument in proportion to the allocation of proceeds.
- Income tax relating to distributions to holders of an equity instrument and to transaction costs of an equity transaction shall be accounted for in accordance with Ind AS 12 Income Taxes
- Changes in the fair value of an equity instrument are not recognised in the financial statements.
- **Presentation:**
  - The amount of transaction costs accounted for as a deduction from equity in the period is disclosed separately in accordance with Ind AS 1.
  - Dividends classified as an expense may be presented in the Statement of Profit and Loss either with interest on other liabilities or as a separate item.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Gains and losses related to changes in the carrying amount of a financial liability are recognised as income or expense in profit or loss even when they relate to an instrument that includes a right to the residual interest in the assets of the entity in exchange for cash or another financial asset.

3.8 OFFSETTING A FINANCIAL ASSET AND A FINANCIAL LIABILITY

In many situations, an entity has the right to receive or pay a single net amount in relation to two or more separate financial instruments and intends to do so as well.

As per Ind AS 32.42 and Ind AS 32.AG38A, a financial asset and a financial liability shall be offset and the net amount presented in the balance sheet when, and only when, an entity:

a) currently has a **legally enforceable right to set off** the recognised amounts – this means that the right of set off:

   i. must not be contingent on a future event; and

   ii. must be legally enforceable in the normal course of business, in the event of default and in the event of insolvency or bankruptcy of the entity and all of the counterparties.

b) **intends** either to settle on a net basis, or to realise the asset and settle the liability simultaneously - If an entity can settle amounts in a manner such that the outcome is, in effect, equivalent to net settlement, the entity will meet the net settlement criterion. This will occur if, and only if, the gross settlement mechanism has features that eliminate or result in insignificant credit and liquidity risk, and that will process receivables and payables in a single settlement process or cycle.

Offsetting a recognised financial asset and a recognised financial liability and presenting the net amount differs from the derecognition of a financial asset or a financial liability. Although offsetting does not give rise to recognition of a gain or loss, the derecognition of a financial instrument not only results in the removal of the previously recognised item from the balance sheet but also may result in recognition of a gain or loss. (Ind AS 32.44).

A right of set-off is a debtor's legal right, by contract or otherwise, to settle or otherwise eliminate all or a portion of an amount due to a creditor by applying against that amount an amount due from the creditor. In unusual circumstances, a debtor may have a legal right to apply an amount due from a third party against the amount due to a creditor provided that there is an agreement between the three parties that clearly establishes the debtor's right of set-off. (Ind AS 32.45).

The conditions set out above are generally not satisfied and offsetting is usually inappropriate when (Ind AS 32.49):

a) several different financial instruments are used to emulate the features of a single financial instrument (a 'synthetic instrument') - For example, a floating rate long-term debt combined with an interest rate swap that involves receiving floating payments and making fixed payments synthesises a fixed rate long-term debt:

   i. Each of the individual financial instruments that together constitute a 'synthetic instrument' represents a contractual right or obligation with its own terms and conditions

   ii. Each may be transferred or settled separately.

   iii. Each financial instrument is exposed to risks that may differ from the risks to which other financial instruments are exposed.

   Accordingly, when one financial instrument in a 'synthetic instrument' is an asset and another is a liability, they are not offset and presented in an entity's balance sheet on a net basis unless they meet the criteria for offsetting.

b) financial assets and financial liabilities arise from financial instruments having the same primary risk exposure (for example, assets and liabilities within a portfolio of forward contracts or other derivative instruments) but involve different counter parties;

c) financial or other assets are pledged as collateral for non-recourse financial liabilities;

d) financial assets are set aside in trust by a debtor for the purpose of discharging an obligation without those assets having been accepted by the creditor in settlement of the obligation (for example, a sinking fund arrangement); or

e) obligations incurred as a result of events giving rise to losses are expected to be recovered from a third party by virtue of a claim made under an insurance contract.

QUICK RECAP

- Classification as a financial liability or as equity depends on the substance of a financial instrument rather than its legal form. The substance depends on the instrument's contractual rights and obligations.
- Liability classification - a financial instrument which contains a contractual obligation whereby the issuing entity is or may be required to deliver cash or another financial asset or own equity shares in lieu of cash to the instrument holder
- There are certain rule-based exceptions to the basic principle for classification of an instrument as financial liability – puttable instruments and obligations arising only on liquidation
- Financial instrument containing a contingent settlement provision, under which the instrument would be classified as a financial liability on the occurrence or non-occurrence of

Join us t.me/caborntofight

some uncertain future event beyond the control of both the issuer and the holder – usually classified as a financial liability unless the part of the contingent settlement provision that indicates liability classification is not genuine; or the issuer can be required to settle the obligation in cash or another financial asset only in the event of liquidation of the issuer

- Instruments which may or will be settled in an entity's own equity instruments – apply "fixed for fixed" test
- Instruments with both equity and liability features are compound instruments – equity and liability components are accounted for separately ('split accounting')
- Split accounting involves first calculating the fair value of the liability component. The equity component is then determined by deducting the fair value of the financial liability from the fair value of the compound financial instrument as a whole
- Subsequent changes in the value of the equity instruments are not recognised in the financial statements.
- The accounting implication of classification of a financial instrument as a financial liability or equity is given in table below:

Accounting aspect	Financial liability	Equity instrument
Re-measurement standard	Ind AS 109	Generally, not re-measured after initial measurement
Recognition of interest, dividends, losses and gains	Profit or loss	Retained earnings
Recognition of transaction costs	Included in calculation of effective interest rate and amortised over expected life of the instrument	Deduction from equity

UNIT 4: DERIVATIVES AND EMBEDDED DERIVATIVES

4.1 INTRODUCTION

Derivatives may exist as standalone financial instruments or may be embedded in other financial or non-financial instruments.

In Unit 3 of this chapter, we analysed the definitions of financial liability and equity. Both these definitions envisage situations in which an instrument is settled by exchange of own equity instruments which are derivatives. To be specific, let's reproduce the relevant portion of these definitions and set the context of discussion for this paragraph in terms of this situation.

Financial liability

A financial instrument that fulfils **either** of (A) or (B) below:

(A) .....

(B) An instrument that will or may be settled in the entity's own equity instruments and is:

(i) .....

(ii) **a derivative** that will or may be settled **other than by** the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

Equity

A financial instrument that fulfils both (A) and (B) below:

(A) .....

(B) An instrument that will or may be settled in the entity's own equity instruments and is:

(i) .....

(ii) **a derivative** that will or may be settled **only by** the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments.

4.2 DEFINITION

4.2.1 Derivatives

Ind AS 109.Appendix A defines a derivative as a financial instrument or other contract with all of the following three characteristics:

Join us t.me/caborntofight

i. **Value changes due to an underlying**: its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided **in the case of a non-financial variable that the variable is not specific to a party to the contract** (sometimes called the 'underlying');

Examples of common derivative contracts and the identified underlying variable:

Type of contract	Main pricing-settlement variable (underlying variable)
Interest rate swap	Interest rates
Currency swap (foreign exchange swap)	Currency rates
Commodity swap	Commodity prices
Equity swap	Equity prices (equity of another entity)
Credit swap	Credit rating, credit index or credit price
Total return swap	Total fair value of the reference asset and interest rates
Purchased or written treasury bond option (call or put)	Interest rates
Purchased or written currency option (call or put)	Currency rates
Purchased or written commodity option (call or put)	Commodity prices
Purchased or written stock option (call or put)	Equity prices (equity of another entity)
Interest rate futures linked to government debt (treasury futures)	Interest rates
Currency futures	Currency rates
Commodity futures	Commodity prices
Interest rate forward linked to government debt (treasury forward)	Interest rates
Currency forward	Currency rates
Commodity forward	Commodity prices
Equity forward	Equity prices (equity of another entity)

The definition of derivative excludes contracts which fulfil following two conditions:

- Value of the contract changes with reference to one or more non-financial variables; and

- That non-financial variable is specific to one of the parties to the contract.

As per paragraph BA.5 of Ind AS 109, a change in the fair value of a non-financial asset is specific to the owner if the fair value reflects not only changes in market prices for such assets (a financial variable) but also the condition of the specific non-financial asset held (a non-financial variable).

Examples of non-financial variables that are not specific to a party to the contract are an index of earthquake losses in a particular region and an index of temperatures in a particular city.

Non-financial variables specific to a party to the contract include:

- the occurrence or non-occurrence of a fire that damages or destroys an asset of a party to the contract
- residual value of an asset which changes in response to changes in the asset's physical condition

Derivatives give one party a contractual right to exchange financial assets or financial liabilities with another party under conditions that are potentially favourable, or a contractual obligation to exchange financial assets or financial liabilities with another party under conditions that are potentially unfavourable. Because the terms of the exchange are determined at inception, as prices in the financial markets change, those terms may become favourable or unfavourable.

A derivative usually has a notional amount, which can be an amount of currency, a number of shares, a number of units of weight or volume or other units specified in the contract. The changes in value of a derivative are measured corresponding to the notional amount. Refer illustration 1 and 2 below.

ii. **No or little initial net investment**: it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors.

Illustration 1: Prepaid interest rate swap (fixed rate payment obligation prepaid at inception)

Entity S enters into a ₹ 100 crores notional amount five-year pay-fixed, receive-variable interest rate swap with Counterparty C.

- *The interest rate of the variable part of the swap is reset on a quarterly basis to three-month Mumbai Interbank Offer Rate (MIBOR).*
- *The interest rate of the fixed part of the swap is 10% p.a.*
- *Entity S prepays its fixed obligation under the swap of ₹ 50 crores (₹ 100 crores × 10% × 5 years) at inception, discounted using market interest rates*

- *Entity S retains the right to receive interest payments on the ₹ 100 crores reset quarterly based on three-month MIBOR over the life of the swap.*

Analyse.

Solution

The initial net investment in the interest rate swap is significantly less than the notional amount on which the variable payments under the variable leg will be calculated. The contract requires an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors, such as a variable rate bond.

Therefore, the contract fulfils the condition 'no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors'.

Even though Entity S has no future performance obligation, the ultimate settlement of the contract is at a future date and the value of the contract changes in response to changes in the LIBOR index. Accordingly, the contract is regarded as a derivative contract.

*****

Illustration 2: Prepaid pay-variable, receive-fixed interest rate swap

- *Entity S enters into a ₹ 100 crores notional amount five-year pay-variable, receive-fixed interest rate swap with Counterparty C.*
- *The variable leg of the swap is reset on a quarterly basis to three-month MIBOR.*
- *The fixed interest payments under the swap are calculated as 10% of the swap's notional amount, i.e. ₹ 10 crores p.a.*
- *Entity S prepays its obligation under the variable leg of the swap at inception at current market rates. Say, that amount is ₹ 36 crores.*
- *It retains the right to receive fixed interest payments of 10% on ₹ 100 crores every year.*

Analyse.

Solution

In effect, this contract results in an initial net investment of ₹ 36 crores which yields a cash inflow of ₹ 10 crores every year, for five years. By discharging the obligation to pay variable interest rate payments, Entity S in effect provides a loan to Counterparty C.

Therefore, all else being equal, the initial investment in the contract should equal that of other financial instruments that consist of fixed annuities. Thus, the initial net investment in the pay-variable, receive-fixed interest rate swap is equal to the investment required in a non-derivative contract that has a similar response to changes in market conditions.

For this reason, the instrument fails the condition 'no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors'. Therefore, the contract is not accounted for as a derivative contract.

*****

Illustration 3: Prepaid forward

Entity XYZ enters into a forward contract to purchase 1 million ordinary shares of Entity T in one year

- *The current market price of T is ₹ 50 per share*
- *The one-year forward price of T is ₹ 55 per share*
- *XYZ is required to prepay the forward contract at inception with a ₹ 50 million payment.*

Analyse.

Solution

Purchase of 1 million shares for current market price is likely to have the same response to changes in market factors as the contract mentioned above. Accordingly, the prepaid forward contract does not meet the initial net investment criterion of a derivative instrument.

*****

iii. **Future settlement**: it is settled at a future date.

However, it is not relevant whether the derivative is settled gross or not. For example, an interest rate swap is a derivative instrument, whether the counterparties pay interest to each other or settle it on a net basis.

Further, an option, say a call option i.e. a right to purchase shares at a fixed price at a certain date in future, may expire unexercised at maturity because it is 'out of money'. Such a contract is still a derivative contract because expiry at maturity is also a form of settlement even though there is no exchange of consideration eventually.

Illustration 4

Entity ABC Ltd., whose functional currency is Indian Rupees, sells products in France denominated in Euro. ABC enters into a contract with an investment bank to convert Euro to Indian Rupees at a fixed exchange rate. The contract requires ABC to remit Euro based on its sales volume in France in exchange for Indian Rupees at a fixed exchange rate of 80.00. Is that contract a derivative?

Solution

Yes. The contract has two underlying variables (the foreign exchange rate and the volume of sales); no initial net investment or an initial net investment that is smaller than would be

Merged By CA - Born To Fight

required for other types of contracts that would be expected to have a similar response to changes in market factors, and a payment provision.

*****

Illustration 5

The definition of a derivative requires that the instrument "is settled at a future date". Is this criterion met even if an option is expected not to be exercised, for example, because it is out of the money?

Solution

Yes. An option is settled upon exercise or at its maturity. Expiry at maturity is a form of settlement even though there is no additional exchange of consideration.

*****

Accounting for derivatives

All derivatives are measured at fair value with changes in fair value being recognized in profit and loss for the period, except derivatives that qualify as hedging instruments. Accounting for derivatives that qualify as hedging instruments is dealt with in the Hedge Accounting chapter.

Illustration 6

Silver Ltd. has purchased 100 ounces of gold on 10 March 20X1. The transaction provides for a price payable which is equal to market value of 100 ounces of gold on 10 April 20X1 and shall be settled by issue of such number of equity shares as is required to settle the aforementioned transaction price at ₹ 10 per share on 10 April 20X1. Whether this is classified as liability or equity? Own use exemption does not apply.

Solution

In the above scenario, there is a contract for purchase of 100 ounces of gold whose consideration varies in response to changing value of gold. Analysing this contract as a derivative –

(a) Value of contract changes in response to change in market value of gold;

(b) There is no initial net investment

(c) It will be settled at a future date, i.e. 10 April 20X1.

Since the above criteria are met, this is a derivative contract.

Now, a derivative contract that is settled in own equity other than exchange of fixed amount of cash for fixed number of shares is classified as 'liability'. In this case, since the contract results in issue of variable number of shares based on transaction price to be determined in future, hence, this shall be classified as 'derivative financial liability'.

Per Ind AS 109.4.2.1 – A derivative financial liability shall be carried at fair value through profit or loss.

Illustration 7 : Derivative contract:

Entity – B Ltd writes an option contract for sale of shares of Target Ltd. at a fixed price of ₹ 100 per share to C Ltd. This option is exercisable anytime for a period of 90 days ('American option'). Evaluate this under the definition of financial instrument.

Solution

In the above case – B Ltd has written an option, which if exercised by C Ltd. will result in B Ltd. selling equity shares of Target Ltd. for fixed price of ₹ 100 per share. Such option will be exercised by C Ltd. only if the market price of shares of Target Ltd. increases beyond ₹ 100, thereby resulting in contractual obligation over B Ltd. to settle the contract under potential unfavorable terms.

If the market price goes to ₹ 120 then the option will be exercised by C Ltd. So, B Ltd has to buy shares from the market at ₹ 120 per share and sell at ₹ 100, thereby resulting in a loss or exchange at unfavorable terms to B Ltd. Hence, the option will meet the definition of financial liability in the books of B Ltd.

The additional question that arises here is the nature of this financial liability and whether it meets the definition of derivative. A derivative is a financial instrument that meets following conditions:

(a) Its value changes in response to change in specified variable like interest rate, equity index, commodity price, etc. If the variable is non-financial, it is not specific to party to the contract

(b) It requires no or little initial net investment

(c) It is settled at a future date.

Evaluating the above instrument, B Ltd. has written an option whose value changes based on change in market price of equity share, it requires no initial net investment and is settled at a future date (anytime in 90 days). Hence, it meets definition of derivative financial liability in books of B Ltd.

*****

Illustration 8: Derivative contract to be settled in own equity instruments

A Ltd. issues warrants to all existing shareholders entitling them to purchase additional equity shares of A Ltd. (with face value of ₹ 100 per share) at an issue price of ₹ 150 per share. Evaluate whether this constitutes an equity instrument or a financial liability?

Solution

In this case, Company A Ltd. has issued warrants entitling the shareholders to purchase equity shares of the Company at a fixed price. Hence, it constitutes a contractual arrangement for issuance of fixed number of shares against fixed amount of cash.

Now, evaluating this contract under definition of derivative –

(i) The value of warrant changes in response to change in value of underlying equity shares;

(ii) This involves no initial net investment

Join us t.me/caborntofight

(iii) It shall be settled at a future date.

Hence, this warrant meets the definition of derivative.

Applying definition of equity under Ind AS 32, a derivative contract that will be settled by exchange of fixed number of equity shares for fixed amount of cash meets definition of equity instrument. The above contract is derivative contract that will be settled by issue of fixed number of own equity instruments by A Ltd. for fixed amount of cash and hence meets definition of equity instrument.

*****

4.2.2 Embedded derivatives

Paragraph 4.3.1 of Ind AS 109 defines an embedded derivative as:

"An embedded derivative is:

- a **component** of a hybrid contract
- that also includes a **non-derivative host**
- with the effect that **some** of the **cash flows** of the combined instrument **vary** in a way **similar to a stand-alone derivative**.

An embedded derivative **causes**:

- some or all of the **cash flows** that otherwise would be **required by the contract**
- to be **modified** according to a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable,
- provided **in the case of a non-financial variable** that the **variable is not specific to a party** to the contract.

A derivative that is attached to a financial instrument but is contractually transferable independently of that instrument, or has a different counterparty, is not an embedded derivative, but a separate financial instrument."

Examples 1 - 3 of embedded derivatives:

1. Company MNL Ltd. holds a bond which is convertible into the ordinary shares of Company Z Ltd. The hybrid contract is the convertible bond; the host contract is the bond asset; the embedded derivative is the conversion option.
2. Company ABC Ltd. enters into a lease with an inflation factor, such that each year rentals are adjusted for changes in risk price index. The hybrid contract is the entire lease; the host is the lease contract, the embedded derivative is the adjustment to the risk price index.
3. Company PQR Ltd. sells furniture to Company XYZ Ltd. in USD. Both companies are located in India. The hybrid contract is the entire sale contract which will be settled in USD; the host contract is the Rupee sale contract; the embedded derivative is the foreign exchange ₹/USD forward.

Illustration 9

A lease contract contains a provision that rentals increase each year by ₹ 3 million. Is there an embedded derivative in this contract?

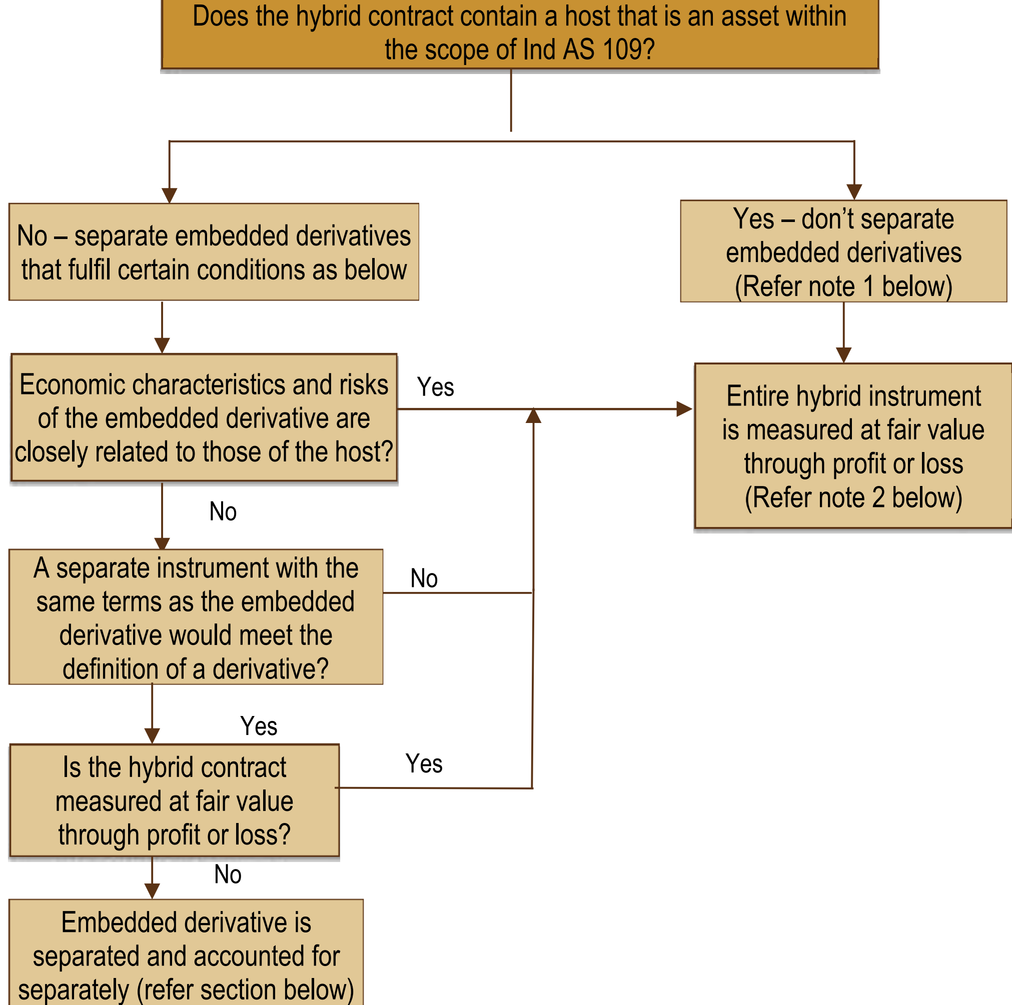
Solution

The price adjustment feature does not meet the definition of a derivative on a stand-alone basis since its value does not change in response to changes of some underlying. There is no underlying in this case; hence there is no embedded derivative in the lease contract.

*****

4.2.2.1 Separation of embedded derivatives from host contract

In certain circumstances, an embedded derivative is required to be separated from the host contract and accounted for separately as a financial instrument. The flowchart below analyses those circumstances:



Join us t.me/caborntofight

Note 1: This implies that embedded derivatives are permitted to be separated from only such hybrid contracts that contain a host which is either a (a) financial instrument classified as financial liability or equity or compound; or (b) contract for purchase or sale of a non-financial item.

Note 2: If both the host and embedded derivative have economic characteristics of an equity instrument, the hybrid instrument is not carried at fair value through profit or loss. In other words, this measurement category is applicable only for host contracts which are financial liabilities.

4.2.2.2 Economic characteristics and risks of the embedded derivative – whether closely related to those of the host?

Paragraphs B4.3.5 and B4.3.8 of Ind AS 109 provide examples of situations in which economic characteristics of the embedded derivative are considered to be closely related or not closely related to those of the host.

Some of these examples are explained below, though students are advised to understand all the examples given in the application guidance of the standards.

1. Underlying indices

Illustration 10: Debt instrument with indexed repayments

Entity X issues a redeemable fixed interest rate debenture to Entity Y. Amount of interest and principal is indexed to the value of equity instruments of Entity X.

Analyse

Solution

In the given case, the host is a fixed interest rate debt instrument. The economic characteristics and risks of a debt instrument are not closely related to those of an equity instrument.

Hence, the exposure of this hybrid instrument to changes in value of equity instruments is an embedded derivative which is required to be separated.

The response above will not change even if the interest payment and principal repayments are indexed to a commodity index or similar underlying.

*****

Illustration 11: Lease contracts dependent on inflation index

A lease contract, between two Indian companies of an asset in India, includes contingent lease rentals that are dependent upon an US inflation index. Can the entity treat inflation linked features as closely related?

Solution

For inflation linked features, an embedded derivative in a lease contract is considered as closely related to the host if it is an inflation—related index related to inflation in the entity's own economic environment.

In this case, whilst the asset and the lessor and lessee are located in India, lease payment are linked to US index. Hence, embedded derivative is not closely related and needs to be separated.

*****

Illustration 12: Lease contracts dependent on inflation index

As per the contract entered between lease and lessor, lease rentals will increase by ₹ 3 million, if profit after tax is over ₹ 200 million. Can the entity treat inflation linked features as closely related?

Solution

No. Whilst contingent rentals based on sales are closely related to a host lease contract, the same is not true of contingent rentals based on profit after tax.

*****

2. *Prepayment options in debt instruments*

It is very common to have debt prepayment options in ordinary borrowing arrangements. Paragraph B4.3.5(e) of Ind AS 109 provides the guidance in this respect:

"A call, put, or prepayment option embedded in a host debt contract or host insurance contract is not closely related to the host contract unless:

i. the option's exercise price is approximately equal on each exercise date to the amortised cost of the host debt instrument or the carrying amount of the host insurance contract;

or

ii. the exercise price of a prepayment option reimburses the lender for an amount up to the approximate present value of lost interest for the remaining term of the host contract. Lost interest is the product of the principal amount prepaid multiplied by the interest rate differential. The interest rate differential is the excess of the effective interest rate of the host contract over the effective interest rate the entity would receive at the prepayment date if it reinvested the principal amount prepaid in a similar contract for the remaining term of the host contract.

The assessment of whether the call or put option is closely related to the host debt contract is made before separating the equity element of a convertible debt instrument in accordance with Ind AS 32."

Join us t.me/caborntofight

Ind AS 109 does not interpret the term "approximately equal". Management of entities will need to adopt a consistent accounting policy to apply this principle in general.

Illustration 13: Debt instrument with prepayment option

Entity PQR borrows ₹ 100 crores from CFDH Bank on 1 April 20X1. Interest is payable at 12% p.a. and there is a bullet repayment of principal at the end of the term.

Term of the loan is 6 years.

The loan includes an option to prepay the loan at 1st April each year with a prepayment penalty of 3%. There are no transaction costs. Without the prepayment option, the interest rate quoted by bank is 11% p.a.

Analyse

Solution

Step 1: Identify the host contract and embedded derivative, if any

In the given case,

- Host is a debt instrument comprising annual interest payment at 12% p.a. and bullet principal repayment at the end of 6 years.
- Option to prepay the debt at ₹ 103 crores is an embedded derivative

Step 2: Determine the amortised cost of the host debt instrument

Whether the prepayment option is likely to be exercised or not, the amortised cost of the host debt instrument should be calculated as present value (PV) of expected cash flows using a fair market interest rate for a debt without the prepayment option (11% p.a. in this case). This is calculated below as ₹ 104.23 crores:

Year	Cash outflow	PV @ 11% p.a.	Finance cost	Amortised cost
	₹ crores			
1	12.00	10.81	11.46	103.68
2	12.00	9.74	11.41	103.09
3	12.00	8.77	11.34	102.43
4	12.00	7.90	11.27	101.70
5	12.00	7.12	11.20	100.90
6	112.00	59.88	11.10	-
		104.22	**67.78**	

Merged By CA - Born To Fight

Step 3: Compare the exercise price of the prepayment option with the amortised cost of the host debt instrument

Year	Amortised cost	Exercise price of prepayment option	Difference
	₹ Crores		
1	103.68	103.00	0.7%
2	103.09	103.00	0.1%
3	102.43	103.00	-0.6%
4	101.70	103.00	-1.3%
5	100.90	103.00	-2.1%
6	-	N/A	

The management of Entity PQR may formulate an appropriate accounting policy to determine what constitutes "approximately equal". In this case, if the management determines that a difference of more than 2% will indicate that the option's exercise price is not approximately equal to the amortised cost of the host debt instrument, it will need to separate the embedded derivative and account for it as per principles given in the subsequent sub-section.

It may be questioned as to why an option to repay a fixed rate loan early meets the definition of embedded derivative. Let us revisit an important phrase from the definition of embedded derivative:

"...some or all of the cash flows that otherwise would be required by the contract to be modified..."

In the context of a fixed rate debt, it may be interpreted that:

- the option affects cash flows only if exercised; and
- the cash flows of a fixed rate debt do not vary with interest rates.

However, in this context, a variation in cash flows should be interpreted as a possible change in the fair value of expected cash flows. Accordingly, the option's expected cash flows vary according to interest rates in a similar way as a separate option to purchase a fixed rate debt asset at a fixed price. A fixed price option to prepay a fixed rate loan will increase in value as interest rates decline (and vice versa).

3. Foreign currency derivative embedded in contract for purchase or sale of non-financial items

Another common situation in trade and commerce in today's world is a contract for the purchase or sale of a non-financial item where the price is denominated in a foreign currency. Paragraph B4.3.8(d) provides following guidance in this respect.

"An embedded foreign currency derivative in a host contract that is an insurance contract or not a financial instrument is closely related to the host contract provided it is not leveraged, does not contain an option feature, and requires payments denominated in one of the following currencies:

i. the functional currency of any substantial party to that contract;

ii. the currency in which the price of the related good or service that is acquired or delivered is routinely denominated in commercial transactions around the world (such as the US dollar for crude oil transactions); or

iii. a currency that is commonly used in contracts to purchase or sell non-financial items in the economic environment in which the transaction takes place (eg a relatively stable and liquid currency that is commonly used in local business transactions or external trade)."

The functional currencies of the parties should be determined in accordance with the definition and guidance in Ind AS 21.9 to 13.

Unless the above exceptions apply, the embedded foreign currency derivative should be separated from the host contract. Certain guidance on how to carry out the separation are enumerated below in detail:

1. the host contract is a sale or purchase contract denominated in the functional currency of the reporting entity

2. the amount of functional currency is determined using the relevant forward exchange rate (to the date of delivery) at the date the contract is entered into

3. the embedded derivative is a forward currency contract to buy or sell the applicable amount of the contract currency for the functional currency, at the same forward exchange rate. The effect is that the fair value of the embedded derivative is initially zero

4. subsequent changes in the fair value of the embedded derivative are recorded in profit or loss

5. on delivery of the non-financial item, the host contract is fulfilled and the embedded derivative is effectively settled. A foreign currency debtor or creditor is recognised for the contract amount, translated at the spot rate in accordance with Ind AS 21.23(a). The

© The Institute of Chartered Accountants of India

closing carrying amount of the embedded derivative is added to the functional currency amount of the host contract to give the initial carrying amount of the debtor or creditor.

4. *Option and non-option based derivatives*

A. Non-option based derivatives

The terms of an embedded non-option derivative, such as a forward or swap, must be determined so as to result in the embedded derivative having a fair value of zero at the inception of the hybrid contract. Non-option based derivatives represent obligations of the counterparties to a contract.

Fair value of a financial instrument is a combination of its intrinsic value and time value. In a fair and perfect market, it would be inappropriate to conclude that immediately at the inception of a contract, it results in creation of rights and obligations for two independent parties i.e. the contract has no intrinsic value at inception. Also, the time value starts accumulating only after the first day of the contract.

The standard specifies that if it were permitted to separate embedded non-option derivatives on other terms, a single hybrid contract could be decomposed into an infinite variety of combinations of host debt instruments and embedded derivatives, for example, by separating embedded derivatives with terms that create leverage, asymmetry or some other risk exposure not already present in the hybrid contract. Therefore, it is inappropriate to separate an embedded non-option derivative on terms that result in a fair value other than zero at the inception of the hybrid contract.

Further, in the case of non-option based derivatives, terms of the host debt instrument reflect the (a) stated or (b) implied substantive terms of the hybrid contract. In the absence of implied or stated terms, the entity makes its own judgement of the terms.

B. Option based derivatives

The economic behaviour of a hybrid contract with an option-based embedded derivative depends critically on the strike price (or exercise price) specified for the option feature in the hybrid contract. Therefore, the separation of an option-based embedded derivative (including any embedded put, call, cap, floor, options or swap feature in a hybrid contract) should be based on the stated terms of the option feature documented in the hybrid contract (unlike a non-option based derivative which is separated on the basis of implied terms also). As a result, the embedded derivative would not necessarily have a fair value or intrinsic value equal to zero at the initial recognition of the hybrid contract.

If an entity were required to identify the terms of an embedded option-based derivative so as to achieve a fair value of the embedded derivative of zero, the strike price generally would have to be determined so as to result in the option being infinitely out of the money. This would imply a

© The Institute of Chartered Accountants of India

zero probability of the option feature being exercised. However, since the probability of the option feature in a hybrid contract being exercised generally is not zero, it would be inconsistent with the likely economic behaviour of the hybrid contract to assume an initial fair value of zero. Similarly, if an entity were required to identify the terms of an embedded option-based derivative so as to achieve an intrinsic value of zero for the embedded derivative, the strike price would have to be assumed to equal the price (or rate) of the underlying variable at the initial recognition of the hybrid contract. In this case, the fair value of the option would consist only of time value. However, such an assumption would not be consistent with the likely economic behaviour of the hybrid contract, including the probability of the option feature being exercised, unless the agreed strike price was indeed equal to the price of the underlying variable at the initial recognition of the hybrid contract.

The economic nature of an option-based embedded derivative is fundamentally different from a forward-based embedded derivative (including forwards and swaps), because the terms of a forward are such that a payment based on the difference between the price of the underlying and the forward price will occur at a specified date, while the terms of an option are such that a payment based on the difference between the price of the underlying and the strike price of the option may or may not occur depending on the relationship between the agreed strike price and the price of the underlying at a specified date or dates in the future. Adjusting the strike price of an option-based embedded derivative, therefore, alters the nature of the hybrid contract. On the other hand, if the terms of a non-option embedded derivative in a host debt instrument were determined so as to result in a fair value of any amount other than zero at the inception of the hybrid contract, that amount would essentially represent a borrowing or lending. Accordingly, it is not appropriate to separate a non-option embedded derivative in a host debt instrument on terms that result in a fair value other than zero at the initial recognition of the hybrid contract.

4.2.2.3 Accounting for embedded derivatives

If the flowchart given in paragraph "Separation of embedded derivatives" results in the conclusion that the embedded derivatives are required to be separated, an entity shall measure the derivatives at fair value at initial recognition and subsequently at fair value through profit or loss. *[Paragraph 4.3.4 of Ind AS 109]*

The initial carrying amount of the host instrument is the residual amount after separating the embedded derivative. *[Paragraph B4.3.3 of Ind AS 109]*

As per paragraph 4.3.5 of Ind AS 109, if a contract contains one or more embedded derivatives and the host is not a financial asset, an entity may designate the entire hybrid contract as at fair value through profit or loss unless:

i. the embedded derivative does not significantly modify the cash flows that otherwise would be required by the contract; or

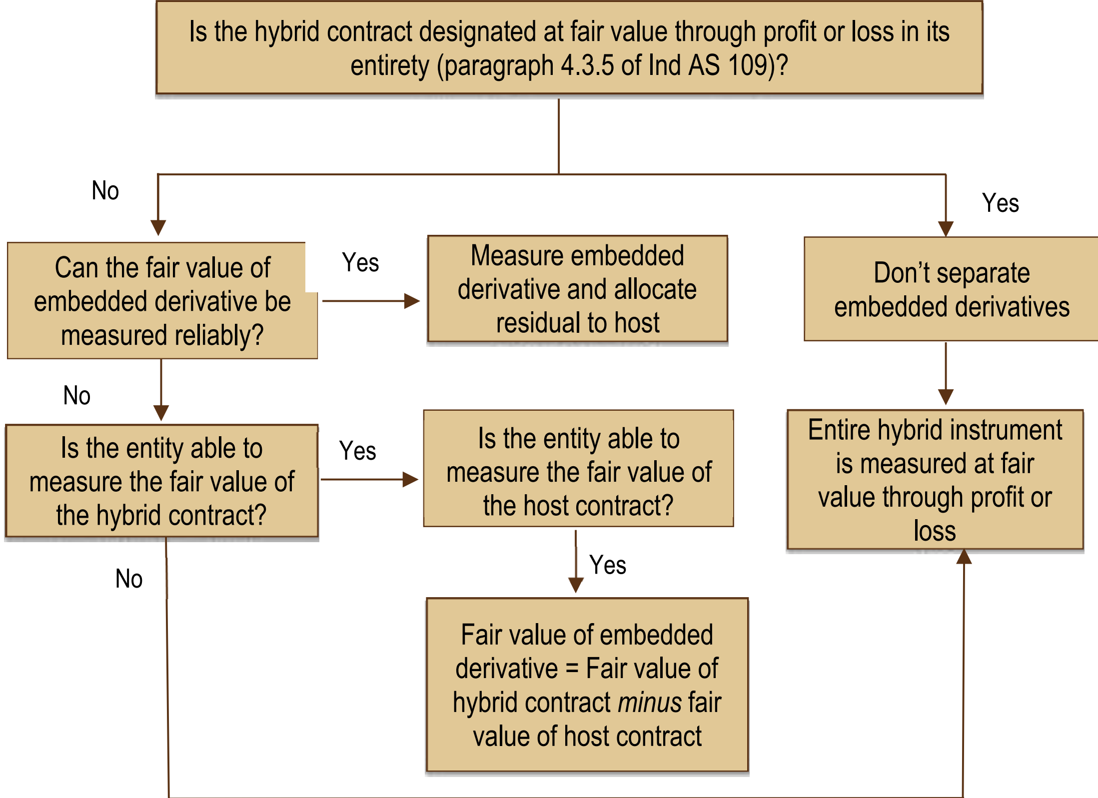
ii. it is clear with little or no analysis when a similar hybrid instrument is first considered that separation of the embedded derivative is prohibited, such as a prepayment option embedded in a loan that permits the holder to prepay the loan for approximately its amortised cost.

These are two exceptions to the general principle that hybrid contracts can be measured at fair value in their entirety, without separation of embedded derivatives. ***Refer explanation below for interpretation of the phrase "significantly modify cash flows" mentioned above***.

Further, as per paragraph 4.3.6 of Ind AS 109, if an entity is required to separate an embedded derivative from its host (as per flowchart presented earlier in this paragraph), but is unable to measure the embedded derivative separately either at acquisition or at the end of a subsequent financial reporting period, it shall designate the entire hybrid contract as at fair value through profit or loss.

If an entity is unable to measure reliably the fair value of an embedded derivative on the basis of its terms and conditions, the fair value of the embedded derivative is the difference between the fair value of the hybrid contract and the fair value of the host. If the entity is unable to measure the fair value of the embedded derivative using this method, the hybrid contract is designated as at fair value through profit or loss.

To conclude, picking up from the flowchart presented earlier in this paragraph, the accounting implications are demonstrated in the flow chart below:



Reassessment of Embedded Derivatives

An entity should assess whether an embedded derivative is required to be separated from the host contract and accounted for as a derivative when the entity first becomes a party to the contract.

Subsequent reassessment is prohibited unless there is a change in the terms of the contract that significantly modifies the cash flows that otherwise would be required under the contract, in which case reassessment is required. An entity determines whether a modification to cash flows is significant by considering the extent to which the expected future cash flows associated with the embedded derivative, the host contract or both have changed and whether the change is significant relative to the previously expected cash flows on the contract.

Illustration 14: Contracts for purchase or sale of non-financial item

Key terms of contracts to buy/sell non-financial items

Company Z is engaged in the business of importing oil seeds for further processing as well as trading purposes. It enters into the following types of contracts as on 1 October 20X1:

Particulars	Contract 1	Contract 2	Contract 3
Nature of Contract	Import of oil seeds from a foreign supplier	Purchase of oil seeds from a domestic producer / supplier	Contract to sell oil seeds on the commodity exchange
Quantity and rate	100 MT at USD 400 per MT to be delivered as on 31 March 20X2	50 MT at ₹ 30,000 per MT to be delivered as on 31 January 20X2	50 MT at USD 450 per MT, maturing as on 15 January 20X2
Net settlement clause included in the contract	Yes	Yes	Yes
Net settlement in practice for similar contracts	There have also been several instances of the oil seeds being sold prior to or shortly after taking delivery. These instances of net settlement constitute approximately 30 per cent of the value of total import contracts.	Yes – company Z has net settled some of the domestic purchase contracts. However, these instances constitute only 1 per cent of the total domestic purchase contracts in value. The remaining contracts are settled by taking delivery of oil seeds which are used for further processing.	Yes – these contracts are required to be net settled with the exchange on the maturity date. Company Z enters into these types of derivative contracts to hedge the risks on its domestic oil seeds purchase contracts

Company Z is required to determine if the contracts entered into for purchase and sale of oil seeds are derivatives within the scope of Ind AS 109 or are executory contracts outside the scope of Ind AS 109.

Solution

Contract 1:

The following factors indicate that this contract does not meet the 'own use' exemption:

- The contract permits net settlement, and
- There is a past practice of a significant proportion (30 per cent in this illustration) of similar contracts being settled on a net basis either in cash or by sale of the oil seeds prior to delivery/shortly after taking delivery.

Therefore, this contract would fall within the scope of Ind AS 109 and should be recognised as a derivative instrument as on 1 October 20X1. The contract would be in the nature of a forward contract to buy 100 MT of oil seeds as on 31 March 20X2 at USD 400 per MT. Company Z would have to recognise the fair value changes (based on change in forward purchase rate) on this contract in the statement of profit and loss at each reporting date.

Contract 2

Contract 2 also permits net settlement in cash. Further, there have been some instances of similar domestic purchase contracts being settled net in cash in the past. However, these have been infrequent in nature and insignificant in proportion to the total value of similar contracts (i.e.1 percent in this illustration).

Company Z is in the practice of taking delivery of the oil seeds purchased under similar contracts and using them for further processing in its plants.

This indicates that the domestic purchase contract meets the criteria for the 'own-use' exemption and should be considered as an executory contract.

Therefore, this contract would not fall within the scope of Ind AS 109.

Contract 3

This contract is in the nature of a derivative contract transacted on a commodity exchange and is required to be net settled in cash on maturity. Therefore, this derivative contract would be covered by Ind AS 109 and required to be classified and measured at FVTPL.

*****

Illustration 15: Foreign currency embedded derivatives

Company A, an Indian company whose functional currency is ₹, enters into a contract to purchase machinery from an unrelated local supplier, company B. The functional currency of company B is also ₹. However, the contract is denominated in USD, since the machinery is sourced by company B from a US based supplier. Payment is due to company B on delivery of the machinery.

Key terms of the contract:

Contractual features	Details
Contract/order date	9 September 20X1
Delivery/payment date	31 December 20X1
Purchase price	USD 1,000,000
USD/₹ Forward rate on 9 September 20X1 for 31 December 20X1 maturity	67.8
USD/₹ Spot rate on 9 September 20X1	66.4
USD/₹ Forward rates for 31 December, on:	
30 September	67.5
31 December (spot rate)	67.0

Company A is required to analyse if the contract for purchase of machinery (a capital asset) from company B contains an embedded derivative and whether this should be separately accounted for on the basis of the guidance in Ind AS 109. Also give necessary journal entries for accounting the same.

Solution

Based on the guidance above, the USD contract for purchase of machinery entered into by company A includes an embedded foreign currency derivative due to the following reasons:

- The host contract is a purchase contract (non-financial in nature) that is not classified as, or measured at FVTPL.
- The embedded foreign currency feature (requirement to settle the contract by payment of USD at a future date) meets the definition of a stand-alone derivative – it is akin to a USD-₹ forward contract maturing on 31 December 20X1.
- USD is not the functional currency of either of the substantial parties to the contract (i.e., neither company A nor company B).
- Machinery is not routinely denominated in USD in commercial transactions around the world. In this context, an item or a commodity may be considered 'routinely denominated' in a particular currency only if such currency was used in a large majority of similar commercial transactions around the world. For example, transactions in crude oil are generally considered routinely denominated in USD. A transaction for acquiring machinery in this illustration would generally not qualify for this exemption.
- USD is not a commonly used currency for domestic commercial transactions in the economic environment in which either company A or B operate. This exemption generally applies when the business practice in a particular economic environment is to use a more stable or liquid foreign currency (such as the USD), rather than the local currency, for a majority of internal or cross-border transactions, or both. In the illustration above, companies A and B are companies operating in India and the purchase contract is an internal/domestic transaction. USD is not a commonly used currency for internal trade

within this economic environment and therefore the contract would not qualify for this exemption.

Accordingly, company A is required to separate the embedded foreign currency derivative from the host purchase contract and recognise it separately as a derivative.

The separated embedded derivative is a forward contract entered into on 9 September 20X1, to exchange USD 10,00,000 for ₹ at the USD/₹ forward rate of 67.8 on 31 December 20X1. Since the forward exchange rate has been deemed to be the market rate on the date of the contract, the embedded forward contract has a fair value of zero on initial recognition.

Subsequently, company A is required to measure this forward contract at its fair value, with changes in fair value recognised in the statement of profit and loss. The following is the accounting treatment at quarter-end and on settlement:

Accounting treatment:

Date	Particulars	Amount (₹)	Amount (₹)
09-Sep-X1	***On initial recognition of the forward contract***		
	(No accounting entry recognised since initial fair value of the forward contract is considered to be nil)	Nil	Nil
30-Sep-X1	***Fair value change in forward contract***		
	Derivative asset (company B) Dr. [(67.8-67.5) x10,00,000]	3,00,000

UNIT 5: RECOGNITION AND DERECOGNITION OF FINANCIAL INSTRUMENTS

The concepts of recognition and derecognition of any asset or liability refer to the timing i.e. when is the financial instrument included in an entity's balance sheet (recognition) and when is it removed from the entity's balance sheet (derecognition).

5.1 INITIAL RECOGNITION

As per paragraph 3.1.1 of Ind AS 109, an entity shall recognise a financial asset or a financial liability in its balance sheet when, and only when, the entity becomes party to the contractual provisions of the instrument.

Paragraph B3.1.2 of Ind AS 109 provides certain examples of applying the aforementioned accounting principle:

Nature of contract	Recognition principle – when are assets or liabilities recognised?
Unconditional receivables and payables	When the entity becomes a party to the contract and, as a consequence, has a legal right to receive or a legal obligation to pay cash
Firm commitment to purchase or sell goods or services	When at least one of the parties has performed under the agreement i.e. until the ordered goods or services have been shipped, delivered or rendered.
Firm commitment to purchase or sell goods or services designated as measured at fair value through profit or loss (refer note 2 below)	Net fair value is recognised as an asset or a liability on the commitment date
Forward contract	On the commitment date. When an entity becomes a party to a forward contract, the fair values of the right and obligation are often equal, so that the net fair value of the forward is zero (refer note 1 below). If the net fair value of the right and obligation is not zero, the contract is recognised as an asset or liability.
Option contracts	When the holder or writer becomes a party to the contract (refer note 1 below).
Planned future transactions	Never

Note 1: Generally, no upfront premium is paid by one party in a forward contract to the other at the inception of the contract. This is indicative of the fact that the fair value of a forward contract on inception is approximately zero. On the other hand, the option holder generally pays an upfront

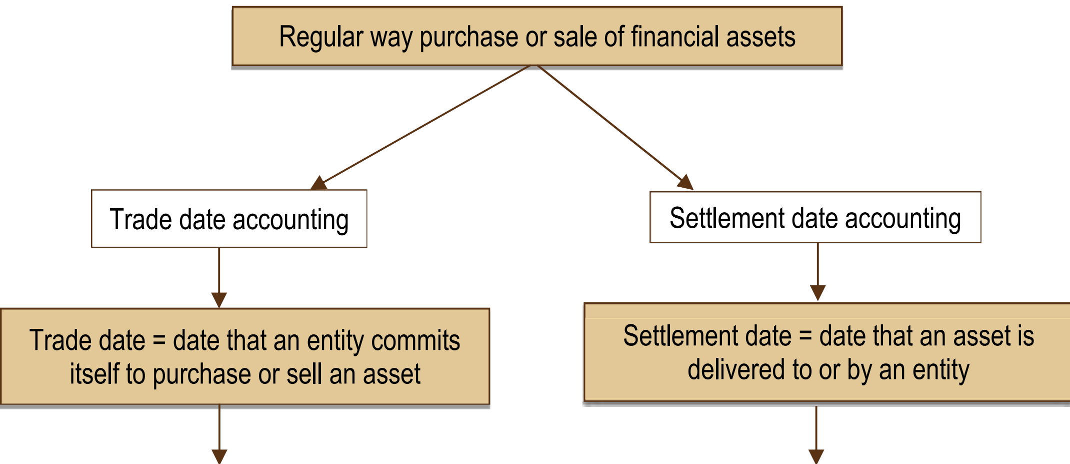
premium to the option writer at the inception of the option contract. This provides evidence that there is some fair value of the rights and obligations of the parties at the inception of an options contract.

Note 2: Contracts to buy or sell non-financial assets that can be settled net or by exchanging financial instruments are treated as if they are financial instruments, that is, derivatives unless they were entered into and continued to be held to meet the entity's normal purchase, sale or usage requirements

5.2 REGULAR WAY PURCHASE OR SALE OF FINANCIAL ASSETS

Ind AS 109 defines a regular way purchase or sale as,

- a **purchase or sale** of a financial asset
- under a **contract**
- whose terms require **delivery** of the asset
- within the **time frame**
- established generally by **regulation or convention in the marketplace** concerned



- Recognition of an asset to be received and the liability to pay for it
- Derecognition of an asset that is sold, recognition of any gain or loss on disposal and the recognition of a receivable from the buyer for payment

For instance, on the Bombay Stock Exchange in India, all transactions in all groups of securities in the Equity segment, Fixed Income securities and Government securities are settled on "T+2" basis. In this case, "T" is the trade date and "T+2" is the settlement date i.e. exchange of monies and securities between the buyers and sellers respectively takes place on second business day (excluding Saturdays, Sundays, bank and Exchange trading holidays) after the trade date.

It follows that if a contract is entered into with a broker for purchase or sale of securities which is normally traded on the Bombay Stock Exchange, with a settlement period that differs from the norms mentioned above, it would not be regarded as a regular way purchase or sale.

When trade date accounting is applied, the buyer of a financial asset recognises the financial asset and its liability to pay on the trade date itself. Correspondingly, the seller derecognises the financial asset and recognises any gain or loss on sale on the trade date. The buyer subsequently measures the financial asset in accordance with its classification category.

When settlement date accounting is applied, a **buyer of financial asset accounts for any change in the fair value of the asset to be received during the period between the trade date and the settlement date** in the same way as it accounts for the acquired asset. In other words,

- assets measured at amortised cost - change in value is not recognised;
- assets classified as financial assets measured at fair value through profit or loss (whether mandatorily or designated) – change in value is recognised in profit or loss;
- financial assets measured at fair value through other comprehensive income (including investments in equity instruments for which irrevocable option is selected) – change in fair value is recognised in other comprehensive income.

Correspondingly, the seller of a financial asset derecognises the same at the settlement date and does not recognise any fair value changes between the trade date and settlement date.

An entity shall apply the same method consistently for all purchases and sales of financial assets that are classified in the same way in accordance with Ind AS 109.

Illustration 1: Regular way contracts: forward contracts

ST Ltd. enters into a forward contract to purchase 10 lakh shares of ABC Ltd. in a month's time for ₹ 50 per share. This contract is entered into with a broker, Mr. AG and not through regular trading mode in a stock exchange. The contract requires Mr. AG to deliver the shares to ST Ltd. upon payment of agreed consideration. Shares of ABC Ltd. are traded on a stock exchange. Regular way delivery is two days. Assess the forward contract.

Solution

In this case, the forward contract is not a regular way transaction and hence must be accounted for as a derivative i.e. between the date of entering into the contract to the date of delivery, all fair value changes are recognised in profit or loss.

*****

Illustration 2: Regular way contracts: option contracts

NKT Ltd. purchases a call option in a public market permitting it to purchase 100 shares of VT Ltd. at any time over the next one month at a price of ₹ 1,000 per share. If NKT Ltd. exercises its option, it has 7 days to settle the transaction according to regulation or convention in the options market. VT Ltd.'s shares are traded in an active public market that requires two-day settlement.

Solution

In this case, the options contract is a regular way transaction as the settlement of the option is governed by regulation or convention in the marketplace for options. Fair value changes between the trade date and settlement date are recognised in profit or loss.

*****

Join us t.me/caborntofight

The illustrations below explain the flow of journal entries in case of trade date accounting and settlement date accounting for regular way purchase and sale of financial assets.

Illustration 3: Regular way purchase of financial asset

On 1 January 20X1, X Ltd. enters into a contract to purchase a financial asset for ₹ 10 lakhs, which is its fair value on trade date. On 4 January 20X1 (settlement date), the fair value of the asset is ₹ 10.5 lakhs. The amounts to be recorded for the financial asset will depend on how it is classified and whether trade date or settlement date accounting is used. Pass necessary journal entries.

Solution

Journal Entries in the Buyer's Books

Trade date accounting

Cr.	Cash	(10,00,000)	(10,00,000)	(10,00,000)

The above mentioned accounting principles apply only to financial assets and Ind AS 109 does not contain any such principles for financial liabilities.

*****

5.3 DERECOGNITION OF FINANCIAL ASSETS

In simple words, derecognition refers to the timing of removing a financial asset from the balance sheet. To take an example, if a company gets its trade receivables discounted from a bank, it would need to determine whether it can remove those trade receivables from its balance sheet.

Paragraph B3.2.1 of Ind AS 109 provides a step-by-step flowchart for making this determination.

Consolidate all subsidiaries ***(see note 1 below)***

↓

Determine whether the derecognition principles are applied to a part or all of an asset (or group of similar assets) ***(see note 2 below)***

↓

Have the rights to the cash flows from the asset expired? ***(see note 3 below)***
- Yes → Derecognise the asset
- No ↓

Has the entity transferred its right to receive cash flows? ***(see note 4 below)***
- Yes → go to "Has the entity transferred substantially all risks and rewards?"
- No ↓

Has the entity assumed a contractual obligation to pay the cash flows in an arrangement that meets three conditions? ***(see note 5 below)***
- No → Continue to recognise the asset
- Yes ↓

Has the entity transferred substantially all risks and rewards? ***(see note 6 below)***
- Yes → Derecognise the asset
- No ↓

Has the entity retained substantially all risks and rewards? ***(see note 6 below)***
- Yes → Continue to recognise the asset
- No ↓

Has the entity retained control of the asset? ***(see note 7 below)***
- No → Derecognise the asset
- Yes ↓

Continue to recognise the asset

Merged By CA - Born To Fight

Notes:

1. In consolidated financial statements, accounting principles for derecognition are applied at a consolidated level. Hence, an entity first consolidates all subsidiaries in accordance with Ind AS 110 and then applies those requirements to the resulting group. (Ind AS 109.3.2.1)

   The importance of this criteria is that sometimes sales of financial assets are made to entities which are specifically designed for this purpose. In those circumstances, it would be inappropriate to derecognise the financial asset if the purchaser entity is indirectly controlled by the seller entity.

2. Let's understand this step using a few fact patterns:

Illustration 4: Part of a financial asset

State whether the derecognition principles will be applied or not.

i. Interest strip of an interest-bearing financial asset i.e. the part entitles its holder to interest cash flows of a financial asset

ii. Dividend strip of an equity share i.e. the part entitles its holder to only dividends arising from an equity share

iii. Cash flows (principal and asset) upto a certain tenure or first right on a proportion of cash flows of an amortising financial asset. Say, the part entitles its holder to first 80% of the cash flows or cash flows for first 4 of the 6 years' tenure.

Solution

Derecognition requirements are applied to a part of a financial asset if that part meets **any of the following three** conditions:

a) The part comprises only **specifically identified cash flows** from a financial asset (or a group of similar financial assets).

   For example, when an entity enters into an interest rate strip whereby the counterparty obtains the right to the interest cash flows, but not the principal cash flows from a debt instrument, derecognition principles are applied to the interest cash flows

b) The part comprises only a **fully proportionate (pro rata) share of the cash flows** from a financial asset (or a group of similar financial assets).

   For example, when an entity enters into an arrangement whereby the counterparty obtains the rights to a 90 per cent share of all cash flows of a debt instrument, derecognition principles are applied to 90 per cent of those cash flows.

c) The part comprises only a **fully proportionate (pro rata) share of specifically identified cash flows** from a financial asset (or a group of similar financial assets).

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

For example, when an entity enters into an arrangement whereby the counterparty obtains the rights to a 90 per cent share of interest cash flows from a financial asset, derecognition principles are applied to 90 per cent of those interest cash flows.

The example of a part of a financial asset at (iii) in Illustration 4 above will not qualify conditions at (b) and (c) above since it does not represent pro rata share of all or specifically identified cash flows.

In (b) and (c) above, if there is more than one counterparty, each counterparty is not required to have a proportionate share of the cash flows provided that the transferring entity has a fully proportionate share.

In all other cases, derecognition principles are applied to the financial asset in its entirety (or to the group of similar financial assets in their entirety).

*****

Illustration 5: Part of a financial asset

State whether the derecognition principles will be applied or not.

i. Entity Y transfers the rights to the first or the last 90 per cent of cash collections from a financial asset (or a group of financial assets)

ii. Entity Z transfers the rights to 90 per cent of the cash flows from a group of receivables, but provides a guarantee to compensate the buyer for any credit losses up to 8 per cent of the principal amount of the receivables.

Solution

In the above circumstances, Entity Y and Entity Z need to apply the derecognition requirements to the financial asset (or a group of similar financial assets) in its entirety.

*****

3. Cash flows from a financial asset expire upon payment of entire due amount or the legal release of the debtor by the creditor from the obligation to pay. In case of derivatives, this condition is considered met when, for example, contractual exercise period of an option expires and option is not exercised.

   Ind AS 109 contains elaborate guidance on when renegotiation of the terms of a financial liability results in derecognition thereof. Refer paragraph "Exchange of financial liability instruments" for more details on the same. However, in respect of financial assets, such elaborate guidance has not been provided.

   One may use the principles of quantitative and qualitative tests prescribed for financial liabilities to evaluate whether renegotiation of the terms of a financial asset results in derecognition or not.

Merged By CA - Born To Fight

We discuss below a few circumstances wherein renegotiation does result in "expiry of right to receive cash flows":

- Agreeing to a moratorium period for repayment of principal or extension of the overall tenor of the loan.
- Substantial reduction in the interest rates
- Agreeing to a right to convert loan or a part thereof into equity shares after a certain period of time

4. Examples of transfer of rights to receive cash flows include sale of a financial asset, such as an investment in a debenture or assignment of a receivable (like factoring arrangements with banks or financial institutions). Refer comprehensive examples below on debt factoring and invoice discounting.

5. In some situations, though an entity retains the contractual rights to receive cash flows of a financial asset ('original asset'), it does assume a contractual obligation to pay those cash flows to one or more entities ('eventual recipients').

   For example, securitisation arrangements are a common form of transfer of financial assets in India. In these arrangements, the originator of a financial asset, say a bank or a NBFC, settle a Trust and transfer a portfolio of financial assets to that Trust. Thereafter, securities of that Trust are issued to unrelated parties or investors. Such arrangements are often "pass through" arrangements, in the sense that the originator or the Trust retains the rights to receive cash flows from the financial asset, but they have a simultaneous obligation to pay those cash flows to a recipient.

   As per paragraph 3.2.5 of Ind AS 109, **all of the** following conditions need to be met in such situations for the transaction to qualify as a "transfer":

   - The entity has **no obligation to pay amounts** to the eventual recipients **unless it collects equivalent amounts** from the original asset.

     Short-term advances by the entity with the right of full recovery of the amount lent plus accrued interest at market rates do not violate this condition. However, existence of guarantees or options that allow the transferee to transfer receivables back to the entity and other recourse arrangements are likely to conflict with this condition.

   - The entity is **prohibited** by the terms of the transfer contract **from selling or pledging the original asset** other than as security to the eventual recipients for the obligation to pay them cash flows.

   - The entity has an **obligation to remit any cash flows** it collects on behalf of the eventual recipients **without material delay.**

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- entity is not entitled to reinvest such cash flows, except for investments in cash or cash equivalents during the short settlement period, and interest earned on such investments is passed to the eventual recipients.

  The standard does not define the word "material" in this condition. Therefore, the same should be understood in common trade parlance.

Illustration 6: Proportionate "pass through" arrangement

Entity A makes a five-year interest-bearing loan (the 'original asset') of ₹ 100 crores to Entity B. Entity A settles a Trust and transfers the loan to that Trust. The Trust issues participatory notes to an investor, Entity C, that entitle the investor to the cash flows from the asset.

As per Trust's agreement with Entity C, in exchange for a cash payment of ₹ 90 crores, Trust will pass to Entity C 90% of all principal and interest payments collected from Entity B (as, when and if collected). Trust accepts no obligation to make any payments to Entity C other than 90% of exactly what has been received from Entity B. Trust provides no guarantee to Entity C about the performance of the loan and has no rights to retain 90% of the cash collected from Entity B nor any obligation to pay cash to Entity C if cash has not been received from Entity B.

Compute the amount to be derecognised.

Solution

If the three conditions are met, the proportion sold is derecognised, provided the entity has transferred substantially all the risks and rewards of ownership. Thus, Entity A would report a loan asset of ₹ 10 crores and derecognise ₹ 90 crores.

*****

6. Let's illustrate the "risks and rewards" test with certain examples given in application guidance of Ind AS 109:

Examples of when an entity **has transferred** substantially all the risks and rewards of ownership are:

(a) an unconditional sale of a financial asset;

(b) a sale of a financial asset together with an option to repurchase the financial asset at its fair value at the time of repurchase; and

(c) a sale of a financial asset together with a put or call option that is deeply out of the money (ie an option that is so far out of the money it is highly unlikely to go into the money before expiry).

Examples of when an entity has retained substantially all the risks and rewards of ownership are:

(a) a sale and repurchase transaction where the repurchase price is a fixed price or the sale price plus a lender's return;

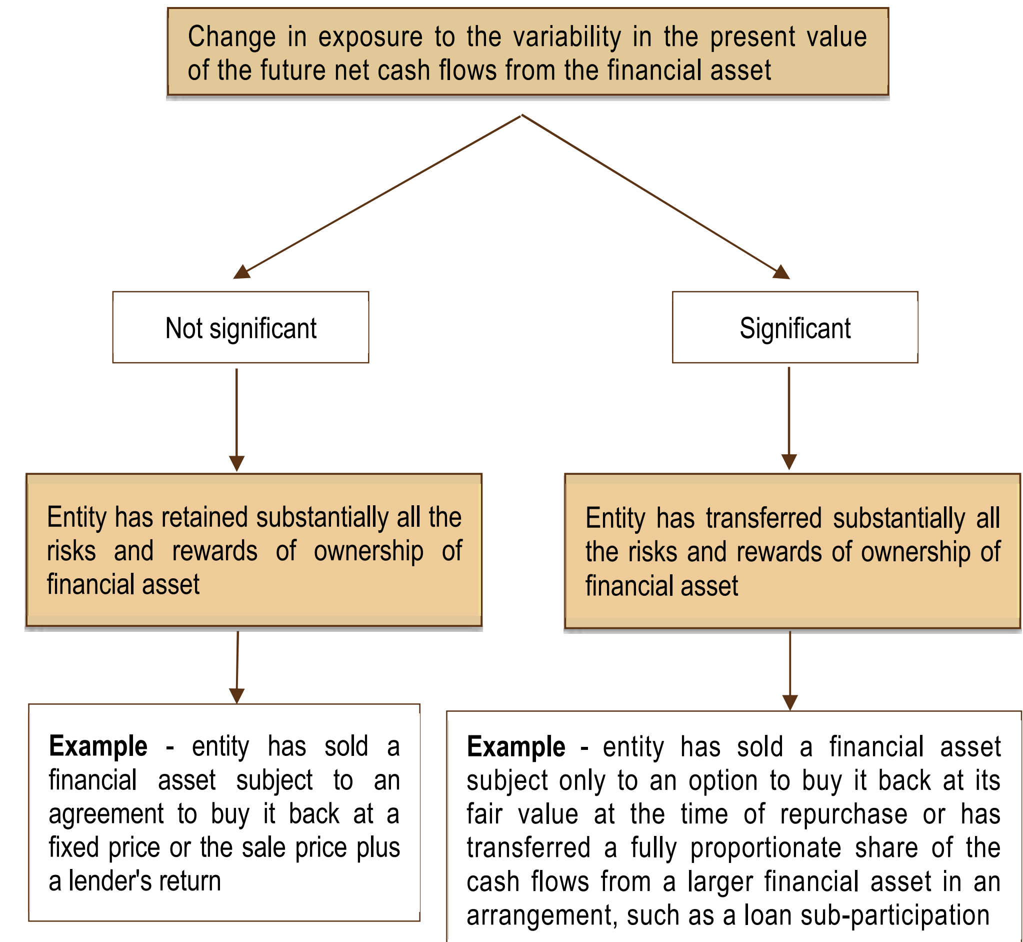
(b) a securities lending agreement;

(c) a sale of a financial asset together with a total return swap that transfers the market risk exposure back to the entity;

(d) a sale of a financial asset together with a deep in-the-money put or call option (ie an option that is so far in the money that it is highly unlikely to go out of the money before expiry); and

(e) a sale of short-term receivables in which the entity guarantees to compensate the transferee for credit losses that are likely to occur.

Paragraph 3.2.7 of Ind AS 109 provides the guidance on **"risks and rewards" test**



In evaluating the extent to which risks and rewards are transferred or retained, risks and rewards that are reasonably expected to be significant in practice should be considered.

So, what is the most significant risk in a portfolio of short term receivables? It is usually credit risk i.e. the risk that the customer will default. Therefore, an **arrangement that involves the transferee having full recourse to the transferor for credit losses will "fail" the risks and rewards tests. An arrangement in which the transferee has no**

recourse to the transferor for credit losses will generally "pass" the risks and rewards tests.

What are the most significant risks in longer term receivables? Well, interest rate risk and slow payment risk are fairly significant in those cases. An arrangement in which the entity continues to pay interest to the transferee until the underlying debtor settles involves the transferee retaining the risk of slow payment.

7. Whether the entity has retained control of the transferred asset depends on the **transferee's ability to sell the asset**. If the transferee,

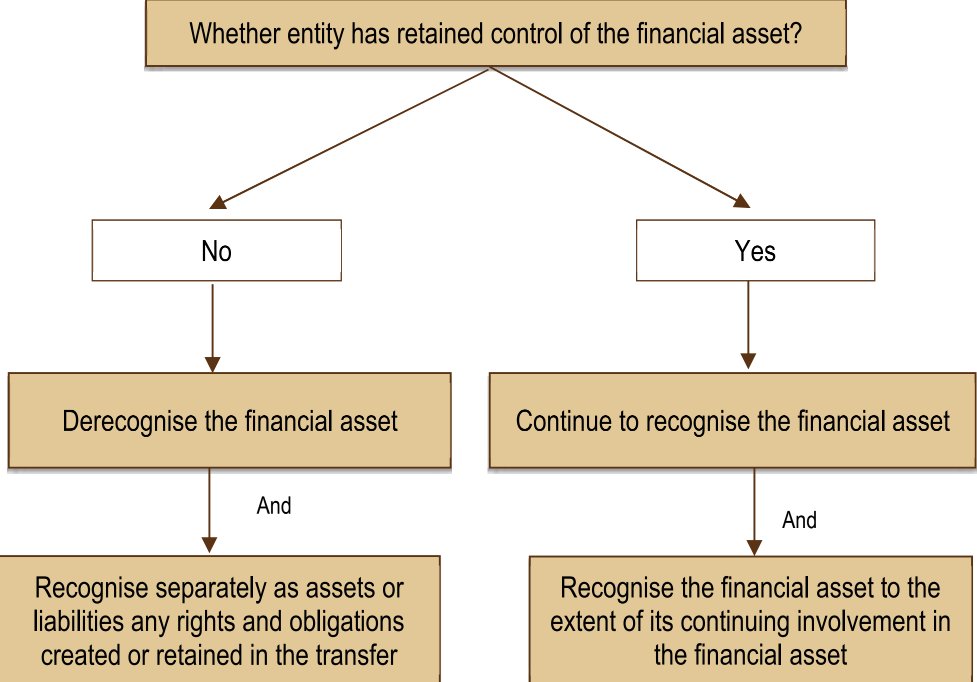
   i. has the practical ability to sell the asset in its entirety to an unrelated third party, and

   ii. is able to exercise that ability unilaterally and without needing to impose additional restrictions on the transfer

   the entity has not retained control.

   In all other cases, the entity has retained control.

   The accounting treatment as a consequence of this decision is as below:



The critical question is what the transferee is able to do in practice, not what contractual rights the transferee has concerning what it can do with the transferred asset or what contractual prohibitions exist.

Paragraphs B3.2.7 and 3.2.8 give examples of certain situations in which transferee is evaluated to have such practical ability and situations in which it doesn't have.

Example 1: Situation when transferee has practical ability to sell the financial asset

Transferred asset is subject to an option that allows the entity to repurchase it and it is traded in an active market: transferee has the practical ability to sell the financial asset as it can readily obtain the transferred asset in the market if the option is exercised.

Example 2: Situations when transferee doesn't have practical ability to sell the financial asset

- Transferred asset is subject to an option that allows the entity to repurchase it and it is not traded in an active market: transferee doesn't have the practical ability to sell the financial asset as it cannot readily obtain the transferred asset in the market if the option is exercised.
- A put option or guarantee with respect to the transferred asset which is sufficiently valuable in the sense that it constrains the transferee from selling the transferred asset because the transferee would, in practice, not sell the transferred asset to a third party without attaching a similar option or other restrictive conditions. Instead, the transferee would hold the transferred asset so as to obtain payments under the guarantee or put option. In this situation, the transferor has retained control of the transferred asset.

Illustrations on application of derecognition principles

Paragraph B3.2.16 of Ind AS 109 provides certain illustrations which are summarised below:

Illustration 7: Repurchase agreements

A financial asset is sold under repurchase agreement. The repurchase price as per that agreement is (a) fixed price or (b) sale price plus a lender's return. Let's look at three alternate scenarios:

i. Repurchase agreement is for the same financial asset.

ii. Repurchase agreement is for substantially the same asset

iii. Repurchase agreement provides the transferee a right to substitute assets that are similar and of equal fair value to the transferred asset at the repurchase date.

State whether the derecognition principles will be applied or not.

Solution

In each of these scenarios, the transferred financial asset is not derecognised because the transferor retains substantially all the risks and rewards of ownership.

© The Institute of Chartered Accountants of India

Let's look at another scenario:

Repurchase agreement provides the transferor only a right of first refusal to repurchase the transferred asset at fair value if the transferee subsequently sells it

In this scenario, the transferred financial asset is derecognised because the transferor has transferred substantially all the risks and rewards of ownership.

*****

Illustration 8: Put options on transferred financial assets

A financial asset is sold and the transferee has a put option. Let's look at some alternate scenarios:

i. Put option is deeply in the money

ii. Put option is deeply out of the money.

State whether the derecognition principles will be applied or not.

Solution

In the first scenario, the transferred asset does not qualify for derecognition because the transferor has retained substantially all the risks and rewards of ownership. However, in the second scenario, the transferor has transferred substantially all the risks and rewards of ownership.

*****

Illustration 9: Call options on transferred financial assets

A financial asset is sold and the transferor has a call option. Let's look at some alternate scenarios:

i. Call option is deeply in the money

ii Call option is deeply out of the money.

What if the transferor holds a call option on an asset that is readily obtainable in the market?

iii Call option is neither deeply in the money nor deeply out of the money

State whether the derecognition principles will be applied or not.

Solution

In the first scenario, the transferred asset does not qualify for derecognition because the transferor has retained substantially all the risks and rewards of ownership. However, in the second scenario, the transferor has transferred substantially all the risks and rewards of ownership.

Join us t.me/caborntofight

Merged By CA - Born To Fight

In the third scenario, the asset is derecognised. This is because the entity (i) has neither retained nor transferred substantially all the risks and rewards of ownership, and (ii) has not retained control.

*****

Illustration 10: Amortising interest rate swaps

An entity may transfer to a transferee a fixed rate financial asset that is paid off over time, and enter into an amortising interest rate swap with the transferee to receive a fixed interest rate and pay a variable interest rate based on a notional amount.

Scenarios:

i. Notional amount of the swap amortises so that it equals the principal amount of the transferred financial asset outstanding at any point in time.

ii. Amortisation of the notional amount of the swap is not linked to the principal amount outstanding of the transferred asset.

State whether the derecognition principles will be applied or not.

Solution

In the first scenario, the swap would generally result in the entity retaining substantial prepayment risk, in which case the entity either continues to recognise all of the transferred asset or continues to recognise the transferred asset to the extent of its continuing involvement.

Such a swap would not result in the entity retaining prepayment risk on the asset. Hence, it would not preclude derecognition of the transferred asset provided the payments on the swap are not conditional on interest payments being made on the transferred asset and the swap does not result in the entity retaining any other significant risks and rewards of ownership on the transferred asset.

*****

5.3.1 Accounting treatment of transfers

5.3.1.1Transfers that qualify for derecognition

If the arrangement results in de-recognition of the financial asset in its entirety:

- in the case of assets included in the "fair value through other comprehensive income" category, any gain or loss previously recorded in equity is recycled to the statement of profit and loss as per the requirements of the standards;
- any new financial assets obtained, financial liabilities assumed and any servicing obligations are recognised at fair value. new asset is part of the proceeds of sale. Any

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

liability assumed, even if it is related to the transferred asset, is a reduction of the sales proceeds.

- the difference between the carrying amount and the consideration received is recognised in the statement of comprehensive income.

Illustration 11: Assignment of receivables

ST Ltd. assigns its trade receivables to AT Ltd. The carrying amount of the receivables is ₹ 10,00,000. The consideration received in exchange of this assignment is ₹ 9,00,000. Customers have been instructed to deposit the amounts directly in a bank account for the benefit of AT Ltd. AT Ltd. has no recourse to ST Ltd. in case of any shortfalls in collections.

State whether the derecognition principles will be applied or not.

Solution

In this situation, ST Ltd. has transferred the rights to contractual cash flows and has also transferred substantially all the risks and rewards of ownership (credit risk being the most significant risk in this situation).

Accordingly, ST Ltd. derecognises the financial asset and recognises ₹ 1,00,000, the difference between consideration received and carrying amount, as an expense in the statement of profit or loss.

*****

5.3.1.2 Transfers that do not qualify for derecognition

If a transfer does not result in derecognition because the entity has retained substantially all the risks and rewards of ownership of the transferred asset (for example, in a situation when the transferor guarantees transferee against any default losses), the entity shall,

- continue to recognise the transferred asset in its entirety,
- recognise a financial liability for the consideration received, recognised at fair value less any transaction costs incurred. The liability is subsequently measured at amortised cost using the effective interest method, and
- in subsequent periods, recognise any income on the transferred asset and any expense incurred on the financial liability.

5.3.1.3 Continuing involvement in transferred assets (partial de-recognition)

If an entity neither transfers nor retains substantially all the risks and rewards of ownership of a transferred asset, and retains control of the transferred asset,

- the entity **continues to recognise the transferred asset to the extent of its continuing involvement**. The extent of the entity's continuing involvement in the transferred asset is the extent to which it is exposed to changes in the value of the transferred asset.
  - ♦ *Guarantees for transferred asset*

Join us t.me/caborntofight

Merged By CA - Born To Fight

The extent of the entity's continuing involvement is the lower of

(i) the amount of the asset, and

(ii) the maximum amount of the consideration received that the entity could be required to repay ('the guarantee amount').

Illustration 12A: Debt factoring with recourse – continuing involvement asset

Entity C agrees with factoring company D to enter into a debt factoring arrangement. Under the terms of the arrangement, the factoring company D agrees to pay ₹ 91.5 crores, less a servicing charge of ₹ 1.5 crores (net proceeds of ₹ 90 crores), in exchange for 100% of the cash flows from short-term receivables.

The receivables have a face value of ₹ 100 crores and carrying amount of ₹ 95 crores.

The customers will be instructed to pay the amounts owed into a bank account of the factoring company. Entity C also writes a guarantee to the factoring company under which it will reimburse any credit losses upto ₹ 5 crores, over and above the expected credit losses of ₹ 5 crores. The guarantee is estimated to have a fair value of ₹ 0.5 crores. Calculate the amount of continuing involvement asset.

Solution

In this situation, the "continuing involvement asset" will be recognised at ₹ 5.5 crores i.e. lower of:

i. the amount of the asset – ₹ 95 crores

ii. the guarantee amount – ₹ 5.5 crores

*****

- the entity also **recognises an associated liability** that is measured in such a way that the net carrying amount of the transferred asset and the associated liability is:
  - ♦ the amortised cost of the rights and obligations retained by the entity, if the transferred asset is measured at amortised cost, or
  - ♦ equal to the fair value of the rights and obligations retained by the entity when measured on a stand-alone basis, if the transferred asset is measured at fair value.
- Recognised changes in the fair value of the transferred asset and the associated liability are accounted for consistently with each other and shall not be offset.
- If the transferred asset is measured at amortised cost, the option in this Standard to designate a financial liability as at fair value through profit or loss is not applicable to the associated liability.
- In case of guarantees, as per the application guidance in Ind AS 109, the associated liability is initially measured at
  - ♦ the guarantee amount plus

Join us t.me/caborntofight

- the fair value of the guarantee (which is normally the consideration received for the guarantee).

Illustration 12B: Debt factoring with recourse – associated liability

Continuing illustration 12A, calculate the amount of associated liability.

Solution

The amount of associated liability is recognised at ₹ 5.5 crores, as below:

i. the guarantee amount (i.e. ₹ 5 crores) plus

ii. the fair value of the guarantee (i.e. ₹ 0.5 crores).

*****

- If an entity's continuing involvement is in only a part of a financial asset, the entity **allocates the previous carrying amount** of the financial asset **between the part it continues to recognise under continuing involvement, and the part it no longer recognises** on the basis of the relative fair values of those parts on the date of the transfer. The difference between:
  - the carrying amount (measured at the date of derecognition) allocated to the part that is no longer recognised and
  - the consideration received for the part no longer recognised

  shall be recognised in profit or loss.
- the entity shall **continue to recognise any income arising on the transferred asset to the extent of its continuing involvement** and shall recognise any expense incurred on the associated liability

Illustration 12C: Debt factoring with recourse – gain or loss on derecognition

Continuing illustration 12A and 12B, pass the necessary Journal Entry.

Solution

The journal entries passed by Entity C on the date of derecognition is as below:

Cash	Dr.	₹ 90 crores	
Loss on derecognition	Dr.	₹ 5 crores	
Continuing involvement asset	Dr.	₹ 5.5 crores	
To Receivables			₹ 95 crores
To Associated liability			₹ 5.5 crores

The guarantee liability of ₹ 0.5 crores shall be amortised in profit or loss over the underlying period.

*****

5.4 DERECOGNITION OF FINANCIAL LIABILITIES

5.4.1 General principles

5.4.1.1 Timing of derecognition

An entity shall remove a financial liability (or a part of a financial liability) from its balance sheet when, and only when, it is extinguished—ie when the obligation specified in the contract is discharged or cancelled or expires. (Paragraph 3.3.1 of Ind AS 109)

A financial liability (or part of it) is extinguished when the debtor either:

(a) discharges the liability (or part of it) by paying the creditor, normally with cash, other financial assets, goods or services; or

(b) is legally released from primary responsibility for the liability (or part of it) either by process of law or by the creditor. (If the debtor has given a guarantee this condition may still be met.)

(Paragraph B3.3.1 of Ind AS 109)

If a debtor pays a third party to assume an obligation and notifies its creditor that the third party has assumed its debt obligation, the debtor does not derecognise the debt obligation unless the condition in paragraph B3.3.1(b) is met. If the debtor pays a third party to assume an obligation and obtains a legal release from its creditor, the debtor has extinguished the debt. However, if the debtor agrees to make payments on the debt to the third party or direct to its original creditor, the debtor recognises a new debt obligation to the third party. (Paragraph B3.3.4 of Ind AS 109)

5.4.1.2 Accounting treatment for extinguishment

The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, shall be recognised in profit or loss. (Paragraph 3.3.3 of Ind AS 109)

Further, in some cases, a creditor releases a debtor from its present obligation to make payments, but the debtor assumes a guarantee obligation to pay if the party assuming primary responsibility defaults. In these circumstances the debtor:

(a) recognises a new financial liability based on the fair value of its obligation for the guarantee, and

(b) recognises a gain or loss based on the difference between (i) any proceeds paid and (ii) the carrying amount of the original financial liability less the fair value of the new financial liability.

5.4.2 Exchange of financial liability instruments

Many times entities re-negotiate terms of their existing debt with the lenders. In India, this is popularly known as "Strategic Debt Restructuring" or SDR. Sometimes, entities approach their lenders to renegotiate terms of their debt, when they want to take advantage of the falling interest rate regime.

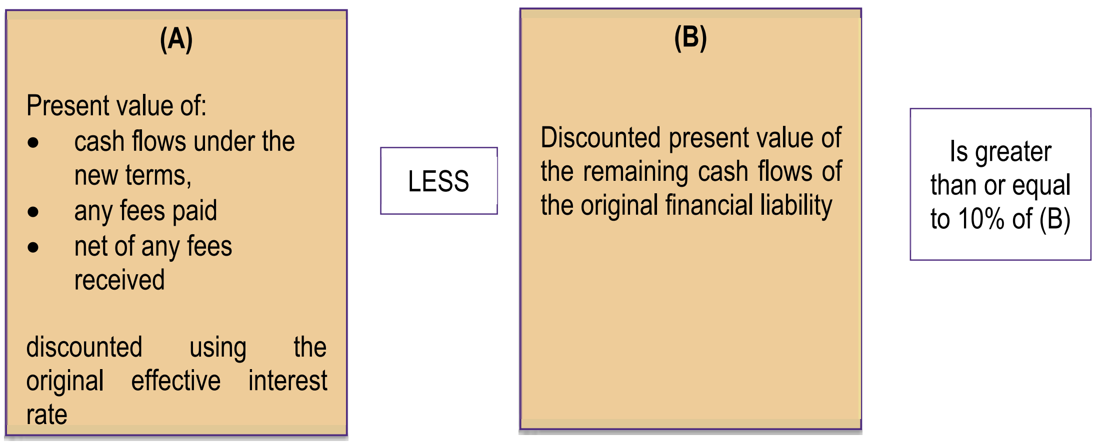
In accounting terms, such situations need to be evaluated to determine whether the original debt is extinguished.

As per paragraph 3.3.2 of Ind AS 109, an exchange between an existing borrower and lender of debt instruments with **substantially different terms** shall be accounted for as:

- an extinguishment of the original financial liability, and
- the recognition of a new financial liability.

Similarly, a **substantial modification** of the terms of an existing financial liability or a part of it (whether or not attributable to the financial difficulty of the debtor) shall be accounted as mentioned above.

As per application guidance in paragraph B3.3.6 of Ind AS 109, the **terms are substantially different if:**



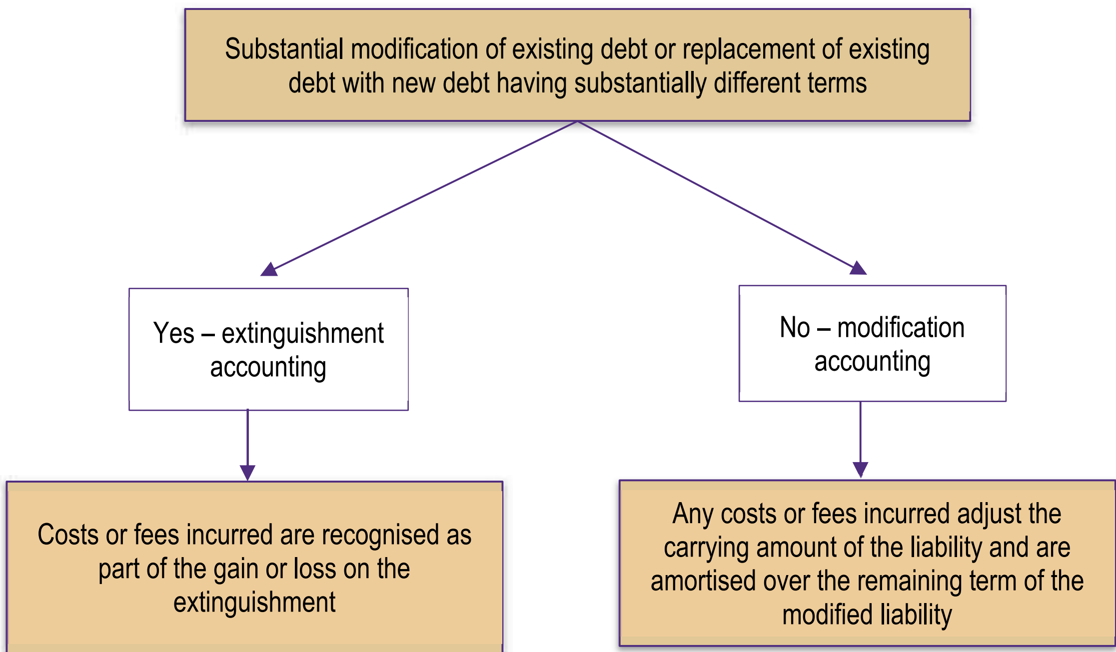
5.4.2.1 Accounting treatment

If an exchange of debt instruments or modification of terms is accounted for as an extinguishment, any costs or fees incurred are recognised as part of the gain or loss on the extinguishment. In determining those fees paid net of any fees received, a borrower includes only fees paid or received between the borrower and the lender, including fees paid or received by either the borrower or lender on the other's behalf.

If the exchange or modification is not accounted for as an extinguishment, any costs or fees incurred adjust the carrying amount of the liability and are amortised over the remaining term of

Merged By CA - Born To Fight

the modified liability. It may be noted here that the costs or fees considered for this purpose differs from the costs or fees considered for the purpose of 10% test. In the case where modification does not result in derecognition, any costs or fees incurred is considered to adjust the effective interest rate whereas for the 10% test only fees paid or received between the borrower and the lender, including fees paid or received by either the borrower or lender on the other's behalf are considered.



1. Extinguishment accounting

If the 10% test is passed, principle of "extinguishment accounting" are applied, that is:

- de-recognition of the existing liability
- recognition of the new or modified liability at its fair value (net of any fees incurred directly related to the new liability)
- recognition of a gain or loss equal to the difference between the carrying value of the old liability and the fair value of the new one
- recognising any incremental costs or fees incurred for modification (and not for the new liability), and any consideration paid or received, in profit or loss
- calculating a new effective interest rate for the modified liability, which is then used in future periods.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Fair value of the new or modified liability is estimated based on the expected future cash flows of the modified liability, discounted using the interest rate at which the entity could raise debt with similar terms and conditions in the market.

Example 3: Extinguishment accounting

On 1 January 20X0, XYZ Ltd. issues 10 year bonds for ₹ 10,00,000, bearing interest at 10% (payable annually on 31st December each year). The bonds are redeemable on 31 December 20X9 for ₹ 10,00,000. No costs or fees are incurred. The effective interest rate is therefore 10%. On 1 January 20X5 (i.e. after 5 years) XYZ Ltd. and the bondholders agree to a modification in accordance with which:

- the term is extended to 31 December 20Y1;
- interest payments are reduced to 5% p.a.;
- the bonds are redeemable on 31 December 20Y1 for ₹ 15,00,000; and
- legal and other fees of ₹ 1,00,000 are incurred.

XYZ Ltd. determines that the market interest rate on 1 January 20X5 for borrowings on similar terms is 11%.

The repayment schedule for the original debt till the date of renegotiation is as below:

Date / year ended	Opening balance	Interest accrual	Cash flows	Closing balance
1 January 20X0	10,00,000	1,00,000	(100,000)	10,00,000
31 December 20X0	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X1	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X2	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X3	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X4	10,00,000	1,00,000	(1,00,000)	10,00,000

On 1 January 20X5, the discounted present value of the remaining cash flows of the original financial liability is ₹ 10,00,000.

On this date, XYZ Ltd. will compute the present value of:

- cash flows under the new terms – i.e. ₹ 15,00,000 payable on 31 December 20Y1 and ₹ 50,000 payable for each of the 7 years ending 31 December 20Y1.
- fees paid by the borrower to the lender – i.e. ₹ 1,00,000

using the original effective interest rate of 10%.

The total of these amounts to ₹ 11,13,158 (Refer Working Note). This differs from the discounted present value of the remaining cash flows of the original financial liability by 11.32% i.e. by more than 10%. Hence, extinguishment accounting applies.

The next step is to estimate the fair value of the modified liability. This is determined as the present value of the future cash flows (interest and principal), using an interest rate of 11% (the market rate at which XYZ Ltd. could issue new bonds with similar terms). The estimated fair value on this basis is ₹ 958,097 (Refer Working Note). A gain or loss on modification is then determined as:

Gain (loss) = carrying value of existing liability - fair value of modified liability - fees and costs incurred i.e. ₹ 10,00,000 – ₹ 9,58,097 – ₹ 1,00,000 = Loss of ₹ 58,097

Working Note:

Year	Discount factor @ 10%	Discount factor @ 11%
1	0.909091	0.900901
2	0.826446	0.811622
3	0.751315	0.731191
4	0.683013	0.658731
5	0.620921	0.593451
6	0.564474	0.534641
7	0.513158	0.481658
Annuity	4.868419	4.712196

Amount	Discounting factor @ 10%	Present value	Discounting factor @ 11%	Present value

1,00,000		1,00,000		
50,000 for 7 years	4.868419	2,43,421	4.712196	2,35,610
		11,13,158		9,58,097
PV of original cash flows @ original EIR		(10,00,000)		
Difference		1,13,158		
Difference %		11.32%		

Modification accounting

Ind AS 109 is not clear as to the accounting treatment if the 10% test is failed. Two alternate approaches are therefore possible:

Amortisation of any cost or fees incurred on modification

Under this approach,

- the fees or costs incurred are netted against the existing liability;

- the effective interest rate is recalculated. This is the rate which discounts the future cash flows as per modified contractual terms to the adjusted carrying amount mentioned above
- the adjusted effective interest rate is used to determine the amortised cost and interest expense in future periods

Example 4: Modification accounting

On 1 January 20X0, XYZ Ltd. issues 10 year bonds for ₹ 1,000,000, bearing interest at 10% (payable annually on 31st December each year). The bonds are redeemable on 31 December 20X9 for ₹ 1,000,000. No costs or fees are incurred. The effective interest rate is therefore 10%. On 1 January 20X5 (i.e. after 5 years) XYZ Ltd. and the bondholders agree to a modification in accordance with which:

- no further interest payments are made
- the bonds are redeemed on the original due date (31 December 20X9) for ₹ 1,600,000;
- fees paid by the borrower to lender ₹ 50,000
- .

The repayment schedule for the original debt till the date of renegotiation is as below:

Date / year ended	Opening balance	Interest accrual	Cash flows	Closing balance
1 January 20X0	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X1	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X2	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X3	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X4	10,00,000	1,00,000	(1,00,000)	10,00,000
31 December 20X5	10,00,000	1,00,000	(1,00,000)	10,00,000

On 1 January 20X5, the discounted present value of the remaining cash flows of the original financial liability is ₹ 10,00,000.

On this date, XYZ Ltd. will compute the present value of:

i. cash flows under the new terms – i.e. ₹ 16,00,000 payable on 31 December 20X9

ii. any fees paid (net of any fees received) – i.e. ₹ 50,000

using the original effective interest rate of 10%.

The total of these amounts to ₹ 10,43,474 (Refer Working Note). This differs from the discounted present value of the remaining cash flows of the original financial liability by 4.35% i.e. by less than 10%. Hence, modification accounting applies.

On this basis:

i. the fees paid of ₹ 50,000 are netted against the existing liability of ₹ 10,00,000, resulting in an adjusted carrying amount of ₹ 9,50,000;

Merged By CA - Born To Fight

ii. the effective interest rate (EIR) is recalculated. This is the rate which discounts the future cash flows (₹ 16,00,000 in five years' time) to the adjusted carrying amount of ₹ 9,50,000. The adjusted EIR is 10.99%

iii. the adjusted EIR is used to determine the amortised cost and interest expense in future periods.

Working Note:

For testing extinguishment -

Cash flows under new terms	16,00,000

Illustration 13: Renegotiation of terms of (defaulted) borrowings subsequent to the year-end

Ind AS 109, Financial Instruments requires recognition of renegotiation gain/loss subject to fulfillment of certain conditions as mentioned in the standard. If there has been a renegotiation of terms of (defaulted) borrowings subsequent to the year end, but before the date of approval of financial statements, then should such modification gain/loss be recognised in the current year

Join us t.me/caborntofight

financial statements itself or in the next year when the terms of (defaulted) borrowings have been renegotiated in accordance with Ind AS 109?

Solution

As per paragraph 5.4.3 of Ind AS 109, Financial Instruments, whenever contractual cash flows of a financial instrument are renegotiated or otherwise modified and the renegotiation or modification does not result in the derecognition of that financial asset in accordance with this Standard, an entity shall recalculate the gross carrying amount of the financial asset and shall recognise a modification gain or loss in profit or loss.

In accordance with the above, modification gain or loss should be recognised in profit or loss in the period in which the renegotiation has contractually taken place. Accordingly, in the given case, if the terms of the (defaulted) borrowings have been renegotiated in the next year, then the related gain/loss should also be recognised in the next year.

*****

5.4.3 Debt for equity swaps

A debtor and creditor might renegotiate the terms of a financial liability with the result that the debtor extinguishes the liability fully or partially by issuing equity instruments to the creditor. These transactions are sometimes referred to as 'debt for equity swaps'.

Appendix D to Ind AS 109, "Extinguishing Financial Liabilities with Equity Instruments" deals with accounting for such situations.

It must be noted that these accounting principles do not apply in following situations:

- the creditor is also a direct or indirect shareholder and is acting in its capacity as a direct or indirect existing shareholder
- the creditor and the entity are controlled by the same party or parties before and after the transaction and the substance of the transaction includes an equity distribution by, or contribution to, the entity
- extinguishing the financial liability by issuing equity shares is in accordance with the original terms of the financial liability

The accounting principles are summarised below:

- An entity shall **remove a financial liability** (or part of a financial liability) from its balance sheet when, and only **when, it is extinguished** in accordance with derecognition principles mentioned above

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- When **equity instruments issued to a creditor** to extinguish all or part of a financial liability are recognised initially, an entity shall **measure them at the fair value** of the equity instruments issued, unless that fair value cannot be reliably measured.
- **If the fair value of the equity instruments issued cannot be reliably measured** then the equity instruments shall be measured to reflect the **fair value of the financial liability** extinguished.
- **If only part of the financial liability is extinguished**, the entity shall assess whether some of the consideration paid relates to a modification of the terms of the liability that remains outstanding. If part of the consideration paid **does relate to a modification of the terms** of the remaining part of the liability, the entity shall allocate the consideration paid between the part of the liability extinguished and the part of the liability that remains outstanding.
- The consideration allocated to the remaining liability shall form part of the assessment of whether the terms of that remaining liability have been substantially modified. **If the remaining liability has been substantially modified, the entity shall account for the modification as the extinguishment of the original liability and the recognition of a new liability**.
- The **difference** between the carrying amount of the financial liability (or part of a financial liability) extinguished, and the consideration paid, shall be **recognised in profit or loss.**

Example 5: Extinguishment of part of a financial liability through issue of equity instruments

JK Ltd. has an outstanding unsecured loan of ₹ 90 crores to a bank. The effective interest rate (EIR) of this loan is 10%. Owing to financial difficulties, JK Ltd. is unable to service the debt and approaches the bank for a settlement.

The bank offers the following terms which are accepted by JK Ltd.:

- 2/3rd of the debt is unsustainable and hence will be converted into 70% equity interest in JK Ltd. The fair value of net assets of JK Ltd. is ₹ 80 crores.
- 1/3rd of the debt is sustainable and the bank agrees to certain moratorium period and decrease in interest rate in initial periods. The present value of cash flows as per these revised terms calculated using original EIR is ₹ 25 crores. The fair value of the cash flows as per these revised terms is ₹ 28 crores.

Fair value of the consideration paid is ₹ 56 crores (70% of ₹ 80 crores) plus ₹ 28 crores i.e. ₹ 84 crores.

Accordingly, 2/3rd of the original financial liability is extinguished through issue of equity shares and terms of 1/3rd of the original financial liability have been modified. JK Ltd. will need to evaluate if this modification tantamount to "substantial modification" or not.

Applying the guidance contained in Appendix D to Ind AS 109:

- Difference between the fair value of equity instruments (₹ 56 crores) and 2/3rd of the original financial liability (2/3rd of ₹ 90 crores = ₹ 60 crores) i.e. ₹ 4 crores will be recognised as a gain in the statement of profit and loss
- Carrying amount of original financial liability which is not extinguished (1/3rd of ₹ 90 crores = ₹ 30 crores) is compared with the present value of cash flows as per these revised terms (₹ 25 crores)
- As the difference is more than 10%, this results in substantial modification of the original financial liability. Resultantly, the existing financial liability (₹ 30 crores) will be extinguished and the new financial liability will be recognised at its fair value i.e. ₹ 28 crores.
- The difference i.e. ₹ 2 crores will be recognised as a gain in the statement of profit and loss.

Merged By CA - Born To Fight

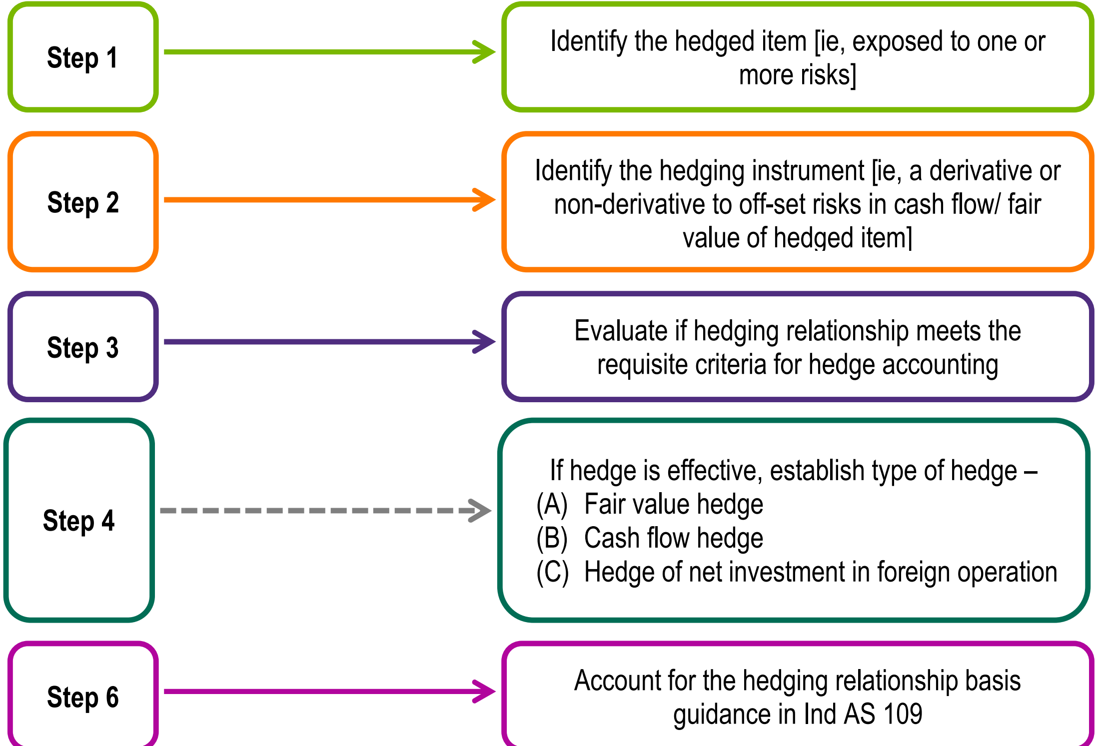
UNIT 6: HEDGE ACCOUNTING

6.1 INTRODUCTION

The objective of hedge accounting is to **represent**, in the financial statements, **the effect of an entity's risk management activities that use financial instruments to manage exposures** arising from particular risks that could affect profit or loss (or other comprehensive income, in the case of investments in equity instruments for which an entity has elected to present changes in fair value in other comprehensive income).

An entity may choose to designate a hedging relationship between a hedging instrument and a hedged item, i.e, hedge accounting is an option provided qualifying criteria are met. In such a case, accounting for gain / loss arising on the hedging relationship, ie, including hedging instrument and hedged item shall be accounted in a specific manner as detailed further in the unit in order to avoid measurement and recognition inconsistencies which may arise otherwise if the hedging instrument and hedged item were accounted separately.

A step wise analysis has been presented using the following diagrammatic presentation –



© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

A hedge relationship can be evaluated for a single hedged item or group of items and the hedging instrument can also be a single instrument or multiple instruments hedging specific risk associated with the hedged item.

6.2 IDENTIFYING THE HEDGED ITEM AND DESIGNATION OF HEDGED ITEMS

- A hedged item can be a recognised **asset** or **liability**, an unrecognised **firm commitment**, a **forecast transaction** or a **net investment in a foreign operation**. The hedged item can be:

  (a) a single item; or

  (b) a group of items.

  A hedged item can also be a component of such an item or group of items.

- The hedged item must be reliably measurable.

- If a hedged item is a forecast transaction (or a component thereof), that transaction must be highly probable.

- An entity may designate an item in its **entirety or a component of an item** as the hedged item in a hedging relationship.

  - An entire item comprises all changes in cash flows or fair value of an item.

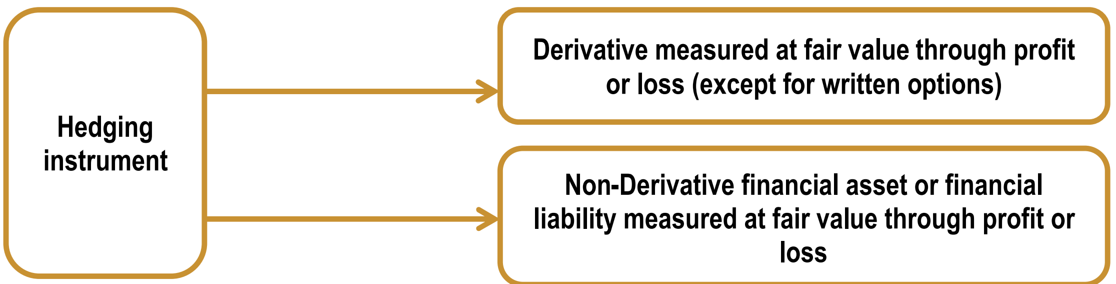
  - A component comprises less than the entire fair value change or cash flow variability of an item. In that case, an entity may designate only the following types of components (including combinations) as hedged items:

    (a) only changes in the cash flows or fair value of an item attributable to a specific risk or risks (risk component), provided that, based on an assessment within the context of the particular market structure, the risk component is separately identifiable and reliably measurable. Risk components include a designation of only changes in the cash flows or the fair value of a hedged item above or below a specified price or other variable (a one-sided risk).

    (b) one or more selected contractual cash flows.

    (c) components of a nominal amount, ie a specified part of the amount of an item

6.3 QUALIFYING INSTRUMENTS FOR HEDGE ACCOUNTING AND DESIGNATION OF HEDGING INSTRUMENTS



- **Exceptions to designating non-derivative financial asset or non-derivative financial liability as hedging instrument:**
  - ♦ A financial liability designated as at fair value through profit or loss for which the amount of its change in fair value that is attributable to changes in the credit risk of that liability is presented in other comprehensive income.
  - ♦ For a hedge of foreign currency risk, the foreign currency risk component of a non-derivative financial asset or a non-derivative financial liability may be designated as a hedging instrument provided that it is not an investment in an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income.
- For hedge accounting purposes, only contracts with a party external to the reporting entity (ie external to the group or individual entity that is being reported on) can be designated as hedging instruments.
- **A qualifying instrument must be designated in its entirety as a hedging instrument.** The only **exceptions permitted** are:

  (a) separating the intrinsic value and time value of an option contract and designating as the hedging instrument only the change in intrinsic value of an option and not the change in its time value;

  (b) separating the forward element and the spot element of a forward contract and designating as the hedging instrument only the change in the value of the spot element of a forward contract and not the forward element; and

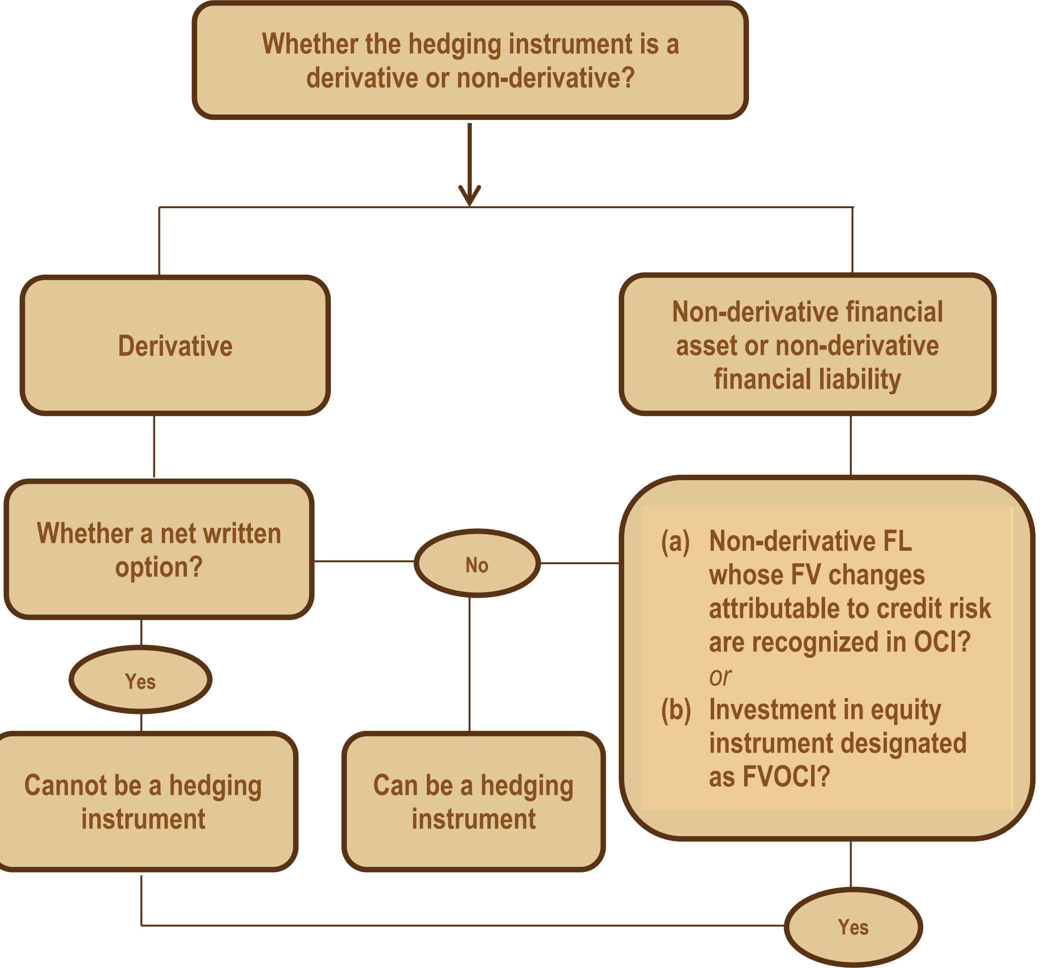
  (c) a proportion of the entire hedging instrument, such as 50 per cent of the nominal amount, may be designated as the hedging instrument in a hedging relationship. However, a hedging instrument may not be designated for a part of its change in fair

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

value that results from only a portion of the time period during which the hedging instrument remains outstanding.

- **Written options are not hedging instruments:** A derivative instrument that combines a written option and a purchased option (for example, an interest rate collar) does not qualify as a hedging instrument if it is, in effect, a net written option at the date of designation.

The decision tree to determining if an instrument can be designated as a hedging instrument is as follows:



6.4 QUALIFYING CRITERIA FOR HEDGE ACCOUNTING

A hedging relationship qualifies for hedge accounting only if all of the following criteria are met:

(a) Hedging relationship consists only of **eligible hedging instruments and eligible hedged items**.

(b) At the inception of the hedging relationship, there is **formal designation and documentation of the hedging relationship** and the entity's risk management objective and strategy for undertaking the hedge. That documentation shall include identification of the hedging instrument, the hedged item, the nature of the risk being hedged and how the entity will assess whether the hedging relationship meets the hedge effectiveness requirements (including its analysis of the sources of hedge ineffectiveness and how it determines the hedge ratio)

(c) Hedging relationship **meets all** of the following **hedge effectiveness requirements**:

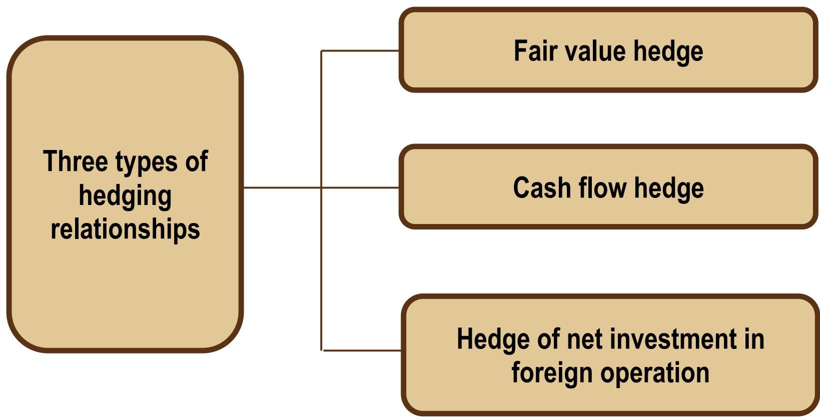
i. there is an **economic relationship** between the hedged item and the hedging instrument;

ii. the effect of **credit risk does not dominate** the value changes that result from that economic relationship; and

iii. the **hedge ratio** of the hedging relationship is the same as that resulting from the quantity of the hedged item that the entity actually hedges and the quantity of the hedging instrument that the entity actually uses to hedge that quantity of hedged item. However, that designation shall not reflect an imbalance between the weightings of the hedged item and the hedging instrument that would create hedge ineffectiveness (irrespective of whether recognised or not) that could result in an accounting outcome that would be inconsistent with the purpose of hedge accounting.

6.5 ACCOUNTING FOR QUALIFYING HEDGING RELATIONSHIPS

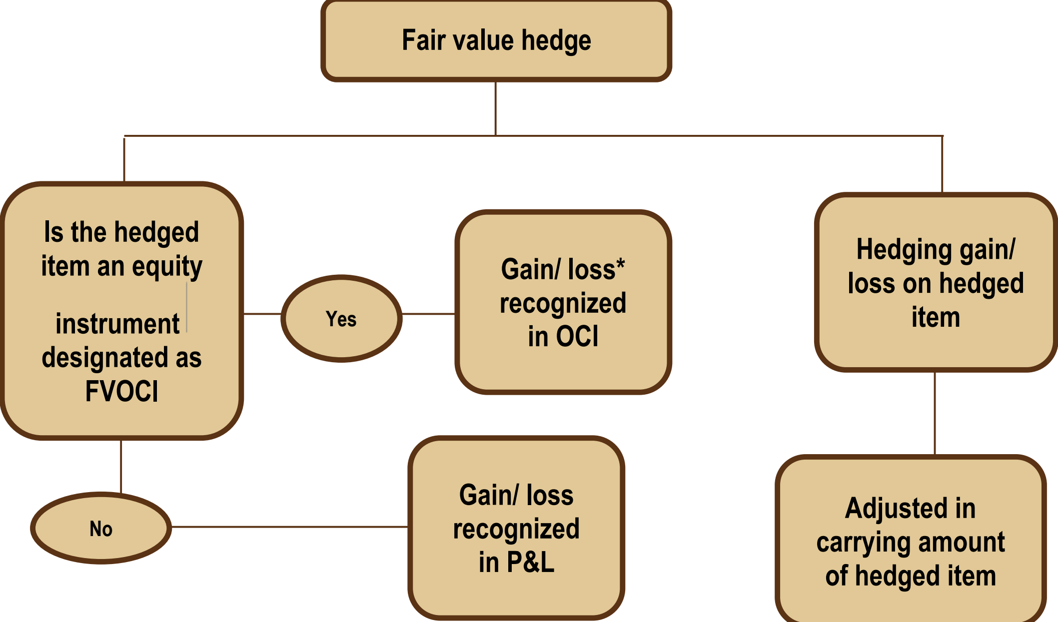
- An entity applies hedge accounting to hedging relationships that meet the qualifying criteria.
- **Types of hedging relationships:**



- **Fair value hedge**

  A fair value hedge is a hedge of the exposure to changes in fair value of a recognised asset or liability or an unrecognised firm commitment, or a component of any such item, that is attributable to a particular risk and could affect profit or loss.

  Where a fair value hedge meets the qualifying criteria, fair value hedge shall be accounted as follows:



*Gain/ loss comprises both hedging instrument and hedged item

- ♦ If the hedged item is a financial asset (or a component thereof) that is measured at fair value through other comprehensive income (FVOCI) other than equity instrument designated as FVOCI in accordance with Ind AS 109, the hedging gain or loss on the hedged item shall be recognised in profit or loss.

- ♦ When a hedged item is an unrecognised firm commitment (or a component thereof), the cumulative change in the fair value of the hedged item subsequent to its designation is recognised as an asset or a liability with a corresponding gain or loss recognised in profit or loss.

- **Cash flow hedge**

  A cash flow hedge is a hedge of the exposure to variability in cash flows that is attributable to a particular risk associated with all, or a component of, a recognised asset or liability (such as all or some future interest payments on variable debt), or a highly probable forecast transaction, and could affect profit or loss.

Join us t.me/caborntofight

Where a cash flow hedge meets the qualifying criteria, it shall be accounted as follows:

(a) the separate component of equity associated with the hedged item (**cash flow hedge reserve**) is adjusted to the lower of the following (in absolute amounts):

i. the cumulative gain or loss on the hedging instrument from inception of the hedge; and

ii. the cumulative change in fair value (present value) of the hedged item (ie the present value of the cumulative change in the hedged expected future cash flows) from inception of the hedge.

(b) the portion of the gain or loss on the hedging instrument that is determined to be an effective hedge (ie the portion that is offset by the change in the cash flow hedge reserve calculated in accordance with (a)) shall be recognised in other comprehensive income.

(c) any remaining gain or loss on the hedging instrument (or any gain or loss required to balance the change in the cash flow hedge reserve calculated in accordance with (a)) is hedge ineffectiveness that shall be recognised in profit or loss

(d) the amount that has been accumulated in the cash flow hedge reserve in accordance with (a) shall be accounted for as follows:

i. If a hedged forecast transaction subsequently results in the recognition of a non-financial asset or non-financial liability, or a hedged forecast transaction for a non-financial asset or a non-financial liability becomes a firm commitment for which fair value hedge accounting is applied, the entity shall remove that amount from the cash flow hedge reserve and include it directly in the initial cost or other carrying amount of the asset or the liability. This is not a reclassification adjustment as defined in IAS 1 and hence it does not affect other comprehensive income.

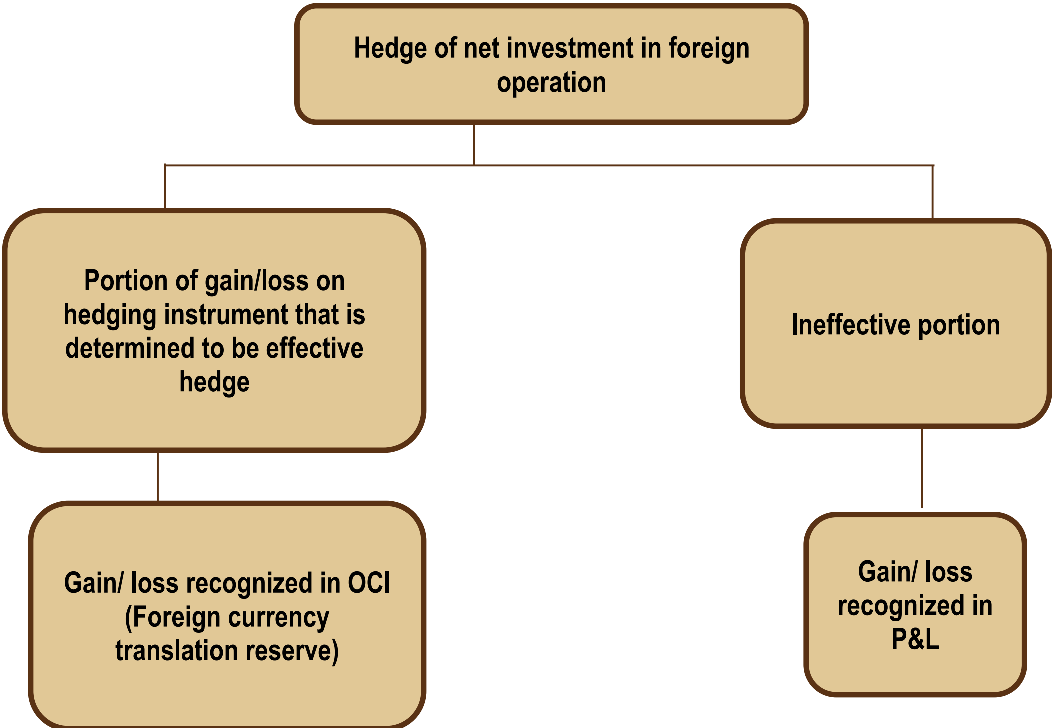
ii. For cash flow hedges other than those covered by (i), that amount shall be reclassified from the cash flow hedge reserve to profit or loss as a reclassification adjustment in the same period or periods during which the hedged expected future cash flows affect profit or loss (for example, in the periods that interest income or interest expense is recognised or when a forecast sale occurs).

iii. However, if that amount is a loss and an entity expects that all or a portion of that loss will not be recovered in one or more future periods, it shall immediately reclassify the amount that is not expected to be recovered into profit or loss as a reclassification adjustment.

Join us t.me/caborntofight

- **Hedge of net investment in foreign operation**

  Hedge of a net investment in foreign operation, including a hedge of a monetary item that is accounted for as part of the net investment, shall be accounted for similarly to cash flow hedges:



The cumulative gain or loss on the hedging instrument relating to the effective portion of the hedge that has been accumulated in the foreign currency translation reserve shall be reclassified from equity to profit or loss as a reclassification adjustment on the disposal or partial disposal of the foreign operation.

UNIT 7: DISCLOSURES

7.1 INTRODUCTION

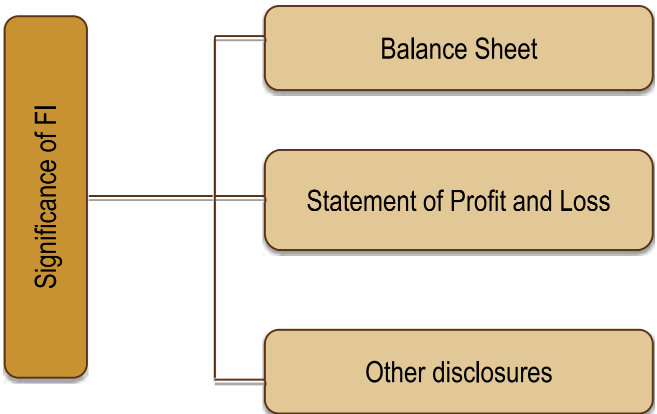
Ind AS 107 provides disclosures for financial instruments to be made in the financial statements that enable users to evaluate:

(a) The significance of financial instruments for the entity's financial position and performance; and

(b) The nature and extent of risks arising from financial instruments to which the entity is exposed during the period and at the end of the reporting period; and how the entity manages those risks.

7.2 SIGNIFICANCE OF FINANCIAL INSTRUMENTS

An entity shall disclose information that enables users of its financial statements to evaluate the significance of financial instruments for its financial position and performance.



7.3 BALANCE SHEET

- **Categories of financial assets and financial liabilities**

  The carrying amounts of each of the following categories, as defined in Ind AS 109, shall be disclosed either in the balance sheet or in the notes:

  (a) Financial assets measured at fair value through profit or loss, showing separately

i. those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 (ie, financial asset whose credit risk exposure is managed through credit derivative that is measured at fair value through profit or loss and hence, such financial asset is also managed at fair value through profit or loss); and

ii. those mandatorily measured at fair value through profit or loss in accordance with Ind AS 109.

(b) financial liabilities at fair value through profit or loss, showing separately –

i. those designated as such upon initial recognition or subsequently in accordance with Ind AS 109 (ie, financial liability whose credit risk exposure is managed through credit derivative that is measured at fair value through profit or loss and hence, such financial liability is also managed at fair value through profit or loss; and

ii. those that meet the definition of held for trading in Ind AS 109.

(c) financial assets measured at amortised cost.

(d) financial liabilities measured at amortised cost.

(e) financial assets measured at fair value through other comprehensive income, showing separately –

i. financial assets that are measured at fair value through other comprehensive income in accordance with Ind AS 109;

ii. investments in equity instruments designated as such upon initial recognition in accordance with Ind AS 109.

- **Financial assets or financial liabilities at fair value through profit or loss**
  - ♦ If the entity has designated as measured at fair value through profit or loss a financial asset (or group of financial assets) that would otherwise be measured at fair value through other comprehensive income or amortised cost, it shall disclose:

    (a) the maximum exposure to credit risk of the financial asset (or group of financial assets) at the end of the reporting period.

    (b) the amount by which any related credit derivatives or similar instruments mitigate that maximum exposure to credit risk.

    (c) the amount of change, during the period and cumulatively, in the fair value of the financial asset (or group of financial assets) that is attributable to changes in the credit risk of the financial asset determined either:

Merged By CA - Born To Fight

i. as the amount of change in its fair value that is not attributable to changes in market conditions that give rise to market risk; or

ii. using an alternative method the entity believes more faithfully represents the amount of change in its fair value that is attributable to changes in the credit risk of the asset.

Changes in market conditions that give rise to market risk include changes in an observed (benchmark) interest rate, commodity price, foreign exchange rate or index of prices or rates.

(d) the amount of the change in the fair value of any related credit derivatives or similar instruments that has occurred during the period and cumulatively since the financial asset was designated.

- If the entity has designated a financial liability as at fair value through profit or loss in accordance with Ind AS 109 and is required to present the effects of changes in that liability's credit risk in other comprehensive income, it shall disclose:

  (a) the amount of change, cumulatively, in the fair value of the financial liability that is attributable to changes in the credit risk of that liability

  (b) the difference between the financial liability's carrying amount and the amount the entity would be contractually required to pay at maturity to the holder of the obligation.

  (c) any transfers of the cumulative gain or loss within equity during the period including the reason for such transfers.

  (d) if a liability is derecognised during the period, the amount (if any) presented in other comprehensive income that was realised at derecognition.

- If an entity has designated a financial liability as at fair value through profit or loss in accordance with Ind AS 109 and is required to present all changes in the fair value of that liability (including the effects of changes in the credit risk of the liability) in profit or loss, it shall disclose:

  (a) Amount of change, during the period and cumulatively, in the fair value of the financial liability that is attributable to changes in the credit risk of that liability;

  and

  (b) Difference between the financial liability's carrying amount and the amount the entity would be contractually required to pay at maturity to the holder of the obligation.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- **Investments in equity instruments designated at fair value through other comprehensive income**

  ♦ If an entity has designated investments in equity instruments to be measured at fair value through other comprehensive income in accordance with Ind AS 109, it shall disclose:

  (a) which investments in equity instruments have been designated to be measured at fair value through other comprehensive income.

  (b) the reasons for using this presentation alternative.

  (c) the fair value of each such investment at the end of the reporting period.

  (d) dividends recognised during the period, showing separately those related to investments derecognised during the reporting period and those related to investments held at the end of the reporting period.

  (e) any transfers of the cumulative gain or loss within equity during the period including the reason for such transfers.

  ♦ If an entity derecognised investments in equity instruments measured at fair value through other comprehensive income during the reporting period, it shall disclose:

  (a) the reasons for disposing of the investments

  (b) the fair value of the investments at the date of derecognition

  (c) the cumulative gain or loss on disposal.

- **Reclassifications**

  ♦ An entity shall disclose if, in the current or previous reporting periods, it has reclassified any financial assets in accordance with Ind AS 109. For each such event, an entity shall disclose –

  (a) the date of reclassification.

  (b) a detailed explanation of the change in business model and a qualitative description of its effect on the entity's financial statements.

  (c) the amount reclassified into and out of each category.

  ♦ For each reporting period following reclassification until derecognition, an entity shall disclose for assets reclassified out of the fair value through profit or loss category so that they are measured at amortised cost or fair value through other comprehensive income in accordance with Ind AS 109:

  (a) the effective interest rate determined on the date of reclassification; and

  (b) the interest revenue recognised.

- If, since its last annual reporting date, an entity has reclassified financial assets out of the fair value through other comprehensive income category so that they are measured at amortised cost; or out of the fair value through profit or loss category so that they are measured at amortised cost or fair value through other comprehensive income it shall disclose:

  (a) the fair value of the financial assets at the end of the reporting period; and

  (b) the fair value gain or loss that would have been recognised in profit or loss or other comprehensive income during the reporting period if the financial assets had not been reclassified.

- **Off-setting financial assets and financial liabilities**

  - An entity shall disclose, at the end of the reporting period, the following quantitative information separately for recognised financial assets and recognised financial liabilities that have been off-set in accordance with Ind AS 32:

    (a) the gross amounts of those recognised financial assets and recognised financial liabilities;

    (b) the amounts that are set off in accordance with the criteria in Ind AS 32 when determining the net amounts presented in the balance sheet;

    (c) the net amounts presented in the balance sheet;

    (d) the amounts subject to an enforceable master netting arrangement or similar agreement that are not otherwise included in the information disclosed for amounts set off in paragraph (b) above, including:

      i. amounts related to recognised financial instruments that do not meet some or all of the offsetting criteria in paragraph 42 of Ind AS 32; and

      ii. amounts related to financial collateral (including cash collateral); and

    (e) the net amount after deducting the amounts in (d) from the amounts in (c) above.

- Collateral

  - An entity shall disclose:

    (a) the carrying amount of financial assets it has pledged as collateral for liabilities or contingent liabilities, including amounts that have been reclassified in accordance with Ind AS 109; and

    (b) the terms and conditions relating to its pledge.

  - When an entity holds collateral (of financial or non-financial assets) and is permitted to sell or repledge the collateral in the absence of default by the owner of the collateral, it shall disclose:

(a) the fair value of the collateral held;

(b) the fair value of any such collateral sold or repledged, and whether the entity has an obligation to return it; and

(c) the terms and conditions associated with its use of the collateral.

- **Allowance for credit losses**

  The carrying amount of financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109 is not reduced by a loss allowance and an entity shall not present the loss allowance separately in the balance sheet as a reduction of the carrying amount of the financial asset. However, an entity shall disclose the loss allowance in the notes to the financial statements.

- **Compound financial instruments with multiple embedded derivatives**

  If an entity has issued an instrument that contains both a liability and an equity component and the instrument has multiple embedded derivatives whose values are interdependent (such as a callable convertible debt instrument), it shall disclose the existence of those features.

- **Defaults and breaches**

  ♦ For loans payable recognised at the end of the reporting period, an entity shall disclose:

  (a) details of any defaults during the period of principal, interest, sinking fund, or redemption terms of those loans payable;

  (b) the carrying amount of the loans payable in default at the end of the reporting period; and

  (c) whether the default was remedied, or the terms of the loans payable were renegotiated, before the financial statements were authorised for issue.

  ♦ If, during the period, there were breaches of loan agreement terms other than those that are existing at the year end and covered by year-end disclosure above, an entity shall disclose the same information as required by paragraph above, if those breaches permitted the lender to demand accelerated repayment (unless the breaches were remedied, or the terms of the loan were renegotiated, on or before the end of the reporting period).

7.4 STATEMENT OF PROFIT AND LOSS

An entity shall disclose the following items of income, expense, gains or losses either in the statement of comprehensive income or in the notes:

(a) net gains or net losses on:

i. financial assets or financial liabilities measured at fair value through profit or loss, showing separately those on financial assets or financial liabilities designated as such upon initial recognition or subsequently in accordance with Ind AS 109, and those on financial assets or financial liabilities that are mandatorily measured at fair value through profit or loss in accordance with Ind AS 109 (eg financial liabilities that meet the definition of held for trading in Ind AS 109).

For financial liabilities designated as at fair value through profit or loss, an entity shall show separately the amount of gain or loss recognised in other comprehensive income and the amount recognised in profit or loss.

ii. financial liabilities measured at amortised cost

iii. financial assets measured at amortised cost

iv. investments in equity instruments designated at fair value through other comprehensive income in accordance with Ind AS 109

v. financial assets measured at fair value through other comprehensive income in accordance with Ind AS 109, showing separately the amount of gain or loss recognised in other comprehensive income during the period and the amount reclassified upon derecognition from accumulated other comprehensive income to profit or loss for the period.

(b) total interest revenue and total interest expense (calculated using the effective interest method) for financial assets that are measured at amortised cost or that are measured at fair value through other comprehensive income (showing these amounts separately); or financial liabilities that are not measured at fair value through profit or loss

(c) fee income and expense (other than amounts included in determining the effective interest rate) arising from:

i. financial assets and financial liabilities that are not at fair value through profit or loss; and

ii. trust and other fiduciary activities that result in the holding or investing of assets on behalf of individuals, trusts, retirement benefit plans, and other institutions.

7.5 OTHER DISCLOSURES

- **Accounting policies**

  An entity discloses its significant accounting policies comprising the measurement basis (or bases) used in preparing the financial statements and the other accounting policies used that are relevant to an understanding of the financial statements.

- **Hedge accounting**

  An entity shall apply these disclosure requirements for those risk exposures that an entity hedges and for which it elects to apply hedge accounting. Hedge accounting disclosures shall provide information about:

  (a) an entity's risk management strategy and how it is applied to manage risk;

  (b) how the entity's hedging activities may affect the amount, timing and uncertainty of its future cash flows; and

  (c) the effect that hedge accounting has had on the entity's balance sheet, statement of comprehensive income and statement of changes in equity.

- **Fair value**

  - For each class of financial assets and financial liabilities (see paragraph 6), an entity shall disclose the fair value of that class of assets and liabilities in a way that permits it to be compared with its carrying amount. In disclosing fair values, an entity shall group financial assets and financial liabilities into classes, but shall offset them only to the extent that their carrying amounts are offset in the balance sheet.

  - In some cases, an entity does not recognise a gain or loss on initial recognition of a financial asset or financial liability because the fair value is neither evidenced by a quoted price in an active market for an identical asset or liability (ie a Level 1 input) nor based on a valuation technique that uses only data from observable markets. In such cases, the entity shall disclose by class of financial asset or financial liability:

    (a) its accounting policy for recognising in profit or loss the difference between the fair value at initial recognition and the transaction price to reflect a change in factors (including time) that market participants would take into account when pricing the asset or liability

    (b) aggregate difference yet to be recognised in profit or loss at the beginning and end of the period and a reconciliation of changes in the balance of this difference.

    (c) why the entity concluded that the transaction price was not the best evidence of fair value, including a description of the evidence that supports the fair value.

  - Disclosures of fair value are not required:

    (a) when the carrying amount is a reasonable approximation of fair value, for example, for financial instruments such as short-term trade receivables and payables;

    (b) for a contract containing a discretionary participation feature (as described in Ind AS 104) if the fair value of that feature cannot be measured reliably; or

    (c) for lease liabilities.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- In case of contracts with discretionary participation feature, where fair value cannot be determined reliably, an entity shall disclose information to help users of the financial statements make their own judgements about the extent of possible differences between the carrying amount of those contracts and their fair value, including:

  (a) the fact that fair value information has not been disclosed for these instruments because their fair value cannot be measured reliably;

  (b) a description of the financial instruments, their carrying amount, and an explanation of why fair value cannot be measured reliably;

  (c) information about the market for the instruments;

  (d) information about whether and how the entity intends to dispose of the financial instruments; and

  (e) if financial instruments whose fair value previously could not be reliably measured are derecognised, that fact, their carrying amount at the time of derecognition, and the amount of gain or loss recognised.

- **Nature and extent of risks arising from financial instruments**

  - An entity shall disclose information that enables users of its financial statements to evaluate the nature and extent of risks arising from financial instruments to which the entity is exposed at the end of the reporting period.

  - The disclosures described below focus on the risks that arise from financial instruments and how they have been managed. These risks typically include, but are not limited to, **credit risk, liquidity risk and market risk**.

  - **Qualitative disclosures**

    For each type of risk arising from financial instruments, an entity shall disclose:

    (a) the exposures to risk and how they arise;

    (b) its objectives, policies and processes for managing the risk and the methods used to measure the risk; and

    (c) any changes in (a) or (b) from the previous period.

  - **Quantitative disclosures –**

    For each type of risk arising from financial instruments, including – credit risk, liquidity risk and market risk, an entity shall disclose:

    (a) summary quantitative data about its exposure to that risk at the end of the reporting period. This disclosure shall be based on the information provided

internally to key management personnel of the entity, for example the entity's board of directors or chief executive officer

(b) certain detailed disclosures required for each type of risk mentioned above, to the extent not provided in accordance with (a).

(c) concentration of risk if not apparent from the disclosures made in accordance with (a) and (b).

If the quantitative data disclosed as at the end of the reporting period are unrepresentative of an entity's exposure to risk during the period, an entity shall provide further information that is representative.

- **Credit risk:**

  An entity shall apply the disclosure requirements in paragraphs 35F–35N of Ind AS 107 (as described below) to financial instruments to which the impairment requirements in Ind AS 109 are applied. However:

  (a) For trade receivables, contract assets and lease receivables, ***paragraph 35J(a)*** applies to those trade receivables, contract assets or lease receivables on which lifetime expected credit losses are recognised in accordance with Ind AS 109, if those financial assets are modified while more than 30 days past due; and

  (b) paragraph 35K(b) does not apply to lease receivables.

- The credit risk disclosures described below shall enable users of financial statements to understand the effect of credit risk on the amount, timing and uncertainty of future cash flows. To achieve this objective, credit risk disclosures shall provide:

  (a) information about an entity's credit risk management practices and how they relate to the recognition and measurement of expected credit losses, including the methods, assumptions and information used to measure expected credit losses

  (b) quantitative and qualitative information that allows users of financial statements to evaluate the amounts in the financial statements arising from expected credit losses, including changes in the amount of expected credit losses and the reasons for those changes; and

  (c) information about an entity's credit risk exposure (ie the credit risk inherent in an entity's financial assets and commitments to extend credit) including significant credit risk concentrations.

- **The credit risk management practices**

  An entity shall explain its credit risk management practices and how they relate to the recognition and measurement of expected credit losses. To meet this objective an

© The Institute of Chartered Accountants of India

entity shall disclose information that enables users of financial statements to understand and evaluate:

(a) how an entity determined whether the credit risk of financial instruments has increased significantly since initial recognition, including, if and how:

ii. financial instruments are considered to have low credit risk in accordance with Ind AS 109, including the classes of financial instruments to which it applies; and

iii. the presumption of Ind AS 109, that there have been significant increases in credit risk since initial recognition when financial assets are more than 30 days past due, has been rebutted;

(b) an entity's definitions of default, including the reasons for selecting those definitions;

(c) how the instruments were grouped if expected credit losses were measured on a collective basis;

(d) how an entity determined that financial assets are credit-impaired financial assets;

(e) an entity's write-off policy, including the indicators that there is no reasonable expectation of recovery and information about the policy for financial assets that are written-off but are still subject to enforcement activity; and

(f) how the requirements in Ind AS 109 for the modification of contractual cash flows of financial assets have been applied, including how an entity:

i. determines whether the credit risk on a financial asset that has been modified while the loss allowance was measured at an amount equal to lifetime expected credit losses, has improved to the extent that the loss allowance reverts to being measured at an amount equal to 12-month expected credit losses in accordance with Ind AS 109; and

ii. monitors the extent to which the loss allowance on financial assets meeting the criteria in (i) is subsequently remeasured at an amount equal to lifetime expected credit losses in accordance with Ind AS 109.

♦ An entity shall explain the inputs, assumptions and estimation techniques used to apply the impairment requirements in Ind AS 109. For this purpose, an entity shall disclose:

(a) the basis of inputs and assumptions and the estimation techniques used to:

i. measure the 12-month and lifetime expected credit losses;

ii. determine whether the credit risk of financial instruments has increased significantly since initial recognition; and

iii. determine whether a financial asset is a credit-impaired financial asset.

(b) how forward-looking information has been incorporated into the determination of expected credit losses, including the use of macroeconomic information; and

(c) changes in the estimation techniques or significant assumptions made during the reporting period and the reasons for those changes.

♦ Quantitative and qualitative information about amounts arising from expected credit losses

To explain the changes in the loss allowance and the reasons for those changes, an entity shall provide, by class of financial instrument, a reconciliation from the opening balance to the closing balance of the loss allowance, in a table, showing separately the changes during the period for:

(a) the loss allowance measured at an amount equal to 12-month expected credit losses;

(b) the loss allowance measured at an amount equal to lifetime expected credit losses for:

i. financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets;

ii. financial assets that are credit-impaired at the reporting date (but that are not purchased or originated credit-impaired); and

iii. trade receivables, contract assets or lease receivables for which the loss allowances are measured in accordance with Ind AS 109

(c) financial assets that are purchased or originated credit-impaired. In addition to the reconciliation, an entity shall disclose the total amount of undiscounted expected credit losses at initial recognition on financial assets initially recognised during the reporting period.

♦ **Credit risk exposure**

To enable users of financial statements to assess an entity's credit risk exposure and understand its significant credit risk concentrations, an entity shall disclose, by credit risk rating grades, the gross carrying amount of financial assets and the exposure to credit risk on loan commitments and financial guarantee contracts. This information shall be provided separately for financial instruments:

(a) for which the loss allowance is measured at an amount equal to 12-month expected credit losses;

Join us t.me/caborntofight

(b) for which the loss allowance is measured at an amount equal to lifetime expected credit losses and that are:

i. financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets;

ii. financial assets that are credit-impaired at the reporting date (but that are not purchased or originated credit-impaired); and

iii. trade receivables, contract assets or lease receivables for which the loss allowances are measured at life-time expected credit losses as an option provided in Ind AS 109.

♦ For all financial instruments to which the impairment requirements in Ind AS 109 are not applied, an entity shall disclose by class of financial instrument:

(a) the amount that best represents its maximum exposure to credit risk at the end of the reporting period without taking account of any collateral held or other credit enhancements (eg netting agreements that do not quality for offset in accordance with Ind AS 32); this disclosure is not required for financial instruments whose carrying amount best represents the maximum exposure to credit risk.

(b) a description of collateral held as security and other credit enhancements, and their financial effect (eg quantification of the extent to which collateral and other credit enhancements mitigate credit risk) in respect of the amount that best represents the maximum exposure to credit risk (whether disclosed in accordance with (a) or represented by the carrying amount of a financial instrument).

- **Liquidity risk**

An entity shall disclose:

(a) a maturity analysis for non-derivative financial liabilities (including issued financial guarantee contracts) that shows the remaining contractual maturities.

(b) a maturity analysis for derivative financial liabilities.

The maturity analysis shall include the remaining contractual maturities for those derivative financial liabilities for which contractual maturities are essential for an understanding of the timing of the cash flows.

(c) a description of how it manages the liquidity risk inherent in (a) and (b).

- **Market risk**
  - ♦ An entity shall disclose:
    - (a) a sensitivity analysis for each type of market risk to which the entity is exposed at the end of the reporting period, showing how profit or loss and equity would have been affected by changes in the relevant risk variable that were reasonably possible at that date;
    - (b) the methods and assumptions used in preparing the sensitivity analysis; and
    - (c) changes from the previous period in the methods and assumptions used, and the reasons for such changes.
  - ♦ If an entity prepares a sensitivity analysis, such as value-at-risk, that reflects interdependencies between risk variables (eg interest rates and exchange rates) and uses it to manage financial risks, it may use that sensitivity analysis in place of the analysis specified in paragraph 40. The entity shall also disclose:
    - (a) an explanation of the method used in preparing such a sensitivity analysis, and of the main parameters and assumptions underlying the data provided; and
    - (b) an explanation of the objective of the method used and of limitations that may result in the information not fully reflecting the fair value of the assets and liabilities involved.

Note: Students are advised to read the application guidance to Ind AS 107 for better understanding of the disclosure requirements related to financial instruments.

COMPREHENSIVE ILLUSTRATIONS

Illustration 1

A Ltd. issued redeemable preference shares to a Holding Company – Z Ltd. The terms of the instrument have been summarized below. Account for this in the books of Z Ltd.

Nature	***Non-cumulative redeemable preference shares***
Repayment:	*Redeemable after 5 years*
Date of Allotment:	*1-Apr-20X1*
Date of repayment:	*31-Mar-20X6*
Total period:	*5.00 years*
Value of preference shares issued:	*100,000,000*
Dividend rate	*0.0001%*
Market rate of interest	*12% per annum*
Present value factor	*0.56743*

Solution

Applying the guidance in Ind AS 109, a 'financial asset' shall be recorded at its fair value upon initial recognition. Fair value is normally the transaction price. However, sometimes certain type of instruments may be exchanged at off market terms (ie, different from market terms for a similar instrument if exchanged between market participants).

For example, a long-term loan or receivable that carries no interest while similar instruments if exchanged between market participants carry interest, then fair value for such loan receivable will be lower from its transaction price owing to the loss of interest that the holder bears. In such cases where part of the consideration given or received is for something other than the financial instrument, an entity shall measure the fair value of the financial instrument.

In the above case, since A Ltd has issued preference shares to its Holding Company – Z Ltd, the relationship between the parties indicates that the difference in transaction price and fair value is akin to investment made by Z Ltd. in its subsidiary.

Following is the table summarising the computations on initial recognition:

Market rate of interest	12%
Present value factor	0.56743
Present value	56,742,686
Loan component	56,742,686
Investment in subsidiary	43,257,314

Subsequently, such preference shares shall be carried at amortised cost at each reporting date. The computation of amortised cost at each reporting date has been done as follows:

Year	Date	Opening Asset	Days	Interest @ 12%	Closing balance
	1-Apr-20X1				56,742,686
1	31-Mar-20X2	56,742,686	365	6,809,122	63,551,808
2	31-Mar-20X3	63,551,808	365	76,26,217	71,178,025
3	31-Mar-20X4	71,178,025	365	85,41,363	79,719,388
4	31-Mar-20X5	79,719,388	365	95,66,327	89,285,715
5	31-Mar-20X6	89,285,715	365	10,714,285	100,000,000

A Limited issues ₹ 1 crore optionally convertible bonds on 1 April 20X1. The bonds have a life of eight years and a face value of ₹ 10 each, and they offer interest, payable at the end of each financial year, at a rate of 6 per cent annum. The bonds are issued at their face value and each bond can be converted into one ordinary share in A Limited at any time in the next eight years. Companies of a similar risk profile have recently issued debt with similar terms, without the option for conversion, at a rate of 8 per cent per annum.

Required:

(a) Provide the appropriate accounting entries for initial recognition.

(b) Calculate the stream of interest expenses across the eight years of the life of the bonds.

(c) Provide the accounting entries if the holders of the bonds elect to convert the bonds to ordinary shares at the end of the third year (after receiving interest for the third year).

Solution

(a) Applying the guidance for compound instruments, the present value of the bond is computed to identify the liability component and then difference between the present value of these bonds & the issue price of ₹ 1 crore shall be allocated to the equity component. In determining the present value, the rate of 8 per cent will be used, which is the interest rate paid on debt of a similar nature and risk that does not provide an option to convert the liability to ordinary shares.

Present value of bonds at the market rate of debt

Present value of principal to be received in eight years discounted at 8%

(10,000,000 X 0.5403)	=	5,403,000
Present value of interest stream discounted at 8% for 8 years		
(6,00,000 X 5.7466)	=	3,447,960
Total present value	=	8,850,960
Equity component	=	1,149,040
Total face value of convertible bonds	=	10,000,000

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

The accounting entries will be as follows:

	Dr. Amount (₹)	Cr. Amount (₹)
1 April, 20X1		
Bank Dr.	10,000,000	
To Convertible bonds (liability)		8,850,960
To Convertible bonds (equity component)		1,149,040
(Being entry to record the convertible bonds and the recognition of the liability and equity components)		
31st March, 20X2		
Interest expense Dr.	708,077	
To Bank		600,000
To Convertible bonds (liability)		108,077
(Being entry to record the interest expense, where the expense equals the present value of the opening liability multiplied by the market rate of interest).		

(b) The stream of interest expense is summarised below, where interest for a given year is calculated by multiplying the present value of the liability at the beginning of the period by the market rate of interest, this is being 8 per cent.

Date	Payment	Interest expense at 8%	Increase in bond liability	Total bond liability
1 April, 20X1				8,850,960
31 March 20X2	600,000	708,077	108,077	8,959,037
31 March 20X3	600,000	716,723	116,723	9,075,760
31 March 20X4	600,000	726,061	126,061	9,201,821
31 March 20X5	600,000	736,146	136,146	9,337,967
31 March 20X6	600,000	747,037	147,037	9,485,004
31 March 20X7	600,000	758,800	158,800	9,643,804
31 March 20X8	600,000	771,504	171,504	9,815,308
31 March 20X9	600,000	784,692*	184,692	10,000,000

*difference is due to rounding off

Merged By CA - Born To Fight

(c) If the holders of the bonds elect to convert the bonds to ordinary shares at the end of the third year (after receiving their interest payments), the entries in the third year would be:

		Dr. Amount (₹)	Cr. Amount (₹)
31 March 20X4			
Interest expense	Dr.	726,061	
To Bank			600,000
To Convertible bonds (liability)			126,061
(Being entry to record interest expense for the period)			
31 March 20X4			
Convertible bonds (liability)	Dr.	9,201,821	
Convertible bonds (equity component)	Dr.	1,149,040	
To Ordinary share capital A/c			10,000,000
To Securities Premium A/c			350,861
(Being entry to record the conversion of bonds into shares of A Limited recognised in equity share capital account at face value of the shares and there being no premium on equity shares, the balance has been transferred to retained earnings.)

On 1st January 20X1, SamCo. Ltd. agreed to purchase USD ($) 20,000 from JT Bank in future on 31st December 20X1 for a rate equal to ₹ 68 per USD. SamCo. Ltd. did not pay any amount upon entering into the contract. SamCo Ltd. is a listed company in India and prepares its financial statements on a quarterly basis.

Following the principles of recognition and measurement as laid down in Ind AS 109, you are required to record the entries for each quarter ended till the date of actual purchase of USD.

For the purposes of accounting, please use the following information representing marked to market fair value of forward contracts at each reporting date:

As at 31st March 20X1 – ₹ (25,000)

As at 30th June 20X1 - ₹ (15,000)

As at 30th September 20X1 - ₹ 12,000

Spot rate of USD on 31st December 20X1 - ₹ 66 per USD

Solution

(i) Assessment of the arrangement using the definition of derivative included under Ind AS 109

Derivative is a financial instrument or other contract within the scope of this Standard with all three of the following characteristics: a) its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract (sometimes called the 'underlying'). b) it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors. c) it is settled at a future date.

Upon evaluation of contract in question it is noted that the contract meets the definition of a derivative as follows:

a) the value of the contract to purchase USD at a fixed price changes in response to changes in foreign exchange rate.

b) the initial amount paid to enter into the contract is zero. A contract which would give the holder a similar response to foreign exchange rate changes would have required an investment of USD 20,000 on inception.

c) the contract is settled in future

The derivative is a forward exchange contract.

As per Ind AS 109, derivatives are measured at fair value upon initial recognition and are subsequently measured at fair value through profit and loss.

(ii) Accounting on 1st January 20X1:

As there was no consideration paid and without evidence to the contrary the fair value of the contract on the date of inception is considered to be zero. Accordingly, no accounting entries shall be recorded on the date of entering into the contract.

(iii) Accounting on 31st March 20X1:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Profit and loss A/c Dr.	25,000	
To derivative financial liability		25,000
(Being mark to market loss on forward contract recorded)		

(iv) Accounting on 30th June 20X1:

The change in value of the derivative forward contract shall be recorded as a derivative financial liability in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Derivative financial liability A/c Dr.	10,000	
To Profit and loss A/c		10,000
(being partial reversal of mark to market loss on forward contract recorded)		

(v) Accounting on 30th September 20X1:

The value of the derivative forward contract shall be recorded as a derivative financial asset in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Derivative financial liability A/c Dr	15,000	
Derivative financial asset A/c Dr	12,000	
To Profit and loss A/c		27,000
(being gain on mark to market of forward contract booked as derivative financial asset and reversal of derivative financial liability)		

(vi) Accounting on 31st December 20X1:

The settlement of the derivative forward contract by actual purchase of USD 20,000 shall be recorded in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank (USD Account) @ 20,000 x 66 Dr.	13,20,000	
Profit and loss A/c Dr.	52,000	
To Bank @ 20,000 x 68		13,60,000
To Derivative financial asset A/c		12,000
(being loss on settlement of forward contract booked on actual purchase of USD)		

*****

Illustration 4

Entity A (an ₹ functional currency entity) enters into a USD 1,000,000 sale contract on 1 January 20X1 with Entity B (an ₹ functional currency entity) to sell equipment on 30 June 20X1.

Spot rate on 1 January 20X1: ₹/ USD	*45*
Spot rate on 31 March 20X1: ₹/ USD	*57*
Three-month forward rate on 31 March 20X1: ₹/ USD	*45*
Six-month forward rate on 1 January 20X1: ₹/ USD	*55*
Spot rate on 30 June 20X1: ₹/ USD	*60*

Assume that this contract has an embedded derivative that is not closely related and requires separation. Please provide detailed journal entries in the books of Entity A for accounting of such embedded derivative until sale is actually made.

Solution

The contract should be separated using the 6 month USD / ₹ forward exchange rate, as at the date of the contract (₹/USD = 55). The two components of the contract are therefore:

- A sale contract for ₹ 55 Million
- A six-month currency forward to purchase USD 1 Million at 55
- This gives rise to a gain or loss on the derivative, and a corresponding derivative asset or liability.

<u>On delivery</u>

1. Entity A records the sales at the amount of the host contract = ₹ 55 Million
2. The embedded derivative is considered to expire.
3. The derivative asset or liability (i.e. the cumulative gain or loss) is settled by becoming part of the financial asset on delivery.
4. In this case the carrying value of the currency forward at 30 June 20X1 on maturity is = ₹ (1,000,000 x 60 – 55 x 1,000,000) = ₹ 5,000,000 (profit/asset)

The table summarising the computation of gain/ loss to be recorded at every period end -

Date	Transaction	Sales	Debtors	Derivative Asset (Liability)	(Profit) Loss
		₹	₹	₹	₹
1-Jan-20X1	Embedded Derivative	Nil Value			
31-Mar-20X1	Change in Fair Value of Embedded Derivatives MTM (55-45) x 1 Million			(10,000,000)	10,000,000

30-Jun-20X1	Change in Fair Value of Embedded Derivatives (60-45) x 1 Million			15,000,000	(15,000,000)
30-Jun-20X1	Recording sales at forward rate	(55,000,000)	55,000,000		
30-Jun-20X1	Embedded derivative-settled against debtors		5,000,000	(5,000,000)	

Journal Entries to be recorded at every period end

a. **01 January 20X1 – No entry to be made**

b. **31 March 20X1 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Profit and loss A/c Dr.	10,000,000	
To Derivative financial liability A/c		10,000,000
(being loss on mark to market of embedded derivative booked)		

c. **30 June 20X1 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Derivative financial asset A/c Dr.	5,000,000	
Derivative financial liability A/c Dr.	10,000,000	
To Profit and loss A/c		15,000,000
(being gain on embedded derivative based on spot rate at the date of settlement booked)		

d. **30 June 20X1 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Trade receivable A/c Dr.	55,000,000	
To Sales A/c		55,000,000
(being sale booked at forward rate on the date of transaction)

Illustration 5

On 1st January 20X1, SamCo. Ltd. entered into a written put option for USD ($) 20,000 with JT Corp to be settled in future on 31st December 20X1 for a rate equal to ₹ 68 per USD at the option of JT Corp. SamCo. Ltd. did not receive any amount upon entering into the contract. SamCo Ltd. is a listed company in India and prepares its financial statements on a quarterly basis.

Following the classification principles of recognition and measurement as laid down in Ind AS 109, you are required to record the entries for each quarter ended till the date of actual purchase of USD.

For the purposes of accounting, please use the following information representing marked to market fair value of put option contracts at each reporting date:

As at 31st March 20X1 – ₹ (25,000)

As at 30th June 20X1 - ₹ (15,000)

As at 30th September 20X1 - ₹ NIL

Spot rate of USD on 31st December 20X1 - ₹ 66 per USD

Solution

i. **Assessment of the arrangement using the definition of derivative included under Ind AS 109**

Derivative is a financial instrument or other contract within the scope of this Standard with all three of the following characteristics:

a. its value changes in response to the change in a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating or credit index, or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract (sometimes called the 'underlying').

b. it requires no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors.

c. it is settled at a future date.

Merged By CA - Born To Fight

Upon evaluation of contract in question it is noted that the contract meets the definition of a derivative as follows:

a) the value of the contract to purchase USD at a fixed price changes in response to changes in foreign exchange rate.

d) the initial amount received to enter into the contract is zero. A contract which would give the holder a similar response to foreign exchange rate changes would have required an investment of USD 20,000 on inception.

e) the contract is settled in future

The derivative liability is a written put option contract.

As per Ind AS 109, derivatives are measured at fair value upon initial recognition and are subsequently measured at fair value through profit and loss.

ii. Accounting on 1st January 20X1

As there was no consideration paid and without evidence to the contrary the fair value of the contract on the date of inception is considered to be zero. Accordingly, no accounting entries shall be recorded on the date of entering into the contract.

iii. Accounting on 31st March 20X1

The value of the derivative put option contract shall be recorded as a derivative financial liability in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Profit and loss A/c Dr.	25,000	
To derivative financial liability		25,000
(Being mark to market loss on the put option contract recorded)		

iv. Accounting on 30th June 20X1

The change in value of the derivative put option contract shall be recorded as a derivative financial liability in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Derivative financial liability A/c Dr.	10,000	
To Profit and loss A/c		10,000
(Being partial reversal of mark to market loss on the put option contract recorded)		

Join us t.me/caborntofight

v. **Accounting on 30th September 20X1**

The change in value of the derivative option contract shall be recorded as a zero in the books of SamCo Ltd. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Derivative financial liability A/c Dr.	15,000	
To Profit and loss A/c		15,000
(Being gain on mark to market of put option contract booked to make the value the derivative liability as zero)		

vi. **Accounting on 31st December 20X1**

The settlement of the derivative put option contract by actual purchase of USD 20,000 shall be recorded in the books of SamCo Ltd. upon exercise by JT Corp. by recording the following journal entry:

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank (USD Account) @ 20,000 x 66 Dr.	13,20,000	
Profit and loss A/c Dr.	40,000	
To Bank @ 20,000 x 68		13,60,000
(being loss on settlement of put option contract booked on actual purchase of USD)		

*****

Illustration 6

ABC Company issued 10,000 compulsory cumulative convertible preference shares (CCCPS) as on 1 April 20X1 @ ₹ 150 each. The rate of dividend is 10% payable every year. The preference shares are convertible into 5,000 equity shares of the company at the end of 5th year from the date of allotment. When the CCCPS are issued, the prevailing market interest rate for similar debt without conversion options is 15% per annum. Transaction cost on the date of issuance is 2% of the value of the proceeds.

Key terms:

Date of Allotment	*01-Apr-20X1*
Date of Conversion	*01-Apr-20X6*
Number of Preference Shares	*10,000*
Face Value of Preference Shares	*150*
Total Proceeds	*15,00,000*

Rate of dividend	*10%*
Market Rate for Similar Instrument	*15%*
Transaction Cost	*30,000*
Face value of equity share after conversion	*10*
Number of equity shares to be issued	*5,000*
Effective interest rate	*15.86%*

You are required to compute the liability and equity component and pass journal entries for entire term of arrangement i.e. from the issue of preference shares till their conversion into equity shares keeping in view the provisions of relevant Ind AS.

Solution

This is a compound financial instrument with two components – liability representing present value of future cash outflows and balance represents equity component.

a. Computation of Liability & Equity Component

Date	Particulars	Cash Flow	Discount Factor	Net present Value
01-Apr-20X1		0	1	0.00
31-Mar-20X2	Dividend	150,000	0.869565	130,434.75
31-Mar-20X3	Dividend	150,000	0.756144	113,421.6
31-Mar-20X4	Dividend	150,000	0.657516	98,627.4
31-Mar-20X5	Dividend	150,000	0.571753	85,762.95
31-Mar-20X6	Dividend	150,000	0.497177	74,576.55
Total Liability Component				502,823.25
Total Proceeds				1,500,000.00
Total Equity Component (Bal fig)				997,176.75

b. Allocation of transaction costs

Particulars	Amount	Allocation	Net Amount
Liability Component	502,823	10,056	492,767
Equity Component	997,177	19,944	977,233
Total Proceeds	1,500,000	30,000	1,470,000

c. Accounting for liability at amortised cost:

- Initial accounting = Present value of cash outflows less transaction costs

- Subsequent accounting = At amortised cost, ie, initial fair value adjusted for interest and repayments of the liability.

	Opening Financial Liability A	Interest B	Cash Flow C	Closing Financial Liability A+B-C
01-Apr-20X1	492,767	-	-	4,92,767
31-Mar-20X2	492,767	78,153	150,000	4,20,920
31-Mar-20X3	420,920	66,758	150,000	3,37,678
31-Mar-20X4	337,678	53,556	150,000	2,41,234
31-Mar-20X5	241,234	38,260	150,000	1,29,494
31-Mar-20X6	129,494	20,506	150,000	-

d. Journal Entries to be recorded for entire term of arrangement are as follows:

Date	Particulars	Debit	Credit
01-Apr-20X1	Bank A/c Dr.	1,470,000	
	To Preference Shares Liability A/c		492,767
	To Equity Component of Preference shares A/c		977,233
	(Being compulsorily convertible preference shares issued. The same are divided into equity component and liability component as per the calculation)		
31-Mar-20X2	Preference shares Liability A/c Dr.	150,000	
	To Bank A/c		150,000
	(Being Dividend at the coupon rate of 10% paid to the shareholders)		
31-Mar-20X2	Finance cost A/c Dr.	78,153	
	To Preference Shares Liability A/c		78,153
	(Being interest as per EIR method recorded)		
31-Mar-20X3	Preference shares Liability A/c Dr.	150,000	
	To Bank A/c		150,000
	(Being Dividend at the coupon rate of 10% paid to the shareholders)		

31-Mar-20X3	Finance cost A/c Dr. To Preference Shares Liability A/c (Being interest as per EIR method recorded)	66,758	66,758
31-Mar-20X4	Preference shares Liability A/c Dr. To Bank A/c (Being Dividend at the coupon rate of 10% paid to the shareholders)	150,000	150,000
31-Mar-20X4	Finance cost A/c Dr. To Preference Shares Liability A/c (Being interest as per EIR method recorded)	53,556	53,556
31-Mar-20X5	Preference shares Liability A/c Dr. To Bank A/c (Being Dividend at the coupon rate of 10% paid to the shareholders)	150,000	150,000
31-Mar-20X5	Finance cost A/c Dr. To Preference Shares Liability A/c (Being interest as per EIR method recorded)	38,260	38,260
31-Mar-20X6	Preference shares Liability A/c Dr. To Bank A/c (Being Dividend at the coupon rate of 10% paid to the shareholders)	150,000	150,000
31-Mar-20X6	Finance cost A/c Dr. To Preference Shares Liability A/c (Being interest as per EIR method recorded)	20,506	20,506
31-Mar-20X6	Equity Component of Preference shares A/c Dr. To Equity Share Capital A/c To Securities Premium A/c (Being Preference shares converted in equity shares and remaining equity component is recognised as securities premium)	977,233	50,000 927,233

(₹ in crore)

Particulars	Valuation Technique	Significant Unobservable Input	Change in %	Sensitivity of the fair value to change in input	
				31st March, 2022	31st March, 2021
Investment in OCPS (FVTOCI)	Discounting Cash Flow	Discounting rate - 14.51% (Previous Year -13.12%)	+0.10%	(1,547)	(1,436)
			-0.10%	1,573	1,463

A.3 The below table summarises the fair value of borrowings which are carried at amortised cost:

(₹ in crore)

Particulars	level	31st March, 2022	31st March, 2021
Non-current borrowings (including current maturities)	level 1	1,03,546	1,11,025
	level 2	79,857	82,180
	level 3	3,137	3,796

For current borrowings, the carrying amounts approximates fair value due to the short maturity of these instruments.

The financial instruments are categorised into three levels based on the inputs used to arrive at fair value measurements as described below

Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2: Inputs other than the quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly; and

Level 3: Inputs based on unobservable market data.

Valuation Methodology

All financial instruments are initially recognised and subsequently re-measured at fair value as described below:

a) The fair value of investment in quoted Equity Shares, Bonds, Government Securities, Treasury Bills, Certificate of Deposit and Mutual Funds is measured at quoted price or NAV.

b) The fair value of Interest Rate Swaps is calculated as the present value of the estimated future cash flows based on observable yield curves.

c) The fair value of Forward Foreign Exchange contracts and Currency Swaps is determined using observable forward exchange rates and yield curves at the balance sheet date.

d) The fair value of over-the-counter Foreign Currency Option contracts is determined using the Black Scholes valuation model.

e) Commodity derivative contracts are valued using available information in markets and quotations from exchange, brokers and price index developers.

f) The fair value for level 3 instruments is valued using inputs based on information about market participants assumptions and other data that are available.

g) The fair value of the remaining financial instruments is determined using discounted cash flow analysis.

h) All foreign currency denominated assets and liabilities are translated using exchange rate at reporting date.

B. Financial Risk Management

The company's activities expose it to variety of financial risks: market risk, credit risk, interest rate risk and liquidity risk. Within the boundaries of approved Risk Management Policy framework The Company uses derivative instruments to manage the volatility of financial markets and minimize the adverse impact on its financial performance.

i) Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk, such as equity price risk and commodity risk.

a) Foreign Currency Risk

Foreign currency risk is the risk that the Fair Value or Future Cash Flows of an exposure will fluctuate because of changes in foreign currency rates. Exposures can arise on account of the various assets and liabilities which are denominated in currencies other than Indian Rupee.

The following table shows foreign currency exposures in US Dollar, Euro and Japanese Yen on financial instruments at the end of the reporting period. The exposure to all other foreign currencies are not material.

(₹ in crore)

b) Interest Rate Risk

The Company is also exposed to interest rate risk, changes in interest rates will affect future cash flows or the fair values of its financial instruments, principally debt. The Company issues debt in a variety of currencies based on market opportunities and it uses derivatives to hedge interest rate exposures.

Merged By CA - Born To Fight

ii) **Commodity Price Risk**

Commodity price risk arises due to fluctuation in prices of crude oil, other feed stock and products. The company has a risk management framework aimed at prudently managing the risk arising from the volatility in commodity prices and freight costs.

The Company's commodity risk is managed centrally through well-established trading operations and control processes. In accordance with the risk management policy, the Company enters into various transactions using derivatives and uses over-the-counter as well as Exchange Traded Futures, Options and Swap contracts to hedge its commodity and freight exposure.

iii) **Credit Risk**

Credit risk is the risk that a customer or counterparty to a financial instrument fails to perform or pay the amounts due causing financial loss to the company. Credit risk arises from company's activities in investments, dealing in derivatives and receivables from customers. The Company ensure that sales of products are made to customers with appropriate creditworthiness. Investment and other market exposures are managed against counterparty exposure limits. Credit information is regularly shared between businesses and finance function, with a framework in place to quickly identify and respond to cases of credit deterioration.

The company has a prudent and conservative process for managing its credit risk arising in the course of its business activities. Credit risk is actively managed through Letters of Credit, Bank Guarantees, Parent Company Guarantees, advance payments and factoring & forfaiting without recourse to the company to avoid concentration of risk. The company restricts its fixed income investments to liquid securities carrying high credit rating.

iv) **Liquidity Risk**

Liquidity risk arises from the Company's inability to meet its cash flow commitments on the due date. The company maintains sufficient stock of cash, marketable securities and committed credit facilities. The company accesses global and local financial markets to meet its liquidity requirements. It uses a range of products and a mix of currencies to ensure efficient funding from across well-diversified markets and investor pools. Treasury monitors rolling forecasts of the company's cash flow position and ensures that the company is able to meet its financial obligation at all times including contingencies.

The company's liquidity is managed centrally with operating units forecasting their cash and liquidity requirements. Treasury pools the cash surpluses from across the different operating units and then arranges to either fund the net deficit or invest the net surplus in a range of short-dated, secure and liquid instruments including short-term bank deposits, money market funds, reverse repos and similar instruments. The portfolio of these investments is diversified to avoid concentration risk in any one instrument or counterparty.

C. Hedge Accounting

The Company's business objective includes safe-guarding its earnings against adverse price movements of crude oil and other feedstock, refined products, freight costs as well as foreign exchange and interest rates. The Company has adopted a structured risk management policy to hedge all these risks within an acceptable risk limit and an approved hedge accounting framework which allows for Fair Value and Cash Flow hedges. Hedging instruments include exchange traded futures and options, over-the-counter swaps, forwards and options as well as non-derivative instruments to achieve this objective.

There is an economic relationship between the hedged items and the hedging instruments. The Company has established a hedge ratio of 1:1 for the hedging relationships. To test the hedge effectiveness, the Company uses the hypothetical derivative method and Dollar offset method.

The hedge ineffectiveness can arise from:

- Differences in the timing of the cash flows.
- Different indexes (and accordingly different curves).
- The counterparties' credit risk differently impacting the fair value movements.

The table below shows the position of hedging instruments and hedged items as on the balance sheet date.

4	At the end of the year	(4,655)	(3,156)	Other Comprehensive Income

Extract of Accounting Policy in respect of Financial Instruments: Page 319-320

(q) Financial Instruments

i. Financial Assets

A. Initial Recognition and Measurement

All Financial Assets are initially recognised at fair value. Transaction costs that are directly attributable to the acquisition or issue of Financial Assets, which are not at Fair Value Through Profit or Loss, are adjusted to the fair

value on initial recognition. Purchase and sale of Financial Assets are recognised using trade date accounting.

B. Subsequent Measurement

a) Financial Assets measured at Amortised Cost (AC)

A Financial Asset is measured at Amortised Cost if it is held within a business model whose objective is to hold the asset in order to collect contractual cash flows and the contractual terms of the Financial Asset give rise to cash flows on specified dates that represent solely payments of principal and interest on the principal amount outstanding.

b) Financial Assets measured at Fair Value Through Other Comprehensive Income (FVTOCI)

A Financial Asset is measured at FVTOCI if it is held within a business model whose objective is achieved by both collecting contractual cash flows and selling Financial Assets and the contractual terms of the Financial Asset give rise on specified dates to cash flows that represents solely payments of principal and interest on the principal amount outstanding.

c) Financial Assets measured at Fair Value Through Profit or Loss (FVTPL)

A Financial Asset which is not classified in any of the above categories are measured at FVTPL. Financial assets are reclassified subsequent to their recognition, if the Company changes its business model for managing those financial assets. Changes in business model are made and applied prospectively from the reclassification date which is the first day of immediately next reporting period following the changes in business model in accordance with principles laid down under Ind AS 109 – Financial Instruments.

C. Investment in Subsidiaries, Associates and Joint Ventures

The Company has accounted for its investments in Subsidiaries, associates and joint venture at cost less impairment loss (if any). The investments in preference shares with the right of surplus assets which are in nature of equity in accordance with Ind AS 32 are treated as separate category of investment and measured at FVTOCI.

D. Other Equity Investments

All other equity investments are measured at fair value, with value changes recognised in Statement of Profit and Loss, except for those equity investments for which the Company has elected to present the value changes in 'Other Comprehensive Income'. However, dividend on such equity investments are recognised in Statement of Profit and loss when the Company's right to receive payment is established.

E. Impairment of Financial Assets

In accordance with Ind AS 109, the Company uses 'Expected Credit Loss' (ECL) model, for evaluating impairment of Financial Assets other than those measured at Fair Value Through Profit and Loss (FVTPL).

Expected Credit Losses are measured through a loss allowance at an amount equal to:

- The 12-months expected credit losses (expected credit losses that result from those default events on the financial instrument that are possible within 12 months after the reporting date); or
- Full lifetime expected credit losses (expected credit losses that result from all possible default events over the life of the financial instrument).

For Trade Receivables the Company applies 'simplified approach' which requires expected lifetime losses to be recognised from initial recognition of the receivables.

The Company uses historical default rates to determine impairment loss on the portfolio of trade receivables. At every reporting date these historical default rates are reviewed and changes in the forward-looking estimates are analysed.

For other assets, the Company uses 12 month ECL to provide for impairment loss where there is no significant increase in credit risk. If there is significant increase in credit risk full lifetime ECL is used.

ii. Financial Liabilities

A. Initial Recognition and Measurement

All Financial Liabilities are recognized at fair value and in case of borrowings, net of directly attributable cost. Fees of recurring nature are directly recognised in the Statement of Profit and Loss as finance cost.

B. Subsequent Measurement

Financial Liabilities are carried at amortised cost using the effective interest method. For trade and other payables maturing within one year from the balance sheet date, the carrying amounts approximate fair value due to the short maturity of these instruments.

iii. Derivative Financial Instruments and Hedge Accounting

The Company uses various derivative financial instruments such as interest rate swaps, currency swaps, forwards & options and commodity contracts to mitigate the risk of changes in interest rates, exchange rates and commodity prices. At the inception of a hedge relationship, the Company formally designates and documents the hedge relationship to which the Company wishes to apply hedge accounting and the risk management objective and strategy for undertaking the hedge. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are also subsequently measured at fair value.

Derivatives are carried as Financial Assets when the fair value is positive and as Financial Liabilities when the fair value is negative. Any gains or losses arising from changes in the fair value of derivatives are taken directly to Statement of Profit and Loss, except for the effective portion of cash flow hedge which is recognised in Other Comprehensive Income and later to Statement of Profit and Loss when the hedged item affects profit or loss or is treated as basis adjustment if a hedged forecast transaction subsequently results in the recognition of a Non-Financial Assets or Non-Financial liability.

Hedges that meet the criteria for hedge accounting are accounted for as follows:

A. Cash Flow Hedge

The Company designates derivative contracts or non-derivative Financial Assets/ Liabilities as hedging instruments to mitigate the risk of movement in interest rates and foreign exchange rates for foreign exchange exposure on highly probable future cash flows attributable to a recognised asset or liability or forecast cash transactions.

When a derivative is designated as a cash flow hedging instrument, the effective portion of changes in the fair value of the derivative is recognised in the cash flow hedging reserve being part of Other Comprehensive Income. Any ineffective portion of changes in the fair value of the derivative is recognised immediately in the Statement of Profit and Loss. If the hedging relationship no longer meets the criteria for hedge accounting, then hedge accounting is discontinued prospectively. If the hedging instrument expires or is sold or terminated or exercised, the cumulative gain or loss on the hedging instrument recognised in cash flow hedging reserve till the period the hedge was effective remains in cash flow hedging reserve until the underlying transaction occurs. The cumulative gain or loss previously recognised in the cash flow hedging reserve is transferred to the Statement of Profit and Loss upon the occurrence of the underlying transaction. If the forecasted transaction is no longer expected to occur, then the amount accumulated in cash flow hedging reserve is reclassified in the Statement of Profit and Loss.

B. Fair Value Hedge

The Company designates derivative contracts or non-derivative Financial Assets/Liabilities as hedging instruments to mitigate the risk of change in fair value of hedged item due to movement in interest rates, foreign exchange rates and commodity prices.

Changes in the fair value of hedging instruments and hedged items that are designated and qualify as fair value hedges are recorded in the Statement of Profit and Loss. If the hedging relationship no longer meets the criteria for hedge accounting, the adjustment to the carrying amount of a hedged item for which the effective interest method is used is amortised to Statement of Profit and Loss over the period of maturity.

iv. Derecognition of Financial Instruments

The Company derecognises a Financial Asset when the contractual rights to the cash flows from the Financial Asset expire or it transfers the Financial Asset and the transfer qualifies for derecognition under Ind AS 109. A Financial liability (or a part of a Financial liability) is derecognised from the Company's Balance Sheet when the obligation specified in the contract is discharged or cancelled or expires.

v. Offsetting

Financial Assets and Financial Liabilities are offset and the net amount is presented in the balance sheet when, and only when, the Company has a legally enforceable right to set off the amount and it intends, either to settle them on a net basis or to realise the asset and settle the liability simultaneously.

(r) Non-current Assets Held for Sale

Non-current assets are classified as held for sale if their carrying amount will be recovered principally through a sale transaction rather than through continuing use and sale is considered highly probable.

A sale is considered as highly probable when decision has been made to sell, assets are available for immediate sale in its present condition, assets

TEST YOUR KNOWLEDGE

Questions

1. As part of staff welfare measures, Y Co Ltd. has contracted to lend to its employees sums of money at 5% per annum rate of interest. The amounts lent are to be repaid in five equal instalments for principle along with the interest. The market rate of interest is 10% per annum for comparable loans. Y lent ₹ 1,600,000 to its employees on 1st January 20X1.

Following the principles of recognition and measurement as laid down in Ind AS 109, you are required to record the entries for the year ended 31 December 20X1, for the transaction and also compute the value of loan initially to be recognised and amortised cost for all subsequent years.

For the purpose of calculation, following discount factors at interest rate of 10% per annum may be adopted –

At the end of year –

Year	Present value factor
1	.909
2	.827
3	.751
4	.683
5	.620

2. Wheel Co. Limited has a policy of providing subsidized loans to its employees for the purpose of buying or building houses. Mr. X, who's executive assistant to the CEO of Wheel Co. Limited, took a loan from the Company on the following terms:

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- Interest rate: 4% for the first 400,000 and 7% for the next 600,000
- Start date: 1 January 20X1
- Tenure: 5 years
- Pre-payment: Full or partial pre-payment at the option of the employee
- The principal amount of loan shall be recovered in 5 equal annual instalments and will be first applied to 7% interest bearing principal
- The accrued interest shall be paid on an annual basis
- Mr. X must remain in service till the term of the loan ends

The market rate of a comparable loan available to Mr. X, is 12% per annum.

Following table shows the contractually expected cash flows from the loan given to Mr. X:

(amount in ₹)

		Inflows			
Date	**Outflows**	**Principal**	**Interest income 7%**	**Interest income 4%**	**Principal outstanding**
1-Jan-20X1	(1,000,000)				1,000,000
31-Dec-20X1		200,000	42,000	16,000	800,000
31-Dec-20X2		200,000	28,000	16,000	600,000
31-Dec-20X3		200,000	14,000	16,000	400,000
31-Dec-20X4		200,000	-	16,000	200,000
31-Dec-20X5		200,000	-	8,000	-

Mr. S, pre-pays ₹ 200,000 on 31 December 20X2, reducing the outstanding principal as at that date to ₹ 400,000.

Following table shows the actual cash flows from the loan given to Mr. X, considering the pre-payment event on 31 December 20X2: **(amount in ₹)**

		Inflows			
Date	**Outflows**	**Principal**	**Interest income 7%**	**Interest income 4%**	**Principal outstanding**

31-Dec-20X1		200,000	42,000	16,000	800,000
31-Dec-20X2		400,000	28,000	16,000	400,000
31-Dec-20X3		200,000	-	16,000	200,000
31-Dec-20X4		200,000	-	8,000	-
31-Dec-20X5		-	-	-	-

Record journal entries in the books of Wheel Co. Limited considering the requirements of Ind AS 109.

3. Wheel Co. Limited borrowed ₹ 500,000,000 from a bank on 1 January 20X1. The original terms of the loan were as follows:

- Interest rate: 11%
- Repayment of principal in 5 equal instalments
- Payment of interest annually on accrual basis
- Upfront processing fee: ₹ 5,870,096

Effective interest rate on loan: 11.50%

On 31 December 20X2, Wheel Co. Limited approached the bank citing liquidity issues in meeting the cash flows required for immediate instalments and re-negotiated the terms of the loan with banks as follows:

- Interest rate 15%
- Repayment of outstanding principal in 10 equal instalments starting 31 December 20X3
- Payment of interest on an annual basis

Record journal entries in the books of Wheel Co. Limited till 31 December 20X3, after giving effect of the changes in the terms of the loan on 31 December 20X2

4. K Ltd. issued 500,000, 6% convertible debentures @ ₹ 10 each on 01 April 20X1. The debentures are due for redemption on 31 March 20X5 at a premium of 10%, convertible into 2,50,000 equity shares of Rs. 10 each i.e. to the extent of 50% and balance to be settled in cash to the debenture holders. The interest rate on equivalent debentures without conversion rights was 10%.

You are required to separate the debt and equity components at the time of issue and show the accounting entries in Company's books at initial recognition. The following present values of Re 1 at 6% and at 10% are provided:

Interest rate	Year 1	Year 2	Year 3	Year 4
6%	0.94	0.89	0.84	0.79
10%	0.91	0.83	0.75	0.68

5. On 1 April 20X1, an 8% convertible loan with a nominal value of ₹ 6,00,000 was issued at par. It is redeemable on 31 March 20X5 also at par. Alternatively, it may be converted into equity shares on the basis of 100 new shares for each ₹ 200 worth of loan.

An equivalent loan without the conversion option would have carried interest at 10%. Interest of ₹ 48,000 has already been paid and included as a finance cost.

Present value rates are as follows:

Year End	@ 8%	@ 10%
1	0.93	0.91
2	0.86	0.83
3	0.79	0.75
4	0.73	0.68

Explain how will the Company account for the above loan notes in the financial statements for the year ended 31 March 20X2?

6. On 1 April 20X1, Sun Limited guarantees a ₹ 10,00,000 loan of Subsidiary – Moon Limited, which Bank STDK has provided to Moon Limited for three years at 8%.

   Interest payments are made at the end of each year and the principal is repaid at the end of the loan term.

   If Sun Limited had not issued a guarantee, Bank STDK would have charged Moon Limited an interest rate of 11%. Sun Limited does not charge Moon Limited for providing the guarantee.

   On 31 March 20X2, there is 1% probability that Moon Limited may default on the loan in the next 12 months. If Moon Limited defaults on the loan, Sun Limited does not expect to recover any amount from Moon Limited.

   On 31 March 20X3, there is 3% probability that Moon Limited may default on the loan in the next 12 months. If Moon Limited defaults on the loan, Sun Limited does not expect to recover any amount from Moon Limited.

   Provide the accounting treatment of financial guarantee as per Ind AS 109 in the books of Sun Ltd., on initial recognition and in subsequent periods till 31 March 20X3.

Answers

1. (i) **Calculation of initial measurement amount of loan to its employees:**

Year end	Cash flow		Total	PV factor	Present value
	Principal	Interest @ 5%			
20X1	320,000	80,000	400,000	.909	363,600
20X2	320,000	64,000	384,000	.827	317,568
20X3	320,000	48,000	368,000	.751	276,368
20X4	320,000	32,000	352,000	.683	240,416
20X5	320,000	16,000	336,000	.620	208,320
					1,406,272

(ii) **Calculation of amortised cost of loan to employees**

Year end	Amortised cost (opening balance)	Interest to be recognised	Repayment (including interest)	Amortised cost (closing balance)
20X1	1,406,272	140,627	400,000	1,146,899
20X2	1,146,899	114,690	384,000	877,589
20X3	877,589	87,759	368,000	597,348
20X4	597,348	59,735	352,000	305,083
20X5	305,083	30,917*	336,000	-

*305,083 x 10% = 30,508. Difference of ₹ 409 is due to approximation in computation.

(iii) **Journal Entries to be recorded of Y Ltd. for the year ended 31 December 20X1**

Date	Particulars	Debit	Credit
1 Jan 20X1	Staff loan A/c Dr.	14,06,272	
	Prepaid staff cost A/c* Dr.	1,93,728	
	[(1,600,000 – 1,406,272), Refer part (ii)]		
	To Bank A/c		16,00,000
	(Being disbursement of loans to staff and excess loan balance over present value thereof in order to reflect the loan at its present value booked as prepaid staff cost)		

31 Dec 20X1	Staff loan A/c Dr.	1,40,627	
	To Interest expense A/c		1,40,627
	(Being interest accrued on loans to staff)		
31 Dec 20X1	Staff cost A/c Dr.	38,746	
	To Prepaid expense A/c		38,746
	(Being prepaid expense charged for the year against staff cost)		

* Where the difference between the amount given by the Company to its employees and its fair value represents another asset, then such asset shall be recognised. Accordingly, such difference is recognised as prepaid employee cost and amortised over the period of loan.

2. As per requirement of Ind AS 109, a financial instrument is initially measured and recorded at its fair value. Therefore, considering the market rate of interest of similar loan available to Mr. X is 12%, the fair value of the contractual cash flows shall be as follows:

	Inflows				
Date	**Principal**	**Interest income 7%**	**Interest income 4%**	**Discount factor @12%**	**PV**
31-Dec-20X1	200,000	42,000	16,000	0.8929	2,30,357
31-Dec-20X2	200,000	28,000	16,000	0.7972	1,94,515
31-Dec-20X3	200,000	14,000	16,000	0.7118	1,63,709
31-Dec-20X4	200,000	-	16,000	0.6355	1,37,272
31-Dec-20X5	200,000	-	8,000	0.5674	1,18,025
Total (fair value)					8,43,878

Benefit to Mr. X, to be considered a part of employee cost for Wheel Co. ₹ 1,56,121.

The deemed employee cost is to be amortised over the period of loan i.e. the minimum period that Mr. X must remain in service.

The amortization schedule of the ₹ 843,878 loan is shown in the following table:

Date	Loan outstanding	Total cash inflows (principal repayment + interest	Interest @ 12%
1-Jan-20X1	843,878		
31-Dec-20X1	687,143	258,000	101,265
31-Dec-20X2	525,600	244,000	82,457

31-Dec-20X3	358,672	230,000	63,072
31-Dec-20X4	185,713	216,000	43,041
31-Dec-20X5	(0)	208,000	22,287*

* Difference is due to approximation.

Journal Entries to be recorded at every period end:

a. 1 January 20X1 –

Particulars		Dr. Amount (₹)	Cr. Amount (₹)
Loan to employee A/c	Dr.	843,879	
Pre-paid employee cost A/c	Dr	156,121	
To Bank A/c			1,000,000
(Being loan asset recorded at initial fair value)			

b. 31 December 20X1 –

Particulars		Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c	Dr.	258,000	
To Interest income (profit and loss) @12% A/c			101,265
To Loan to employee A/c			156,735
(Being first instalment of repayment of loan accounted for using the amortised cost and effective interest rate of 12%)			
Employee benefit (profit and loss) A/c	Dr.	31,224	
To Pre-paid employee cost A/c			31,224
(Being amortization of pre-paid employee cost charged to profit and loss as employee benefit cost)			

On 31 December 20X2, due to pre-payment of a part of loan by Mr. X, the carrying value of the loan shall be re-computed by discounting the future remaining cash flows by the original effective interest rate.

There shall be two sets of accounting entries on 31 December 20X2, first the realisation of the contractual cash flow as shown in (c) below and then the accounting for the pre-payment of ₹ 200,000 included in (d) below:

c. **31 December 20X2 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr. To Interest income (profit and loss) @12% A/c To Loan to employee A/c (Being second instalment of repayment of loan accounted for using the amortised cost and effective interest rate of 12%)	244,000	 82,457 161,543
Employee benefit (profit and loss) A/c Dr. To Pre-paid employee cost A/c (Being amortization of pre-paid employee cost charged to profit and loss as employee benefit cost)	31,224	 31,224

Computation of new carrying value of loan to employee:

	Inflows				
Date	**Principal**	**Interest income 7%**	**Interest income 4%**	**Discount factor @12%**	**PV**
31-Dec-20X3	200,000	-	16,000	0.8929	192,857
31-Dec-20X4	200,000	-	8,000	0.7972	165,816
Total (revised carrying value)					358,673
Less: Current carrying value					525,601
Adjustment required					166,928

The difference between the amount of pre-payment and adjustment to loan shall be considered a gain, though will be recorded as an adjustment to pre-paid employee cost, which shall be amortised over the remaining tenure of the loan.

d. **31 December 20X2 prepayment–**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr. To Pre-paid employee cost A/c To Loan to employee A/c (Being gain to Wheel Co. Limited recorded as an adjustment to pre-paid employee cost)	200,000	 33,072 166,928

The amortisation schedule of the new carrying amount of loan shall be as follows:

Date	Loan outstanding	Total cash inflows (principal repayment + interest	Interest @ 12%
31-Dec-20X2	358,673		
31-Dec-20X3	185,714	216,000	43,041
31-Dec-20X4	-	208,000	22,286

Amortisation of employee benefit cost shall be as follows:

Date	Balance	Amortised to P&L	Adjustment
1-Jan-20X1	156,121		
31-Dec-20X1	124,897	31,224	
31-Dec-20X2	60,601	31,224	33,072
31-Dec-20X3	30,300	30,300	
31-Dec-20X4	-	30,300	

e. **31 December 20X3 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr.	216,000	
To Interest income (profit and loss) @12% A/c		43,041
To Loan to employee A/c		172,959
(Being third instalment of repayment of loan accounted for using the amortised cost and effective interest rate of 12%)		
Employee benefit (profit and loss) A/c Dr	30,300	
To Pre-paid employee cost A/c		30,300
(Being amortization of pre-paid employee cost charged to profit and loss as employee benefit cost)		

f. **31 December 20X4 –**

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr.	208,000	
To Interest income (profit and loss) @12% A/c		22,286
To Loan to employee A/c		185,714
(Being last instalment of repayment of loan accounted for using the amortised cost and effective interest rate of 12%)		

Employee benefit (profit and loss) A/c Dr.	30,300	
To Pre-paid employee cost A/c		30,300
(Being amortization of pre-paid employee cost charged to profit and loss as employee benefit cost)		

3. On the date of initial recognition, the effective interest rate of the loan shall be computed keeping in view the contractual cash flows and upfront processing fee paid. The following table shows the amortisation of loan based on effective interest rate:

Date	Cash flows (principal)	Cash flows (interest and fee)	Amortised cost (opening + interest – cash flows)	Interest @ EIR (11.50%)
1-Jan-20X1	(500,000,000)	5,870,096	494,129,904	
31-Dec-20X1	100,000,000	55,000,000	395,954,843	56,824,939
31-Dec-20X2	100,000,000	44,000,000	297,489,650	45,534,807
31-Dec-20X3	100,000,000	33,000,000	198,700,959	34,211,310
31-Dec-20X4	100,000,000	22,000,000	99,551,570	22,850,610
31-Dec-20X5	100,000,000	11,000,000	(0)	11,448,430

a. 1 January 20X1 –

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr.	494,129,904	
To Loan from bank A/c		494,129,904
(Being loan recorded at its fair value less transaction costs on the initial recognition date)		

b. 31 December 20X1 –

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Loan from bank A/c Dr.	98,175,061	
Interest expense (profit and loss) Dr.	56,824,939	
To Bank A/c		155,000,000
(Being first instalment of loan and payment of interest accounted for as an adjustment to the amortised cost of loan)		

Merged By CA - Born To Fight

c. 31 December 20X2 – Before Wheel Co. Limited approached the bank –

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Interest expense (profit and loss) Dr.	45,534,807	
To Loan from bank A/c		1,534,807
To Bank A/c		44,000,000
(Being loan payment of interest recorded by the Company before it approached the Bank for deferment of principal)		

Upon receiving the new terms of the loan, Wheel Co. Limited, re-computed the carrying value of the loan by discounting the new cash flows with the original effective interest rate and comparing the same with the current carrying value of the loan. As per requirements of Ind AS 109, any change of more than 10% shall be considered a substantial modification, resulting in fresh accounting for the new loan:

Date	Cash flows (principal)	Interest outflow @15%	Discount factor	PV of cash flows
31-Dec-20X2	(400,000,000)			
31-Dec-20X3	40,000,000	60,000,000	0.8969	89,686,099
31-Dec-20X4	40,000,000	54,000,000	0.8044	75,609,805
31-Dec-20X5	40,000,000	48,000,000	0.7214	63,483,092
31-Dec-20X6	40,000,000	42,000,000	0.6470	53,053,542
31-Dec-20X7	40,000,000	36,000,000	0.5803	44,100,068
31-Dec-20X8	40,000,000	30,000,000	0.5204	36,429,133
31-Dec-20X9	40,000,000	24,000,000	0.4667	29,871,422
31-Dec-20Y0	40,000,000	18,000,000	0.4186	24,278,903
31-Dec-20Y1	40,000,000	12,000,000	0.3754	19,522,235
31-Dec-20Y3	40,000,000	6,000,000	0.3367	15,488,493
PV of new contractual cash flows discounted at 11.50%				451,522,791
Carrying amount of loan				397,489,650
Difference				54,033,141
Percentage of carrying amount				13.59%

Note: Calculation done above is on full decimal, though in the table discount factor is limited to 4 decimals.

Considering a more than 10% change in PV of cash flows compared to the carrying value of the loan, the existing loan shall be considered to have been extinguished and the new loan shall be accounted for as a separate financial liability. The accounting entries for the same are included below:

d. 31 December 20X2 – accounting for extinguishment

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Loan from bank (old) A/c Dr.	397,489,650	
Loss on modification of loan (profit and loss) Dr.	2,510,350	
To Loan from bank (new) A/c		400,000,000
(Being new loan accounted for at its principal amount in absence of any transaction costs directly related to such loan and correspondingly a de-recognition of existing loan)		

e. 31 December 20X3

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Loan from bank A/c Dr.	40,000,000	
Interest expense (profit and loss) Dr.	60,000,000	
To Bank A/c		100,000,000
(Being first instalment of the new loan and payment of interest accounted for as an adjustment to the amortised cost of loan)		

4. Computation of debt component of convertible debentures on 01 April 20X1

Particulars	Amount
Present value of principal amount repayable after 4 years	
(A) 5,000,000 x 50% x 1.10 x 0.68 (10% discount factor)	1,870,000
(B) Present value of interest [300,000 x 3.17] (4 years cumulative 10% discount factor)	951,000
Total present value of debt component (A) + (B)	2,821,000
Issue proceeds from convertible debentures	5,000,000
Value of equity component	2,179,000

Journal entry at initial recognition

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c Dr.	5,000,000	
To 6% debenture A/c (liability component)		2,821,000
To 6% debenture A/c (equity component)		2,179,000
(Being disbursement recorded at fair value)		

5. **Step 1** There is an 'option' to convert the loans into equity i.e. the loan note holders do not have to accept equity shares; they could demand repayment in the form of cash.

Ind AS 32 states that where there is an obligation to transfer economic benefits there should be a liability recognised. On the other hand, where there is not an obligation to transfer economic benefits, a financial instrument should be recognised as equity.

In the above illustration we have both – 'equity' and 'debt' features in the instrument. There is an obligation to pay cash – i.e. interest at 8% per annum and a redemption amount – this is 'financial liability' or 'debt component'. The 'equity' part of the transaction is the option to convert. So it is a compound financial instrument.

Step 2 Debt element of the financial instrument so as to recognise the liability is the present value of interest and principal

The rate at which the same is to be discounted, is the rate of *equivalent* loan note *without* the conversion option would have carried interest at 10%, therefore this is the rate to be used for discounting

Step 3 Calculation of the debt element of the loan note as follows:

8% Interest discounted at a rate of 10% Present Value (6,00,000 x 8%)

S. No	Year	Interest amount	PVF	Amount
Year 1	20X2	48,000	0.91	43,680
Year 2	20X3	48,000	0.83	39,840
Year 3	20X4	48,000	0.75	36,063
				1,19,583
Year 4	20X5	648,000	0.68	4,40,640
Amount to be recognised as a liability				5,60,223

Initial proceeds	(6,00,000)
Amount to be recognised as equity	39,777

* In year 4, the loan note is redeemed therefore ₹ 6,00,000 + ₹ 48,000 = ₹ 6,48,000.

Step 4 The next step is to recognise the interest component equivalent to the loan that would carry if there was no option to cover. Therefore, the interest should be recognised at 10%. As on date ₹ 48,000 has been recognised in the statement of profit and loss i.e. 6,00,000 x 8% but we have discounted the present value of future interest payments and redemption amount using discount factors of 10%, so the finance charge in the statement of profit and loss must also be recognised at the same rate i.e. for the purpose of consistency.

The additional charge to be recognised in the income statement is calculated as:

Debt component of the financial instrument ₹ 5,60,000

Interest charge (5,60,000 x 10%)	₹ 56,000
Already charged to the income statement	(₹ 48,000)
Additional charge required	₹ 8,000

Journal Entries for recording additional finance cost for year ended 31 March 20X2

Particulars	Dr. Amount (₹)	Cr. Amount (₹)
Finance cost A/c Dr.	8,000	
To Debt component A/c		8,000
(Being interest recorded for difference between amount recorded earlier and that to be recorded per Ind AS 32)		

6. ***1 April 20X1***

A financial guarantee contract is initially recognised at fair value. The fair value of the guarantee will be the present value of the difference between the net contractual cash flows required under the loan, and the net contractual cash flows that would have been required without the guarantee.

Particulars	Year 1 (₹)	Year 2 (₹)	Year 3 (₹)	Total (₹)
Cash flows based on interest rate of 11% (A)	1,10,000	1,10,000	1,10,000	3,30,000
Cash flows based on interest rate of 8% (B)	80,000	80,000	80,000	2,40,000
Interest rate differential (A-B)	30,000	30,000	30,000	90,000
Discount factor @ 11%	0.901	0.812	0.731	
Interest rate differential discounted at 11%	27,030	24,360	21,930	73,320
Fair value of financial guarantee contract (at inception)				**73,320**

Merged By CA - Born To Fight

Journal Entry

Particulars		Debit (₹)	Credit (₹)
Investment in subsidiary	Dr.	73,320	
To Financial guarantee (liability)			73,320
(Being financial guarantee initially recorded)			

31 March 20X2

Subsequently at the end of the reporting period, financial guarantee is measured at the higher of:

- the amount of loss allowance; and
- the amount initially recognised less cumulative amortization, where appropriate.

At 31 March 20X2, there is 1% probability that Moon Limited may default on the loan in the next 12 months. If Moon Limited defaults on the loan, Sun Limited does not expect to recover any amount from Moon Limited. The 12-month expected credit losses are therefore ₹ 10,000 (Rs.10,00,000 x 1%).

The initial amount recognised less amortisation is ₹ 51,385 (₹ 73,320 + ₹ 8,065 (interest accrued based on EIR)) – ₹ 30,000 (benefit of the guarantee in year 1) Refer table below. The unwound amount is recognised as income in the books of Sun Limited, being the benefit derived by Moon Limited not defaulting on the loan during the period.

Year	Opening balance ₹	EIR @ 11%	Benefits provided ₹	Closing balance ₹
1	73,320	8,065	(30,000)	51,385
2	51,385	5,652	(30,000)	27,037
3	27,037	2,963*	(30,000)	-

* Difference is due to approximation

The carrying amount of the financial guarantee liability after amortisation is therefore ₹ 51,385, which is higher than the 12-month expected credit losses of ₹ 10,000. The liability is therefore adjusted to ₹ 51,385 (the higher of the two amounts) as follows:

Particulars		Debit (₹)	Credit (₹)
Financial guarantee (liability)	Dr.	21,935	
To Profit or loss			21,935
(Being financial guarantee subsequently adjusted)			

Join us t.me/caborntofight

31 March 20X3

At 31 March 20X3, there is 3% probability that Moon Limited will default on the loan in the next 12 months. If Moon Limited defaults on the loan, Sun Limited does not expect to recover any amount from Moon Limited. The 12-month expected credit losses are therefore ₹ 30.000 (₹ 10,00,000 x 3%).

The initial amount recognised less accumulated amortisation is ₹ 27,037, which is lower than the 12-month expected credit losses (₹ 30,000). The liability is therefore adjusted to ₹ 30,000 (the higher of the two amounts) as follows:

Particulars	Debit (₹)	Credit (₹)
Financial guarantee (liability) Dr.	21,385*	
To Profit or loss (Note)		21,385
(Being financial guarantee subsequently adjusted)		

* The carrying amount at the end of 31 March 20X2 = ₹ 51,385 less 12-month expected credit losses of ₹ 30,000.

Join us t.me/caborntofight

30. An entity shall not reclassify any financial ______________. (9)

31. _________________ on ordinary shares are contracts that give the holder the right to sell ordinary shares at a specified price for a given period. (3,7)

33. Deferred tax liabilities are the amounts of income taxes payable in future periods in respect of____________ temporary differences. (7)

34. A contract is not an ________ instrument solely because it may result in the receipt or delivery of the entity's own equity instruments. (6)

35. An entity shall ___________ a financial liability from its balance sheet when the obligation specified in the contract is discharged. (6)

DOWN:

1. On issuance of a contract that may be settled in ordinary shares or cash at the entity's option, it is presumed by an entity that the contract will be settled in ordinary shares, and the resulting potential ordinary shares shall be included in diluted earnings per share if the effect is __________. (8)

2. A related party transaction is a transfer of resources, services or obligations between a ______________ entity and a related party, regardless of whether a price is charged. (9)

3. _________ between a parent and its subsidiaries shall be disclosed irrespective of any transaction between them. (12)

5. The gross carrying amount of a financial asset shall be reduced when the entity has no __________ expectations of recovering it in its entirety or a portion thereof. (10)

8. A financial instrument shall be classified on initial recognition as a financial liability, a financial asset or an equity instrument as per the ___________ of the contractual arrangement and the definitions of a financial liability, a financial asset and an equity instrument. (9)

9. If the total external revenue reported by operating segments constitutes less than 75 per cent of the entity's revenue, _________operating segments shall be identified as

Join us t.me/caborntofight

reportable segments (even if they do not meet the specified criteria) until at least 75 per cent of the entity's revenue is included in reportable segments. (10)

13. Purchased put or call options held by the entity on its own ordinary shares are ______ included in the calculation of diluted earnings per share. (3)

15. The term 'Chief Operating Decision Maker' identifies a __________, not necessarily a manager with a specific title. (8)

16. Information about other business activities and operating segments that are not reportable shall be __________ and disclosed in an 'all other segments' category. (8)

17. Post-employment benefit plans are classified as either ________ contribution plans or _________ benefit plans, depending on the economic substance of the plan. (7)

18. Ind AS 24 requires __________ of related party relationships, transactions and outstanding balances, including commitments, in the financial statements. (10)

20. The objective of the impairment requirements in Ind AS 109 is to recognize lifetime expected credit losses for all financial instruments for which there have been ____________ increases in credit risk since initial recognition. (11)

21. _________ items are units of currency held and assets and liabilities to be received or paid in a fixed or determinable number of units of currency. (8)

22. An entity shall _________ a financial asset or a financial liability in its balance sheet when, and only when, the entity becomes party to the contractual provisions of the instrument. (9)

25. An _________ share is an equity instrument that is subordinate to all other classes of equity instruments. (8)

26. Contracts that require the entity to ___________ its own shares are reflected in the calculation of diluted earnings per share, if the effect is dilutive. (10)

28. An entity shall account for a _________ plan in the same way as for a multi-employer plan. (5)

CHAPTER 12

INDIAN ACCOUNTING STANDARD 103: BUSINESS COMBINATIONS

LEARNING OUTCOMES

After studying this chapter, you would be able to:

- Explain various terms used in Ind AS 103 "Business Combinations"
- Examine the key differences between Ind AS 103 and Accounting Standard 14
- Identify the acquiring enterprise
- Determine the acquisition date, purchase consideration under various situations and contingent consideration
- Allocate the purchase price
- Recognize the assets and liabilities of the acquired entity
- Examine the measurement principles
- Calculate goodwill or bargain purchase
- Evaluate contingent payments to employee shareholders and acquirer share-based payment awards exchanged for awards held by the acquiree's employees
- Integrate subsequent measurement and accounting principles for reacquired rights, contingent liabilities, indemnification assets and contingent consideration
- Appraise the disclosure requirements in case of Business Combination
- Account for distribution of non-cash assets to owners as dividend in accordance with Appendix A Distribution of Non-Cash Assets to Owners of Ind AS 10 Events after the Reporting Period.

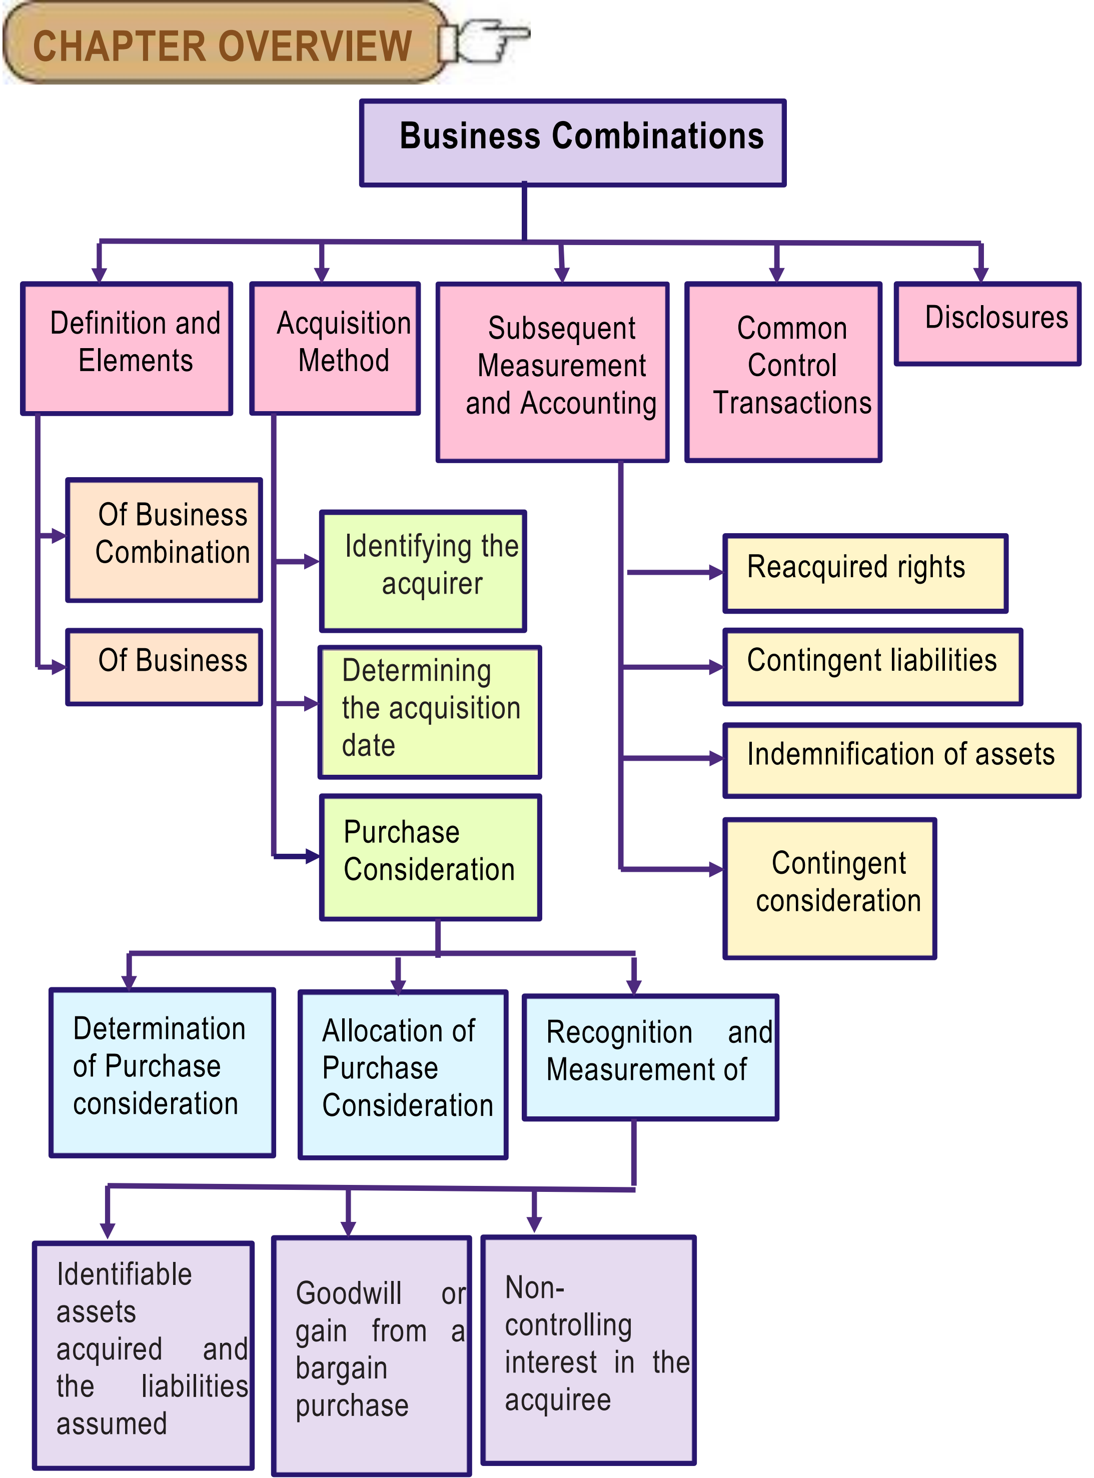
CHAPTER OVERVIEW



1. INTRODUCTION

The necessity of a standard on Business Combination in India assumes importance considering the fact that Indian companies are increasingly stretching their business in foreign countries for best-fit business combinations. Presently in India, Accounting Standard (AS) 14 'Accounting for Amalgamation' lays out specific treatment for Amalgamation and AS 21, 'Consolidated Financial Statements' are applied for consolidation. However, it is not matching the global financial reporting standards requirements.

After convergence of IFRS as Ind AS, Ind AS 103 which is in line with IFRS 3 takes care of the global requirements in case of business combinations worldwide.

A **business combination** is a transaction in which the acquirer obtains control of another business (the acquiree).

The term **'business'** is defined as an integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing ***goods or services to customers, generating investment income (such as dividends or interest) or generating other income from ordinary activities.***

Business combinations are most common form of business transactions through which companies grow in size rather than organic activities.

Business combination or acquisition is different from asset acquisition. The following are the key differences in accounting of an asset acquisition and a business combination:

Particulars	**Business Combination**	**Acquisition of group of assets under Ind AS**
Intangible assets, including goodwill	Intangible assets are recognised at fair value, if they are separately identifiable. Goodwill is recognised as a separate asset.	Intangible assets acquired as part of a group of assets would be recognised and measured based on an allocation of the overall cost of the transaction with reference to their relative fair values. No goodwill would be recognised.
Transaction Costs	In a business combination, acquisition-related costs (including stamp duty) are expensed in the period in which	Transaction costs are capitalised as a component of the cost of the assets acquired.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

	such costs are incurred and are not included as part of the consideration transferred.	
Deferred Tax Accounting	Deferred taxes are recorded on temporary differences of assets acquired (other than goodwill) and liabilities assumed in a business combination.	Ind AS prohibits recognition of deferred taxes for temporary differences that arise upon initial recognition of an asset or liability in a transaction which (i) is not a business combination and (ii) at the time of the transaction, affects neither accounting nor taxable income. [Ind AS 12 paragraph 15]. Accordingly, no deferred taxes are recognised for temporary differences on asset acquisitions (on initial recognition).
Situations where the fair value of the assets acquired and liabilities assumed exceeds the fair value of consideration Transferred (referred to as gain on bargain purchases)	If the fair value of the assets acquired and liabilities assumed exceeds the fair value of the consideration transferred (plus the amount of non-controlling interest and the fair value of the acquirer's previously held equity interests in the acquiree), a gain is recognised by the acquirer in other comprehensive income and accumulate the same in equity as capital reserve.	The assets acquired and liabilities assumed are measured using an allocation of the fair value of consideration transferred based upon relative fair values. As a result, no gain is recognised for a bargain purchase.
Contingent liabilities assumed	To be recognised if represents present obligation that arises from past events and its fair value can be measured reliably with subsequent changes to profit or loss.	Not recognised, subject to Ind AS 37.

Illustration 1: Asset acquisition

An entity acquires an equipment and a patent in exchange for ₹ 1,000 crore cash and land. The fair value of the land is ₹ 400 crore and its carrying value is ₹ 100 crore. Fair values of the equipment and patent are estimated to be ₹ 500 crore and ₹ 1,000 crore, respectively. The equipment and patent relate to a product that has just recently been commercialised. The market for this product is still developing.

Assume the entity incurred no transaction costs. For ease of convenience, the tax consequences on the gain have been ignored.

State how should the transaction be accounted for.

Solution

As per paragraph 2(b) of Ind AS 103, the standard does not apply to "the acquisition of an asset or a group of assets that does not constitute a business. In such cases the acquirer shall identify and recognise the individual identifiable assets acquired (including those assets that meet the definition of, and recognition criteria for, intangible assets in Ind AS 38, Intangible Assets) and liabilities assumed. The cost of the group shall be allocated to the individual identifiable assets and liabilities on the basis of their relative fair values at the date of purchase. Such a transaction or event does not give rise to goodwill". In the given case, the acquisition of equipment and patent does not represent acquisition of a business as equipment and patent relate to a product that has just recently been commercialised.

The cost of the asset acquisition is determined based on the fair value of the assets given, unless the fair value of the assets received is more reliably determinable. In the given case, the fair value measurement of the land appears more reliable than the fair value estimate of the equipment and patent. Thus, the entity should record the acquisition of the equipment and patent as ₹ 1,400 crore (the total fair value of the consideration transferred).

Thus, the fair value of the consideration given, i.e., ₹ 1,400 crore is allocated to the individual assets acquired based on their relative estimated fair values. The entity should record a gain of ₹ 300 crore for the difference between the fair value and carrying value of the land.

The equipment is recorded at its relative fair value ((₹ 500 / ₹ 1,500) × ₹ 1,400 = ₹ 467 crore).

The patent is recorded at its relative fair value ((₹ 1,000 / ₹ 1,500) × ₹ 1,400 = ₹ 933 Crore).

*****

2. SCOPE UNDER IND AS 103

This Indian Accounting Standard applies to a transaction or other event that meets the definition of a business combination. This Indian Accounting Standard does not apply to:

(a) the formation of a joint arrangement.

(b) the acquisition of an asset or a group of assets that does not constitute a business i.e. it is an asset acquisition.

3. DEFINITION OF BUSINESS COMBINATION

Under Ind AS 103, Business combination occurs when an entity obtains **control** of a **business** by acquiring net assets or acquiring its significant equity interest. An entity can obtain control of a business by contract only in which case the acquirer would neither have acquired net assets nor equity interest. In such a case, while preparing balance sheet, controlling interest would be zero and non-controlling interest will be 100%.

- As such, two elements are required for a transaction to be a business combination under Ind AS 103:
  - the acquirer obtains control of an acquiree ("control" as defined in Ind AS 110); and
  - the acquiree is a business
- An acquirer might obtain control of an acquiree in a variety of ways, for example:
  - by transferring cash, cash equivalents or other assets (including net assets that constitute a business);
  - by incurring liabilities;
  - by issuing equity interests;
  - by providing more than one type of consideration; or
  - without transferring consideration, including by contract alone.
- A business combination may be structured in a variety of ways for legal, taxation or other reasons, which include but are not limited to:
  - one or more businesses become subsidiaries of an acquirer or the net assets of one or more businesses are legally merged into the acquirer;

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- one combining entity transfers its net assets, or its owners transfer their equity interests, to another combining entity or its owners;
- all of the combining entities transfer their net assets, or the owners of those entities transfer their equity interests, to a newly formed entity (sometimes referred to as a roll-up or put-together transaction); or
- a group of former owners of one of the combining entities obtains control of the combined entity.

4. DEFINITION AND ELEMENTS OF BUSINESS

4.1 Definition of Business

As per paragraph B7 of the application guidance of Ind AS 103, a business consists of inputs and processes applied to those inputs that have the ability to contribute to the creation of outputs. Although businesses usually have outputs, outputs are not required for an integrated set of activities and assets to qualify as a business.

Analysis: Ind AS 103 defines business as an integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing goods or services to customers, generating investment income (such as dividends or interest) or generating other income from ordinary activities.

For a transaction to meet the definition of a business combination (and for the acquisition method of accounting to apply), the entity must gain control of an integrated set of assets and activities that is more than a collection of assets or a combination of assets and liabilities. It will be straightforward in most cases to determine whether a business has been acquired. A business would normally be carrying out a continuing trade with identifiable revenue. This means that the assets or combination of assets and liabilities of the acquired entity interact with each other and, importantly, with the people who operate the assets as a business. However, determining whether a business has been acquired may not be easy and in some cases will require judgement.

4.2 Elements of Business

The three elements of a business are defined as follows:

(a) **Input**: Any economic resource that creates outputs or has the ability to contribute to the creation of outputs, when one or more processes are applied to it.

Join us t.me/caborntofight

Example:

Non-current assets (including intangible assets or rights to use non-current assets), intellectual property, the ability to obtain access to necessary materials or rights and employees.

(b) **Process**: Any system, standard, protocol, convention or rule that when applied to an input or inputs, creates output or has the ability to contribute to the creations of outputs.

Example:

Strategic management processes, operational processes and resource management processes.

These processes typically are documented, but the intellectual capacity of an organised workforce having the necessary skills and experience following rules and conventions may provide the necessary processes that are capable of being applied to inputs to create outputs. (Accounting, billing, payroll and other administrative systems typically are not processes used to create outputs.)

(c) **Output**: The result of inputs and processes applied to those inputs that provide goods or services to customers, generate investment income (such as dividends or interest) or generate other income from ordinary activities.

4.3 Further Assessment

To be capable of being conducted and managed for the purpose identified in the definition of a business, an integrated set of activities and assets requires two essential elements—inputs and processes applied to those inputs.

Therefore, an integrated set of activities and assets must include, at a minimum, an input and a substantive process that together significantly contribute to the ability to create output.

Substantive Process:

To determine whether acquired process is substantive, following has to be considered:

(1) **If a set of activities and assets does not have output at the acquisition date, an acquired process (or group of processes) shall be considered substantive only if-**

(a) It is critical to the ability to develop or convert an acquired input or inputs into outputs; and

(b) The inputs acquired include both an organised workforce that has the necessary skills, knowledge, or experience to perform that process (or group of processes) and other inputs that the organised workforce could develop or convert into outputs.

Those other inputs could include-

(i) Intellectual property that could be used to develop a good or service;

(ii) Other economic resources that could be developed to create outputs; or

(iii) Rights to obtain access to necessary materials or rights that enable the creation of future Outputs.

(2) If a set of activities and assets has outputs at the acquisition date, an acquired process (or group of processes) shall be considered substantive if, when applied to an acquired input or inputs, it-

(a) is critical to the ability to continue producing outputs, and the inputs acquired include an organised workforce with the necessary skills, knowledge, or experience to perform that process (or group of processes); or

(b) significantly contributes to the ability to continue producing outputs and-

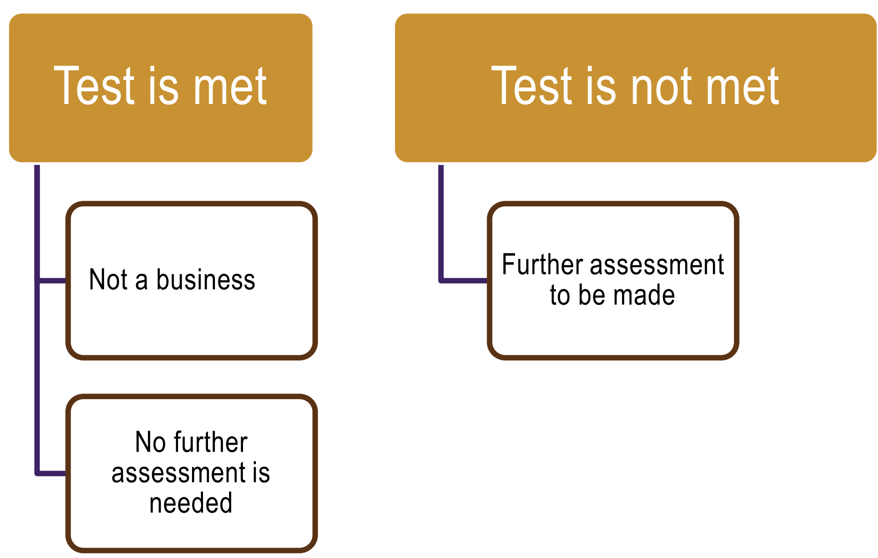
(i) is considered unique or scarce; or

(ii) cannot be replaced without significant cost, effort, or delay in the ability to continue producing outputs.

4.4 Concentration Test

As per paragraph B7A of the application guidance of Ind AS 103, an optional test (the concentration test) has been introduced to permit a simplified assessment of whether an acquired set of activities and assets is not a business.

On the basis of the above test, following will be the consequences:



Following conditions should be present to meet concentration test:

As per paragraph B7A of the application guidance of Ind AS 103, the concentration test is met if substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets. For the concentration test:

(a) gross assets acquired shall exclude cash and cash equivalents, deferred tax assets, and goodwill resulting from the effects of deferred tax liabilities;

(b) the fair value of the gross assets acquired shall include any consideration transferred (plus the fair value of any non-controlling interest and the fair value of any previously held interest) in excess of the fair value of net identifiable assets acquired.

(c) a single identifiable asset shall include any asset or group of assets that would be recognized and measured as a single identifiable asset in a business combination;

(d) if a tangible asset is attached to, and cannot be physically removed and used separately from, another tangible asset (or from an underlying asset subject to a lease, as defined in Ind AS 116, Leases), without incurring significant cost, or significant diminution in utility or fair value to either asset (for example, land and buildings), those assets shall be considered a single identifiable asset;

(e) when assessing whether assets are similar, an entity shall consider the nature of each single identifiable asset and the risks associated with managing and creating outputs from the assets (that is, the risk characteristics);

(f) the following shall not be considered similar assets:

  (i) a tangible asset and an intangible asset;

  (ii) tangible assets in different classes unless they are considered a single identifiable asset in accordance with the criterion in subparagraph (d);

  (iii) identifiable intangible assets in different classes

  (iv) a financial asset and a non-financial asset;

  (v) financial assets in different classes; and

  (vi) identifiable assets that are within the same class of asset but have significantly different risk characteristics.

Notes:

1) Concentration test is optional test and the decision to apply is made on a transaction to transaction basis.

2) Does not prohibit an entity from performing a detailed test assessment using definition of business given in this standard.

3) 3 Step process for concentration test:

  a) Measure the Fair Value of Gross Assets acquired.

  b) Identify the single identifiable assets or group of similar identifiable asset.

Join us t.me/caborntofight

c) Determine if substantially all of the value determined in point (a) is concentrated in the value determined in point (b) then it is an asset acquisition otherwise needs to assess business definition as per Ind AS 103.

Fair value of gross assets shall be determined as follows (I + ii – iii):

i) Fair value of consideration transferred (including fair value of non-controlling interest and fair value of previously interest held)

ii) Fair value of liabilities assumed.

iii) Cash and cash equivalent and deferred tax assets and goodwill resulting from DTL's.

Example 1: On Concentration test

Entity A holds 20% interest in Entity B. Subsequently Entity A, further acquires 50% share in Entity B by paying ₹ 300 Crores.

The fair value of assets acquired and Liabilities assumed are as follows:

Building - ₹ 1000 Crores

Cash and Cash Equivalent - ₹ 200 Crores

Financial Liabilities - ₹ 800 Crores

DTL - ₹ 150 crores

Fair value of Entity B is ₹ 400 Crores and Fair value of NCI is ₹ 120 Crores (400 x 30%)

Fair value of Entity A's previously held interest is ₹ 80 Crores (400 x 20%)

Entity A needs to determine whether acquisition is an asset acquisition as per concentration test.

i) Fair value of consideration transferred (including fair value of non-controlling interest and fair value of previously interest held) = 300 + 120 + 80 = ₹ 500 Crores

ii) Fair value of liability assumed (excluding deferred tax) – ₹ 800 crores

iii) Cash and cash equivalent – ₹ 200 crores.

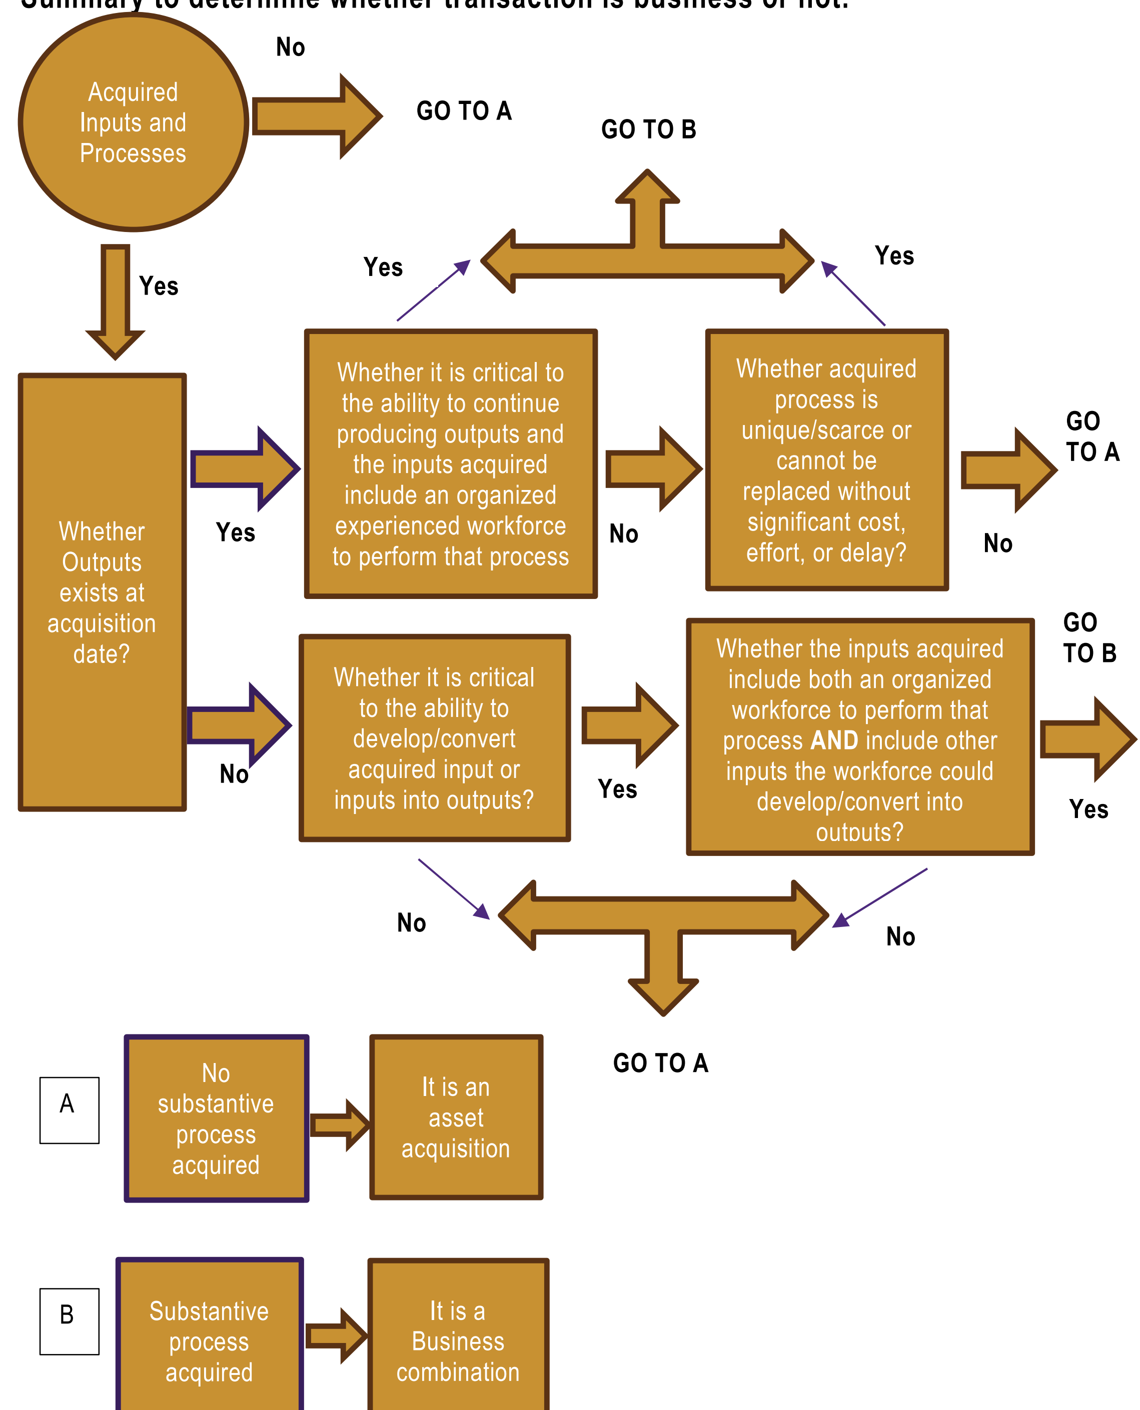
Fair value of gross assets acquired - ₹ 1,100 Crores

In the above scenario, substantially all fair value of gross assets acquired is concentrated in a single identifiable asset i.e. building. Hence it should be asset acquisition. (1,000 / 1,100 = 91% of value of gross assets is concentrated into single identifiable asset i.e. building). A Judgement is required to conclude on the word substantially as the same is not defined in the standard.

In our view we have considered 91% of the value as substantial to conclude the above transaction as asset acquisition.

Join us t.me/caborntofight

Summary to determine whether transaction is business or not:



Example 2: Simple-business combination

Company X is a liquor manufacturer and has traded for a number of years. The company produces a wide variety of liquor and employs a workforce of machine operators, testers, and other operational, marketing and administrative staff. It owns and operates a factory, warehouse, machinery and holds raw material inventory and finished products.

On 1st January, 20X1, Company Y pays USD 80 million to acquire 100% of the ordinary voting shares of Company X. No other type of shares has been issued by the Company X. On the same day, the four main executive directors of the Company Y take on the same roles in the Company X.

In this case, it is clear that the Company X is a business. It operates a trade with a variety of assets that are used by its employees in a number of related activities. These assets and activities are necessarily integrated in order to create and sell the company's products. As per definition the above acquisition includes an input (including four main executive directors of Company X) and thus it can be concluded as the significant process acquired along with the other inputs.

Thus, Company Y obtains control on 1st January, 20X1 by acquiring 100% of the voting rights.

The application of the definition is less clear in situations as illustrated in the following examples:

Example 3: Investment in a development stage entity

Company D is a development stage entity that has not started revenue-generating operations. The workforce consists mainly of research engineers who are developing a new technology that has a pending patent application. Negotiations to license this technology to a number of customers are at an advanced stage. Company D requires additional funding to complete development work and commence planned commercial production.

The value of the identifiable net assets in Company D is ₹ 750 million. Company A pays ₹ 600 million in exchange for 60% of the equity of Company D (a controlling interest).

Although Company D is not yet earning revenues (an example of 'outputs') there are a number of indicators that it has a sufficiently integrated set of activities and assets that are capable of being managed to produce a return for investors. In particular, Company D:

- employs specialist engineers developing the know-how and design specifications of the technology.
- is pursuing a viable plan to complete the development work and commence production.
- has identified and will be able to access customers willing to buy the outputs.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

In addition, Company A has paid a premium (or goodwill) for its 60% interest. In the absence of evidence to the contrary, Company D is presumed to be a business.

Example 4: Acquisition of an entity holding investment properties

Company A acquires 100% of the equity and voting rights of Company P, a subsidiary of a property investment group. Company P owns three investment properties. The properties are single-tenant industrial warehouses subject to long-term leases. The leases oblige Company P to provide basic maintenance and security services, which have been outsourced to third party contractors. The administration of Company P's leases was carried out by an employee of its former parent company on a part-time basis but this individual does not transfer to the new owner.

In most cases, an asset or group of assets and liabilities that are being capable of generating revenues, combined with all or many of the activities necessary to earn those revenues, would constitute a business. However, investment property is a specific case in which earning a return for investors is a defining characteristic of the asset. Accordingly, revenue generation and activities that are specific and ancillary to an investment property and its tenancy agreements should therefore be given a lower 'weighting' in assessing whether the acquiree is a business.

Further process (i.e. Basic maintenance, security services and administration) is not critical to the ability to continue producing outputs. Also process (i.e. Basic maintenance, security services and administration) is not unique and it can be replaced easily without significant cost.

In our view the purchase of investment property with tenants and services that are purely ancillary to the property and its tenancy agreements should generally be accounted for as an asset purchase.

Example 5: Acquisition of an entity holding investment properties

Company A acquires 100% of the equity and voting rights of Company Q, which owns three investment properties. The properties are multi-tenant residential condominiums subject to short-term rental agreements that oblige Company Q to provide substantial maintenance and security services, which are outsourced with specialist providers. Company Q has five employees who deal directly with the tenants and with the outsourced contractors to resolve any non-routine security or maintenance requirements. These employees are involved in a variety of lease management tasks (e.g. identification and selection of tenants; lease negotiation and rent reviews) and marketing activities to maximise the quality of tenants and the rental income.

In this case, Company Q consists of a group of revenue-generating assets, together with employees and activities that clearly go beyond activities ancillary to the properties and their tenancy agreements.

Further process (i.e. identification and selection of tenants; lease negotiation and rent reviews) is critical to the ability to continue producing outputs (i.e. in terms to maximise quality of tenants and the rental income).

The assets and activities are clearly integrated so Company Q is considered a business.

Example 6: Seller retains some activities and assets

Company S is a manufacturer of a wide range of products. The company's payroll and accounting system is managed as a separate cost centre, supporting all the operating segments and the head office functions.

Company A agrees to acquire the trade, assets, liabilities and workforce of the operating segments of Company S but does not acquire the payroll and accounting cost centre or any head office functions. Company A is a competitor of Company S.

In this case, the activities and assets within the operating segments are capable of being managed as a business and so Company A accounts for the acquisition as a business combination. The payroll, accounting cost centre and administrative head office functions are typically not used to create outputs and so are generally not considered an essential element in assessing whether an integrated set of activities and assets is a business or not.

Example 7: Acquisition of a shell company

Company A is a property development company with a number of subsidiary companies, each of which holds a single development. After completion of the development, Company A sells its equity investment because the applicable tax rate is lower than that applicable to the sale of the underlying property.

Company A is planning to start the development of a large new retail complex. Rather than incorporating a new company, Company A acquires the entire share capital of a 'shell' company.

The shell company does not contain an integrated set of activities and assets and so does not constitute a business. Consequently, Company A should account for the purchase of the shell company in the same way as the incorporation of a new subsidiary. In the consolidated financial statements, any costs incurred will be accounted for in accordance with their nature and applicable Ind AS. No goodwill is recognised.

Illustration 2

Company A is a pharmaceutical company. Since inception, the Company had been conducting in-house research and development activities through its skilled workforce and recently obtained an intellectual property right (IPR) in the form of patents over certain drugs. The Company's has a production plant that has recently obtained regulatory approvals. However, the Company has

Join us t.me/caborntofight

not earned any revenue so far and does not have any customer contracts for sale of goods. Company B acquires Company A.

Determine whether Company A constitute a business in accordance with Ind AS 103.

Solution

The definition of business requires existence of inputs and processes. In this case, the skilled workforce, manufacturing plant and IPR, along with strategic and operational processes constitutes the inputs and processes in line with the requirements of Ind AS 103.

When the said inputs and processes are applied as an integrated set, the Company A will be capable of producing outputs; the fact that the Company A currently does not have revenue is not relevant to the analysis of the definition of business under Ind AS 103. Basis this and presuming that Company A would have been able to obtain access to customers that will purchase the outputs, the present case can be said to constitute a business as per Ind AS 103.

*****

Illustration 3

Modifying the above illustration, if Company A had revenue contracts and a sales force, such that Company B acquires all the inputs and processes other than the sales force, then whether the definition of the business is met in accordance with Ind AS 103?

Solution

Though the sales force has not been taken over, however, if the missing inputs (i.e., sales force) can be easily replicated or obtained by the market participant to generate output, it may be concluded that Company A has acquired business. Further, if Company B is also into similar line of business, then the existing sales force of the Company B may also be relevant to mitigate the missing input. As such, the definition of business is met in accordance with Ind AS 103.

*****

5. THE ACQUISITION METHOD

The following key steps are involved in the acquisition accounting for business combinations:

Step 1: Identifying the acquirer.

Step 2: Determining the acquisition date.

Step 3: Recognising and measuring the identifiable assets acquired, the liabilities assumed and any non-controlling interest in the acquiree; and

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Step 4: Recognising and measuring goodwill or a gain from a bargain purchase.

Ask Following questions to account a business combination transaction:

6. IDENTIFYING ACQUIRING ENTERPRISE

6.1 The Acquiring Enterprise

All business combination within the scope of Ind AS 103 are accounted under the acquisition method (also known as purchase method). In order to apply the purchase method, the parties involved has to identify the acquirer i.e the entity that obtains the control of another entity. The entity on whom the control is established is termed as acquiree. This is because the acquiree's assets and liabilities are accounted as per the recognition and measurement principles of the standard.

The acquiring enterprise is the enterprise which obtains control and the determination of control is as per the guidance given in Ind AS 110. It may so happen that guidance in Ind AS 110 does not clearly indicate which of the combining entity is the acquirer. In such a case, Ind AS 103 provides additional guidance on identifying the acquirer.

As per Ind AS 110 'Consolidated Financial Statements', an investor controls an investee if and only if the investor has all the following:

(a) power over the investee;

(b) exposure, or rights, to variable returns from its involvement with the investee; and

(c) the ability to use its power over the investee to affect the amount of the investor's returns.

© The Institute of Chartered Accountants of India

The above definition is very wide and control assessment does not depend only on voting rights instead it depends on the following as well:

- Potential voting rights;
- Rights of non-controlling shareholders; and
- Other contractual right of the investor if those are substantive in nature.

Control assessment has been discussed in detail in the chapter of Consolidated Financial Statements. One example on potential voting rights and its implication on assessment of control is provided below for the students to understand the concept of control.

In order to ascertain control do not look at the voting rights only. Evaluate other factors also like board control, potential voting rights etc.

Indicator of Control		
More than 50% voting rights	Power to appoint and remove board of directors	Investor have currently excersiable potential voting rights

Illustration 4: Potential voting rights

Company P Ltd., a manufacturer of textile products, acquires 40,000 equity shares of Company X (a manufacturer of complementary products) out of 1,00,000 shares in issue. As part of the same agreement, the Company P purchases an option to acquire an additional 25,000 shares. The option is exercisable at any time in the next 12 months. The exercise price includes a small premium to the market price at the transaction date.

After the above transaction, the shareholdings of Company X's two other original shareholders are 35,000 and 25,000. Each of these shareholders also has currently exercisable options to acquire 2,000 additional shares.

Assess whether control is acquired by Company P.

Solution

In assessing whether it has obtained control over Company X, Company P should consider not only the 40,000 shares it owns but also its option to acquire another 25,000 shares (a so-called

potential voting right). In this assessment, the specific terms and conditions of the option agreement and other factors are considered as follows:

- the options are currently exercisable and there are no other required conditions before such options can be exercised
- if exercised, these options would increase Company P's ownership to a controlling interest of over 50% before considering other shareholders' potential voting rights (65,000 shares out of a total of 1,25,000 shares)
- although other shareholders also have potential voting rights, if all options are exercised Company P will still own a majority (65,000 shares out of 1,29,000 shares)
- the premium included in the exercise price makes the options out-of-the-money. However, the fact that the premium is small and the options could confer majority ownership indicates that the potential voting rights have economic substance.

By considering all the above factors, Company P concludes that with the acquisition of the 40,000 shares together with the potential voting rights, it has obtained control of Company X.

*****

6.2 Acquisitions through payment of cash or incurring of liability

In a business combination effected primarily by transferring cash or other assets or by incurring liabilities, the acquirer is usually the entity that transfers the cash or other assets or incurs the liabilities.

6.3 Acquisitions through issue of equity instrument

In a business combination effected primarily by exchanging equity interests, the acquirer is usually the entity that issues its equity interests. However, in some business combinations, commonly called 'reverse acquisitions', the issuing entity is the acquiree. Reverse acquisition has been dealt in a separate section of this chapter.

Other pertinent facts and circumstances shall also be considered in identifying the acquirer in a business combination effected by exchanging equity interests, including:

a) ***The relative voting rights in the combined entity after the business combination***: The acquirer is usually the combining entity whose owners as a group retain or receive the largest portion of the voting rights in the combined entity. In determining which group of owners retains or receives the largest portion of the voting rights, an entity shall consider the existence of any unusual or special voting arrangements and options, warrants or convertible securities.

© The Institute of Chartered Accountants of India

Illustration 5

Veera Limited and Zeera Limited are both in the business of manufacturing and selling of Lubricant. Shareholders of Veera Limited and Zeera Limited agreed to join forces to benefit from lower delivery and distribution costs. The business combination is carried out by setting up a new entity called Meera Limited that issues 100 shares to Veera Limited shareholders and 50 shares to Zeera Limited shareholders in exchange for the transfer of the shares in those entities. The number of shares reflects the relative fair values of the entities before the combination. Also respective company's shareholders get the voting rights in Meera Limited based on their respective shareholdings.

Determine the acquirer by applying the principles of Ind AS 103 'Business Combinations'

Solution

As per para B15 of Ind AS 103, in a business combination effected primarily by exchanging equity interests, the acquirer is usually the entity that issues its equity interests. However, in some business combinations, commonly called 'reverse acquisitions', the issuing entity is the acquiree. Other pertinent facts and circumstances shall also be considered in identifying the acquirer in a business combination effected by exchanging equity interests, including:

The relative voting rights in the combined entity after the business combination - The acquirer is usually the combining entity whose owners as a group retain or receive the largest portion of the voting rights in the combined entity.

Based on above mentioned para, acquirer shall be the either of the combining entities (i.e. Veera Limited or Zeera Limited) whose owners as a Group retain or receive the largest portion of the voting rights in the combined entity.

Hence in the above scenario Veera Limited shareholder gets 67% Share [(100/150) x100] and Zeera Limited shareholder gets 33.33% share in Meera Limited. Hence Veera Limited is acquirer as per the principles of Ind AS 103.

*****

b) ***The existence of a large minority voting interest in the combined entity if no other owner or organised group of owners has a significant voting interest:*** The acquirer is usually the combining entity whose single owner or organised group of owners holds the largest minority voting interest in the combined entity.

c) ***The composition of the governing body of the combined entity:*** The acquirer is usually the combining entity whose owners have the ability to elect or appoint or to remove a majority of the members of the governing body of the combined entity.

Join us t.me/caborntofight

d) ***The composition of the senior management of the combined entity:*** The acquirer is usually the combining entity whose (former) management dominates the management of the combined entity.

e) ***The terms of the exchange of equity interests:*** The acquirer is usually the combining entity that pays a premium over the pre-combination fair value of the equity interests of the other combining entity or entities.

f) ***The acquirer is usually the combining entity*** whose relative size (measured in, for example, assets, revenues or profit) is significantly greater than that of the other combining entity or entities. In a business combination involving more than two entities, determining the acquirer shall include a consideration of, among other things, which of the combining entities initiated the combination, as well as the relative size of the combining entities.

Examples 8 & 9

8. Company A and Company B operate in power industry and both entities are operating entities. Company A has much larger scale of operations than Company B. Company B merges with Company A such that the shareholders of Company B would receive 1 equity share of Company A for every 1 share held in Company B. Such issue of shares would comprise 20% of the issued share capital of the combined entity. After discharge of purchase consideration, the pre-merger shareholders of Company A hold 80% of the capital in Company A.

In this transaction, Company A is the acquirer for the purposes of accounting for business combination as per Ind AS 103. This is because, by merging the entire shareholding of Company B, Company A has acquired control over Company B. Further, the shareholders of erstwhile Company B do not obtain control over Company A on account of shares received as part of purchase consideration, as they hold only 20% of the paid-up capital of Company A.

9. Company A and Company B operate in power industry and both entities are operating entities. Company A has much smaller scale of operations than Company B. Company B merges Company A such that the shareholders of Company B would receive 10 equity share of Company A for every 1 share held in Company B. Such issue of shares would comprise 70% of the issued share capital of the combined entity. After discharge of purchase consideration, the pre-merger shareholders of Company A hold 30% of capital of Company A. Post-acquisition, the management of Company B would manage the operations of the combined entity.

In this transaction, Company B is the acquirer for the purposes of accounting for business combination as per Ind AS 103. This is because, after merger, the shareholders of

Join us t.me/caborntofight

erstwhile Company B would have a controlling interest and management of the combined entity. As such, in substance, Company B has acquired control over Company A.

It is important to note that the Company B would be considered as an acquirer for accounting purposes only (i.e., accounting acquirer). For legal purposes as well as for reporting purposes, it is the Company A that would be considered as an acquirer (i.e., legal acquirer).

Appropriate identification of an acquirer is relevant, as the net assets of the accounting acquiree (rather than that of the accounting acquirer) are recognised at fair value.

Illustration 6

ABC Ltd. incorporated a company Super Ltd. to acquire 100% shares of another entity Focus Ltd. (and therefore to obtain control of the Focus Ltd.). To fund the purchase, Super Ltd. acquired a loan from XYZ Bank at commercial interest rates. The loan funds are used by Super Ltd. to acquire entire voting shares of Focus Ltd. at fair value in an orderly transaction. Post the acquisition, Super Ltd. has the ability to elect or appoint or to remove a majority of the members of the governing body of the Focus Ltd. and also Super Ltd.'s management is in a power where it will be able to dominate the management of the Focus Ltd.

State whether Super Ltd. be identified as the acquirer in this business combination.

Solution

Paragraph 6 of Ind AS 103 states that for each business combination, one of the combining entities shall be identified as the acquirer.

While paragraph 7 states that the guidance in Ind AS 110 shall be used to identify the acquirer that is the entity that obtains control of another entity called the acquiree. If a business combination has occurred but applying the guidance in Ind AS 110 does not clearly indicate which of the combining entities is the acquirer, the factors in paragraphs B14–B18 of Ind AS 103 shall be considered in making that determination.

Further, paragraph B15 provides that, in a business combination effected primarily by exchanging equity interests, the acquirer is usually the entity that issues its equity interests. However, in some business combinations, commonly called 'reverse acquisitions', the issuing entity is the acquiree. Other pertinent facts and circumstances shall also be considered in identifying the acquirer in a business combination effected by exchanging equity interests, including:

(a) **The relative voting rights in the combined entity after the business combination:** The acquirer is usually the combining entity whose owners as a group retain or receive the largest portion of the voting rights in the combined entity. In determining which group of

owners retains or receives the largest portion of the voting rights, an entity shall consider the existence of any unusual or special voting arrangements and options, warrants or convertible securities.

(b) **The existence of a large minority voting interest in the combined entity if no other owner or organised group of owners has a significant voting interest:** The acquirer is usually the combining entity whose single owner or organised group of owners holds the largest minority voting interest in the combined entity.

(c) **The composition of the governing body of the combined entity:** The acquirer is usually the combining entity whose owners have the ability to elect or appoint or to remove a majority of the members of the governing body of the combined entity.

(d) **The composition of the senior management of the combined entity:** The acquirer is usually the combining entity whose (former) management dominates the management of the combined entity.

(e) **The terms of the exchange of equity interests:** The acquirer is usually the combining entity that pays a premium over the pre-combination fair value of the equity interests of the other combining entity or entities.

The key drivers of the accounting are identifying the party on whose behalf the new entity has been formed and identifying the business acquired. In this scenario, as Super Ltd. has the ability to elect or appoint or to remove a majority of the members of the governing body of the Focus Ltd. and has the ability to dominate the management of the Focus Ltd. Accordingly, Super Ltd. will be identified as the acquirer unless there are conditions to conclude to the contrary.

*****

6.4 Acquisition involving Shell Company and Reverse Acquisition

A reverse acquisition occurs when the entity that issues securities (the legal acquirer) is identified as the acquiree for accounting purposes. The entity whose equity interests are acquired (the legal acquiree) must be the acquirer for accounting purposes for the transaction to be considered a reverse acquisition. For example, reverse acquisitions sometimes occur when a private operating entity wants to become a public entity but does not want to register its equity shares. To accomplish that, the private entity will arrange for a public entity to acquire its equity interests in exchange for the equity interests of the public entity. In this example, the public entity is the **legal acquirer** because it issued its equity interests, and the private entity is the **legal acquiree** because its equity interests were acquired. However, application of the guidance given in above paragraph results in identifying:

a) the public entity as the **acquiree** for accounting purposes (the accounting acquiree); and

b) the private entity as the **acquirer** for accounting purposes (the accounting acquirer).

The accounting acquiree must meet the definition of a business for the transaction to be accounted for as a reverse acquisition, and all of the recognition and measurement principles of Ind AS 103, including the requirement to recognise goodwill, will apply.

Example 9: Reverse Acquisition

The Balance Sheets of Entity A and Entity B immediately before business acquisition are as follows:

	Amount (₹ in thousands)	
Particulars	**Entity A**	**Entity B**
Current Assets	600	800
Non Current Assets	1,200	2,900
Total Assets	1,800	3,700
Current Liabilities	400	200
Non - Current Liabilities	300	1200
Total Liabilities	700	1400
Equity		
30,000 Shares of ₹ 10 Each	300	
60,000 Shares of ₹ 10 Each		600
Retained Earnings	800	1700
Total Equity	1100	2300
Total Equity and Liability	1800	3700

On 31 March 20X1, Entity A issues 2.5 shares in exchange for each share of Entity B. All of entity B's shareholders exchange their shares. Therefore, Entity A issues 1,50,000 shares in exchange for all 60,000 shares of entity B. Entity A legally owns 100% of entity B.

The shareholders of Entity B own 83.33% (1,50,000/1,80,000) of the combined entity. The directors of entity B are appointed 6 out of 8 positions in combined entity's board. In accordance with Ind AS 103, Entity B (Legal Acquiree) is the accounting acquirer and Entity A (Legal Acquirer) is the accounting acquiree as Entity B shareholders control over combined entity.

Join us t.me/caborntofight

The quoted market price of Entity B's share as at 31st March, 20X1 is ₹ 105 per share and Entity A's share price as at 31st March, 20X1 is ₹ 20 per share.

Assume the fair value of Entity A's identifiable net assets as at 31st March, 20X1 are the same as carrying values and ignore tax effect.

The acquisition date fair value (i.e. at 31st March, 20X1) of the accounting acquirer equity instrument is generally used to determine the amount of consideration transferred for business combination. In this case it is 105 per share (Entity B).

So if the business combination had taken place in the form of Entity B issuing additional shares to Entity A's shareholders in exchange for their shares in Entity A, Entity B would have to issue 12,000 shares (30,000 / 2.5) for the ratio of ownership interest in the combined entity to be same. (12,000/72,000). Therefore, the consideration for the business combination effectively transferred by Entity B is ₹ 12,60,000 (12,000 Shares x ₹ 105).

Calculation of Goodwill:

Fair value of Assets less Liabilities Assumed (Entity A)	-	₹ 11,00,000
Consideration transferred (by Entity B)	-	(₹ 12,60,000)
Goodwill	-	₹ 1,60,000

Example 11: New parent pays cash to effect a business combination

Company A decided to spin-off two of its existing businesses (currently housed in two separate entities, Company B and Company C). To facilitate the spin-off, Company A incorporates a new entity (Company D) with nominal equity and appoints independent directors to the board of Company D. Company D signs an agreement to purchase Companies B and C in cash, conditional on obtaining sufficient funding. To fund these acquisitions, Company D issues a prospectus offering to issue shares for cash.

At the conclusion of the transaction, Company D has owned 99% by the new investors with Company A retaining only a 1% non-controlling interest.

In this situation, a set of new investors paid cash to obtain control of Company D in an arm's length transaction. Company D is then used to effect the acquisition of 100% ownership of Companies B and C by paying cash. Company A relinquishes its control of Companies B and C to the new owners of Company D.

Although Company D is a newly formed entity, Company D is identified as the acquirer not only because it paid cash but also because the new owners of Company D have obtained control of Companies B and C from Company A.

Join us t.me/caborntofight

Identification of the acquiring enterprise is very critical and the accounting may change significantly if the accounting acquirer is different than legal acquirer. .

7. DETERMINING THE ACQUISITION DATE

The acquirer shall identify the acquisition date, which is the date on which it obtains control of the acquiree.

The date on which the acquirer obtains control of the acquiree is generally the date on which the acquirer legally transfers the consideration, acquires the assets and assumes the liabilities of the acquiree — the closing date. However, the acquirer might obtain control on a date that is either earlier or later than the closing date. For example, the acquisition date precedes the closing date if a written agreement provides that the acquirer obtains control of the acquiree on a date before the closing date. An acquirer shall consider all pertinent facts and circumstances in identifying the acquisition date.

The acquisition date is a very important step in the business combination accounting because it determines when the acquirer recognises and measures the consideration, the assets acquired and liabilities assumed. The acquiree's results are consolidated from this date. The acquisition date materially impacts the overall acquisition accounting, including post-combination earnings.

Acquisition date will be the date on which the acquirer obtains control.

The acquisition date is often readily apparent from the structure of the business combinations and the terms of the sale and purchase agreement (if applicable) but this is not always the case.

Example 12

Company A acquired 80% equity interest in Company B for cash consideration. The relevant dates are as under:

✓ Date of shareholder agreement	1st June, 20X1
✓ Appointed date as per shareholder agreement	1st April, 20X1
✓ Date of obtaining control over the board representation	1st July, 20X1
✓ Date of payment of consideration	15th July, 20X1
✓ Date of transfer of shares to Company A	1st August, 20X1

© The Institute of Chartered Accountants of India

In this case, as the control over financial and operating policies are acquired through obtaining board representation on 1st July, 20X1, it is this date that is considered as the acquisition date. It may be noted that the appointed date as per the agreement is not considered as the acquisition date, as the Company A did not have control over Company B as at that date.

Illustration 7

Can an acquiring entity account for a business combination based on a signed non-binding letter of intent where the exchange of consideration and other conditions are expected to be completed with 2 months?

Solution

No. as per the requirement of the standard a non- binding Letter of Intent (LOI) does not effectively transfer control and hence this cannot be considered as the basis for determining the acquisition date.

*****

Illustration 8

On 1st April, X Ltd. agrees to acquire the share of B Ltd. in an all equity deal. As per the binding agreement X Ltd. will get the effective control on 1st April. However, the consideration will be paid only when the shareholders' approval is received. The shareholder's meeting is scheduled to happen on 30th April. If the shareholders' approval is not received for issue of new shares, then the consideration will be settled in cash.

Determine the acquisition date.

Solution

The acquisition date in the above case is 1st April. This is because, in the above scenario, even if the shareholders don't approve the shares, consideration will be settled through payment of cash.

*****

Illustration 9 : Business Combination without a Court approved scheme

ABC Ltd. acquired all the shares of XYZ Ltd. The negotiations had commenced on 1st January, 20X1 and the agreement was finalised on 1st March, 20X1. While ABC Ltd. obtains the power to control XYZ Ltd.'s operations on 1st March, 20X1, the agreement states that the acquisition is effective from 1st January, 20X1 and that ABC Ltd. is entitled to all profits after that date. In addition, the purchase price is based on XYZ Ltd.'s net asset position as at 1st January, 20X1.

Determine the date of acquisition.

Solution

Paragraph 8 of Ind AS 103 provides that acquisition date is the date on which the acquirer obtains control of the acquiree.

Further paragraphs 6 and 7 of Ind AS 110, Consolidated Financial Statements, inter alia, state that an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Thus, an investor controls an investee if and only if the investor has all the following:

(a) power over the investee;

(b) exposure, or rights, to variable returns from its involvement with the investee; and

(c) the ability to use its power over the investee to affect the amount of the investor's returns.

Further, paragraph 9 of Ind AS 103 clarifies that the date on which the acquirer obtains control of the acquiree is generally the date on which the acquirer legally transfers the consideration, acquires the assets and assumes the liabilities of the acquiree—the closing date. However, the acquirer might obtain control on a date that is either earlier or later than the closing date.

Therefore, in this case, notwithstanding that the price is based on the net assets as at 1st January, 20X1 and that XYZ Ltd.'s shareholders do not receive any dividends after that date, the date of acquisition for accounting purposes will be 1st March, 20X1. It is only on 1st March, 20X1 and not 1st January, 20X1, that ABC Ltd. has the power to direct the relevant activities of XYZ Ltd. so as to affect its returns from its involvement with XYZ Ltd. Accordingly, the date of acquisition is 1st March, 20X1.

*****

Illustration 10 : Acquisition date- Regulatory approval

ABC Ltd. and XYZ Ltd. are manufacturers of rubber components for a particular type of equipment. ABC Ltd. makes a bid for XYZ Ltd.'s business and the Competition Commission of India (CCI) announces that the proposed transaction is to be scrutinised to ensure that competition laws are not breached. Even though the contracts are made subject to the approval of the CCI, ABC Ltd. and XYZ Ltd. mutually agree the terms of the acquisition and the purchase price before competition authority clearance is obtained.

Can the acquisition date in this situation be the date on which ABC Ltd. and XYZ Ltd. agree the terms even though the approval of CCI is awaited? Assume that the approval of CCI is substantive.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

Paragraph 8 of Ind AS 103 provides that acquisition date is the date on which the acquirer obtains control of the acquiree.

Further, paragraph 9 of Ind AS 103 clarifies that the date on which the acquirer obtains control of the acquiree is generally the date on which the acquirer legally transfers the consideration, acquires the assets and assumes the liabilities of the acquiree — the closing date. However, the acquirer might obtain control on a date that is either earlier or later than the closing date.

For example, the acquisition date precedes the closing date if a written agreement provides that the acquirer obtains control of the acquiree on a date before the closing date. An acquirer shall consider all pertinent facts and circumstances in identifying the acquisition date.

Since CCI approval is a substantive approval for ABC Ltd. to acquire control of XYZ Ltd.'s operations, the date of acquisition cannot be earlier than the date on which approval is obtained from CCI. This is pertinent given that the approval from CCI is considered to be a substantive process and accordingly, the acquisition is considered to be completed only on receipt of such approval.

*****

8. STEP ACQUISITIONS

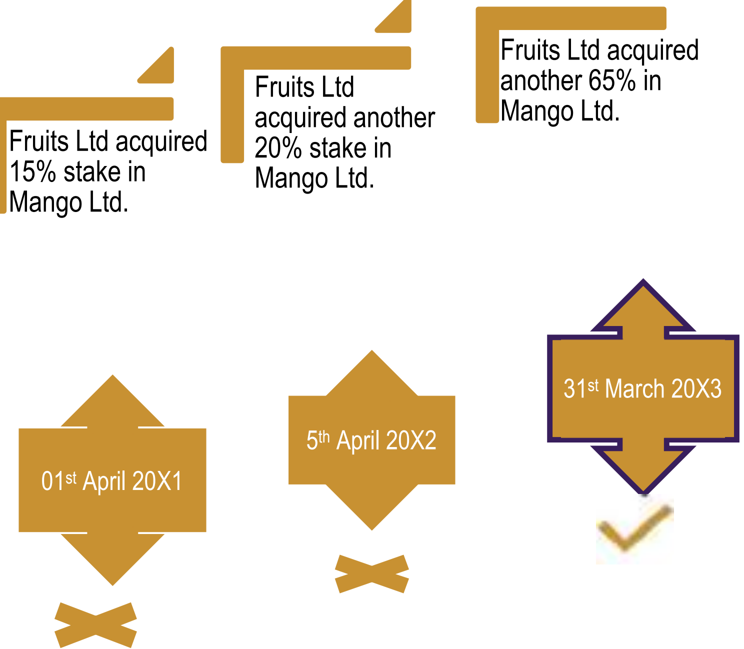
In the case an entity acquires an entity step by step through series of purchase then the acquisition date will be the date on which the acquirer obtains control. Till the time the control is obtained the Investment will be accounted as per the requirements of other Ind AS 109, if the investments are covered under that standard or as per Ind AS 28, if the investments are in Associates or Joint Ventures.

If a business combination achieved in stages, the acquirer shall remeasure its previously held equity interest in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in profit or loss or other comprehensive income, as appropriate.

In prior reporting periods, the acquirer may have recognised changes in the value of its equity interest in the acquiree in other comprehensive income. If so, the amount that was recognised in other comprehensive income shall be recognised on the same basis as would be required if the acquirer had disposed directly of the previously held equity interest.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Below is the example for acquisition of business in case of stake acquired in stages:



Control is acquired on 31st March 20X3 in above example because total stake as on that date will be 90%.

Assumption: Control is acquired in form of total stake, unless otherwise stated.

9. DETERMINATION OF THE PURCHASE CONSIDERATION

The consideration transferred in a business combination shall be measured at fair value, which shall be calculated as the total of the acquisition-date fair values of the assets (including cash) transferred by the acquirer, the liabilities incurred by the acquirer to former owners of the acquiree and the equity interests issued by the acquirer. Examples of potential forms of consideration include cash, other assets, a business or a subsidiary of the acquirer, *contingent consideration*, ordinary or preference equity instruments, options, warrants and member interests of *mutual entities*.

Exception to the fair value in determination of Purchase consideration

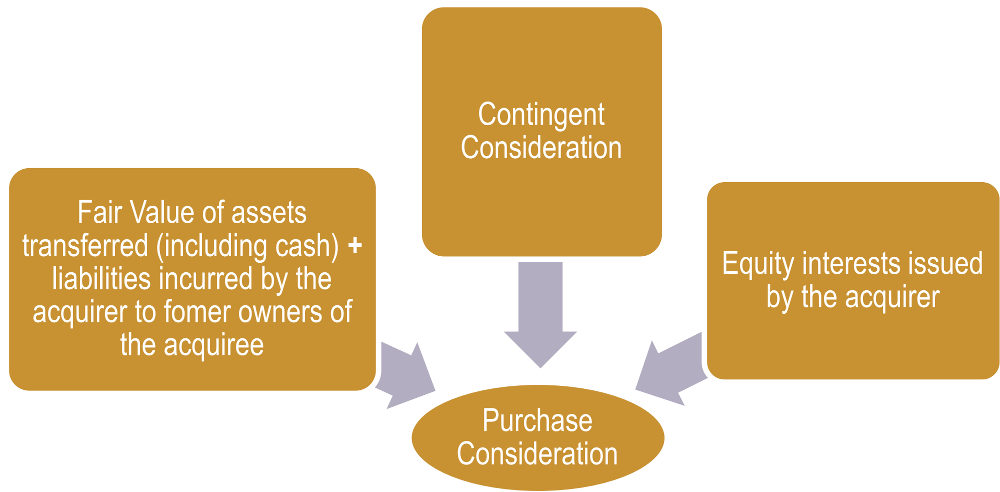
However, any portion of the acquirer's share-based payment awards exchanged for awards held by the acquiree's employees that is included in consideration transferred in the business combination shall be measured in accordance with the requirements of Ind AS 102, Share Based payments.

The consideration transferred may include assets or liabilities of the acquirer that have carrying amounts that differ from their fair values at the acquisition date (for example, non-monetary assets or a business of the acquirer). If so, the acquirer shall remeasure the transferred assets or liabilities to their fair values as of the acquisition date and recognise the resulting gains or losses, if any, in the statement of profit and loss.

This means that if the acquirer has transferred a land as a part of the business combination arrangement to the owners of the acquiree then the fair value of the land will be considered in determining the fair value of the consideration. Consequently, the land will be de-recognised in the financial statements of the acquirer and the difference between the carrying amount of the land and the fair value considered for purchase consideration will be recorded in profit and loss.

However, sometimes the transferred assets or liabilities remain within the combined entity after the business combination (for example, because the assets or liabilities were transferred to the acquiree rather than to its former owners), and the acquirer therefore retains control of them. In that situation, the acquirer shall measure those assets and liabilities at their carrying amounts immediately before the acquisition date and shall not recognise a gain or loss in statement of profit and loss on assets or liabilities it controls both before and after the business combination. Although no gain or loss is recognised by the transferring entity, the asset transferred will affect the amount of NCI and goodwill that is recognised.

Purchase Consideration can be summarized as:



9.1 A Business Combination achieved in Stages (Step Acquisition)

An acquirer sometimes obtains control of an acquiree in which it held an equity interest immediately before the acquisition date.

Example 13

On 31st December 20X1, Entity A holds a 35 per cent non-controlling equity interest in Entity B. On that date, Entity A purchases an additional 40 per cent interest in Entity B, which gives it control of Entity B. This transaction is referred as a business combination achieved in stages, sometimes also referred to as a step acquisition.

In a business combination achieved in stages, the acquirer shall remeasure its previously held equity interest in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in profit or loss. In prior reporting periods, the acquirer may have recognised changes in the value of its equity interest in the acquiree in other comprehensive income. As per
Ind AS 109 or Ind AS 27, an entity can elect to measure investments in equity instruments at fair value through other comprehensive income. However, once elected all gains and losses on that investment even on sale is recognized in OCI. Therefore, if the investment is designated as fair value through OCI, the resulting gain or loss, if any, will be recognized in OCI.

When a party to a joint operation, obtains control of a joint operation business, the transaction will be considered as a business combination achieved in stages. The acquirer should re-measure its previously held interest in the joint operation at fair value at the acquisition date.

Illustration 11

On 1st April, 20X1, PQR Ltd. acquired 30% of the voting ordinary shares of XYZ Ltd. for ₹ 8,000 crore. PQR Ltd. accounts its investment in XYZ Ltd. using equity method as prescribed under Ind AS 28. At 31st March, 20X2, PQR Ltd. recognised its share of the net asset changes of XYZ Ltd. using equity accounting as follows:

	(₹ in crore)
Share of profit or loss	*700*
Share of exchange difference in OCI	*100*
Share of revaluation reserve of PPE in OCI	*50*

The carrying amount of the investment in the associate on 31st March, 20X2 was therefore ₹ 8,850 crore (8,000 + 700 + 100 + 50).

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

On 1st April, 20X2, PQR Ltd. acquired the remaining 70% of XYZ Ltd. for cash ₹ 25,000 crore. The following additional information is relevant at that date:

	(₹ in crore)
Fair value of the 30% interest already owned	*9,000*
Fair value of XYZ's identifiable net assets	*30,000*

Determine the accounting such business combination.

Solution

Paragraph 42 of Ind AS 103 provides that in a business combination achieved in stages, the acquirer shall remeasure its previously held equity interest in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in statement of profit and loss or other comprehensive income, as appropriate. In prior reporting periods, the acquirer may have recognized changes in the value of its equity interest in the acquiree in other comprehensive income. If so, the amount that was recognised in other comprehensive income shall be recognised on the same basis as would be required if the acquirer had disposed directly of the previously held equity interest.

Applying the above, PQR Ltd. records the following entry in its consolidated financial statements:

		(₹ in crore)	
		Debit	**Credit**
Identifiable net assets of XYZ Ltd.	Dr.	30,000	
Goodwill (W.N.1)	Dr.	4,000	
Foreign currency translation reserve	Dr.	100	
PPE revaluation reserve	Dr.	50	
To Cash			25,000
To Investment in associate -XYZ Ltd.			8,850
To Retained earnings (W.N.2)			50
To Gain on previously held interest in XYZ recognised in Profit or loss (W.N.3)			250
(To recognise acquisition of XYZ Ltd.)			

Join us t.me/caborntofight

Working Notes:

1. Calculation of Goodwill

	₹ in crore
Cash consideration	25,000
Add: Fair value of previously held equity interest in XYZ Ltd.	9,000
Total consideration	34,000
Less: Fair value of identifiable net assets acquired	(30,000)
Goodwill	4,000

2. The credit to retained earnings represents the reversal of the unrealized gain of ₹ 50 crore in Other Comprehensive Income related to the revaluation of property, plant and equipment. In accordance with Ind AS 16, this amount is not reclassified to profit or loss.

3. The gain on the previously held equity interest in XYZ Ltd. is calculated as follows: ₹

	₹ in crore
Fair Value of 30% interest in XYZ Ltd. at 1st April, 20X2	9,000
Carrying amount of interest in XYZ Ltd. at 1st April, 20X2	(8,850)
	150
Unrealised gain previously recognised in OCI	100
Gain on previously held interest in XYZ Ltd. recognised in profit or loss	250

*****

9.2 A Business Combination achieved without the transfer of Consideration

An acquirer sometimes obtains control of an acquiree without transferring consideration. The acquisition method of accounting for a business combination applies to those combinations. Such circumstances include:

(a) The acquiree repurchases a sufficient number of its own shares for an existing investor (the acquirer) to obtain control.

(b) Minority veto rights lapse that previously kept the acquirer from controlling an acquiree in which the acquirer held the majority voting rights.

(c) The acquirer and acquiree agree to combine their businesses by contract alone. The acquirer transfers no consideration in exchange for control of an acquiree and holds no

equity interests in the acquiree, either on the acquisition date or previously. Examples of business combinations achieved by contract alone include bringing two businesses together in a stapling arrangement or forming a dual listed corporation.

In a business combination achieved by contract alone, the acquirer shall attribute to the owners of the acquiree the amount of the acquiree's net assets recognised in accordance with this Indian Accounting Standard. In other words, the equity interests in the acquiree held by parties other than the acquirer are a non-controlling interest in the acquirer's post-combination financial statements even if the result is that all of the equity interests in the acquiree are attributed to the non-controlling interest.

Illustration 12: Business Combination Achieved by Contract Alone

Sita Ltd and Beta Ltd decides to combine together for forming a Dual Listed Corporation (DLC). As per their shareholder's agreement, both the parties will retain original listing and Board of DLC will be comprised of 10 members out of which 6 members will be of Sita Ltd and remaining 4 board members will be of Beta Ltd.

The fair value of Sita Ltd is ₹ 100 crores and fair value of Beta Ltd is ₹ 80 crores. The fair value of net identifiable assets of Beta Limited is ₹ 70 crores. Assume non-controlling Interest (NCI) to be measured at fair value.

Determine the goodwill to be recognised on acquisition.

Solution

Sita Ltd has more Board members and thereby have majority control in DLC. Therefore, Sita Ltd is identified as acquirer and Beta Ltd as acquiree.

Since no consideration has been transferred, the goodwill needs to be calculated as the difference of Part A and Part B:

Part A:

1) Consideration paid by Acquirer. – Nil

2) Controlling Interest in Acquiree – ₹ 80 crores

3) Acquirer's previously held interest – Nil

Part B:

Fair value of net identifiable asset – ₹ 70 crores

Goodwill is recognised as ₹ 10 crores (80 crores – 70 crores) in business combination achieved through contract alone when NCI is measured at fair value.

*****

9.3 Direct Cost of Acquisition

The direct cost of acquisition is not included in the determination of the purchase consideration. Costs which includes like finder's fees, due diligence cost accounting, legal fees, investment banker fees, even bonuses paid to employees for doing a successful acquisition will not be included in the cost of acquisition.

Illustration 13

Should stamp duty paid on acquisition of land pursuant to a business combination be capitalised to the cost of the asset or should it be treated as an acquisition related cost and accordingly be expensed off?

Solution

As per Ind AS 103, the acquisition-related costs incurred by an acquirer to affect a business combination are not part of the consideration transferred.

Paragraph 53 of Ind AS 103 states that, acquisition-related costs are costs the acquirer incurs to affect a business combination. Those costs include finder's fees; advisory, legal, accounting, valuation and other professional or consulting fees; general administrative costs, including the costs of maintaining an internal acquisitions department; and costs of registering and issuing debt and equity securities. The acquirer shall account for acquisition related costs as expenses in the periods in which the costs are incurred and the services are received, with one exception.

Note: The costs to issue debt or equity securities shall be recognised in accordance with Ind AS 32 and Ind AS 109.

The stamp duty payable for transfer of assets in connection with the business combination is an acquisition-related cost as described under paragraph 53 of Ind AS 103. Stamp duty is a cost incurred by the acquirer in order to affect the business combination and it is not part of the fair value exchange between the buyer and seller for the business. In such cases, the stamp duty is incurred to acquire the ownership rights in land in order to complete the process of transfer of assets as part of the overall business combination transaction, but it does not represent consideration paid to gain control over business from the sellers.

It may be noted that the accounting treatment of stamp duty incurred for separate acquisition of an item of property, plant and equipment (i.e. not as part of business combination) differs under Ind AS 16, Property, Plant and Equipment. Unlike Ind AS 16, the acquisition accounting as per Ind AS 103 requires assets and liabilities acquired in a business combination to be measured at fair value. While incurred in connection with a business combination, stamp duty does not increase the future economic benefits from the net assets comprising the business (which would be recognised at fair value) and hence cannot be capitalised. The examples of costs given in

Join us t.me/caborntofight

paragraph 53 is only an inclusive list; they are only indicative and do not preclude any other cost to be considered as acquisition-related cost. In the given case, the transfer of land and the related stamp duty is required to be accounted as part of the business combination transaction as per requirements of Ind AS 103 and not as a separate transaction under Ind AS.

Accordingly, stamp duty incurred in relation to land acquired as part of a business combination transaction are required to be recognised as an expense in the period in which the acquisition is completed and given effect to in the financial statements of the acquirer.

*****

Illustration 14

ABC Ltd. acquires PQR Ltd. on 30th June, 20X1. The assets acquired from PQR Ltd. include an intangible asset that comprises wireless spectrum license. For this intangible asset, ABC Ltd. is required to make an additional one-time payment to the regulator in PQR's jurisdiction in order for the rights to be transferred for its use.

Whether such additional payment to the regulator is an acquisition-related cost?

Solution

As per Ind AS 103, the acquisition-related costs incurred by an acquirer to affect a business combination are not part of the consideration transferred.

Paragraph 53 of Ind AS 103 states that, acquisition-related costs are costs the acquirer incurs to affect a business combination. Those costs include finder's fees; advisory, legal, accounting, valuation and other professional or consulting fees; general administrative costs, including the costs of maintaining an internal acquisitions department; and costs of registering and issuing debt and equity securities. The acquirer shall account for acquisition-related costs as expenses in the periods in which the costs are incurred and the services are received, with one exception. The costs to issue debt or equity securities shall be recognised in accordance with Ind AS 32 and Ind AS 109.

The payment to the regulator represents a transaction cost and will be regarded as acquisition related cost incurred to affect the business combination. Applying the requirements of para 53 of Ind AS 103, it should be expensed as it is incurred. Transfer of rights in the instant case cannot be construed to be separate from the business combination because the transfer of the rights to ABC Ltd. is an integral part of the business combination itself.

It may be noted that had the right been acquired separately (i.e. not as part of business combination), the transaction cost is required to be capitalised as part of the intangible asset as per the requirements of Ind AS 38, Intangible Assets.

9.4 Contingent Consideration

The consideration the acquirer transfers in exchange for the acquiree includes any asset or liability resulting from a contingent consideration arrangement. The acquirer shall recognise the acquisition-date fair value of contingent consideration as part of the consideration transferred in exchange for the acquiree.

The acquirer shall classify an obligation to pay contingent consideration as a liability or as equity on the basis of the definitions of an equity instrument and a financial liability in accordance with the requirement of Ind AS 32 'Financial Instruments: Presentation', or other applicable Indian Accounting Standards. The acquirer shall classify as an asset a right to the return of previously transferred consideration if specified conditions are met.

Fair value of the assets transferred or liability incurred should be measured on the acquisition date to determine the fair value. Any direct cost of acquisition should be recorded directly in profit and loss account and should not be included in purchase consideration.

Example 14:

Company A acquires Company B in April, 20X1 for cash. The acquisition agreement states that an additional ₹ 20 million of cash will be paid to B's former shareholders if B succeeds in achieving certain specified performance targets. A determines the fair value of the contingent consideration liability to be 15 million at the acquisition date. At a later date, the probability of meeting the said performance target becomes lower.

As certain consideration is based on achieving certain performance parameters in future, the consideration is contingent on achieving those parameters. As such, the transaction involves contingent consideration. Further, since the consideration is to be settled for a variable amount in cash, such consideration would be in the nature of financial liability rather than equity.

As at the acquisition date, the acquirer should consider the acquisition date fair value of contingent consideration as part of business combination. Accordingly, such recognition would increase goodwill (or reduce gain on bargain purchase, as the case may be).

In the above example, if the chance of meeting the performance criteria becomes less probable, then in such a case, the contingent consideration in the nature of financial liability should be remeasured and the impact for the change in the fair value should be recognised in statement of profit and loss.

10. PURCHASE PRICE ALLOCATION

10.1 Recognition of Assets and Liabilities of the Acquired Entity

As of the acquisition date, the acquirer shall recognise, separately from goodwill, the identifiable assets acquired, the liabilities assumed and any non-controlling interest in the acquiree.

The most important principle in a purchase price allocation exercise is to recognize and measure all the assets and liabilities acquired on the acquisition date.

10.1.1 Recognition

Following conditions have to be considered while recognising the assets and liabilities of the acquire:

- To qualify for recognition as part of applying the acquisition method, the identifiable assets acquired and liabilities assumed must meet the definitions of assets and liabilities in the Framework for the Preparation and Presentation of Financial Statements in accordance with Indian Accounting Standards* issued by the Institute of Chartered Accountants of India at the acquisition date. For example, costs the acquirer expects but is not obliged to incur in the future to effect its plan to exit an activity of an acquiree or to terminate the employment of or relocate an acquiree's employees are not liabilities at the acquisition date. Therefore, the acquirer does not recognise those costs as part of applying the acquisition method. Instead, the acquirer recognises those costs in its post combination financial statements in accordance with other Ind AS.
- Acquirer should only record the assets and liabilities recorded as a part of the business combination which means only those assets and liabilities which have been assumed as a part of the business combination deal should only be recorded and not any other assets which are not related to the acquisition to which other applicable Ind AS should be applied.
- When the acquirer applies the recognition principle under business combination it may record certain assets and liabilities which the acquiree had not recorded earlier in their financial statements. For example, the acquirer recognises the acquired identifiable intangible assets, such as a brand name, a patent or a customer relationship, that the

* For this Standard, acquirers are required to apply the definitions of an asset and a liability given in *Framework for Preparation and Presentation of Financial Statements in accordance with Indian Accounting Standards* rather than the *Conceptual Framework for Financial Reporting under Indian Accounting Standards issued in 2021*.

Join us t.me/caborntofight

acquiree did not recognise as assets in its financial statements because it developed them internally and charged the related costs to expense.

There are certain exceptions to specific assets and liabilities which have been discussed below.

- The assets and liabilities have to be classified as per the requirement of applicable Ind AS which will depend on the contractual terms, economic conditions etc.
- In some situations, Ind AS provide for different accounting depending on how an entity classifies or designates a particular asset or liability. Examples of classifications or designations that the acquirer shall make on the basis of the pertinent conditions as they exist at the acquisition date include but are not limited to:
  - ♦ classification of particular financial assets and liabilities as measured at fair value through profit or loss or at amortised cost, or as a financial asset measured at fair value through other comprehensive income in accordance with Ind AS 109, Financial Instruments;
  - ♦ designation of a derivative instrument as a hedging instrument in accordance with Ind AS 109; and
  - ♦ assessment of whether an embedded derivative should be separated from a host contract in accordance with Ind AS 109 (which is a matter of 'classification' as this Ind AS uses that term).

The only exception to the above principle is that for lease contract (in which acquiree is the lessor as either an operating lease or a finance lease) and insurance contracts classification will be based on the basis of the conditions existing at inception and not on acquisition date. Therefore, they are not reassessed at the acquisition date, unless they are modified at that date.

10.2 Measurement Principle

The assets and liabilities recognized based on the aforesaid recognition principles has to be measured based on the following principles:

- The acquirer shall measure the identifiable assets acquired and the liabilities assumed at their acquisition-date fair values.
- For each business combination, the acquirer shall measure at the acquisition date components of non-controlling interest (under existing AS it is called as minority interest) in the acquiree that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation at either:
  - ♦ fair value; or

- ♦ The present ownership instruments' proportionate share in the recognised amounts of the acquiree's identifiable net assets

- All other components of non-controlling interests shall be measured at their acquisition date fair values, unless another measurement basis is required by Ind AS.

10.2.1 Exception to the recognition or measurement principle

The exception principles laid out in this standard for recognition or measurement of certain assets and liabilities are only limited to acquisition date accounting and may be different than the requirements of other accounting standards. The application of the above principles may result in two scenarios:

- An asset or liability which otherwise would not have been recorded gets recorded.
- The assets and liabilities are measured at a value other than the acquisition date fair values.

Items	Guidance under Ind AS 103
Contingent liability	Ind AS 37, Provisions, Contingent Liabilities and Contingent Assets, defines a contingent liability as: (a) a possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity; or (b) a present obligation that arises from past events but is not recognised because: i. it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or ii. the amount of the obligation cannot be measured with sufficient reliability. The requirements in Ind AS 37 do not apply in determining which contingent liabilities to recognise as of the acquisition date. Instead, the acquirer shall recognise as of the acquisition date a contingent liability assumed in a business combination if it is a present obligation that arises from past events and its fair value can be measured reliably. Therefore, contrary to Ind AS 37, the acquirer recognises a contingent liability assumed in a business combination at the acquisition date even if it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation.

Join us t.me/caborntofight

Summary of above:

Outcome	**Ind AS 37**	**Business Combination**
Possible obligation	Not recognised	Not recognised
Present obligation – not probable that an outflow of economic benefits will occur	Not recognised	Recognised if reliably measured
Present obligation – probable that an outflow of economic benefits will occur, but cannot be measured reliably	Not recognised	Not recognised

Example 15

A suit for damages worth ₹ 10 million was filed on Company B for alleged breach of certain contract provisions. Company B had disclosed the same as a contingent liability in its financial statements, as it considered that it is a present obligation for which it was not probable that the amount would be payable. Company A acquire Company B and determines the fair value of the contingent liability to be ₹ 2 million.

Company A would recognise ₹ 2 million in its financial statements as part of acquisition accounting, even if it is not probable that payment will be required to settle the obligation.

Income taxes	As per the requirement of Ind AS 12, no deferred tax consequence should be recorded on initial recognition of deferred tax **except** assets and liabilities acquired during business combination. Accordingly, the acquirer shall recognise and measure a deferred tax asset or liability arising from the assets acquired and liabilities assumed in a business combination in accordance with Ind AS 12, Income Taxes. The acquirer shall account for the potential tax effects of temporary differences and carry forwards of an acquiree that exist at the acquisition date or arise as a result of the acquisition in accordance with Ind AS 12.
Employee benefits	The acquirer records the fair value of the obligations for any post retirement obligation as per the principles of Ind AS 19 which is an exception of the general fair value rule.
Indemnification assets	The seller in a business combination may contractually indemnify the acquirer for the outcome of a contingency or uncertainty related to all or part of a specific asset or liability. For example, the seller may indemnify the acquirer against losses above a specified amount on a liability arising from a particular contingency; in other words, the seller will guarantee that the acquirer's liability will not exceed a specified amount. As a result, the

	acquirer obtains an indemnification asset. The acquirer shall recognise an indemnification asset at the same time that it recognises the indemnified item measured on the same basis as the indemnified item, subject to the need for a valuation allowance for uncollectible amounts.

Example 16:

Company A acquires Company B in a business combination on 1st April, 20X1. B is being sued by one of its customers for breach of contract for ₹ 250. The sellers of B provide indemnification to A for the reimbursement of any losses greater than ₹ 100. There are no collectability issues around this indemnification. At the acquisition date, Company A determined that there is a present obligation and therefore the fair value of the contingent liability of ₹ 250 is recognised by A in the acquisition accounting. In the acquisition accounting A also recognises an indemnification asset of ₹ 150 (₹ 250 – ₹ 100).

Illustration 15

ABC Ltd. acquired a beverage company PQR Ltd. from XYZ Ltd. At the time of the acquisition, PQR Ltd. is the defendant in a court case whereby certain customers of PQR Ltd. have alleged that its products contain pesticides in excess of the permissible levels that have caused them health damage.

PQR Ltd. is being sued for damages of ₹ 2 crore. XYZ Ltd. has indemnified ABC Ltd. for the losses, if any, due to the case for amount up to ₹ 1 crore. The fair value of the contingent liability for the court case is ₹ 70 lakh.

How should ABC Ltd. account for the contingent liability and the indemnification asset? What if the fair value of the liability is ₹ 1.2 crore instead of ₹ 70 lakh.

Solution

In the current scenario, ABC Ltd. measures the identifiable liability of entity PQR Ltd. at ₹ 70 lakh and also recognises a corresponding indemnification asset of ₹ 70 lakhs on its consolidated balance sheet. The net impact on goodwill from the recognition of the contingent liability and associated indemnification asset is nil.

However, in the case where the liability's fair value is more than ₹ 1 crore ie. ₹ 1.2 crore, the indemnification asset will be limited to ₹ 1 crore only.

*****

Illustration 16

ABC Ltd. pays ₹ 50 crore to acquire PQR Ltd. from XYZ Ltd. PQR Ltd. manufactured products containing fiber glass and has been named in 10 class actions concerning the effects of these fiber glass. XYZ Ltd. agrees to indemnify ABC Ltd. for the adverse results of any court cases up

to an amount of ₹ 10 crore. The class actions have not specified amounts of damages and past experience suggests that claims may be up to ₹ 1 crore each, but that they are often settled for small amounts.

ABC Ltd. makes an assessment of the court cases and decides that due to the potential variance in outcomes, the contingent liability cannot be measured reliably and accordingly no amount is recognised in respect of the court cases.

How should indemnification asset be accounted for?

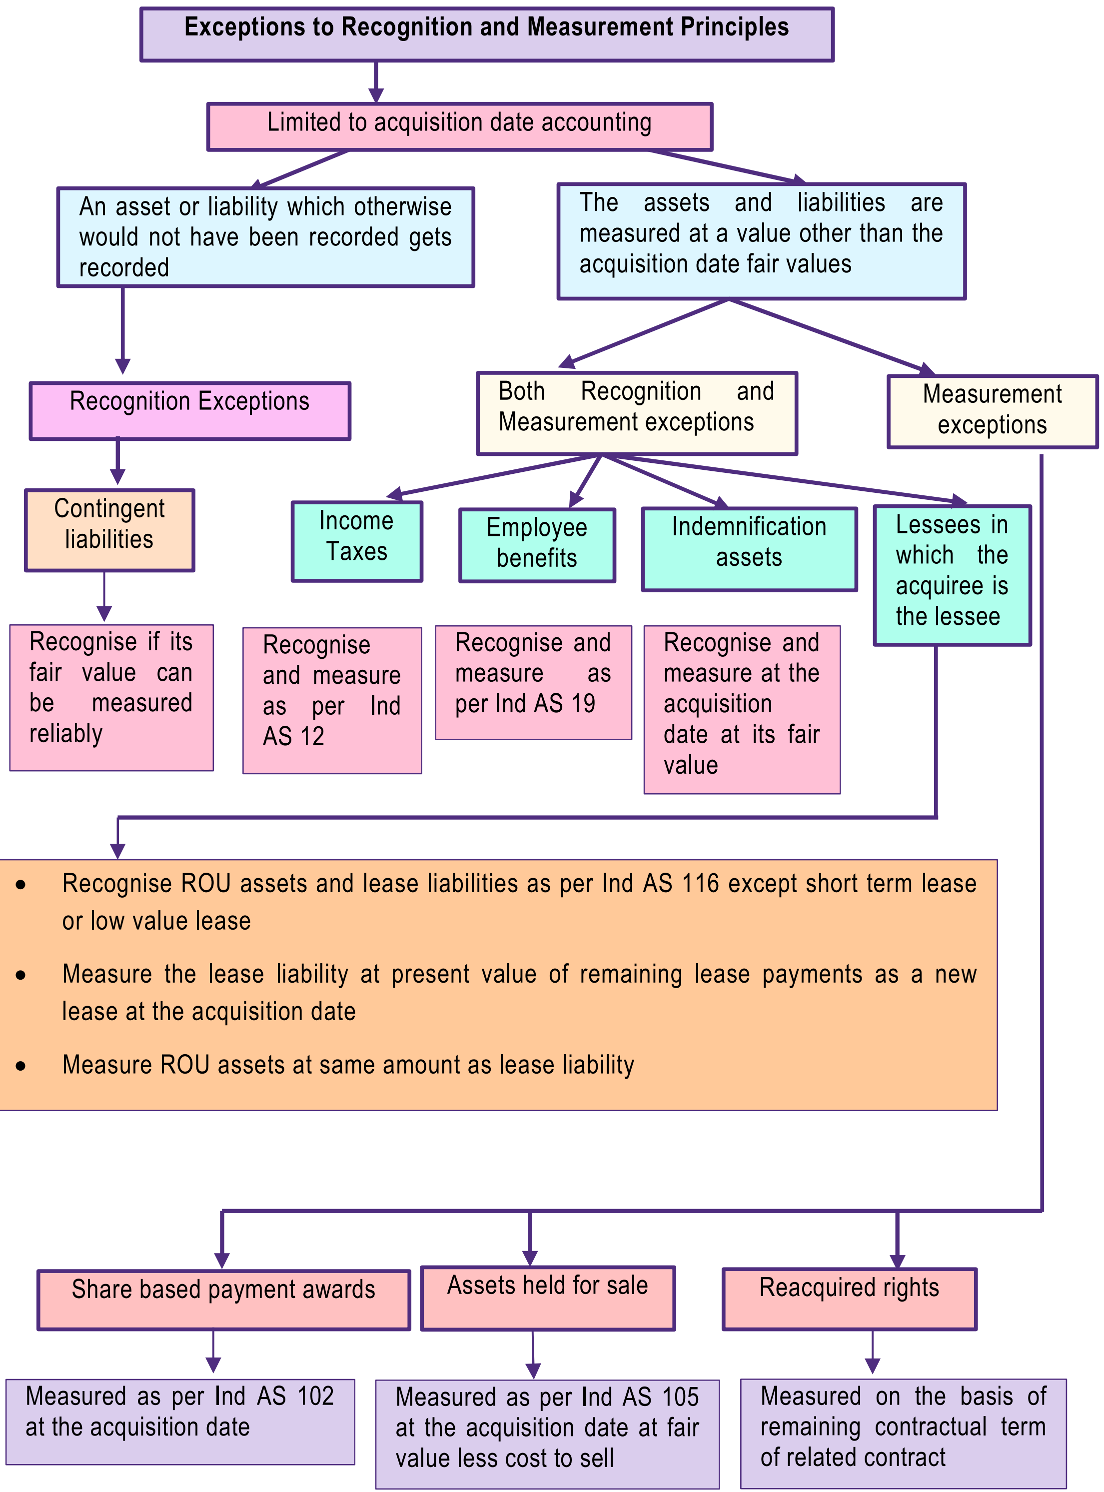
Solution

Since no liability is recognised in the given case, ABC Ltd. will also not recognise an indemnification asset as part of the business combination accounting.

*****

Reacquired rights	These are the rights which the acquirer before acquisition may have granted to the acquiree to use certain assets which belongs to the acquirer. It does not matter whether the asset was recorded in the financial statement of the acquirer or not. For example, license to use the brand name, Franchisee rights etc. if an acquirer acquires an acquiree which had certain rights granted to it by the acquirer then the business combination results in settlement of the right and accordingly any settlement gain or loss should be considered as a separate transaction from business combination and will be recorded in the financial statement of the acquirer. The acquirer shall measure the value of a reacquired right recognised as an intangible asset on the basis of the remaining contractual term of the related contract without considering the effect of potential renewals.
Intangible assets	The acquirer shall record separately from Goodwill, the identifiable intangible acquired in a business combination. An intangible asset is identifiable if it meets either the separability criterion or the contractual-legal criterion. (Refer a section below on intangible asset highlighting detailed guidance on recognition and measurement criteria)
Share based payment transactions	The acquirer shall measure a liability or an equity instrument related to share-based payment transactions of the acquiree or the replacement of an acquiree's share-based payment transactions with share-based payment transactions of the acquirer in accordance with the method in Ind AS 102, Share-based Payment, at the acquisition date.

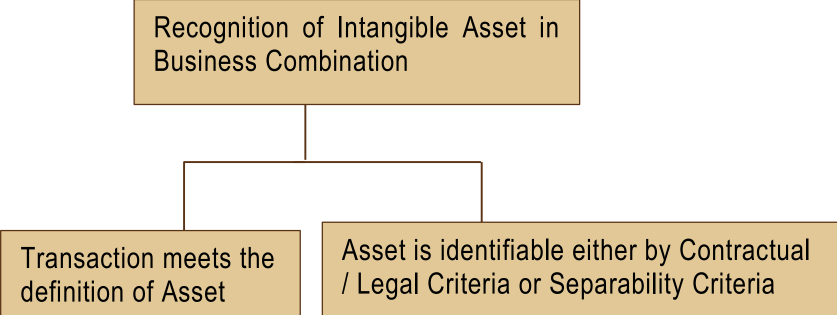
Assets held for sale	The acquirer shall measure an acquired non-current asset (or disposal group) that is classified as held for sale at the acquisition date in accordance with Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations, at fair value less costs to sell in accordance with that Ind AS.
Leases	**Acquiree is a lessee** • The acquirer shall recognise right-of-use assets and lease liabilities for leases identified in accordance with Ind AS 116. • The acquirer is not required to recognise right-of-use assets and lease liabilities for: (a) leases for which the lease term ends within 12 months of the acquisition date; or (b) leases for which the underlying asset is of low value. • The acquirer shall measure the lease liability at the present value of the remaining lease payments as if the acquired lease were a new lease at the acquisition date. • The acquirer shall measure the right-of-use asset at the same amount as the lease liability, adjusted to reflect favourable or unfavourable terms of the lease when compared with market terms. **Acquiree is a lessor** In measuring the acquisition-date fair value of an asset, the acquirer shall take into account the terms of the lease. The acquirer does not recognise a separate asset or liability if the terms of an operating lease are either favourable or unfavourable when compared with market terms.
Assembled workforce	The acquirer subsumes into Goodwill the value of an acquired intangible asset that is not identifiable as of the acquisition date. For example, an acquirer may attribute value to the existence of an assembled workforce, which is an existing collection of employees that permits the acquirer to continue to operate an acquired business from the acquisition date. An assembled workforce does not represent the intellectual capital of the skilled workforce—the (often specialised) knowledge and experience that employees of an acquiree bring to their jobs. Because the assembled workforce is not an identifiable asset to be recognised separately from goodwill, any value attributed to it is subsumed into goodwill.



Exceptions to Recognition and Measurement Principles
Limited to acquisition date accounting
An asset or liability which otherwise would not have been recorded gets recorded
The assets and liabilities are measured at a value other than the acquisition date fair values
Recognition Exceptions
Both Recognition and Measurement exceptions
Measurement exceptions
Contingent liabilities
Income Taxes
Employee benefits
Indemnification assets
Lessees in which the acquiree is the lessee
Recognise if its fair value can be measured reliably
Recognise and measure as per Ind AS 12
Recognise and measure as per Ind AS 19
Recognise and measure at the acquisition date at its fair value
Recognise ROU assets and lease liabilities as per Ind AS 116 except short term lease or low value lease
Measure the lease liability at present value of remaining lease payments as a new lease at the acquisition date
Measure ROU assets at same amount as lease liability
Share based payment awards
Assets held for sale
Reacquired rights
Measured as per Ind AS 102 at the acquisition date
Measured as per Ind AS 105 at the acquisition date at fair value less cost to sell
Measured on the basis of remaining contractual term of related contract

10.3 Intangible Assets

As explained above an intangible asset should be recorded separately from Goodwill if either the separability criteria is met or it arises out of contractual legal criterion.



10.3.1 Contractual Legal criterion

An intangible asset that meets the contractual-legal criterion is identifiable even if the asset is not transferable or separable from the acquiree or from other rights and obligations.

For example:

a. an acquiree owns and operates a nuclear power plant. The licence to operate that power plant is an intangible asset that meets the contractual-legal criterion for recognition separately from goodwill, even if the acquirer cannot sell or transfer it separately from the acquired power plant. An acquirer may recognise the fair value of the operating licence and the fair value of the power plant as a single asset for financial reporting purposes if the useful lives of those assets are similar.

b. an acquiree owns a technology patent. It has licensed that patent to others for their exclusive use outside the domestic market, receiving a specified percentage of future revenue in foreign exchange. Both the technology patent and the related licence agreement meet the contractual-legal criterion for recognition separately from goodwill even if selling or exchanging the patent and the related licence agreement separately from one another would not be practical.

10.3.2 Separability criteria

The separability criterion means that an acquired intangible asset is **capable** of being separated or divided from the acquiree and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, identifiable asset or liability. An intangible asset that the acquirer would be able to sell, license or otherwise exchange for something else of value meets the separability criterion even if the acquirer does not intend to sell, license or otherwise exchange it. An acquired intangible asset meets the separability criterion if there is

Join us t.me/caborntofight

evidence of exchange transactions for that type of asset or an asset of a similar type, even if those transactions are infrequent and regardless of whether the acquirer is involved in them.

Example 17:

Customer and subscriber lists are frequently licensed and thus meet the separability criterion. Even if an acquiree believes its customer lists have characteristics different from other customer lists, the fact that customer lists are frequently licensed generally means that the acquired customer list meets the separability criterion. However, a customer list acquired in a business combination would not meet the separability criterion if the terms of confidentiality or other agreements prohibit an entity from selling, leasing or otherwise exchanging information about its customers.

An intangible asset that is not individually separable from the acquiree or combined entity meets the separability criterion if it is separable in combination with a related contract, identifiable asset or liability.

For example:

a. market participants exchange deposit liabilities and related depositor relationship intangible assets in observable exchange transactions. Therefore, the acquirer should recognise the depositor relationship intangible asset separately from goodwill.

b. an acquiree owns a registered trademark and documented but unpatented technical expertise used to manufacture the trademarked product. To transfer ownership of a trademark, the owner is also required to transfer everything else necessary for the new owner to produce a product or service indistinguishable from that produced by the former owner. Because the unpatented technical expertise must be separated from the acquiree or combined entity and sold if the related trademark is sold, it meets the separability criterion.

Accordingly, as per the guidance above it follows that identification of intangible asset will be judgemental and will vary in each case.

Following are the possible sources of information and broad indicator to be used to identify any possible intangible separately from goodwill:

A. Internal sources:

- **Financial statements of the acquiree-**
  - significant R&D cost may be indicator that there may be possible technology related intangible.
  - Significant sales promotion or marketing cost- this is a strong indicator of marketing related intangible like distributor network, Marketing collaterals etc.

Join us t.me/caborntofight

- Customer acquisition cost- lot of companies spend money to acquire new customers like online e-commerce companies provide incentive to register a customer as a first- time user or download their app. This may be a strong indicator of existence of customer list as an intangible.

- **Share purchase agreement-** This can also be a strong indicator of existence of intangible in the form of any technical know-how, trademarks or patent which are included in the agreement.

- **Purpose of acquisition-** The reason for acquisition may also indicate the possible intangible to be recorded. For e.g. Coca Cola acquired Thumps Up with an intention to close the brand which will result in increase in its market share. Accordingly, this will also be a possible intangible asset.

Illustration 17

Company A, FMCG company acquires an online e-commerce company E, with the intention to start its retail business. The e-commerce company has over the period have 10 million registered users. However, the e-commerce company E does not have any intention to sell the customer list.

Should this customer list be recorded as an intangible in a business combination?

Solution

In this situation the customer database does not give rise to legal or contractual right. Accordingly, the assessment of its separability will be assessed. The database can be useful to other players and Company E has the ability to transfer this to them. Accordingly, the intention not to transfer will not affect the assessment whether to record this as an intangible or not. Hence customer list should be recorded as an intangible in a business combination.

*****

Illustration 18

ABC Ltd. a pharmaceutical group acquires XYZ Ltd. another pharmaceutical business. XYZ Ltd. has incurred significant research costs in connection with two new drugs that have been undergoing clinical trials. Out of the two drugs, one drug has not been granted necessary regulatory approvals. However, ABC Ltd. expects that approval will be given within two years. The other drug has recently received regulatory approval. The drugs' revenue-earning potential was one of the principal reasons why entity ABC Ltd. decided to acquire entity XYZ Ltd.

Whether the research and development on either of the drugs be recognised as an intangible asset in the books of ABC Ltd.?

Join us t.me/caborntofight

Solution

Ind AS 38, Intangible Assets provides explicit guidance on recognition of acquired in-process research and development.

Paragraph 21 of Ind AS 38 provides guidance regarding general recognition conditions which require it to be probable that expected future economic benefits will flow to the entity before an intangible asset can be recognised and for the cost to be measured reliably.

As per paragraph 33 of Ind AS 38, both of the standard's general recognition criteria, i.e. probability of benefits and reliable measurement, are always considered to be satisfied for intangible assets acquired in a business combination.

The fair value of an intangible asset reflects expectations about the probability of these benefits, despite uncertainty about the timing or the amount of the inflow. There will be sufficient information to measure the fair value of the asset reliably if it is separable or arises from contractual or other legal rights. If there is a range of possible outcomes with different probabilities, this uncertainty is taken into account in the measurement of the asset's fair value.

Paragraph 34 of Ind AS 38, provides that in accordance with this Standard and Ind AS 103, an acquirer recognises at the acquisition date, separately from goodwill, an intangible asset of the acquiree, irrespective of whether the asset had been recognised by the acquiree before the business combination.

This means that the acquirer recognises as an asset separately from goodwill an in-process research and development project of the acquiree if the project meets the definition of an intangible asset. An acquiree's in-process research and development project meets the definition of an intangible asset when it:

(a) meets the definition of an asset; and

(b) is identifiable, i.e. is separable or arises from contractual or other legal rights.

In accordance with above,

(i) The fair value of the first drug reflects the probability and the timing of the regulatory approval being obtained. As per the standard, the recognition criterion of probable future economic benefits is considered to be satisfied in respect of the asset acquired accordingly an asset is recognised. Subsequent expenditure on an in-process research or development project acquired separately is to be dealt with in accordance with paragraph 43 of Ind AS 38.

(ii) The rights to the second drug also meet the recognition criteria in Ind AS 8 and are recognised. The approval means it is probable that future economic benefits will flow to ABC Ltd. This will be reflected in the fair value assigned to the intangible asset.

© The Institute of Chartered Accountants of India

Merged By CA - Born To Fight

Thus, recognising in-process research and development as an asset on acquisition applies different criteria to those that are required for internal projects. The research costs of internal R&D projects may under no circumstances be capitalised as an intangible asset. It may be pertinent to note that entities will be required to recognise on acquisition some research and development expenditure that they would not have been able to recognise if it had been an internal project. Although the amount attributed to the project is accounted for as an asset, Ind AS 38 requires that any subsequent expenditure incurred after the acquisition of the project is to be accounted for in accordance with paragraphs 54 to 62 of Ind AS 38.

*****

10.3.3 Assembled workforce and other items that are not identifiable

The acquirer subsumes into goodwill the value of an acquired intangible asset that is not identifiable as of the acquisition date. For example, an acquirer may attribute value to the existence of an assembled workforce, which is an existing collection of employees that permits the acquirer to continue to operate an acquired business from the acquisition date.

An assembled workforce does not represent the intellectual capital of the skilled workforce — the (often specialised) knowledge and experience that employees of an acquiree bring to their jobs. Because the assembled workforce is not an identifiable asset to be recognised separately from goodwill, any value attributed to it is subsumed into goodwill.

The acquirer also subsumes into goodwill any value attributed to items that do not qualify as assets at the acquisition date. For example, the acquirer might attribute value to potential contracts the acquiree is negotiating with prospective new customers at the acquisition date. Because those potential contracts are not themselves assets at the acquisition date, the acquirer does not recognise them separately from goodwill. The acquirer should not subsequently reclassify the value of those contracts from goodwill for events that occur after the acquisition date. However, the acquirer should assess the facts and circumstances surrounding the events occurring shortly after the acquisition to determine whether a separately recognisable intangible asset existed at the acquisition date.

After initial recognition, an acquirer accounts for intangible assets acquired in a business combination in accordance with the provisions of Ind AS 38, Intangible Assets. However, as described in paragraph 3 of Ind AS 38, the accounting for some acquired intangible assets after initial recognition is prescribed by other Ind AS.

The identifiability criteria determine whether an intangible asset is recognised separately from goodwill. However, the criteria neither provides guidance for measuring the fair value of an intangible asset nor restrict the assumptions used in measuring the fair value of an intangible asset. For example, the acquirer would take into account the assumptions that market

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

participants would use when pricing the intangible asset, such as expectations of future contract renewals, in measuring fair value. It is not necessary for the renewals themselves to meet the identifiability criteria.

10.4 Reacquired Rights

As part of a business combination, an acquirer may reacquire a right that it had previously granted to the acquiree to use one or more of the acquirer's recognised or unrecognised assets. Examples of such rights include a right to use the acquirer's trade name under a franchise agreement or a right to use the acquirer's technology under a technology licensing agreement. A reacquired right is an identifiable intangible asset that the acquirer recognises separately from goodwill.

If the terms of the contract giving rise to a reacquired right are favourable or unfavourable relative to the terms of current market transactions for the same or similar items, the acquirer shall recognise a settlement gain or loss.

Illustration 19

Vadapav Ltd. is a successful company has number of own stores across India and also offers franchisee to other companies. Efficient Ltd. is one of the franchisee of Vadapav Ltd. and it operates number of store in south India. Vadapav Ltd. decided to acquire Efficient Ltd. due to its huge distribution network and accordingly purchased the outstanding shares on 1st April, 20X2. On the acquisition date, Vadapav Ltd. determines that the license agreement reflects current market terms.

Determine the accounting for franchisee right by Vadapav Ltd. at the time of acquisition of business.

Solution

Vadapav will record the franchisee right as an intangible asset (reacquired right) while doing purchase price allocation and since it is at market terms no gain or loss will be recorded on settlement.

*****

Illustration 20

ABC Ltd. acquires PQR Ltd. for a consideration of ₹ 1 crore. Four years ago, ABC Ltd. had granted a ten-year license allowing PQR Ltd. to operate in Europe. The cost of the license was ₹ 2,50,000. The contract allows either party to terminate the franchise at a cost of the unexpired initial fee plus 20%. At the date of acquisition, the settlement amount is ₹ 1,80,000 [(₹ 2,50,000 x 6/10) + 20%].

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

ABC Ltd. has acquired PQR Ltd., because it sees high potential in the European market and wishes to exploit it. ABC Ltd. calculates that under current economic conditions and at current prices it could grant a six-year franchise for a price of ₹ 4,50,000.

How is the license accounted for as part of the business combination?

Solution

Paragraph B51 of Ind AS 103 provides that "the acquirer and acquiree may have a relationship that existed before they contemplated the business combination, referred to here as a 'pre-existing relationship'. A pre-existing relationship between the acquirer and acquiree may be contractual (for example, vendor and customer or licensor and licensee) or non-contractual (for example, plaintiff and defendant)."

Further, paragraph B52 of Ind AS 103 provides that "if the business combination in effect settles a pre-existing relationship, the acquirer recognises a gain or loss, measured as follows:

(a) for a pre-existing non-contractual relationship (such as a lawsuit), fair value.

(b) for a pre-existing contractual relationship, the lesser of (i) and (ii):

  (i) the amount by which the contract is favourable or unfavourable from the perspective of the acquirer when compared with terms for current market transactions for the same or similar items. (An unfavourable contract is a contract that is unfavourable in terms of current market terms. It is not necessarily an onerous contract in which the unavoidable costs of meeting the obligations under the contract exceed the economic benefits expected to be received under it.)

  (ii) the amount of any stated settlement provisions in the contract available to the counterparty to whom the contract is unfavourable.

  If (ii) is less than (i), the difference is included as part of the business combination accounting.

The amount of gain or loss recognised may depend in part on whether the acquirer had previously recognised a related asset or liability, and the reported gain or loss therefore may differ from the amount calculated by applying the above requirements."

Based on the above in the instant case, the license is recognised at ₹ 4,50,000, the fair value at market rates of a license based on the remaining contractual life.

The gain or loss on settlement of the contract is the lower of:

- ₹ 3,00,000, which is the amount by which the right is unfavorable to ABC Ltd. compared to market terms. This is the difference between the amount that ABC Ltd. could receive for

granting a similar right, ₹ 4,50,000, compared to the carrying value (or the unamortised value) that it was granted for, ₹ 1,50,000 (2,50,000 X 6/10).

- ₹ 1,80,000, which is the amount that ABC Ltd. would have to pay to terminate the right at the date of acquisition.

The loss on settlement of the contract is ₹ 1,80,000. Therefore, out of the ₹ 1 crore paid, ₹ 98.2 lakh is accounted for as consideration for the business combination and ₹ 1,80,000 is accounted for separately as a settlement loss on the re-acquired right.

*****

10.5 Goodwill – Recognition and Measurement

The acquirer shall recognise Goodwill as of the acquisition date measured as the excess of (a) over (b) below:

a) the aggregate of:

   i. the purchase consideration transferred at acquisition-date fair value;

   ii. the amount of any non-controlling interest in the acquiree measured in accordance with this Ind AS (refer non-controlling section); and

   iii. in a business combination achieved in stages, the acquisition-date fair value of the acquirer's previously held equity interest in the acquiree.

b) the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed measured in accordance with this Ind AS.

In a business combination in which the acquirer and the acquiree (or its former owners) exchange only equity interests, the acquisition-date fair value of the acquiree's equity interests may be more reliably measurable than the acquisition-date fair value of the acquirer's equity interests. If so, the acquirer shall determine the amount of goodwill by using the acquisition-date fair value of the acquiree's equity interests instead of the acquisition-date fair value of the equity interests transferred. To determine the amount of goodwill in a business combination in which no consideration is transferred, the acquirer shall use the acquisition-date fair value of the acquirer's interest in the acquiree in place of the acquisition-date fair value of the consideration transferred (paragraph 32(a)(i)).

10.6 Bargain Purchase

In extremely rare circumstances, an acquirer will make a bargain purchase in a business combination in which the value of net assets acquired in a business combination exceeds the purchase consideration.

© The Institute of Chartered Accountants of India

The acquirer shall recognise the resulting gain in other comprehensive income on the acquisition date and accumulate the same in equity as capital reserve, if the reason for bargain purchase gain is clear and evidence exist. If there does not exist clear evidence of the underlying reasons for classifying the business combination as a bargain purchase, then the gain shall be recognised directly in equity as capital reserve.

The gain shall be attributed to the acquirer and there will no allocation to the non-controlling shareholders.

A bargain purchase might happen, for example, in a business combination that is a forced sale in which the seller is acting under compulsion.

The Ind AS itself acknowledges that it is very rare that a bargain purchase in a business combination will arise and accordingly the standard re-emphasises the above point by requiring the entities to reassess and identify the clear reason why it is a bargain purchase business combination. For e.g. acquisition of business in a bankruptcy sale, or sale of business due to a regulatory requirement.

Example 18:

Entity X is one of the largest liquor manufacturing company in the world and it acquires another Entity Y which has significant presence in India and UK. However, the competition commission in UK has issued orders to sell one division of the UK assets of Entity Y in order to comply with the local competition regulation in UK within a specified timeline. Entity Z another boutique liquor manufacturer realises the opportunity and purchase the assets of Entity Y from Entity X.

In the given case above it is more likely than not that there could be an element of bargain purchase as the Entity X was under compulsion to sell the assets within a specified timeline.

As mentioned above before recognising a gain on a bargain purchase, the acquirer shall determine whether there exists clear evidence of the underlying reasons for classifying the business combination as a bargain purchase. If such evidence exists, the acquirer shall reassess whether it has correctly identified all of the assets acquired and all of the liabilities assumed and shall recognise any additional assets or liabilities that are identified in that review.

The acquirer shall then review the procedures used to measure the amounts this Ind AS requires to be recognised at the acquisition date for all of the following:

- the identifiable assets acquired and liabilities assumed;
- the non-controlling interest in the acquiree, if any;
- for a business combination achieved in stages, the acquirer's previously held equity interest in the acquiree; and
- the consideration transferred.

© The Institute of Chartered Accountants of India

Merged By CA - Born To Fight

The objective of the review is to ensure that the measurements appropriately reflect consideration of all available information as of the acquisition date.

Illustration 21

On 1st January, 20X1, A Ltd. acquires 80 per cent of the equity interests of B Ltd. in exchange for cash of ₹ 15 crore. The former owners of B Ltd. were required to dispose off their investments in B Ltd. by a specified date, and accordingly they did not have sufficient time to find potential buyers. A qualified valuation professional hired by the management of A Ltd. measures the identifiable net assets acquired, in accordance with the requirements of Ind AS 103, at ₹ 20 crore and the fair value of the 20 per cent non-controlling interest in B Ltd. at ₹ 4.2 crore. How should A Ltd. recognise the above bargain purchase?

Solution

The amount of B Ltd.'s identifiable net assets i.e., ₹ 20 crore exceeds the fair value of the consideration transferred plus the fair value of the non-controlling interest in B Ltd. i.e. ₹ 19.2 crore. Therefore, A Ltd. should review the procedures it used to identify and measure the net assets acquired and the fair value of non-controlling interest in B Ltd. and the consideration transferred. After the review, A Ltd. decides that the procedures and resulting measures were appropriate. A Ltd. measures the gain on its purchase of the 80 per cent interest at ₹ 80 lakh, as the difference between the amount of the identifiable net assets which is ₹ 20 crore and the sum of purchase consideration and fair value of non-controlling interest, which is ₹ 19.2 crore (cash consideration of ₹ 15 crore and fair value of non-controlling interest of ₹ 4.2 crore).

Assuming there exists clear evidence of the underlying reasons for classifying the business combination as a bargain purchase, the gain on bargain purchase of 80 per cent interest calculated at ₹ 80 lakh, which will be recognised in other comprehensive income on the acquisition date and accumulated the same in equity as capital reserve.

If the acquirer chose to measure the non-controlling interest in B Ltd. on the basis of its proportionate share of identifiable net assets of the acquiree, the recognised amount of the non-controlling interest would be ₹ 4 crore (₹ 20 crore × 0.20). The gain on the bargain purchase then would be ₹ 1 crore (₹ 20 crore – (₹ 15 crore + ₹ 4 crore)).

10.7 Measurement Period

Ind AS 103 provides a measurement period window wherein if all the required information is not available on the acquisition date then the entity will be required to do the purchase price allocation on a provision basis. During the measurement period, the acquirer shall retrospectively adjust the provisional amounts recognised at the acquisition date to reflect new information obtained about facts and circumstances that existed as of the acquisition date and, if known, would have affected the measurement of the amounts recognised as of that date.

During the measurement period, the acquirer shall also recognise additional assets or liabilities if new information is obtained about facts and circumstances that existed as of the acquisition date.

The measurement period ends as soon as the acquirer receives the information it was seeking about facts and circumstances that existed as of the acquisition date or learns that more information is not obtainable. However, the measurement period shall not exceed one year from the acquisition date.

The measurement period provides the acquirer with a reasonable time to obtain the information necessary to identify and measure the following as of the acquisition date in accordance with the requirements of this Ind AS:

- the identifiable assets acquired, liabilities assumed and any non-controlling interest in the acquiree;
- the consideration transferred for the acquiree (or the other amount used in measuring goodwill);
- in a business combination achieved in stages, the equity interest in the acquire previously held by the acquirer; and
- the resulting goodwill or gain on a bargain purchase.

Any change i.e. increase or decrease in the net assets acquired due to new information available during the measurement period which existed on the acquisition date will be adjusted against goodwill.

However, after the measurement period ends, any change in the value of assets and liabilities due to an information which existed on the valuation date will be accounted as an error as per Ind AS 8, Accounting policies, Changes in Accounting Estimates and Errors.

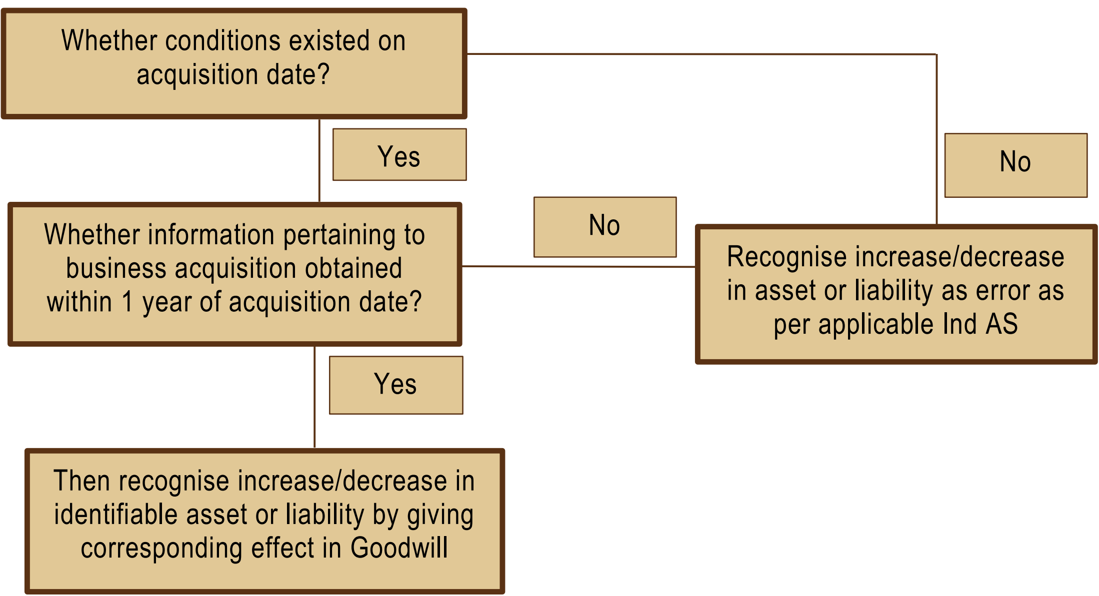

Illustration 22

Entity X acquired 100% shareholding of Entity Y on 1st April, 20X1 and had completed the preliminary purchase price allocation and accordingly recorded net assets of ₹ 100 million against the purchase consideration of 150 million. Entity Y had significant carry forward losses on which deferred tax asset was not recorded due to lack of convincing evidence on the acquisition date. However, on 31st March, 20X2, Entity Y won a significant contract which is expected to generate enough taxable income to recoup the losses. Accordingly, the deferred tax asset was recorded on the carry forward losses on 31st March, 20X2.

Whether the aforesaid losses can be adjusted with the Goodwill recorded based on the preliminary purchase price allocation?

Solution

No, as per the requirement of Ind AS 103, changes to the net assets are allowed which results from the discovery of a fact which existed on the acquisition date. However, change of facts resulting in recognition and de-recognition of assets and liabilities after the acquisition date will be accounted in accordance with other Ind AS. In the above scenario deferred tax asset was not eligible for recognition on the acquisition date and accordingly the new contract on 31st March, 20X2 will tantamount to change of estimate and accordingly will not impact the Goodwill amount.

Merged By CA - Born To Fight

Illustration 23

ABC Ltd. acquires XYZ Ltd. in a business combination on 15th January, 20X1. Few days before the date of acquisition, one of XYZ Ltd.'s customers had claimed that certain amounts were due by XYZ Ltd. under penalty clauses for completion delays included in the contract.

ABC Ltd. evaluates the dispute based on the information available at the date of acquisition and concludes that XYZ Ltd. was responsible for at least some of the delays in completing the contract. Based on the evaluation, ABC Ltd. recognises ₹ 1 crore towards this liability which is its best estimate of the fair value of the liability to the customer based on the information available at the date of acquisition.

In October, 20X1 (within the measurement period), the customer presents additional information as per which ABC Ltd. concludes the fair value of liability on the date of acquisition to be ₹ 2 crore.

ABC Ltd. continues to receive and evaluate information related to the claim after October, 20X1. Its evaluation doesn't change till February, 20X2 (i.e. after the measurement period), when it concludes that the fair value of the liability for the claim at the date of acquisition is ₹ 1.9 crore. ABC Ltd. determines that the amount that would be recognised with respect to the claim under Ind AS 37, Provisions, Contingent Liabilities and Contingent Assets as at February, 20X2 is ₹ 2.2 crore.

How should the adjustment to the provisional amounts be made in the financial statements during and after the measurement period?

Solution

The consolidated financial statements of ABC Ltd. for the year ended 31st March, 20X1 should include ₹ 1 crore towards the contingent liability in relation to the customer claim.

When the customer presents additional information in support of its claim, the incremental liability of ₹ 1 crore (₹ 2 crore – ₹ 1 crore) will be adjusted as a part of acquisition accounting as it is within the measurement period. In its financial statements for the year ending on 31st March, 20X2, ABC Ltd. will disclose the amounts and explanations of the adjustments to the provisional values recognized during the current reporting period. Therefore, it will disclose that the comparative information for the year ending on 31st March, 20X1 is adjusted retrospectively to increase the fair value of the item of liability at the acquisition date by ₹ 1 crore, resulting in a corresponding increase in goodwill.

The information resulting in the decrease in the estimated fair value of the liability for the claim in February, 20X2 was obtained after the measurement period. Accordingly, the decrease is not recognised as an adjustment to the acquisition accounting. If the amount determined in

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

accordance with Ind AS 37 subsequently exceeds the previous estimate of the fair value of the liability, then ABC Ltd. recognises an increase in the liability. As the change has occurred after the end of the measurement period, the increase in the liability amounting to ₹ 20 lakh (₹ 2.2 crore – ₹ 2 crore) is recognised in profit or loss.

*****

10.8 Determining what is part of the Business Combination Transaction

The acquirer and the acquiree may have a pre-existing relationship or other arrangement before negotiations for the business combination began, or they may enter into an arrangement during the negotiations that is separate from the business combination. In either situation, the acquirer shall identify any amounts that are not part of what the acquirer and the acquiree (or its former owners) exchanged in the business combination, i.e. amounts that are not part of the exchange for the acquiree. The acquirer shall recognise as part of applying the acquisition method only the consideration transferred for the acquiree and the assets acquired and liabilities assumed in the exchange for the acquiree. Separate transactions shall be accounted for in accordance with the relevant Ind AS.

A transaction entered into by or on behalf of the acquirer or primarily for the benefit of the acquirer or the combined entity, rather than primarily for the benefit of the acquiree (or its former owners) before the combination, is likely to be a separate transaction. The following are examples of separate transactions that are not to be included in applying the acquisition method:

- a transaction that in effect settles pre-existing relationships between the acquirer and acquiree;
- a transaction that remunerates employees or former owners of the acquiree for future services; and
- a transaction that reimburses the acquiree or its former owners for paying the acquirer's acquisition-related costs.

The acquirer should consider the following factors, which are neither mutually exclusive nor individually conclusive, in determining whether the transaction is separate from Business combination:

I. **The reasons for the transaction**- Understanding the reasons why the parties to the combination (the acquirer and the acquiree and their owners, directors and managers -and their agents) entered into a particular transaction or arrangement may provide insight into whether it is part of the consideration transferred and the assets acquired or liabilities

© The Institute of Chartered Accountants of India

assumed. For example, if a transaction is arranged primarily for the benefit of the acquirer or the combined entity rather than primarily for the benefit of the acquiree or its former owners before the combination, that portion of the transaction price paid (and any related assets or liabilities) is less likely to be part of the exchange for the acquiree. Accordingly, the acquirer would account for that portion separately from the business combination.

II. **Who initiated the transaction**—Understanding who initiated the transaction may also provide insight into whether it is part of the exchange for the acquiree. For example, a transaction or other event that is initiated by the acquirer may be entered into for the purpose of providing future economic benefits to the acquirer or combined entity with little or no benefit received by the acquiree or its former owners before the combination. On the other hand, a transaction or arrangement initiated by the acquiree or its former owners is less likely to be for the benefit of the acquirer or the combined entity and more likely to be part of the business combination transaction.

III. **The timing of the transaction**—The timing of the transaction may also provide insight into whether it is part of the exchange for the acquiree. For example, a transaction between the acquirer and the acquiree that takes place during the negotiations of the terms of a business combination may have been entered into in contemplation of the business combination to provide future economic benefits to the acquirer or the combined entity. If so, the acquiree or its former owners before the business combination are likely to receive little or no benefit from the transaction except for benefits they receive as part of the combined entity.

*****

Illustration 24

Progressive Ltd. is being sued by Regressive Ltd. for an infringement of its Patent. At 31st March, 20X2, Progressive Ltd. recognised a ₹ 10 million liability related to this litigation.

On 30th July, 20X2, Progressive Ltd. acquired the entire equity of Regressive Ltd. for ₹ 500 million. On that date, the estimated fair value of the expected settlement of the litigation is ₹ 20 million.

Recommend the accounting for such litigation liability at the time of business combination of Progressive Ltd. and Regressive Ltd.

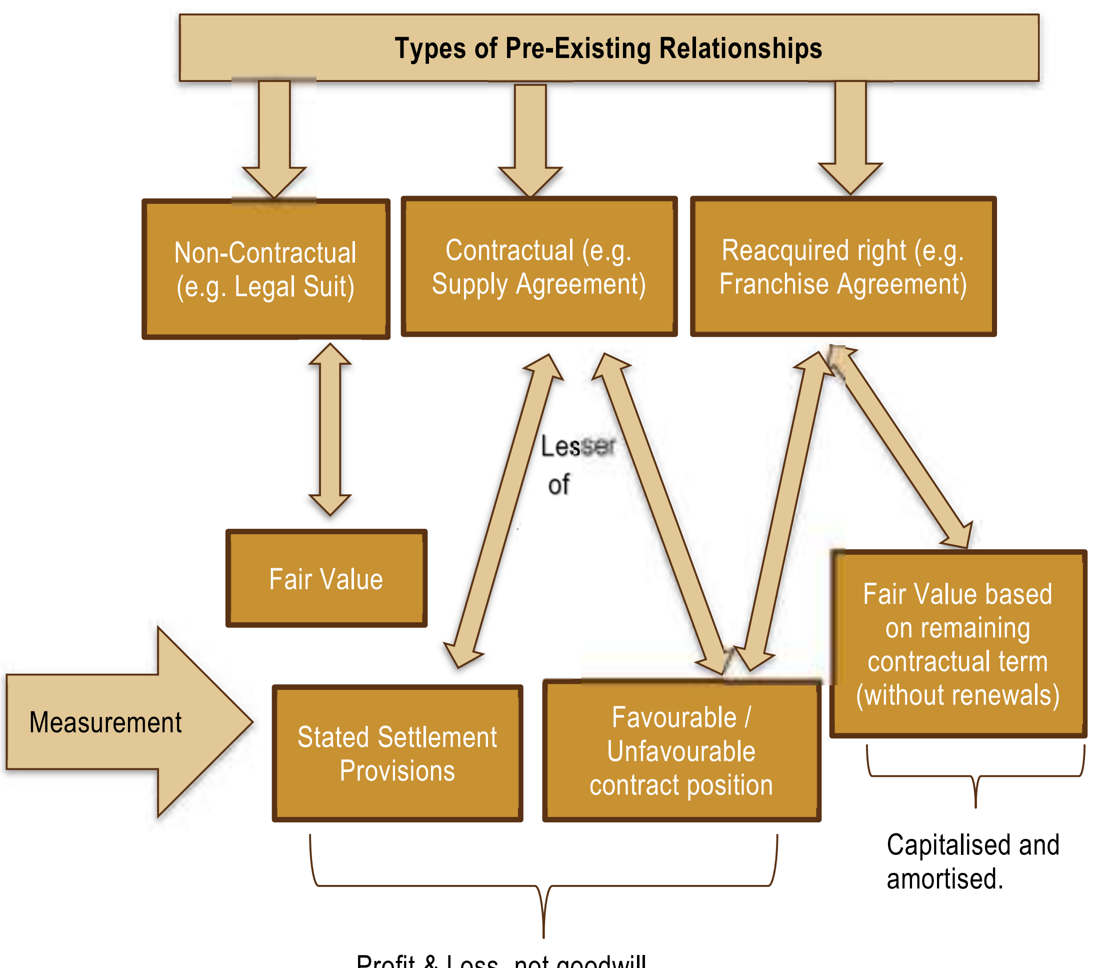
Solution

In the above scenario the litigation is in substance settled with the business combination transaction and accordingly ₹ 20 million being the fair value of the litigation liability will be considered as paid for settling the litigation claim and will be not included in the business

combination. Accordingly, the purchase price will reduce by ₹ 20 million and the difference between ₹ 20 million and ₹ 10 million will be recorded in income statement of the Progressive limited as loss on settlement of the litigation.

*****

Summary of accounting for a pre-existing relationship:



10.9 Contingent Payments to Employees or Selling Shareholders

Whether arrangements for contingent payments to employees or selling shareholders are contingent consideration in the business combination or are separate transactions depends on the nature of the arrangements. Understanding the reasons why the acquisition agreement

Join us t.me/caborntofight

includes a provision for contingent payments, who initiated the arrangement and when the parties entered into the arrangement may be helpful in assessing the nature of the arrangement.

If it is not clear whether an arrangement for payments to employees or selling shareholders is part of the exchange for the acquiree or is a transaction separate from the business combination, the acquirer should consider the following indicators:

a) **Continuing employment—**The terms of continuing employment by the selling shareholders who become key employees may be an indicator of the substance of a contingent consideration arrangement. The relevant terms of continuing employment may be included in an employment agreement, acquisition agreement or some other document. A contingent consideration arrangement in which the payments are automatically forfeited if employment terminates is remuneration for post-combination services. Arrangements in which the contingent payments are not affected by employment termination may indicate that the contingent payments are additional consideration rather than remuneration.

b) **Duration of continuing employment —** If the period of required employment coincides with or is longer than the contingent payment period, that fact may indicate that the contingent payments are, in substance, remuneration.

c) **Level of remuneration —** Situations in which employee remuneration (other than the contingent payments) is at a reasonable level in comparison with that of other key employees in the combined entity may indicate that the contingent payments are additional consideration rather than remuneration.

d) **Incremental payments to employees —** If selling shareholders who do not become employees receive lower contingent payments on a per-share basis than the selling shareholders who become employees of the combined entity, that fact may indicate that the incremental amount of contingent payments to the selling shareholders who become employees is remuneration.

e) **Number of shares owned—**The relative number of shares owned by the selling shareholders who remain as key employees may be an indicator of the substance of the contingent consideration arrangement. For example, if the selling shareholders who owned substantially all of the shares in the acquiree continue as key employees, that fact may indicate that the arrangement is, in substance, a profit sharing arrangement intended to provide remuneration for post-combination services. Alternatively, if selling shareholders who continue as key employees owned only a small number of shares of the acquiree and all selling shareholders receive the same amount of contingent consideration on a per-share basis, that fact may indicate that the contingent payments are additional consideration. The pre-acquisition ownership interests held by parties related to selling

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

shareholders who continue as key employees, such as family members, should also be considered.

f) **Linkage to the valuation—**If the initial consideration transferred at the acquisition date is based on the low end of a range established in the valuation of the acquire and the contingent formula relates to that valuation approach, that fact may suggest that the contingent payments are additional consideration. Alternatively, if the contingent payment formula is consistent with prior profit-sharing arrangements, that fact may suggest that the substance of the arrangement is to provide remuneration.

g) **Formula for determining consideration—**The formula used to determine the contingent payment may be helpful in assessing the substance of the arrangement. For example, if a contingent payment is determined on the basis of a multiple of earnings, that might suggest that the obligation is contingent consideration in the business combination and that the formula is intended to establish or verify the fair value of the acquiree. In contrast, a contingent payment that is a specified percentage of earnings might suggest that the obligation to employees is a profit-sharing arrangement to remunerate employees for services rendered.

h) **Other agreements and issues —** The terms of other arrangements with selling shareholders (such as agreements not to compete, executory contracts, consulting contracts and property lease agreements) and the income tax treatment of contingent payments may indicate that contingent payments are attributable to something other than consideration for the acquiree. For example, in connection with the acquisition, the acquirer might enter into a property lease arrangement with a significant selling shareholder. If the lease payments specified in the lease contract are significantly below market, some or all of the contingent payments to the lessor (the selling shareholder) required by a separate arrangement for contingent payments might be, in substance, payments for the use of the leased property that the acquirer should recognise separately in its post-combination financial statements. In contrast, if the lease contract specifies lease payments that are consistent with market terms for the leased property, the arrangement for contingent payments to the selling shareholder may be contingent consideration in the business combination.

Illustration 25

KKV Ltd acquires a 100% interest in VIVA Ltd, a company owned by a single shareholder who is also the KMP in the Company, for a cash payment of USD 20 million and a contingent payment of USD 2 million. The terms of the agreement provide for contingent payment 2 years after the acquisition if, the following conditions are met:

- *the EBIDTA margins of the Company after 2 years post-acquisition is 21%.*

- *the former shareholder continues to be employed with VIVA Ltd for at least 2 years after the acquisition. No part of the contingent payment will be paid if the former shareholder does not complete the 2 year employment period.*

Determine the purchase consideration in the above case.

Solution

In the above scenario the former shareholder is required to continue in employment and the contingent consideration will be forfeited if the employment is terminated or if he resigns. Accordingly, only USD 20 million is considered as purchase consideration and the contingent consideration is accounted as employee cost and will be accounted as per the other Ind AS.

*****

Illustration 26 : Contingent consideration- Payments to employees who are former owners of acquiree

ABC Ltd. acquires all of the outstanding shares of XYZ Ltd. in a business combination. XYZ Ltd. had three shareholders with equal shareholdings, two of whom were also senior-level employees of XYZ Ltd. and would continue as employee post-acquisition of shares by ABC Ltd.

- *The employee shareholders each will receive ₹ 60,00,000 plus an additional payment of ₹ 1,50,00,000 to 2,00,00,000 based on a multiple of earnings over the next two years.*
- *The non-employee shareholders each receive ₹ 1,00,00,000.*

The additional payment of each of these employee shareholders will be forfeited if they leave the employment of XYZ Ltd. at any time during the two years following its acquisition by ABC Ltd. The salary received by them is considered reasonable remuneration for their services.

How much amount is attributable to post combination services?

Solution

Paragraph B55(a) of Ind AS 103 provides an indication that a contingent consideration arrangement in which the payments are automatically forfeited if employment terminates is remuneration for post-combination services.

Arrangements in which the contingent payments are not affected by employment termination may indicate that the contingent payments are additional consideration rather than remuneration.

In accordance with the above, in the instant case, the additional consideration of ₹ 1,50,00,000 to ₹ 2,00,00,000 represents compensation for post-combination services, as the same represents that part of the payment which is forfeited if the former shareholder does not remain

in the employment of XYZ Ltd. for two years following the acquisition - i.e., only ₹ 60,00,000 is attributed to consideration in exchange for the acquired business.

*****

10.10 Acquirer Share Based Payment Awards Exchanged for Awards held by the Acquiree's Employees

- An acquirer may exchange its share-based payment awards (replacement awards) for awards held by employees of the acquiree.
- The above share-based payment awards will include vested and unvested shares.
- Exchanges of share options or other share-based payment awards in conjunction with a business combination are accounted for as modifications of share-based payment awards in accordance with Ind AS 102, Share based Payment.
- If the acquirer replaces the acquiree awards, either all or a portion of the market-based measure of the acquirer's replacement awards shall be included in measuring the consideration transferred in the business combination. Market based measure means that awards will be re-measured on the acquisition date as per the requirements of Ind AS 102.
- In situations in which acquiree awards would expire as a consequence of a business combination and if the acquirer replaces those awards when it is not obliged to do so, all of the market-based measure of the replacement awards shall be recognised as remuneration cost in the post-combination financial statements in accordance with Ind AS 102. That is to say, none of the market-based measure of those awards shall be included in measuring the consideration transferred in the business combination. The acquirer is obliged to replace the acquiree awards if the acquiree or its employees have the ability to enforce replacement.

  For example, for the purposes of applying this guidance, the acquirer is obliged to replace the acquiree's awards if replacement is required by:

  (a) the terms of the acquisition agreement;

  (b) the terms of the acquiree's awards; or

  (c) applicable laws or regulations.
- To determine the portion of a replacement award that is part of the consideration transferred for the acquiree and the portion that is remuneration for post-combination service, the acquirer shall measure both the replacement awards granted by the acquirer and the acquiree awards as of the acquisition date in accordance with Ind AS 102. The portion of the market-based measure of the replacement award that is part of the consideration transferred in exchange for the acquiree equals the portion of the acquiree award that is attributable to pre-combination service.
- The portion of the replacement award attributable to pre-combination service is the market-based measure of the acquiree award multiplied by the ratio of the portion of the vesting

Join us t.me/caborntofight

period completed to the greater of the total vesting period or the original vesting period of the acquiree award. The vesting period is the period during which all the specified vesting conditions are to be satisfied. Vesting conditions are defined in Ind AS 102.

- The portion of a non-vested replacement award attributable to post-combination service, and therefore recognised as remuneration cost in the post-combination financial statements, equals the total market-based measure of the replacement award less the amount attributed to pre-combination service. Therefore, the acquirer attributes any excess of the market-based measure of the replacement award over the market-based measure of the acquiree award to post-combination service and recognises that excess as remuneration cost in the post-combination financial statements.
- The acquirer shall attribute a portion of a replacement award to post-combination service if it requires post combination service, regardless of whether employees had rendered all of the service required for their acquiree awards to vest before the acquisition date.
- The portion of a non-vested replacement award attributable to pre-combination service, as well as the portion attributable to post-combination service, shall reflect the best available estimate of the number of replacement awards expected to vest.

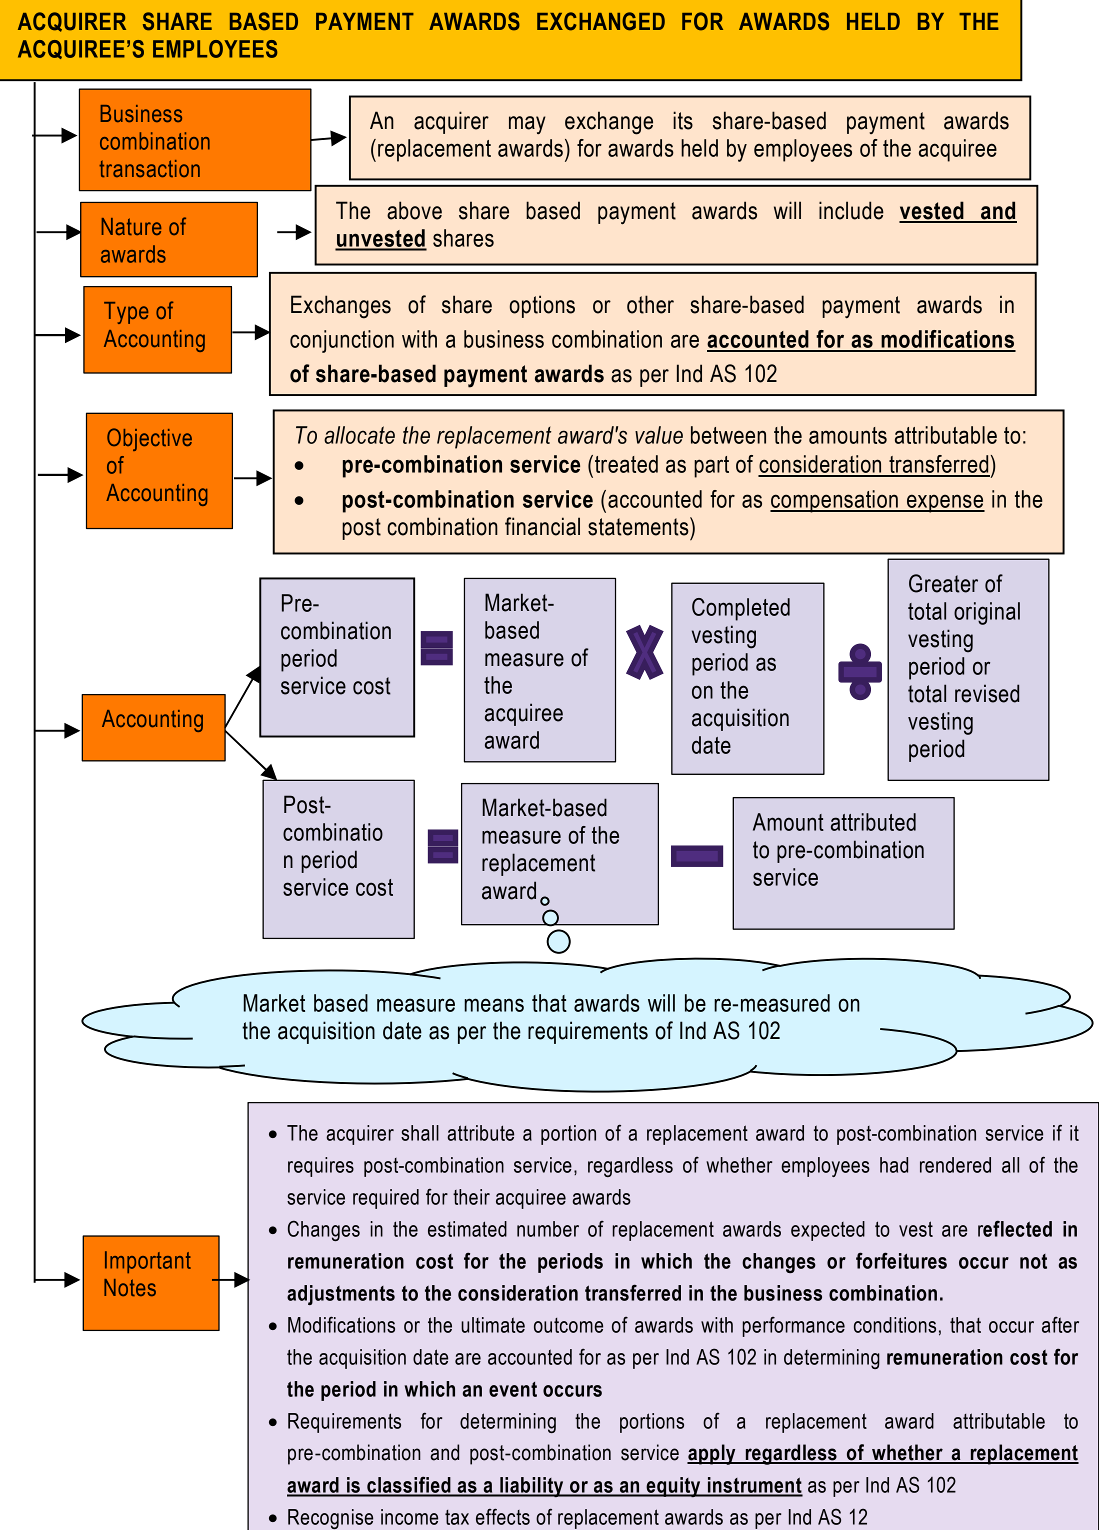
Example 19

If the market-based measure of the portion of a replacement award attributed to pre-combination service is ₹ 100 and the acquirer expects that only 95 per cent of the award will vest, the amount included in consideration transferred in the business combination is ₹ 95.

- Changes in the estimated number of replacement awards expected to vest are reflected in remuneration cost for the periods in which the changes or forfeitures occur not as adjustments to the consideration transferred in the business combination. Similarly, the effects of other events, such as modifications or the ultimate outcome of awards with performance conditions, that occur after the acquisition date are accounted for in accordance with Ind AS 102 in determining remuneration cost for the period in which an event occurs.
- The same requirements for determining the portions of a replacement award attributable to pre-combination and post-combination service apply regardless of whether a replacement award is classified as a liability or as an equity instrument in accordance with the provisions of Ind AS 102. All changes in the market-based measure of awards classified as liabilities after the acquisition date and the related income tax effects are recognised in the acquirer's post-combination financial statements in the period(s) in which the changes occur.
- The income tax effects of replacement awards of share-based payments shall be recognised in accordance with the provisions of Ind AS 12, Income Taxes.

The above guidance on Share based payment as per the Ind AS 103 can be summarized as follows:

Join us t.me/caborntofight



ACQUIRER SHARE BASED PAYMENT AWARDS EXCHANGED FOR AWARDS HELD BY THE ACQUIREE'S EMPLOYEES
Business combination transaction
An acquirer may exchange its share-based payment awards (replacement awards) for awards held by employees of the acquiree
Nature of awards
The above share based payment awards will include vested and unvested shares
Type of Accounting
Exchanges of share options or other share-based payment awards in conjunction with a business combination are accounted for as modifications of share-based payment awards as per Ind AS 102
Objective of Accounting
To allocate the replacement award's value between the amounts attributable to:
pre-combination service (treated as part of consideration transferred)
post-combination service (accounted for as compensation expense in the post combination financial statements)
Accounting
Pre-combination period service cost
Market-based measure of the acquiree award
Completed vesting period as on the acquisition date
Greater of total original vesting period or total revised vesting period
Post-combination period service cost
Market-based measure of the replacement award
Amount attributed to pre-combination service
Market based measure means that awards will be re-measured on the acquisition date as per the requirements of Ind AS 102
Important Notes
The acquirer shall attribute a portion of a replacement award to post-combination service if it requires post-combination service, regardless of whether employees had rendered all of the service required for their acquiree awards
Changes in the estimated number of replacement awards expected to vest are reflected in remuneration cost for the periods in which the changes or forfeitures occur not as adjustments to the consideration transferred in the business combination.
Modifications or the ultimate outcome of awards with performance conditions, that occur after the acquisition date are accounted for as per Ind AS 102 in determining remuneration cost for the period in which an event occurs
Requirements for determining the portions of a replacement award attributable to pre-combination and post-combination service apply regardless of whether a replacement award is classified as a liability or as an equity instrument as per Ind AS 102
Recognise income tax effects of replacement awards as per Ind AS 12

Illustration 27

Green Ltd acquired Pollution Ltd. As a part of the arrangement Green Ltd. had to replace the Pollution Ltd.'s existing equity-settled award. The original awards specify a vesting period of five years. At the acquisition date, Pollution Ltd employees have already rendered two years of service.

As required, Green Ltd replaced the original awards with its own share-based payment awards (replacement award). Under the replacement awards, the vesting period is reduced to 2 year (from the acquisition date).

The value (market-based measure) of the awards at the acquisition date are as follows:

- *original awards: ₹ 500*
- *replacement awards: ₹ 600*

As of the acquisition date, all awards are expected to vest.

Determine the accounting for the above replacement award.

Solution

Pre-combination period

The value of the replacement awards will have to be allocated between the pre-combination and post combination period. As of the acquisition date, the fair value of the original award (₹ 500) will be multiplied by the service rendered upto acquisition date (2 years) divided by greater of original vesting period (5 years) or new vesting period (4 years). Accordingly, ₹ 500 x 2/5= ₹ 200 will be considered as pre-combination service and will be included in the purchase consideration.

Post- Combination period

The fair value of the award on the acquisition date is ₹ 600 which means the difference between the replacement award which is ₹ 600 and the amount allocated to pre-combination period (₹ 200) is ₹ 400 which will be now recorded over the remaining vesting period which is 2 years as an employee compensation cost.

*****

10.11 Non-replacement Awards

The acquiree may have outstanding share-based payment transactions that the acquirer does not exchange for its share-based payment transactions. If vested, those acquiree share-based

payment transactions are part of the non-controlling interest in the acquiree and are measured at their market-based measure. If unvested, they are measured at their market-based measure as if the acquisition date were the grant date in accordance with paragraphs 19 and 30.

The market-based measure of unvested share-based payment transactions is allocated to the non-controlling interest on the basis of the ratio of the portion of the vesting period completed to the greater of the total vesting period and the original vesting period of the share-based payment transaction. The balance is allocated to post-combination service.

The above means that the acquiree's existing award will be settled in its own shares and the consequential shareholders will become the Non-controlling shareholders. The above principles can be summarized as follows:

Vested shares -

- the value credited to Share based payment reserve is classified as NCI.

Unvested-

- Pre-combination period is considered as a part of NCI
- Post-combination period- is recorded as employee cost and the credit forms part of the NCI in the balance sheet.

Join us t.me/caborntofight

EQUITY-SETTLED SHARE-BASED PAYMENT TRANSACTIONS OF THE ACQUIREE

- Acquiree may have outstanding share-based payment transactions that the acquirer does not exchange for its share-based payment transactions
- Acquiree's existing award will be settled in its own shares and the consequential shareholders will become the Non-controlling shareholders
- Accounting
  - Vested shares
    - Measured at their market-based measure and the value credited to Share based payment reserve
    - Such acquiree share-based payment transactions are part of NCI
  - Unvested shares
    - Pre-combination period
      - Considered as a part of NCI
        - Market-based measure of the acquiree award × Completed vesting period as on the acquisition date ÷ Greater of total original vesting period or total revised vesting period
    - Post-combination period
      - Debited as employee cost and credited to NCI in the balance sheet
        - Market-based measure of the replacement award − Amount attributed to pre-combinati on service

Illustration 28

P Ltd. a real estate company acquires Q Ltd. another construction company which has an existing equity settled share-based payment scheme. The awards vest after 5 years of employee service. At the acquisition date, Company Q's employees have rendered 2 years of service. None of the awards are vested at the acquisition date. P did not replace the existing share-based payment scheme but reduced the remaining vesting period from 3 years to 2 years. Company P determines that the market-based measure of the award at the acquisition date is

₹ 500 (based on measurement principles and conditions at the acquisition date as per Ind AS 102).

Determine the accounting for market-based measure of the award.

Solution

The market-based measure or the fair value of the award on the acquisition date of 500 is allocated to NCI and post combination employee compensation expense. The portion allocable to pre-combination period is ₹ 500 x 2/5 = ₹ 200 which will be included in pre-combination period and is allocated to NCI on the acquisition date. The amount is computed based on original vesting period.

The remaining expense which is ₹ 500 – ₹ 200 = ₹ 300 is accounted over the remaining vesting period of 2 years as compensation expenses.

*****

10.12 Non-controlling Interest in an Acquiree

Ind AS 103 allows the acquirer to measure a non-controlling interest in the acquiree at its fair value at the acquisition date. Sometimes an acquirer will be able to measure the acquisition-date fair value of a non-controlling interest on the basis of a quoted price in an active market for the equity shares (ie those not held by the acquirer). In other situations, however, a quoted price in an active market for the equity shares will not be available. In those situations, the acquirer would measure the fair value of the non-controlling interest using other valuation techniques.

The fair values of the acquirer's interest in the acquiree and the non-controlling interest on a per-share basis might differ. The main difference is likely to be the inclusion of a control premium in the per-share fair value of the acquirer's interest in the acquiree or, conversely, the inclusion of a discount for lack of control (also referred to as a non-controlling interest discount) in the per-share fair value of the non-controlling interest if market participants would take into account such a premium or discount when pricing the non-controlling interest.

Illustration 29

Classic Ltd. acquires 60% of the ordinary shares of Natural Ltd. a private entity, for ₹ 97.5 crore. The fair value of its identifiable net assets is ₹ 150 crore. The fair value of the 40% of the ordinary shares owned by non-controlling shareholders is ₹ 65 crore. Carrying amount of Natural Ltd.'s net assets is ₹ 120 crore.

Measure the non-controlling interest.

Solution

Paragraph 19 of Ind AS 103 states that for each business combination, the acquirer shall measure at the acquisition date components of non-controlling interest in the acquiree that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation at either:

Join us t.me/caborntofight

(a) fair value; or

(b) the present ownership instruments' proportionate share in the recognised amounts of the acquiree's identifiable net assets.

All other components of non-controlling interests shall be measured at their acquisition-date fair values, unless another measurement basis is required by Ind AS.

In accordance with above, non-controlling interests will be measured in either of the following manner:

(a) Non-controlling interests are measured at fair value

Under this method, goodwill represents the difference between the fair value of Natural Ltd. and the fair value of its identifiable net assets.

Thus, Classic Ltd. will recognise the business combination as follows: (₹ in crores)

Identifiable net assets at fair value	Dr.	150	
Goodwill*	Dr.	12.5	
To Non-controlling interest			65
To Investment in Natural Ltd.			97.5

*Note: Goodwill is calculated as 97.5 + 65 - 150 = 12.5 or 162.5 - 150 = 12.5

(b) Non-controlling interests are measured at proportionate share of identifiable net assets

Under this method, goodwill represents the difference between the total of the consideration transferred less the fair value of the acquirer's share of net assets acquired and liabilities assumed. The non-controlling interests that are present ownership interests and entitle their holders to a proportionate share of the Natural Ltd 's net assets in the event of liquidation (i.e. the ordinary shares) are measured at the non-controlling interest's proportionate share of the identifiable net assets of Natural Ltd.

Thus, Classic will recognise the business combination as follows:

(₹ in Crores)

Identifiable net assets at fair value	Dr.	150	
Goodwill*	Dr.	7.5	
To Non-controlling interest (40% x 150)			60
To Investment in Natural Ltd.			*97.5*

*Note: Goodwill is calculated as 97.5+60-150 = 7.5 or 97.5-(150 x 60%) = 7.5

*****

11. SUBSEQUENT MEASUREMENT AND ACCOUNTING

In general, an acquirer shall subsequently measure and account for assets acquired, liabilities assumed or incurred and equity instruments issued in a business combination in accordance with other applicable Ind AS for those items, depending on their nature. However, this Ind AS provides guidance on subsequently measuring and accounting for the following assets acquired, liabilities assumed or incurred and equity instruments issued in a business combination:

a) reacquired rights;

b) contingent liabilities recognised as of the acquisition date;

c) indemnification assets; and

d) Contingent consideration.

11.1 Reacquired Rights

A reacquired right recognised as an intangible asset shall be amortised over the remaining contractual period of the contract in which the right was granted. An acquirer that subsequently sells a reacquired right to a third party shall include the carrying amount of the intangible asset in determining the gain or loss on the sale.

11.2 Contingent Liabilities

After initial recognition and until the liability is settled, cancelled or expires, the acquirer shall measure a contingent liability recognised in a business combination at the higher of:

(a) the amount that would be recognised in accordance with Ind AS 37; and

(b) the amount initially recognised less, if appropriate, the cumulative amount of income recognised in accordance with the principles of Ind AS 115, Revenue from Contracts with Customers.

11.3 Indemnification Assets

At the end of each subsequent reporting period, the acquirer shall measure an indemnification asset that was recognised at the acquisition date on the same basis as the indemnified liability or asset, subject to any contractual limitations on its amount and, for an indemnification asset that is not subsequently measured at its fair value, management's needs to do assessment of the collectability of the indemnification asset. The acquirer shall derecognise the indemnification asset only when it collects the asset, sells it or otherwise loses the right to it.

Join us t.me/caborntofight

11.4 Contingent Consideration

Some changes in the fair value of contingent consideration that the acquirer recognises after the acquisition date may be the result of additional information that the acquirer obtained after that date about facts and circumstances that existed at the acquisition date.

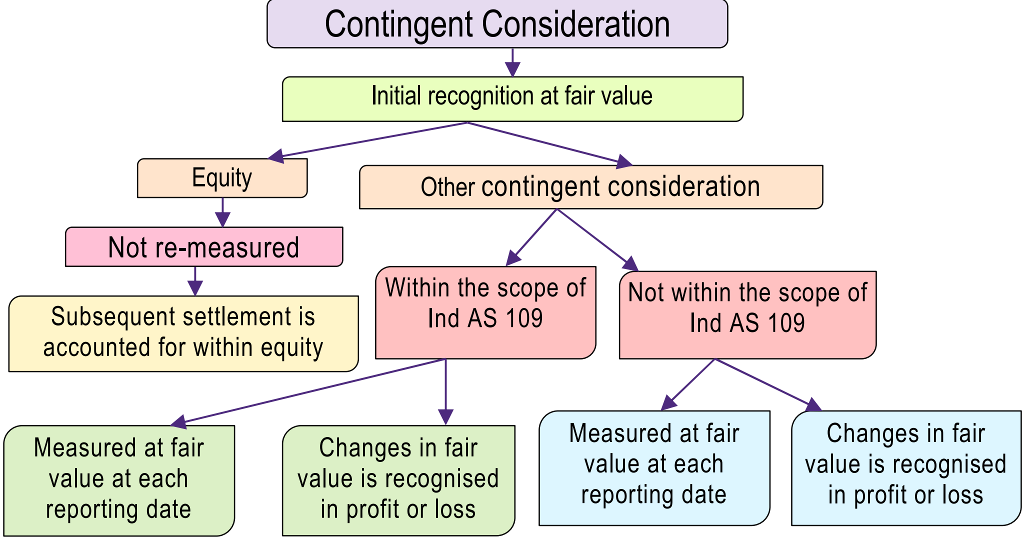
Such changes are measurement period adjustments to the extent it is on account of conditions which existed as of the acquisition date will be adjusted against goodwill. However, changes resulting from events after the acquisition date, such as meeting an earnings target, reaching a specified share price or reaching a milestone on a research and development project, are not measurement period adjustments. The acquirer shall account for changes in the fair value of contingent consideration that are not measurement period adjustments as follows:

(a) Contingent consideration classified as equity shall not be re-measured and its subsequent settlement shall be accounted for within equity.

(b) Other contingent consideration that:

i. is within the scope of Ind AS 109 shall be measured at fair value at each reporting date and changes in fair value shall be recognised in profit or loss in accordance with Ind AS 109.

ii. is not within the scope of Ind AS 109 shall be measured at fair value at each reporting date and changes in fair value shall be recognised in profit or loss.



© The Institute of Chartered Accountants of India

12. DISCLOSURES

The acquirer shall disclose information that enables users of its financial statements to evaluate the nature and financial effect of a business combination that occurs either:

a) during the current reporting period; or

b) after the end of the reporting period but before the financial statements are approved for issue.

Ind AS 103 requires detailed disclosures on Business Combination. The acquirer shall disclose the following information for each business combination that occurs during the reporting period:

a. the name and a description of the acquiree.

b. the acquisition date.

c. the percentage of voting equity interests acquired.

d. the primary reasons for the business combination and a description of how the acquirer obtained control of the acquiree.

e. a qualitative description of the factors that make up the goodwill recognised, such as expected synergies from combining operations of the acquiree and the acquirer, intangible assets that do not qualify for separate recognition or other factors.

f. the acquisition-date fair value of the total consideration transferred and the acquisition-date fair value of each major class of consideration, such as:

   I. cash;

   II. other tangible or intangible assets, including a business or subsidiary of the acquirer;

   III. liabilities incurred, for example, a liability for contingent consideration; and

   IV. equity interests of the acquirer, including the number of instruments or interests issued or issuable and the method of measuring the fair value of those instruments or interests.

g. for contingent consideration arrangements and indemnification assets:

   i. the amount recognised as of the acquisition date;

   ii. a description of the arrangement and the basis for determining the amount of the payment; and

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

iii. an estimate of the range of outcomes (undiscounted) or, if a range cannot be estimated, that fact and the reasons why a range cannot be estimated. If the maximum amount of the payment is unlimited, the acquirer shall disclose that fact.

h. for acquired receivables:

   i. the fair value of the receivables;

   ii. the gross contractual amounts receivable; and

   iii. the best estimate at the acquisition date of the contractual cash flows not expected to be collected. The disclosures shall be provided by major class of receivable, such as loans, direct finance leases and any other class of receivables.

i. the amounts recognised as of the acquisition date for each major class of assets acquired and liabilities assumed.

j. for each contingent liability recognised, the information required in paragraph 85 of Ind AS 37, Provisions, Contingent Liabilities and Contingent Assets. If a contingent liability is not recognised because its fair value cannot be measured reliably, the acquirer shall disclose:

   i. the information required by paragraph 86 of Ind AS 37; and

   ii. the reasons why the liability cannot be measured reliably.

k. the total amount of goodwill that is expected to be deductible for tax purposes.

l. for transactions that are recognised separately from the acquisition of assets and assumption of liabilities in the business combination:

   i. a description of each transaction;

   ii. how the acquirer accounted for each transaction;

   iii. the amounts recognised for each transaction and the line item in the financial statements in which each amount is recognised; and

   iv. if the transaction is the effective settlement of a pre-existing relationship, the method used to determine the settlement amount.

m. the disclosure of separately recognised transactions required by (l) shall include the amount of acquisition-related costs and, separately, the amount of those costs recognised as an expense and the line item or items in the statement of profit and loss in which those expenses are recognised. The amount of any issue costs not recognised as an expense and how they were recognised shall also be disclosed.

n. in a bargain purchase (see paragraphs 34–36A):

   i. the amount of any gain recognised in other comprehensive income in accordance with paragraph 34;

ii. the amount of any gain directly recognised in equity in accordance with paragraph 36A; and

iii. a description of the reasons why the transaction resulted in a gain in case of (i) above.

o. for each business combination in which the acquirer holds less than 100 per cent of the equity interests in the acquiree at the acquisition date:

i. the amount of the non-controlling interest in the acquiree recognised at the acquisition date and the measurement basis for that amount; and

ii. for each non-controlling interest in an acquiree measured at fair value, the valuation technique(s) and significant inputs used to measure that value.

p. in a business combination achieved in stages:

i. the acquisition-date fair value of the equity interest in the acquiree held by the acquirer immediately before the acquisition date; and

ii. the amount of any gain or loss recognised as a result of remeasuring to fair value the equity interest in the acquiree held by the acquirer before the business combination (see paragraph 42) and the line item in the statement of profit and loss in which that gain or loss is recognised.

q. Following additional information:

i. the amounts of revenue and profit or loss of the acquiree since the acquisition date included in the consolidated statement of profit and loss for the reporting period; and

ii. the revenue and profit or loss of the combined entity for the current reporting period as though the acquisition date for all business combinations that occurred during the year had been as of the beginning of the annual reporting period.

If disclosure of any of the information required by this subparagraph is impracticable, the acquirer shall disclose that fact and explain why the disclosure is impracticable. This Ind AS uses the term 'impracticable' with the same meaning as in Ind AS 8, Accounting Policies, Changes in Accounting Estimates and Errors.

If the acquisition date of a business combination is after the end of the reporting period but before the financial statements are approved for issue, the acquirer shall disclose the information required as above unless the initial accounting for the business combination is incomplete at the time the financial statements are approved for issue. In that situation, the acquirer shall describe which disclosures could not be made and the reasons why they cannot be made.

Join us t.me/caborntofight

To meet the objective of the Ind AS 103 disclosure requirements, the acquirer shall disclose the following information for each material business combination or in the aggregate for individually immaterial business combinations that are material collectively:

a) if the initial accounting for a business combination is incomplete for particular assets, liabilities, non-controlling interests or items of consideration and the amounts recognised in the financial statements for the business combination thus have been determined only provisionally

   i. the reasons why the initial accounting for the business combination is incomplete;

   ii. the assets, liabilities, equity interests or items of consideration for which the initial accounting is incomplete; and

   iii. the nature and amount of any measurement period adjustments recognised during the reporting period.

b) for each reporting period after the acquisition date until the entity collects, sells or otherwise loses the right to a contingent consideration asset, or until the entity settles a contingent consideration liability or the liability is cancelled or expires:

   i. any changes in the recognised amounts, including any differences arising upon settlement;

   ii. any changes in the range of outcomes (undiscounted) and the reasons for those changes; and

   iii. the valuation techniques and key model inputs used to measure contingent consideration.

c) for contingent liabilities recognised in a business combination, the acquirer shall disclose the information required by paragraphs 84 and 85 of Ind AS 37 for each class of provision.

d) a reconciliation of the carrying amount of goodwill at the beginning and end of the reporting period showing separately:

   i. the gross amount and accumulated impairment losses at the beginning of the reporting period.

   ii. additional goodwill recognised during the reporting period, except goodwill included in a disposal group that, on acquisition, meets the criteria to be classified as held for sale in accordance with Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations.

   iii. adjustments resulting from the subsequent recognition of deferred tax assets during the reporting period

Join us t.me/caborntofight

iv. goodwill included in a disposal group classified as held for sale in accordance with Ind AS 105 and goodwill derecognised during the reporting period without having previously been included in a disposal group classified as held for sale

v. impairment losses recognised during the reporting period in accordance with Ind AS 36. (Ind AS 36 requires disclosure of information about the recoverable amount and impairment of goodwill in addition to this requirement.)

vi. net exchange rate differences arising during the reporting period in accordance with Ind AS 21, The Effects of Changes in Foreign Exchange Rates.

vii. any other changes in the carrying amount during the reporting period.

viii. the gross amount and accumulated impairment losses at the end of the reporting period.

e) the amount and an explanation of any gain or loss recognised in the current reporting period that both:

i. relates to the identifiable assets acquired or liabilities assumed in a business combination that was effected in the current or previous reporting period; and

ii. is of such a size, nature or incidence that disclosure is relevant to understand the combined entity's financial statements.

The acquirer shall disclose information that enables users of its financial statements to evaluate the financial effects of adjustments recognised in the current reporting period that relate to business combinations that occurred in the period or in previous reporting periods.

13. COMMON CONTROL TRANSACTIONS INCLUDING MERGER

Common control transaction accounting guidance is included in Appendix C of Ind AS 103.

13.1 Definitions

Transferor means an entity or business which is combined into another entity as a result of a business combination.

Transferee means an entity in which the transferor entity is combined.

Reserve means the portion of earnings, receipts or other surplus of an entity (whether capital or revenue) appropriated by the management for a general or a specific purpose other than provision for depreciation.

Join us t.me/caborntofight

Common control business combination means a business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

13.2 Common Control Business Combinations

Common control business combinations will include transactions, such as transfer of subsidiaries or businesses, between entities within a group.

The extent of non-controlling interests in each of the combining entities before and after the business combination is not relevant in determining whether the combination involves entities under common control. This is because a partially-owned subsidiary is nevertheless under the control of the parent entity.

An entity can be controlled by an individual, or by a group of individuals acting together under a ***contractual arrangement***, and that individual or group of individuals may not be subject to the financial reporting requirements of Ind AS. Therefore, it is not necessary for combining entities to be included as part of the same consolidated financial statements for a business combination to be regarded as one having entities under common control.

A group of individuals are regarded as controlling an entity when, as a result of contractual arrangements, they collectively have the power to govern its financial and operating policies so as to obtain benefits from its activities, and that ultimate collective power is not transitory.

Common control combinations are the most frequent. Broadly, these are transactions in which an entity obtains control of a business (hence a business combination) but both combining parties are ultimately controlled by the same party or parties both before and after the combination. These combinations often occur as a result of a group reorganisation in which the direct ownership of subsidiaries changes but the ultimate parent remains the same. However, such combinations can also occur in other ways and careful analysis and judgement are sometimes required to assess whether some combinations are covered by the definition (and the scope exclusion). In particular:

- an assessment is required as to whether common control is 'transitory' (if so, the combination is not a common control combination and Ind AS 103 applies). The term transitory is not explained in the standard. In our view it is intended to ensure that Ind AS 103 is applied when a transaction that will lead to a substantive change in control is structured such that, for a brief period before and after the combination, the entity to be acquired/sold is under common control. However, common control should not be considered transitory simply because a combination is carried out in contemplation of an initial public offering or sale of combined entities.

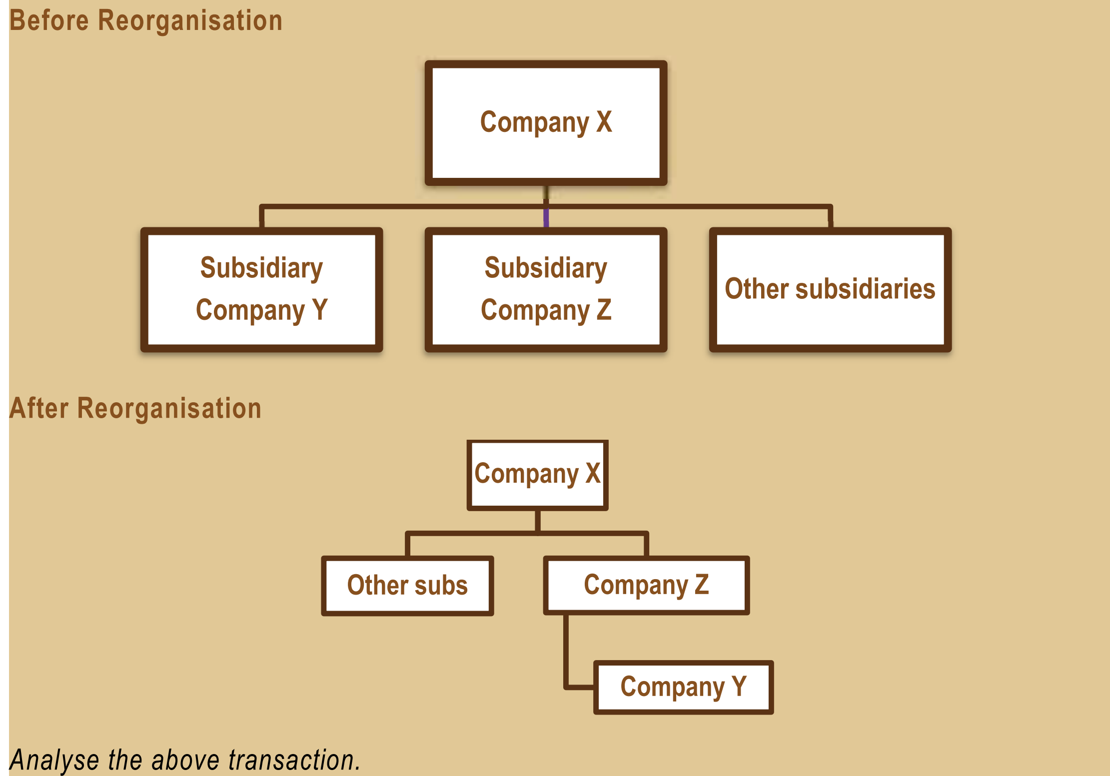
- when a group of two or more individuals have control before and after the transaction, an assessment is needed as to whether they exercise control collectively as a result of a contractual agreement.

  Examples of common control transaction

  - Merger between fellow subsidiaries
  - Merger of subsidiary with parent
  - Acquisition of an entity from an entity within the same group
  - Bringing together entities under common control in a corporate legal structure

Illustration 30

Company X, the ultimate parent of a large number of subsidiaries, reorganises the retail segment of its business to consolidate all of its retail businesses in a single entity. Under the reorganisation, Company Z (a subsidiary and the biggest retail company in the group) acquires Company X's shareholdings in its one operating subsidiary, Company Y by issuing its own shares to Company X. After the transaction, Company Z will directly control the operating and financial policies of Company Y.



Analyse the above transaction.

Solution

In this situation, Company Z pays consideration to Company X to obtain control of Company Y. The transaction meets the definition of a business combination. Prior to the reorganisation, each of the parties are controlled by Company X. After the reorganisation, although Company Y is now owned by Company Z, all two companies are still ultimately owned and controlled by Company X. From the perspective of Company X, there has been no change as a result of the reorganisation. This transaction therefore meets the definition of a common control combination and is within the scope of Ind AS 103.

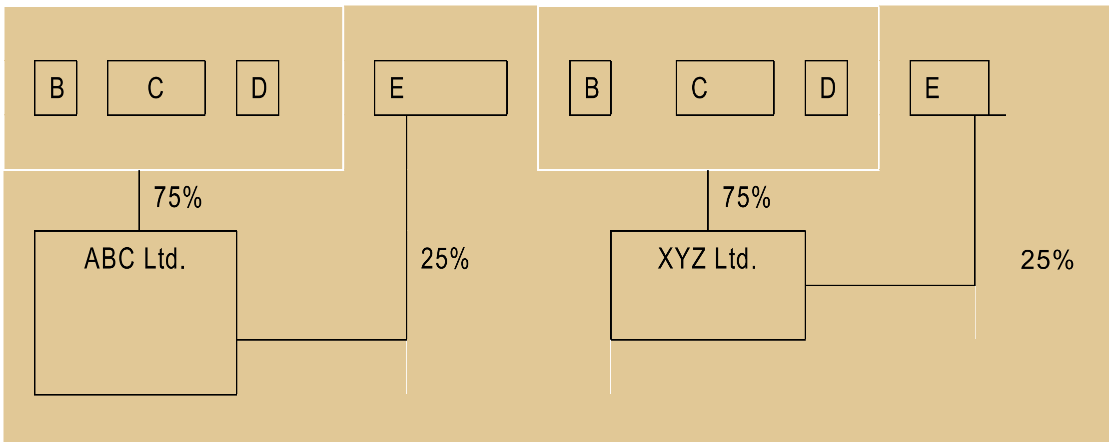
*****

Illustration 31

ABC Ltd. and XYZ Ltd. are owned by four shareholders B, C, D and E, each of whom holds 25% of the shares in each company. Shareholders B, C and D have entered into a shareholders' agreement in terms of governance of ABC Ltd. and XYZ Ltd. due to which they exercise joint control.

Determine whether ABC Ltd. and XYZ Ltd. are under common control.

Solution



Appendix C to Ind AS 103 defines common control business combination as a business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

As per paragraphs 6 and 7 of Appendix C to Ind AS 103, an entity can be controlled by an individual, or by a group of individuals acting together under a contractual arrangement, and that individual or group of individuals may not be subject to the financial reporting requirements of Ind AS. Therefore, it is not necessary for combining entities to be included as part of the same consolidated financial statements for a business combination to be regarded as one having

entities under common control. Also, a group of individuals are regarded as controlling an entity when, as a result of contractual arrangements, they collectively have the power to govern its financial and operating policies so as to obtain benefits from its activities, and that ultimate collective power is not transitory.

In the instant case, both ABC Ltd. and XYZ Ltd. are jointly controlled by group of individuals (B, C and D) as a result of contractual arrangement. Therefore, in the current scenario, ABC Ltd. and XYZ Ltd. are considered to be under common control.

*****

Illustration 32

ABC Ltd. and XYZ Ltd. are owned by four shareholders B, C, D and E, each of whom holds 25% of the shares in each company. However, there are no agreements between any of the shareholders that they will exercise their voting power jointly.

Determine whether ABC Ltd. and XYZ Ltd. are under common control.

Solution

Appendix C to Ind AS 103 defines 'Common control business combination' as business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

Further as per paragraphs 6 and 7 of Appendix C to Ind AS 103, an entity can be controlled by an individual, or by a group of individuals acting together under a contractual arrangement, and that individual or group of individuals may not be subject to the financial reporting requirements of Ind AS. Therefore, it is not necessary for combining entities to be included as part of the same consolidated financial statements for a control. Also a group of individuals are regarded as controlling an entity when, as a result of contractual arrangements, they collectively have the power to govern its financial and operating policies so as to obtain benefits from its activities, and that ultimate collective power is not transitory.

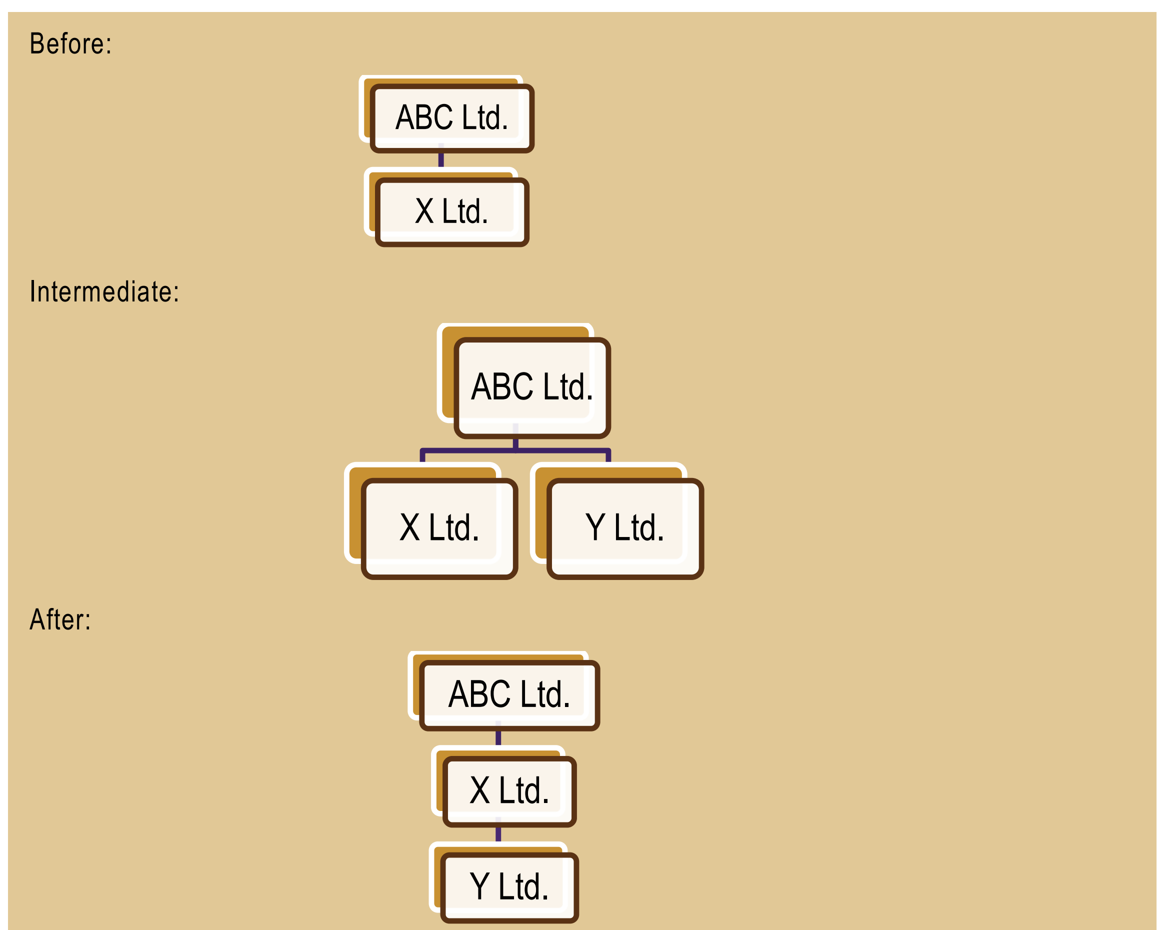
In the present case, there is no contractual arrangement between the shareholders who exercise control collectively over either company. Thus, ABC Ltd. and XYZ Ltd. are not considered to be under common control even if there is an established pattern of voting together.

*****

Illustration 33

ABC Ltd. had a subsidiary, namely, X Ltd. which was acquired on 1st April, 2XX0. ABC Ltd. acquires all of the shares of Y Ltd. on 1st April, 2X17. ABC Ltd. transfers the shares in Y Ltd. to X Ltd. on 2nd April, 2X17. How should the above transfer of Y Ltd. into X Ltd. be accounted for in the consolidated financial statements of X Ltd.?

Join us t.me/caborntofight



Solution

Appendix C to Ind AS 103 defines common control business combination as business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

As per paragraph 7 of Appendix C to Ind AS 103, a group of individuals are regarded as controlling an entity when, as a result of contractual arrangements, they collectively have the power to govern its financial and operating policies so as to obtain benefits from its activities, and that ultimate collective power is not transitory.

The term 'transitory' has been included as part of Appendix C to Ind AS 103.

The word 'transitory' has been included in the common control definition to ensure that acquisition accounting applies to those transactions that look as though they are combinations involving entities under common control, but which in fact represent genuine substantive business combinations with unrelated parties.

Join us t.me/caborntofight

Based on above, if the intermediate step had been omitted and instead X Ltd. had been the ABC group's vehicle for the acquisition of Y Ltd. - i.e. going straight to the 'after' position - then X Ltd. would have been identified as the acquirer.

Considering X Ltd. and Y Ltd. are under common control (with common parent), it might seem that acquisition accounting is not required because of the specific requirement for common control business combination. However, X Ltd. should be identified as the acquirer and should account for its combination with Y Ltd. using acquisition accounting. This is because X Ltd. would have applied acquisition accounting for Y Ltd. if X Ltd. had acquired Y Ltd directly rather than through ABC Ltd. Acquisition accounting cannot be avoided in the financial statements of X Ltd. simply by placing X Ltd. and Y Ltd. under the common control ABC Ltd shortly before the transaction.

*****

13.3 Method of Accounting for Common Control Business Combinations

Business combinations involving entities or businesses under common control shall be accounted for using the pooling of interest method.

The pooling of interest method is considered to involve the following:

(i) The assets and liabilities of the combining entities are reflected at their carrying amounts.

(ii) No adjustments are made to reflect fair values or recognise any new assets or liabilities. The only adjustments that are made is to harmonise accounting policies.

(iii) The financial information in the financial statements in respect of prior periods should be restated as if the business combination had occurred from the beginning of the earliest period presented in the financial statements, irrespective of the actual date of the combination. However, if business combination had occurred after that date, the prior period information shall be restated only from that date.

The consideration for the business combination may consist of securities, cash or other assets. Securities shall be recorded at nominal value. In determining the value of the consideration, assets other than cash shall be considered at their fair values.

The balance of the retained earnings appearing in the financial statements of the transferor is aggregated with the corresponding balance appearing in the financial statements of the transferee. Alternatively, it is transferred to General Reserve, if any.

The identity of the reserves shall be preserved and shall appear in the financial statements of the transferee in the same form in which they appeared in the financial statements of the transferor. Thus, for example, the General Reserve of the transferor entity becomes the General Reserve of the transferee, the Capital Reserve of the transferor becomes the Capital Reserve of

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

the transferee and the Revaluation Reserve of the transferor becomes the Revaluation Reserve of the transferee. As a result of preserving the identity, reserves which are available for distribution as dividend before the business combination would also be available for distribution as dividend after the business combination.

The difference, if any, between the amount recorded as share capital issued plus any additional consideration in the form of cash or other assets and the amount of share capital of the transferor shall be transferred to capital reserve and should be presented separately from other capital reserves with disclosure of its nature and purpose in the notes.

The acid test in assessing common control transaction is that before and after the reorganisation the entity should be controlled by the same shareholders.

Illustration 34

How will the financial statement of the prior periods be restated under common control in the following scenarios:

a) Common Control period extends beyond the start of comparative period

XYZ Ltd acquired PQR Ltd in a common control transaction on 1 October 20X9. The year-end of XYZ Ltd is 31 March. Both XYZ Ltd and PQR Ltd have been controlled by shareholders since their incorporation.

b) Common Control period started in the comparative period

ABC Ltd acquired DEF Ltd in a common control transaction on 1st October 20X9. The year-end of ABC Ltd is 31st March. Both ABC Ltd and DEF Ltd are controlled by shareholder A. A made investment in ABC Ltd in 20X0 and made investment in DEF Ltd on 1st October 20X8.

Solution

Paragraph 9(iii) of Appendix C to Ind AS 103 states that the financial information in the financial statements in respect of prior periods should be restated as if the business combination had occurred from the beginning of the preceding period in the financial statements, irrespective of the actual date of the combination. However, if business combination had occurred after that date, the prior period information shall be restated only from that date.

a) In accordance with Paragraph 9(iii) above, the entity will be required to restate its financial statements as if the business combination had occurred from the beginning of the preceding period in the financial statements, accordingly in the present case XYZ Ltd will have to restate its comparatives for the financial year 20X8-20X9 as if the acquisition had occurred before 1st April 20X8. Additionally, the results of current year of PQR Ltd will be

© The Institute of Chartered Accountants of India

required to include XYZ's financial statements for the period from 1st April 20X9 to 30th September 20X9.

b) In accordance with paragraph 9(iii) above, ABC Ltd will have to restate its comparatives for the financial year ended 20X8-20X9 as if the acquisition had occurred on 1st October 20X8, but not earlier. Additionally, the results of current year of DEF Ltd will be required to include the financial statements of ABC Ltd for the period from 1 April 20X9 to 1st October 20X9.

*****

Illustration 35

Entity A owns 100% equity shares of entity B since 01.04.20X1. Entity A arranges loan funding from a financial institution in a new wholly owned subsidiary called "Entity C". The loan is used by Entity C to acquire 100% shareholding in entity B, for cash consideration of ₹ 2,00,000. Entity A applies Ind AS 103 to account for common control transactions and Entity C will adopt the same policy. Fair value of net identifiable assets is ₹ 1,50,000 and carrying value of net identifiable assets is ₹ 1,00,000.

How will Entity C apply acquisition accounting in its consolidated financial statements?

Solution:

As per para 2 of appendix C of Ind AS 103, Common control business combination means a business combination involving entities or businesses in which all the combining entities or businesses are ultimately controlled by the same party or parties both before and after the business combination, and that control is not transitory.

In the above scenario, the Entity A controls Entity B before and after the acquisition. After acquisition, entity A controls entity B through entity C.

As per para 8 of appendix C of Ind AS 103, Business combinations involving entities or businesses under common control shall be accounted for using the pooling of interest method.

As per para 9(i) of appendix C of Ind AS 103, the pooling of interest method is considered to involve the assets and liabilities of the combining entities are reflected at their carrying amounts.

Based on the above analysis, Entity C cannot be the acquirer. Entity A has created Entity C and is the seller, so Entity C has effectively been formed and issued shares to effect the business combination. Entity C is not a business and the transaction between entity B and Entity C is not a business combination. It is a reorganisation of entity B. As a result, entity B's assets and liabilities are included in Entity C consolidated financial statements at their pre-combination carrying amounts without a fair value uplift.

*****

Illustration 36

Enterprise Ltd. has 2 divisions Laptops and Mobiles. Division Laptops has been making constant profits while division Mobiles has been invariably suffering losses.

On 31st March, 20X2, the division-wise draft extract of the Balance Sheet was: **(₹ in crores)**

		Laptops	Mobiles	Total
Property, Plant and Equipment cost		250	500	750
Depreciation		(225)	(400)	(625)
Net Property, Plant and Equipment	(A)	25	100	125
Current assets:		200	500	700
Less: Current liabilities		(25)	(400)	(425)
	(B)	175	100	275
Total	(A+B)	200	200	400
Financed by:				
Loan funds		-	300	300
Capital : Equity ₹ 10 each		25	-	25
Surplus		175	(100)	75
		200	200	400

Division Mobiles along with its assets and liabilities was sold for ₹ 25 crores to Turnaround Ltd. a new company, who allotted 1 crore equity shares of ₹ 10 each at a premium of ₹ 15 per share to the members of Enterprise Ltd. in full settlement of the consideration, in proportion to their shareholding in the company. One of the members of Enterprise Ltd. was holding 52% shareholding of the Company.

Assuming that there are no other transactions, you are asked to:

(i) Pass journal entries in the books of Enterprise Ltd.

(ii) Prepare the Balance Sheet of Enterprise Ltd. after the entries in (i).

(iii) Prepare the Balance Sheet of Turnaround Ltd.

Solution

Journal of Enterprise Ltd.

(₹ in crores)

			Dr.	Cr.
(1)	Loan Funds	Dr.	300	
	Current Liabilities	Dr.	400	
	Provision for Depreciation	Dr.	400	
	To Property, Plant and Equipment			500
	To Current Assets			500
	To Capital Reserve			100
	(Being division Mobiles along with its assets and liabilities sold to Turnaround Ltd. for ₹ 25 crores)			

Notes :

(1) Any other alternative set of entries, with the same net effect on various accounts, may be given by the students.

(2) In the given scenario, this demerger will meet the definition of common control transaction. Accordingly, the transfer of assets and liabilities will be derecognized and recognized as per book value and the resultant loss or gain will be recorded as capital reserve in the books of demerged entity (Enterprise Ltd).

Enterprise Ltd.
Balance Sheet after reconstruction

Notes to Accounts

		(₹ in crores)
1.	**Share Capital:**	
	Issued and Paid-up capital	
	1 crore Equity shares of ₹ 10 each fully paid up	10
	(All the above shares have been issued for consideration other than cash, to the members of Enterprise Ltd. on takeover of Division Mobiles from Enterprise Ltd.)	
2.	**Other Equity:**	
	Securities Premium	15
	Capital reserve [25- (600 – 700)]	(125)
		(110)

Working Note:

In the given case, since both the entities are under common control, this will be accounted as follows:

- All assets and liabilities will be recorded at book value
- Identity of reserves to be maintained.
- No goodwill will be recorded.
- Securities issued will be recorded as per the nominal value.

Illustration 37

Maxi Mini Ltd. has 2 divisions - Maxi and Mini. The draft information of assets and liabilities as at 31st October, 20X2 was as under:

		Maxi division	Mini division	Total (in crores)
Property, Plant and Equipment				
Cost		600	300	900
Depreciation		(500)	(100)	(600)
W.D.V.	(A)	100	200	300
Current assets		400	300	700
Less: Current liabilities		(100)	(100)	(200)
	(B)	300	200	500
Total	(A+B)	400	400	800

Financed by :			
Loan funds (A)	*–*	*100*	*100*
(secured by a charge on property, plant and equipment)			
Own funds:			
Equity capital			*50*
(fully paid up ₹ 10 per share)			
Other Equity	*-*	*-*	*650*
(B)	*?*	*?*	*700*
Total (A+B)	*400*	*400*	*800*

It is decided to form a new company Mini Ltd. to take over the assets and liabilities of Mini division.

Accordingly, Mini Ltd. was incorporated to take over at Balance Sheet figures, the assets and liabilities of that division. Mini Ltd. is to allot 5 crore equity shares of ₹ 10 each in the company to the members of Maxi Mini Ltd. in full settlement of the consideration. The members of Maxi Mini Ltd. are therefore to become members of Mini Ltd. as well without having to make any further investment.

(a) You are asked to pass journal entries in relation to the above in the books of Maxi Mini Ltd. and Mini Ltd. Also show the Balance Sheets of the 2 companies as on the morning of 1st November, 20X2, showing corresponding previous year's figures.

(b) The directors of the 2 companies ask you to find out the net asset value of equity shares pre and post demerger.

(c) Comment on the impact of demerger on "share holders wealth".

Solution

Demerged Company: Mini Division of "Maxi Mini Ltd"

Resulting Company: "Mini Ltd."

(a) Journal of Maxi Mini Ltd. (Demerged Company)

		(₹ in crores)	
		Dr.	***Cr.***
Current liabilities A/c	Dr.	100	
Loan fund (secured) A/c	Dr.	100	
Provision for depreciation A/c	Dr.	100	
Loss on reconstruction (Balancing figure)	Dr.	300	
To Property, Plant and Equipment A/c			300

To Current assets A/c		300
(Being the assets and liabilities of Mini division taken out of the books on transfer of the division to Mini Ltd., the consideration being allotment to the members of the company of one equity share of ₹ 10 each of that company at par for every share held in the company vide scheme of reorganisation)		

Note: Any other alternatives set of entries, with the same net effect on various accounts, may be given by the students. In the absence of additional information on fair value of the assets transferred it has been assumed that the group of shareholders control both the demerged and the resultant entity. It is expected that students should evaluate all reorganization from common control parameters and aptly highlight the assumptions in the note while solving the question.

Mini Ltd.

Balance Sheet as at 1st November, 20X2 *₹ in crore*

ASSETS	Note No.	After reconstruction
Non-current assets		
Property, Plant and Equipment		200
Current assets		
Other current assets		300
		500
EQUITY AND LIABILITIES		
Equity		
Equity share capital (of face value of ₹ 10 each)		50
Other equity (capital reserve)		250
Liabilities		
Non-current liabilities		
Financial liabilities		
Borrowings		100
Current liabilities		
Current liabilities		100
		500

Notes to Account

	(₹ in crores)
1. Share Capital:	
Issued and paid up:	
5 crores Equity shares of ₹ 10 each fully paid up	50
(All the above shares have been issued for consideration other than cash, to the members of Maxi Mini Ltd., on takeover of Mini division from Maxi Mini Ltd.)	

(b) Net asset value of an equity share

	Pre-demerger	*Post-demerger*
Maxi Mini Ltd. :	$\frac{₹\ 700\ crores}{5\ crores}$ = 140	$\frac{₹\ 400\ crores}{5\ crores}$ = ₹ 80
Mini Ltd.:		$\frac{₹\ 300\ crores}{5\ crores}$ = ₹ 60

(c) Demerger into two companies has had no impact on "net asset value" of shareholding. Pre-demerger, it was ₹ 140 per share. After demerger, it is ₹ 80 plus ₹ 60 i.e. ₹ 140 per original share.

It is only yield valuation that is expected to change because of separate focusing on two distinct businesses whereby profitability is likely to improve on account of demerger.

ABX Ltd. issued a requisite number of shares to discharge the claims of the equity shareholders of the transferor companies. Also new debentures were issued in exchange of the old series of both the companies.

Prepare a note showing purchase consideration and discharge thereof and draft the Balance Sheet of ABX Ltd:

a. Assuming that both the entities are under common control

b. Assuming BX Ltd is a larger entity and their management will take control of the entity ABX Ltd.

The fair value of net assets of AX and BX limited are as follows:

Assets	***AX Ltd. ('000)***	***BX Ltd. ('000)***
Property, Plant and Equipment	*9,500*	*1,000*
Inventory	*1,300*	*2,900*
Fair value of the business	*11,000*	*14,000*

Solution

(a) 1. Calculation of Purchase Consideration

		AX Ltd.		**BX Ltd.**
		₹ '000		₹ '000
Assets taken over:				
Property, Plant and Equipment		85,00		75,00
Investment		10,50		5,50
Inventory		12,50		27,50
Trade receivables		18,00		40,00
Cash & Cash equivalent		4,50		4,00

Gross Assets		130,50		152,00
Less : Liabilities				
12% Debentures	30,00		40,00	
Trade payables	10,00	(40,00)	15,00	(55,00)
Net Assets taken over		90,50		97,00
Less: Other Equity:				
General Reserve	15,00		20,00	
P & L A/c	10,00		5,00	
Investment Allowance Reserve	5,00		1,00	
Export Profit Reserve	50	(30,50)	1,00	(27,00)
Purchase Consideration		60,00		70,00

Total Purchase Consideration = 130,00 (60,00 of AX Ltd. & 70,00 of BX Ltd.)

2. Discharge of Purchase Consideration

No. of shares to be issued to AX Ltd =

$$\frac{\text{Net Assets taken over of AX Ltd.}}{\text{Net Assets taken over of AX Ltd. and BX Ltd.}} \text{x Purchase Consideration}$$

No. of shares to be issued to BX Ltd =

$$\frac{\text{Net Assets taken over of BX Ltd.}}{\text{Net Assets taken over of AX Ltd. and BX Ltd.}} \text{x Purchase Consideration}$$

	AX Ltd. ***₹ '000***	***BX Ltd.*** ***₹ '000***
$130{,}00 \times \frac{90{,}50}{187{,}50} = 6{,}27{,}500$ * Equity shares of ₹ 10 each	62,75	
$130{,}00 \times \frac{97{,}00}{187{,}50} = 6{,}72{,}500$ Equity shares of ₹ 10 each		67,25

* The total purchase consideration is to be discharged by ABX Ltd. in such a way that the rights of the shareholders of AX Ltd. and BX Ltd. remain unaltered in the future profits of ABX Ltd.

Balance Sheet of ABX Ltd. as on 1.1.20X2 *₹ in '000*

ASSETS	Note No.	Amount

(b) Assuming BX Ltd is a larger entity and their management will take the control of the entity ABX Ltd.

In this case BX Ltd. and AX Ltd. are not under common control and hence accounting prescribed under Ind AS 103 for business combination will be applied. A question arises here is who is the accounting acquirer ABX Ltd which is issuing the shares or AX Ltd. or BX Ltd. As per the accounting guidance provided in Ind AS 103, sometimes the legal acquirer may not be the accounting acquirer. In the given scenario although ABX Ltd. is issuing the shares but BX Ltd. post-merger will have control and is bigger in size which is a clear indicator that BX Ltd. will be an accounting acquirer. This can be justified by the following table: **(In '000s)**

	AX Ltd.	BX Ltd.
Fair Value	11,000	14,000
Value per share	10	10
No. of shares	1,100	1,400
i.e. Total No. of shares in ABX Ltd. = 2,500 thousand shares		
Thus, % Held by each Company in Combined Entity	44%	56%

Note: It is a case of Reverse Acquisition.

Accordingly, BX Ltd. assets will be recorded at historical cost in the merged financial statements.

(1) Calculation of Purchase Consideration (All figures are in thousands)

We need to calculate the number of shares to be issued by BX Ltd. to AX Ltd. to maintain the same percentage i.e. 56%:

Thus, 700 thousand shares of BX Ltd. (given in the balance sheet) represents 56%. This means that total no. of shares would be 1,250 thousand shares ie 700 thousand shares / 56%.

This implies BX Ltd. would need to issue 550 thousand shares (1,250 less 700) to AX Ltd.

Purchase Consideration = 550 thousand shares x ₹ 20 per share (ie. 14,000 thousand / 700 thousand shares) = ₹ 11,000 thousand.

Balance Sheet of ABX Ltd. as on 1.1.20X2 *₹ in '000*

ASSETS	Note No.	Amount
Non-current assets		
Property, Plant and Equipment (9,500 + 7,500)		17,000

Illustration 39

On 9th April, 20X2, Shyam Ltd. a listed company started to negotiate with Ram Ltd, which is an unlisted company about the possibility of merger. On 10th May, 20X2, the board of directors of Shyam Ltd. authorized their management to pursue the merger with Ram Ltd. On 15th May, 20X2, management of Shyam Ltd. offered management of Ram Ltd. 12,000 shares of Shyam Ltd. against their total share outstanding. On 31st May, 20X2, the board of directors of Ram Ltd accepted the offer subject to shareholder's vote. On 2nd June, 20X2 both the companies jointly made a press release about the proposed merger.

On 10th June, 20X2, the shareholders of Ram Ltd approved the terms of the merger. On 15th June, the shares were allotted to the shareholders of Ram Ltd.

The market price of the shares of Shyam Ltd was as follows:

Date	*Price per share*
9th April	*70*
10th May	*75*
15th May	*60*
31st May	*70*
2nd June	*80*
10th June	*85*
15th June	*90*

What is the acquisition date and what is purchase consideration in the above scenario?

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution

As per paragraph 8 of Ind AS 103, the acquirer shall identify the acquisition date, which is the date on which it obtains control of the aquiree. In the above scenario, the acquisition date will the date on which the shares were allotted to the shareholders of Ram Ltd. Although the shareholder approval was obtained on 10th June, 20X2 but the shares were issued only on 15th June, 20X2. Accordingly, the purchase consideration will be on the basis of ₹ 90 ie. the market price on that date. Hence total purchase consideration would be ₹ 10,80,000 (ie 12,000 shares x ₹ 90).

Other information

a. Professional Ltd. acquired 70% shares of Dynamic Ltd. on 1st April, 20X2 by issuing its own shares in the ratio of 1 share of Professional Ltd. for every 2 shares of Dynamic Ltd. The fair value of the shares of Professional Ltd was ₹ 40 per share.

b. The fair value exercise resulted in the following: (all nos. in Lakh)

   a. Fair value of PPE on 1st April, 20X2 was ₹ 350 lakhs.

   b. Professional Ltd also agreed to pay an additional payment as consideration that is higher of ₹ 35 lakh and 25% of any excess profits in the first year, after acquisition, over its profits in the preceding 12 months made by Dynamic Ltd. This additional amount will be due after 2 years. Dynamic Ltd has earned ₹ 10 lakh profit in the preceding year and expects to earn another ₹ 20 Lakh.

   c. In addition to the above, Professional Ltd also agreed to pay one of the founder shareholders a payment of ₹ 20 lakh provided he stays with the Company for two years after acquisition.

   d. Dynamic Ltd had a certain equity settled share-based payment award (original award) which was replaced by the new awards issued by Professional Ltd. As per the original terms, the vesting period was 4 years and as of the acquisition date the employees of Dynamic Ltd have already served 2 years of service. As per the replaced awards the vesting period has been reduced to one year (one year from the acquisition date). The fair value of the award on the acquisition date was as follows:

      i. Original award- ₹ 5 lakh

      ii. Replacement award-₹ 8 lakh.

   e. Dynamic Ltd had a lawsuit pending with a customer who had made a claim of ₹ 50 lakh. Management reliably estimated the fair value of the liability to be ₹ 5 lakh.

   f. The applicable tax rate for both entities is 30%.

You are required to prepare opening consolidated balance sheet of Professional Ltd as on 1st April, 20X2. Assume 10% discount rate.

Solution

Consolidated Balance Sheet of Professional Ltd as on 1st April, 20X2 **(₹ in Lakhs)**

	Amount
Assets	
Non-Current Assets:	
Property, plant and equipment	650
Investment	500
Current assets:	
Inventories	400
Financial assets:	
Trade receivables	750
Cash and cash equivalents	300
Others	630
Total	3,230
Equity and Liabilities	
Equity	
Share capital- Equity shares of ₹ 10 each	514
Other Equity	1,128.62
NCI	154.95
Non-Current liabilities:	
Long term borrowings	450
Long term provisions (50+70+28.93)	148.93
Deferred tax	28.5
Current Liabilities:	
Short term borrowings	250
Trade payables	550
Provision for Law suit Damages	5
Total	3,230

Notes:

a. As per Ind AS 103, the acquirer is required to record the assets and liabilities acquired at their respective fair value. Accordingly, the PPE of Dynamic Ltd. will be recorded at ₹ 350 lakhs.

b. The value of replacement award is allocated between consideration transferred and post combination expense. The portion attributable to purchase consideration is determined based on the fair value of the replacement award for the service rendered till the date of

the acquisition. Accordingly, ₹ 2.5 lakhs (5 x 2/4) is considered as a part of purchase consideration and is credited to Professional Ltd equity as this will be settled in its own equity. Since the fair value of the award on the acquisition date is ₹ 8 lakhs, the balance of ₹ 5.5 lakhs (8 – 2.5) will be recorded as employee expense in the books of Dynamic Ltd over the remaining life, which is 1 year in this scenario. (Para B59 of Ind AS 103)

c. There is a difference between contingent consideration and deferred consideration. In the given case, ₹ 35 lakhs is the minimum payment to be paid after 2 years and accordingly will be considered as deferred consideration. The other element is if a company meet certain target then they will get 25% of that or ₹ 35 lakhs whichever is higher. In the given case, the minimum what is expected to be paid has been considered and the fair value of the contingent consideration has been considered as zero. The impact of time value on deferred consideration has been given @ 10%.

d. The additional consideration of ₹ 20 lakhs to be paid to the founder shareholder is contingent to him/her continuing in employment and hence this will be considered as employee compensation and will be recorded as post combination expenses in the income statement of Dynamic Ltd.

Working Notes:

1. Computation for Purchase consideration

Particulars		Amount
Share capital of Dynamic Ltd		4,00,00,000
Number of shares	4,00,000	
Shares to be issued 2:1	2,00,000	
Fair value ₹ per share		40
		₹ in lakhs
PC (2,00,000 x 70% x ₹ 40 per share) (A)		56.00
Deferred consideration after discounting ₹ 35 lakhs for 2 years @ 10% (B)		28.93
Replacement award Market based measure of the acquiree award (5) x ratio of the portion of the vesting period completed (2) / greater of the total vesting period (3) or the original vesting period (4) of the acquiree award i.e. (5 x 2/4) (C)		2.50
PC in lakhs (A+B+C)		87.43

14. EXTRACTS FROM THE FINANCIAL STATEMENTS OF LISTED ENTITIES

Relevant Extracts from Financial Statements of selected Listed Companies:

1. ***Annual Report of Hindustan Unilever Ltd. for the year ending 31 March 2021: Amalgamation of GlaxoSmithKline Consumer Healthcare Ltd.:***

   Disclosure in Standalone Financial Statements:

Amalgamation of GlaxoSmithKline Consumer Healthcare Limited

On 1st April, 2020, the Company completed the merger of GlaxoSmithKline Consumer Healthcare Limited ['GSK CH'] via an all-equity merger under which 4.39 shares of HUL (the Company) were allotted for every share of GSK CH. With this merger the Company acquired the business of GSK CH including the Right to Use asset of brand Horlicks and Intellectual property rights of brands like Boost, Maltova and Viva. The Company also acquired the Horlicks intellectual property rights, being the legal rights to the Horlicks brand for India from GlaxoSmithKline Plc.

The scheme of merger ["scheme"] submitted by the Company was approved by Hon'ble National Company Law Tribunal by its order dated 24th September, 2019 (Mumbai bench) and 12th March, 2020 (Chandigarh bench). The Board of Directors approved the scheme between the Company and GSK CH, on 1st April, 2020. The scheme was filed with Registrar of Companies on the same date. Accordingly, 1st April, 2020 is considered as the acquisition date, i.e. the date on which control is transferred to the Company.

The merger was in line with HUL's strategy to build a sustainable and profitable Foods & Refreshment (F&R) business in India by leveraging the megatrend of health and wellness. GSK CH was one of the key players in this category with iconic brands such as 'Horlicks' and 'Boost' and comprised of a wide product portfolio.

The merger has been accounted for using the acquisition accounting method under Ind AS 103 – Business Combinations. All identified assets acquired, and liabilities assumed on the date of merger were recorded at their fair value.

(A) Purchase consideration transferred:

The total consideration paid was ₹40,242 crores which comprised of shares of the Company, valued based on the share price of the Company on the completion date. Refer to the details below:

As per the scheme, the Company issued its shares in favour of existing shareholders of GSK CH such that 4.39 of Company's shares were allotted for every share of GSK CH as below.

Total number of GSK CH shares outstanding	4,20,55,538
Total number of Company's shares issued to GSK CH shareholders i.e. 4.39 of Company's shares per share of GSK CH	18,46,23,812
Value of the Company share (closing price of the Company share on NSE as on 1st April, 2020)	2,179.65
Total consideration paid to acquire GSK CH (₹ crores)	**40,242**

(a) Total costs relating to the issuance of shares amounting to ₹44 crores have been recognised against equity.

(b) Transaction cost of ₹146 crores that were not directly attributable to the issue of shares are included under exceptional items in the standalone Statement of Profit and Loss.

(All amounts in ₹ crores, unless otherwise stated)

NOTE 40 BUSINESS COMBINATION (CONTINUED)

(B) Details of major assets acquired, and liabilities assumed:

	Amount
Specified Tangible Asset	
Property, Plant and Equipment	
Owned Assets	1,133
Leased Assets	76
Capital Work-in-progress	30
Specified Intangibles Assets	
Right of Use Horlicks	19,274
Boost Trademark	4,800
Others	62
Other Assets	
Trade and other receivables	651
Inventories	470
Cash and cash equivalents	300
Bank Balances other than cash and cash equivalents	3,855
Indemnification asset	608
Tax assets	186
Total identifiable assets (A)	**31,445**
Specified liabilities	
Trade payables	533
Other liabilities	400
Provision for employee benefits	86
Other Provisions (including ₹64 crores provision created against contingent liabilities)	343
Direct Tax Provision against contingent liabilities	974
Deferred tax liabilities	6,132
Total identifiable liabilities (B)	**8,468**
Total identifiable net assets acquired (A) - (B)	22,977
Goodwill	17,365
Total Net Assets	**40,242**

The main assets acquired were Right to use Horlicks and Boost brand which were valued using the income approach model by estimating future cashflows generated by these assets and discounting them to present value using rates in line with a market participant expectation.

In addition, as applicable, Property plant & equipment have been valued using the market comparison technique and replacement cost method.

The gross contractual value and fair value of trade and other receivables as at the dates of acquisition amounted to ₹651 crores which is expected to be fully recoverable.

© The Institute of Chartered Accountants of India

(All amounts in ₹ crores, unless otherwise stated)

(C) Acquisition of Horlicks Brand:

The Company also acquired the Horlicks intellectual property rights (IPR), being the legal rights to the Horlicks brand for India from GlaxoSmithKline Plc for a consideration of ₹3,045 crores. The transaction has been accounted as an asset acquisition in line with Ind AS 38 (Intangible asset).

The Company incurred transaction cost of ₹91 crores for the above asset acquisition which was capitalised along with Horlicks IPR. Total value of ₹3,136 crores is recognised under Intangible assets in the standalone financial statements.

(D) Goodwill:

Goodwill of ₹17,265 crores was recognised upon giving effect to the Scheme of Merger, which primarily can be attributable to the synergies expected to be achieved from integrating GSK CH into the Company's existing business and the value of GSK CH India's overlapping distribution network and assembled workforce i.e. the value of the acquired experienced and skilled employees, who have been instrumental to the GSK CH success.

Pursuant to amendment by Finance Act, 2021, Goodwill has been held as non-tax deductible asset effective 1st April, 2020.

(E) Details of contingent liabilities recognised:

GSK CH had direct/indirect tax related matters under litigation, for which contingent liability was determined amounting to ₹3,583 crores. Provision for these contingencies have been created at a fair value of ₹1,038 crores. There are several matters being disputed and, in each case, we believe that the likelihood that the Company will ultimately prevail is more likely than not. We expect that most of these disputes will not be resolved for several years. Further the Company has recognised Indemnification assets of ₹608 crores.

GlaxoSmithKline Plc, GlaxoSmithKline Pte. Ltd., Horlicks Ltd and the Company have entered into a contract to indemnify the Company for any exposure in relation to select taxation matters for a period of 10 years from date of acquisition i.e. till 31st March, 2030 and for a maximum value of USD 150 million.

(F) Analysis on cash flows of acquisition:

Purchase cost of Brand Horlicks of ₹3,045 crores and related transaction cost of ₹91 crores is included under Cash flow from investing activities.

Transaction cost attributable to issuance of equity shares ₹44 crores is included under cash flows from investing activities.

Transaction cost of ₹146 crores that were not directly attributable to the issue of shares are included under cash flow from operating activities.

(G) Impact of acquisition on the results

For the 12 months ended 31st March, 2021, GSK CH contributed revenue of ₹4,752 crores, EBITDA of ₹1,512 crores and EBIT of ₹1,406 crores to the Company's results.

Comparable period

The results for the year ended 31st March, 2021 include the impact of the acquisitions of VWash and GSK CH and accordingly are not comparable with previous year to that extent.

(iii) Calculation of Goodwill:

₹ crore

	Mindtree Limited
Purchase consideration for 31.20% stake purchased in open offer (A)	5038.57
Fair valuation of existing 28.86% stake (B)	4333.96
Total consideration (C)=(A+B)	9372.53
Add: Non-controlling interest	2023.88
Less: Fair value of net assets acquired	5067.86
Goodwill	6328.55

Join us t.me/caborntofight

Notes forming part of the Consolidated Financial Statements (contd.)

NOTE [44] (contd.)

(iv) Goodwill is attributable to future growth of business out of synergies from this acquisition and assembled workforce. The goodwill is not deductible for income tax purposes.

(v) The transaction cost of ₹ 96.39 crore (including ₹ 12.12 crore in previous year) have been expensed in the Statement of Profit and Loss.

(vi) Contingent liability of ₹ 26.85 crore has been recognised in respect of certain claims (mainly tax disputes) which have not been acknowledged as debt.

(vii) The non-controlling interest (39.94% ownership in Mindtree Limited) recognised at the acquisition date was measured at proportionate share of Mindtree Limited's net assets.

(viii) The Company fair valued its acquisition date stake of 28.86% as on July 2, 2019 and consequently, a loss of ₹ 329.89 crore was recognised in other comprehensive income.

(ix) Mindtree Limited has reported revenue of ₹ 5917.18 crore and profit after tax of ₹ 538.17 crore from the date of acquisition till March 31, 2020. Had the entity been acquired from April 1, 2019, it would have reported revenue of ₹ 7764.25 crore and profit after tax of ₹ 630.87 crore during 2019-20.

(x) Out of the ₹ 1315.30 crore trade receivables acquired, ₹ 1249.54 crore have been collected during the year.

15. SIGNIFICANT DIFFERENCES BETWEEN IND AS 103 AND AS 14

- **Under the existing Indian GAAP**, there is no comprehensive standard that addresses accounting for acquisitions where one entity obtains control of another entity. The accounting for such transactions is largely dependent on the form of the acquisition. For example, the accounting treatment may differ depending on whether the acquired company is retained as a separate legal entity or whether it is legally merged with the acquirer.

  To add to the complexity and confusion, if the acquired company is merged with the acquirer through a court-approved scheme, the scheme itself may prescribe an accounting treatment that is required to be followed, which may be in variation with the accounting standards. Indian GAAP still permits the use of the pooling-of-interest method whereby the entire transaction is accounted based on carrying values and no goodwill arises.

  Further, the current principles (AS 21, Consolidated Financial Statements) provide guidance on accounting for acquisition of a subsidiary in the entity's consolidated financial statements by adding, on a line-by-line basis, all assets and liabilities of the acquiree at the carrying values as appearing in the acquiree' s financial statement (subject to adjustment for alignment of accounting policies).

- **Under Ind AS 103**, Business Combination, is a more widely used term than just in relation to mergers and amalgamations and encompasses a wide range of arrangements (unless excluded from scope of Ind AS 103). Ind AS 103 provides principles for identifying what constitutes a business combination, prescribes the accounting treatment for business combinations with greater emphasis on the use of fair values in accounting for a business combination.

  The core principle of Ind AS 103 requires an acquirer of a business to recognise the assets acquired and the liabilities assumed at their acquisition date fair values and to disclose information that enables users to evaluate the nature and financial effects of the acquisition.

S. No.	Basis	Ind AS	Accounting Standards
1.	Applicability	Ind AS 103 applies to all types of business combinations (as defined in the standard) except formation of joint venture and acquisition of assets which do not constitute business. Ind AS 103 is wider in scope	AS 14 deals with amalgamation and mergers.

Join us t.me/caborntofight

2.		Ind AS 103 prescribes only the acquisition method for every business combination, except for business combinations involving entities or businesses under common control which shall be accounted for using the pooling of interests method.	Under AS 14, there are two methods of accounting for amalgamation *viz* the pooling of interest method and the purchase method. (Paragraph 7 of AS 14)
3.	**Effective date**	As per Ind AS 103, the date on which the acquirer obtains control of the acquiree is the acquisition date i.e. Effective date.	AS 14 mentions but does not define date of amalgamation. In practice generally the date of amalgamation / acquisition mentioned in the court scheme (the Appointed date) is considered as the acquisition date.
4.	**Valuation base**	Ind AS 103 requires the acquired identifiable assets liabilities and non-controlling interest to be recognised at fair value under acquisition method. (Paragraphs 18-19 of Ind AS 103)	Under AS 14, the acquired assets and liabilities are recognised at their existing book values or at fair values under the purchase method. (Paragraph 12 of AS 14)
5.	**Accounting of non-controlling interest / minority interest**	Ind AS 103 requires that for each business combination, the acquirer shall measure any non-controlling interest in the acquiree either at fair value or at the non-controlling interest's proportionate share of the acquiree's identifiable net assets. (Paragraph 19 of Ind AS 103)	AS 21 states that the minority interest is the amount of equity attributable to minorities at the date on which investment in a subsidiary is made and it is shown outside shareholders' equity. (Paragraph 13(e) of AS 21)
6.	**Amortisation of Goodwill**	Under Ind AS 103, the goodwill is not amortised but tested for impairment on annual basis in accordance with Ind AS 36.	AS 14 requires that the goodwill arising on amalgamation in the nature of purchase is amortised over a period not exceeding five years.
7.	**Reverse acquisition**	Ind AS 103 provides guidance on accounting for reverse acquisitions.	AS 14 does not deal with the same.

© The Institute of Chartered Accountants of India

8.	**Contingent consideration**	Ind AS 103 deals with the contingent consideration in case of business combination, i.e., an obligation of the acquirer to transfer additional assets or equity interests to the former owners of an acquiree as part of the exchange for control of the acquiree if specified future events occur or conditions are met.	AS 14 does not provide specific guidance on this aspect.
9.	**Bargain purchase gain / capital reserve and its presentation**	Ind AS 103 requires bargain purchase gain arising on business combination to be recognised in other comprehensive income and accumulated in equity as capital reserve, unless there is no clear evidence for the underlying reason for classification of the business combination as a bargain purchase, in which case, it shall be recognised directly in equity as capital reserve. (Paragraph 34 of Ind AS 103)	Under AS 14, the excess amount is treated as capital reserve under the head reserves and surplus. (Paragraph 17 of AS 14)
	Accounting for common control transactions	Appendix C of Ind AS 103 deals with accounting for common control transactions, which prescribes pooling of interest method of accounting, which is different from accounting for other business combinations as prescribed under Ind AS 103.	AS 14 does not differentiate and prescribe accounting for such transactions different from other amalgamations.

16. CARVE OUT IN IND AS 103 FROM IFRS 3

As per IFRS: IFRS 3 requires bargain purchase gain arising from a business combination to be recognised in profit or loss as income.

Carve out: Ind AS 103 requires the bargain purchase gain to be recognised in other comprehensive income and accumulated in equity as capital reserve, unless there is no clear evidence for the underlying reason for classification of the business combination as a bargain purchase, in which case, it shall be recognised directly in equity as capital reserve. A similar carve-out is made in Ind AS 28, Investments in Associates and Joint Ventures.

Reasons: Since bargain purchase gain occurs at the time of acquiring a business, these are considered as capital reserve in continuation of the practice then prevailing in the Indian GAAP.

17. CARVE-IN IN IND AS 103 FROM IFRS 3

As per IFRS: IFRS 3 excludes from its scope business combinations of entities under common control.

Carve-in: Appendix C of Ind AS 103, *Business Combinations* gives guidance in this regard. Therefore, this is additional guidance under Ind AS that is not available under IFRS Standards.

Questions

1. Company A and Company B are in power business. Company A holds 25% of equity shares of Company B. On 1st November, Company A obtains control of Company B when it acquires a further 65% of Company B's shares, thereby resulting in a total holding of 90%. The acquisition had the following features:

   - **Consideration:** Company A transfers cash of ₹ 59,00,000 and issues 1,00,000 shares on 1st November. The market price of Company A's shares on the date of issue is ₹ 10 per share.
   - **Contingent consideration:** Company A agrees to pay additional consideration of ₹ 7,00,0g12000 if the cumulative profits of Company B exceed ₹ 70,00,000 over the next two years. At the acquisition date, it is not considered probable that the extra consideration will be paid. The fair value of the contingent consideration is determined to be ₹ 3,00,000 at the acquisition date.
   - **Transaction costs:** Company A pays acquisition-related costs of ₹ 1,00,000.
   - **Non-controlling interests (NCI):** The fair value of the NCI is determined to be ₹ 7,50,000 at the acquisition date based on market prices. Company A elects to measure non-controlling interest at fair value for this transaction.
   - **Previously held non-controlling equity interest:** Company A has owned 25% of the shares in Company B for several years. At 1st November, the investment is included in Company A's consolidated balance sheets at ₹ 6,00,000, accounted for using the equity method; the fair value is ₹ 20,00,000.

   The fair value of Company B's net identifiable assets at 1st November is ₹ 60,00,000, determined in accordance with Ind AS 103.

Join us t.me/caborntofight

Determine the accounting under acquisition method for the business combination by Company A.

2. On 31st December, 20X1, Entity A issues 2.5 shares in exchange for each ordinary share of Entity B. All of Entity B's shareholders exchange their shares in Entity B. Therefore, Entity A issues 150 ordinary shares in exchange for all 60 ordinary shares of Entity B.

   The fair value of each ordinary share of Entity B at 31st December, 20X1 is ₹ 40. The quoted market price of Entity A's ordinary shares at that date is ₹ 16.

   The fair values of Entity A's identifiable assets and liabilities at 31st December, 20X1 are the same as their carrying amounts, except that the fair value of Entity A's non- current assets at 31st December, 20X1 is ₹ 1,500.

   The balance sheets of Entity A and Entity B immediately before the business combination are:

	Entity A (legal parent, accounting acquiree)	**Entity B (legal subsidiary, accounting acquirer)**
Current assets	500	700
Non-current assets	1,300	3,000
Total assets	1,800	3,700
Current liabilities	300	600
Non-current liabilities	400	1,100
Total liabilities	700	1,700
Shareholders' equity		
Retained earnings	800	1,400
Issued equity		
100 ordinary shares	300	
60 ordinary shares		600
Total shareholders' equity	1,100	2,000
Total liabilities and shareholders' equity	1,800	3,700

   Assume that Entity B's earnings for the annual period ended 31st March, 20X1 were ₹ 600 and that the consolidated earnings for the annual period ended 31st March, 20X2 were ₹ 800. Assume also that there was no change in the number of ordinary shares issued by Entity B during the annual period ended 31st March, 20X1 and during the period from 1st January, 20X1 to the date of the reverse acquisition on 31st December, 20X1.

Join us t.me/caborntofight

Calculate the fair value of the consideration transferred measure goodwill and prepare consolidated balance sheet as on 31st December, 20X1.

3. **Scenario 1: New information on the fair value of an acquired loan**

Bank F acquires Bank E in a business combination in October, 20X1. The loan by Bank E to Borrower B is recognised at its provisionally determined fair value. In December 20X1, F receives Borrower B's financial statements for the year ended 30th September, 20X1, which indicate significant decrease in Borrower B's income from operations. Basis this, the fair value of the loan to B at the acquisition date is determined to be less than the amount recognised earlier on a provisional basis.

Scenario 2: Decrease in fair value of acquired loan resulting from an event occurring during the measurement period.

Bank F acquires Bank E in a business combination in October, 20X1. The loan by Bank E to Borrower B is recognised at its provisionally determined fair value. In December 20X1, F receives information that Borrower B has lost its major customer earlier that month and this is expected to have a significant negative effect on B's operations.

Comment on the treatment done by Bank F.

4. Company A acquired 90% equity interest in Company B on 1st April, 20X1 for a consideration of ₹ 85 crores in a distress sale. Company B did not have any instrument recognised in equity. The Company appointed a registered valuer with whose assistance, the Company valued the fair value of NCI and the fair value identifiable net assets at ₹ 15 crores and ₹ 100 crores respectively.

Find the value at which NCI has to be shown in the financial statements.

5. On 1st April, 20X1, Company A acquired 5% of the equity share capital of Company B for 1,00,000. A accounts for its investment in B at Fair Value through OCI (FVOCI) under Ind AS 109, *Financial Instruments: Recognition and Measurement*. At 31st March, 20X2, A carried its investment in B at fair value and reported an unrealised gain of ₹ 5,000 in other comprehensive income, which was presented as a separate component of equity. On 1st April, 20X2, A obtains control of B by acquiring the remaining 95 percent of B.

Comment on the treatment to be done based on the facts given in the question.

6. Company A acquires 70 percent of Company S on 1st January, 20X1 for consideration transferred of ₹ 5 million. Company A intends to recognise the NCI at proportionate share of fair value of identifiable net assets. With the assistance of a suitably qualified valuation professional, A measures the identifiable net assets of B at ₹ 10 million. A performs a review and determines that the business combination did not include any transactions that should be accounted for separately from the business combination.

State whether the procedures followed by A and the resulting measurements are appropriate or not. Also calculate the bargain purchase gain in the process

7. Entity A and entity B provide construction services in India. Entity A is owned by a group of individuals, none of whom has control and does not have a collective control agreement. Entity B is owned by a single individual, Mr. Ram. The owners of entities A and B have decided to combine their businesses. The consideration will be settled in shares of entity B. Entity B issues new shares, amounting to 40% of its issued share capital, to its controlling shareholder, Mr. Ram. Mr. Ram then transfers the shares to the owners of entity A in exchange for their interest in entity A. At this point Mr. Ram controls both entities A and B, owning 100% of entity A and 71.42% of entity B. Mr. Ram had a controlling interest in both entity A and entity B before and after the contribution.

   Is the combination of entities A and B a combination of entities under common control?

8. On 1 April 20X1, Alpha Ltd. acquires 80 percent of the equity interest of Beta Pvt. Ltd. in exchange for cash of ₹ 300. Due to legal compulsion, Beta Pvt. Ltd. had to dispose of their investments by a specified date. Therefore, they did not have sufficient time to market Beta Pvt. Ltd. to multiple potential buyers. The management of Alpha Ltd. initially measures the separately recognizable identifiable assets acquired and the liabilities assumed as of the acquisition date in accordance with the requirement of Ind AS 103. The identifiable assets are measured at ₹ 500 and the liabilities assumed are measured at ₹ 100. Alpha Ltd. engages on independent consultant, who determined that the fair value of 20 per cent non-controlling interest in Beta Pvt. Ltd. is ₹ 84.

   Alpha Ltd. reviewed the procedures it used to identify and measure the assets acquired and liabilities assumed and to measure the fair value of both the non controlling interest in Beta Pvt. Ltd. and the consideration transferred. After the review, it decided that the procedures and resulting measures were appropriate.

   Calculate the gain or loss on acquisition of Beta Pvt. Ltd. and also show the journal entries for accounting of its acquisition. Also calculate the value of the non-controlling interest in Beta Pvt. Ltd. on the basis of proportionate interest method, if alternatively applied?

9. ABC Ltd. prepares consolidated financial statements upto 31st March each year. On 1st July 20X1, ABC Ltd. acquired 75% of the equity shares of JKL Ltd. and gained control of JKL Ltd. the issued shares of JKL Ltd. is 1,20,00,000 equity shares. Details of the purchase consideration are as follows:

   - On 1st July, 20X1, ABC Ltd. issued two shares for every three shares acquired in JKL Ltd. On 1st July, 20X1, the market value of an equity share in ABC Ltd. was ₹ 6.50 and the market value of an equity share in JKL Ltd. was ₹ 6.

   - On 30th June, 20X2, ABC Ltd. will make a cash payment of ₹ 71,50,000 to the former shareholders of JKL Ltd. who sold their shares to ABC Ltd. on 1st July, 20X1. On 1st July, 20X1, ABC Ltd. would have to pay interest at an annual rate of 10% on borrowings.

- On 30th June, 20X3, ABC Ltd. may make a cash payment of ₹ 3,00,00,000 to the former shareholders of JKL Ltd. who sold their shares to ABC Ltd. on 1st July, 20X1. This payment is contingent upon the revenues of ABC Ltd. growing by 15% over the two-year period from 1st July, 20X1 to 30th June, 20X3. On 1st July, 20X1, the fair value of this contingent consideration was ₹ 2,50,00,000. On 31st March, 20X2, the fair value of the contingent consideration was ₹ 2,20,00,000.

On 1st July, 20X1, the carrying values of the identifiable net assets of JKL Ltd. in the books of that company was ₹ 6,00,00,000. On 1st July, 20X1, the fair values of these net assets was ₹ 7,00,00,000. The rate of deferred tax to apply to temporary differences is 20%.

During the nine months ended on 31st March, 20X2, JKL Ltd. had a poorer than expected operating performance. Therefore, on 31st March, 20X2 it was necessary for ABC Ltd. to recognise an impairment of the goodwill arising on acquisition of JKL Ltd., amounting to 10% of its total computed value.

Compute the impairment of goodwill in the consolidated financial statements of ABC Ltd. under both the methods permitted by Ind AS 103 for the initial computation of the non-controlling interest in JKL Ltd. at the acquisition date.

10. How should contingent consideration payable in relation to a business combination be accounted for on initial recognition and at the subsequent measurement as per Ind AS in the following cases:

On 1st April 20X1, A Ltd. acquires 100% interest in B Ltd. As per the terms of agreement the purchase consideration is payable in the following 2 tranches:

a. an immediate issuance of 10 lakhs shares of A Ltd. having face value of ₹ 10 per share;

b. a further issuance of 2 lakhs shares after one year if the profit before interest and tax of B Ltd. for the first year following acquisition exceeds ₹ 1 crore.

   i. The fair value of the shares of A Ltd. on the date of acquisition is ₹ 20 per share. Further, the management has estimated that on the date of acquisition, the fair value of contingent consideration is ₹ 25 lakhs.

   ii. During the year ended 31st March 20X2, the profit before interest and tax of B Ltd. exceeded ₹ 1 crore. As on 31st March 20X2, the fair value of shares of A Ltd. is ₹ 25 per share.

   iii. Continuing with the fact pattern in (a) above except for:

c. The number of shares to be issued after one year is not fixed.

d. Rather, A Ltd. agreed to issue variable number of shares having a fair value equal to ₹ 40 lakhs after one year, if the profit before interest and tax for the first year following acquisition exceeds ₹ 1 crore. A Ltd. issued shares with ₹ 40 lakhs after a year.

11. As part of its business expansion strategy, KK Ltd. is in process of setting up a pharma intermediates business which is at very initial stage. For this purpose, KK Ltd. has acquired on 1st April, 20X1, 100% shares of ABR Ltd. that manufactures pharma intermediates. The purchase consideration for the same was by way of a share exchange valued at ₹ 35 crores. The fair value of ABR Ltd.' s net assets was ₹ 15 crores, but does not include:

    (i) A patent owned by ABR Ltd. for an established successful intermediate drug that has a remaining life of 8 years. A consultant has estimated the value of this patent to be ₹ 10 crores. However, the outcome of clinical trials for the same are awaited. If the trials are successful, the value of the drug would fetch the estimated ₹ 15 crores.

    (ii) ABR Ltd. has developed and patented a new drug which has been approved for clinical use. The cost of developing the drug was ₹ 12 crores. Based on early assessment of its sales success, the valuer has estimated its market value at ₹ 20 crores.

    (iii) ABR Ltd.'s manufacturing facilities have received a favourable inspection by a government department. As a result of this, the Company has been granted an exclusive five-year license to manufacture and distribute a new vaccine. Although the license has no direct cost to the Company, its directors believe that obtaining the license is a valuable asset which assures guaranteed sales and the value for the same is estimated at ₹ 10 crores.

    KK Ltd. has requested you to suggest the accounting treatment of the above transaction under applicable Ind AS.

12. H Ltd. acquired equity shares of S Ltd., a listed company, in two tranches as mentioned in the below table:

Date	Equity stake purchased	Remarks
1st November, 20X6	15%	The shares were purchased based on the quoted price on the stock exchange on the relevant dates.
1st January, 20X7	45%	

Both the above-mentioned companies have Rupees as their functional currency. Consequently, H Ltd. acquired control over S Ltd. on 1st January, 20X7. Following is the Balance Sheet of S Ltd. as on that date:

Particulars	Carrying value (₹ in crore)	Fair value (₹ in crore)
ASSETS:		
Non-current assets		

Join us t.me/caborntofight

(a) Property, plant and equipment	40.0	90.0
(b) Intangible assets	20.0	30.0
(c) Financial assets		
- Investments	100.0	350.0
Current assets		
(a) Inventories	20.0	20.0
(b) Financial assets		
- Trade receivables	20.0	20.0
- Cash held in functional currency	4.0	4.0
(c) Other current assets		
Non-current asset held for sale	4.0	4.5
TOTAL ASSETS	208	
EQUITY AND LIABILITIES:		
Equity		
(a) Share capital (face value ₹ 100)	12.0	50.4
(b) Other equity	141.0	Not applicable
Non-current liabilities		
(a) Financial liabilities		
- Borrowings	20.0	20.0
Current liabilities		
(a) Financial liabilities		
- Trade payables	28.0	28.0
(b) Provision for warranties	3.0	3.0
(c) Current tax liabilities	4.0	4.0
TOTAL EQUITY AND LIABILITIES	208.0	

Other information:

Following is the statement of contingent liabilities of S Ltd. as on 1st January, 20X7:

Particulars	Fair value (₹ in crore)	Remarks
Law suit filed by a customer for a claim of ₹ 2 crore	0.5	It is not probable that an outflow of resources embodying economic benefits will be required to settle the claim. Any amount which would be paid

		in respect of law suit will be tax deductible.
Income tax demand of ₹ 7 crore raised by tax authorities; S Ltd. has challenged the demand in the court.	2.0	It is not probable that an outflow of resources embodying economic benefits will be required to settle the claim.

In relation to the above-mentioned contingent liabilities, S Ltd. has given an indemnification undertaking to H Ltd. up to a maximum of ₹ 1 crore.

₹ 1 crore represents the acquisition date fair value of the indemnification undertaking.

Any amount which would be received in respect of the above undertaking shall not be taxable.

The tax bases of the assets and liabilities of S Ltd. is equal to their respective carrying values being recognised in its Balance Sheet.

Carrying value of non-current asset held for sale of ₹ 4 crore represents its fair value less cost to sell in accordance with the relevant Ind AS.

In consideration of the additional stake purchased by H Ltd. on 1st January, 20X7, it has issued to the selling shareholders of S Ltd. 1 equity share of H Ltd. for every 2 shares held in S Ltd. Fair value of equity shares of H Ltd. as on 1st January, 20X7 is ₹ 10,000 per share.

On 1st January, 20X7, H Ltd. has paid ₹ 50 crore in cash to the selling shareholders of S Ltd. Additionally, on 31st March, 20X9, H Ltd. will pay ₹ 30 crore to the selling shareholders of S Ltd. if return on equity of S Ltd. for the year ended 31st March, 20X9 is more than 25% per annum. H Ltd. has estimated the fair value of this obligation as on 1st January, 20X7 and 31st March, 20X7 as ₹ 22 crore and ₹ 23 crore respectively. The change in fair value of the obligation is attributable to the change in facts and circumstances after the acquisition date.

Quoted price of equity shares of S Ltd. as on various dates is as follows:

As on November, 20X6 ₹ 350 per share

As on 1st January, 20X7 ₹ 395 per share

As on 31st March, 20X7 ₹ 420 per share

On 31st May, 20X7, H Ltd. learned that certain customer relationships existing as on 1st January, 20X7, which met the recognition criteria of an intangible asset as on that date, were not considered during the accounting of business combination for the year ended 31st March, 20X7. The fair value of such customer relationships as on 1st January, 20X7

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

was ₹ 3.5 crore (assume that there are no temporary differences associated with customer relations; consequently, there is no impact of income taxes on customer relations).

On 31st May, 20X7 itself, H Ltd. further learned that due to additional customer relationships being developed during the period 1st January, 20X7 to 31st March, 20X7, the fair value of such customer relationships has increased to ₹ 4 crore as on 31st March, 20X7.

On 31st December, 20X7, H Ltd. has established that it has obtained all the information necessary for the accounting of the business combination and that more information is not obtainable.

H Ltd. and S Ltd. are not related parties and follow Ind AS for financial reporting. Income tax rate applicable is 30%.

You are required to provide your detailed responses to the following, along with reasoning and computation notes:

(a) What should be the goodwill or bargain purchase gain to be recognised by H Ltd. in its financial statements for the year ended 31st March, 20X7. For this purpose, measure non-controlling interest using proportionate share of the fair value of the identifiable net assets of S Ltd.

(b) Will the amount of non-controlling interest, goodwill, or bargain purchase gain so recognised in (a) above change subsequent to 31st March, 20X7? If yes, provide relevant journal entries.

(c) What should be the accounting treatment of the contingent consideration as on 31st March, 20X7?

13. Company X is engaged in the business of exploration & development of Oil & Gas Blocks.

Company X currently holds participating interest (PI) in below mentioned producing Block as follows:

Block Name	Company X	Company Y	Company Z	Total
AWM/01	30%	60%	10%	100%

For the above Block, Company X, Y & Z has entered into unincorporated Joint Arrangement.

Company Y is the Operator of the Block AWM/01. Company X & Company Z are the Joint Operators. Company Y incurs all the expenditure on behalf of Joint Venture and raise cash call to Company X & Company Z at each month end in respect of their share of expenditure incurred in Joint Venture. All the manpower and requisite facilities / machineries owned by the Joint venture and thereby owned by all the Joint Operators.

Join us t.me/caborntofight

For past few months, due to liquidity issues, Company Z defaulted in payment of cash calls to operators. Therefore, company Y (Operator) has issued notice to company Z for withdrawal of their participating right from on 01.04.20X1. However, company Z has filed the appeal with arbitrator on 30.04.20X1.

Financial performance of company Z did not improve in subsequent months and therefore company Z decided to withdraw participating interest rights from Block AWM/01 and entered into sale agreement with Company X & Company Y. As per the terms of the agreement, dated 31.5.20X1, Company X will receive 33.33% share & Company Y will receive 66.67% share of PI rights owned by Company Z.

Company X is required to pay ₹ 1 Lacs against 33.33% share of PI rights owned by Company Z.

After signing of sale agreement, Operator (company Y) approach government of India for modification in PSC (Production Sharing Contract) i.e. removal of Company Z from PSC of AWM/01 and government has approved this transaction on 30.6.20X1. Government approval for the modification in PSC is essential, given the industry in which the joint operators operate.

Balance sheet of Company X & Company Z are as follows:

Particulars	Company X		Company Z	
	31.5.20X1 ₹	30.6.20X1 ₹	31.5.20X1 ₹	30.6.20X1 ₹

Total Liabilities	**13,50,000**	**23,00,000**	**4,25,000**	**8,50,000**

Additional Information:

1. Fair Value of PPE & Development CWIP owned by Company Z as per Market participant approach is ₹ 5,00,000 & ₹ 2,00,000 respectively.
2. Fair Value of all the other assets and liabilities acquired are assumed to be at their carrying values (except cash & cash equivalent). Cash and cash equivalents of Company Z are not to be acquired by Company X as per the terms of agreement.
3. Tax rate is assumed to be 30%.
4. As per Ind AS 111, it is a joint operation whereby every operator records their share of assets and liabilities in their books.

You need to determine the following:

1. Whether the above acquisition falls under business or asset acquisition as defined under business combination standard Ind AS 103?
2. Determine the acquisition date in the above transaction?
3. Prepare Journal entries for the above-mentioned transaction?
4. Draft the Balance Sheet for Company X based on your analysis in Part 1 above as at acquisition date.

14. Entity X acquired entity Y in a business combination as per Ind AS 103. There is an existing share-based plan in entity Y with a vesting condition for 3 years in which 2 years have already lapsed at the date of such business acquisition. Entity X agreed to replace the existing award for the employees of combined entity. The details are as below –

Acquisition date fair value of share-based payment plan	₹ 300
Number of years to vest after acquisition	1 year
Fair Value of award which replaces existing plan	₹ 400

Calculate the share-based payment values?

Answers

1. ***Identify the acquirer***

In this case, Company A has paid cash consideration to shareholders of Company B. Further, the shares issued to Company B pursuant to the acquisition do not transfer control of Company A to erstwhile shareholders of Company B. Therefore, Company A is the acquirer and Company B is the acquiree.

Determine acquisition date

As the control over the business of Company B is transferred to Company A on 1st November, that date is considered as the acquisition date.

Determine the purchase consideration

The purchase consideration in this case will comprise the following:

Cash consideration	₹ 59,00,000
Equity shares issued (1,00,000 x 10 i.e., at fair value)	₹ 10,00,000
Contingent consideration (at fair value)	₹ 3,00,000
Fair value of previously held interest	₹ 20,00,000

As such, the total purchase consideration is ₹ 92,00,000.

Acquisition cost incurred by and on behalf of the Company A for acquisition of Company B should be recognised in the Statement of profit and loss. As such, an amount of ₹ 1,00,000 should be recognised in Statement of profit and loss.

Determine fair value of identifiable assets and liabilities

The fair value of identifiable net assets is determined at ₹ 60,00,000.

Measure NCI

The management has decided to recognise the NCI at its fair value. As such, the NCI will be recognised at ₹ 7,50,000.

Re-measure previously held interests in case business combination is achieved in stages

In this case, the control has been acquired in stages i.e., before acquisition to control, the Company A exercised significant influence over Company B. As such, the previously held interest should be measured at fair value and the difference between the fair value and the carrying amount as at the acquisition date should be recognised in Statement of Profit and Loss. As such, an amount of ₹ 14,00,000 (i.e., 20,00,000 less 6,00,000) will be recognised in Statement of profit and loss.

Determination of goodwill or gain on bargain purchase

Goodwill should be calculated as follows:

	(₹)
Total consideration	92,00,000
Recognised amount of any non-controlling interest	7,50,000
Less: Fair value of Company B's net identifiable assets	(60,00,000)
Goodwill	**39,50,000**

2. Identifying the acquirer

As a result of Entity A issuing 150 ordinary shares, Entity B's shareholders own 60 per cent of the issued shares of the combined entity (i.e., 150 of the 250 total issued shares). The remaining 40 per cent are owned by Entity A's shareholders. Thus, the transaction is determined to be a reverse acquisition in which Entity B is identified as the accounting acquirer while Entity A is the legal acquirer.

Calculating the fair value of the consideration transferred

If the business combination had taken the form of Entity B issuing additional ordinary shares to Entity A's shareholders in exchange for their ordinary shares in Entity A, Entity B would have had to issue 40 shares for the ratio of ownership interest in the combined entity to be the same. Entity B's shareholders would then own 60 of the 100 issued shares of Entity B — 60 per cent of the combined entity. As a result, the fair value of the consideration effectively transferred by Entity B and the group's interest in Entity A is ₹ 1,600 (40 shares with a fair value per share of ₹ 40).

The fair value of the consideration effectively transferred should be based on the most reliable measure. Here, the quoted market price of Entity A's shares provides a more reliable basis for measuring the consideration effectively transferred than the estimated fair

Join us t.me/caborntofight

value of the shares in Entity B, and the consideration is measured using the market price of Entity A's 100 shares with a fair value per share of ₹ 16.

Measuring goodwill

Goodwill is measured as the excess of the fair value of the consideration effectively transferred (the group's interest in Entity A) over the net amount of Entity A's recognised identifiable assets and liabilities, as follows:

	₹	₹
Consideration effectively transferred		1,600
Net recognised values of Entity A's identifiable assets and liabilities		
Current assets	500	
Non-current assets	1,500	
Current liabilities	(300)	
Non-current liabilities	(400)	(1,300)
Goodwill		300

Consolidated balance sheet at 31st December, 20X1

The consolidated balance sheet immediately after the business combination is:

	₹
Non-current assets [3,000 + 1,500]	4,500
Goodwill	300
Current assets [700 + 500]	1,200
Total assets	6,000
Shareholders' equity	
Issued equity 250 ordinary shares [600 + 1,600]	2,200
Retained earnings	1,400
Total shareholders' equity	3,600
Non-current liabilities [1,100 + 400]	1,500
Current liabilities [600 + 300]	900
Total liabilities	2,400
Total liabilities and shareholders' equity	6,000

The amount recognised as issued equity interests in the consolidated financial statements (₹ 2,200) is determined by adding the issued equity of the legal subsidiary immediately before the business combination (600) and the fair value of the consideration effectively transferred (₹ 1,600). However, the equity structure appearing in the consolidated financial statements (i.e., the number and type of equity interests issued) must reflect the equity structure of the legal parent, including the equity interests issued by the legal parent to affect the combination.

3. **Scenario 1:** The new information obtained by F subsequent to the acquisition relates to facts and circumstances that existed at the acquisition date. Accordingly, an adjustment (i.e., decrease) to in the provisional amount should be recognised for loan to B with a corresponding increase in goodwill.

Scenario 2: Basis this, the fair value of the loan to B will be less than the amount recognised earlier at the acquisition date. The new information resulting in the change in the estimated fair value of the loan to B does not relate to facts and circumstances that existed at the acquisition date, but rather is due to a new event i.e., the loss of a major customer subsequent to the acquisition date. Therefore, based on the new information, F should determine and recognise an allowance for loss on the loan in accordance with Ind AS 109, *Financial Instruments: Recognition and Measurement*, with a corresponding charge to profit or loss; goodwill is not adjusted.

4. In this case, Company A has the option to measure NCI as follows:

- Option 1: Measure NCI at fair value i.e., ₹ 15 crores as derived by the valuer;
- Option 2: Measure NCI as proportion of fair value of identifiable net assets i.e., ₹ 10 crores (100 crores x 10%)

5. At the acquisition date A recognises the gain of ₹ 5,000 in OCI as the gain or loss is not allowed to be recycled to income statement as per the requirement of Ind AS 109. A's investment in B would be at fair value and therefore does not require remeasurement as a result of the business combination. The fair value of the 5 percent investment (1,05,000) plus the fair value of the consideration for the 95 percent newly acquired interest is included in the acquisition accounting.

6. The amount of B's identifiable net assets exceeds the fair value of the consideration transferred plus the fair value of the NCI in B, resulting in an initial indication of a gain on a bargain purchase. Accordingly, A reviews the procedures it used to identify and measure the identifiable net assets acquired, to measure the fair value of both the NCI and the consideration transferred, and to identify transactions that were not part of the business combination.

Following that review, A concludes that the procedures followed and the resulting measurements were appropriate.

	(₹)
Identifiable net assets	1,00,00,000
Less: Consideration transferred	(50,00,000)
NCI (10 million x 30%)	(30,00,000)
Gain on bargain purchase	20,00,000

7. No. This is not a business combination of entities under common control. Mr. Ram's control of both entities before the business combination was transitory. The substance of the transaction is that entity B has obtained control of entity A. Entity B accounts for this transaction as a business combination under Ind AS 103 using acquisition accounting.

8. The amount of Beta Pvt. Ltd. identifiable net assets [₹ 400, calculated as ₹ 500 - ₹ 100) exceeds the fair value of the consideration transferred plus the fair value of the non controlling interest in Beta Pvt. Ltd. [₹ 384 calculated as 300 + 84]. Alpha Ltd. measures the gain on its purchase of the 80 per cent interest as follows:

		₹ in lakh
Amount of the identifiable net assets acquired (₹ 500 - ₹ 100)		400
Less: Fair value of the consideration transferred for Alpha Ltd. 80 per cent interest in Beta Pvt. Ltd.	300	
Add: Fair value of non controlling interest in Beta Pvt. Ltd.	84	(384)
Gain on bargain purchase of 80 per cent interest		16

Journal Entry

	₹ in lakh	₹ in lakh
Identifiable assets acquired Dr.	500	
To Cash		300
To Liabilities assumed		100
To OCI/Equity-Gain on the bargain purchase		16
To Equity-non controlling interest in Beta Pvt Ltd.		84

If the acquirer chose to measure the non controlling interest in Beta Pvt. Ltd. on the basis of its proportionate interest in the identifiable net assets of the acquire, the recognized

amount of the non controlling interest would be ₹ 80 (₹ 400 x 0.20). The gain on the bargain purchase then would be ₹ 20 (₹ 400- (₹ 300 + ₹ 80)

9. Computation of goodwill impairment

	NCI at fair value	NCI at of net assets
	₹ in '000	₹ in '000
Cost of investment		
Share exchange (12,000 x 75% x 2/3 x ₹ 6.50)	39,000	39,000
Deferred consideration (7,150 / 1.10)	6,500	6,500
Contingent consideration	25,000	25,000
Non-controlling interest at date of acquisition:		
Fair value – 3000 x ₹ 6	18,000	
% of net assets – 68,000 (Refer W.N.) x 25%		17,000
Net assets on the acquisition date (Refer W.N.)	(68,000)	(68,000)
Goodwill on acquisition	20,500	19,500
Impairment @ 10%	2,050	1,950

Working Note:

Net assets on the acquisition date	₹ '000
Fair value at acquisition date	70,000
Deferred tax on fair value adjustments [20% x (70,000 – 60,000)]	(2,000)
	68,000

10. Paragraph 37 of Ind AS 103, inter alia, provides that the consideration transferred in a business combination should be measured at fair value, which should be calculated as the sum of (a) the acquisition-date fair values of the assets transferred by the acquirer, (b) the liabilities incurred by the acquirer to former owners of the acquiree and (c) the equity interests issued by the acquirer.

Further, paragraph 39 of Ind AS 103 provides that the consideration the acquirer transfers in exchange for the acquiree includes any asset or liability resulting from a contingent consideration arrangement. The acquirer shall recognize the acquisition-date fair value of contingent consideration as part of the consideration transferred in exchange for the acquiree.

With respect to contingent consideration, obligations of an acquirer under contingent consideration arrangements are classified as equity or a liability in accordance with

Join us t.me/caborntofight

Ind AS 32 or other applicable Ind AS, i.e., for the rare case of non-financial contingent consideration. Paragraph 40 provides that the acquirer shall classify an obligation to pay contingent consideration that meets the definition of a financial instrument as a financial liability or as equity on the basis of the definitions of an equity instrument and a financial liability in paragraph 11 of Ind AS 32, Financial Instruments: Presentation. The acquirer shall classify as an asset a right to the return of previously transferred consideration if specified conditions are met. Paragraph 58 of Ind AS 103 provides guidance on the subsequent accounting for contingent consideration.

(i) In the given case the amount of purchase consideration to be recognized **on initial recognition** shall be as follows:

	₹
Fair value of shares issued (10,00,000 x ₹20)	2,00,00,000
Fair value of contingent consideration	25,00,000
Total purchase consideration	2,25,00,000

Subsequent measurement of contingent consideration payable for business combination

In general, an equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Ind AS 32 describes an equity instrument as one that meets both of the following conditions:

(a) There is no contractual obligation to deliver cash or another financial asset to another party, or to exchange financial assets or financial liabilities with another party under potentially unfavorable conditions (for the issuer of the instrument).

(b) If the instrument will or may be settled in the issuer's own equity instruments, then it is:

(i) a non-derivative that comprises an obligation for the issuer to deliver a fixed number of its own equity instruments; or

(ii) a derivative that will be settled only by the issuer exchanging a fixed amount of cash or other financial assets for a fixed number of its own equity instruments.

In the given case, given that the acquirer has an obligation to issue fixed number of shares on fulfilment of the contingency, the contingent consideration will be classified as equity as per the requirements of Ind AS 32.

As per paragraph 58 of Ind AS 103, contingent consideration classified as equity should not be re-measured and its subsequent settlement should be accounted for within equity.

Here, the obligation to pay contingent consideration amounting to ₹ 25,00,000 is recognized as a part of equity and therefore not re-measured subsequently or on issuance of shares.

(ii) The amount of purchase consideration to be recognized **on initial recognition** shall be as follows:

	₹
Fair value of shares issued (10,00,000 x ₹20)	2,00,00,000
Fair value of contingent consideration	25,00,000
Total purchase consideration	2,25,00,000

Subsequent measurement of contingent consideration payable for business combination

The contingent consideration will be classified as liability as per Ind AS 32.

As per paragraph 58 of Ind AS 103, contingent consideration not classified as equity should be measured at fair value at each reporting date and changes in fair value should be recognized in profit or loss.

As at 31 March 20X2, (being the date of settlement of contingent consideration), the liability would be measured at its fair value and the resulting loss of ₹ 15,00,000 (₹ 40,00,000 – ₹ 25,00,000) should be recognized in the profit or loss for the period. A Ltd. would recognize issuance of 160,000 (`40,00,000/25) shares at a premium of ₹ 15 per share.

11. As per para 13 of Ind AS 103 'Business Combination', the acquirer's application of the recognition principle and conditions may result in recognising some assets and liabilities that the acquiree had not previously recognised as assets and liabilities in its financial statements. This may be the case when the asset is developed by the entity internally and charged the related costs to expense.

Based on the above, the company can recognise following Intangible assets while determining Goodwill / Bargain Purchase for the transaction:

(i) Patent owned by ABR Ltd.: The patent owned will be recognised at fair value by KK Ltd. even though it was not recognised by ABR Ltd. in its financial statements. The patent will be amortised over the remaining useful life of the asset i.e. 8 years. Since the company is awaiting the outcome of the trials, the value of the patent cannot be estimated at ₹ 15 crore and the extra ₹ 5 crore should only be disclosed as a Contingent Asset and not recognised.

(ii) Patent internally developed by ABR Ltd.: As per para 18 of Ind AS 103 'Business Combination', the acquirer shall measure the identifiable assets acquired and the

liabilities assumed at their acquisition date fair values. Since the patent developed has been approved for clinical use, it is an identifiable asset, hence the same will be measured at fair value ie ₹ 20 crore on the acquisition date.

(iii) **Grant of Licence to ABR Ltd. by the Government:** As regards to the five-year license, applying para 18 of Ind AS 103, grant asset will be recognised at fair value on the acquisition date by KK Ltd. On acquisition date, the fair value of the license is ₹ 10 crore. However, since the question does not mention about the fair value of the identifiable liability with respect to grant of license for the acquirer, it is assumed that no conditions with respect to compliance of grant (if any) have been passed to the acquirer. Hence, the fair value of the liability with respect to grant, for acquirer would be nil. Only, the grant asset (license) would be recognised at ₹ 10 crore in the books of acquirer KK Ltd.

Hence the revised working would be as follows:

	₹
Fair value of net assets of ABR Ltd.	15 crore
Add: Patent (10 + 20)	30 crore
Add: License	10 crore
Less: Grant for License	(Nil)
	55 crores
Purchase Consideration	(35 crores)
Bargain purchase	20 crore

12. (i) As an only exception to the principle of classification or designation of assets as they exist at the acquisition date is that for lease contract and insurance contracts classification which will be based on the basis of the conditions existing at inception and not on acquisition date.

Therefore, H Ltd. would be required to retain the original lease classification of the lease arrangements and thereby recognise the lease arrangements as finance lease.

(ii) The requirements in Ind AS 37 'Provisions, Contingent Liabilities and Contingent Assets', do not apply in determining which contingent liabilities to recognise as of the acquisition date as per Ind AS 103 'Business Combination'. Instead, the acquirer shall recognise as of the acquisition date a contingent liability assumed in a business combination if it is a present obligation that arises from past events and its fair value can be measured reliably. Therefore, contrary to Ind AS 37, the acquirer recognises a contingent liability assumed in a business combination at the acquisition date even if it is not probable that an outflow of resources embodying economic benefits will be

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

required to settle the obligation. Hence H Ltd. will recognize contingent liability of ₹ 2.5 cr.

Since S Ltd. has indemnified for ₹ 1 cr., H Ltd. shall recognise an indemnification asset at the same time for ₹ 1 cr.

As per the information given in the question, this indemnified asset is not taxable. Hence, its tax base will be equal to its carrying amount. No deferred tax will arise on it.

(iii) As per Ind AS 103, non-current assets held for sale should be measured at fair value less cost to sell in accordance with Ind AS 105 'Non-current Assets Held for Sale and Discontinued Operations'. Therefore, its carrying value as per balance sheet has been considered in the calculation of net assets.

(iv) Any equity interest in S Ltd. held by H Ltd. immediately before obtaining control over S Ltd. is adjusted to acquisition-date fair value. Any resulting gain or loss is recognised in the profit or loss of H Ltd.

Calculation of purchase consideration as per Ind AS 103 ₹ in crore

Investment in S Ltd.			
On 1st Nov. 20X6	15%	[(12/100) x ₹ 395 x 15%]	7.11
On 1st Jan. 20X7	45%		
Own equity given		12 x 100 x ₹ 10,000 x 45% x 1/2	270.00
Cash			50.00
Contingent consideration			22.00
			349.11

(v) Calculation of deferred tax on assets and liabilities acquired as part of the business combination, including current tax and goodwill.

Item	₹ in crore				
	Book value	Fair value	Tax base	Taxable (deductible) temporary difference	Deferred tax assets (liability) @ 30%
Property, plant and equipment	40	90	40	50	(15)

Borrowings	20	20	20	-	-
Trade payables	28	28	28	-	-
Provision for warranties	3	3	3	-	-
Current tax liabilities	4	4	4	-	-
Contingent liability		0.5	-	(0.5)	0.15
Deferred tax Liability					(92.85)

(vi) Calculation of identifiable net assets acquired

	₹ in crore	₹ in crore
Property, plant and equipment	90	
Intangible assets	30	
Investments	350	
Inventories	20	
Trade receivables	20	
Cash held in functional currency	4	
Non-current asset held for sale	4	
Indemnified asset	1	
Total asset		519
Less: Borrowings	20	
Trade payables	28	
Provision for warranties	3	
Current tax liabilities	4	
Contingent liability (2 + 0.5)	2.50	
Deferred tax liability (W.N.2)	92.85	(150.35)
Net identifiable assets		368.65

(a) Calculation of NCI by proportionate share of net assets

Net identifiable assets of S Ltd. on 1.1.20X7 (Refer W.N.(vi)) = 368.65 crore

NCI on 1.1.20X7 = 368.65 crore x 40% = 147.46 crore

Calculation of Goodwill as per Ind AS 103

Goodwill on 1.1.20X7 = Purchase consideration + NCI – Net assets

= 349.11 + 147.46 – 368.65 = 127.92 crore

(b) As per para 45 of Ind AS 103 'Business Combination', if the initial accounting for a business combination is incomplete by the end of the reporting period in which the combination occurs, the acquirer shall report in its financial statements provisional amounts for the items for which the accounting is incomplete.

During the measurement period, the acquirer shall retrospectively adjust the provisional amounts recognised at the acquisition date to reflect new information obtained about facts and circumstances that existed as of the acquisition date and, if known, would have affected the measurement of the amounts recognised as of that date.

During the measurement period, the acquirer shall also recognise additional assets or liabilities if new information is obtained about facts and circumstances that existed as of the acquisition date and, if known, would have resulted in the recognition of those assets and liabilities as of that date.

The measurement period ends as soon as the acquirer receives the information it was seeking about facts and circumstances that existed as of the acquisition date or learns that more information is not obtainable. However, the measurement period shall not exceed one year from the acquisition date.

Further, as per para 46 of Ind AS 103, the measurement period is the period after the acquisition date during which the acquirer may adjust the provisional amounts recognised for a business combination. The measurement period provides the acquirer with a reasonable time to obtain the information necessary to identify and measure the following as of the acquisition date in accordance with the requirements of this Ind AS:

(a) the identifiable assets acquired, liabilities assumed and any non-controlling interest in the acquiree;

(b) .....

(c) ......; and

(d) the resulting goodwill or gain on a bargain purchase.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Para 48 states that the acquirer recognises an increase (decrease) in the provisional amount recognised for an identifiable asset (liability) by means of a decrease (increase) in goodwill.

Para 49 states that during the measurement period, the acquirer shall recognise adjustments to the provisional amounts as if the accounting for the business combination had been completed at the acquisition date.

Para 50 states that after the measurement period ends, the acquirer shall revise the accounting for a business combination only to correct an error in accordance with Ind AS 8 'Accounting Policies, Changes in Accounting Estimates and Errors'.

On 31st December, 20X7, H Ltd. has established that it has obtained all the information necessary for the accounting of the business combination and the more information is not obtainable. Therefore, the measurement period for acquisition of S Ltd. ends on 31st December, 20X7.

On 31st May, 20X7 (ie within the measurement period), H Ltd. learned that certain customer relationships existing as on 1st January, 20X7 which met the recognition criteria of an intangible asset as on that date were not considered during the accounting of business combination for the year ended 31st March, 20X7. Therefore, H Ltd. shall account for the acquisition date fair value of customer relations existing on 1st January, 20X7 as an identifiable intangible asset. The corresponding adjustment shall be made in the amount of goodwill.

Accordingly, the amount of goodwill will be changed due to identification of new asset from retrospective date for changes in fair value of assets and liabilities earlier recognised on provisional amount (subject to meeting the condition above for measurement period). NCI changes would impact the consolidated retained earnings (parent's share). Also NCI will be increased or decreased based on the profit during the post-acquisition period.

Journal Entry

Customer relationship	Dr. 3.5 crore	
To NCI		1.4 crore
To Goodwill		2.1 crore

However, the increase in the value of customer relations after the acquisition date shall not be accounted by H Ltd., as the customer relations developed after 1st January, 20X7 represents internally generated intangible assets which are not eligible for recognition on the balance sheet.

(c) Since the contingent considerations payable by H Ltd is not classified as equity and is within the scope of Ind AS 109 'Financial Instruments', the changes in the fair value

shall be recognised in profit or loss. Change in Fair value of contingent consideration (23-22) ₹ 1 crore will be recognized in the Statement of Profit and Loss.

13. (1) Ind AS 103 defines business as an integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing goods or services to customers, generating investment income (such as dividends or interest) or generating other income from ordinary activities.

For a transaction to meet the definition of a business combination (and for the acquisition method of accounting to apply), the entity must gain control of an integrated set of assets and activities that is more than a collection of assets or a combination of assets and liabilities.

To be capable of being conducted and managed for the purpose identified in the definition of a business, an integrated set of activities and assets requires two essential elements—inputs and processes applied to those inputs.

Therefore, an integrated set of activities and assets must include, at a minimum, an input and a substantive process that together significantly contribute to the ability to create output.

In the aforesaid transaction, Company X acquired share of participating rights owned by Company Z for the producing Block (AWM/01). The output exist in this transaction (Considering AWM/01) is a producing block. Also all the manpower and requisite facilities / machineries are owned by Joint venture and thereby all the Joint Operators. Hence, acquiring participating rights tantamount to acquire inputs (Expertise Manpower & Machinery) and it is critical to the ability to continue producing outputs. Thus, the said acquisition will fall under the Business Acquisition and hence standard Ind AS 103 is to be applied for the same.

(2) As per paragraph 8 of Ind AS 103, acquisition date is the date on which the acquirer obtains control of the acquiree. Further, paragraph 9 of Ind AS 103 clarifies that the date on which the acquirer obtains control of the acquiree is generally the date on which the acquirer legally transfers the consideration, acquires the assets and assumes the liabilities of the acquiree—the closing date. However, the acquirer might obtain control on a date that is either earlier or later than the closing date.

An acquirer shall consider all pertinent facts and circumstances in identifying the acquisition date. Since government of India (GOI) approval is a substantive approval for Company X to acquire control of Company Z's operations, the date of acquisition cannot be earlier than the date on which approval is obtained from GOI. This is pertinent given that the approval from GOI is considered to be a substantive process and accordingly, the acquisition is considered to be completed only on receipt of such approval. Hence acquisition date in the above scenario is 30.6.20X1.

Less: Consideration Paid	(1,00,000)
Gain on Bargain Purchase (To be transferred to OCI)	**19,988**

*In extremely rare circumstances, an acquirer will make a bargain purchase in a business combination in which the value of net assets acquired in a business combination exceeds the purchase consideration. The acquirer shall recognise the resulting gain in other comprehensive income on the acquisition date and accumulate the same in equity as capital reserve, if the reason for bargain purchase gain is clear and evidence exist. If there does not exist clear evidence of the underlying reasons for classifying the business combination as a bargain purchase, then the gain shall be recognised directly in equity as capital reserve. Since in above scenario it is clearly evident that due to liquidity issues, Company Z has to withdraw their participating right from AWM/01. The said bargain purchase gain should be transferred to other comprehensive income on the acquisition date.

3. Computation of Deferred Tax Liability arising on Business Combination

Particulars	Acquisition Date Value (₹)
Total Non - Current Assets	2,56,641
Total Current Assets (Except Cash & Cash Equivalent of ₹ 66,660)	59,994
Total Non-Current Liabilities	(99,990)
Total Current Liabilities	(66,660)
Net Assets Acquired at Fair Value	**1,49,985**
Book value of Net Assets Acquired	(49,995)
Temporary Difference	**99,990**
DTL @ 30% on Temporary Difference	**29,997**

Note: As per Ind AS 103, in case an entity acquires another entity step by step through series of purchase then the acquisition date will be the date on which the acquirer obtains control. Till the time the control is obtained the investment will be accounted as per the requirements of other Ind AS 109, if the investments are covered under that standard or as per Ind AS 28, if the investments are in Associates or Joint Ventures.

If a business combination is achieved in stages, the acquirer shall remeasure its previously held equity interest in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in profit or loss or other comprehensive income, as appropriate.

Since in the above transaction, company X does not hold any prior interest in Company Z & company holds only 30% PI rights in Block AWM/01 trough unincorporated joint arrangement, this is not a case of step acquisition.

14. Pre-acquisition period = 2

Post-acquisition period = 1

Total fair value at acquisition date = ₹ 300

Value to be recorded as per business combination under Ind AS 103 = ₹ 300/3 x 2 = ₹ 200

Value to be recorded as per Ind AS 102 (**A**) = ₹ 300/3 x 1 = ₹ 100

Fair value of the replacement of such award = ₹ 400

Difference from acquisition date fair value (**B**) = ₹ 400 – ₹ 300 = ₹ 100

Total value to be accounted over vesting period as per Ind AS 102 = A + B

= ₹ 100 + ₹ 100 = ₹ 200

CHAPTER 13

CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS OF GROUP ENTITIES

LEARNING OUTCOMES

After studying this chapter, you will be able to:

- Understand the scope and objective of various Ind AS related to preparation of consolidated and separate financial statements
- Comprehend the concepts of control evaluation over an investee
- Analyse whether an entity is an investment entity
- Learn consolidation procedure for subsidiaries and accounting of non-controlling interests
- Determine whether an entity is a joint arrangement and if yes then whether that joint arrangement is a joint operation or joint venture
- Assess whether an investor has significant influence over an investee to treat that investee as an associate
- Learn what is the equity method of accounting and how it is applied in accounting of associates and joint ventures in the consolidated financial statements
- Gain knowledge of what are separate financial statements and how to account for the investments in subsidiaries, associates and joint ventures in separate financial statements of the investor
- Understand the disclosure requirements with respect to interests in other entities in the consolidated and separate financial statements.

UNIT 1:

INTRODUCTION TO CONSOLIDATED AND SEPARATE FINANCIAL STATEMENTS

1.1 INTRODUCTION

Consolidated and Separate Financial Statements of Group Entities

Consolidated financial statements present the financial position of an entire group including the parent and its group companies. Whereas the separate financial statements present the financial position of a single entity for which the financial statements are prepared.

Various stakeholders such as investors, promoters, lenders, government authorities, etc. are more interested in referring to the consolidated financial statements for their decision-making purpose as consolidated financial statements provide a complete overview of the operations and profitability of the entire group which is controlled by the parent rather than just looking at the separate financial statements of the parent. Also, in current business scenario, various large corporates frequently do business restructuring or expansion by creating more group companies in order to achieve benefits like tax savings, operational efficiency, etc. Hence, in such circumstances the consolidated financial statements are imperative to have a complete understanding of the profitability and financial position of the entire group.

1.2 IND AS COVERED IN THE CHAPTER

In this study material, following Ind AS are covered related to the preparation of consolidated and separate financial statements of group entities:

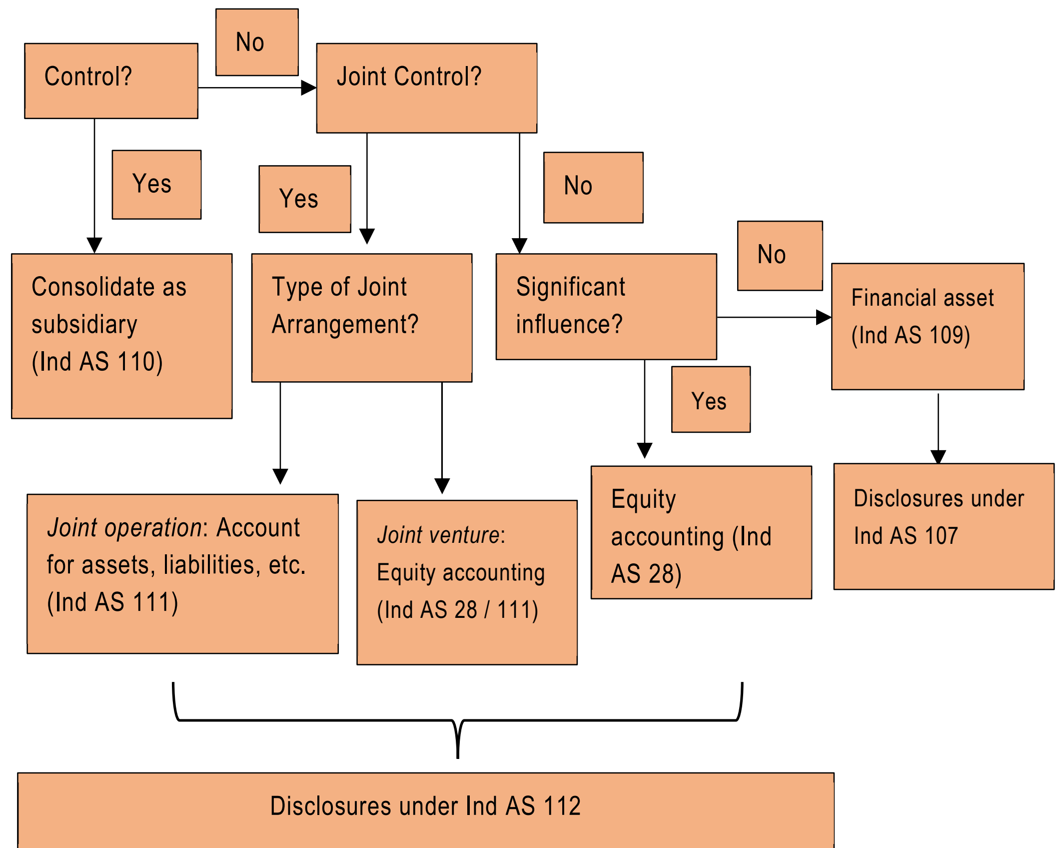
- Ind AS 110 *'Consolidated Financial Statements'*: This Ind AS provides the criteria for evaluation of whether an entity controls one or more other entities to treat them as subsidiaries of the entity. It also explains the procedures for preparation of consolidated financial statements including the requirements for elimination of inter-company transactions, accounting of non-controlling interests, accounting of loss of control over subsidiaries and many more. The principles of control evaluation are covered in unit 3 of this chapter and principles of consolidation procedures are covered in unit 4 of this chapter.

- Ind AS 111 *'Joint Arrangements'*: This Ind AS explains the principles of determining whether an investment by an entity in an arrangement with one or more other parties can be treated as a joint arrangement or not. Also, it explains how to classify such joint arrangement between joint operation and joint venture. The principles of this Ind AS are covered in unit 5 of this chapter.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

- Ind AS 28 *'Investments in Associates and Joint Ventures'*: This Ind AS describes the principles of determining whether an investor has significant influence over an investee whereby the investee will be treated as an associate of the investor. Further, this Ind AS explains the principles of application of equity method of accounting for accounting of investments in associates and joint ventures in the consolidated financial statements. The principles of this Ind AS are covered in unit 6 of this chapter.
- Ind AS 27 *'Separate Financial Statements'*: This Ind AS prescribes the principles of accounting and disclosure of investment in subsidiaries, associates and joint ventures in the separate financial statements of an entity. The principles of accounting of investments in subsidiaries, associates and joint ventures are covered in unit 7 of this chapter and principles of disclosures of investments in subsidiaries, associates and joint ventures are covered in unit 8 of this chapter.
- Ind AS 112 *'Disclosures of Interests in Other entities'*: This Ind AS provides the requirements for an entity to disclose certain information in its financial statements with respect to its interests in other entities. The requirements of this Ind AS are covered in unit 8 of this chapter.



Merged By CA - Born To Fight

UNIT 2: IMPORTANT DEFINITIONS

Following are the definitions of some of the important terms used across the chapter.

- **Associate:** An associate is an entity over which the investor has significant influence.
- **Consolidated Financial Statements:** The financial statements of a group in which the assets, liabilities, equity, income, expenses and cash flows of the parent and its subsidiaries are presented as those of a single economic entity.
- **Control over an investee:** An investor controls an investee when the investor is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.
- **Group:** A parent and its subsidiaries.
- **Joint arrangement**: A joint arrangement is an arrangement of which two or more parties have joint control.
- **Joint control:** Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.
- **Joint operation:** A joint operation is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement.
- **Joint venture:** A joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement.
- **Non-controlling interest:** Equity in a subsidiary not attributable, directly or indirectly, to a parent.
- **Parent:** An entity that controls one or more entities.
- **Power:** Existing rights that give the current ability to direct the relevant activities.
- **Separate financial statements:** Separate financial statements are those presented by a parent (i.e. an investor with control of a subsidiary) or an investor with joint control of, or significant influence over, an investee, in which the investments are accounted for at cost or in accordance with Ind AS 109 *'Financial Instruments'*.
- **Significant influence:** Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control of those policies.
- **Subsidiary:** An entity that is controlled by another entity.

UNIT 3:
IND AS 110: CONSOLIDATED FINANCIAL STATEMENTS

3.1 OBJECTIVE OF IND AS 110

The objective of Ind AS 110 is to provide principles of when an entity should prepare consolidated financial statements and how those consolidated financial statements should be prepared. In particular, Ind AS 110 provides following principles for presentation and preparation of consolidated financial statements:

- A parent that controls one or more subsidiaries should prepare consolidated financial statements
- Guidance on how to apply the principles of control evaluation to determine whether an investor has control over an investee to be able to consolidate that investee
- Principles around accounting requirements for consolidated financial statements
- Definition of an investment entity and consolidation exemptions applicable to them

The principles mentioned above are discussed in this unit except the accounting requirements for consolidated financial statements which is discussed in Unit 4.

Further, Ind AS 110 does not deal with the accounting requirements for business combinations and their effects on consolidation, including goodwill arising on a business combination. Hence, such requirements are also not discussed in this study material. Refer study material 'Business Combination and Corporate Restructuring' for discussion on the same.

3.2 SCOPE OF IND AS 110

Ind AS 110 requires that an entity that is a parent should prepare consolidated financial statements. However, there are certain exemptions and exceptions to this as follows:

Exemption

As per paragraph 4(a) of Ind AS 110, a parent entity that meets **all** of the following conditions need **not present** consolidated financial statements:

(i) The entity is a wholly owned or partly owned subsidiary of another entity and all the owners of the entity are informed, and they do not object to the entity not preparing consolidated financial statements

(ii) The debt or equity instruments of the entity are not traded in a public market (whether domestic or foreign stock exchange or an over-the-counter market, including local and regional markets)

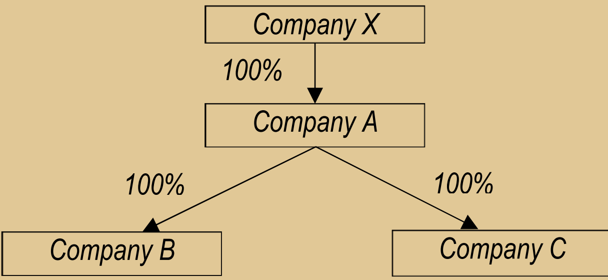
(iii) The entity has not filed nor is it in the process of filing its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market

(iv) The entity's ultimate or any intermediate parent produces financial statements that are available for public use and comply with Ind AS, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with Ind AS 110

Illustration 1: Exception to prepare consolidated financial statements

Scenario A:

Following is the structure of a group headed by Company X:



Company X is a listed entity in India and prepares consolidated financial statements as per the requirements of Ind AS. Company A is an unlisted entity and it is not in the process of listing any of its instruments in public market. Company X does not object to Company A not preparing consolidated financial statements.

Whether Company A is required to prepare consolidated financial statements as per the requirements of Ind AS 110?

Scenario B:

Assume the same facts as per Scenario A except, Company X is a foreign entity and is listed in stock exchange of a foreign country and it prepares its financial statements as per the generally accepted accounting principles (GAAP) applicable to that country.

Will your answer be different in this case?

Scenario C:

Assume the same facts as per Scenario A except, 100% of the investment in Company A is held by Mr. X (an individual) instead of Company X.

Will your answer be different in this case?

Join us t.me/caborntofight

Solution:

Scenario A:

In this case, Company A satisfies all the conditions for not preparing consolidated financial statements i.e. it is not a listed entity nor it is in the process of listing, the parent of Company A prepares consolidated financial statements as per Ind AS which is available for public use and parent of Company A does not object Company A not preparing consolidated financial statements.

Hence, Company A is not required to prepare consolidated financial statements.

Scenario B:

In this case, the consolidated financial statements of parent of Company A are not prepared under Ind AS. Hence Company A cannot avail the exemption from preparation of consolidated financial statements.

Scenario C:

In this case, Mr. X (an individual) would not be preparing its financial statements as per the requirements of Ind AS which is available for public use.

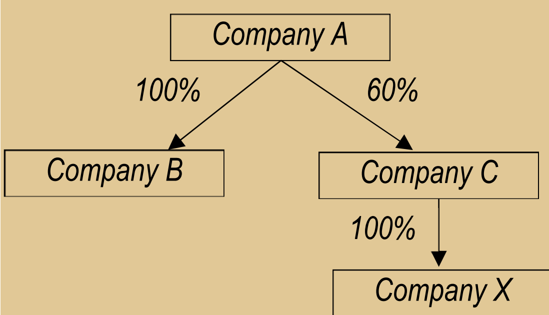
Hence Company A cannot avail the exemption from preparation of consolidated financial statements.

*****

Illustration 2: Exception to prepare consolidated financial statements

Scenario A:

Following is the structure of a group headed by Company A.



Company A is a listed entity in India and prepares consolidated financial statements as per the requirements of Ind AS. Company C is an unlisted entity and it is not in the process of listing any of its instruments in public market. 60% of the equity share capital of Company C is held by Company A and balance 40% equity share capital is held by other outside investors. Company A does not object to Company C not preparing consolidated financial statements.

Whether Company C is required to prepare consolidated financial statements as per the requirements of Ind AS 110?

Scenario B:

Assume the same facts as per Scenario A except, the balance 40% of the equity share capital of Company C is held by Company B.

State whether C Limited is required to inform its other owner B Limited (owning 40%) of its intention to not prepare consolidated financial statements as mentioned in paragraph 4(a)(i)?

Solution:

Scenario A:

Company C is a partly owned subsidiary of Company A. In such case, Company C should inform the other 40% equity shareholders about Company C not preparing consolidated financial statements and if they do not object then only Company C can avail the exemption from preparing consolidated financial statements.

Scenario B:

In this scenario, Company C is 100% held by Company A (60% direct investment and 40% investment through Company B). Hence, Company C is not required to inform to Company B of not preparing consolidated financial statements and can avail the exemption from preparing the consolidated financial statements.

*****

Exception 1

Ind AS 110 does not apply to post-employment benefit plans or other long-term employee benefit plans to which Ind AS 19 *'Employee Benefits'* applies. Therefore, an entity which has set up such plans should not consolidate them.

Example 1

Company A has set up an Employee Gratuity Plan trust for the purpose of giving gratuity benefits to its employees. The gratuity benefit given by the company is a post-employee benefit plan which is accounted as per Ind AS 19 (refer Unit 1 of Chapter 9 for the accounting of employee benefit plans as per Ind AS 19). So, Company A is not required to evaluate whether it controls the trust and should not consolidate it.

Exception 2

An investment entity (explained in section 3.7 of this Unit) that is required to measure all of its subsidiaries at fair value through profit or loss need not present consolidated financial statements. This exception is further explained subsequently in this unit.

Join us t.me/caborntofight

Note:

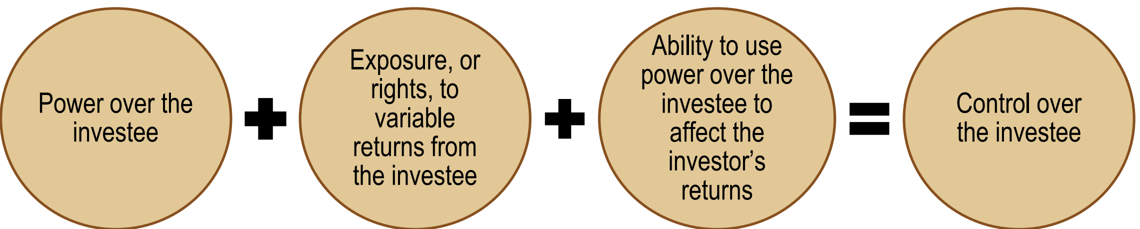
It may be noted that the Indian GAAP (i.e. the accounting standards under The Companies (Accounting Standards) Rules, 2021) contained two exceptions from consolidation, which **are no longer applicable under Ind AS**:

- When control is intended to be temporary; or
- When the subsidiary operates under severe long-term restrictions

3.3 CONTROL EVALUATION

As per Ind AS 110, an investor needs to determine whether it controls an investee and if yes then the investor would be treated as a parent and the investee would be treated as a subsidiary of the parent.

An investor controls an investee if and only if the investor has **all of the following three elements**:



After doing an initial assessment of control over an investee, the investor should reassess the control over the investee when there are changes to one or more of the three elements of control mentioned above.

Further, there may be situations where the investor is not the only one who control the investee and it may need to act in co-operation with any other entity. There may also be a situation where there is no investor who individually controls the investee. In such scenario, the investor would account for the interest in such investees in accordance with other applicable Ind AS such as Ind AS 111 for joint arrangement (discussed in Unit 5 of this Chapter), Ind AS 28 for investments in associates (discussed in Unit 6 of this Chapter) or Ind AS 109 for financial instruments (discussed in Chapter 12).

Each of the elements of control evaluation are explained below.

3.3.1 Power

What is power?

The first criterion of control evaluation is to determine whether the investor has power over the investee. An investor gets power over an investee if it has three elements:

Join us t.me/caborntofight

A. **existing rights** that give it

B. the **current ability**

C. to direct the **relevant activities** of the investee.

In some situations, activities both before and after a particular set of circumstances arises or event occurs may be relevant activities. When two or more investors have the current ability to direct relevant activities and those activities occur at different times, the investors shall determine which investor is able to direct the activities that most significantly affect those returns consistently with the treatment of concurrent decision-making rights. The investors shall reconsider this assessment over time if relevant facts or circumstances change. We will move in a reverse order to understand the meaning of 'power' in the context of Ind AS 110. In other words, we will first learn what are 'relevant activities', then we will move to understand what is intended to be covered within the scope of 'current ability' and finally, we will link this understanding with the concept of 'rights'.

How to identify the relevant activities and how the decisions about those activities are made?

Relevant activities are the activities of investee that significantly affect the investee's returns. For a detailed understanding of what encompasses 'returns', please refer to section 3.3.2.

There may be range of operating and financing activities that would significantly affect the returns of an investee. Examples of activities related to operating and financing activities that can be relevant activities include, but not limited to:

- Selling and purchasing of goods and services
- Managing financial assets during their life (including upon default)
- Selecting, acquiring or disposing of assets
- Researching and developing new products or processes
- Determining a funding structure or obtaining funding
- Establishing operating and capital decisions of the investee, including budgets
- Appointing, terminating and remunerating an investee's key management personnel or service providers

The power to direct the relevant activities can be shared by multiple parties but those rights may not meet the definition of joint control.

Example 2

Five parties each own 20 per cent of entity Z, and each has one seat on entity Z's board of directors. All strategic operating and financing decisions (ie decisions in respect of the activities that significantly affect the returns of entity Z) require the consent of any four of the five directors. The five parties do not jointly control entity Z because unanimous consent is not required for decisions relating to the activities of entity Z that significantly affect its returns. Nevertheless, it is clear that the power to direct the activities of entity Z is shared and no single party controls entity Z.

There may be another situation where two or more investors have the rights to unilaterally direct different relevant activities of an investee. In such situation, one has to decide which activities can most significantly affect the returns of the investee and the investor having the ability to direct those activities would be considered to have power over the investee. The investors shall reconsider this assessment in case there is change in the facts or circumstances.

Illustration 3: Different investors have ability to direct different relevant activities

A Ltd. and B Ltd. set up a new company C Ltd. to construct and operate a toll road. A Ltd. is responsible for the construction of the toll road, which is expected to take two years. Thereafter, B Ltd. has authority on all matters related to toll road operation.

Is it possible for B Ltd. to have power over C Ltd. during the construction phase, even though A Ltd. is responsible for construction and has authority to make decisions that need to be made during the construction phase?

Solution

B Ltd. may power during the construction phase, even though it cannot yet exercise its decision-making rights during construction. The investor that has the ability to direct the activities that most significantly affect the returns of the investee has power over the investee. Consideration should be given to the factors that determine profit margin, revenue and valuation of C Ltd. For example, the construction of the road may be under the strict supervision and precise requirements of the regulator say State Road Transport Corporation (SRTC).

A Ltd. will recover its costs plus a fixed percentage of margin. That margin will be returned through adjustment of the amount of tolls that will flow to A Ltd., so that A Ltd. has first call on the cash flows generated by tolls. B Ltd. will manage the toll road operations, including maintenance, and will be able to claim a management fee equivalent to any residual cash in the entity after all operating expenses have been paid, including payments to A Ltd.

Assume that B Ltd. has the ability to set tolls (and not SRTC). In this scenario, A Ltd. merely works like a contractor, earning a fixed margin, and probably a financing income for financing the construction. A Ltd. does not take much of a risk on the cash flows, because the residual risks and rewards belong to B Ltd. Consequently, B Ltd. controls C Ltd. from its inception.

*****

Join us t.me/caborntofight

Merged By CA - Born To Fight

Illustration 4: Determining the relevant activities

A Ltd. is an asset manager of a venture capital fund i.e. Fund X. Out of the total outstanding units of the fund, 10% units are held by A Ltd. and balance 90% units are held by other investors. Majority of the unitholders of the fund have right to appoint a committee which will manage the day-to-day administrative activities of the fund. However, the decisions related to the investments / divestments to be done by Fund X is taken by asset manager i.e. A Ltd. Based on above, who has power over Fund X?

Solution:

In this case, A Ltd. is able to direct the activities that can most significantly affect the returns of Fund X. Hence, A Ltd. has power over the investee. However, this does not mean that A Ltd. has control over the fund and consideration will have to be given to other elements of control evaluation as well i.e. exposure to variable returns and link between power and exposure to variable returns.

*****

Current ability to direct relevant activities

An investor would have current ability to direct relevant activities if that investor were able to make decisions at the time those decisions need to be taken. An investor can have the current ability to direct the activities of an investee even if it does not actively direct the activities of the investee.

Having the current ability to direct the activities of an investee is not limited to being able to act today. There may be steps to be taken in order to act - for example, an investor may need to initiate a meeting before it can exercise its voting or other rights that give it power. However, such a delay would not prevent the investor from having power, assuming that there are no other barriers that would prevent the investor from exercising its rights when it chooses to do so.

For some investees, particularly those with most of their operating and financing decisions predetermined, decisions that significantly affect the returns of the investee are not made continuously. Such decisions may be made only if particular events occur or circumstances arise. For such investees, having the ability to make those decisions if and when they arise is a source of a current ability to direct the relevant activities.

It must be borne in mind that the current ability to direct the activities of an investee would, in all cases, arise from rights (voting rights, potential voting rights, rights within other arrangements or a combination of these).

In some situations, activities both before and after a particular set of circumstances arises or event occurs may be relevant activities. When two or more investors have the current ability to direct relevant activities and those activities occur at different times, the investors shall determine which investor is able to direct the activities that most significantly affect those returns consistently with

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

the treatment of concurrent decision-making rights. The investors shall reconsider this assessment over time if relevant facts or circumstances change.

Illustration 5: Current ability to direct the relevant activities

An investment vehicle (the investee) is created and financed with a debt instrument held by an investor (the debt investor) and equity instruments held by a number of other investors. The equity tranche is designed to absorb the first losses and to receive any residual return from the investee. One of the equity investors who holds 30 per cent of the equity is also the asset manager.

The investee uses its proceeds to purchase a portfolio of financial assets, exposing the investee to the credit risk associated with the possible default of principal and interest payments of the assets. The transaction is marketed to the debt investor as an investment with minimal exposure to the credit risk associated with the possible default of the assets in the portfolio because of the nature of these assets and because the equity tranche is designed to absorb the first losses of the investee.

The returns of the investee are significantly affected by the management of the investee's asset portfolio, which includes decisions about the selection, acquisition and disposal of the assets within portfolio guidelines and the management upon default of any portfolio assets. All those activities are managed by the asset manager until defaults reach a specified proportion of the portfolio value (ie when the value of the portfolio is such that the equity tranche of the investee has been consumed). From that time, a third-party trustee manages the assets according to the instructions of the debt investor.

Based on the above, who has power over the investment vehicle?

Solution:

Managing the investee's asset portfolio is the relevant activity of the investee.

The asset manager has the ability to direct the relevant activities until defaulted assets reach the specified proportion of the portfolio value; the debt investor has the ability to direct the relevant activities when the value of defaulted assets surpasses that specified proportion of the portfolio value.

The asset manager and the debt investor each need to determine whether they are able to direct the activities that most significantly affect the investee's returns, including considering the purpose and design of the investee as well as each party's exposure to variability of returns.

*****

3.3.1.1 Rights that give power to an investor

Power arises from rights. To have power over an investee, an investor must have existing rights that give the investor the current ability to direct the relevant activities.

Join us t.me/caborntofight

Merged By CA - Born To Fight

The rights that give an investor power over an investee can differ investee by investee. Following are some of the examples (not an exhaustive list) of various forms of rights that, either individually or in combination with other rights, can give power to an investor:

Form of right	Illustration
Voting rights or potential voting rights of an investee (this is further explained subsequently in this unit).	An investor holding majority of the equity share capital of an investee. Concepts of power through voting or potential voting rights are further discussed in detail in section 3.3.1.3 of this unit.
Rights to appoint, reassign or remove members of an investee's key management personnel who have the ability to direct the relevant activities.	An investor having right to appoint majority of the members of the Board of Director who have power to take decisions related to relevant activities.
Rights to appoint or remove another entity that directs the relevant activities.	Right with an investor to appoint or remove an asset manager who takes decisions related to investments / divestments by a venture capital fund.
Rights to direct the investee to enter into, or veto any changes to, transactions for the benefit of the investor.	Right with an investor to direct the investee to sell all of its outputs to a group company of the investor at the price determined by investor
Other rights (such as decision-making rights specified in a management contract) that give the holder the ability to direct the relevant activities.	Right related to relevant activities given to a single investor by all other investors through a shareholders' agreement

In most of the case where the investee has a range of relevant activities and decisions are required to be taken on a continuous basis for those activities then it will be voting or similar rights that give an investor power over the investee.

3.3.1.1A Substantive rights vs Protective Rights

For the purpose of determination of power over an investee, an investor shall consider only those rights which are substantive. Protective rights are not considered for the determination of power. Below table summarises the difference between substantive rights and protective rights:

Substantive rights	Protective rights
Substantive rights can give the investor power over the investee.	Protective rights do not give investor power over the investee.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Substantive rights relate to the relevant activities of the investee.	Protective rights relate to protect the interest of the party holding those rights without giving the holder the right over the relevant activities of the investee.

Both the above rights are discussed below in detail.

1. Substantive rights

For a right to be substantive, the holder must have the practical ability to exercise that right.

Assessment of whether the rights are substantive requires judgement taking into consideration all the facts and circumstances. Following are some of the factors (not an exhaustive list) that should be considered while assessing whether the rights are substantive or not:

a) Whether there are any **barriers** that prevent the holder from exercising the rights. Example of such barriers (not an exhaustive list) can be as follows:

- Financial penalties and incentives
- High exercise or conversion price
- Terms and conditions that make it unlikely that the rights would be exercised, like, conditions that narrowly limit the timing of their exercise
- The absence of an explicit, reasonable mechanism in the founding documents of an investee or in applicable laws or regulations that would allow the holder to exercise its rights.
- The inability of the holder of the rights to obtain the information necessary to exercise its rights.
- Operational barriers or incentives. For example, in case of a venture capital fund managed by an asset manager, there is absence of other managers willing or able to provide specialised services or provide the services and take on other interests held by the existing manager.
- legal or regulatory requirements. For example, where a foreign investor is prohibited from exercising its rights

b) When the exercise of rights requires **agreement of more than one party**, or when the rights are **held by more than one party**, whether a mechanism is in place that provides those parties with the practical ability to exercise their rights collectively if they choose to do so. The lack of such a mechanism is an indicator that the rights may not be substantive.

An independent board of directors may serve as a mechanism for numerous investors to act collectively in exercising their rights.

c) Whether the party or parties that hold the rights would **benefit from the exercise of those rights**. For example, the holder of potential voting rights in an investee shall consider the

exercise or conversion price of the instrument. The potential voting rights are more likely to be substantive when the exercise price is lower than the market price or when there are other synergies anticipated between the investor and the investee.

Below are some illustrations that explain the above factors of determining whether the rights held by investors are substantive or not:

Illustration 5: Voting rights are substantive or not

Scenario A:

Following is the voting power holding pattern of B Ltd.

- *10% voting power held by A Ltd.*
- *90% voting power held by 9 other investor each holding 10%*

All the investors have entered into a management agreement whereby they have granted the decision-making powers related to the relevant activities of B Ltd. to A Ltd. for a period of 5 years.

After 2 years of the agreement, the investors holding 90% of the voting powers have some disputes with A Ltd. and they want to take back the decision-making rights from A Ltd. This can be done by passing a resolution with majority of the investors voting in favour of the removal of rights from A Ltd. However, as per the termination clause of the management agreement, B Ltd. will have to pay a huge penalty to A Ltd. for terminating the agreement before its stated term.

Whether the rights held by investors holding 90% voting power are substantive?

Scenario B:

Assume the same facts as per Scenario A except, there is no penalty required to be paid by B Ltd. for termination of agreement before its stated term. However, instead of all other investors, there are only 4 investors holding total 40% voting power that have disputes with A Ltd. and want to take back decision-making rights from A Ltd.

Whether the rights held by investors holding 40% voting power are substantive?

Solution:

Scenario A:

If the investors holding 90% of the voting power exercise their right to terminate the management agreement, then it will result in B Ltd. having to pay huge penalty which will affect the returns of B Ltd. This is a barrier that prevents such investors from exercising their rights and hence such rights are not substantive.

Scenario B:

To take back the decision-making rights from A Ltd., investors holding majority of the voting power need to vote in favour of removal of rights from A Ltd. However, the investors having disputes with A Ltd. do not have majority voting power and hence the rights held by them are not substantive.

*****

Illustration 6: Potential voting rights are substantive or not

Scenario A:

An investor is holding 30% of the voting power in ABC Ltd. The investor has been granted an option to purchase 30% more voting power from other investors. However, the exercise price of the option is too high compared to the current market price of ABC Ltd. because ABC Ltd. is incurring losses since last 2 years and it is expected to continue to incur losses in future period as well. Whether the right held by the investor to exercise purchase option is substantive?

Scenario B:

Assume the same facts as per Scenario A except, the option price is in line with the current market price of ABC Ltd. and ABC Ltd. is making profits. However, the option can be exercised in next 1 month only and the investor is not in a position to arrange for the require amount in 1 month's time to exercise the option. Whether the right held by the investor to exercise purchase option is substantive?

Scenario C:

Assume the same facts as per Scenario A except, ABC Ltd. is making profits. However, the current market price of ABC Ltd. is not known since the ABC Ltd. is a relatively new company, business of the company is unique and there are no other companies in the market doing similar business. Hence the investor is not sure whether to exercise the purchase option. Whether the right held by the investor to exercise purchase option is substantive?

Solution:

Scenario A:

The right to exercise purchase option is not substantive since the option exercise price is too high as compared to current market price of ABC Ltd.

Merged By CA - Born To Fight

Scenario B:

The right to exercise purchase option is not substantive since the time period for the investor to arrange for the requisite amount for exercising the option is too narrow.

Scenario C:

The right to exercise purchase option is not substantive. This is because the investor is not able to obtain information about the market value of ABC Ltd. which is necessary in order to compare the option exercise price with market price so that it can decide whether the exercise of purchase option would be beneficial or not.

*****

Illustration 7: Removal rights are substantive or not

A venture capital fund is managed by an asset manager who has right to take the investment and divestments decisions related to the fund corpus. The asset manager is also holding some stake in the fund. The other investors of the fund have right to remove the asset manager.

However, in the present scenario, there is absence of other managers who are willing or able to provide specialised services that the current asset manager is providing and purchase the stake that the current asset manager is holding in the fund. Whether the removal rights available with other investors are substantive?

Solution:

If the other investors exercise their removal rights, then it will impact the operations of the fund and ultimately the returns of the fund since there is no substitute of the current asset manager available who can manage the corpus of the fund. Hence the removal rights held by other investors are not substantive.

*****

For a right to be substantive, it should be exercisable when decisions about the direction of the relevant activities need to be made. In most of the cases a right, to be a substantive right, rights need to be currently exercisable. However, there may be some situations where a right can be substantive, even though it may not be currently exercisable.

Example 3

In case of an investor currently holding only 30% voting rights in a company has an option to purchase additional 40% voting rights to increase its voting rights to 70%. The option can be exercised within next 25 days. Also, there is a meeting of shareholding scheduled to be held after 30 days to take decision about relevant activities of the company. In such case, even though the

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

investor is not currently holding majority voting power, it can exercise the purchase option and increase its voting power to 70% by the time when the decisions about the relevant activities are to be made. Hence such rights are substantive rights.

An investor may be directing relevant activities of an investee and the evidence of that can help determine whether the investor has power. However, such evidence is not, in itself, conclusive in determining whether the investor has power over an investee.

While assessing the power, an investor should also consider the substantive rights held by other investors. The other investors may not be able to initiate the decisions about relevant activities on their own, but the rights held by them to approve or block any decision may prevent the investor from taking decision about relevant activities.

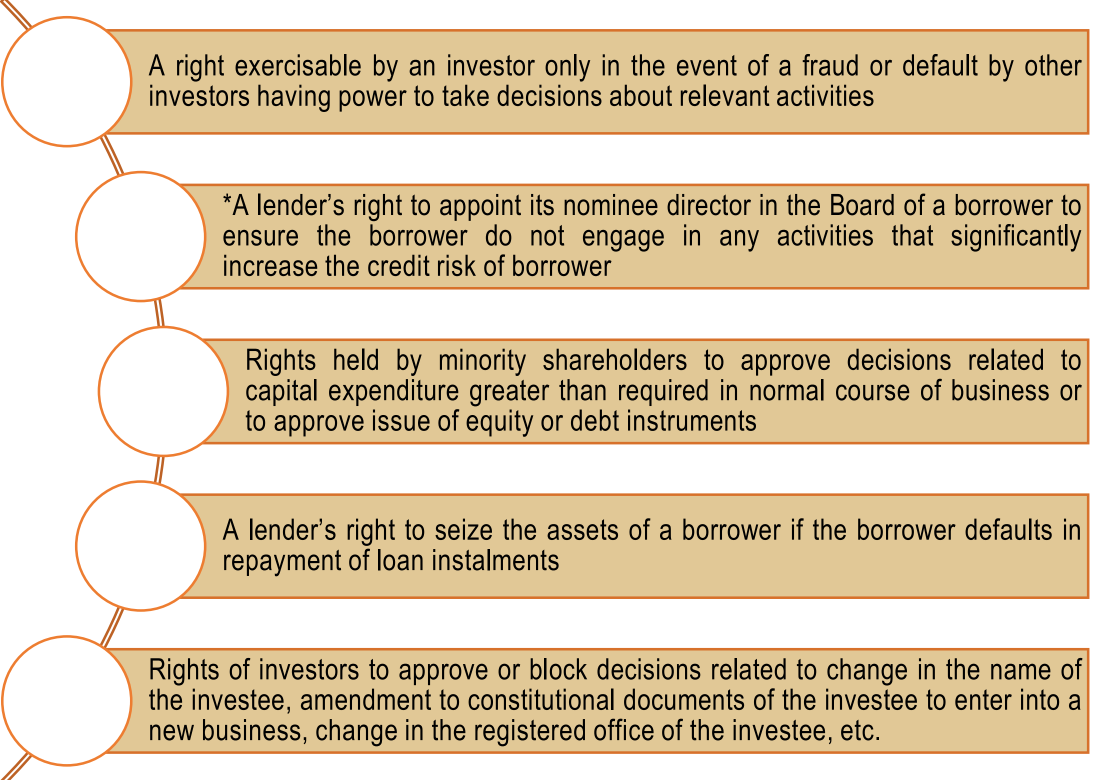
Example 4

In case of a company with 5 investors, a meeting of the investors to take decisions about relevant activities can be called if at least 2 members are in favour of calling the meeting. However, to pass any decision in the meeting, unanimous consent of all investors is required. Hence, in such case a single investor may not be able to initiate the meeting, but his consent is required to pass any decision in the meeting.

2. Protective rights

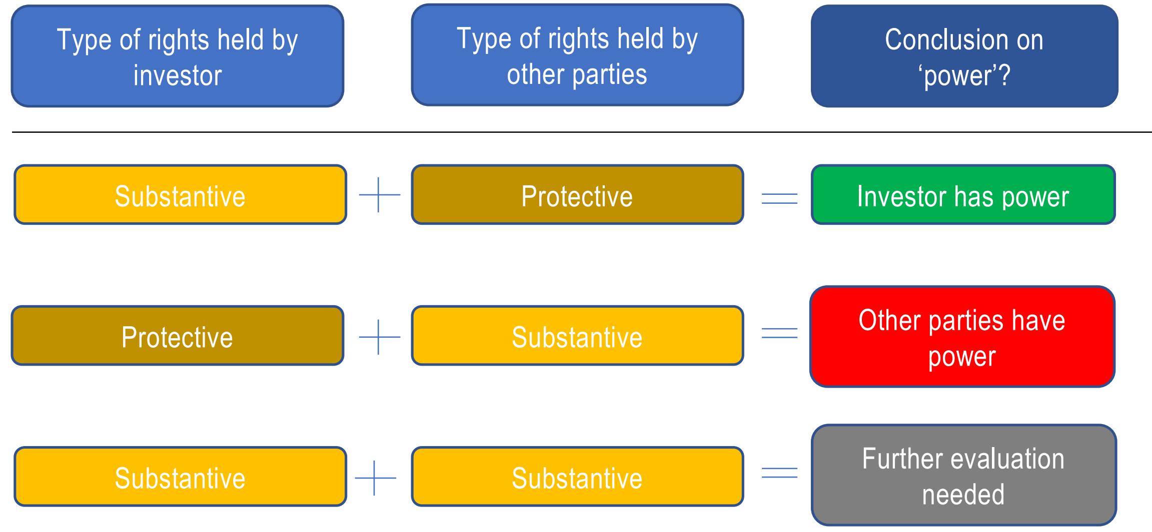
Protective rights are the rights designed to **protect the interest of the party** holding those rights **without giving that party power** over the entity to which those rights relate.

Such rights mainly **relate to fundamental changes** to the activities of an investee or apply in exceptional circumstances. However, not all the rights that apply in exceptional circumstances or are contingent on future events are protective rights. Protective rights do not give its holder power or prevent another party from having power over an investee. The examples of protective rights include, but not limited to, following:



***Note:** The 2nd right (illustrated above) is not protective in all circumstances. So far as the nomination doesn't result in majority control over the Board, it can be considered protective.

The effect of substantive and protective rights is summarised below:



Franchises

Apart from the examples of protective rights mentioned above, one more example can be of rights of a franchisor in a franchise agreement. In a franchise agreement, the investee i.e. the franchisee usually give the franchisor the rights that are related to protect the franchise brand. Following are some of the salient features of a franchise arrangement which indicates that the rights of a franchisor in a franchise agreement are protective rights:

Salient features of a franchise agreement that indicate that rights of franchisor are protective rights			
Franchisor's right do not give it ability to direct the relevant activities of franchisee	Other parties have current ability to direct the relevant activities of the franchisee	Franchisor's rights do not affect the rights of others to take decisions about relevant activities	Franchisee operates the business for its own account

Note: Control over fundamental decisions as the legal form of the franchisee and its funding structure may be determined by parties other than the franchisor and may significantly affect the returns of the franchisee. The lower the level of financial support provided by the franchisor and the lower the franchisor's exposure to variability of returns from the franchisee the more likely it is that the franchisor has only protective rights.

Illustration 8: Protective rights of a franchisor

ABC Ltd. is a manufacturer of branded garments and is the owner of Brand X. PQR Ltd. has entered into a franchise agreement with ABC Ltd. to allow PQR Ltd. to set up a retail outlet to sell the products of Brand X.

As per the agreement, PQR Ltd. will set up the retail outlet from its own funds, decide the capital structure of the entity, hire employees and their remuneration, select vendors for acquiring capital items, etc. However, ABC Ltd. will give certain operating guidelines like the interior of the retail outlet, uniform of the employees and other such guidelines to protect the brand name of ABC Ltd.

Whether the rights held by ABC Ltd. protective or substantive?

Solution:

The activities that most significantly affect the returns of PQR Ltd. are the funding and capital structure of PQR Ltd., hiring of employees and their remuneration, vendors for capital items, etc. which are exercisable by PQR Ltd. Further, the retails outlet is being set up by PQR Ltd. without

Merged By CA - Born To Fight

any financial support from ABC Ltd. The rights available with ABC Ltd. are to protect the brand name of ABC Ltd. and such rights do not affect the ability of PQR Ltd. to take decisions about relevant activities. Hence, the rights held by ABC Ltd. are protective rights.

*****

3.3.1.3 Voting rights

Generally, an investor gets power over an investee by way of voting rights that allow it to direct the relevant activities.

However, there can be situations where voting rights (even if the investor holds majority of them) do not give investor power over the investee. This can be in the following situations:

- Voting rights are not substantive (as discussed above).
- If another entity has existing rights that provide that entity with the right to direct the relevant activities and that entity is not an agent of the investor, the investor does not have power over the investee

Even if the voting rights do not give power to an investor, there can be other rights which would give an entity power over the investee. In this section we will discuss various scenarios of power through voting rights and power other than through voting rights.

3.3.1.3.1 Power through voting rights

In the most straightforward cases, the investor that holds a majority of voting rights has power over an investee. However, there can be certain cases where an investor can have power even if it holds less than a majority of the voting rights of an investee.

A. Power with a majority of the voting rights

An investor that holds more than half of the voting rights of an investee has power in the following situations:

The relevant activities are directed by a vote of the holder of the majority of the voting rights

A majority of the members of the governing body that directs the relevant activities are appointed by a vote of the holder of the majority of the voting rights

For example, in case of a company where the decisions related to relevant activities are taken by Board of Directors of the company and the Board members are appointed by shareholder holding majority of the voting rights. Then the shareholder holding majority of the voting rights has power over the company.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

B. Power without a majority of voting rights

There can be certain cases where an investor can have power even if it holds less than a majority of the voting rights of an investee. Following are the examples of power without majority voting rights:

Contractual arrangement with other vote holders	Rights from other contractual arrangements	The investor's voting rights	Potential voting rights

Combination of all of above

Contractual arrangement with other vote holders

An investor, who is not holding voting rights that are sufficient to given it power over the investee, may enter into a contract with other vote holders to give the investor rights to exercise voting rights which are **sufficient to have power over the investee**. In such case, the investor would direct the other vote holders on how they should vote whereby the investor gets power to direct the decision related to relevant activities.

Rights from other contractual arrangements

Apart from holding voting rights, an investor might be having decisions-making rights related to relevant activities of the investee pursuant to a contractual arrangement. Such **contractual rights in combination with voting rights** may give investor power to direct the relevant activities like manufacturing process of the investee or other operating and financing activities of the investee.

However, in the absence of any other rights, economic dependence of an investee on the investor (such as relations of a supplier with its main customer) does not lead to the investor having power over the investee.

The investor's voting rights

There may be certain situations where even though an investor is not holding majority of the voting rights, but the voting rights held by it are **sufficient to give it practical ability** to have power over the investee unilaterally. Generally, this is termed as de-facto control.

In assessing the sufficiency of the voting rights of an investor, one should consider the **size of the investor's holding of voting rights** relative to the size and dispersion of holdings of the other vote holders. This is interpreted as follows:

Join us t.me/caborntofight

Particulars	Higher number or size	Lower number or size
Number of voting rights held by investor	More likely to have power	Less likely to have power
Size of investor's voting rights relative to voting rights held by other holders	More likely to have power	Less likely to have power
Number of parties required to outvote the investor	More likely to have power	Less likely to have power

Illustration 9: Voting rights of investor are sufficient to give it power

An investor holds 45% of the voting rights of an investee. The remaining voting rights are held by thousands of shareholders, none individually holding more than 1% of the voting rights. None of the shareholders has any arrangements to consult any of the others or make collective decisions. Whether the investor holding 45% voting right have power over the investee?

Solution:

On the basis of the absolute size of its holding by the investor and the relative size of the voting rights held by other shareholders, it is more likely that the investor would have power over the investee.

*****

Illustration 10: Voting rights of investor are sufficient to give it power

ABC Ltd. holds 40% of the voting rights of XYZ Ltd. The remaining voting rights are held by 6 other shareholders, each individually holding 10% each. Whether the investor holding 40% voting right have power over the investee?

Solution:

In this case, it is less likely that ABC Ltd. will have power over XYZ Ltd. since the size of the number of shareholders required to outvote ABC Ltd. is not so high. Additional facts and circumstances should also be considered to determine whether ABC Ltd. has power or not.

*****

Apart from the size of the investor's voting rights, one should also consider the i) potential voting rights held by investor or other vote holders or parties (discussed subsequently in this section) and ii) rights arising from other contractual arrangements (already discussed above) to determine whether the investor's voting rights are sufficient to give it power over the investee.

Ind AS 110 provides that when the decisions related to relevant activities of an investee are taken by **majority vote holders** and the investor holds sufficiently more voting rights compared to other vote holders and the other shareholdings are widely dispersed then it may be clear from the above

factors i.e. i) size of the investor's voting rights, ii) potential voting rights and iii) other contractual arrangements that investor has power over the investee. In such case, there is no need to consider other factors to evaluate who has power over the investee.

- For examples, in the illustration 9 discussed above, the investor holding 45% of voting rights may, on the basis of the absolute size of its holding and the relative size of the other shareholdings, conclude it has power over the investee without the need to consider any other evidence of power.
- However, in illustration 10 above, the absolute size of the ABC Ltd.'s holding and the relative size of the other shareholdings alone are not conclusive in determining whether ABC Ltd. has power over the investee and hence additional facts and circumstances need to be considered.

When it is not clear from the three factors of sufficiency of voting rights of an investor discussed above, the investor should consider additional facts and circumstances such as the **voting patterns at previous shareholders' meetings** to determine whether investor has power over the investee.

Illustration 11: Voting patterns at previous shareholders' meetings

An investor holds 35% of the voting rights of an investee. Three other shareholders each hold 5% of the voting rights of the investee. The remaining voting rights are held by numerous other shareholders, none individually holding more than 1% of the voting rights. None of the shareholders has arrangements to consult any of the others or make collective decisions. Decisions about the relevant activities of the investee require the approval of a majority of votes cast at relevant shareholders' meetings — 75% of the voting rights of the investee have been cast at recent relevant shareholders' meetings.

Whether the investor's voting rights are sufficient to give it power to direct the relevant activities of the investee?

Solution:

In this case, the active participation of the other shareholders at recent shareholders' meetings indicates that the investor would not have the practical ability to direct the relevant activities unilaterally, regardless of whether the investor has directed the relevant activities because a sufficient number of other shareholders voted in the same way as the investor.

*****

Ind AS 110 provides that if it is not clear from the above factors of sufficiency of voting rights of an investor that investor has power then the investor does not control the investee.

Potential voting rights

Potential voting rights are rights to obtain voting rights of an investee, such as those arising from **convertible instruments or options or forward contracts**. Those potential voting rights are considered only if the rights are substantive as per the guidance discussed earlier.

When considering potential voting rights, an investor shall consider the purpose and design of the instrument giving those rights as well as any other benefits that the investor would get from the exercise of those rights.

Potential voting rights are to be considered in combination with voting or other decisions-making rights that the investor might have to assess whether investor has power or not.

Illustration 12: Potential voting rights

Investor A and two other investors each hold a third of the voting rights of an investee. The investee's business activity is closely related to investor A. In addition to its equity instruments, investor A also holds debt instruments that are convertible into ordinary shares of the investee at any time for a fixed price. The conversion rights are substantive. If the debt were converted, investor A would hold 60% of the voting rights of the investee. Investor A would benefit from realising synergies if the debt instruments were converted into ordinary shares. Whether investor A has power over the investee?

Solution:

Investor A has power over the investee because it holds voting rights of the investee together with substantive potential voting rights that give it the current ability to direct the relevant activities.

*****

3.3.1.3.2 Power other than through voting rights

When voting rights cannot have a significant effect on an investee's returns, such as when voting rights relate to administrative tasks only the investor shall consider following factors to determine whether it has power over the investee:

- Purpose and design of the investee
- Contractual arrangements
- Special relation between investor and investee

Purpose and design of the investee

Evaluation of purpose and design of the investee helps in:

- identification of relevant activities of the investee,
- how decisions about the relevant activities are made,
- who has the current ability to direct those activities, and
- who receives returns from those activities.

Join us t.me/caborntofight

Merged By CA - Born To Fight

In assessing the purpose and design of an investee, an investor shall consider its **involvement and decisions made at the time of design of the investee** and evaluate whether such involvement provide the investor with rights that are sufficient to give it power. Being involved in the design of an investee alone is not sufficient to give an investor control. However, involvement in the design may indicate that the investor had the opportunity to obtain rights that are sufficient to give it power over the investee.

Illustration 13: Purpose and design of the investee

PQR Ltd. has entered into a contract with a state government to construct a power plant and distribute the electricity generated from the plant to the households of the state. For this, PQR Ltd. has set up a new entity XYZ Ltd. PQR Ltd. was involved in the design of XYZ Ltd. The decisions related to the relevant activities of XYZ Ltd. i.e. how much electricity to generate or the price at which units of electricity to be sold to customers, etc. are not determined by the voting rights. Whether PQR Ltd. has power over XYZ Ltd.?

Solution:

PQR Ltd. was involved in the design of XYZ Ltd. Accordingly, its involvement in the design may indicate that the investor had the opportunity to obtain rights that are sufficient to give it power over the investee. However, being involved in the design of XYZ Ltd. alone is not sufficient to give PQR Ltd. control over XYZ Ltd. and hence other facts and circumstances, such as other contractual arrangements, should also be considered.

*****

Contractual arrangements

An investor shall consider contractual arrangements such as call rights, put rights and liquidation rights that give it explicit or implicit decision-making rights that are closely related to the relevant activities of the investee even though they may occur outside the legal boundaries of the investee.

For some investees, decisions about relevant activities are required to be taken only when particular circumstances arise or events occur. The investee may be designed so that the direction of its activities and its returns are predetermined unless and until those particular circumstances arise or events occur. In this case, only those decisions that are required to be taken when those circumstances or events occur would significantly affect its returns and thus be relevant activities. However, it is not necessary for those circumstance or events to actually occur to establish that investor has power over the investee. The fact that the investor has rights to take those decisions whenever required is sufficient to establish power.

Illustration 14: Rights contingent upon future events

An investee's only business activity, as specified in its founding documents, is to purchase receivables and service them on a day-to-day basis for its investors. Following is the relevant fact pattern:

Join us t.me/caborntofight

- *The servicing on a day-to-day basis includes the collection and passing on of principal and interest payments as they fall due.*
- *Upon default of a receivable the investee automatically puts the receivable to an investor as agreed separately in an agreement between the investee and the investor.*
- *The only relevant activity is managing the receivables upon default because it is the only activity that can significantly affect the investee's returns.*
- *Managing the receivables before default is not a relevant activity because the activities before default are predetermined and amount only to collecting cash flows as they fall due and passing them on to investors.*

Whether the investor has power over the investee?

Solution:

In this question, the design of the investee ensures that the investor has decision-making power only in case of default of a receivable. The terms of the agreement between investee and investor are integral to the overall transaction and the establishment of the investee. Therefore, the terms of the agreement together with the founding documents of the investee lead to the conclusion that the investor has power over the investee even though the investor takes ownership of the receivables only upon default and manages the defaulted receivables outside the legal boundaries of the investee.

*****

An investor may have an explicit or implicit commitment to ensure that an investee continues to operate as designed. Such a commitment may increase the investor's exposure to variability of returns and thus increase the incentive for the investor to obtain rights sufficient to give it power. Therefore, a commitment to ensure that an investee operates as designed may be an indicator that the investor has power, but does not, by itself, give an investor power, nor does it prevent another party from having power.

Illustration 15: Commitment to ensure that an investee operates as designed

A Ltd. is a manufacturer of pharmaceutical products. A Ltd. has invested in share capital of B Ltd. which is a manufacturer of packing material for pharmaceutical products. A Ltd.'s requirements of packing materials for its products are entirely supplied by B Ltd. A Ltd. is not purchasing the packing materials from any other vendors because the materials supplied by other vendors are of inferior quality. Whether A Ltd. has power over B Ltd.?

Solution:

A Ltd. would be the most affected by the operations of B Ltd. since it is dependent on B Ltd. for the supply of packing materials. Therefore A Ltd. would be committed to ensure that B Ltd. operates as designed. This can be an indicator of A Ltd. having power over B Ltd. But it has to consider other facts and circumstances as well to conclude whether it control B Ltd. or not.

*****

Special relation between investor and investee

Ind AS 110 recognises that the control assessment process described above will not always yield a clear conclusion. To assist in reaching a conclusion in marginal situations, the Standard includes guidance on:

- Evidence of possible power
- Indicators of possible power
- Incentives to obtain power

In some circumstances it may be difficult to determine whether an investor's rights are sufficient to give it power over an investee. In such cases, paragraph B18 of Ind AS 110 provides guidance to enable the assessment of power whereby the investor shall consider **evidence** of whether it has the **practical ability to direct** the relevant activities unilaterally. Following are some of the examples of such evidences:

Evidence	Illustration
The investor can appoint or approve the investee's key management personnel who can direct the relevant activities	An investor holds 40% of the voting rights of an investor. However, the investor has right to appoint majority of the board members of investee and the decisions of relevant activities of investee are taken by its board.
The investor can direct the investee to enter into, or can veto any changes to, significant transactions for the benefit of the investor	A Ltd. and B Ltd. both holds 50% each of voting rights of an investee and also have right to appoint 2 members each in board of investee. The decision of relevant activities of investee are taken in board meetings by majority members. A Ltd. also has right to appoint a chairman of the board who will have a casting vote in case of a deadlock situation.
The investor can dominate either the nominations process for electing members of the investee's governing body or the obtaining of proxies from other holders of voting rights.	X Ltd. has invested in the share capital of P Ltd. Apart from A Ltd. there are 4 other investors in P Ltd. Each investor has right to appoint one member on the board of P Ltd. who will have right to direct the relevant activities of P Ltd. Out of the 4 other investors, 2 investors are related parties of X Ltd. and hence X Ltd. can direct them to appoint their representative on the board as per X Ltd.'s choice. Accordingly, X Ltd. can appoint majority of the members of the board of P Ltd.

Merged By CA - Born To Fight

The investee's key management personnel are related parties of the investor	The chief executive officer of the investee and the chief executive officer of the investor are the same person.
The majority of the members of the investee's governing body are related parties of the investor.	The majority of the board members of the investee are also the board members of the investor.

As per paragraph B19 of Ind AS 110, sometimes there will be **indications** that the investor has a special relationship with the investee, which suggests that the **investor has more than a passive interest in the investee**. The existence of any individual indicator, or a particular combination of indicators, does not necessarily mean that investor has power over an investee. However, having more than a passive interest in the investee may indicate that the investor has other related rights sufficient to give it power over an investee. For example, the following suggests that the investor has more than a passive interest in the investee and, in combination with other rights, may indicate power:

Investee's key management personnel who can direct the relevant activities are current or previous employees of the investor

Investee's operations are dependent on the investor such as in following situations:

- Dependence to fund a significant portion of its operations.
- Guarantee a significant portion of the investee's obligations.
- Dependence for critical services, technology, supplies or raw materials.
- Assets such as licences or trademarks that are critical to investee's operations are controlled by investor
- Dependence on for key management personnel, such as when the investor's personnel have specialised knowledge of the investee's operations.

A significant portion of the investee's activities either involve or are conducted on behalf of the investor

Investor's exposure, or rights, to returns from its involvement with the investee is disproportionately greater than its voting or other similar rights.

- For example, there may be a situation in which an investor is entitled, or exposed, to more than half of the returns of the investee but holds less than half of the voting rights of the investee.

Join us t.me/caborntofight

Further, paragraph B20 of Ind AS 110 provides that the greater an investor's exposure, or rights, to variability of returns from its involvement with an investee, the greater is the **incentive** for the investor to obtain rights sufficient to give it power. Therefore, having a large exposure to variability of returns is an indicator that the investor may have power. However, the extent of the investor's exposure does not, in itself, determine whether an investor has power over the investee.

When the factors set out in paragraph B18 and the indicators set out in paragraphs B19 and B20 of Ind AS 110 are considered together with an investor's rights, greater weight shall be given to the evidence of power described in paragraph B18.

3.3.2 Exposure, or rights, to variable returns from an investee

When assessing whether an investor has control of an investee, the investor determines whether it is exposed, or has rights, to 'variable returns' from its involvement with the investee.

Variable returns are returns that are not fixed and have the **potential to vary as a result of the performance of an investee**. Variable returns can be only positive, only negative or both positive and negative. It should be noted that the term used is 'returns' and not 'benefits' which are often interpreted as implying only positive returns.

An investor assesses whether returns from an investee are variable and how variable those returns are on the basis of the **substance of the arrangement** and regardless of the legal form of the returns.

- For example, an investor can hold a bond with fixed interest payments. The fixed interest payments are variable returns for the purpose of control evaluation because they are subject to default risk and they expose the investor to the credit risk of the issuer of the bond. The amount of variability (i.e. how variable those returns are) depends on the credit risk of the bond.
- Similarly, fixed performance fees for managing an investee's assets are variable returns because they expose the investor to the performance risk of the investee. The amount of variability depends on the investee's ability to generate sufficient income to pay the fee.
- However, a non-refundable income received from the investee which is not impacted by the credit risk or performance of the investee can be considered as a fixed return.

It must also be noted that the term 'returns' includes within its scope both (a) direct returns (which are mostly financial returns), as well as (b) synergistic returns, which are more indirect.

Following are some of the examples of variable returns:

Merged By CA - Born To Fight

Variable returns from an investee		
Dividends, other distributions of economic benefits from an investee (eg interest from debt securities) Changes in the value of the investor's investment in that investee.	- Remuneration for servicing an investee's assets or liabilities - Fees and exposure to loss from providing credit or liquidity support - Residual interests in the investee's assets and liabilities on liquidation - Tax benefits - Access to future liquidity	Returns that are not available to other interest holders For example, an investor might use its assets in combination with the assets of the investee, such as combining operating functions to achieve economies of scale, cost savings, sourcing scarce products, gaining access to proprietary knowledge or limiting some operations or assets, to enhance the value of the investor's other

Exposure to variable returns is not in itself enough to conclude the assessment of control. An investor should have power over the investee and the ability to use its power to affect the amount of the investor's returns from its involvement with the investee. For example, it is common for a lender to have an exposure to variable returns from a borrower through interest payments that it receives from the borrower, that are subject to credit risk. However, the lender would not control the borrower if it does not have the ability to affect those interest payments (which is frequently the case).

Although only one investor can control an investee, more than one party can share in the returns of an investee. For example, holders of non-controlling interests can share in the profits or distributions of an investee.

Reputational risk

During the financial crisis, some financial institutions provided funding or other support to securitisation or investment vehicles because they established or promoted those vehicles. Rather than allowing them to fail and facing a loss of reputation, the financial institutions stepped in, and in some cases took control of the vehicles. Having reputational risk in isolation is not an appropriate basis for consolidation. The term 'reputational risk' relates to the risk that failure of an investee would damage an investee's reputation and, therefore, that of an investor or sponsor, compelling the investor or sponsor to provide support to an investee in order to protect its reputation, even though the investor or sponsor has no legal or contractual requirement to do so.

Reputational risk is part of an investor's exposure to risks and rewards, albeit a risk that arises from non-contractual sources. Therefore, when assessing control, reputational risk is a factor to consider along with other facts and circumstances. It is not an indicator of power in its own right, but may increase an investor's incentive to secure rights that give the investor power over an investee.

Join us t.me/caborntofight

3.3.3 Link between power and returns

An investor controls an investee if the investor not only has **power** over the investee and **exposure or rights to variable returns** from its involvement with the investee, but also has the ability to use its power to affect the investor's returns from its involvement with the investee.

Thus, an investor with decision-making rights shall **determine whether it is a principal or an agent**. An investor shall also determine whether another entity with decision-making rights is acting as an agent for the investor. An agent is a party primarily engaged to act on behalf and for the benefit of another party or parties (the principal(s)). An investor that is an agent does not control an investee when it exercises decision-making rights delegated to it.

An investor may delegate its decision-making authority to an agent on some specific issues or on all relevant activities. When assessing whether it controls an investee, the investor shall treat the decision-making rights delegated to its agent as held by the investor directly.

A decision maker shall consider the overall **relationship between itself, the investee being managed and other parties involved** with the investee, in particular all the factors below, in determining whether it is an agent:

The scope of the decision-making authority	Rights held by other parties	Remuneration from the investee	Exposure to variable returns from other interests in the investee

Different weightings shall be applied to each of the factors on the basis of particular facts and circumstances.

The scope of the decision-making authority

The scope of a decision maker's decision-making authority is evaluated by considering:

(a) the activities that are permitted according to the decision-making agreement(s) and specified by law, and

(b) the discretion that the decision maker has when making decisions about those activities.

A decision maker shall consider the purpose and design of the investee, the risks to which the investee was designed to be exposed, the risks it was designed to pass on to the parties involved and the level of involvement the decision maker had in the design of an investee. For example, if a decision maker is significantly involved in the design of the investee (including in determining the scope of decision-making authority), that involvement may indicate that the decision maker had the opportunity and incentive to obtain rights that result in the decision maker having the ability to direct the relevant activities.

Rights held by other parties

Substantive removal or other rights may indicate that the decision maker is an agent.

Join us t.me/caborntofight

Removal rights

Removal rights are rights to deprive the decision-maker of its decision-making authority.

The removal rights held by other should be considered as follows:

Single party holds substantive removal rights and can remove the decision maker **without cause**, this, in isolation, is **sufficient to conclude** that the decision maker is an **agent**.

↓

If **more than one party holds such rights** (and no individual party can remove the decision maker without the agreement of other parties) those rights are **not, in isolation, conclusive** in determining that a decision maker is an agent.

↓

The **greater the number of parties** required to act together to exercise removal rights and the **greater the magnitude** of, and variability associated with, the decision maker's **other economic interests** (ie remuneration and other interests), the **less the weighting** that shall be placed on removal rights.

Other substantive rights

If other parties hold substantive rights that can restrict the decision maker from exercising its discretion shall be considered in similar manner to removal right when evaluating whether the decision maker is an agent.

For example, a decision maker that is required to obtain approval from a small number of other parties for its actions is generally an agent.

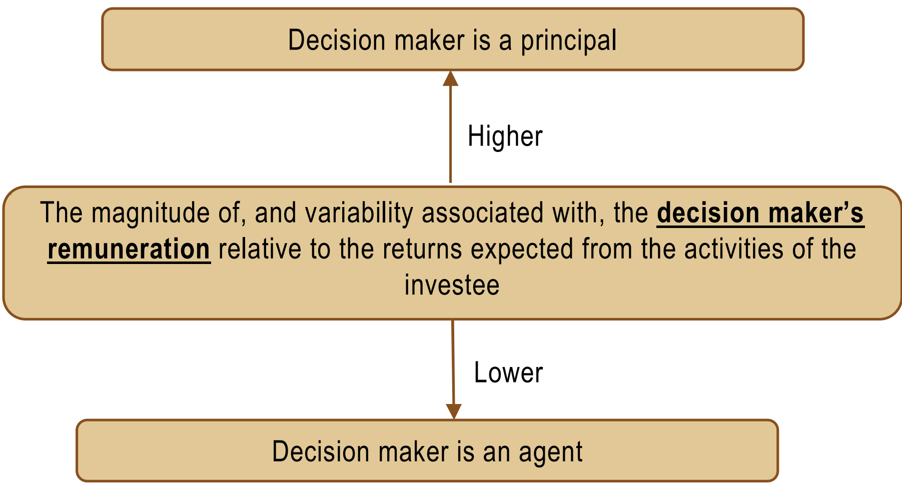
Consideration of the rights held by other parties shall include an assessment of any rights exercisable by an investee's board of directors (or other governing body) and their effect on the decision-making authority.

For example, if board of directors (which is appointed by other investors) of an investee has right to remove the decision maker without cause than the decision maker is an agent.

Remuneration from the investee

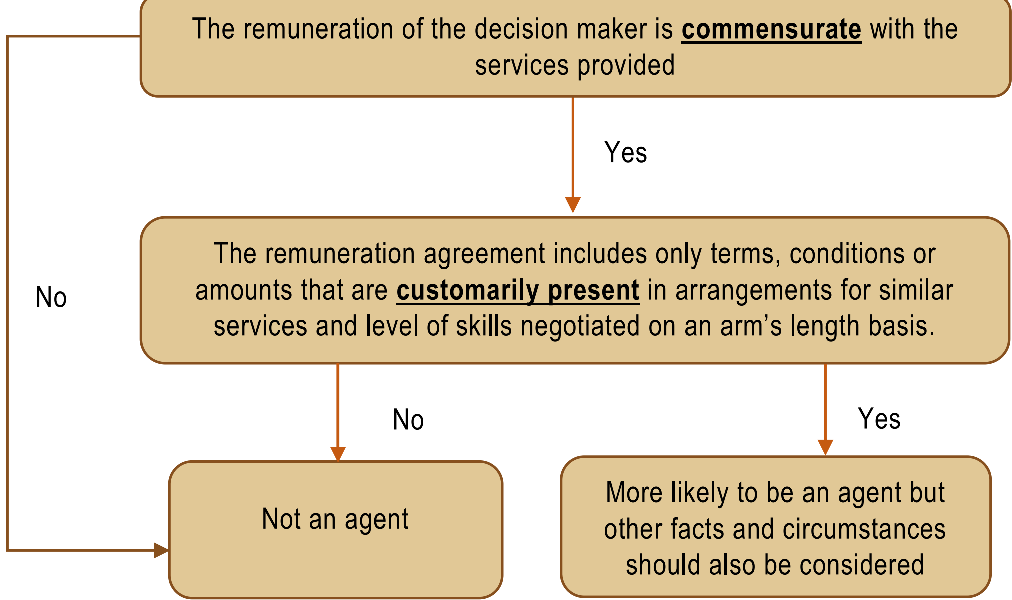
The relationship between the remuneration of a decision maker and it being an agent is explained below:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight



For example, if a variation in investee's returns by 1% causes variation in decision maker's remuneration from investee by less than 1% then the decision maker can be an agent. However, if a variation in investees returns by 1% causes variation in decision maker's remuneration from investee by more than 1% then the decision maker can be a principal.

Further, in determining whether it is a principal or an agent the decision maker shall also consider following conditions:

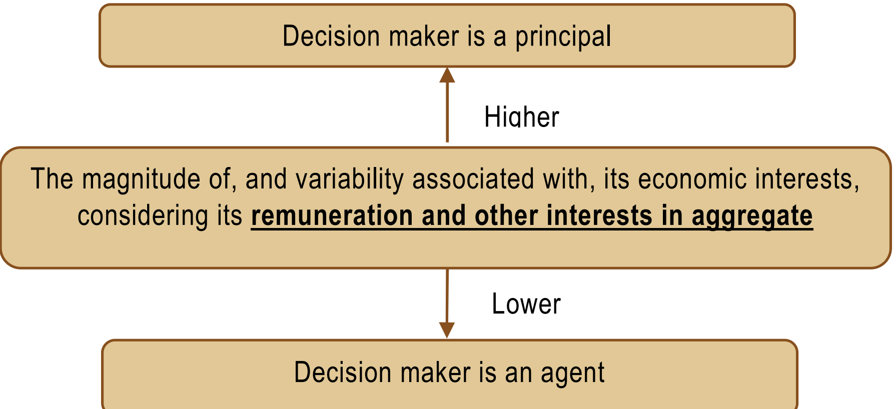


Exposure to variable returns from other interests in the investee

A decision maker that holds other interests in an investee (like investments in the investee or provides guarantees with respect to the performance of the investee), shall consider its exposure

to variability of returns from those interests in assessing whether it is an agent. **Holding other interests in an investee indicates that the decision maker may be a principal.**

In evaluating the exposure to variability of returns, the decision maker shall consider the magnitude of variability as follows:



It is to be noted that here the decision maker needs to consider the remuneration and other interests in aggregate. Hence, even though in case the decision maker had concluded in the initial assessment about remuneration that it is an agent, it needs to again consider remuneration in the assessment of exposure to variable returns.

Apart from the magnitude of exposure to variable returns, decision maker shall also consider whether its exposure to **variability of returns is different from that of the other investors**. If yes, then whether this might influence its actions. **For example,** this might be the case when a decision maker holds subordinated interests in, or provides other forms of credit enhancement to, an investee.

The decision maker shall evaluate its **exposure relative to the total variability** of returns of the investee. This evaluation is made primarily on the basis of returns expected from the activities of the investee but **shall not ignore** the decision maker's **maximum exposure to variability** of returns of the investee through other interests that the decision maker holds.

For example, if a variation in investees returns by 1% causes variation in decision maker's returns from investee by less than 1%. However, a variation in investee's returns by ₹ 100 causes variation in decision maker's returns from investee by ₹ 150 because of significant variation in the market price of the equity shares of the investee.

Illustration 16: Link between power and returns

A decision maker (fund manager) establishes, markets and manages a publicly traded, regulated fund according to narrowly defined parameters set out in the investment mandate as required by its local laws and regulations. The fund was marketed to investors as an investment in a

diversified portfolio of equity securities of publicly traded entities. Following is the relevant fact pattern related to fund manager:

- *Within the defined parameters, the fund manager has discretion about the assets in which to invest.*
- *The fund manager has made a 10% pro rata investment in the fund and receives a market-based fee for its services equal to 1% of the net asset value of the fund.*
- *The fees are commensurate with the services provided.*
- *The fund manager does not have any obligation to fund losses beyond its 10% investment.*

The fund is not required to establish, and has not established, an independent board of directors. The investors do not hold any substantive rights that would affect the decision-making authority of the fund manager but can redeem their interests within particular limits set by the fund.

Whether the fund manager controls the fund?

Solution:

Although operating within the parameters set out in the investment mandate and in accordance with the regulatory requirements, the fund manager has decision-making rights that give it the current ability to direct the relevant activities of the fund — the investors do not hold substantive rights that could affect the fund manager's decision-making authority. The fund manager receives a market-based fee for its services that is commensurate with the services provided and has also made a pro rata investment in the fund. The remuneration and its investment expose the fund manager to variability of returns from the activities of the fund without creating exposure that is of such significance that it indicates that the fund manager is a principal.

In this case, consideration of the fund manager's exposure to variability of returns from the fund together with its decision-making authority within restricted parameters indicates that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund.

*****

Illustration 17: Link between power and returns

A decision maker establishes, markets and manages a fund that provides investment opportunities to a number of investors. The decision maker (fund manager) must make decisions in the best interests of all investors and in accordance with the fund's governing agreements. Nonetheless, the fund manager has wide decision-making discretion. The fund manager receives a market-based fee for its services equal to 1% of assets under management and 20% of all the fund's profits if a specified profit level is achieved. The fees are commensurate with the services provided.

Although it must make decisions in the best interests of all investors, the fund manager has extensive decision-making authority to direct the relevant activities of the fund. The fund manager

is paid fixed and performance-related fees that are commensurate with the services provided. In addition, the remuneration aligns the interests of the fund manager with those of the other investors to increase the value of the fund, without creating exposure to variability of returns from the activities of the fund that is of such significance that the remuneration, when considered in isolation, indicates that the fund manager is a principal.

The above fact pattern and analysis applies to various scenarios described below. Each scenario is considered in isolation. Determine whether the fund manager control the fund?

Scenario A

The fund manager also has a 2% investment in the fund that aligns its interests with those of the other investors. The fund manager does not have any obligation to fund losses beyond its 2% investment. The investors can remove the fund manager by a simple majority vote, but only for breach of contract.

Scenario B

The fund manager has a more substantial pro rata investment in the fund but does not have any obligation to fund losses beyond that investment. The investors can remove the fund manager by a simple majority vote, but only for breach of contract.

Scenario C

The fund manager has a 20% pro rata investment in the fund but does not have any obligation to fund losses beyond its 20% investment. The fund has a board of directors, all of whose members are independent of the fund manager and are appointed by the other investors. The board appoints the fund manager annually. If the board decided not to renew the fund manager's contract, the services performed by the fund manager could be performed by other managers in the industry.

Solution:

Scenario A

The fund manager's 2% investment increases its exposure to variability of returns from the activities of the fund without creating exposure that is of such significance that it indicates that the fund manager is a principal. The other investors' rights to remove the fund manager are considered to be protective rights because they are exercisable only for breach of contract. In this example, although the fund manager has extensive decision-making authority and is exposed to variability of returns from its interest and remuneration, the fund manager's exposure indicates that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund.

Scenario B

In this scenario, the other investors' rights to remove the fund manager are considered to be protective rights because they are exercisable only for breach of contract. Although the fund

manager is paid fixed and performance-related fees that are commensurate with the services provided, the combination of the fund manager's investment together with its remuneration could create exposure to variability of returns from the activities of the fund that is of such significance that it indicates that the fund manager is a principal. The greater the magnitude of, and variability associated with, the fund manager's economic interests (considering its remuneration and other interests in aggregate), the more emphasis the fund manager would place on those economic interests in the analysis, and the more likely the fund manager is a principal.

For example, having considered its remuneration and the other factors, the fund manager might consider a 20% investment to be sufficient to conclude that it controls the fund. However, in different circumstances (i.e. if the remuneration or other factors are different), control may arise when the level of investment is different.

Scenario C

Although the fund manager is paid fixed and performance-related fees that are commensurate with the services provided, the combination of the fund manager's 20% investment together with its remuneration creates exposure to variability of returns from the activities of the fund that is of such significance that it indicates that the fund manager is a principal. However, the investors have substantive rights to remove the fund manager — the board of directors provides a mechanism to ensure that the investors can remove the fund manager if they decide to do so.

In this scenario, the fund manager places greater emphasis on the substantive removal rights in the analysis. Thus, although the fund manager has extensive decision-making authority and is exposed to variability of returns of the fund from its remuneration and investment, the substantive rights held by the other investors indicate that the fund manager is an agent. Thus, the fund manager concludes that it does not control the fund.

*****

Illustration 18: Link between power and returns

An investee is created to purchase a portfolio of fixed rate asset-backed securities, funded by fixed rate debt instruments and equity instruments. The equity instruments are designed to provide first loss protection to the debt investors and receive any residual returns of the investee.

The transaction was marketed to potential debt investors as an investment in a portfolio of asset-backed securities with exposure to the credit risk associated with the possible default of the issuers of the asset-backed securities in the portfolio and to the interest rate risk associated with the management of the portfolio.

On formation, the equity instruments represent 10% of the value of the assets purchased. A decision maker (the asset manager) manages the active asset portfolio by making investment decisions within the parameters set out in the investee's prospectus. For those services, the asset manager receives a market-based fixed fee (i.e. 1% of assets under management) and performance-related fees (i.e. 10% of profits) if the investee's profits exceed a specified level.

Merged By CA - Born To Fight

The fees are commensurate with the services provided. The asset manager holds 35% of the equity in the investee. The remaining 65% of the equity, and all the debt instruments, are held by a large number of widely dispersed unrelated third-party investors. The asset manager can be removed, without cause, by a simple majority decision of the other investors.

Does the asset manager control the investee?

Solution:

The asset manager is paid fixed and performance-related fees that are commensurate with the services provided. The remuneration aligns the interests of the fund manager with those of the other investors to increase the value of the fund. The asset manager has exposure to variability of returns from the activities of the fund because it holds 35% of the equity and from its remuneration.

Although operating within the parameters set out in the investee's prospectus, the asset manager has the current ability to make investment decisions that significantly affect the investee's returns -the removal rights held by the other investors receive little weighting in the analysis because those rights are held by a large number of widely dispersed investors. In this example, the asset manager places greater emphasis on its exposure to variability of returns of the fund from its equity interest, which is subordinate to the debt instruments. Holding 35% of the equity creates subordinated exposure to losses and rights to returns of the investee, which are of such significance that it indicates that the asset manager is a principal. Thus, the asset manager concludes that it controls the investee.

*****

Following table summarises the above illustrations on link between power and returns by highlighting each of the factors for evaluating link between power and returns:

Illustration	Scope of the decision-making authority	Removal rights held by others	Remuneration from the investee	Variable returns from other interests	Conclusion
16	Narrowly defined	No such rights	1% of the net asset value of the fund	10% investment in the fund	Agent
17 (A)	Extensive decision-making authority	Removal for cause by simple majority	1% of assets under management and 20% of all the fund's	2% investment in the fund	Agent
17 (B)				20% investment in the fund	Principal

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

17 (C)		Removal without cause by board	profits if a specified profit level is achieved	20% investment in the fund	Agent
18	Decisions within the parameters set out in the investee's prospectus	Removal without cause by simple majority of widely dispersed investors	1% of assets under management and 10% of profits if the profits exceed a specified level	35% of equity in the investee	Principal

Illustration 19: Link between power and returns

A decision maker (the sponsor) sponsors a fund, which issues short-term debt instruments to unrelated third-party investors. The transaction was marketed to potential investors as an investment in a portfolio of highly rated medium-term assets with minimal exposure to the credit risk associated with the possible default by the issuers of the assets in the portfolio. Various transferors sell high quality medium-term asset portfolios to the fund. Each transferor services the portfolio of assets that it sells to the fund and manages receivables on default for a market-based servicing fee. Each transferor also provides first loss protection against credit losses from its asset portfolio through over-collateralisation of the assets transferred to the fund. The sponsor establishes the terms of the fund and manages the operations of the fund for a market-based fee. The fee is commensurate with the services provided. The sponsor approves the sellers permitted to sell to the fund, approves the assets to be purchased by the fund and makes decisions about the funding of the fund. The sponsor must act in the best interests of all investors.

The sponsor is entitled to any residual return of the fund and also provides credit enhancement and liquidity facilities to the fund. The credit enhancement provided by the sponsor absorbs losses of up to 5% of all of the fund's assets, after losses are absorbed by the transferors. The liquidity facilities are not advanced against defaulted assets. The investors do not hold substantive rights that could affect the decision-making authority of the sponsor. Whether the sponsor has control over the fund?

Solution:

Even though the sponsor is paid a market-based fee for its services that is commensurate with the services provided, the sponsor has exposure to variability of returns from the activities of the fund because of its rights to any residual returns of the fund and the provision of credit enhancement and liquidity facilities (i.e. the fund is exposed to liquidity risk by using short-term debt instruments to fund medium-term assets). Even though each of the transferors has decision-making rights that affect the value of the assets of the fund, the sponsor has extensive decision-

making authority that gives it the current ability to direct the activities that most significantly affect the fund's returns (i.e. the sponsor established the terms of the fund, has the right to make decisions about the assets (approving the assets purchased and the transferors of those assets) and the funding of the fund (for which new investment must be found on a regular basis)). The right to residual returns of the fund and the provision of credit enhancement and liquidity facilities expose the sponsor to variability of returns from the activities of the fund that is different from that of the other investors. Accordingly, that exposure indicates that the sponsor is a principal and thus the sponsor concludes that it controls the fund. The sponsor's obligation to act in the best interest of all investors does not prevent the sponsor from being a principal.

*****

3.4 RELATIONSHIP WITH OTHER PARTIES

When assessing control, an investor shall consider the nature of its relationship with other parties and whether those other parties are acting on the investor's behalf i.e. they are **'de facto agents'** of the investor. The determination of whether other parties are acting as de facto agents requires judgement, considering not only the nature of the relationship but also how those parties interact with each other and the investor.

A de factor agent relationship **does not require a contractual arrangement** between the investor and the de facto agent.

A party is a de facto agent when the investor has, or those that direct the activities of the investor have, the **ability to direct that party** to act on the investor's behalf.

An investor shall consider its de facto agent's decision-making rights and its indirect exposure, or rights, to variable returns through the de facto agent **together with its own** when assessing control of an investee.

Further, having a de facto agent does not necessarily mean that the investor controls the investee. The investor still needs to perform the control evaluation as per the detailed guidance discussed above.

When assessing control, an investor would consider its de facto agent's decision-making rights and exposure (or rights) to variable returns together with its own as if the rights were held by the investor directly.

Example 5

An investor holds 30% voting powers in an investee. One of the fellow subsidiaries of the investor also holds 30% voting powers of the investee. If the investor believes that if has the ability to direct the fellow subsidiary to act on behalf of the investor while exercising its voting rights, then the investor may conclude that the fellow subsidiary is a de facto agent of the investor. Accordingly, investor would be able to control the investee with ability to use 60% of the voting

rights. However, in case the fellow subsidiary holds just 10% voting rights of the investee then the investor would not be able to control the investee with just 40% voting rights (30% held by investor itself and 10% owned by de facto agent).

Following are the examples of other parties that, by the nature of their relationship, might act as de facto agents for the investor:

- Investor's related parties
- A party that received its interest in the investee as a contribution or loan from the investor
- A party that has agreed not to sell, transfer or encumber its interests in the investee without the investor's prior approval (except in case investor and other party have right of prior approval and rights are based on mutually agreed terms)
- A party that cannot finance its operations without subordinated financial support from the investor
- Investee for which the majority of the members of board or similar body are the same as those of the investor
- A party that has a close business relationship with the investor, such as the relationship between a professional service provider and one of its significant clients.

Parties mentioned above are not necessarily de facto agents of the investor. However, the investor needs to evaluate whether the parties following in the above categories are the de facto agents or not.

3.5 CONTROL OF SPECIFIED ASSETS

An investor shall consider whether it treats a portion of an investee as a deemed separate entity and, if so, whether it controls the deemed separate entity. A deemed separate entity is often called a **'silo'**.

An investor shall treat a portion of an investee as a deemed separate entity if and only if the following condition is satisfied:

Determination of whether a portion of an investee is a deemed separate entity		
Specified assets of the investee (and related credit enhancements, if any) are the only source of payment for specified liabilities of, or specified other interests in, the investee.	Parties other than those with the specified liability do not have rights or obligations related to the specified assets or to residual cash flows from those assets.	In substance, none of the returns from the specified assets can be used by the remaining investee and none of the liabilities of the deemed separate entity are payable from the assets of the remaining investee.

Thus, in substance, all the assets, liabilities and equity of that deemed separate entity are **ring-fenced** from the overall investee.

For example, an investee is a mutual fund and under the investee there are multiple sub-funds established with different investment objectives like debt-oriented funds, equity-oriented funds, etc. In such case, an assessment should be made as to whether the sub-funds are deemed separate entities as per the conditions mentioned above.

When the conditions mentioned above are satisfied, an investor shall assess **whether it controls the silo** by applying the guidance of control evaluation i.e. whether the investor has power over the silo, exposure or rights to variable returns from involvement with silo and whether it can use that power to affect the returns of the silo.

If the investor controls the silo, the investor shall consolidate that silo. In that case, other parties exclude that silo when assessing control of, and in consolidating, the investee.

For example, continuing with the above example on identification of a silo, if one of the sub-funds is treated as a silo then the investor that controls that silo will consolidate that sub-fund. Other parties who control other sub-funds will exclude the sub-fund controlled by the investor in their control evaluation and consolidation.

3.6 CONTINUOUS ASSESSMENT

An investor shall reassess whether it controls an investee **if facts and circumstances indicate that there are changes** to one or more of the three elements of control i.e. power, exposure or rights to variable returns and link between power and variable returns.

An investor should reassess the control over an investee in following situations:

Situation	Example
A change in how power over an investee can be exercised	Changes to decision-making rights whereby the relevant activities are no longer directed through voting rights, but instead other agreements, like contracts, give another party or parties power over the investee
An event can cause an investor to gain or lose power over an investee without the investor being involved in that event	An investor can gain power over an investee because decision-making rights held by another party or parties that previously prevented the investor from controlling an investee have lapsed
Changes affecting exposure, or rights, to variable returns from involvement with an investee	An investor that has power over an investee can lose control of an investee if the investor ceases to be entitled to receive variable returns or to be exposed to obligations (e.g. if a contract to receive performance-related fees is terminated).
Assessment to act as an agent or principal has changed. Changes in the overall relationship between the investor and other parties can mean that an investor no longer acts as an agent, even though it has previously acted as an agent, and vice versa.	If changes to the rights of the investor, or of other parties, occur, the investor shall reconsider its status as a principal or an agent.

An investor's initial assessment of control or its status as a principal or an agent would not change simply because of a change in market conditions (e.g. a change in the investee's returns driven by market conditions), unless the change in market conditions changes one or more of the three elements of control or changes the overall relationship between a principal and an agent.

3.7 INVESTMENT ENTITIES

3.7.1 Determining whether an entity is an investment entity

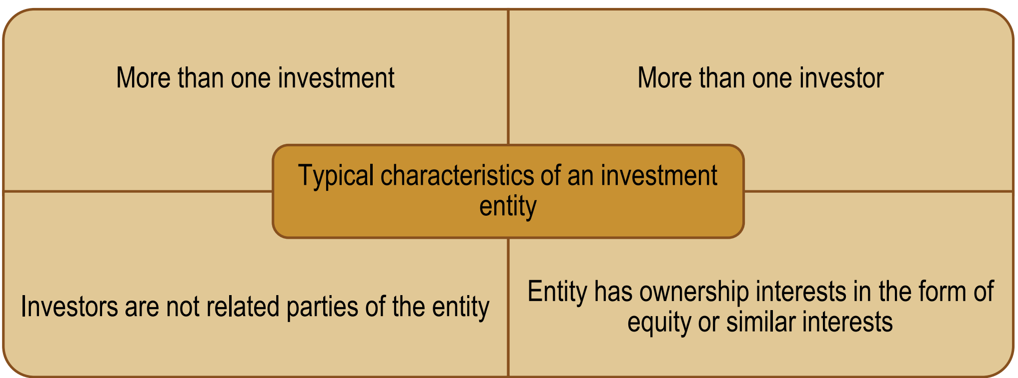
A parent shall determine whether it is an investment entity. An entity is an investment entity if it fulfils **all the following conditions**:

Obtains funds from one or more investors for providing those investor(s) with **investment management services**

Commits to its investor(s) that its business purpose is to invest funds solely for **returns from capital appreciation, investment income**, or both

Measures and evaluates the performance of substantially all of its **investments on a fair value basis**

In assessing whether an entity meets the definition of investment entity as above, the entity shall consider whether it has the following typical characteristics of an investment entity:



The absence of one or more of these typical characteristics does not necessarily disqualify an entity from being classified as an investment entity but indicates that additional judgement is required in determining whether the entity is an investment entity.

If facts and circumstances indicate that there are **changes** to one or more of the three elements that make up the definition of an investment entity or the typical characteristics of an investment entity, a parent shall **reassess whether it is an investment entity**.

© The Institute of Chartered Accountants of India

Following is the detailed discussion on two of the three elements of the definition of an investment entity (business purpose and fair value measurement) and the typical characteristics of an investment entity. As regards the first element, i.e. provision of investment management services, that essentially differentiates an investment entity from other entities.

3.7.1.1 Business Purpose

The definition of an investment entity requires that the purpose of the entity is to invest solely for capital appreciation, investment income (such as dividends, interest or rental income), or both.

Documents or other evidence that indicate the entity's investment objectives are include:

- offering memorandum of the entity
- publications distributed by the entity and other corporate
- partnership documents of the entity
- manner in which the entity presents itself to other parties (such as potential investors or potential investees)

For example, an entity may present its business as providing medium-term investment for capital appreciation. In contrast, an entity that presents itself as an investor whose objective is to jointly develop, produce or market products with its investees has a business purpose that is inconsistent with the business purpose of an investment entity, because the entity will earn returns from the development, production or marketing activity as well as from its investments.

Apart from the business purpose of investing for capital appreciation and investment income, an **investment entity may provide investment-related services** (e.g. investment advisory services, investment management, investment support and administrative services), to third parties as well as to its investors, even if those activities are substantial to the entity, subject to the entity continuing to meet the definition of an investment entity.

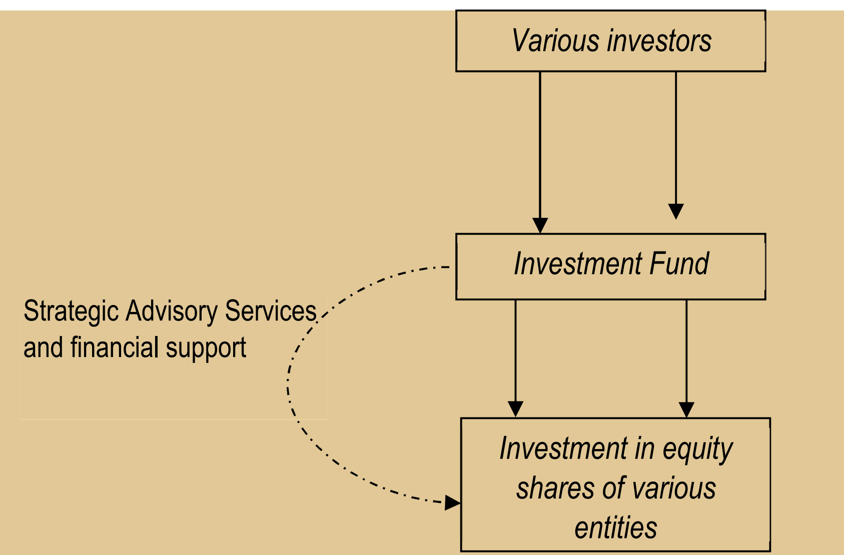
An investment entity may also participate in the following **investment-related activities** if these activities are **undertaken to maximise the investment return** (capital appreciation or investment income) from its investees and do not represent a separate substantial business activity or a separate substantial source of income to the investment entity:

a) providing management services and strategic advice to an investee; and

b) providing financial support to an investee, such as a loan, capital commitment or guarantee.

Illustration 20: Business purpose of an investment entity

An asset manager has set up and investment fund for the purpose of acquiring capital contributions from various investors (by issuing them units in the fund) and investing those contributions in the equity share capital of various entities for the purpose of earning capital appreciation on those investments. Following is the existing structure of the fund.



Apart from the investments in various entities, the investment fund also provides its investee the strategic advisory services so that it can result in increase in the capital appreciation from investments in those investees. It also provides its investees financial support in the form of loan to provide them with funds for acquiring capital assets. The investment fund does not hold such investments for a period longer than 5 years. The investment fund measures and evaluate the performance of the investments on fair value basis.

Whether the investment fund can be treated as an investment entity?

Solution:

Out of the three elements of the definition of an investment entity, the investment fund fulfils the two elements very clearly i.e. it obtains fund from more than one investor for providing investment management services and measures and evaluates its investments on fair value basis.

The typical characteristics of an investment entity are also present in the structure of the investment fund i.e. more than one investment, more than one investor, investors are unrelated and investment fund issues units in the fund to the investors.

With respect to the business objective of the investment fund, the objective is to earn capital appreciation from its investments. The strategic advisory services and financial support provided to investees are extended with the intention of earning higher capital appreciation from the investees. However, judgement should to be applied that these do not represent substantial business activity or a separate substantial source of income for the investment fund. If the investment fund concludes that these services and financial support to investees are not substantial business activity and substantial source of income for the investment fund, then only the investment fund can be treated as an investment entity.

*****

Join us t.me/caborntofight

3.7.1.2 Exit strategies

One feature that differentiates an investment entity from other entities is that an **investment entity does not plan to hold its investments indefinitely**; it holds them for a limited period. Because equity investments and non-financial asset investments have the potential to be held indefinitely, an investment entity **shall have an exit strategy** documenting how the entity plans to realise capital appreciation from substantially all of its equity investments and non-financial asset investments.

An investment entity shall also have an exit strategy for any debt instruments that have the potential to be held indefinitely, for example perpetual debt investments. The entity need not document specific exit strategies for each individual investment but shall identify different **potential strategies for different types or portfolios of investments**, including a substantive time frame for exiting the investments. Exit mechanisms that are only put in place for default events, such as a breach of contract or non-performance, are not considered exit strategies for the purpose of this assessment.

Exit strategies can vary by type of investment.

- **For investments in private equity securities**, examples of exit strategies include an initial public offering, a private placement, a trade sale of a business, distributions (to investors) of ownership interests in investees and sales of assets (including the sale of an investee's assets followed by a liquidation of the investee).
- **For equity investments that are traded in a public market**, examples of exit strategies include selling the investment in a private placement or in a public market.
- **For real estate investments**, an example of an exit strategy includes the sale of the real estate through specialized property dealers or the open market.

An investment entity may have an **investment in another investment entity** that is formed in connection with the entity for legal, regulatory, tax or similar business reasons. In this case, the **investment entity investor need not have an exit strategy** for that investment, provided that the investment entity investee has appropriate exit strategies for its investments.

Illustration 21: Exit strategies of an investment entity

ABC Ltd. Is established with primary objective of investing in the equity shares of various entities across various industries based on the detailed research about each industry and entities within that industry being done by the investment manager of the company.

The investment manager decides the timing as to when the investments should be made considering the current market situation. Sometimes, the investment manager decides to invest the idle funds into short-term to medium-term debt instruments with fixed maturity. The exit strategies are in place for the investments done in equity shares but the same is not there for investments done in debt instruments.

© The Institute of Chartered Accountants of India

Merged By CA - Born To Fight

Determine whether the entity fulfils the exit strategy condition of being classified as investment entity?

Solution:

The exit strategies are in place for investments done in equity shares. But not in place for investments done in debt instruments. However, it should be noted that the debt instruments have fixed maturity period and they cannot be held for indefinite period. Hence, there is no need for having exit strategies for such instruments. Accordingly, the exit strategy condition is fulfilled for being classified as investment entity.

*****

3.7.1.3 Earnings from investments

To be an investment entity, an entity must commit to its investors that its business purpose is to invest funds solely for **returns from capital appreciation, investment income**, or both.

An entity is **not an investment entity if** the entity, or another member of the group containing the entity **obtains**, or has the objective of obtaining, **other benefits from the entity's investments** that are not available to other parties unrelated to the investee.

Such other benefits include following:

Acquisition, use, exchange or exploitation of the **processes, assets or technology of an investee**. This would include the entity or another group member having disproportionate, or exclusive, rights to acquire assets, technology, etc. of any investee

Joint arrangements or other agreements between the entity or another group member and an investee to develop, produce, market or provide products or services;

Financial guarantees or assets provided by an investee for borrowing arrangements of the entity or another group member (however, an investment entity would still be able to use an investment in an investee as collateral for any of its borrowings)

An **option held by a related party** of the entity **to purchase**, from that entity or another group member, an **ownership interest** in an investee of the entity;

Transactions (except as mentioned in next paragraph) between the entity or another group member and an investee that are

- on terms that are unavailable to unrelated parties; or
- not at fair value; or
- represent a substantial portion of the investee's or the entity's or other group entities' business

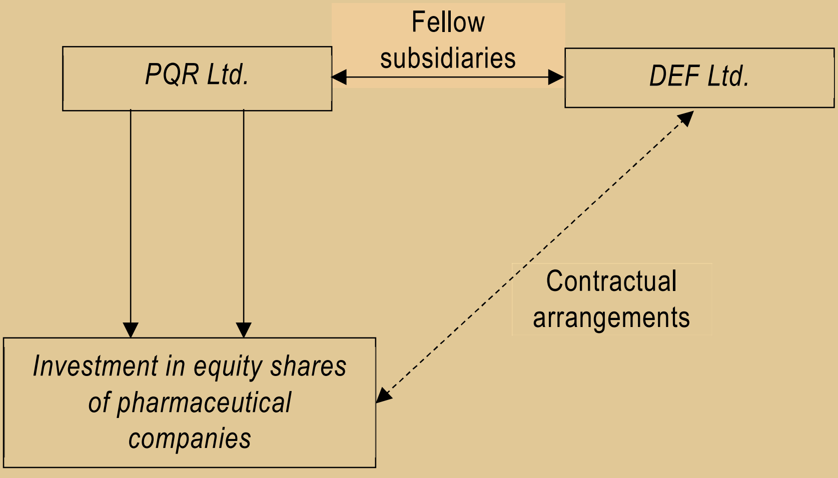
An investment entity may have a strategy to invest in more than one investee in the same industry, market or geographical area in order to benefit from synergies that increase the capital appreciation and investment income from those investees. An entity is not disqualified from being classified as an investment entity merely because such investees trade with each other.

Illustration 22: Earnings from investments of an investment entity

PQR Ltd. is established with primary objective of investing in the equity shares of various pharmaceutical companies which are involved in the research and development of medicine for a critical illness. DEF Ltd. is a fellow subsidiary of PQR Ltd. and DEF Ltd. has entered into contractual arrangements with all the investees of PQR Ltd. that in case they are successful in developing the medicine then they will transfer the patent and distribution rights for that medicine to DEF Ltd. at less then market price. This arrangement is explained in following diagram:



Determine whether PQR Ltd. can be classified as investment entity?

Solution:

PQR Ltd. and DEF Ltd. are part of same group. Further, DEF Ltd. have exclusive right to acquire the patent and distributions rights from the investees of PQR Ltd. and that too at less than the market price. Hence, the related party of PQR Ltd. is in position to obtain benefits other than capital appreciation and investment income from the investees that are not available to other parties unrelated to the investee. Accordingly, PQR Ltd. cannot be classified as investment entity.

*****

3.7.1.4 Fair value measurement

An essential element of the definition of an investment entity is that it measures and evaluates the performance of substantially all of its investments on a fair value basis, because **using fair value results in more relevant information** than, for example, consolidating its subsidiaries or

Join us t.me/caborntofight

Merged By CA - Born To Fight

using the equity method for its interests in associates or joint ventures. In order to demonstrate that it meets this element of the definition, an investment entity:

Provides investors with **fair value information and measures substantially all of its investments at fair value** whenever fair value is required or permitted in accordance with Ind ASs

Reports fair value information internally to the entity's key management personnel, who use fair value as the primary measurement attribute to evaluate the performance of substantially all of its investments and to make investment decisions.

In order to meet the requirement of measuring investments at fair value, an investment entity would:

a) elect the exemption from applying the equity method in Ind AS 28 for its investments in associates and joint ventures (exemptions from applying the equity method is discussed in detail in unit 6); and

b) measure its financial assets at fair value using the requirements in Ind AS 109.

An investment entity may have some non-investment assets, such as a head office property and related equipment, and may also have financial liabilities. The fair value measurement element of the definition of an investment entity applies to an investment entity's investments. Accordingly, an investment entity **need not measure its non-investment assets or its liabilities at fair value**.

3.7.1.5 More than one investment

An investment entity **typically holds several investments** to diversify its risk and maximise its returns. An entity may hold a portfolio of investments directly or indirectly, for example by holding a single investment in another investment entity that itself holds several investments.

There may be times when the entity holds a single investment. However, **holding a single investment does not necessarily prevent an entity from meeting the definition of an investment entity**. For example, an investment entity may hold only a single investment when the entity:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

is in its **start-up period** and has not yet identified suitable investments and, therefore, has not yet executed its investment plan

has **not yet** made other investments to **replace those it has disposed** of

is **established to pool investors' funds** to invest in a single investment when that investment is unobtainable by individual investors (e.g. when the required minimum investment is too high for an individual investor)

is in the process of **liquidation**

3.7.1.6 More than one investor

An investment entity would have **several investors who pool their funds** to gain access to investment management services and investment opportunities that they might not have had access to individually. Having several investors would make it less likely that the entity, or other members of the group containing the entity, would obtain benefits other than capital appreciation or investment income.

Alternatively, an investment entity may be formed by, or for, a **single investor that represents or supports the interests of a wider group of investors** (e.g. a pension fund, government investment fund or family trust).

There may also be times when the entity temporarily has a single investor. For example, an **investment entity may have only a single investor** when the entity:

(a) is within its **initial offering period**, which has not expired and the entity is actively identifying suitable investors;

(b) has not yet **identified suitable investors to replace ownership interests** that have been redeemed; or

(c) is in the process of **liquidation**

3.7.1.7 Unrelated investors

An investment entity has **several investors that are not related parties** of the entity or other members of the group containing the entity. Having unrelated investors would make it **less likely** that the entity, or other members of the group containing the entity, would **obtain benefits other than capital appreciation or investment income.**

However, an entity may still qualify as an investment entity even though its investors are related to the entity.

For example, an investment entity may set up a separate 'parallel' fund for a group of its employees (such as key management personnel) or other related party investor(s), which mirrors the investments of the entity's main investment fund. This 'parallel' fund may qualify as an investment entity even though all of its investors are related parties.

3.7.1.8 Ownership interests

An investment entity is typically, but is not required to be, a separate legal entity. Ownership interests in an investment entity are typically in the form of **equity or similar interests** (e.g. partnership interests), to which proportionate shares of the net assets of the investment entity are attributed. However, **having different classes of investors**, some of which have rights only to a specific investment or groups of investments or which have different proportionate shares of the net assets, **does not preclude an entity from being an investment entity**.

Example 6

An entity has issued two types of equity shares to its investors i.e. class A shares and class B shares. Holders of class A shares are entitled to receive 10% of the profits of the entity at the end of each year. After distribution of such amount, the balance amount is distributed proportionately between holders of class A shares and class B shares. Such method of distribution of profits to shareholders would not preclude the entity from being an investment entity if other conditions are satisfied.

In addition, an entity that has significant **ownership interests in the form of debt** that, in accordance with other applicable Ind AS, does not meet the definition of equity, may still qualify as an investment entity, **provided that the debt holders are exposed to variable** returns from changes in the fair value of the entity's net assets.

Example 7

An entity has issued compulsorily convertible bonds with fixed interest payments to the investors. Such bonds are convertible into variable numbers of equity shares and hence classified as financial liability in accordance with Ind AS 32 *'Financial Instruments: Presentation'*. The compulsorily convertible bonds expose the investors to variable returns because after conversion, the investors will have rights in the net assets of the entity which is dependent on the fair value of investments done by the entity.

3.7.2 Exemptions to investment entities

An investment entity **shall**

- **not consolidate its subsidiaries** or apply Ind AS 103 *'Business Combinations'* when it obtains control of another entity; **and**
- **measure an investment in a subsidiary at fair value through profit or loss** in accordance with Ind AS 109.

 Join us t.me/caborntofight

If an investment entity has a subsidiary **that is not itself an investment entity** and whose main purpose and activities are **providing services related** to the investment entity's **investment activities**, it shall **consolidate that subsidiary** and apply the requirements of Ind AS 103 to the acquisition of any such subsidiary. If the subsidiary that provides the investment-related services or activities is itself an investment entity then the investment entity parent shall measure that subsidiary at fair value through profit or loss.

A **parent of an investment entity shall consolidate** all entities that it controls, including those controlled through an investment entity subsidiary, unless the parent itself is an investment entity. This is explained in following diagram form:

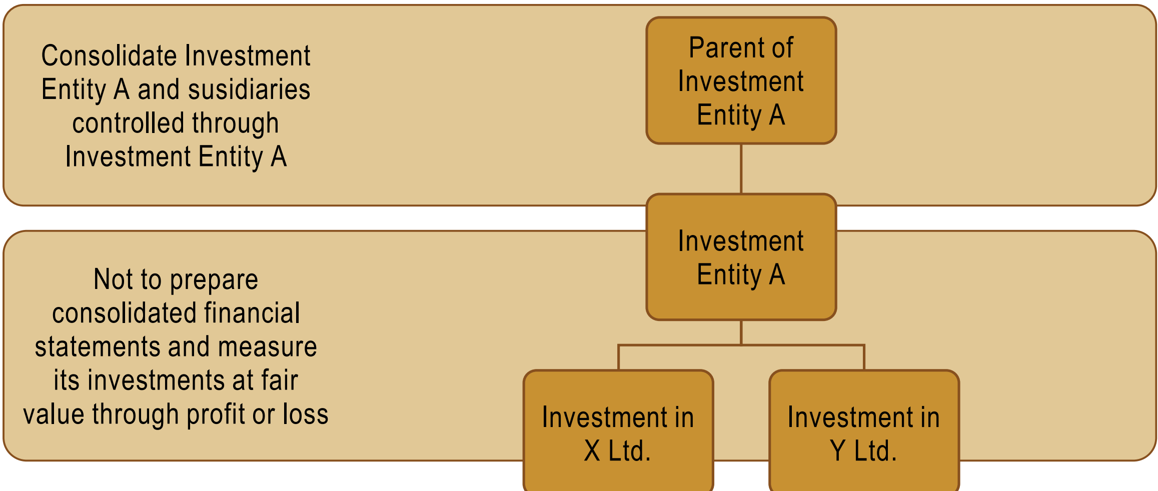


Illustration 23

HTF Ltd. was formed by T Ltd. to invest in technology start-up companies for capital appreciation. T Ltd. holds 70 percent interest in HTF Ltd. and controls HTF Ltd. The other 30 percent ownership interest in HTF Ltd. is owned by 10 unrelated investors. T Ltd. holds options to acquire investments held by HTF Ltd., at their fair value, which would be exercised if the technology developed by the investees would benefit the operations of T Ltd. No plans for exiting the investments have been identified by HTF Ltd. HTF Ltd. is managed by an investment adviser that acts as agent for the investors in HTF Ltd.

Determine whether HTF Ltd. is an investment entity or not.

Solution:

Even though HTF Ltd.'s business purpose is investing for capital appreciation and it provides investment management services to its investors, HTF Ltd. is not an investment entity because of the following arrangements and circumstances:

Merged By CA - Born To Fight

(a) T Ltd., the parent of HTF Ltd. holds options to acquire investments in investees held by HTF Ltd. if the assets developed by the investees would benefit the operations of T Ltd. This provides a benefit in addition to capital appreciation or investment income; and

(b) the investment plans of HTF Ltd. do not include exit strategies for its investments, which are equity investments. The options held by T Ltd. are not controlled by HTF Ltd. and do not constitute an exit strategy.

UNIT 4: CONSOLIDATION PROCEDURE FOR SUBSIDIARIES

4.1 OVERVIEW

The consolidated financial statement includes following:

- Consolidated balance sheet
- Consolidated statement of profit and loss
- Consolidated statement of changes in equity
- Consolidated cash flow statement
- Consolidated notes to the financial statements

When a company is required to prepare consolidated financial statements, the company shall mutatis mutandis follow the requirements of Division II of Schedule III to the Companies Act, 2013 as applicable to a company in the preparation of balance sheet, statement of changes in equity and statement of profit and loss. In addition, the consolidated financial statements shall disclose the information as per the requirements specified in the applicable Ind AS. In addition, the company shall disclose additional information as required by Ind AS 27 and Ind AS 112 (Refer Unit 8).

4.2 CONSOLIDATION PROCEDURE FOR SUBSIDIARIES

Consolidation of an investee shall begin **from the date the investor obtains control** of the investee and cease when the investor loses control of the investee.

Following are the key concepts relating to preparation of consolidated financial statements:

Join us t.me/caborntofight

- Calculation of goodwill / capital reserve and determination of non-controlling interest on the date of acquisition of control over a subsidiary
- Calculation of goodwill / capital reserve when the interest in subsidiary is acquired on different dates (i.e. step acquisition)
- How to account for control obtained over a subsidiary without transfer of consideration?
- Requirement to have uniform accounting policies
- How the income and expense of a subsidiary should be measured for while consolidating them in the parent's consolidated financial statements?
- How the potential voting rights held in subsidiary should be accounted?
- How to deal with different reporting periods of parent and subsidiary?
- Dividend from subsidiary: How to account for it and its impact on non-controlling interest?
- Requirement to eliminate intra-group transaction and elimination of unrealised profit / loss
- Allocating share in profit / loss to non-controlling interest and accounting of change in the proportion held by controlling and non-controlling interests
- Preparation of consolidated financial statements using all the above principles
- How to account for chain-holding under consolidation?

Each of the above concepts are explained in detail below. When a parent loses control over a subsidiary, it will stop consolidating that subsidiary. The principles of accounting in case of loss of control over a subsidiary are discussed in section 4.3 below.

4.2.1 Calculation of goodwill / capital reserve and determination of non-controlling interest on the date of acquisition of control over a subsidiary

The guidance related to calculation of goodwill / capital reserve on acquisition of a subsidiary is provided in **Ind AS 103** *'Business Combinations'*. A business combination is a transaction or other event in which an acquirer obtains control of one or more businesses.

Calculation of goodwill

An entity that acquires interest in a subsidiary shall recognise goodwill on the acquisition date. Goodwill is measured as the **excess of (a) over (b)** below:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

a) The aggregate of

   a. the consideration transferred measured in accordance with Ind AS 103, which generally requires acquisition-date fair value; and

   b. the amount of any non-controlling interest in the acquiree measured in accordance with Ind AS 103;

   c. in a business combination achieved in stages, the acquisition-date fair value of the acquirer's previously held equity interest in the acquiree

b) the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed measured in accordance with Ind AS 103. (Ind A S103 requires the net assets acquired to be measured at fair value except in case of a common control business combination transaction. Such transaction is explained in more detail in chapter 13).

Calculation of capital reserve

In extremely rare circumstances, an acquirer will make a bargain purchase in a business combination in which the amount in b) mentioned above exceeds the aggregate of the amounts specified in a) above. If that excess remains after applying certain requirements of paragraph 36 of Ind AS 103, then the acquirer shall recognise the resulting gain in other comprehensive income on the acquisition date and accumulate the same in equity as capital reserve. The gain shall be attributed to the acquirer. In all other cases, the excess of b) over a) above shall be recognised directly in equity as a capital reserve.

Measurement of non-controlling interest

Non-controlling interest is the equity **not attributable, directly or indirectly, to a parent**.

Non-controlling interest in the acquiree are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation.

For each business combination, the acquirer shall **measure at the acquisition date** components of non-controlling interest that give the holder ownership interest in the acquiree at either:

a) Fair value or

b) The present ownership instruments' proportionate share in the recognised amounts of the acquiree's identifiable net assets

Summary of calculation of goodwill / capital reserve

To summarise, following steps are involved in calculation of goodwill / capital reserve:

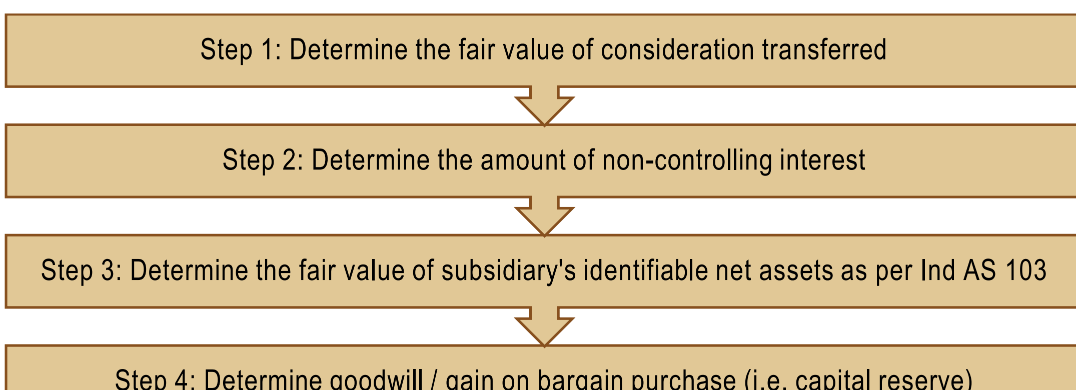

Illustration 1: Determination of goodwill

A Limited acquires 80% of B Limited by paying cash consideration of ₹ 120 crore. The fair value of non-controlling interest on the date of acquisition is ₹ 30 crore. The value of subsidiary's identifiable net assets as per Ind AS 103 is ₹ 130 crore. Determine the value of goodwill and pass the journal entry.

Solution:

The amount of non-controlling interest can be measured as per i) Fair value method or ii) Proportionate share method (i.e. proportionate share in the net identifiable assets of the acquiree). The value of goodwill will be different under both the methods. The goodwill is calculated as per both the methods below:

Fair value method	**₹ crore**
Fair value of consideration transferred	120
Fair value of non-controlling interest	30
	150
Value of subsidiary's identifiable net assets as per Ind AS 103	(130)
Goodwill	**20**
Proportionate share method	**₹ crore**
Fair value of consideration transferred	120
Proportional share of non-controlling interest in the net identifiable assets of acquiree (130 x 20%)	26
	146
Value of subsidiary's identifiable net assets as per Ind AS 103	(130)
Goodwill	**16**

Journal Entries

Illustration 2: Determination of goodwill

Ram Ltd. acquires 60% of Raja Ltd. by paying cash consideration of ₹ 750 lakh (including control premium). The fair value of non-controlling interest on the date of acquisition is ₹ 480 lakh. The value of subsidiary's identifiable net assets as per Ind AS 103 is ₹ 1,000 lakh. Determine the value of goodwill and pass the journal entry.

Solution:

The amount of non-controlling interest can be measures wither as per i) Fair value method or ii) Proportionate share method (i.e. proportionate share in the net identifiable assets of the acquiree). The value of goodwill will be different under both the methods. The goodwill is calculated as per both the methods below:

Fair value method	**₹ lakh**
Fair value of consideration transferred	750
Fair value of non-controlling interest	480
	1,230
Value of subsidiary's identifiable net assets as per Ind AS 103	(1,000)
Goodwill	**230**

Merged By CA - Born To Fight

Proportionate share method	₹ lakh
Fair value of consideration transferred	750
Proportional share of non-controlling interest in the net identifiable assets of acquiree (1,000 x 40%)	400
	1,150
Value of subsidiary's identifiable net assets as per Ind AS 103	(1,000)
Goodwill	**150**

Illustration 3: Determination of gain on bargain purchase

X Ltd. acquires 80% of Y Ltd. by paying cash consideration of ₹ 400 lakh. The fair value of non-controlling interest on the date of acquisition is ₹ 100 lakh. The value of subsidiary's identifiable net assets as per Ind AS 103 is ₹ 520 lakh. Determine the value of gain on bargain purchase and pass the journal entry.

Solution:

The amount of non-controlling interest can be measured as per i) Fair value method or ii) Proportionate share method (i.e. proportionate share in the net identifiable assets of the acquiree). The value of gain on bargain purchase will be different under both the methods. The gain is calculated as per both the methods below:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Fair value method	**₹ lakh**
Fair value of consideration transferred	400
Fair value of non-controlling interest	100
	500
Value of subsidiary's identifiable net assets as per Ind AS 103	(520)
Gain on bargain purchase	**(20)**
Proportionate share method	**₹ lakh**
Fair value of consideration transferred	400
Proportional share of non-controlling interest in the net identifiable assets of acquiree (520 x 20%)	104
	504
Value of subsidiary's identifiable net assets as per Ind AS 103	(520)
Gain on bargain purchase	**(16)**

Journal Entries

Fair value method		**₹ lakh**	
		Dr.	Cr.
Net identifiable assets	Dr.	520	
To Cash			400
To Gain on bargain purchase*			20
To Non-controlling interest			100

Proportionate share method		**₹ lakh**	
		Dr.	Cr.
Net identifiable assets	Dr.	520	
To Cash			400
To Gain on bargain purchase*			16
To Non-controlling interest			104

* Gain on bargain purchase is either recognised in OCI or is recognised directly in equity as a capital reserve.

*****

Illustration 4: Determination of goodwill when there is no non-controlling interest

M Ltd. acquires 100% of N Ltd. by paying cash consideration of ₹ 100 lakh. The value of subsidiary's identifiable net assets as per Ind AS 103 is ₹ 80 lakh. Determine the value of goodwill.

Solution:

The value of goodwill is calculated as follows:

Determination of goodwill	**₹ lakh**
Fair value of consideration transferred	100
Value of subsidiary's identifiable net assets as per Ind AS 103	(80)
Goodwill	**20**

*****

4.2.2 Calculation of goodwill / capital reserve when the interest in subsidiary is acquired on different dates (i.e. step acquisition)

An entity may be holding some equity interest in a subsidiary immediately before it obtained control over the subsidiary.

Example 1

On 1 April 20X1, A Ltd. Was holding 25% stake in B Ltd. On that date, A Ltd. Acquired further 40% stake in B Ltd. And thereby obtained control over B Ltd.

Such transaction is referred to as business combination achieved in stages or also referred to as step acquisition.

In a business combination achieved in stages, the acquirer shall **remeasure its previously held equity interest** in the acquiree at its acquisition-date fair value and recognise the resulting gain or loss, if any, in profit or loss or other comprehensive income, as appropriate.

A change from holding a non-controlling investment in an entity to obtaining control of that entity is a significant change in the nature of and economic circumstances surrounding that investment. That change warrants a change in the classification and measurement of that investment. Once it obtains control, the acquirer is no longer the owner of a non-controlling investment asset in the acquiree. The acquirer therefore ceases its accounting for an investment asset and begins reporting in its financial statements the underlying assets, liabilities and results of operations of the acquiree. In effect, the acquirer exchanges its status as an owner of an investment asset in an entity for a controlling financial interest in all of the underlying assets and liabilities of that entity (acquiree) and the right to direct how the acquiree and its management use those assets in its operations. In a business combination achieved in stages, the acquirer derecognises its investment asset in an entity in its consolidated financial statements when it achieves control.

© The Institute of Chartered Accountants of India

Thus, it is appropriate to recognise any resulting gain or loss in profit or loss at the acquisition date.

In prior reporting periods, the acquirer may have recognised changes in the value of its equity interest in the acquiree in other comprehensive income (refer Chapter 12 which contains guidance on accounting for investments in equity instruments which are measured at fair value through other comprehensive income). If so, the amount that was recognised in other comprehensive income shall be recognised on the same basis as would be required if the acquirer had disposed directly of the previously held equity interest. In other words, the gains or losses from changes in the fair value accumulated in other comprehensive income would never be reclassified to profit or loss but may be transferred into the retained earnings on 'deemed disposal' of the investment, which is consistent with the accounting in case of 'actual disposal' of such an investment.

Illustration 5: Step acquisition

RS Ltd. holds 30% stake in PQ Ltd. This investment in PQ Ltd. is accounted as an investment in associate in accordance with Ind AS 28 and the carrying value of such investment in ₹ 100 lakh. RS Ltd. purchases the remaining 70% stake for a cash consideration of ₹ 700 lakh. The fair value of previously held 30% stake is measured to be ₹ 300 lakh on the date of acquisition of 70% stake. The value of PQ Ltd.'s identifiable net assets as per Ind AS 103 on that date is ₹ 800 lakh. How should RS Ltd. account for the business combination?

Solution:

The amount of goodwill is calculated as follows:

Determination of goodwill	**₹ lakh**
Fair value of consideration transferred	700
Fair value of previously held equity interest	300
	1,000
Value of subsidiary's identifiable net assets as per Ind AS 103	(800)
Goodwill	**200**

RS Ltd. should record the difference between the fair value of previously held equity interest in the subsidiary and the carrying value of that interest in the profit or loss i.e. ₹ 200 lakh (300 – 100) should be recognised in profit or loss.

Journal entries

Fair value method		**₹ lakh**	
		Dr.	Cr.
Net identifiable assets	Dr.	800	

Goodwill Dr.	200	
To Cash		700
To Investment in associate		100
To Gain on fair valuation of previously held equity interest		200

*****

4.2.3 Control obtained over a subsidiary without the transfer of consideration

An acquirer sometimes obtains control of an acquiree without transferring consideration. Such circumstances include:

(a) The **acquiree repurchases** a sufficient number of its own shares for an existing investor (the acquirer) to obtain control.

(b) **Minority veto rights lapse** that previously kept the acquirer from controlling an acquiree in which the acquirer held the majority voting rights.

(c) The acquirer and acquiree agree to combine their businesses **by contract** alone. The acquirer transfers no consideration in exchange for control of an acquiree and holds no equity interests in the acquiree, either on the acquisition date or previously. Examples of business combinations achieved by contract alone include bringing two businesses together in a stapling arrangement or forming a dual listed corporation.

In a business combination achieved without the transfer of consideration, "acquisition-date fair value of the consideration transferred" in the formula for measurement of goodwill or gain on bargain purchase is substituted by "acquisition-date fair value of its interest in the acquiree". In other words, the acquirer shall remeasure its existing equity interest in the acquiree at its acquisition date fair value (and recognise the gain or loss on such remeasurement in profit or loss or other comprehensive income, as the case may be) and use that to compute goodwill or gain on bargain purchase.

In a business combination achieved by contract alone, the acquirer shall attribute to the owners of the acquiree (i.e. those holding equity interests) the amount of the acquiree's net assets recognised in accordance with Ind AS 103. In other words, the equity interests in the acquiree held by parties other than the acquirer are a non-controlling interest in the acquirer's post-combination financial statements even if the result is that all of the equity interests in the acquiree are attributed to the non-controlling interest.

Example 2

A Ltd. obtained control over B Ltd. by contract alone. There is no stake in B Ltd. held by A Ltd. So, while preparing the consolidated financial statements, A Ltd. will attribute 100% of the net assets of B Ltd. to the non-controlling interest.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

4.2.4 Uniform accounting policies

A parent shall prepare consolidated financial statements using uniform accounting policies for **like transactions and other events in similar circumstances**.

If a member of the group uses accounting policies other than those adopted in the consolidated financial statements for like transactions and events in similar circumstances, appropriate adjustments are made to that group member's financial statements in preparing the consolidated financial statements to ensure conformity with the group's accounting policies.

Example 3

A Ltd. (a company incorporated and registered in India) has a subsidiary B Inc. (a company incorporated and registered in United States). A Ltd. follows Ind AS for the preparation of its financial statements. However, B Inc. follows generally accepted accounting principles in United States (US GAAP). Hence, while using B Inc.'s financial statements for the purpose of preparing consolidated financial statements of A Ltd., appropriate adjustments should be made to B Inc.'s financial statements to convert its US GAAP financial statements to Ind AS financial statements.

Illustration 6: Uniform accounting policies

PQR Ltd. is the subsidiary company of MNC Ltd. In the individual financial statements prepared in accordance with Ind AS, PQR Ltd. has adopted Straight-line method (SLM) of depreciation and MNC Ltd. has adopted written-down value method (WDV) for depreciating its property, plant and equipment. As per Ind AS 110, Consolidated Financial Statements, a parent shall prepare consolidated financial statements using uniform accounting policies for like transactions and other events in similar circumstances.

How will these property, plant and equipment be depreciated in the consolidated financial statements of MNC Ltd. prepared as per Ind AS?

Solution:

As per paragraph 60 and 61 of Ind AS 16, 'Property, Plant and Equipment', a change in the method of depreciation shall be accounted for as a change in an accounting estimate as per Ind AS 8 *'Accounting Policies, Changes in Accounting Estimates and Errors'*.

Therefore, the selection of the method of depreciation is an accounting estimate and not an accounting policy.

The entity should select the method that most closely reflects the expected pattern of consumption of the future economic benefits embodied in the asset. That method should be applied consistently from period to period unless there is a change in the expected pattern of consumption of those future economic benefits in separate financial statements as well as consolidated financial statements.

Join us t.me/caborntofight

Therefore, there can be different methods of estimating depreciation for property, plant and equipment, if their expected pattern of consumption is different. The method once selected in the individual financial statements of the subsidiary should not be changed while preparing the consolidated financial statements.

Accordingly, in the given case, the property, plant and equipment of PQR Ltd. (subsidiary company) may be depreciated using straight line method and property, plant and equipment of parent company (MNC Ltd.) may be depreciated using written down value method, if such method closely reflects the expected pattern of consumption of future economic benefits embodied in the respective assets.

*****

Illustration 7: Uniform accounting policies

H Limited has a subsidiary, S Limited and an associate, A Limited. The three companies are engaged in different lines of business.

These companies are using the following cost formulas for their valuation in accordance with Ind AS 2 'Inventories'.

Name of the Company	***Cost formula used***
H Limited	*FIFO*
S Limited, A Limited	*Weighted average cost*

Whether H Limited is required to value inventories of S Limited and A Limited also using FIFO formula in preparing its consolidated financial statements?

Solution:

Paragraph 19 of Ind AS 110 states that a parent shall prepare consolidated financial statements using uniform accounting policies for like transactions and other events in similar circumstances.

Paragraph B87 of Ind AS 110 states that if a member of the group uses accounting policies other than those adopted in the consolidated financial statements for like transactions and events in similar circumstances, appropriate adjustments are made to that group member's financial statements in preparing the consolidated financial statements to ensure conformity with the group's accounting policies.

It may be noted that the above mentioned paragraphs require an entity to apply uniform accounting policies "for like transactions and events in similar circumstances". If any member of the group follows a different accounting policy for like transactions and events in similar circumstances, appropriate adjustments are to be made in preparing consolidated financial statements.

Join us t.me/caborntofight

Paragraph 5 of Ind AS 8 defines accounting policies as "the specific principles, bases, conventions, rules and practices applied by an entity in preparing and presenting financial statements."

Ind AS 2 requires inventories to be measured at the lower of cost and net realisable value.

Paragraph 25 of Ind AS 2 states that the cost of inventories shall be assigned by using FIFO or weighted average cost formula. An entity shall use the same cost formula for all inventories having a similar nature and use to the entity. For inventories with a different nature or use, different cost formulas may be justified.

Elaborating on the requirements of paragraph 25, paragraph 26 of Ind AS 2 illustrates that inventories used in one operating segment may have a use to the entity different from the same type of inventories used in another operating segment. However, a difference in geographical location of inventories (or in the respective tax rules), by itself, is not sufficient to justify the use of different cost formulas.

Paragraph 36(a) of Ind AS 2 requires disclosure of "the accounting policies adopted in measuring inventories, including the cost formula used". Thus, as per Ind AS 2, the cost formula applied in valuing inventories is also an accounting policy.

As mentioned earlier, as per Ind AS 2, different cost formulas may be justified for inventories of a different nature or use. Thus, if inventories of S Limited and A Limited differ in nature or use from inventories of H Limited, then use of cost formula (weighted average cost) different from that applied in respect of inventories of H Limited (FIFO) in consolidated financial statements may be justified. In other words, in such a case, no adjustment needs to be made to align the cost formula applied by S Limited and A Limited to cost formula applied by H Limited.

*****

4.2.5 Measurement of income and expense of subsidiary

An entity includes the income and expenses of a subsidiary in the consolidated financial statements **from the date it gains control** until the date when the entity ceases to control the subsidiary.

Income and expenses of the subsidiary are based on the amounts of the assets and liabilities recognised in the consolidated financial statements at the acquisition date.

Example 4

On the date of acquisition of control by A Ltd over B Ltd., the fair value of B Ltd.'s property, plant and equipment were ₹ 100 lakh and such assets are recorded in the consolidated financial statements of A Ltd. at that value. However, the carrying value of such assets in the books of B Ltd. on the date of acquisition were ₹ 80 lakh. Hence, for the purpose consolidated financial statements, the depreciation expense should be computed based on ₹ 100 lakh and not ₹ 80 lakh.

4.2.6 Accounting of potential voting rights held in subsidiary

When potential voting rights, or other derivatives containing potential voting rights, exist, the proportion of profit or loss and changes in equity allocated to the parent and non-controlling interests in preparing consolidated financial statements is determined solely on the basis of existing ownership interests and **does not reflect the possible exercise or conversion of potential voting rights** and other derivatives. Such instruments with potential voting rights are **accounted as per Ind AS 109.**

However, there can be some cases where an entity has, in substance, an existing ownership interest as a result of a transaction that currently gives the entity access to the returns associated with an ownership interest. In such circumstances, the proportion allocated to the parent and non-controlling interests in preparing consolidated financial statements is determined by taking into account the eventual exercise of those potential voting rights and other derivatives that currently give the entity access to the returns. Accordingly, Ind AS 109 is not applied to instruments containing potential voting rights in such circumstances.

- This can be the situation where, **for example**, an investor currently holds 60% of the voting power of an investee (and hence controls the investee) has a purchase option to acquire additional 20% voting power in the investee and the terms of the contract provides that the investor will also get the returns on the underlying shares even for the period prior to the date of actual exercise of the option.

4.2.7 Reporting period of parent and subsidiary

The financial statements of the parent and its subsidiaries used in the preparation of the consolidated financial statements shall have the **same reporting date**.

When the end of the reporting period of the parent is different from that of a subsidiary (e.g. parent's financial year ends on 31 March 20X1 but the subsidiary's financial year ends on 31 December 20X0), the subsidiary prepares, **for consolidation purposes**, additional financial information as of the same date as the financial statements of the parent to enable the parent to consolidate the financial information of the subsidiary, unless it is impracticable to do so.

If it is impracticable to do so, the parent shall consolidate the financial information of the subsidiary using the **most recent financial statements** of the subsidiary adjusted for the **effects of significant transactions or events** that occur between the date of those financial statements and the date of the consolidated financial statements. In any case, the difference between the date of the subsidiary's financial statements and that of the consolidated financial statements **shall be no more than three months**.

The length of the reporting periods and any difference between the dates of the financial statements shall be the same from period to period. This means that if the financial statements of a subsidiary used for consolidation in previous periods were ending on different dates than that

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

of the parent whereas the financial statements used for current period end on the same date as that of the parent then the comparatives for previous period should be restated to have comparison of equivalent periods.

Illustration 8: Different reporting dates

How should assets and liabilities be classified into current or non-current in consolidated financial statements when parent and subsidiary have different reporting dates?

Solution:

Paragraphs B92 and B93 of Ind AS 110 require subsidiaries with reporting period end different from parent, to provide additional information or details of significant transactions or events if it is impracticable to provide additional information to enable the parent entity to consolidate such financial information at group's reporting period end.

The appropriate classification of the assets and liabilities as current or non-current in the consolidated financial statements has to be determined by reference to the reporting period end of the group. Accordingly, when a subsidiary's financial statements are for a different reporting period end, it is necessary to review the subsidiary's balance sheet to ensure that items are correctly classified as current or non-current as at the end of the group's reporting period.

For example, a subsidiary with the financial year end of 31st December, 20X1 has a payable outstanding that is due for payment on 1st January, 20X3, and has accordingly classified it as non-current in its balance sheet. The financial year end of the parent's consolidated financial statements is 31st March 20X2. Due to the time lag, the subsidiary's payable falls due within 12 months from the end of the parent's reporting period.

Accordingly, in this case, the payable should be classified as a current liability in the consolidated financial statements of the parent because the amount is repayable within nine months of the end of the parent's reporting period.

*****

Illustration 9: Different reporting dates

A Limited, an Indian Company has a foreign subsidiary, B Inc. Subsidiary B Inc. has taken a long-term loan from a foreign bank, which is repayable after the year 20X9. However, during the year ended 31st March, 20X2, it breached one of the conditions of the loan, as a consequence of which the loan became repayable on demand on the reporting date. Subsequent to year end but before the approval of the financial statements, B Inc. rectified the breach and the bank agreed not to demand repayment and to let the loan run for its remaining period to maturity as per the original loan terms. While preparing its standalone financial statements as per IFRS, B Inc. has classified this loan as a current liability in accordance with IAS 1 'Presentation of Financial Statements'.

Whether A limited is required to classify such loan as current while preparing its consolidated financial statement under Ind AS?

Solution:

As per paragraph 74 of Ind AS 1, where there is a breach of a material provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand on the reporting date, the entity does not classify the liability as current, if the lender agreed, after the reporting period and before the approval of the financial statements for issue, not to demand payment as a consequence of the breach.

The above position under Ind AS 1 differs from the corresponding position under IAS 1. As per paragraph 74 of IAS 1, when an entity breaches a provision of a long-term loan arrangement on or before the end of the reporting period with the effect that the liability becomes payable on demand, it classifies the liability as current, even if the lender agreed, after the reporting period and before the recognized on of the financial statements for issue, not to demand payment as a consequence of the breach. An entity classifies the liability as current because, at the end of the reporting period, it does not have an unconditional right to defer its settlement for at least twelve months after that date.

Accordingly, the loan liability recognized as current liability by B Inc. in its standalone financial statements prepared as per IFRS, should be aligned as per Ind AS in the consolidated financial statements of A Limited and should be classified as non-current in the consolidated financial statements of A Limited in accordance with Ind AS 1.

*****

4.2.8 Accounting of dividend from subsidiary and its impact on non-controlling interest

As per para 5.7.1A of Ind AS 109, dividends are recognized in profit or loss by an investor entity only when:

- The entity's **right to receive** payment of the dividend is established,
- It is **probable** that the economic benefits associated with the dividend will flow to the entity, and
- the amount of the dividend can be **measured reliably**.

As per para 12 of Ind AS 27, an entity shall recognize a dividend from a subsidiary in its separate financial statements when its right to receive the dividend is **established**.

As per the Companies Act, 2013, the entity's right to receive the dividend is established when it is declared by the shareholders in the annual general meeting of the company.

An investor should recognise a dividend from a subsidiary, a joint venture or an associate as income in its separate financial statements. As per Ind AS 36, declaration of dividend by a subsidiary, associate or joint venture coupled with a few more evidence is an indication of impairment of investment.

Illustration 10: Dividend proposed by subsidiary

XYZ Ltd. purchased 80% shares of ABC Ltd. on 1st April, 20X1 for ₹ 1,40,000. The issued capital of ABC Ltd., on 1st April, 20X1 was ₹ 1,00,000 and the balance in the Statement of Profit and Loss was ₹ 60,000.

For the year ending on 31st March, 20X2 ABC Ltd. has earned a profit of ₹ 20,000 and later on it declared and paid a dividend of ₹ 30,000.

Assume, the fair value of non-controlling interest is same as the fair value on a per-share basis of the purchased interest#. All net assets are identifiable net assets, there are no non-identifiable assets. The fair value of identifiable net assets is ₹ 1,50,000.

Show by an entry how the dividend should be recorded in the books of XYZ Ltd. Whenever it is received after approval in the ensuing annual general meeting.

What is the amount of non-controlling interest as on 1st April, 20X1 (using Fair value Method) and 31st March, 20X2? Also pass a journal entry on the acquisition date.

(#This assumption is only for illustration purpose. However, in practical scenarios the fair value of NCI will be different than the fair value of the controlling interest.)

Solution:

XYZ Ltd.'s share of dividend ₹ 30,000 x 80% = ₹ 24,000.

		₹	
		Dr.	Cr.
Bank	Dr.	24,000	
To Profit & Loss A/c			24,000

Calculation of Non- controlling interest and Journal Entry

NCI on 1st April 20X1 = 20% of the fair value on a pre-share basis of the purchased interest.

= 20% x ₹ 1,75,000 (W.N.1) = ₹ 35,000

The journal entry recorded on the acquisition date for the 80% interest acquired is as follows:

		₹	
		Dr.	Cr.
Identifiable net assets	Dr.	1,50,000	
Goodwill (Balancing Figure)	Dr.	25,000	
To Cash			1,40,000
To NCI			35,000

Working Note 1

Fair value on a per-share basis of the purchased interest / Fair Value of Identifiable net assets

= consideration transferred x 100/80

= 1,40,000 x 100/80 = ₹ 1,75,000

NCI on 31st March 20X2 = NCI on 31st March 20X1 + Share of NCI in Profits of 20X1- 20X2

= 35,000 + (20,000 X 20%) = ₹ 39,000

Note: Dividend as per Ind AS will be recognized only when approval by the shareholder is received in the annual general meeting.

*****

Illustration 11: Dividend proposed by subsidiary

From the facts given in the above illustration, calculate the amount of non-controlling interest as on 1st April, 20X1 (Using NCI's proportionate share method) and 31st March, 20X2.

Also pass a journal entry on the acquisition date.

Solution:

NCI on 1st April 20X1 = 20% of the fair value on identifiable assets.

= 20% x ₹ 1,50,000 = ₹ 30,000

The journal entry recorded on the acquisition date for the 80% interest acquired is as follows:

		₹	
		Dr.	Cr.
Identifiable net assets	Dr.	1,50,000	
Goodwill (Balancing Figure)	Dr.	20,000	
To Cash			1,40,000
To NCI			30,000

NCI on 31st March 20X2 = NCI on 31st March 20X1 + Share of NCI in Profits of 20X1- 20X2

= 30,000 + (20,000 X 20%) = ₹ 34,000

Note: Dividend as per Ind AS will be recognized only when approval by the shareholder is received in the annual general meeting.

*****

Illustration 12: Dividend proposed by subsidiary

The facts are same as in the above illustration except that the fair value of net identifiable asset is ₹ 1,60,000. Calculate NCI and Pass Journal Entry on the acquisition date

Note: Use fair value method for 31st March 20X1.

Solution:

Calculation of Non- controlling interest and Journal Entry

NCI on 1st April 20X1 = 20% of the fair value on a pre-share basis of the purchased interest.

= 20% x ₹ 1,75,000 (W.N.1) = ₹ 35,000

The journal entry recorded on the acquisition date for the 80% interest acquired is as follows:

		₹	
		Dr.	Cr.
Identifiable net assets	Dr.	1,60,000	
Goodwill (Balancing Figure)	Dr.	15,000	
To Cash			1,40,000
To NCI			35,000

Working Note

Fair value on a per-share basis of the purchased interest / Fair Value of Identifiable net assets

= consideration transferred x 100/80

= 1,40,000 x 100/80 = ₹ 1,75,000

NCI on 31st March 20X2 = NCI on 31st March 20X1 + Share of NCI in Profits of 20X1- 20X2

= 35,000 + (20,000 x 20%) = ₹ 39,000

Note: Dividend as per Ind AS will be recognized only when approval by the shareholder is received.

*****

Illustration 13: Dividend proposed by subsidiary

The facts are same as in the above illustration except that the fair value of net identifiable asset is ₹ 1,60,000. Calculate NCI and Pass Journal Entry on the acquisition date. Use NCI's proportionate share method for 31st March 20X1.

Merged By CA - Born To Fight

Solution:

NCI on 1st April 20X1 = 20% of the fair value on identifiable assets.

= 20% x ₹ 1,60,000 = ₹ 32,000

The journal entry recorded on the acquisition date for the 80% interest acquired is as follows:

		₹	
		Dr.	Cr.
Identifiable net assets	Dr.	1,60,000	
Goodwill (Balancing Figure)	Dr.	12,000	
To Cash			1,40,000
To NCI			32,000

NCI on 31st March 20X2 = NCI on 31st March 20X1 + Share of NCI in Profits of 20X1- 20X2

= 32,000 + (20,000 X 20%) = ₹ 36,000

Note: Dividend as per Ind AS will be recognized only when approval by the shareholder is received.

*****

4.2.9 Elimination of intra-group transactions

In order to present financial statements for the group in a consolidated format, the effect of transactions between group entities should be eliminated. Intra – group balances and intra – group transactions and resulting unrealized profits should be eliminated in full. Unrealized losses resulting from intra – group transactions should also be eliminated unless cost cannot be recovered.

Liabilities due to one group entity by another will be set off against the corresponding asset in the other group entity's financial statements; sales made by one group entity to another should be excluded from turnover and from purchase (or related head) or the appropriate expense heading in the consolidated statement of profit and loss.

To the extent that the buying entity has further sold the goods in question to a third party, the eliminations to sales and cost of sales are all that is required, and no adjustments to consolidated profit or loss for the period, or to net assets, are needed. However, to the extent that the goods in question are still on hand at year end, they may be carried at an amount that is in excess of cost to the group and the amount of the intra-group profit must be eliminated, and assets are reduced to cost to the group.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

For transactions between group entities, unrealized profits resulting from intra-group transactions that are included in the carrying amount of assets, such as inventories and Property, Plant and Equipment, Intangible Assets and Investment Property, are eliminated in full. The requirement to eliminate such profits in full applies to the transactions of all subsidiaries that are consolidated – even those in which the group's interest is less than 100%.

4.2.9.1 Unrealised profit on inventories

Where a group entity sells goods to another, the selling entity, as a separate legal entity, records profits made on those sales. If these goods are still held in inventory by the buying entity at the year end, however, the profit recorded by the selling entity, when viewed from the standpoint of the group as a whole, has not yet been earned, and will not be earned until the goods are eventually sold outside the group. On consolidation, the unrealized profit on closing inventories will be eliminated from the group's profit, and the closing inventories of the group will be recorded at cost to the group.

4.2.9.2 Unrealised profit on transfer of non-current assets

Similar to the treatment described above for unrealized profits in inventories, unrealized inter-company profits arising from intra-group transfers of Property, Plant and Equipment, Intangible Assets and Investment Property are also eliminated from the consolidated financial statements.

4.2.9.3 Unrealised losses

Unrealised losses resulting from intra-group transactions that are deducted in arriving at the carrying amount of assets are also eliminated **unless cost cannot be recovered**.

Illustration 14: Elimination of intra-group profit on sale of assets by a subsidiary to its parent

A parent owns 60% of a subsidiary. The subsidiary sells some inventory to the parent for ₹ 35,000 and makes a profit of ₹ 15,000 on the sale. The inventory is in the parent's balance sheet at the year end. Examine the treatment of intra-group transaction and pass the necessary journal entry.

Solution:

The parent must eliminate 100% of the unrealized profit on consolidation. The inventory will, therefore, be carried in the group's balance sheet at ₹ 20,000 (₹ 35,000 - ₹ 15,000). The consolidated income statement will show a corresponding reduction in profit of ₹ 15,000.

		₹' 000	
		Dr.	Cr.
Consolidated revenue	Dr.	35	
To Cost of sales			20
To Inventory			15

The reduction of group profit of ₹ 15,000 is allocated between the parent company and non-controlling interest in the ratio of their interests 60% and 40%.

*****

Illustration 15: Elimination of intra-group profit on sale of assets by a parent to its subsidiary

In the above illustration, assume that it is the parent that makes the sale. The parent owns 60% of a subsidiary. The parent sells some inventory to the subsidiary for ₹ 35,000 and makes a profit of ₹ 15,000. On the sale the inventory is in the subsidiary's balance sheet at the year end. Examine the treatment of intra-group transaction and pass the necessary journal entry.

Solution:

The parent must eliminate 100% of the unrealized profit on consolidation. The inventory will, therefore, be carried in the group's balance sheet at ₹ 20,000 (₹ 35,000 - ₹ 15,000). The consolidated income statement will show a corresponding reduction in profit of ₹ 15,000.

The double entry on consolidation is as follows:

		₹' 000	
		Dr.	Cr.
Consolidated revenue	Dr.	35	
To Cost of sales			20
To Inventory			15

In this case, since it is the parent that has made the sale, the reduction in profit of ₹ 15,000 is allocated entirely to the parent company.

*****

Illustration 16: Inventories of subsidiary out of purchases from the parent

A Ltd, a parent company sold goods costing ₹ 200 lakh to its 80% subsidiary B Ltd. at ₹ 240 lakh. 50% of these goods are lying at its stock. B Ltd. has measured this inventory at cost i.e. at ₹ 120 lakh. Show the necessary adjustment in the consolidated financial statements (CFS). Assume 30% tax rate.

Solution:

A Ltd. shall reduce the inventories of ₹ 120 lakh of B Ltd., by ₹ 20 lakh in CFS. This will increase expenses and reduce consolidated profit by ₹ 20 lakh. It shall also create deferred tax asset of ₹ 6 lakh since accounting base of inventories (₹ 100 lakh) is lower than its tax base (₹ 120 lakh).

*****

Illustration 17: Inventories of parent out of purchases from the subsidiary

Ram Ltd., a parent company purchased goods costing ₹ 100 lakh from its 80% subsidiary Shyam Ltd. at ₹ 120 lakh. 50% of these goods are lying at the godown. Ram Ltd. has measured this inventory at cost i.e. at ₹ 60 lakh. Show the necessary adjustment in the consolidated financial statements (CFS). Assume 30% tax rate.

Solution:

Ram Ltd. shall reduce the inventories of ₹ 60 lakh of Shyam Ltd., by ₹ 10 lakh in CFS. This will increase expenses and reduce consolidated profit by ₹ 10 lakh. It shall also create deferred tax asset of ₹ 3 lakh since accounting base of inventories (₹ 50 lakh) is lower than its tax base (₹ 60 lakh).

*****

Illustration 18: Property, plant and equipment (PPE) sold by parent to subsidiary

A Ltd. (which is involved in the business of selling capital equipment) a parent company sold a capital equipment costing ₹ 100 lakh to its 80% subsidiary B Ltd. at ₹ 120 lakh. The capital equipment is recorded as PPE by B Ltd. The useful life of the PPE on the date of transfer was 10 years. Show the necessary adjustment in the consolidated financial statements (CFS).

Solution:

A Ltd. shall reduce the value of PPE of ₹ 120 lakh of B Ltd., by ₹ 20 lakh in CFS. This will increase expenses and reduce consolidated profit by ₹ 20 lakh. Further, A Ltd. should also reduce the depreciation charge of B Ltd. to the extent of value of PPE reduced as above. Hence, A Ltd. should reduce the depreciation by ₹ 2 lakh (₹ 20 lakh ÷ 10 years). Further, the sales and cost of goods sold recorded by parent A Ltd. shall also be eliminated.

The double entry on consolidation is as follows:

		₹' lakh	
		Dr.	Cr.
Consolidated revenue	Dr.	120	
To Cost of sales			100
To PPE			18
To Depreciation			2

*****

4.2.10 Allocating share in profit / loss to non-controlling interest and change in the proportion held by controlling and non-controlling interest

A parent shall present non-controlling interests in the consolidated balance sheet **within equity**, **separately from the equity of the owners of the parent**.

4.2.10.1 Allocating share in profit / loss to non-controlling interests

An entity shall attribute the profit or loss and each component of other comprehensive income to the owners of the parent and to the non-controlling interests. The entity shall also attribute total comprehensive income to the owners of the parent and to the non-controlling interests **even if this results in the non-controlling interests having a deficit balance**.

Illustration 19: Attribution of profit / loss to non-controlling interest

A Ltd. acquired 70% equity shares of B Ltd. on 1.4.20X1 at cost of ₹ 10,00,000 when B Ltd. had an equity share capital of ₹ 10,00,000 and other equity of ₹ 80,000. In the four consecutive years, B Ltd. fared badly and suffered losses of ₹ 2,50,000, ₹ 4,00,000, ₹ 5,00,000 and ₹ 1,20,000 respectively. Thereafter in 20X5-20X6, B Ltd. experienced turnaround and registered an annual profit of ₹ 50,000. In the next two years i.e. 20X6-20X7 and 20X7-20X8, B Ltd. recorded annual profits of ₹ 1,00,000, and ₹ 1,50,000 respectively. Show the non-controlling interests and goodwill at the end of each year for the purpose of consolidation. Assume that the assets are at fair value. Ignore impairment of goodwill.

Solution:

₹

Year	Profit / (Loss)	Non-controlling interest (30%)	Additional consolidated P&L (Dr.) / Cr.	Goodwill
At the time of acquisition in 20X1		3,24,000 (W.N.)		2,44,000(W.N.)
20X1-20X2	(2,50,000)	(75,000)	(1,75,000)	2,44,000
		2,49,000		
20X2-20X3	(4,00,000)	(1,20,000)	(2,80,000)	2,44,000
		1,29,000		
20X3-20X4	(5,00,00)	(1,50,000)	(3,50,000)	2,44,000
		(21,000)		
20X4-20X5	(1,20,000)	(36,000)	(84,000)	2,44,000
		(57,000)		

Join us t.me/caborntofight

20X5-20X6	50,000	15,000	35,000	2,44,000
		(42,000)		
20X6-20X7	1,00,000	30,000	70,000	2,44,000
		(12,000)		
20X7-20X8	1,50,000	45,000	1,05,000	2,44,000
		33,000		

Working note:

Calculation of non-controlling interest:	**₹**
Share capital	10,00,000
Other equity	80,000
Total	10,80,000
NCI (30% x 10,80,000)	3,24,000

NCI is measured at NCI's proportionate share of the acquiree's identifiable net assets. (Considering the carrying amount of share capital & other equity to be fair value)

Calculation of Goodwill:	**₹**
Consideration	10,00,000
Non-controlling interest	3,24,000
Less: Net Assets	(10,80,000)
Goodwill	2,44,000

*****

Illustration 20: Non-controlling interest and goodwill

From the following data, determine in each case:

1) *Non-controlling interest at the date of acquisition (using proportionate share method) and at the date of consolidation*

2) *Goodwill or Gain on bargain purchase.*

3) *Amount of holding company's share of profit in the Consolidated Balance Sheet assuming holding company's own retained earnings to be ₹ 2,00,000 in each case*

Merged By CA - Born To Fight

Case	Subsidiary Company	% of shares owned	Cost	Date of Acquisition 1.04.20X1		Consolidation date 31.03.20X2	
				Share Capital [A]	Retained earnings [B]	Share Capital [C]	Retained earnings [D]
Case 1	A	90%	1,40,000	1,00,000	50,000	1,00,000	70,000
Case 2	B	85%	1,04,000	1,00,000	30,000	1,00,000	20,000
Case 3	C	80%	56,000	50,000	20,000	50,000	20,000
Case 4	D	100%	1,00,000	50,000	40,000	50,000	56,000

The company has adopted an accounting policy to measure Non-controlling interest at NCI's proportionate share of the acquiree's identifiable net assets. It may be assumed that the fair value of acquiree's net identifiable assets is equal to their book values.

Solution:

(1) Non-controlling Interest = the equity in a subsidiary not attributable, directly or indirectly, to a parent. Equity is the residual interest in the assets of an entity after deducting all its liabilities i.e. in this given case Share Capital + Balance in Statement of Profit & Loss (Assuming it to be the net aggregate value of identifiable assets in accordance with Ind AS)

	% shares owned by NCI [E]	Non-controlling interest as at the date of acquisition [E] X [A + B]	Non-controlling interest as at the date of consolidation [E] X [C + D]
Case 1 [100-90]	10%	15,000	17,000
Case 2 [100-85]	15%	19,500	18,000
Case 3 [100-80]	20%	14,000	14,000
Case 4 [100-100]	Nil	Nil	Nil

Join us t.me/caborntofight

(3) Calculation of Goodwill or Gain on bargain purchase

	Consideration [G]	Non-controlling interest [H]	Net Identifiable assets [A] + [B] = [I]	Goodwill [G] + [H] – [I]	Gain on bargain Purchase [I] – [G] – [H]
Case 1	1,40,000	15,000	1,50,000	5,000	-
Case 2	1,04,000	19,500	1,30,000	-	6,500
Case 3	56,000	14,000	70,000	Nil	Nil
Case 4	1,00,000	0	90,000	10,000	-

(4) On 31.03.20X2 in each case the following amount shall be added or deducted from the balance of holding Co.'s Retained earnings.

	% Share Holding [K]	Retained earnings as on 31.03.20X1 [L]	Retained earnings as on consolidation Date [M]	Retained earnings post-acquisition [N] = [M] – [L]	Amount to be added/(deducted) from holding's Retained earnings [O] = [K] X [N]
1	90%	50,000	70,000	20,000	18,000
2	85%	30,000	20,000	(10,000)	(8,500)
3	80%	20,000	20,000	Nil	Nil
4	100%	40,000	56,000	16,000	16,000

*****

If a subsidiary has outstanding cumulative preference shares that are classified as equity and are held by non-controlling interests, the entity shall compute its share of profit or loss after adjusting for the dividends on such shares, whether or not such dividends have been declared.

Example 5

R Ltd. holds 80% stake on Y Ltd. Y Ltd. has also issued 10% cumulative preference shares worth ₹ 10,00,000 to the non-controlling interest. During the year, Y Ltd. earned profit of ₹ 5,00,000. Y Ltd. has not declared any dividend on cumulative preference share for current year. Ignore requirements of irredeemable preference shares.

In such case, the profit attributable to R Ltd. for current year would be as follows:

	₹
Total profit of Y Ltd.	5,00,000
Dividend on preference shares (10,00,000 x 10%)	(1,00,000)
Net profit	4,00,000
Profit attributable to R Ltd. (4,00,000 x 80%)	**3,20,000**

4.2.10.2 Change in the proportion held by controlling and non-controlling interests

A parent's ownership interest may change without a loss of control, for example, in following situations:

- Parent buys shares from non-controlling interest (say, increase in stake from 60% to 70%)
- Parent sells shares to non-controlling interest (say, decrease in stake from 70% to 60%)
- Subsidiary issues new shares to non-controlling interest in a capital raising exercise resulting in dilution in stake of parent

Changes in a parent's ownership interest in a subsidiary that do not result in the parent losing control of the subsidiary are **equity transactions** (i.e. transactions with owners in their capacity as owners).

Example 6

M Ltd. holds 70% stake in N Ltd. Now if M Ltd. purchases additional 10% stake in N Ltd. or sells 10% of its existing stake (i.e. without losing control) then it is an equity transaction.

When the proportion of the equity held by non-controlling interests changes, an entity shall adjust the carrying amounts of the controlling and non-controlling interests to reflect the changes in their relative interests in the subsidiary. The entity shall recognise **directly in equity** any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received, and attribute it to the owners of the parent.

Further, it must be noted that due to such changes in controlling and non-controlling interests, no changes are made to subsidiary's assets (including goodwill) and liabilities. It is again emphasized that no gain or loss is recognized in such transactions.

Illustration 21: Sale of 20% interest in a wholly- owned subsidiary

Entity P sells a 20% interest in a wholly owned subsidiary to outside investors for ₹ 100 lakh in cash. The carrying value of the subsidiary's net assets is ₹ 300 lakh, including goodwill of ₹ 65 lakh from the subsidiary's initial acquisition.

Pass journal entries to record the transaction.

Solution:

The accounting entry in the consolidated financial statements recorded on the disposition date for the 20% interest sold as follows:

		₹ lakh	
		Dr.	Cr.
Cash	Dr.	100	
To Non-controlling interest (20% x 300 lakh)			60
To Other Equity (Gain on sale of interest in subsidiary)			40

As per para B96 of Ind AS 110, where proportion of the equity of NCI changes, then group shall adjust controlling and non-controlling interest and any difference between amount by which NCI (60 lakh) is adjusted and fair value of consideration received (100 lakh) to be attributed to parent in other equity ie. 40 lakh.

*****

Illustration 22: Acquisition of additional stake in a subsidiary

Entity A acquired 60% of entity B two years ago for ₹ 6,000. At that time, entity B's fair value was ₹ 10,000. It had net assets with a fair value of ₹ 6,000 (which is assumed same as book value). Goodwill of ₹ 2,400 was recorded (being ₹ 6,000 – (60% x ₹ 6,000). On 1 October 20X0, entity A acquires a further 20% interest in entity B, taking its holding to 80%. At that time the fair value of entity B is ₹ 20,000 and entity A pays ₹ 4,000 for the 20% interest. At the time of the purchase the fair value of entity B's net assets is ₹ 12,000 and the carrying amount of the non- controlling interest is ₹ 4,000.

Pass journal entries to record the transaction.

Solution:

The accounting entry recorded for the purpose of the non- controlling interest is as follows:

		₹	
		Dr.	Cr.
Non-controlling interest (4,000 ÷ 40 x 20)	Dr.	2,000	
Other Equity (Loss on acquisition of interest in subsidiary)	Dr.	2,000	
To Cash			4,000

As per para B96 of Ind AS 110, where proportion of the equity of NCI changes, then group shall adjust controlling and non-controlling interest and any difference between amount by which NCI (₹ 2,000) is adjusted and fair value of consideration received (₹ 4,000) to be attributed to parent in other equity i.e. ₹ 2,000.

Join us t.me/caborntofight

Note: This illustration mentions two types of fair values:

- Fair value of Entity B, and
- Fair value of net assets of Entity B

It should be borne in mind that the two fair values are different concepts. The former is used only for the purpose of determining the consideration to be paid for purchase of equity interests. It can be seen that for the initial stake purchase, Entity A paid 60% of the "fair value of Entity B" i.e. 60% of ₹ 10,000 = ₹ 6,000. Further, for the second purchase transaction, Entity A paid 20% of the "fair value of Entity B" i.e. 20% of ₹ 20,000 = ₹ 4,000.

The latter i.e. fair value of net assets of Entity B is used for the purpose of accounting. It can be seen that the goodwill arising on acquisition of Entity B is determined as difference between consideration paid i.e. ₹ 6,000 and Entity A's share in fair value of net assets of Entity B on date of acquisition i.e. 60% of ₹ 6,000 = ₹ 6,000 minus ₹ 3,600 = ₹ 2,400. The fair value of net assets after the date of acquisition (i.e. ₹ 12,000 in this illustration) is not relevant for accounting purposes.

*****

Illustration 23: Acquisition of additional stake in a subsidiary

A Ltd. acquired 10% additional shares of its 70% subsidiary. The following relevant information is available in respect of the change in non-controlling interest on the basis of Balance Sheet finalized as at 1.4.20X0:

	₹ in thousand
Separate financial statements	*As at 31.3.20X0*
Investment in subsidiary (70% interest) – at cost	*14,000*
Purchase price for additional 10% interest	*2,600*
Consolidated financial statements	
Non-controlling interests (30%)	*6,600*
Consolidated profit & loss account balance	*2,000*
Goodwill	*600*

The reporting date of the subsidiary and the parent is 31 March 20X0. Prepare note showing adjustment for change of non-controlling interest. Should goodwill be adjusted for the change?

Join us t.me/caborntofight

Solution:

The following accounting entry is passed:

		₹ '000	
		Dr.	Cr.
Non-controlling interest (6,600 ÷ 30 x 10)	Dr.	2,200	
Other Equity (Loss on acquisition of interest in subsidiary)	Dr.	400	
To Cash			2,600

As per para B96 of Ind AS 110, where proportion of the equity of NCI changes, then group shall adjust controlling and non-controlling interest and any difference between amount by which NCI (₹ 22,00,000) is adjusted and fair value of consideration received (₹ 26,00,000) to be attributed to parent in other equity i.e. ₹ 4,00,000.

Consolidated goodwill is not adjusted.

*****

Illustration 24: Acquisition of additional stake in a subsidiary

A Ltd. acquired 70% shares of B Ltd. on 1.4.20X0 when the fair value of net assets of B Ltd. was ₹ 200 lakh. During 20X0-20X1, B Ltd. made profit of ₹ 100 lakh. Individual and consolidated balance sheets as at 31.3.20X1 are as follows: ***₹ lakh***

	A	B	Group
Assets			
Goodwill			10
PPE	627	200	827
Financial assets:			
Investments	150		
Cash	200	30	230
Other current assets	23	70	93
	1,000	**300**	**1160**
Equity and liability			
Share capital	200	100	200
Other equity	800	200	870
Non-controlling interest			90
	1,000	**300**	**1160**

A Ltd. acquired another 10% stake in B Ltd. on 1.4.20X1 at ₹ 32 lakh. The proportionate carrying amount of the non-controlling interest is ₹ 30 lakh. Show the individual and consolidated balance sheet of the group immediately after the change in non-controlling interest.

Solution:

₹ lakh

	A	B	Workings	Group
Assets				
Goodwill				10
PPE	627	200		827
Financial assets:				
Investments (150+32)	182

To Cash			32

*****

Illustration 25: Reduction in interest in subsidiary

Amla Ltd. purchased a 100% subsidiary for ₹ 10,00,000 at the end of 20X1 when the fair value of the subsidiary Lal Ltd.'s net asset was ₹ 8,00, 000.

The parent sold 40% of its investment in the subsidiary in March 20X4 to outside investors for ₹ 9,00,000. The parent still maintains a 60% controlling interest in the subsidiary. The carrying value of the subsidiary's net assets is ₹ 18,00,000 (including net assets of ₹ 16,00,000 & goodwill of ₹ 2,00,000).

Calculate gain / loss on sale of interest in subsidiary as at 31st March 20X4.

Solution:

As per Ind AS 110, a change in ownership that does not result in a loss of control is equity transaction. The identifiable net assets (including goodwill) remain unchanged and any difference between the amount by which the non-controlling interest is recorded (including the non-controlling interest portion of goodwill) and a fair value of the consideration received is recognized directly in equity and attributed to the controlling interest. For disposals that do not result in the loss of control, the change in the non-controlling interest is recorded at its proportionate interest of the carrying value of the subsidiary.

Gain on the sale of the investment of ₹ 5,00,000 in parent's separate financial statements calculated as follows:

	₹' 000
Sale proceeds	900
Less: Cost of investment in subsidiary (10,00,000 x 40%)	(400)
Gain on sale in the parent's separate financial statements	500

As discussed above, the group's consolidated income statement for 31st March 20X4 would show no gain on the sale of the interest in the subsidiary. Instead, the difference between the fair value of the consideration received and the amount by which the non-controlling interest is recorded is recognized directly in equity.

	₹' 000
Sale proceeds	900
Less: Recognition of non-controlling interest (18,00,000 x 40%)	(720)
Credit to other equity	180

The entry recognized in the consolidated accounts under Ind AS 110 is:

	₹' 000	
	Dr.	Cr.
Cash Dr.	900	
To Non-controlling interest		720
To Other Equity (Gain on sale of interest in subsidiary)		180

The difference between the gain in the parent's income statement and the increase reported in the group's consolidated equity is ₹ 3,20,000. This difference represents the share of post-acquisition profits retained in the subsidiary ₹ 3,20,000 [(that is, 18,00,000 – 10,00,000) x 40%] that have been reported in the group's income statement up to the date of sale.

*****

Illustration 26: Reduction in interest in subsidiary

Entity A sells 30% interest in its wholly-owned subsidiary to outside investors in an arm 's length transaction for ₹ 500 crore in cash and retains a 70% controlling interest in the subsidiary. At the time of the sale, the carrying value of the subsidiary's net assets in the consolidated financial statements of Entity A is ₹ 1,300 crore, additionally, there is a goodwill of ₹ 200 crore that arose on the subsidiary's acquisition. Entity A initially accounted for NCI representing present ownership interests in the subsidiary at fair value and it recognises subsequent changes in NCI in the subsidiary at NCI's proportionate share in aggregate of net identifiable assets and associated goodwill. How should Entity A account for the transaction?

Solution:

As per paragraph 23 of Ind AS 110, changes in a parent's ownership interest in a subsidiary that do not result in the parent losing control of the subsidiary are equity transactions (i.e. transactions with owners in their capacity as owners). Thus, changes in ownership interest that do not result in loss of control do not impact goodwill associated with the subsidiary or the statement of profit and loss.

Paragraph B96 of Ind AS 110 states that when the proportion of the equity held by non-controlling interests changes, an entity shall adjust the carrying amounts of the controlling and non-controlling interests to reflect the changes in their relative interests in the subsidiary. The entity shall recognise directly in equity any difference between the amount by which the non-controlling interests are adjusted and the fair value of the consideration paid or received, and attribute it to the owners of the parent.

Thus, at the time of sale of 30% of its equity interest, consolidated financial statements include an amount of ₹ 1,500 crore in respect of the subsidiary. Accordingly, in the present case, the accounting entry in the consolidated financial statements on the date of sale of the 30% interest would be as follows:

	₹ in crore	
	Dr.	Cr.
Cash Dr.	500	
To Non-controlling interest (1,500 x 30%)		450
To Other Equity (Gain on sale of interest in subsidiary)		50

*****

Illustration 27: Treatment of goodwill and non-controlling interest where a parent holds an indirect interest in a subsidiary

A parent company (entity A) has an 80% owned subsidiary (entity B). Entity B makes an acquisition for cash of a third company (entity C), which it then wholly owns. Goodwill of ₹ 1,00,000 arises on the acquisition of entity C.

How should that goodwill be reflected in consolidated financial statement of entity A? Should it be reflected as

a) 100% of the goodwill with 20% then being allocated to the non- controlling interest, or

b) 80% of the goodwill that arises?

Solution:

Assuming that entity B prepares consolidated financial statements, 100% of the goodwill would be recognized on the acquisition of entity C in those financial statements. Entity A should reflect 100% of goodwill and allocate 20% to the non- controlling interest in its consolidated financial statements. This is because the non-controlling interest is a party to the transaction and the goodwill forms part of the net assets of the sub group (in this case, the sub group being the group headed by entity B).

*****

4.2.11 Preparation of consolidated financial statements after applying above principles

In this section we will discuss how the full set of consolidated financial statements is prepared after applying the consolidation principles discussed above.

4.2.11.1 Preparation of consolidated balance sheet

- Assets and outside liabilities of the subsidiary company are combined with those of the parent company. Appropriate intra group elimination adjustments as explained in section 4.2.9 above are recognised.
- The equity share capital of the subsidiary and investment of parent company are eliminated and goodwill / capital reserve and non-controlling interest are recognised.
- The parent's share in post-acquisition profits of the subsidiary company (added to appropriate concerned account of the parent company) are accounted in consolidated balance sheet.

4.2.11.2 Preparation of consolidated profit & loss

- The items of income and expenses are added on line by line basis.

Join us t.me/caborntofight

- Intra-group transactions are eliminated in full (e.g. sales made by parent to a subsidiary which is recorded as purchase by subsidiary are eliminated from the consolidated profit & loss by reducing both sales of parent and purchase of subsidiary) – refer section 4.2.9 above.

4.2.11.3 Preparation of consolidated cash flows

- Items of cash flow from various activities are to be added on line by line basis and from the consolidated items, inter-company transactions should be eliminated.

4.2.12 Chain-holding under consolidation

4.2.12.1 Meaning of chain control

A parent company can establish control over subsidiary directly or indirectly. Chain-holding refers to situations wherein a parent is controlling a subsidiary indirectly, i.e., having a controlling interest over a company indirectly. This may happen in number of ways, for example, parent company (P Ltd.) holding controlling interest in a subsidiary (S1 Ltd.), which in turn is holding a controlling interest in another company (S2 Ltd.). In this case, P Ltd. is having an indirect control over S2 Ltd. through its direct subsidiary S1 Ltd.

4.2.12.2 Consolidation procedures in case of chain-holding

Holding in subsidiary may be of various structures like:

Situation 1: Sub-subsidiaries

Parent P → 80% → Subsidiary 1 → 60% → Sub-subsidiary (S2)

In the above case, P holds a controlling interest in S1 which in turn holds a controlling interest in S2.

Analysis:

1. P owns 80% of 60% = 48% of S2
2. The non-controlling interest (NCI) in S1 owns 20% of 60% = 12% of S2
3. The non-controlling interest (NCI) in S2 itself owns the remaining 40% of the S2 equity.

S2 is nevertheless a sub-subsidiary of P, because it is a subsidiary of S1 which in turn is a subsidiary of P. The chain of control thus makes S2 sub-subsidiary of P which owns only 48% of its equity.

Date of effective control:

The date the sub-subsidiary (S2) comes under the control of the holding company is either:

1. The date P acquired S1 if S1 already holds shares in S2, or
2. If S1 acquires shares in S2 later, i.e. after the acquisition by P in S1, then such date of acquisition by S1.

Join us t.me/caborntofight

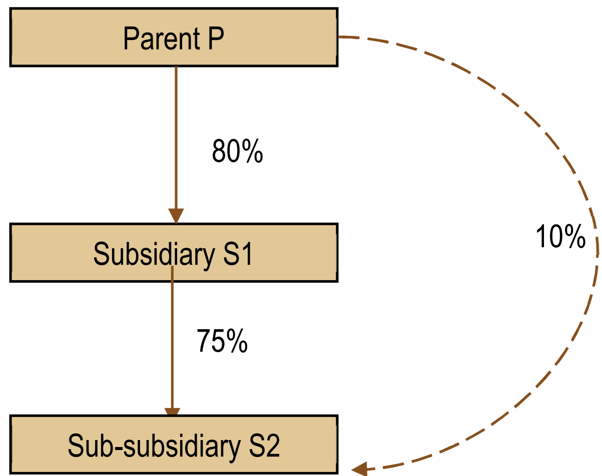
Points to remember:

The dates of acquisition and the order in which the group is built up should be considered while identifying as to which balances to select as the pre-acquisition reserves of the sub-subsidiary.

Care must be taken when consolidating sub-subsidiaries, because (usually) either:

1. The parent company acquired the subsidiary before the subsidiary bought the sub-subsidiary
2. The parent holding company acquired the subsidiary after the subsidiary bought the sub-subsidiary
3. Depending on whether (1) or (2) is the case, the retained earnings of the subsidiary at acquisition will be different.

Situation II: Direct holdings in sub-subsidiaries:



In this case, S2 is a sub-subsidiary of P with additional shares held directly by P.

In the above case, there is:

1.	**Direct** non-controlling share (NCI) in S1 of	20%	
2.	**Direct** non-controlling share (NCI) in S2 of (25-10)	15%	
3.	**Indirect** non-controlling share (NCI) in S2 of 20% x 75%	15%	30%

Analysis:

The effective interest in SS is:

Group (80% x 75%)	60% interest
Direct holding	10%
	70%

Join us t.me/caborntofight

Merged By CA - Born To Fight

Thus NCI 30%

100%

Note: Once we have ascertained the structure and non-controlling interest, we can proceed as we do for case A.

Total Capital Reserve (105 + 83)	**188**	

4. Calculation of Non-controlling Interest

	S Ltd.	SS Ltd.
At Fair Value (See Note 3)	80	128
Add: Post Acquisition Reserves (See Note 1)	(10 x 20%) 2	(10 x 40%) 4
Add: Post Acquisition Retained Earnings (See Note 1)	(15 x 20%) 3	(13 x 40%) 5.2
Less: NCI share of investment in SS Ltd.	(280 x 20%) (56)*	-
	29	137.2
Total (29 + 137.2)	166.2	

***Note:** The non-controlling interest in S Ltd. will take its proportion in SS Ltd. So, they have to bear their proportion in the investment by S Ltd. (in SS Ltd.) also.

Join us t.me/caborntofight

5. Calculation of Consolidated Other Equity

	Reserves	Retained Earnings
P Ltd.	180	160
Add: Share in S Ltd.	(10 x 80%) 8	(15 x 80%) 12
Add: Share in SS Ltd.	(10 x 60%) 6	(13 x 60%) 7.8
	194	**179.8**

Note: It is assumed date the sale of goods by SS Ltd. is done after acquisition of shares by S Ltd. Alternatively, it may be assumed that the sale has either been done before acquisition of shares by S Ltd. in SS Ltd. or sale has been throughout the year. Accordingly, the treatment for unrealized gain may vary.

*****

4.3 LOSS OF CONTROL

A parent can lose control over a subsidiary in a number of ways. These include:

- Loss of control due to outright sale – where the entire stake is sold off,
- Loss of control due to partial sale – where the parent retains interest as an associate, jointly controlled entity or a financial asset,
- Deemed loss of control where no consideration is received but the parent's interest is diluted in some other manner such as:
  - voting rights issued to a new investor,
  - control on relevant activities,
  - consolidation of voting rights of other shareholders;
  - an investor acquiring substantial stake from the stock exchange.

In this section we will discuss following two things:

- Accounting treatment of loss of control of a subsidiary
- Loss of control of a subsidiary in two or more arrangements (transactions)

4.3.1 Accounting treatment on loss of control of a subsidiary

If a parent loses control of a subsidiary, it shall follow the accounting treatment mentioned below:

If a parent loses control of a subsidiary, it shall			
Derecognise: • the assets (including any goodwill) and liabilities of the subsidiary • the carrying amount of any non-controlling interests in the former subsidiary	**Recognise:** • the fair value of the consideration received • if loss of control involves a distribution of shares of the subsidiary to owners, then that distribution; and • any investment retained in the former subsidiary at its fair value at the date when control is lost (refer **note 1** below)	**Reclassify:** • to profit or loss, or transfer directly to retained earnings if required by other Ind ASs, the amounts recognised in other comprehensive income in relation to the subsidiary (refer **note 2** below)	**Recognises gain / loss:** • recognise any resulting difference as a gain or loss in profit or loss attributable to the parent

Note 1: The fair value at which the retained interest is recognized shall be regarded as the fair value on initial recognition of a financial asset in accordance with Ind AS 109 or, when appropriate, the cost on initial recognition of an investment in an associate or joint venture.

Example 7

A Ltd. was holding 60% stake in B Ltd. Now A Ltd. has sold 50% stake to a third party and balance 10% stake is retained. The fair value of that 10% stake on the date of loss of control is ₹ 1,00,000. So, A Ltd. will record the 10% stake at ₹ 1,00,000 on the date of loss of control. This fair value will be treated as fair value on initial recognition as per Ind AS 109. In case, after the loss of control, A Ltd. still has significant influence over B Ltd. (e.g. through board representation) then this fair value of ₹ 1,00,000 will be treated as cost on initial recognition of investment in associate B Ltd.

Note 2: If a parent loses control of a subsidiary, the parent shall account for all amounts previously recognized in other comprehensive income in relation to that subsidiary on the same basis as would be required if the parent had directly disposed of the related assets or liabilities.

Example 8

X Ltd. has previously recognized in other comprehensive income in relation to a subsidiary Y Ltd. i) cumulative exchange differences relating to a foreign operation and ii) revaluation surplus. Now X Ltd. has sold its entire holding in Y Ltd. and hence has lost control over it. Hence, on loss of control, X Ltd. should reclassify the cumulative exchange differences relating to the foreign operation (that would have been reclassified to profit or loss if the parent had directly disposed that foreign operation) to profit or loss as reclassification adjustment. The revaluation surplus (that would have been transferred directly to retained earnings if the parent had directly disposed the asset) shall be transferred directly to retained earnings.

Illustration 30: Subsidiary issues shares to a third party and parent loses control

In March 20X1 a group had a 60% interest in subsidiary with share capital of 50,000 ordinary shares. The carrying amount of goodwill is ₹ 20,000 at March 20X1 calculated using the partial goodwill method. On 31 March 20X1, an option held by the minority shareholders exercised the option to subscribe for a further 25,000 ordinary shares in the subsidiary at ₹ 12 per share, raising ₹ 3,00,000. The net assets of the subsidiary in the consolidated balance sheet prior to the option's exercise were ₹ 4,50,000, excluding goodwill.

Calculate gain or loss on loss of interest in subsidiary due to option exercised by minority shareholder.

Solution:

Shareholdings

	Before		After	
	No	**%**	**No**	**%**
Group	30,000	60	30,000	40
Other party	20,000	40	45,000	60
	50,000	100	75,000	100
Net assets	**₹' 000**	**%**	**₹' 000**	**%**
Group's share	270	60	300	40
Other party's share	180	40	450	60
	450	100	750	100

Calculation of group gain on deemed disposal	**₹' 000**
Fair value of 40% interest retained (₹ 12 x 30,000)**	360
Less: Net assets derecognized	(450)
Non-controlling interest derecognized	180
Goodwill	(20)
Gain on deemed disposal	70

** **Note**: For simplicity, it has been assumed the fair value per share is equal to the subscription price.

As control of the subsidiary is lost, the retained interest is recognized at its fair value at the date control is lost. The resulting remeasurement gain is recognized in profit and loss.

Illustration 31: Calculation of gain on outright sale of subsidiary

A parent purchased 80% interest in a subsidiary for ₹ 1,60,000 on 1 April 20X1 when the fair value of the subsidiary's net assets was ₹ 1,75,000. Goodwill of ₹ 20,000 arose on consolidation under the partial goodwill method. An impairment of goodwill of ₹ 8,000 was charged in the consolidated financial statements for year ended 31 March 20X3. No other impairment charges have been recorded. The parent sold its investment in the subsidiary on 31 March 20X4 for ₹ 2,00,000. The book value of the subsidiary's net assets in the consolidated financial statements on the date of the sale was ₹ 2,25,000 (not including goodwill of ₹ 12,000). When the subsidiary met the criteria to be classified as held for sale under Ind AS 105, no write off was required because the expected fair value less cost to sell (of 100% of the subsidiary) was greater than the carrying value.

The parent carried the investment in the subsidiary in its separate financial statements at cost, as permitted by Ind AS 27.

Calculate gain or loss on disposal of subsidiary in parent's separate and consolidated financial statements as at 31st March 20X4.

Solution:

The parent's separate statement of profit and loss for 20X3-20X4 would show a gain on the sale of investment of ₹ 40,000 calculated as follow:

	₹' 000
Sales proceeds	200
Less: Cost of investment in subsidiary	(160)
Gain on sale in parent's account	40

However, the group's statement of profit & loss for 20X3-20X4 would show a gain on the sale of subsidiary of ₹ 8,000 calculated as follows:

		₹' 000
Sales proceeds		200
Less: Share of net assets at date of disposal (₹ 2,25,000 X 80%)	(180)	
Goodwill on consolidation at date of sale (W.N.)	(12)	(192)
Gain on sale in group's account		8

© The Institute of Chartered Accountants of India

Working note

The goodwill on consolidation (assuming partial goodwill method) is calculated as follows:

		₹' 000
Fair value of consideration at the date of acquisition		160
Non-controlling interest measured at proportionate share of the acquiree's identifiable net assets (1,75,000 X 20%)	35	
Less: Fair value of net assets of subsidiary at date of acquisition	(175)	(140)
Goodwill arising on consolidation		20
Impairment at 31 March 20X3		(8)
Goodwill at 31 March 20X4		12

*****

Illustration 32: Partial disposal when subsidiary becomes an associate

AT Ltd. purchased a 100% subsidiary for ₹ 50,00,000 on 31st March 20X1 when the fair value of the net assets of BT Ltd. was ₹ 40,00,000. Therefore, goodwill is ₹ 10,00,000. AT Ltd. sold 60% of its investment in BT Ltd. on 31st March 20X3 for ₹ 67,50,000, leaving the AT Ltd. with 40% and significant influence. At the date of disposal, the carrying value of net assets of BT Ltd. excluding goodwill is ₹ 80,00,000. Assume the fair value of the investment in associate BT Ltd. retained is proportionate to the fair value of the 60% sold, that is ₹ 45,00 000.

Calculate gain or loss on sale of proportion of BT Ltd. in AT Ltd.'s separate and consolidated financial statements as at 31st March 20X3. Provide Journal Entries.

Solution:

AT Ltd.'s standalone statement for profit or loss of 20X2-20X3 would show a gain on the sale of investment of a ₹ 37,50,000 calculated as follows:

	₹' lakh
Sales proceeds	67.5
Less: Cost of investment in subsidiary (₹ 50,00,000 * 60%)	(30.0)
Gain on sale in parent's account	37.5

In the consolidated financial statements, the group will calculate the gain or loss on disposal differently. The carrying amount of all of the assets including goodwill is derecognized when control is lost. This is compared to the proceeds received and the fair value of the investment retained.

The gain on the disposal will, therefore, be calculated as follows:

	₹' lakh
Sales proceeds	67.5
Fair value of 40%interest retained	45.0
	112.5
Less: Net assets disposed, including goodwill (80,00,000+ 10,00,000)	(90.0)
Gain on sale in the group's financial statements	22.5

The gain on loss of control would be recorded in consolidated statement of profit and loss. The gain or loss includes the gain of ₹ 13,50,000 [₹ 67,50,000 – (₹ 90,00,000 x 60%)] on the portion sold. However, it also includes a gain on remeasurement of the 40% retained interest of ₹ 9,00,000 (₹ 36,00,000* to ₹ 45,00,000). The entity will need to disclose the portion of the gain that is attributable to remeasuring any remaining interest to fair value, that is, ₹ 9,00,000.

* 90,00,000 x 40%= 36,00,000

*****

Illustration 33: Partial disposal when 10% investment in former subsidiary is retained

The facts of this illustration are same per the above Illustration, except the group AT Ltd. Disposes of a 90% interest for ₹ 85,50,000 leaving the AT Ltd. with a 10% investment. The fair value of the remaining interest is ₹ 9,50,000 (assumed for simplicity to be pro rata to the fair value of the 90% sold)

Calculate gain or loss on sale of proportion of BT Ltd. in AT Ltd.'s separate and consolidated financial statements as at 31st March 20X3.

Solution:

The parent's AT Ltd. income statement in its separate financial statements for 20X2-20X3 would show a gain on the sale of the investment of ₹ 40,50,000 calculated as follows:

	₹' lakh
Sales proceeds	85.5
Less: Cost of investment in subsidiary (₹ 50,00,000 * 90%)	(45.0)
Gain on sale in parent's account	40.5

In the consolidated financial statements, all of the assets, including goodwill are derecognized when control is lost. This is compared to the proceeds received and the fair value of the investment retained.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

	₹' lakh
Sales proceeds	85.5
Fair value of 10%interest retained	9.5
	95.0
Less: Net assets disposed, including goodwill (80,00,000 + 10,00,000)	(90.0)
Gain on sale in the group's financial statements	5.0

The gain on loss of control would be recorded in profit or loss. The gain or loss includes the gain of ₹ 4,50,000 related to the 90% portion sold [₹ 85,50,000 – (₹ 90,00,000 x 90%)] as well as ₹ 50,000 related to the remeasurement of fair value of 10% retained interest (₹ 9,00,000 to ₹ 9,50,000).

*****

4.3.2 Loss of control of a subsidiary in two or more arrangements (transactions)

A parent might lose control of a subsidiary in two or more arrangements (transactions). However, sometimes circumstances indicate that the multiple arrangements should be **accounted for as a single transaction**.

The above requirement is relevant because Ind AS 110 requires an entity to record gain / loss on disposal of investment in subsidiary in profit or loss only when the control is lost. This can give opportunity to an entity to arrange the disposal in such a way that it can reduce the amount to be recognized in profit or loss.

Example 9

MN Ltd. was holding 80% stake in UV Ltd. Now, MN Ltd. wants to dispose its entire holding in UV Ltd. It can do it in following ways:

- Option 1: Sale entire 80% stake in single transaction. In this case, the entire gain / loss on sale of 80% stake would be recognised in profit or loss.
- Option 2: Sale 25% stake in one transaction and sale the remaining 55% stake in another transaction. In this case, the gain / loss on sale of 25% stake would be recognised directly in equity since it will be sale of stake without loss of control. When the remaining 55% stake is sold then the gain / loss pertaining to that stake will be recognised in profit or loss.

In determining whether to account for the arrangements as a single transaction, a parent shall consider all the terms and conditions of the arrangements and their economic effects. One or more of the following indicate that the parent should account for the multiple arrangements as a single transaction:

They are entered into at the **same time or in contemplation of each other**.

They form a single transaction designed to **achieve an overall commercial effect**

The occurrence of one arrangement is **dependent** on the occurrence of at least one other arrangement.

One arrangement considered on its own is **not economically justified, unless it is considered together** with other arrangements. (e.g. when a disposal of shares is priced below market and is compensated for by a subsequent disposal priced above market)

Illustration 34: Loss control of a subsidiary in two transactions

MN Ltd. was holding 80% stake in UV Ltd. Now, MN Ltd. has disposed of the entire stake in UV Ltd. in two different transactions as follows:

- *Transaction 1: Sale of 25% stake for a cash consideration of ₹ 2,50,000*
- *Transaction 2: Sale of 55% stake for a cash consideration of ₹ 5,50,000*

Both the transactions have happened within a period of one month. In accordance with the guidance given in Ind AS 110, both the transactions have to be accounted as a single transaction.

The net assets of UV Ltd. and non-controlling interest on the date of both the transactions was ₹ 9,00,000 and ₹ 1,80,000 respectively (assuming there were no earnings between the period of two transactions).

How MN Ltd. should account the transaction?

Solution:

MN Ltd. will account for the transaction as follows:

		₹
Recognise:		
Fair value of consideration (2,50,000 + 5,50,000)		8,00,000
Derecognise:		
Net assets of UV Ltd.	(9,00,000)	
Non-controlling interest	1,80,000	(7,20,000)
Gain to be recorded in profit or loss		**80,000**

If MN Ltd. loses control over UV Ltd. on the date of transaction 1, then the above gain is recorded on the date of transaction 1 and MN Ltd. will stop consolidating UV Ltd. from that date. The consideration of ₹ 5,50,000 receivable in transaction 2 will be shown as consideration receivable.

If MN Ltd. loses control over UV Ltd. on the date of transaction 2, then the above gain is recorded on the date of transaction 2 and MN Ltd. will stop consolidating UV Ltd. from that date. The consideration of ₹ 2,50,000 received in transaction 1 will be shown as advance consideration received.

*****

4.4 ACCOUNTING FOR A CHANGE IN INVESTMENT ENTITY STATUS

A parent that either ceases to be an investment entity or becomes an investment entity shall account for the change in its status **prospectively** from the date at which the change in status occurred.

4.4.1 Accounting when an entity ceases to be an investment entity

When an entity ceases to be an investment entity, it shall apply Ind AS 103 to any subsidiary that was previously measured at fair value through profit or loss. The date of the change of status shall be the deemed acquisition date. The fair value of the subsidiary at the deemed acquisition date shall represent the transferred deemed consideration when measuring any goodwill or gain from a bargain purchase that arises from the deemed acquisition. All subsidiaries shall be consolidated in accordance with the consolidation principles discussed above in this unit.

Illustration 35: An entity ceases to be an investment entity

A Limited ceased to be in investment entity from 1st April 20X1 on which date it was holding 80% of B Limited. The carrying value of such investment in B Limited (which was measured at fair value through profit or loss) was ₹ 4,00,000. The fair value of non-controlling interest on the date of change in status was ₹ 1,00,000. The value of subsidiary's identifiable net assets as per Ind AS 103 was ₹ 4,50,000 on the date of change in status. Determine the value of goodwill and pass the journal entry on the date of change in status of investment entity. (Assume that non-controlling interest is measured at fair value method)

Solution:

Goodwill calculation:	₹
Deemed consideration (i.e. fair value of subsidiary on the date of change in status)	4,00,000
Fair value of non-controlling interest	1,00,000
	5,00,000

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Value of subsidiary's identifiable net assets as per Ind AS 103	(4,50,000)
Goodwill	**50,000**

Journal Entry		₹	
		Dr.	Cr.
Net identifiable assets	Dr.	4,50,000	
Goodwill	Dr.	50,000	
To Investment in B Limited (on date of change in status)			4,00,000
To Non-controlling interest			1,00,000

*****

4.4.2 Accounting when an entity becomes an investment entity

When an entity becomes an investment entity, it shall cease to consolidate its subsidiaries at the date of the change in status (except for any subsidiary that itself is not an investment entity but provide services related to the investment entity's investment activities. Such subsidiaries shall be continued to be consolidated). The investment entity shall apply the requirements of loss of control explained earlier in this unit to those subsidiaries that it ceases to consolidate as if the investment entity had lost control of those subsidiaries at that date.

Illustration 36: An entity becomes an investment entity

CD Ltd. purchased a 100% subsidiary for ₹ 20,00,000 on 31st March 20X1 when the fair value of the net assets of KL Ltd. was ₹ 16,00,000. Therefore, goodwill was ₹ 4,00,000. CD Ltd. becomes an investment entity on 31st March 20X3 when the carrying value of its investment in KL Ltd. (measured at fair value through profit or loss) was ₹ 25,00,000. At the date of change in status, the carrying value of net assets of KL Ltd. excluding goodwill was ₹ 19,00,000.

Calculate gain or loss with respect to investment in KL Ltd. on the date of change in investment entity status of CD Ltd.

Solution:

The gain on the disposal will be calculated as follows:

	₹
Fair value of retained interest (100%)	25,00,000
Less: Net assets disposed, including goodwill (19,00,000 + 4,00,000)	(23,00,000)
Gain on the date of change in investment entity status of CD Ltd.	2,00,000

*****

4.5 SIGNIFICANT DIFFERENCES BETWEEN IND AS 110 AND AS 21

S. No.	Topic	Ind AS 110	AS 21
1.	Preparation of Consolidated Financial Statements	Ind AS 110 makes the preparation of consolidated financial statements mandatory for a parent (subject to limited exceptions).	AS 21 does not mandate the preparation of consolidated financial statements by a parent. However, if a parent presents consolidated financial statements, it is required to apply AS 21 in preparing and presenting such financial statements.
2.	Control	The definition of control in Ind AS 110 is principle based - an investor controls an investee when it is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.	As per AS 21, control is the ownership of more than one-half of the voting power of an enterprise or control of the composition of the board of directors or other similar governing body of another enterprise so as to obtain economic benefits from its activities. Thus, AS 21 lays down quantitative parameters for determining whether an entity controls another entity.
3.		As per the definition of 'control' under Ind AS 110, control of an entity can be with one entity only.	There can occasionally be situations where application of the definition of 'control' as per AS 21 results in there being two parents of an entity. In such a case, both the parents are required to consolidate the entity in their respective consolidated financial statements.

4.	Exclusion of a subsidiary from consolidation	Ind AS 110 does not permit exclusion of a subsidiary from consolidation on either of these grounds.	As per AS 21, a subsidiary is excluded from consolidation when control is intended to be temporary or when it operates under severe long-term restrictions which significantly impair its ability to transfer funds to the parent.
5.	Difference between the date of the subsidiary's financial statements and that of the consolidated financial statements	Under Ind AS 110 difference between the date of the subsidiary's financial statements and that of the consolidated financial statements cannot exceed three months.	As per AS 21, difference between the date of the subsidiary's financial statements and that of the consolidated financial statements cannot exceed six months.
6.	Changes in a parent's ownership interest in a subsidiary not resulting in losing control	Ind AS 110 specifically lays down accounting requirements applicable to changes in a parent's ownership interest in a subsidiary that do not result in the parent losing control of the subsidiary.	In AS 21, no such guidance has been given.
7.	Uniform accounting policies	Ind AS 110, require the use of uniform accounting policies. No such exemption is given in Ind AS 110.	AS 21 allows the use of non-uniform accounting policies if it is not practicable to use uniform accounting policies disclosure is, however, required of, that fact together with the proportions of the items in the consolidated financial statements to which the different accounting policies have been applied.

8.	Potential equity shares and its voting rights	As per Ind AS 110, potential voting rights that are substantive are also considered when assessing whether an entity has control over another entity.	For considering share ownership, potential equity shares of the investee held by investor are not taken into account as per AS 21.
9.	Recognition of deferred taxes	Ind AS 110, read with Ind AS 12, requires recognition of deferred taxes in respect of temporary differences that arise from such elimination in consolidated financial statements.	According to AS 21, the tax expense (comprising current tax and deferred tax) to be shown in the consolidated financial statements should be the aggregate of the amounts of tax expense appearing in the separate financial statements of the parent and its subsidiaries. This means that under AS 21, deferred taxes are not recognised in consolidated financial statements in respect of timing differences that arise from the elimination of profits and losses resulting from intragroup transactions in consolidated financial statements.

UNIT 5:
IND AS 111: JOINT ARRANGEMENTS

5.1 OBJECTIVE OF IND AS 111

Joint arrangement is an arrangement of which two or more parties have joint control. Joint arrangements are established for a variety of purposes (e.g. as a way for parties to share costs and risks, or as a way to provide the parties with access to new technology or new markets) and can be established using different structures and legal forms.

The objective of Ind AS 111 is to establish principles for financial reporting by entities that have an interest in a joint arrangement.

This Ind AS defines various terms related to joint arrangements. It requires an entity that is a party to a joint arrangement to determine the type of joint arrangement in which it is involved i.e. whether it is a joint operation or a joint venture by assessing its rights and obligations. Based on the type of the arrangement, the accounting treatment for that arrangement will be decided.

5.2 SCOPE OF IND AS 111

Ind AS 111 shall be applied by all entities that are a **party to a joint arrangement**.

5.3 ASSESSMENT OF JOINT ARRANGEMENT

As mentioned above, a joint arrangement is an arrangement of which two or more parties have joint control.

A joint arrangement has the following characteristics:

The parties are bound by a **contractual arrangement**	AND	The contractual arrangement gives two or more of those parties **joint control** of the arrangement

5.3.1 Contractual arrangement

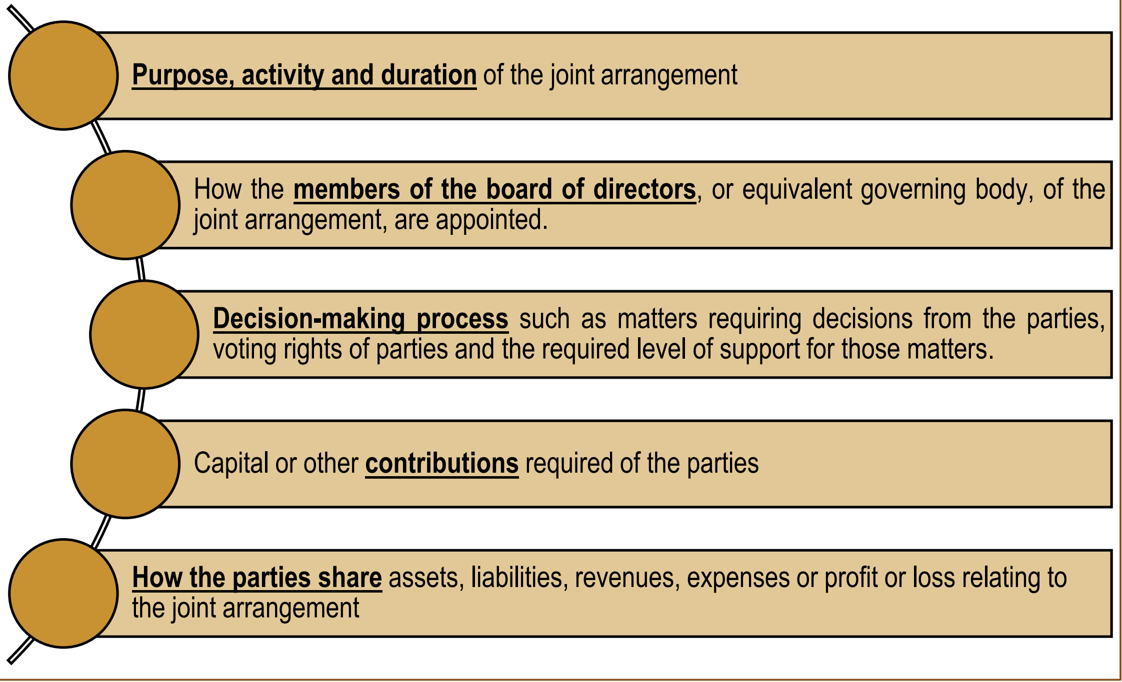
One of the essential elements of a joint arrangement is that there has to be a contractual arrangement between the parties to the arrangement. A contractual arrangement is usually in writing, however, it can be evidenced in several other ways as well.

A joint arrangement can be structured through a separate vehicle. In most of such case, the contractual arrangement is incorporated in the articles, charter or by-laws of the separate vehicle.

Example 1

A Ltd. and B Ltd. incorporated a new entity AB Ltd. The articles of association of AB Ltd. defines the terms of contractual arrangements between A Ltd. and B Ltd.

The contractual arrangement describes the terms of arrangement between the two or more parties that are involved in the activity that is subject of the arrangement. The contractual arrangement generally deals with such matters as:



5.3.2 Joint control

Joint control is the contractually agreed sharing of control of an arrangement, which exists only when **decisions about the relevant activities** require the **unanimous consent** of the parties sharing control.

Hence, in a joint arrangement, all the parties to an arrangement must act collectively in order to take decisions about the relevant activities of the arrangement and there is no single party who

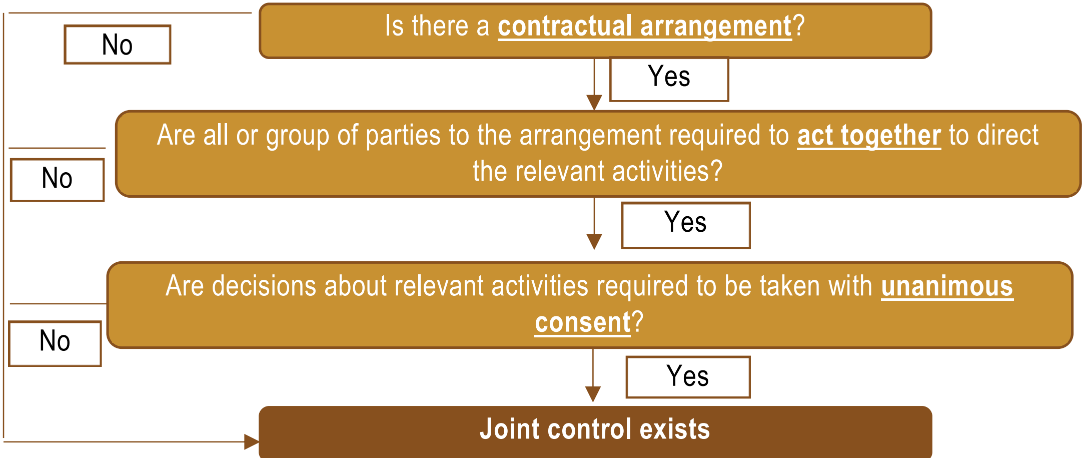
can control the arrangement individually. In a joint arrangement, any party sharing the control can prevent the other party / parties from controlling the arrangement.

In order to assess the joint control, an entity that is a party to an arrangement should **first assess** that whether the contractual arrangement gives all the parties or a group of the parties **control over the arrangement**. Control assessment will be done based on the guidance given in Ind AS 110 (which is discussed in Unit 3). Accordingly, all the principles of control assessment, some of which are summarised below, would be relevant while doing the assessment of joint control by the parties:

- Power over the relevant activities of the investee
  - Power with and without voting rights
  - Potential voting rights
  - Rights to appoint Key Managerial Personnel
  - De-facto control
  - Purpose and design of the investee
  - Contractual arrangements
  - Special relationship with investor and investee
- Exposure to returns
- Ability to use the power to affect the returns of the investee

Hence, if all the parties or a group of parties to a contractual arrangement (**considered collectively**) have power, exposure to returns and ability to use that power to affect the returns of the arrangement then the parties have control over the arrangement collectively.

The flowchart below can be used as a visual aid to remember the aforementioned concepts in brief:



Please remember: In a joint arrangement, no single party controls the arrangement on its own. That is because, by definition, a party with joint control can prevent other parties from controlling the arrangement.

Following are some of the illustrations for doing assessment of joint control.

(One should keep in mind that the illustrations on control assessment discussed in Unit 3 would also be equally relevant for doing assessment of joint control).

Illustration 1: Joint control

ABC Ltd. and DEF Ltd. have entered into a contractual arrangement to manufacture a product and sell that in retail market. As per the terms of the arrangement, decisions about the relevant activities require consent of both the parties. The parties share the returns of the arrangement equally amongst them. Whether the arrangement can be treated as joint arrangement?

Solution:

The arrangement is a joint arrangement since both the parties are bound by the contractual arrangement and the decisions about relevant activities require unanimous consent of both the parties.

*****

Sometimes the decision-making process that is agreed upon by the parties in their contractual arrangement **implicitly leads to joint control**. This is explained in below illustrations:

Illustration 2: Implicit joint control

PQR Ltd. and XYZ Ltd. established an arrangement in which each has 50% of the voting rights and the contractual arrangement between them specifies that at least 51% of the voting rights are required to make decisions about the relevant activities. Whether the arrangement can be treated as joint arrangement?

Solution:

In this case, the parties have implicitly agreed that they have joint control of the arrangement because decisions about the relevant activities cannot be made without both parties agreeing.

*****

Illustration 3: Implicit joint control

A Ltd., B Ltd. and C Ltd. established an arrangement whereby A Ltd. has 50% of the voting rights in the arrangement, B Ltd. has 30% and C has 20%. The contractual arrangement between A Ltd., B Ltd. and C Ltd. specifies that at least 75% of the voting rights are required to make decisions about the relevant activities of the arrangement. Whether the arrangement can be treated as joint arrangement?

Join us t.me/caborntofight

Solution:

In this case, even though A can block any decision, it does not control the arrangement because it needs the agreement of B. The terms of their contractual arrangement requiring at least 75% of the voting rights to make decisions about the relevant activities imply that A Ltd. and B Ltd. have joint control of the arrangement because decisions about the relevant activities of the arrangement cannot be made without both A Ltd. and B Ltd. agreeing.

*****

Apart from the above-mentioned situations of implicit joint control, there can be other circumstances where the contractual arrangement requires a minimum proportion of the voting rights to make decisions about the relevant activities. When that minimum required proportion of the voting rights can be achieved by more than one combination of the parties agreeing together, that arrangement is not a joint arrangement unless the **contractual arrangement specifies** which parties (or combination of parties) are required to agree unanimously to decisions about the relevant activities of the arrangement. This is explained in below illustrations:

Illustration 4: Explicit joint control

An arrangement has three parties: X Ltd. has 50% of the voting rights in the arrangement and Y Ltd. and Z Ltd. each have 25%. The contractual arrangement between them specifies that at least 75% of the voting rights are required to make decisions about the relevant activities of the arrangement. Whether the arrangement can be treated as joint arrangement?

Solution:

In this case, even though X Ltd. can block any decision, it does not control the arrangement because it needs the agreement of either Y Ltd. or Z Ltd. In this question, X Ltd., Y Ltd. and Z Ltd. collectively control the arrangement. However, there is more than one combination of parties that can agree to reach 75% of the voting rights (i.e. either X Ltd. and Y Ltd. or X Ltd. and Z Ltd.). In such a situation, to be a joint arrangement the contractual arrangement between the parties would need to specify which combination of the parties is required to agree unanimously to decisions about the relevant activities of the arrangement.

*****

Illustration 5: Explicit joint control

An arrangement has A Ltd. and B Ltd. each having 35% of the voting rights in the arrangement with the remaining 30% being widely dispersed. Decisions about the relevant activities require approval by a majority of the voting rights. Whether the arrangement can be treated as joint arrangement?

Solution:

A Ltd. and B Ltd. have joint control of the arrangement only if the contractual arrangement specifies that decisions about the relevant activities of the arrangement require both A Ltd. and

B Ltd. agreeing. However, in the given case, decisions about the relevant activities require approval by a majority of the voting rights. Hence, there is no joint arrangement.

*****

The above illustrations also highlight that it is **not necessary** that all the parties in an arrangement should have joint control to form a joint arrangement. Some party or parties may be participating in the joint arrangement but may not be having joint control of that joint arrangement. That is the reason the word "or" has been used between the words "all" and "group of parties" in the flowchart given earlier.

Following are some further illustrations on assessment of whether a joint arrangement exists or not:

Illustration 6: Joint control through board representation

Electronics Ltd. is established by two investors R Ltd. and S Ltd. The investors are holding 60% and 40% of the voting power of the investee respectively.

As per the articles of association of Electronics Ltd., both the investors have right to appoint 2 directors each on the board of Electronics Ltd. The directors appointed by each investor will act in accordance with the directions of the investor who has appointed such director. Further, articles of association provides that the decision about relevant activities of the entity will be taken by board of directors through simple majority.

Determine whether Electronics Ltd. is controlled by a single investor or is jointly controlled by both the investors.

Solution:

The decisions about relevant activities are required to be taken by majority of board of directors. Hence, out of the 4 directors, at least 3 directors need to agree to pass any decision. Accordingly, the directors appointed by any one investor cannot take the decisions independently without the consent of at least one director appointed by other investor. Hence, Electronics Ltd. is jointly controlled by both the investors. R Ltd. holding majority of the voting rights is not relevant in this case since the voting rights do not given power over the relevant activities of the investee.

*****

Illustration 7: Chairman with casting vote

MN Software Ltd. is established by two investors M Ltd. and N Ltd. Both the investors are holding 50% of the voting power each of the investee.

As per the articles of association of MN Software Ltd., both the investors have right to appoint 2 directors each on the board of the company. The directors appointed by each investor will act in accordance with the directions of the investor who has appointed such director. The decision about relevant activities of the entity will be taken by board of directors through simple majority.

Articles of association also provides that M Ltd. has right to appoint the chairman of the board who will have right of a casting vote in case of a deadlock situation.

Determine whether MN Software Ltd. is jointly controlled by both the investors.

Solution:

The decisions about relevant activities are required to be taken by majority of board of directors. Hence, out of the 4 directors, at least 3 directors need to agree to pass any decision. Accordingly, the directors appointed by any one investor cannot take the decisions independently without the consent of at least one director appointed by other investor. However, the chairman of the board has right for a casting vote in case of a deadlock in the board. Hence, M Ltd. has the ability to take decisions related to relevant activities through 2 votes by directors and 1 casting vote by chairman of the board. Therefore, M Ltd. individually has power over MN Software Ltd. and there is no joint control.

*****

Illustration 8: Equal voting rights but no joint control

ABC Ltd. is established by two investors AB Ltd. and BC Ltd. Each investor is holding 50% of the voting power of the investee.

As per the articles of association of ABC Ltd., AB Ltd. and BC Ltd. have right to appoint 3 directors and 2 directors respectively on the board of ABC Ltd. The directors appointed by each investor will act in accordance with the directions of the investor who has appointed such director. Further, articles of association provides that the decision about relevant activities of the entity will be taken by board of directors through simple majority.

Determine whether ABC Ltd. is jointly controlled by both the investors.

Solution:

The decisions about relevant activities are required to be taken by majority of board of directors. Hence, out of the 5 directors, at least 3 directors need to agree to pass any decision. Accordingly, the directors appointed by AB Ltd. can take the decisions independently without the consent of any of the directors appointed by BC Ltd. Hence, ABC Ltd. is not jointly controlled by both the investors. Equal voting rights held by both the investors is not relevant in this case since the voting rights do not given power over the relevant activities of the investee.

*****

Illustration 9: Joint control over specific asset

X Ltd. and Y Ltd. entered into a contractual arrangement to buy a piece of land to construct residential units on the said land and sell to customers.

As per the arrangement, the land will be further divided into three equal parts. Out of the three parts, both the parties will be responsible to construct residential units on one part each by taking

decision about relevant activities independently and they will be entitled to the returns generated from their own part of land. The third part of the land will be jointing managed by both the parties requiring unanimous consent of both the parties for all the decision making.

Determine whether the arrangement is a joint arrangement or not.

Solution:

The two parts of the land which are required to be managed by both the parties independently on their own would not fall within the definition of a joint arrangement. However, the third part of the land which is required to be managed by both the parties with unanimous decision making would meet the definition of a joint arrangement.

*****

Illustration 10: Multiple relevant activities directed by different investors

Entity R and entity S established a new entity RS Ltd. to construct a national highway and operate the same for a period of 30 years as per the contract given by government authorities.

As per the articles of association of RS Ltd, the construction of the highway will be done by entity R and all the decisions related to construction will be taken by entity R independently. After the construction is over, entity S will operate the highway for the period of 30 years and all the decisions related to operating of highway will be taken by entity S independently. However, decisions related to funding and capital structure of RS Ltd. will be taken by both the parties with unanimous consent.

Determine whether RS Ltd. is a joint arrangement between entity R and entity S?

Solution:

In this case, the investors should evaluate which of the decisions about relevant activities can most significantly affect the returns of RS Ltd. In the given case, construction of the national highway and operation of the same are both significant activities with control over the same being held unilaterally by R Ltd. and S Ltd. However, the decisions related to funding and capital structure of RS Ltd. are taken with unanimous consent.

The above structure is tabulated below:

Activity	Decision-making	Remarks
Construction of the highway	R Ltd., independently	All activities are significant for RS Ltd., but since funding and capital structure are essential without which construction and operation cannot commence, the same is highly significant.
Operation of the highway	S Ltd., independently	
Funding and Capital Structure	Joint decision-making by R Ltd. and S Ltd., both	

Join us t.me/caborntofight

In view of the above, since the decision relating to Funding and Capital Structure are taken jointly by R Ltd. and S Ltd. both, we can conclude that RS Ltd. is a joint arrangement.

*****

Illustration 11: Informal agreement for sharing of control

An entity has four investors A, B, C and D holding 10%, 20%, 30% and 40% voting power respectively. The articles of association require decisions about relevant activities to be taken by majority voting rights. However, investor A, B and C have informally agreed to vote together. This informal agreement has been effective in recent meetings of the investors to take decisions about relevant activities. Whether A, B and C have joint control over the entity?

Solution:

In this case, three investors have informally agreed to make unanimous decisions. These three investors together also have majority voting rights in the entity. Hence, investor A, B and C have joint control over the entity. The agreement between investor A, B and C need not be formally documented as long as there is evidence of its existence in recent meetings of the investors.

*****

It should be noted that if the requirement for unanimous consent relates only to decisions that give a party **protective rights** and not to decisions about the relevant activities of an arrangement, that party is not a party with joint control of the arrangement. This is explained in below illustration:

Illustration 12: Party with protective rights

D Ltd., E Ltd. and F Ltd. have established a new entity DEF Ltd. As per the arrangement, unanimous consent of all three parties is required only with respect to decisions related to change of name of the entity, amendment to constitutional documents of the entity to enter into a new business, change in the registered office of the entity, etc. Decisions about other relevant activities require consent of only D Ltd. and E Ltd. Whether F Ltd. is a party with joint control of the arrangement?

Solution:

Consent of F Ltd. is required only with respect to the fundamental changes in DEF Ltd. Hence these are protective rights. The decisions about relevant activities are taken by D Ltd. and E Ltd. Hence, F Ltd. is not a party with joint control of the arrangement.

*****

A contractual arrangement might include clauses on the **resolution of disputes**, such as arbitration. These provisions may allow for decisions to be made **without unanimous consent** among the parties that have joint control. The existence of such provisions does not prevent the arrangement from being jointly controlled and, consequently, from being a joint arrangement. This is explained in below illustration:

© The Institute of Chartered Accountants of India

Illustration 13: Resolution of disputes without unanimous consent

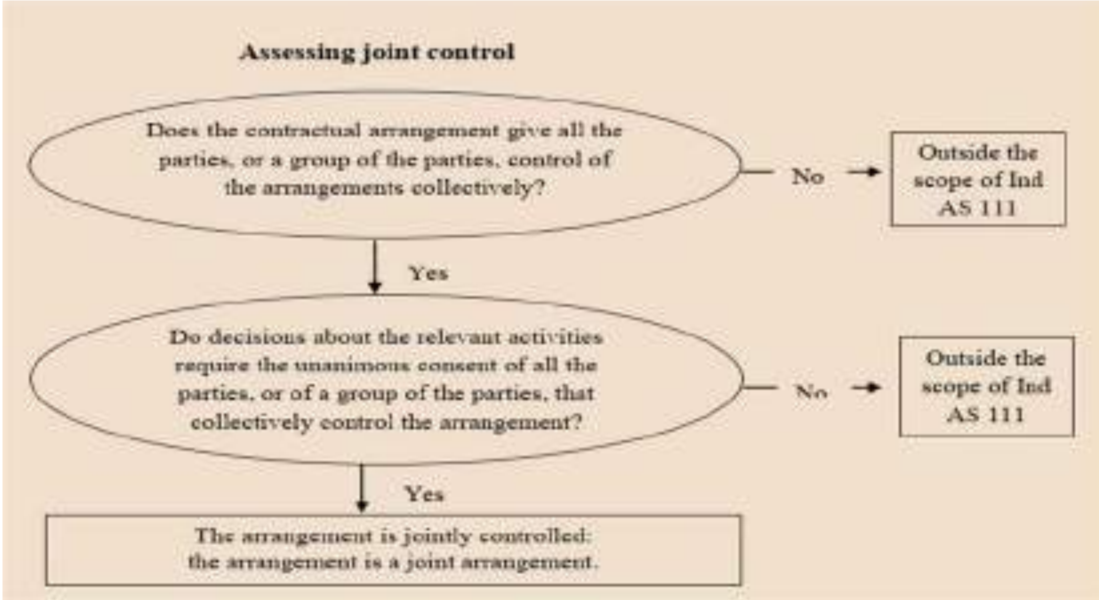
Entity A and Entity B established a contractual arrangement whereby the decision related to relevant activities are required to be taken by unanimous consent of both the parties. However, in case of any dispute with any vendor or customer of the arrangement, entity A has right to take necessary decisions for the resolution of disputes including decisions of going for the arbitration or filing a suit in court of law. Whether the arrangement is a joint arrangement?

Solution:

The arrangement is a joint arrangement since the contractual arrangement requires decisions about relevant activities to be taken by unanimous consent of both the parties. The right available with entity A to take decisions for resolution of disputes will not prevent the arrangement from being a joint arrangement.

*****

The following flow chart summarises the requirements of assessing joint control:



When an arrangement is outside the scope of Ind AS 111, an entity accounts for its interest in the arrangement in accordance with relevant Ind AS, such as Ind AS 110, Ind AS 28 or Ind AS 109.

If facts and circumstances change, an entity shall reassess whether it still has joint control of the arrangement.

5.4 TYPES OF JOINT ARRANGEMENT

Once it is determined that an arrangement is a joint arrangement, the entity needs to determine whether the joint arrangement is a joint operation or a joint venture depending upon the rights and obligations of the parties to the arrangement. This determination is relevant because of the way the joint arrangement is accounted for i.e. whether it is a consolidation of assets, liabilities, income and expenses or use of equity method specified under Ind AS 28.

Joint operation and joint venture are defined below:

A **joint operation** is a joint arrangement whereby the parties that have joint control of the arrangement have **rights to the assets, and obligations for the liabilities**, relating to the arrangement. Those parties are called joint operators.

A **joint venture** is a joint arrangement whereby the parties that have joint control of the arrangement have **rights to the net assets** of the arrangement. Those parties are called joint venturers.

As mentioned above, for classification of a joint arrangement between joint operation and joint venture, the parties shall assess their rights and obligations arising from the arrangement. When making that assessment, an entity shall consider the **structure of the joint arrangement**. Further, if the joint arrangement is **structured through a separate** vehicle then the entity shall consider the following.

- The legal form of the separate vehicle
- The terms of the contractual arrangement
- When relevant, other facts and circumstances

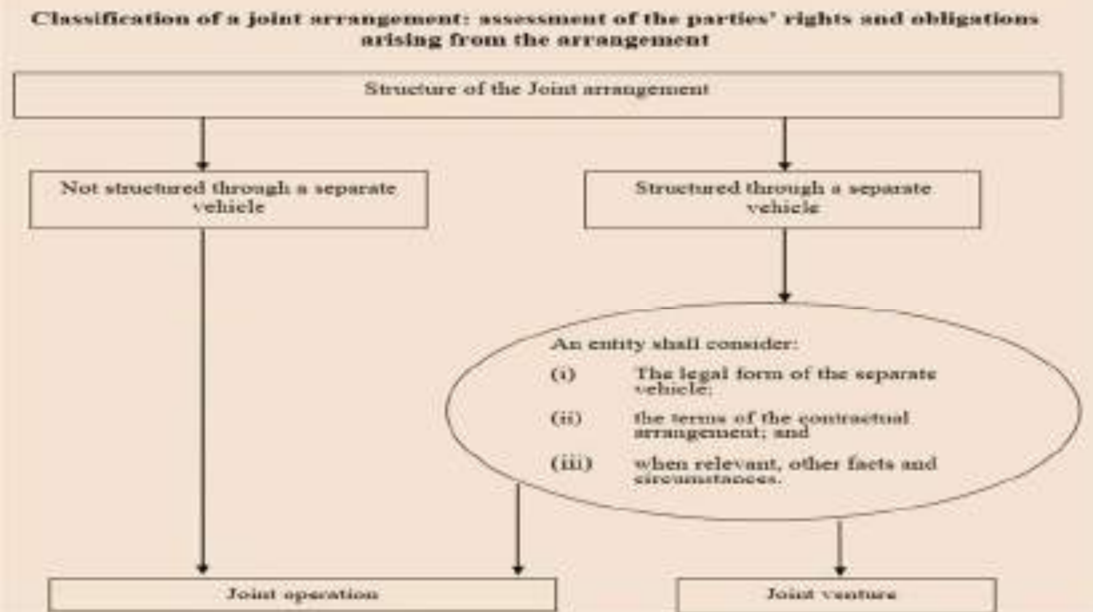
Each of the above factors are discussed below in detail. If facts and circumstances change, an entity shall reassess whether its earlier conclusion on the type of joint arrangement has changed.

5.4.1 Assessment of whether a joint arrangement is a joint operation or a joint venture

When assessing whether a joint arrangement is a joint operation or a joint venture, an entity should first determine whether the joint arrangement is structured through a separate vehicle or not. Some joint arrangements are not structured through a separate vehicle and some joint arrangements are structured through a separate vehicle.

A separate vehicle is defined in Ind AS 111 as a **separately identifiable financial structure**, including separate legal entities or entities recognised by statute, regardless of whether those entities have a legal personality. **Examples** of a separate vehicle include partnership, company, trust, association of persons, government authority, etc.

Below chart summarise the classification of a joint arrangement based on the structure of the arrangement.



5.4.1.1 Joint arrangements not structured through a separate vehicle

A joint arrangement that is not structured through a separate vehicle is a **joint operation**.

In such case, the contractual arrangement often describes the nature of the activities that are the subject of the arrangement and how the parties intend to undertake those activities together. The contractual arrangement also establishes the parties' rights to the assets, and obligations for the liabilities, relating to the arrangement. The contractual arrangement could also specify how the revenues and expenses that are common to the parties are to be shared among them.

This is explained in below illustration:

Illustration 14: Joint operation

P Ltd. and Q Ltd. are two construction entities and they have entered into a contractual arrangement to jointly construct a metro rail project.

The construction of metro rail project involves various activities such as construction of infrastructure (like metro station, control room, pillars at the centre of the road, etc.) for the metro, laying of the tracks, acquiring of the coaches of the metro, etc. The total length of the metro line to be constructed is 50 kms. As per the arrangement, both the parties are responsible to construct 25 kms each. Each party is required to incur its own cost, use its own assets, incur the liability and has right to the revenue from their own part of the work.

Determine whether the arrangement is a joint operation or not?

Join us t.me/caborntofight

Solution:

The arrangement is a joint operation since the arrangement is not structured through a separate vehicle and each party has rights to the assets, and obligations for the liabilities relating to their own part of work in the joint arrangement.

*****

In some cases, the parties to a joint arrangement might agree, for example, to share and operate an asset together. However, such arrangements are still a joint operation since they are not structured through a separate vehicle.

In such a case, the contractual arrangement establishes the parties' rights to the asset that is operated jointly, and how output or revenue from the asset and operating costs are shared among the parties. This is explained in below illustration:

Illustration 15: Joint operation by sharing an asset

RS Ltd. and MN Ltd. entered into a contractual arrangement to run a business of providing cars of hire. The cars will be owned by both the parties jointly. The expenses to run the car (like driver salary, petrol, maintenance, insurance, etc.) and revenues from the business will be shared between both the parties as agreed in the contractual arrangement. Determine whether the arrangement is a joint operation or not?

Solution:

The arrangement is a joint operation since the arrangement is not structured through a separate vehicle.

*****

5.4.1.2 Joint arrangements structured through a separate vehicle

A joint arrangement in which the assets and liabilities relating to the arrangement are held in a separate vehicle can be either **a joint venture or a joint operation**.

As mentioned earlier, when the joint arrangement is structured through a separate vehicle, an entity should consider i) legal form of the separate vehicle, ii) the terms of the contractual arrangement and, when relevant, iii) any other facts and circumstances to assess whether the arrangement is a joint venture or a joint operation. Each of these factors are further explained below.

5.4.1.2.1 The legal form of the separate vehicle

The legal form of the separate vehicle is relevant when assessing the type of joint arrangement.

For example, there may be a situation where the legal form of a separate vehicle causes the separate vehicle to be **considered in its own right** (i.e. the assets and liabilities held in the separate vehicle are the assets and liabilities of the separate vehicle and not the assets and

liabilities of the parties). In such case, the legal form of the separate vehicle indicates that the arrangement is a joint venture.

If the legal form of the separate vehicle indicates that the arrangement is a joint venture then the entity should further evaluate the terms of contractual arrangements and any other relevant facts and circumstance to see whether those factors indicate that the arrangement is a joint operation or not. However, if the legal form indicates that the arrangement is a joint operation (i.e. in a situation where the legal form does not confer separation between the parties and the separate vehicle) then there is no need to evaluate any other factor and the arrangement is concluded to be a joint operation.

Illustration 16: Legal form indicates the arrangement to be a joint venture

Entity X and Entity Y are engaged in the business of Engineering, Procurement and Construction (EPC) for its customers. Both the parties have jointly won a contract from a customer for executing an EPC contract and for that the parties have established a new entity XY Ltd. The contract will be executed through XY Ltd.

All the assets required for the execution of the contract will be acquired and liabilities relating to the execution will be incurred by XY Ltd. in its own name. Entity X and entity Y will have share in the net profits of XY Ltd. in the ratio of their shareholding i.e. 50% each. Assuming that the arrangement meets the definition of a joint arrangement, determine whether the joint arrangement is a joint operation or a joint venture?

Solution:

The legal form of the separate vehicle is a company. The legal form of the separate vehicle causes the separate vehicle to be considered in its own right. Hence, it indicates that the arrangement is a joint venture. In this case, the parties should further evaluate the terms of contractual arrangements and other relevant facts and circumstance to conclude whether the arrangement is a joint venture or a joint operation.

*****

Illustration 17: Legal form indicates the arrangement to be a joint operation

Two entities have established a Limited Liability Partnership (LLP) with each party having 50% share in the net profits of the firm. If the arrangement meets the definition of a joint arrangement, determine whether the joint arrangement is a joint operation or a joint venture? Would your answer change if a partnership firm was established instead of an LLP.

Solution:

A limited liability partnership is recognized as a body corporate with an existence distinct from that of its partners. Accordingly, the partners to the LLP would have a right to the net assets of the LLP as against a right to the assets and obligations to the liabilities of the same. Accordingly, such an arrangement would be a joint venture.

In case the entity formed is a partnership firm, the Indian Partnership Act, 1932 does not distinguish the partners from the partnership firm, and therefore all the partners would be liable to the liabilities of the firm, as well as have interest in the assets of the firm (and not the net assets). accordingly, there would be no separation between the partners and the partnership firm. Hence, in such a case, the joint arrangement would be regarded as a joint operation.

*****

5.4.1.2.2 Assessing the terms of the contractual arrangement

Generally, the rights and obligations conferred through contractual arrangement are consistent with the rights and obligations conferred by the legal form of the separate vehicle. However, in some case the contractual arrangement alters the rights and obligations conferred by the legal form of the separate vehicle.

If the contractual arrangement indicates that the arrangement is a joint operation then there is no need to evaluate any other facts and circumstances and the arrangement is concluded to be a joint operation.

Illustration 18: Assessing the terms of the contractual arrangement

Continuing with the illustration 16 above, assume that Entity X and Entity Y have entered into a separate agreement whereby they have agreed that each party has an interest in the assets of the XY Ltd. and each party is liable for the liabilities of XY Ltd. in a specified proportion. Determine whether the joint arrangement is a joint operation or a joint venture?

Solution:

In this case, the terms of the separate agreement may cause the arrangement to be a joint operation.

*****

The following table provides some examples (not an exhaustive list) of some common terms present in contractual arrangements of parties to a joint operation and a joint venture:

Assessing the terms of the contractual arrangement		
	Joint operation	**Joint venture**
The terms of the contractual arrangement	The terms provide the parties with rights to the assets, and obligations for the liabilities, relating to the arrangement.	The terms provide the parties with rights to the net assets of the arrangement.
Rights to assets	The parties share all interests (e.g. rights, title or ownership) in the	The assets brought into the arrangement or subsequently acquired by the joint

	assets relating to the arrangement in a specified proportion.	arrangement are the arrangement's assets. The parties have no interests (i.e. no rights, title or ownership) in the assets of the arrangement.
Obligations for liabilities	The parties to the joint arrangement share all liabilities, obligations, costs and expenses in a specified proportion. The parties to the joint arrangement are liable for claims raised by third parties.	The joint arrangement is liable for the debts and obligations of the arrangement. The parties are liable to the arrangement only to the extent of their respective investments in the arrangement or to their respective obligations to contribute any unpaid or additional capital to the arrangement. Creditors of the joint arrangement do not have rights of recourse against any party with respect to debts or obligations of the arrangement.
Revenues, expenses, profit or loss	Revenues and expenses are allocated on the basis of the relative performance of each party to the joint arrangement. However, the parties might have agreed to share the profit or loss relating to the arrangement on the basis of a specified proportion such as the parties' ownership interest in the arrangement. This would not prevent the arrangement from being a joint operation if the parties have rights to the assets, and obligations for the liabilities, relating to the arrangement.	Each party has share in the profit or loss relating to the activities of the arrangement.

Guarantees	The parties to joint arrangements might provide guarantees to third parties that, for example, receive a service from, or provide financing to, the joint arrangement. The provision of such guarantees does not, by itself, determine that the joint arrangement is a joint operation. The feature that determines whether the classification of joint arrangement is whether the parties have obligations for the liabilities relating to the arrangement (whether they are guaranteed by the parties or not is irrelevant).

5.4.1.2.3 Assessing other facts and circumstances

When the legal form of the separate vehicle and the terms of the contractual arrangement indicate that the arrangement is a joint venture, the parties should evaluate other relevant facts and circumstance to assess whether the arrangement is a joint operation or not. If the other relevant facts and circumstances also do not have evidence of the arrangement being a joint operation then the arrangement is concluded to be a joint venture.

The other relevant facts and circumstances that should be evaluated which might indicate that the arrangement is a joint operation are as follows. If both the following conditions are satisfied then the arrangement is a joint operation.

- The arrangement's activities primarily aim to **provide the parties with an output** (i.e. the parties have rights to substantially all the economic benefits of the assets held in the separate vehicle); and
- The parties are substantially the **only source of cash flows** contributing to the continuity of the operations of the arrangement. Hence, the arrangement depends on the parties on a continuous basis for settling the liabilities relating to the activity conducted through the arrangement.

Illustration 19: Assessing other facts and circumstances

Two parties structure a joint arrangement in an incorporated entity i.e. Entity A in which each party has a 50% ownership interest. The purpose of the arrangement is to manufacture materials required by the parties for their own, individual manufacturing processes. The arrangement ensures that the parties operate the facility that produces the materials to the quantity and quality specifications of the parties. The legal form of Entity A (an incorporated entity) through which the activities are conducted initially indicates that the assets and liabilities held in Entity A are the assets and liabilities of Entity A. The contractual arrangement between the parties does not specify that the parties have rights to the assets or obligations for the liabilities of Entity A. There are following other relevant facts and circumstances applicable in this case:

- *The parties agreed to purchase all the output produced by Entity A in a ratio of 50:50. Entity A cannot sell any of the output to third parties, unless this is approved by the two parties to the arrangement. Because the purpose of the arrangement is to provide the parties with*

Merged By CA - Born To Fight

output they require, such sales to third parties are expected to be uncommon and not material.

- *The price of the output sold to the parties is set by both parties at a level that is designed to cover the costs of production and administrative expenses incurred by Entity A. On the basis of this operating model, the arrangement is intended to operate at a break-even level.*

Based on the above fact pattern, determine whether the arrangement is a joint operation or a joint venture?

Solution:

The legal form of Entity A and the terms of the contractual arrangement indicate that the arrangement is a joint venture. However, the other relevant facts and circumstances mentioned above indicates that:

- the obligation of the parties to purchase all the output produced by Entity A reflects the exclusive dependence of Entity A upon the parties for the generation of cash flows and, thus, the parties have an obligation to fund the settlement of the liabilities of Entity A.
- the fact that the parties have rights to all the output produced by Entity A means that the parties are consuming, and therefore have rights to, all the economic benefits of the assets of Entity A.

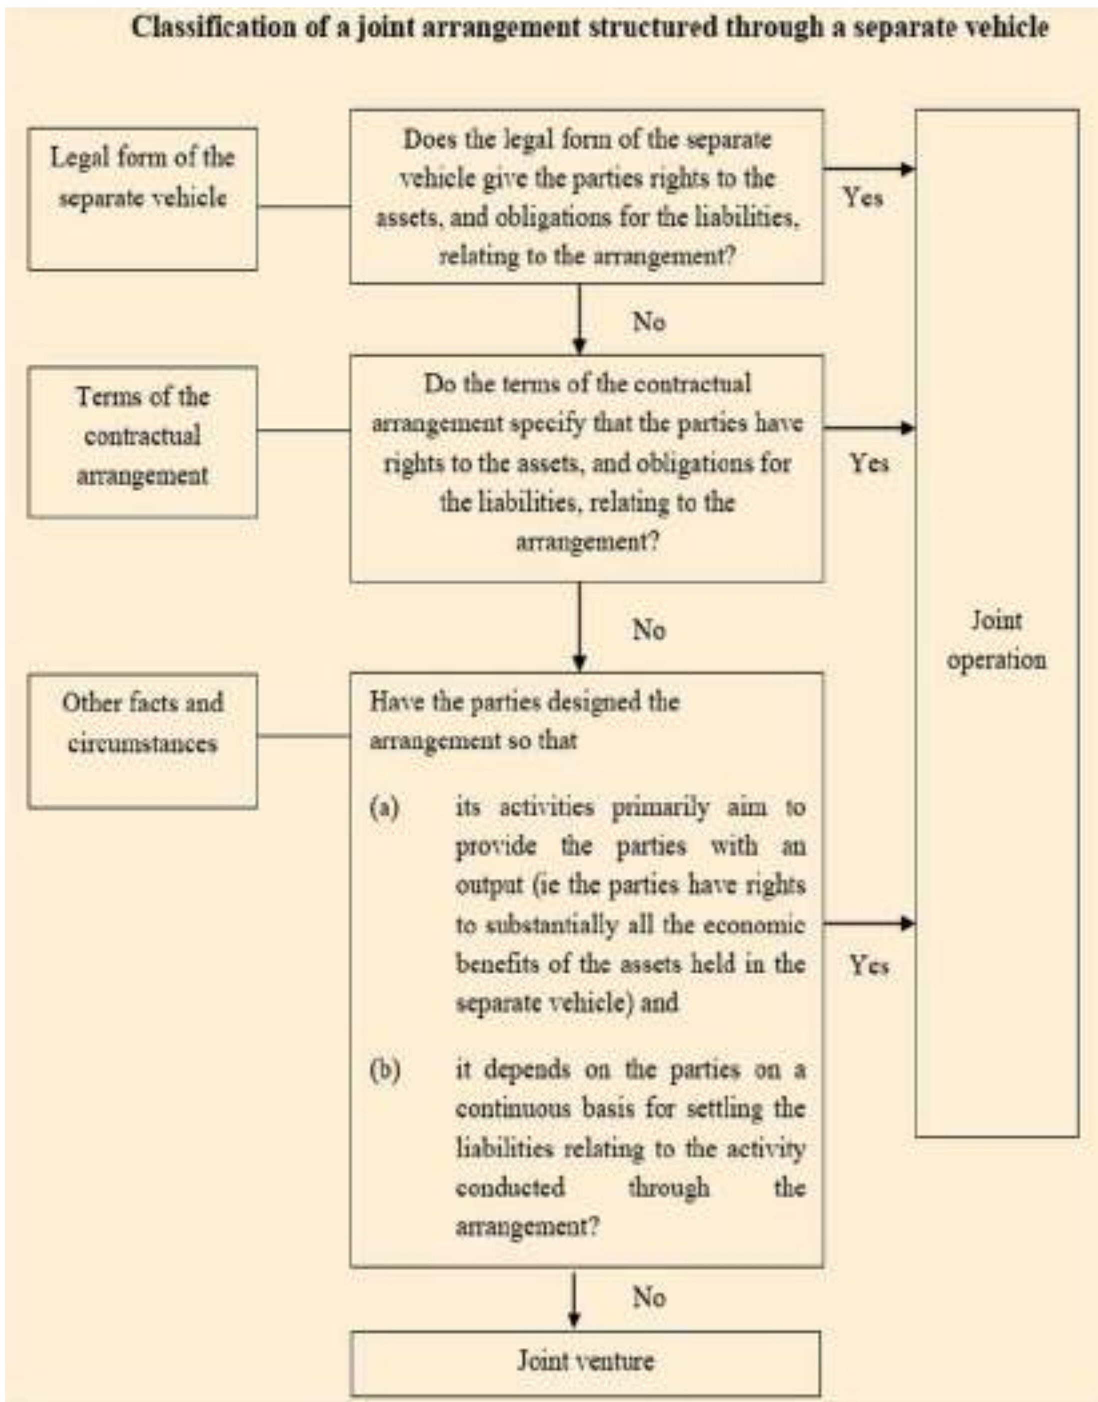
These facts and circumstances indicate that the arrangement is a joint operation. The conclusion about the classification of the joint arrangement in these circumstances would not change if, instead of the parties using their share of the output themselves in a subsequent manufacturing process, the parties sold their share of the output to third parties.

If the parties changed the terms of the contractual arrangement so that the arrangement was able to sell output to third parties, this would result in Entity A assuming demand, inventory and credit risks. In that scenario, such a change in the facts and circumstances would require reassessment of the classification of the joint arrangement. Such facts and circumstances would indicate that the arrangement is a joint venture.

*****

The following flow chart summarises the above principles an entity should follow to classify an arrangement when the joint arrangement is **structured through a separate vehicle**:

Join us t.me/caborntofight



5.4.2 Multiple joint arrangements under single framework agreement

Sometimes the parties may be bound by a framework agreement that sets up the general

contractual terms for undertaking one or more activities. Under a single framework agreement, the parties might establish different joint arrangements for different activities to be performed under the framework agreement. Even though all such joint arrangements are related to the same framework agreement, their type might be different i.e. one joint arrangement can be a joint operation and another joint arrangement can be a joint venture. This is explained in below illustration:

Illustration 20: Multiple joint arrangements under single framework agreement

AB Ltd. and CD Ltd. have entered into a framework agreement to manufacture and distribute a new product i.e. Product X. The two activities to be performed as per the framework agreement are i) Manufacture of Product X and ii) Distribution of Product X. The manufacturing of the product will not be done through a separate vehicle. The parties will purchase the necessary machinery in their joint name. For the distribution of the product, the parties have established a new entity ABCD Ltd. All the goods manufactured will be sold to ABCD Ltd. as per price mutually agreed by the parties. Then ABCD Ltd. will do the marketing and distribution of the product. Both the parties will have joint control over ABCD Ltd.

The legal form of ABCD Ltd. causes it to be considered in its own right (ie the assets and liabilities held in ACD Ltd. are the assets and liabilities of ABC Ltd. and not the assets and liabilities of the parties). Further, the contractual arrangement and other relevant facts and circumstances also do not indicate otherwise.

Determine whether various arrangements under the framework agreement are joint operation or joint venture?

Solution:

The manufacturing of Product X is not done through a separate vehicle and the assets used to manufacture the product are jointly owned by both the parties. Hence, the manufacturing activity is a joint operation.

The distribution of Product X is done through a separate vehicle i.e. ABCD Ltd. Further, AB Ltd. and CD Ltd. do not have rights to the assets, and obligations for the liabilities, relating to ABCD Ltd. Hence ABCD Ltd. is a joint venture.

*****

5.5 ACCOUNTING OF JOINT OPERATIONS

In this section, we will discuss following concepts related to accounting of joint operations:

- Accounting of interest in joint operations in separate and consolidated financial statement of joint operator

Merged By CA - Born To Fight

- Accounting for sales or contributions of assets to a joint operation in separate and consolidated financial statement of joint operator
- Accounting for purchases of assets from a joint operation in separate and consolidated financial statement of joint operator
- Accounting by an entity that is a party to the joint operation but does not have joint control

5.5.1 Accounting of interest in joint operations in separate and consolidated financial statement of joint operator

A joint operator shall recognise in its **separate and consolidated financial statements** in relation to its interest in a joint operation:

a) its assets, including its share of any assets held jointly;

b) its liabilities, including its share of any liabilities incurred jointly;

c) its revenue from the sale of its share of the output arising from the joint operation;

d) its share of the revenue from the sale of the output by the joint operation; and

e) its expenses, including its share of any expenses incurred jointly.

A joint operator shall account for the assets, liabilities, revenues and expenses relating to its interest in a joint operation in accordance with the Ind ASs applicable to the particular assets, liabilities, revenues and expenses.

Illustration 21: Accounting of interest in joint operation

P and Q form a joint arrangement PQ using a separate vehicle. P and Q each own 50% of the capital of PQ. However, the contractual terms of the joint arrangement states that P has the rights to all of Machinery and the obligation to pay Bank Loan in PQ. P and Q have rights to all other assets in PQ and obligations for all other liabilities in PQ in proportion to their share of capital (i.e. 50% each).

PQ's balance sheet is as follows:

Balance Sheet

Liabilities	₹	Assets	₹
Capital	1,50,000	Machinery	2,50,000
Bank Loan	75,000	Cash	50,000
Other Loan	75,000		
	3,00,000		3,00,000

How should P record in its financial statements its rights and obligations in PQ?

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Solution:

Under Ind AS 111, P should record the following in its financial statements, to account for its rights in the assets of PQ and its obligations for the liabilities of PQ.

Machinery	2,50,000
Cash	25,000
Capital	75,000
Bank Loan	75,000
Other Loan	37,500

*****

Illustration 22: Accounting of interest in joint operation

AB Ltd. and BC Ltd. have established a joint arrangement through a separate vehicle PQR. The legal form of the separate vehicle does not confer separation between the parties and the separate vehicle itself. Thus, both the parties have rights to the assets and obligations for the liabilities of PQR. As neither the contractual terms nor the other facts and circumstances indicate otherwise, it is concluded that the arrangement is a joint operation and not a joint venture.

Both the parties own 50% each of the equity interest in PQR. However, the contractual terms of the joint arrangement state that AB Ltd. has the rights to all of Building No. 1 owned by PQR and the obligation to pay all of the debt owned by PQR to a lender XYZ. AB Ltd. and BC Ltd. have rights to all other assets of PQR and obligations for all other liabilities of PQR in proportion of their equity interests (i.e. 50% each)

PQR's balance sheet is as follows:

Balance Sheet

Liabilities	₹	Assets	₹
Debt owed to XYZ	240	Cash	40
Employee benefit plan obligation	100	Building 1	240
Equity	140	Building 2	200
	480		480

How should AB Ltd. record in its financial statements its rights and obligations in PQR?

Solution:

Under Ind AS 111, AB Ltd. should record the following in its financial statements, to account for its rights in the assets of PQR and its obligations for the liabilities of PQR.

Merged By CA - Born To Fight

	₹
Assets	
Cash	20
Building 1 *	240
Building 2	100
Liabilities	
Debt (third party) ^	240
Employee benefit plan obligation	50
Equity	70

* Since AB Ltd. has the rights to all of Building No. 1, it records the amount in its entirety.

^ AB Ltd. has obligation for the debt owed by PQR to XYZ in its entirety

*****

5.5.2 Accounting for sales or contributions of assets to a joint operation in separate and consolidated financial statement of joint operator

When a joint operator sells or contributes any asset to the joint operation, it is in effect transacting with the other parties to the joint operation and hence the joint operator shall **recognise gains and losses** resulting from such transactions **only to the extent of the other parties' interest** in the joint operation.

Illustration 23: Accounting for sales or contributions of assets to a joint operation

A Ltd. is one of the parties to a joint operation holding 60% interest in a joint operation and the balance 40% interest is held by another joint operator. A Ltd. has contributed an asset held by it to the joint operation for the activities to be conducted in joint operation. The carrying value of the asset sold was ₹ 100 and the asset was actually sold for ₹ 80 i.e. at a loss of ₹ 20.

How should A Ltd. account for the sale of asset to joint operation in its books?

Solution:

A Ltd. should record the loss on the transaction only to the extent of other party's interest in the joint operation.

The total loss on the transaction is ₹ 20. Hence, A Ltd. shall record loss on sale of asset to the extent of ₹ 8 (₹ 20 x 40%) which is the loss pertaining to the interest of other party to the joint operation. The loss of ₹ 12 (₹ 20 - ₹ 8) shall not be recognised as that is unrealised loss.

Further, while accounting its interest in the joint operation, A Ltd. shall record its share in that asset at value of ₹ 60 [A Ltd. share of asset ₹ 48 (₹ 80 x 60%) plus unrealised loss of ₹ 12].

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

The journal entry for the transaction would be as follows:

Bank	Dr.	₹ 32	
Loss on sale	Dr.	₹ 8	
To Asset			₹ 40

*****

When above transactions provide evidence of a **reduction in the net realisable value** of the assets to be sold or contributed to the joint operation, or of an **impairment loss** of those assets, those losses shall be **recognised fully** by the joint operator.

5.5.3 Accounting for purchases of assets from a joint operation in separate and consolidated financial statement of joint operator

When a joint operator purchases any asset from the joint operation, it **shall not recognise its share** of the gains and losses until it resells those assets to a third party.

Illustration 24: Accounting for purchases of assets from a joint operation

A Ltd. is one of the parties to a joint operation holding 60% interest in the joint operation and the balance 40% interest is held by another joint operator. A Ltd. has purchased an asset from the joint operation. The carrying value of the asset in the books of joint operation was ₹ 100 and the asset was actually purchased for ₹ 80 i.e. at a loss of ₹ 20. How should A Ltd. account for the purchase of asset from joint operation in its books?

Solution:

A Ltd. should not record its share of the loss until the asset is resold to a third party.

The joint operation has sold the asset at ₹ 80 by incurring a loss of ₹ 20. Hence, A Ltd. shall record the asset at ₹ 92 [Purchase price ₹ 80 + A Ltd.'s share in loss ₹ 12 (₹ 20 x 60%)].

Further, while accounting its interest in the joint operation, A Ltd. shall not record any share in the loss incurred in sale transaction by the joint operation.

The journal entry for the transaction would be as follows:

Asset	Dr.	₹ 32	
To Bank			₹ 32

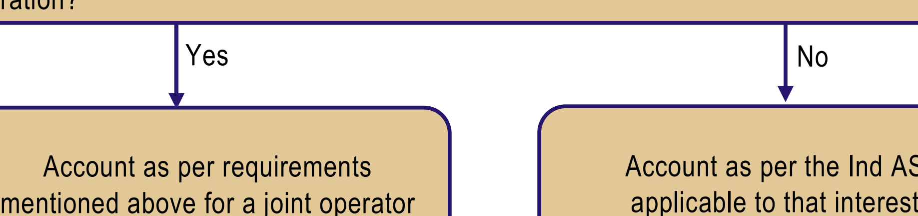
*****

When above transactions provide evidence of a **reduction in the net realisable value** of the assets to be purchased or of an **impairment loss** of those assets, a joint operator shall **recognise its share of those losses**.

Join us t.me/caborntofight

5.5.4 Accounting by an entity that is a party to the joint operation but does not have joint control

A party that participates in, but does not have joint control of, a joint operation shall also account for its interest in the arrangement in its separate and consolidated financial statements as follows:



5.6 ACCOUNTING OF JOINT VENTURES

5.6.1 Accounting in the consolidated financial statements

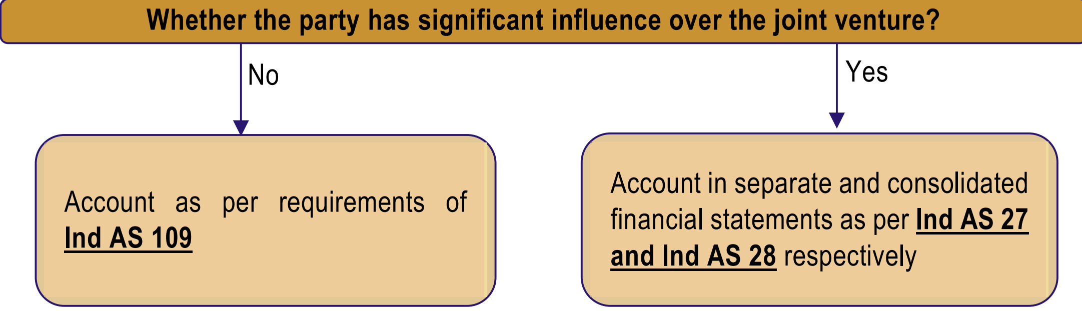
A joint venturer shall recognise its interest in a joint venture as an investment and shall account for that investment using the **equity method** in accordance with **Ind AS 28**, unless the entity is exempted from applying the equity method as specified in that standard. These requirements are discussed in detail in unit 6.

5.6.2 Accounting in the separate financial statements

In its separate financial statements, a joint venturer shall account for its interest in a joint venture in accordance **Ind AS 27**. These requirements are discussed in detail in unit 7.

5.6.3 Accounting by an entity that is a party to the joint venture but does not have joint control

A party that participates in, but does not have joint control of, a joint venture shall also account for its interest in the arrangement in its **separate and consolidated financial statements** as follows:



5.7 ACCOUNTING FOR ACQUISITIONS OF INTERESTS IN JOINT OPERATIONS IN SEPARATE AND CONSOLIDATED FINANCIAL STATEMENT OF JOINT OPERATOR

When an entity acquires an interest in a joint operation in which the activity of the joint operation constitutes **a business, as defined in Ind AS 103**, it shall apply, to the extent of its share in the joint operation, all the requirements of business combinations accounting as per Ind AS 103, and other Ind ASs, that do not conflict with the guidance in Ind AS 111. Necessary disclosure shall also be made as required by those Ind ASs in relation to business combinations.

The principles on business combinations accounting that do not conflict with the guidance in Ind AS 111 include but are not limited to following:

- Measuring identifiable assets and liabilities at fair value
- Recognising acquisition-related costs as expenses in the periods in which the costs are incurred and the services are received
- Recognising deferred tax that arise from initial recognition of assets or liabilities, except for deferred tax liabilities that arise from initial recognition of goodwill
- Recognising the excess of the consideration transferred over the net assets as goodwill
- Impairment testing of goodwill acquired in business combination

The above requirements also apply to the **formation of a joint operation** if, and only **if, an existing business**, as defined in Ind AS 103, is contributed to the joint operation on its formation by one of the parties that participate in the joint operation. However, these requirements **do not apply** to the formation of a joint operation if all of the parties that participate in the joint operation **only contribute assets or groups of assets that do not constitute businesses** to the joint operation.

A joint operator might **increase its interest in a joint operation** in which the activity of the joint operation constitutes a business, as defined in Ind AS 103, by acquiring an additional interest in the joint operation. In such cases, **previously held interests in the joint operation are not remeasured** if the joint operator retains joint control.

A party that participates in, but does not have joint control of, a joint operation might obtain joint control of the joint operation in which the activity of the joint operation constitutes a business as defined in Ind AS 103. In such cases, previously held interests in the joint operation are not remeasured.

If the transaction of acquisition of interest in the joint operation is a **common control transaction** as defined in Ind AS 103 then an entity should not apply the requirements mentioned above. In such case, the entity shall apply the accounting specified in **Appendix C of Ind AS 103**.

***

5.8 SIGNIFICANT DIFFERENCES BETWEEN IND AS 111 AND AS 27

S. No.	Topic	Ind AS 111	AS 27
1.	Joint arrangement	Ind AS 111 defines the term 'joint arrangement' as "an arrangement of which two or more parties have joint control." Essentially, Ind AS 111 substitutes the term 'joint arrangement' for the term 'joint venture' used in AS 27 without any substantive change in the underlying concept. Ind AS 111 uses the term 'joint venture' in a restrictive sense to refer to one type of joint arrangement (the other type being a joint operation).	AS 27 defines the term 'joint venture' as "a contractual arrangement whereby two or more parties undertake an economic activity, which is subject to joint control".
2.	Classification	Under Ind AS 111, a joint arrangement is either a joint operation or a joint venture. Arrangements that are classified as jointly controlled operations or jointly controlled assets under AS 27 would be classified as 'joint	AS 27 classifies joint venture into three categories, namely, jointly controlled operations, jointly controlled assets and jointly controlled entities.

		operations' under Ind AS 111. An arrangement that is classified as a jointly controlled entity under AS 27 would be classified as either a joint operation or a joint venture under Ind AS 111. The classification of joint arrangement depends on whether the parties that have joint control of the arrangement have rights to the assets, and obligations for the liabilities, relating to the arrangement (a joint operation) or whether those parties have rights to the net assets of the arrangement (a joint venture).	
3.	Accounting for interest in a jointly controlled entity	Ind AS 111 requires interest in a jointly controlled entity to be accounted for in the venturer's consolidated financial statements in accordance with Ind AS 28, i.e., using equity method of accounting (which is also used to account for interests in associates under Ind AS 28).	AS 27 requires a venturer to account for its interest in a jointly controlled entity in its (i.e., venturer's) consolidated financial statements using proportionate consolidation method.
4.	Circumstances in which proportionate consolidation method or equity method is not, or may not be, applied	Ind AS 111 (or Ind AS 28) does not provide a similar exemption from application of equity method to an interest in a joint venture, unless such an interest meets the criteria laid down in Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations to be classified as held for sale (in which case Ind AS 105 rather than equity method is applied to the interest).	Under AS 27 a venturer does not apply proportionate consolidation method to an interest in a jointly controlled entity which is acquired and held exclusively with a view to its subsequent disposal in the near future.

UNIT 6:
IND AS 28: INVESTMENTS IN ASSOCIATES AND JOINT VENTURES

6.1 OBJECTIVE OF IND AS 28

Ind AS 28 prescribes following:

- guidance on accounting of investments in associates and
- the requirements for the application of the equity method when accounting for investments in associates and joint ventures.

6.2 SCOPE OF IND AS 28

Ind AS 28 shall be applied by all entities that are

- investors with **joint control** of an investee (i.e. the investee is a joint venture of the investor), or
- **significant influence** over an investee (i.e. the investee is an associate of the investor).

6.3 SIGNIFICANT INFLUENCE

An associate is an entity over which the investor has significant influence. Hence, to assess whether an investee is an associate or not, an entity needs to understand the term 'significant influence'.

Significant influence is the power to **participate in the financial and operating policy decisions** of the investee but is not control or joint control of those policies.

In this section, we will discuss following concepts related to assessment of significant influence:

- Presumption of significant influence
- Judgement required in assessment of significant influence
- Consideration of potential voting rights when assessing significant influence
- Loss of significant influence

Each of the above concepts are discussed in detail below.

6.3.1 Presumption of significant influence

Presumption of significant influence:

- If an entity holds (directly or indirectly through a subsidiary) **20% or more of the voting rights** of an investee then it is **presumed that the entity has significant influence**, unless it can be clearly demonstrated that it is not the case.
- Conversely, if the entity holds, (directly or indirectly through a subsidiary), less **than 20% of the voting power** of the investee, it is **presumed that the entity does not have significant influence**, unless such influence can be clearly demonstrated.

It should be noted that a substantial or majority ownership by another investor does not necessarily preclude an entity from having significant influence.

Illustration 1: Significant influence

E Ltd. holds 25% of the voting power of an investee. The balance 75% of the voting power is held by three other investors each holding 25%.

The decisions about the financing and operating policies of the investee are taken by investors holding majority of the voting power. Since, the other three investors together hold majority voting power, they generally take the decisions without taking the consent of E Ltd. Even if E Ltd. proposes any changes to the financing and operating policies of the investee, the other three investors do not vote in favour of those changes. So, in effect the suggestions of E Ltd. are not considered while taking decisions related to financing and operating policies.

Determine whether E Ltd. has significant influence over the investee?

Solution:

Since E Ltd. is holding more than 20% of the voting power of the investee, it indicates that E Ltd. might have significant over the investee. However, the other investors in the investee prevent E Ltd. from participating in the financing and operating policy decisions of the investee. Hence, in this case, E Ltd. is not in a position to have significant influence over the investee.

*****

6.3.2 Judgement required in assessment of significant influence

The assessment of whether the investor has significant influence over the investee requires application of judgement. In making such judgement, the investor shall consider following factors which generally demonstrate the existence of significant influence:

a) representation on the board of directors or equivalent governing body of the investee

© The Institute of Chartered Accountants of India

Illustration 2: Representation on board

Kuku Ltd. holds 12% of the voting shares in Boho Ltd. Boho Ltd.'s board comprise of eight members and two of these members are appointed by Kuku Ltd. Each board member has one vote at meeting. is Boho Ltd an associate of Kuku Ltd?

Solution:

Boho Ltd is an associate of Kuku Ltd as significant influence is demonstrated by the presence of directors on the board and the relative voting rights at meetings.

It is presumed that entity has significant influence where it holds 20% or more of the voting power of the investee, but it is not necessary to have 20% representation on the board to demonstrate significant influence, as this will depend on all the facts and circumstances. One board member may represent significant influence even if that board member has less than 20% of the voting power. But for significant influence to exist it would be necessary to show based on specific facts and circumstances that this is the case, as significant influence would not be presumed.

*****

b) participation in policy-making processes, including participation in decisions about dividends or other distributions

Illustration 3: Participation in policy-making processes

M Ltd. holds 10% of the voting power an investee. The balance 90% voting power is held by nine other investors each holding 10%.

The decisions about the relevant activities (except decision about taking borrowings) of the investee are taken by the members holding majority of the voting power. The decisions about taking borrowings are required to be taken by unanimous consent of all the investors. Further, decisions about taking borrowing are not the decisions that most significantly affect the returns of the investee.

Determine whether M Ltd. has significant influence over the investee?

Solution:

In this case, though M Ltd. is holding less than 20% of the voting power of the investee, M Ltd.'s consent is required to take decisions about taking borrowings which is one of the relevant activities. Further, since the decisions about taking borrowing are not the decisions that most significantly affect the returns of the investee, it cannot be said that all the investors have joint control over the investee.

Hence, it can be said that M Ltd. has significant influence over the investee.

*****

c) material transactions between the entity and its investee

Illustration 4: Material transactions between the entity and its investee

RS Ltd. is an entity engaged in the business of pharmaceuticals. It has invested in the share capital of an investee XY Ltd. and is holding 15% of XY Ltd.'s total voting power.

XY Ltd. is engaged in the business of producing packing materials for pharmaceutical entities. One of the incentives for RS Ltd. to invest in XY Ltd. was the fact that XY Ltd. is engaged in the business of producing packing materials which is also useful for RS Ltd. Since last many years, XY Ltd.'s almost 90% of the output is procured by RS Ltd.

Determine whether RS Ltd. has significant influence over XY Ltd.?

Solution:

Since 90% of the output of XY Ltd. is procured by RS Ltd., XY Ltd. would be dependent on RS Ltd. for the continuation of its business. Hence, even though RS Ltd. is holding only 15% of the voting power of XY Ltd. it has significant influence over XY Ltd.

*****

d) interchange of managerial personnel

Illustration 5: Interchange of managerial personnel

Entity X and entity Y operate in the same industry, but in different geographical regions. Entity X acquires a 10% shareholding in entity Y as a part of a strategic agreement. A new production process is key to serve a fundamental change in the strategic direction of entity Y. The terms of agreement provide for entity Y to start a new production process under the supervision of two managers from entity X. The managers seconded from entity X, one of whom is on entity X's board, will oversee the selection and recruitment of new staff, the purchase of new equipment, the training of the workforce and the negotiation of new purchase contracts for raw materials. The two managers will report directly to entity Y's board and as well as to entity X. Analyse.

Solution:

The secondment of the board member and a senior manager from entity X to entity Y gives entity X a range of power over a new production process and may evidence that entity X has significant influence over entity Y. This assessment takes into the account what are the key financial and operating policies of entity Y and the influence this gives entity X over those policies.

*****

Join us t.me/caborntofight

e) provision of essential technical information

Illustration 6: Provision of essential technical information

R Ltd. is a tyre manufacturing entity. The entity has entered into a technology transfer agreement with another entity Y Ltd. which is also involved in the business of tyre manufacturing. R Ltd. is an established entity in this business whereas Y Ltd. is a relatively new entity.

As per the agreement, R Ltd. has granted to Y Ltd. a license to use its technical information and know-how which are related to the processes for the manufacture of tyres. Y Ltd. is dependent on the technical information and know-how supplied by R Ltd. because of its lack of expertise and experience in this business. Further, R Ltd. has also invested in 10% of the equity share capital of Y Ltd.

Determine whether R Ltd. has significant influence over Y Ltd.?

Solution:

Y Ltd. obtains essential technical information for the running of its business from R Ltd. Hence R Ltd. has significant influence over Y Ltd. despite of holding only 10% of the equity share capital of Y Ltd.

*****

6.3.3 Consideration of potential voting rights when assessing significant influence

An entity may own potential voting rights such as share warrants, share call options, convertible instruments, or other similar instruments that can give the entity additional voting power or reduce another party's voting power over the investee.

Potential voting rights that are **currently exercisable are considered** when assessing whether an entity has significant influence. Potential voting rights that are currently not exercisable are not considered for the assessment. This can be the case when the rights cannot be exercised until a future date or until the occurrence of a future event.

In assessing whether potential voting rights contribute to significant influence, the entity examines all facts and circumstances except (a) the intentions of management and (b) the financial ability to exercise those potential rights.

Illustration 7: Potential voting rights

An entity which is currently holding 10% of the voting power of an entity has an option of purchase additional 15% voting power of the investee from other investors. However, the entity currently does not have financial ability to purchase additional 15% voting power of the investee. Determine whether the entity has significant influence over the investee?

Solution:

Considering the potential voting rights, the entity can have more than 20% of the voting power of the investee and hence it is presumed that the entity has significant influence over the investee. The fact that the entity does not have financial ability to purchase such additional voting power is not considered in such assessment (It should be noted that under Ind AS 110, potential voting rights which an entity cannot exercise because of its financial ability are not considered as substantive and hence not factored in the assessment. However, under Ind AS 28, there is no such requirement given. Hence the potential voting rights, even if they are not substantive as per Ind AS 110, are included in the assessment of significant influence.)

*****

6.3.4 Loss of significant influence

An entity loses significant influence over an investee **when it loses the power to participate in the financial and operating policy decisions** of that investee.

The loss of significant influence can occur with or without a change in ownership levels. For example, loss of significant influence can occur when an associate becomes subject to the control of a government, court, administrator or regulator. It could also occur as a result of a contractual arrangement.

6.4 EQUITY METHOD

The **equity method** is a method of accounting whereby the investment is initially recognised at cost and adjusted thereafter for the post-acquisition change in the investor's share of the investee's net assets. The investor's profit or loss includes its share of the investee's profit or loss and the investor's other comprehensive income includes its share of the investee's other comprehensive income. In this section, we will discuss following principles related to equity method of accounting:

- Application of the equity method
- Exemptions from applying the equity method
- Equity method procedure

The above principles are explained below.

6.4.1 Application of the equity method

An investor is required to account its investments in associates and joint ventures as per equity method.

It should be noted that equity method is **not applied** for accounting of investments in associates

and joint ventures **in the separate financial statements** of the investor. In separate financial statements, an investor shall apply the guidance given in Ind AS 27 which is discussed in detail in unit 7.

Under the equity method of accounting, an investor shall pass following entries at various stages of investment:

1) Initial entry to record investment done in associate or joint venture at cost
2) Recording of investor's share in the profit / loss of the associate or joint venture after the date of acquisition
3) Recording of investor's share in the other comprehensive income of the associate or joint venture after the date of acquisition
4) Distributions received from an investee

Above entries are explained by way of an illustration below:

Illustration 8: Accounting entries related investment in associate / joint venture

On the first day of a financial year, A Ltd. invested in the equity share capital of B Ltd. at a cost of ₹ 1,00,000 to acquire 25% share in the voting power of B Ltd. A Ltd. has concluded that B Ltd. is an associate of A Ltd. At the end of the year, B Ltd. earned profit of ₹ 10,000 and other comprehensive income of ₹ 2,000. In that year, B Ltd. also declared dividend to the extent of ₹ 4,000. Pass necessary entries in the books of A Ltd. to account for the investment in associate.

Solution:

Following entries would be passed in the books of A Ltd.:

1) Initial entry to record investment done in associate

Investment in B Ltd. A/c	Dr.	1,00,000	
To Bank A/c			1,00,000

2) Recording of share in the profit of the associate

Investment in B Ltd. A/c	Dr.	2,500	
To Share in profit of investee (P&L)			2,500

[A Ltd. share in profit would be ₹ 2,500 (₹ 10,000 x 25%)]

3) Recording of share in the other comprehensive income (OCI) of the associate

Investment in B Ltd. A/c	Dr.	500	
To Share in OCI of investee (OCI)			500

[A Ltd. share in OCI would be ₹ 500 (₹ 2,000 x 25%)]

4) Recording of dividend distributed by associate

Dividend Receivable A/c	Dr.	1,000	
To Investment in B Ltd. A/c			1,000

[A Ltd. share in dividend would be ₹ 1,000 (₹ 4,000 x 25%)]

*****

It should be noted that Ind AS 28 not only requires to record the income distributed by the associate or joint venture but it also requires an investor to record its share in the profit / loss of the associate or joint venture (which may not be yet distributed). This provides more informative reporting of the investor's net assets and profit or loss.

Potential voting rights

Generally, an entity accounts for its interest in an associate or joint venture on the basis of existing ownership interests and the possible effect of exercise or conversion of any **potential voting rights are not considered for applying equity method**. Instruments with such potential voting rights are accounted for as per Ind AS 109.

For example, if potential voting rights are contained in Compulsorily Convertible Preference Shares (CCPS) of the investee and such CCPS do not give present access to returns associated with ownership interests (refer below), then such CCPS shall be accounted for as per Ind AS 109 (refer chapter 12) i.e. either at fair value through profit or loss or at fair value through other comprehensive income.

However, there can be some cases where the potential voting rights in substance currently give access to the returns associated with an ownership interest in an associate or a joint venture. In such cases, the investor shall account for instruments with such potential voting rights as per equity method and not as per Ind AS 109. This can be the situation where, **for example**, an investor has a purchase option to acquire additional voting power in an investee and the terms of the contract provides that the investor will also get the share in the profit / loss of the investee even for the period prior to the date of actual exercise of the option.

6.4.2 Exemptions from applying the equity method

An entity need not apply the equity method to its investment in an associate or a joint venture in following cases:

Exemption 1

As per paragraph 17 of Ind AS 28, an entity need not apply equity method if the entity is a parent that is **exempt from preparing consolidated financial statements** by the scope exception in paragraph 4(a) of Ind AS 110 **or if all the following** apply:

Owners of the entity	
The entity is a wholly owned or partly owned subsidiary of another entity and all the owners of the entity are informed and they do not object to the entity not applying the equity method.	The entity's ultimate or any intermediate parent produces financial statements that are available for public use and comply with Ind ASs, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with Ind AS 110.
Public trading of instruments of the entity	
The debt or equity instruments of the entity are not traded in a public market (whether domestic or foreign stock exchange or an over-the-counter market, including local and regional markets).	The entity has not filed nor is it in the process of filing its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market.

The above conditions are similar to the conditions given in paragraph 4(a) of Ind AS 110. To see illustration of above conditions, refer to the scope exemption illustrations give in unit 3 on Ind AS 110.

Exemption 2

When an investment in an associate or a joint venture is held by, or is held indirectly through, an entity that is a **venture capital organisation, or a mutual fund, unit trust and similar entities including investment-linked insurance funds**, the entity may elect to measure investments in those associates and joint ventures at **fair value through profit or loss** in accordance with Ind AS 109. Such election shall be made separately for each associate or joint venture at time of its initial recognition.

Example 1

A mutual fund has invested in the equity share capital of certain companies in excess of 20% of the total equity share of those entities. Hence, those investees are presumed to be an associate of the mutual fund. In this case, the mutual fund can decide not to apply equity method to account for those investments and instead measure them at fair value through profit or loss as per Ind AS 109.

Exemption 3

When an entity has an investment in an associate, a portion of which is held indirectly through a venture capital organisation, or a mutual fund, unit trust and similar entities including investment-linked insurance funds, the entity may elect to measure that portion of the investment in the associate at fair value through profit or loss in accordance with Ind AS 109.

© The Institute of Chartered Accountants of India

This is regardless of whether the venture capital organisation has significant influence over that portion of the investment.

If the entity makes that election, the entity shall apply the equity method to any remaining portion of its investment in an associate that is not held through a venture capital organisation.

This exemption is explained in below illustration:

Illustration 9: Exemption from applying equity method

MNO Ltd. holds 15% of the voting power of DEF Ltd. PQR Mutual Fund (which is a subsidiary of MNO Ltd.) also holds 10% voting power of DEF Ltd. Hence, MNO Ltd. holds total 25% voting power of DEF Ltd. (15% held by own and 10% held by subsidiary) and accordingly has significant influence over DEF Ltd. How should MNO Ltd. account for investment in DEF Ltd. in its consolidated financial statements?

Solution:

The 15% interest which is held directly by MNO Ltd. should be measured as per equity method of accounting. However, with respect to the 10% interest which is held through a mutual fund, MNO Ltd. can avail the exemption from applying the equity method to that 10% interest and instead measure that investment at fair value through profit or loss. To summarise, the total interest of 25% in DEF Ltd. should be measured as follows:

- 15% interest held directly by MNO Ltd.: Measure as per equity method of accounting
- 10% interest held indirectly through a mutual fund: Measure as per equity method of accounting or at fair value thorough profit or loss as per Ind AS 109

*****

6.4.3 Equity method procedure

Many of the concepts used in applying the equity method of accounting are similar to the concepts used for consolidation procedure for subsidiaries. Following is the summary of various concepts used in applying the equity method of accounting:

Join us t.me/caborntofight

Merged By CA - Born To Fight

Calculation of goodwill / capital reserve on acquisition of investment in associate or joint venture and calculation of share in profit / loss of associate or joint venture

Determination group's share in an associate or a joint venture

Accounting of upstream and downstream transactions between the entity and its associate or joint venture

Accounting of contribution of non-monetary asset by an entity to its associate or joint venture

How to deal with different reporting periods of the entity and its associate or joint venture?

Requirement to have uniform accounting policies

What are the long-term interests in associate or joint venture apart from equity investment?

How to account for share in losses of loss making associate or joint venture in excess of value interest in the associate or joint venture?

Each of the above concepts are explained below.

6.4.3.1 Calculation of goodwill / capital reserve and calculation of share in profit / loss of associate or joint venture

An investment is accounted for using the equity method from the date on which it becomes an associate or a joint venture.

On acquisition of the investment, an entity shall identify the goodwill or capital reserve.

Goodwill

Any excess of the cost of the investment over the entity's share of the net fair value of the investee's identifiable assets and liabilities is treated as goodwill. Goodwill is included in the carrying amount of the investment. Amortisation of that goodwill is not permitted.

Capital reserve

Any excess of the entity's share of the net fair value of the investee's identifiable assets and liabilities over the cost of the investment is treated as capital reserve. It is recorded directly in equity.

While recording the entity's share in the profit / loss of the investee, the entity needs to make certain adjustment to that share of profit / loss. For example, adjustment shall be made for:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- depreciation of the depreciable assets based on their fair values at the acquisition date.
- impairment losses such as for goodwill or property, plant and equipment.

Illustration 10: Acquisition of interest in an associate

Blue Ltd. acquired 25% of the equity share capital of Green Ltd. on the first day of the financial year for ₹ 1,25,000. As of that date, the carrying value of the net assets of Green Ltd. was ₹ 3,00,000 and the fair value was ₹ 4,00,000. The excess of fair value over the carrying value was attributable to one of the buildings owned by Green Ltd. having a remaining useful life of 20 years. Green Ltd. earned profit of ₹ 40,000 and other comprehensive income of ₹ 10,000 during the year. Calculate the goodwill / capital reserve on the date of acquisition, Blue Ltd.'s share in the profit and other comprehensive income for the year and closing balance of investment at the end of the year.

Solution:

(1) Goodwill / capital reserve on the date of acquisition

The cost of the investment is higher than the net fair value of the investee's identifiable assets and liabilities. Hence there is goodwill. Amount of goodwill is calculated as follows

	₹
Cost of acquisition of investment	1,25,000
Blue Ltd.'s share in fair value of net assets of Green Ltd. on the date of acquisition (4,00,000 x 25%)	(1,00,000)
Goodwill	**25,000**

Above goodwill will be recorded as part of carrying amount of the investment.

(2) Share in profit and other comprehensive income of Green Ltd.

	₹
Share in profit of Green Ltd. (40,000 x 25%)	10,000
Adjustment for depreciation based on fair value (1,00,000 ÷ 20) x 25%	(1,250)
Share in profit after adjustment	**8,750**
Share in other comprehensive income (10,000 x 25%)	**2,500**

Merged By CA - Born To Fight

(3) Closing balance of investment at the end of the year

	₹
Cost of acquisition of investment (including goodwill of ₹ 25,000)	1,25,000
Share in profit after adjustments	8,750
Share in other comprehensive income	2,500
Closing balance of investment	**1,36,250**

*****

Illustration 11: Cumulative preference shares issued by associate or joint venture

KL Ltd. has invested in 50% voting power of a joint venture MN Ltd. MN Ltd. has also issued 10% cumulative preference shares, classified as equity, to other investors worth ₹ 10,00,000. During the year, MN Ltd. earned profit of ₹ 4,00,000. Also, MN Ltd. has not declared any dividend on the preference shares for current year. Calculate KL Ltd.'s share in the net profit of MN Ltd. for the year.

Solution:

If an associate or a joint venture has outstanding cumulative preference shares that are held by parties other than the entity and are classified as equity, the entity should compute its share of profit or loss after adjusting for dividend on such shares, whether or not the dividends have been declared.

In current case, KL Ltd.'s share in net profit of MN Ltd. would be as follows.

	₹
Profit of MN Ltd. for the year	4,00,000
Dividend on cumulative preference shares (10,00,000 x 10%)	(1,00,000)
Net profit attributable to the holders of equity share	3,00,000
KL Ltd.'s 50% share in net profit of MN Ltd.	1,50,000

*****

6.4.3.2 Group's share in an associate or a joint venture

For applying the equity method, an entity shall consider the share held by it **directly or indirectly (through a subsidiary)** in an associate or a joint venture. The holding by the entity's associate or joint venture in another associate or joint venture of the entity is ignored for this purpose.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Example 2

A Ltd., its subsidiary B Ltd. and its joint venture C Ltd. holds 15%, 10% and 10% respectively of the share capital of an associate X Ltd. Hence, to apply equity method, A Ltd. shall consider the interest held by it and by its subsidiary B Ltd. i.e. total interest of 25%. It shall not consider the interest held by C Ltd. which is a joint venture.

When an **associate or a joint venture has subsidiaries, associates or joint ventures**, the profit or loss, other comprehensive income and net assets taken into account in applying the equity method are those recognised in the associate's or joint venture's **financial statements which include** the associate's or joint venture's share of the profit or loss, other comprehensive income and net assets of its associates and joint ventures.

Example 3

X Ltd. has an associate P Ltd. P Ltd. has further invested in a subsidiary Q Ltd. and a joint venture R Ltd. Hence, for the purpose of applying the equity method, X Ltd. shall consider the consolidated financial statements of P Ltd.

Illustration 12: Share in the consolidated financial statements of associate

Entity A holds a 20% equity interest in Entity B (as associate) that in turn has a 100% equity interest in Entity C. Entity B recognised net assets relating to Entity C of ₹ 1,000 in its consolidated financial statements. Entity B sells 20% of its interest in Entity C to a third party (a non-controlling shareholder) for ₹ 300 and recognises this transaction as an equity transaction in accordance with paragraph 23 of Ind AS 110, resulting in a credit in Entity B's equity of ₹ 100.

The financial statements of Entity A and Entity B are summarised as follows before and after the transaction:

Before

A's consolidated financial statements

Assets	₹	Liabilities	₹
Investment in B	200	Equity	200
Total	200	Total	200

B's consolidated financial statements

Assets	₹	Liabilities	₹
Assets (from C)	1,000	Equity	1,000
Total	1,000	Total	1,000

Merged By CA - Born To Fight

The financial statements of B after the transaction are summarised below:

After

B's consolidated financial statements

Assets	₹	Liabilities		₹
Assets (from C)	1,000	Equity	1,000	
Cash	300	Equity transaction with non-controlling interest	100	
		Equity attributable to owners		1,100
		Non-controlling interest		200
Total	1,300	Total		1,300

Although Entity A did not participate in the transaction, Entity A's share of net assets in Entity B increased as a result of the sale of B's 20% interest in C. Effectively, A's share in B's net assets is now ₹ 220 (20% of ₹ 1,100) i.e. ₹ 20 in addition to its previous share.

How is an equity transaction that is recognised in the financial statements of Entity B reflected in the consolidated financial statements of Entity A that uses the equity method to account for its investment in Entity B?

Solution:

The change of interest in the net assets / equity of the associate as a result of the investee's equity transaction is reflected in the investor's financial statements as 'share of other changes in equity of investee' (in the statement of changes in equity) instead of gain in Statement of profit and loss, since it reflects the post-acquisition change in the net assets of the investee and also faithfully reflects the investor's share of the associate's transaction as presented in the associate's consolidated financial statements.

Thus, in the given case, Entity A recognises ₹ 20 as change in other equity instead of in statement of profit and loss and maintains the same classification as of its associate, Entity B, i.e., a direct credit to equity as in its consolidated financial statements.

*****

6.4.3.3 Upstream and downstream transactions between the entity and its associate or joint venture

An entity (or a subsidiary of the entity) may enter into upstream or downstream transactions with its associate or joint venture.

- 'Upstream' transactions are, for example, sales of assets from an associate or a joint venture to the investor.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- ‘Downstream’ transactions are, for example, sales or contributions of assets from the investor to its associate or its joint venture.

There may be some gain / loss resulting from such transactions. The entity shall record such gain / loss in its financial statements only to the extent of the unrelated investors’ interests in the associate or joint venture.

Illustration 13: Upstream and downstream transaction between an entity and its associate

Scenario A

M Ltd. has invested in 40% share capital of N Ltd. and hence N Ltd. is an associate of M Ltd. During the year, N Ltd. sold inventory to M Ltd. for a value of ₹ 10,00,000. This included profit of 10% on the transaction price i.e. profit of ₹ 1,00,000. Out the above inventory, M Ltd. sold inventory of ₹ 6,00,000 to outside customers. Hence, the inventory of ₹ 4,00,000 purchased from N Ltd. is still lying with M Ltd. Determine the unrealised profit to be eliminated on above transaction.

Scenario B

Assume the same facts as per Scenario A except that the inventory is sold by M Ltd. to N Ltd. instead of N Ltd. selling to M Ltd. Determine the unrealised profit to be eliminated on above transaction.

Solution:

Scenario A

Firstly, as part of its equity method accounting for investment in N Ltd., M Ltd. will pass this journal entry:

Investment in N Ltd.	Dr.	40,000	
To Share in profit of N Ltd.			40,000

Out of the inventory of ₹ 10,00,000, M Ltd. has sold inventory worth ₹ 6,00,000 to outside customers. Hence, the profit of ₹ 60,000 (6,00,000 x 10% profit margin) on such inventory is realised. However, the inventory worth ₹ 4,00,000 is still held by M Ltd. which consists profit of ₹ 40,000 (4,00,000 x 10%). Hence, M Ltd.’s share in such profit i.e. ₹ 16,000 (40,000 x 40%) is considered as unrealised.

Accordingly, after recording of share in total profit of N Ltd., M Ltd. should pass following adjustment entry to reverse the unrealised profit margin:

Share in profit of N Ltd.	Dr.	16,000	
To Inventory / Investment in N Ltd.			16,000

In subsequent period, when this inventory of ₹ 4,00,000 is sold by N Ltd. to an outside customer then the above profit margin of ₹ 16,000 will be treated as realised and hence the above entry will be reversed in that period.

Merged By CA - Born To Fight

[**Note**: in the separate financial statements of M Ltd., inventory is carried at ₹ 4,00,000 whereas in its consolidated financial statements, inventory is carried at ₹ 3,84,000 (due to elimination entry above in respect of unrealized profit). In the subsequent period, when the inventory is sold, Inventory Account is credited by ₹ 4,00,000 whereas for the purpose of consolidated financial statements, it should have been credited by only ₹ 3,84,000. The difference is adjusted by debiting back ₹ 16,000 to the Inventory Account and a corresponding recognition of share in profit of associate.]

Scenario B

Out of the inventory of ₹ 10,00,000, N Ltd. has sold inventory worth ₹ 6,00,000 to outside customers. Hence, the profit of ₹ 60,000 (6,00,000 x 10% profit margin) on such inventory is realised. However, the inventory worth ₹ 4,00,000 is still held by N Ltd. which consists profit of ₹ 40,000 (4,00,000 x 10%). Out of this profit of ₹ 40,000, profit to the extent of other investor's interest in the investee is treated as realised profit i.e. ₹ 24,000 (40,000 x 60%) is treated as realised profit. Balance profit of ₹ 16,000 (40,000 x 40%) is considered as unrealised. Hence, M Ltd. should pass following adjustment entry to reverse the unrealised profit:

Sales	Dr.	160,000	
To Cost of material consumed			144,000
To Investment in N Ltd.			16,000

In subsequent period, when this inventory of ₹ 4,00,000 is sold by N Ltd. to an outside customer then the above profit margin of ₹ 16,000 will be treated as realised and hence the above entry will be reversed in that period.

*****

When downstream transactions provide evidence of a **reduction in the net realisable value** of the assets to be sold or contributed, or of an **impairment loss** of those assets, those losses shall be **recognised in full** by the investor.

When upstream transactions provide evidence of a reduction in the **net realisable value** of the assets to be purchased or of an **impairment loss** of those assets, the investor shall **recognise its share** in those losses.

Illustration 14: Impairment loss on downstream and upstream transaction between an entity and its joint venture

Scenario A

X Ltd. has invested in a joint venture Y Ltd. by holding 50% of its equity share capital. During the year, X Ltd. sold an asset to Y Ltd. at its market value of ₹ 8,00,000. The asset's carrying value in X Ltd.'s books was ₹ 10,00,000. Determine how should X Ltd. account for the sale transaction in its books.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Scenario B

Assume the same facts as per Scenario A except that the asset is sold by Y Ltd. to X Ltd. instead of X Ltd. selling to Y Ltd. Determine how should X Ltd. account for the above transaction in its books.

Solution:

Scenario A

X Ltd. should record full loss of ₹ 2,00,000 (10,00,000 – 8,00,000) in its books as that would represent the impairment loss because the market value has actually declined. This loss would have been recorded even if X Ltd. had first impaired the asset and then sold to Y Ltd. at zero profit / loss. Following entry should be passed in the books of X Ltd.

Bank A/c	Dr.	8,00,000	
Loss on sale of asset	Dr.	2,00,000	
To Asset			10,00,000

Scenario B

X Ltd. should record loss to the extent of its share in Y Ltd. Hence, X Ltd.'s share in loss i.e. ₹ 1,00,000 [(10,00,000 – 8,00,000) x 50%] should be recorded by X Ltd. in its books. The loss should be recorded since the market value of the asset has actually declined and this would represent impairment. This loss would have been recorded even if Y Ltd. would have first recorded an impairment loss of ₹ 2,00,000 and then sold to X Ltd. at zero profit / loss. Following entry should be passed in the books of X Ltd.

Asset	Dr.	8,00,000	
Share in loss of Y Ltd.	Dr.	1,00,000	
To Bank			8,00,000
To Investment in Y Ltd.			1,00,000

*****

6.4.3.4 Contribution of non-monetary asset by an entity to its associate or joint venture

An entity might contribute a non-monetary asset to an associate or a joint venture in exchange of an equity interest in that associate or joint venture. Such contribution of asset shall be accounted in accordance with the **guidance for downstream transactions** discussed above.

However, if such contribution of cnon-monetary asset **lacks commercial substance**, then the gain / loss involved in such transaction is treated as unrealised and such **gain / loss is eliminated against the investment value**. In other words, the carrying amount of the investment in associate

or joint venture in such a situation will be equal to the carrying amount of non-monetary asset contributed in exchange. The term 'commercial substance' has the same meaning as defined in Ind AS 16 *'Property, Plant and Equipment'* and discussed in unit 2 of chapter 7.

If, in addition to receiving an equity interest in an associate or a joint venture, an entity receives monetary or non-monetary assets, the entity **recognises in full** in profit or loss the portion of the **gain or loss** on the non-monetary contribution **relating to the monetary or non-monetary assets received**.

6.4.3.5 Different reporting periods of the entity and its associate or joint venture

To apply equity method of accounting, an entity shall use the **most recent** available financial statements of the associate or joint venture.

When the end date of the reporting period of the entity and that of the associate or joint venture is different (e.g. entity's financial year ends on 31 March 20X1 but the associate's financial year ends on 31 December 20X0) then associate or joint venture shall prepare financial statements as of the period end date of the entity **for the purpose of doing equity method accounting** by the entity.

In above situation, if it is impracticable for the associate or joint venture to prepare financial statements as of the period end date of the entity then the entity can use the financial statements of associate or joint venture ending on different date subject to **giving effect of significant transactions or events** occurring between the end date of the associate's or joint venture's financial statements and end date of the entity's financial statements.

In no case, the difference between the end date of the reporting period of associate or joint venture and end date of reporting period of the entity **can exceed 3 months**.

The length of the reporting periods and any difference between the ends of the reporting periods shall be the same from period to period. This means that if the financial statements of an associate or a joint venture used for equity accounting in previous periods were ending on different dates than that of the entity whereas the financial statements used for current period end on the same date as that of the entity then the comparatives for previous period should be restated to have comparison of equivalent periods.

6.4.3.6 Uniform accounting policies

When using the financial statements of an associate or joint venture for doing equity method accounting, the **accounting policies** (for like transaction and events in similar circumstances) as used by associate or joint venture in preparing their financial statements **should be same as the policies used by the entity** in preparing its financial statements.

If the accounting policies are not same then **adjustments should be made to align** the accounting policies of associate or joint venture to those of the entity.

Join us t.me/caborntofight

Example 4

A Ltd. (a company incorporated and registered in India) holds 25% voting power of B Inc. (a company incorporated and registered in United States). B Inc. is an associate for A Ltd. A Ltd. Follows Ind AS for the preparation of its financial statements. However, B Inc. follows generally accepted accounting principles in United States (US GAAP). Hence, while using B Inc.'s financial statements for the purpose of doing equity method accounting, A Ltd. Shall do necessary adjustment to covert US GAAP financial statements to Ind AS financial statements and then do equity method accounting.

There are two exceptions to above rule:

Exception 1

In case of an **associate**, the adjustment for uniformity of accounting policies with those of the entity will not be done **if it is impracticable to do so**.

It is to be noted that this exemption is available in case of an associate only and not available for joint venture. This is because for an investor with just significant influence over an investee, it may be difficult to obtain necessary information to do adjustment for aligning accounting policies. However, in case of a joint venture, it would be relatively easy to obtain such information as the investor has joint control over the joint venture.

Exception 2

An entity may have interest in **an associate or a joint venture that is an investment entity**. Such an associate or a joint venture may also have interest in one or more subsidiaries. When this is the case, such associate or joint venture, being an investment entity, would **account for its interest in subsidiaries at fair value**. Hence, in such case, the **entity can elect to retain** the fair value measurement used by the associate or joint venture.

Such election can be made by the entity **separately for each associate or joint venture** at the later of the date on which:

a) the associate or joint venture is initially recognised

b) the associate or joint venture becomes an investment entity

c) the associate or joint venture first becomes a parent

6.4.3.7 Long-term interests in associate or joint venture apart from equity investment

An entity might hold financial instruments in an associate or joint venture other than the investments accounted for using the equity method. These includes long-term interests that, in substance, form part of the entity's net investment in the associate or joint venture.

For example, an item for which settlement is neither planned nor likely to occur in the foreseeable future is, in substance, an extension of the entity's investment in that associate or joint venture.

Join us t.me/caborntofight

- Such items may include
  - preference shares and
  - long-term receivables or loans,
- but do not include
  - trade receivables,
  - trade payables or
  - any long-term receivables for which adequate collateral exists, such as secured loans.

An entity shall account such long-term interest in accordance with Ind AS 109. It is to be noted that certain requirements of Ind AS 28 also apply to such long-term interests (like allocating share in loss of associate or joint venture to such interests and testing for impairment and recording of impairment loss on the net investment in associate or joint venture – these are explained in subsequent paragraphs). However, an entity should first apply Ind AS 109 to those interests and then apply Ind AS 28 to the balance remaining after applying Ind AS 109.

6.4.3.8 Loss making associate or joint venture

In case of a loss making associate or joint venture, an entity's share of losses of such associate or joint venture may equal or exceed its **interest in the associate or joint venture**. In such case, the entity discontinues recognized its share of further losses.

It should be noted that the interest in the associate or joint venture not only includes the carrying amount of the investment in the associate or joint venture determined using the equity method but also includes any **long-term interests that, in substance, form part of the entity's net investment in the associate or joint venture**. The examples of such long-term interests are discussed in 6.4.2.8 above. It should be noted that an entity should **first apply Ind AS 109** to such long-term interests and then apply the above requirement of allocating to such long-term interest any share in loss of associate or joint venture. Further, while applying Ind AS 109, an entity shall not take account of any adjustments to the carrying value of long-term interests that arise from applying Ind AS 28.

Losses recognized using the equity method in excess of the entity's investment in ordinary shares are applied to the other components of the entity's interest in an associate or a joint venture in the reverse order of their seniority (i.e. priority in liquidation).

After the entity's interest is reduced to zero, additional losses are provided for, and a liability is recognized, only to the extent that the entity has incurred **legal or constructive obligations or made payments** on behalf of the associate or joint venture.

If the associate or joint venture **subsequently reports profits**, the entity resumes recognized its share of those profits **only after** its share of the profits equals the share of losses not recognized.

Illustration 15: Loss making associate and long-term interests

An entity has following three type interests in an associate:

- *Equity shares: 25% of the equity shares to which equity method of accounting is applied*
- *Preference shares: Non-cumulative preference shares that form part of net investment in the associate. Such preference shares are measured at fair value as per Ind AS 109.*
- *Long-term loan: The loan carrying interest of 10% p.a. The interest income is received at the end of each year. The long-term loan is accounted as per amortised cost as per Ind AS 109. This loan also forms part of net investment in the associate.*

At the start of year 1, the carrying value of each of the above interests is as follows:

- *Equity shares – ₹ 10,00,000*
- *Preference shares – ₹ 5,00,000*
- *Long-term loan – ₹ 3,00,000*

Following table summarises the changes in the fair value of preference shares as per Ind AS 109, impairment loss on long-term loan as per Ind AS 109 and entity's share in profit / loss of associate for year 1-5.

₹

End of Year	Increase / (Decrease) in fair value of preference shares as per Ind AS 109	Impairment loss / (reversal) on long-term loan as per Ind AS 109	Entity's share in profit / (loss) of associate
1	(50,000)	(50,000)	(16,00,000)
2	(50,000)	-	(2,00,000)
3	1,00,000	50,000	-
4	50,000	-	10,00,000
5	30,000	-	10,00,000

Throughout year 1 to 5, there has been no objective evidence of impairment in the net investment in the associate. The entity does not have any legal or constructive obligation to share the losses of the associate beyond its interest in the associate.

Based on above, determine the closing balance of each of the above interests at the end of each year.

Join us t.me/caborntofight

Solution:

Year 1

Below table summarises the closing balance of each of the interest at the end of year 1: ₹

Type of interest	Opening balance at the start of the year	Adjustment as per Ind AS 109	Balance after applying Ind AS 109	Share in profit / (loss) of associate	Closing balance at the end of the year
	(A)	(B)	I = (A+B)	(D)	I = (C+D)
Equity shares	10,00,000	NA	10,00,000	(10,00,000)	-
Preference shares	5,00,000	(50,000)	4,50,000	(4,50,000)	-
Long-term loan	3,00,000	(50,000)	2,50,000	(1,50,000)	1,00,000
Total	**18,00,000**	**(1,00,000)**	**17,00,000**	**(16,00,000)**	**1,00,000**

The entire loss of ₹ 16,00,000 is recognised. Hence, there is no unrecognised loss at the end of year 1.

Year 2

Below table summarises the closing balance of each of the interest at the end of year 2: ₹

Type of interest	Opening balance at the start of the year	Adjustment as per Ind AS 109	Balance after applying Ind AS 109	Share in profit / (loss) of associate	Closing balance at the end of the year
	(A)	(B)	I = (A+B)	(D)	I = (C+D)
Equity shares	-	NA	-	-	-
Preference shares	-	(50,000)	(50,000)	50,000 *	-
Long-term loan	1,00,000	-	1,00,000	(1,00,000)	-
Total	**1,00,000**	**(50,000)**	**50,000**	**(50,000)**	**-**

* Recognition of changes in fair value as per Ind AS 109 has resulted in the carrying amount of Preference shares being negative ₹ 50,000. Consequently, the entity shall reverse a portion of the associate's losses previously allocated to Preference shares.

Out of the total loss of ₹ 2,00,000 for the year, loss of only ₹ 50,000 is recognized. Hence, there is unrecognized loss to the extent of ₹ 1,50,000 at the end of year 2.

Year 3

Below table summarises the closing balance of each of the interest at the end of year 3: ₹

Type of interest	Opening balance at the start of the year	Adjustment as per Ind AS 109	Balance after applying Ind AS 109	Share in profit / (loss) of associate	Closing balance at the end of the year
	(A)	(B)	I = (A+B)	(D)	I = (C+D)
Equity shares	-	NA	-	-	-
Preference shares	-	1,00,000	1,00,000	(1,00,000)	-
Long-term loan	-	50,000	50,000	(50,000)	-
Total	**-**	**1,50,000**	**1,50,000**	**(1,50,000)**	**-**

The share in profit / loss for the year is nil. However, there was previously unrecognised loss of ₹ 1,50,000 which is allocated in current year. After recognising the above loss, there is no unrecognised loss at the end of year 3.

Year 4

Below table summarises the closing balance of each of the interest at the end of year 4: ₹

Type of interest	Opening balance at the start of the year	Adjustment as per Ind AS 109	Balance after applying Ind AS 109	Share in profit / (loss) of associate	Closing balance at the end of the year
	(A)	(B)	I = (A+B)	(D)	I = (C+D)
Equity shares	-	NA	-	2,00,000	2,00,000
Preference shares	-	50,000	50,000	5,00,000	5,50,000
Long-term loan	-	-	-	3,00,000	3,00,000
Total	**-**	**50,000**	**50,000**	**10,00,000**	**10,50,000**

The entity's share in profit of associate for the year is ₹ 10,00,000. The entity shall allocate such profit to each of the instruments in order of their seniority in liquidation. The entity should limit the amount of profit to be allocated to preference shares and long-term loan to the extent of losses previously allocated to them. Hence, the entity has allocated ₹ 5,00,000 to preference shares and ₹ 3,00,000 to long-term debt.

There is no unrecognised loss at the end of year 4.

Year 5

Below table summarises the closing balance of each of the interest at the end of year 5:

₹

Type of interest	Opening balance at the start of the year	Adjustment as per Ind AS 109	Balance after applying Ind AS 109	Share in profit / (loss) of associate	Closing balance at the end of the year
	(A)	(B)	I = (A+B)	(D)	I = (C+D)
Equity shares	2,00,000	NA	2,00,000	10,00,000	12,00,000
Preference shares	5,50,000	30,000	5,80,000	-	5,80,000
Long-term loan	3,00,000	-	3,00,000	-	3,00,000
Total	**10,50,000**	**30,000**	**10,80,000**	**10,00,000**	**20,80,000**

The entity's share in profit of associate for the year is ₹ 10,00,000. The entire profit is allocated to equity shares since there is no loss previously allocated to either preference shares or long-term loan.

There is no recognized loss at the end of year 5.

Year 1 to 5

The interest accrual on long-term loan would be done in each year at 10% p.a. This will be done without taking into account any adjustment done in the carrying value of long-term loan as per Ind AS 28. Hence, the entity will accrue interest of ₹ 30,000 (3,00,000 x 10%) in each year.

*****

6.5 IMPAIRMENT LOSSES

After doing accounting as per equity method explained above, an entity shall determine whether there is **an objective evidence** that the entity's net investment in an associate or a joint venture is impaired.

The objective evidence of impairment can arise as a result of:

- one or more events that occurred after the initial recognition of the net investment (a **'loss event'**) and
- that loss event (or events) has an **impact on the estimated future cash flows** from the net investment that can be reliably estimated.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

It is not necessary to identify a single event that caused impairment. Rather, impairment can be a combined effect of several individual events.

Losses expected as a result of future events, no matter how likely, are not recognized.

Objective evidence that the net investment is impaired includes **observable data** about the following loss events:

- Significant **financial difficulty** of the associate or joint venture
- **Breach of contract**, such as a default in payments by the associate or joint venture
- The entity **granting a concession** to associate or joint venture (because of its financial difficulties)
- It becoming probable that the associate or joint venture will enter **bankruptcy or other financial reorganisatio**n
- **Disappearance of an active market** for the net investment because of financial difficulties of the associate or joint venture
- **Adverse effect** in the environment (technological, market, economic or legal) in which associate or joint venture operates
- **Significant or prolonged decline in the fair value** of an investment in an equity instrument below its cost

It should be noted that the disappearance of an active market because the associate's or joint venture's equity or financial instruments are **no longer publicly traded is not evidence of impairment**.

A downgrade of an associate's or joint venture's credit rating or a decline in the fair value of the associate or joint venture, is not of itself, evidence of impairment, although it may be evidence of impairment when considered with other available information.

Impairment of goodwill included in carrying value of associate or joint venture

As discussed earlier in this unit, the goodwill on acquisition of associate or joint venture is recognized as part of the carrying amount of the net investment in associate or joint venture. Such goodwill is **not tested separately** for impairment, rather the entire carrying amount of the investment is **tested for impairment as a single asset** when there is objective evidence of impairment as mentioned above.

Any impairment loss recognized is **not allocated** to any asset, including goodwill, that forms part of the carrying amount of the net investment in the associate or joint venture.

Merged By CA - Born To Fight

Reversal of impairment loss

Any reversal of impairment loss is recognized in accordance with Ind AS 36 *'Impairment of Assets'* to the extent that the recoverable amount of the net investment subsequently increases.

Determining value in use

Impairment loss is provided by comparing the recoverable amount (higher of value in use and fair value less ***costs of disposal***) with the carrying amount of the investment.

For above purpose, an entity can determine the value in use in **either** of the following ways:

a) Method 1: Values in use shall include entity's share in the present value of estimated future cash flows expected to be generated by the associate or joint venture, including:

   i. cash flows from the operations of the associate or joint venture and

   ii. proceeds from the ultimate disposal of the investment

b) Method 2: Value in use shall include the present value of estimated future cash flows expected to arise from:

   i. dividends to be received and

   ii. proceeds from the ultimate disposal of the investment.

If appropriate assumptions are used then both the above methods will give the same results.

The recoverable amount of an investment in an associate or a joint venture shall be assessed for each associate or joint venture separately, unless the associate or joint venture does not generate cash inflows from continuing use that are largely independent of those from other assets of the entity.

6.6 DISCONTINUING THE USE OF THE EQUITY METHOD

An entity shall discontinue the use of the equity method from the date when its investment ceases to be an associate or a joint venture

The accounting consequences when an investment ceases to be an associate or a joint venture are explained below.

Investment becomes a subsidiary

If the investment becomes a subsidiary, the entity shall account for its investment in accordance with Ind AS 103 and Ind AS 110. Ind AS 103 requires revaluation of the previously held interest in the equity accounted investment at its acquisition date fair value, with recognition of any gain or loss in profit or loss.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Retained interest in the former associate or joint venture is a financial asset

Retained interest in the former associate or joint venture that is a financial asset shall be measured at fair value. The entity shall recognise in profit or loss any difference between:

- the fair value of any retained interest and any proceeds from disposing of a part interest in the associate or joint venture; and
- the carrying amount of the investment at the date the equity method was discontinued.

Following illustration explains how an entity shall record in profit or loss any gain / loss on discontinuation of equity method in such case.

Illustration 16: Recording in profit or loss of the gain / loss on discontinuation of equity method

CD Ltd. held 50% of the voting power of RS Ltd. which is a joint venture of CD Ltd. The carrying value of the investment in RS Ltd. is ₹ 1,00,000. Now out of the 50% stake, CD Ltd. has sold 20% stake in RS Ltd. to a third party for a consideration of ₹ 80,000. The fair value of the retained 30% interest is ₹ 1,20,000. Determine how much gain / loss should be recorded in profit or loss of CD Ltd.

Solution:

CD Ltd. Shall record in profit or loss difference between below:

- the fair value of any retained interest (i.e. ₹ 1,20,000) and any proceeds from disposing of a part interest in the joint venture (i.e. ₹ 80,000); and
- the carrying amount of the investment at the date the equity method was discontinued (i.e. ₹ 1,00,000).

Hence, CD Ltd. Shall record gain of ₹ 1,00,000 in profit or loss.

*****

Reclassification of items recorded in other comprehensive income

On discontinuation of equity method, any share in the other comprehensive income of associate or joint venture that was previously recognized by the entity shall be reclassified to profit or loss on the same basis as would have been required if the investee had directly disposed of the related assets or liabilities.

Example 5

An investor has recognised in past in its other comprehensive income its share of ₹ 10,000 in the cumulative exchange differences relating to a foreign operation of its associate. Now, the investment in that associate is sold and equity method of accounting is stopped. So, the investor shall reclassify the cumulative exchange differences of ₹ 10,000 recorded in its other comprehensive income to profit or loss.

The above principle also applies in case there is a reduction in the ownership interest in an associate or joint venture but the investee still continues to be an associate or joint venture. In that case, the reclassification should be done in proportion to the reduction in the ownership interest.

It may be noted that while it is not explicitly stated in Ind AS 28, it can be inferred that in case there is a reduction in the ownership interest in an associate or joint venture but the investee still continues to be an associate or joint venture, the entity should recognize gain or loss. This accounting treatment is different from the accounting for changes in ownership interest interests in a subsidiary, without losing control.

An associate becomes a joint venture and vice versa

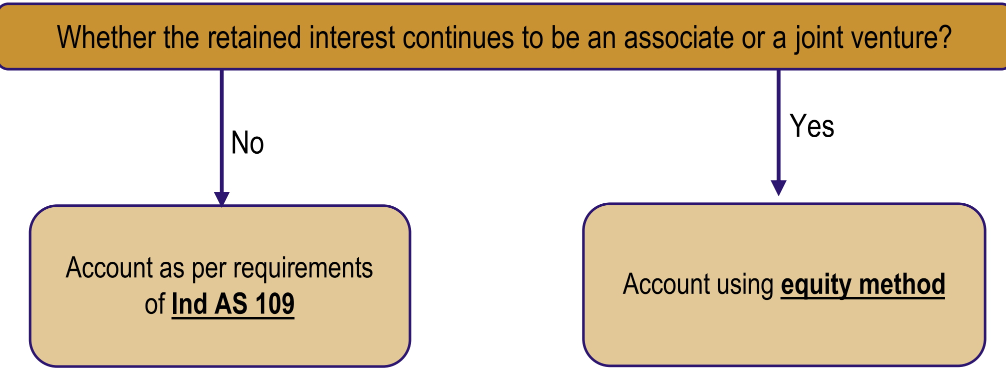
If an investment in an associate becomes an investment in a joint venture or an investment in a joint venture becomes an investment in an associate, the entity continues to apply the equity method and does not remeasure the retained interest.

6.7 CLASSIFICATION OF INVESTMENT IN ASSOCIATE OR JOINT VENTURE AS HELD FOR SALE

An entity shall apply Ind AS 105 *'Non-current Assets Held for Sale and Discontinued Operations'* to an investment, or a portion of an investment, in an associate or a joint venture that meets the criteria to be classified as held for sale.

Any **retained portion of an investment** in an associate or a joint venture that has not been classified as held for sale shall be accounted as follows:

- Till the time disposal of the portion that is classified as held for sale takes place:
  - Accounted using equity method
- After the disposal of the portion that is classified as held for sale takes place
  - Accounted as follows:



The above requirements are explained in below illustration:

Illustration 17: Investment in joint venture held for sale

Ram Ltd. holds 50% of the equity share capital of Shyam Ltd. The balance 50% equity share capital is held by another investor. Ram Ltd. has joint control over Shyam Ltd. and it is a joint venture of Ram Ltd., accounted using equity method. Now Ram Ltd. is planning to sell 10% of the equity share capital of Shyam Ltd. to a third party. Such 10% investment meets the criteria of an asset held for sale and has been measured and disclosed accordingly. Now determine how should Ram Ltd. account 40% interest retained in Shyam Ltd.

Solution:

Till the time 10% stake is sold, Ram Ltd. shall account for the retained interest of 40% as per equity method. After the sale of 10% investment, if Ram Ltd. still has joint control over Shyam Ltd. (e.g. through contractual arrangement) then it shall continue to measure that investment using equity method. However, if Ram Ltd. is not going to have joint control over Shyam Ltd. post the disposal of 10% investment then retained investment of 40% shall be accounted as per Ind AS 109.

*****

When an investment, or a portion of investment, in associate or a joint venture previously classified as held for sale **no longer meets the criteria** to be so classified, it shall be accounted for using the **equity method retrospectively** as from the date of its classification as held for sale. Financial statements for the prior periods shall be amended accordingly.

6.8 SIGNIFICANT CHANGES IN IND AS 28 FROM IAS 28 RESULTING INTO CARVE OUT

As per IFRS

IAS 28 (paragraph 35) requires that for the purpose of applying equity method of accounting in the preparation of investor's financial statements, uniform accounting policies should be used. In other words, if the associate's accounting policies are different from those of the investor, the investor should change the financial statements of the associate by using same accounting policies.

Carve out

In Ind AS 28 (paragraph 35), the phrase, 'unless impracticable to do so' has been added in the relevant requirements.

Reason

Certain associates, e.g., regional rural banks (RRBs), being associates of nationalized banks,

Merged By CA - Born To Fight

may not be in a position to use the Ind AS as these may be too advanced for the RRBs. Accordingly, the above-stated words have been included to exempt such associates.

6.9 SIGNIFICANT DIFFERENCES BETWEEN IND AS 28 AND AS 23

S. No.	Topic	Ind AS 28	AS 23
1.	Significant Influence	In Ind AS 28, 'Significant Influence' has been defined as 'power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies'. Ind AS 28 defines joint control also.	In AS 23, 'Significant Influence' has been defined as 'power to participate in the financial and/or operating policy decisions of the investee but is not control over those policies'.
2.	Consideration for significant influence	As per Ind AS 28, existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether an entity has significant influence or not.	For considering share ownership for the purpose of significant influence, potential equity shares of the investee held by investor are not taken into account as per AS 23.
3.	Application of equity method	No exemption for applying equity method is provided in Ind AS 28.	One of the exemptions from applying equity method in AS 23 is where the associate operates under severe long-term restrictions that significantly impair its ability to transfer funds to the investee.
4.	Measurement of the investment in the associate at fair value through profit or loss as per Ind AS 109	Ind AS 28 permits an entity that has an investment in an associate, a portion of which is held indirectly through venture capital organisations, or a mutual fund, unit trust and similar entities including investment-linked insurance funds, to elect to measure that portion of the investment in the associate at fair	AS 23 does not provide for the same.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

		value through profit or loss in accordance with Ind AS 109 regardless of whether these entities have significant influence over that portion of the investment.	
5.	Held for sale	Ind AS 28 requires a portion of an investment in an associate or a joint venture to be classified as held for sale if the disposal of that portion of the interest would fulfil the criteria to be classified as held for sale in accordance with Ind AS 105.	AS 23 does not specifically deal with this aspect.
6.	Accounting of investment in an associate in separate financial statements	As per Ind AS 28, in separate financial statements, investment in an associate is to be accounted for at cost or in accordance with Ind AS 109, Financial Instruments.	As per AS 23, in separate financial statements, investment in an associate is not accounted for as per the equity method, the same is accounted for in accordance with AS 13, Accounting for Investments.
7.	Difference in reporting dates	There is no limit on the length of difference in the reporting dates of the investor and the associate. As per Ind AS 28, length of difference in the reporting dates of the associate or joint venture should not be more than three months.	AS 23 permits the use of financial statements of the associate drawn upto a date different from the date of financial statements of the investor when it is impracticable to draw the financial statements of the associate upto the date of the financial statements of the investor.
8.	Accounting Policies	Both AS 23 and Ind AS 28 require that similar accounting policies should be used for preparation of investor's financial statements and in case an associate uses different accounting policies for like transactions, appropriate	AS 23 provide exemption to this that if it is not possible to make adjustments to the accounting policies of the associate, the fact shall be disclosed along with a brief description of the differences

		adjustments shall be made to the accounting policies of the associate. Ind AS 28 provides that the entity's financial statements shall be prepared using uniform accounting policies for like transactions and events in similar circumstances unless, in case of an associate, it is impracticable to do so.	between the accounting policies.
9.	Share of losses in the associate	As per Ind AS 28, carrying amount of investment in the associate or joint venture determined using the equity method together with any long-term interests that, in substance, form part of the entity's net investment in the associate or joint venture shall be considered for recognising entity's share of losses in the associate or joint venture.	As per AS 23, investor's share of losses in the associate is recognised to the extent of carrying amount of investment in the associate.
10.	Recognition of impairment loss on investment	Ind AS 28 requires that after application of equity method, including recognising the associate's or joint venture's losses, the requirements of Ind AS 109 shall be applied to determine whether it is necessary to recognise any additional impairment loss.	With regard to impairment, AS 23 requires that the carrying amount of investment in an associate should be reduced to recognise a decline, other than temporary, in the value of the investment.
11.	When investment ceases to be an associate	Ind AS 28 provides that use of equity method will be discontinued from the date when investment ceases to be an associate and in case such associates become the subsidiary, it will be accounted in accordance with Business Combination (Ind AS 103) and if the retained interest becomes a financial asset, it will measure the retained interest at fair value.	AS 23 does not deal with the situation as to associate becoming a subsidiary. However, in other case (there is some retained interest), the investment will be accounted for in accordance with AS 13- Investments and retained interest will not be fair valued under AS 23.

UNIT 7:
IND AS 27: SEPARATE FINANCIAL STATEMENTS

7.1 OBJECTIVE OF IND AS 27

The objective of Ind AS 27 is to prescribe the accounting and disclosure requirements for **investments in subsidiaries, joint ventures and associates** when an entity prepares separate financial statements.

7.2 SCOPE OF IND AS 27

Ind AS 27 shall be applied in accounting for investments in subsidiaries, joint ventures and associates when an entity

- elects, or
- is required by law,

to present separate financial statements.

It is to be noted that **Ind AS 27 does not mandate which entities produce separate financial statements**. It applies when an entity prepares separate financial statements that comply with Ind AS. However, it may be noted that as per the Companies Act, 2013, all companies covered under that Act are required to prepare financial statements.

7.3 WHAT ARE SEPARATE FINANCIAL STATEMENTS AND HOW THEY ARE PRESENTED?

What are separate financial statements?

Separate financial statements are those presented by:

- a parent (i.e. an investor with control of a subsidiary) or
- an investor with investment in an associate or a joint venture,

in which the investments are accounted for at **cost or in accordance with Ind AS 109** *'Financial Instruments'*.

How separate financial statements are presented?

Separate financial statements are presented:

- **in addition** to consolidated financial statements or

Join us t.me/caborntofight

- **in addition** to financial statements of an investor that does not have investments in subsidiaries but has investments in associates or joint ventures in which investments in associates or joint ventures are accounted for using the equity method.

There are two more scenarios in which separate financial statements are prepared:

Scenario 1

An entity that is exempted from:

- preparation of consolidated financial statements in accordance with paragraph 4(a) of Ind AS 110 (explained in detail in unit 3) or
- applying equity method as per paragraph 17 of Ind AS 28 (explained in detail in unit 6)

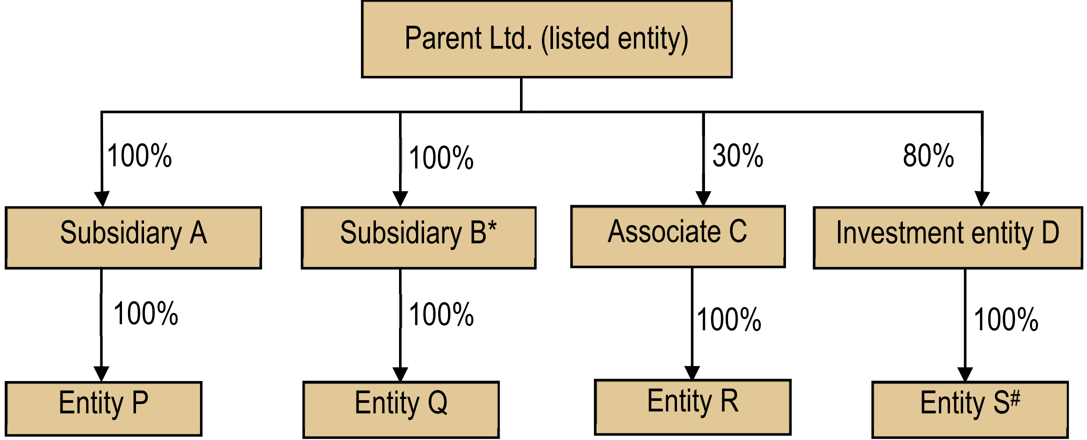
may present separate financial statements as its only financial statements.

Scenario 2

As per para 31 of Ind AS 110, an investment entity that has one or more subsidiaries and the purpose and activities of all those subsidiaries is not to provide services that relate to the investment entity's investment activities then such investment entity shall not prepare consolidated financial statements. Instead, such investments in subsidiaries are to be accounted at fair value through profit or loss as per Ind AS 109.

In such case, investment entity presents separate financial statements as its only financial statements.

Example: Following chart represents the group structure of Parent Ltd. and table below it explains the above requirements related to separate financial statements



* Subsidiary B has availed the exemption from preparation of consolidated financial statements as per paragraph 4(a) of Ind AS 110

Entity S does not provide services that relate to the Investment entity D's investment activities

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

All the above entities are incorporated under the Companies Act, 2013.

Name of the entity	Whether entity prepares consolidated financial statements?	Status for separate financial statements
Parent Ltd.	Yes	Will be prepared as it is required by Companies Act, 2013
Subsidiary A	Yes	Will be prepared as it is required by Companies Act, 2013
Subsidiary B	No	Will be prepared as it is required by Companies Act, 2013 (in this case, entity will present separate financial statements as its only financial statements)
Associate C	Yes	Will be prepared as it is required by Companies Act, 2013
Investment entity D	No	Will be prepared as it is required by Companies Act, 2013. Entity will present separate financial statements as its only financial statements
Entity P	No	These entities will prepare their financial statements as required by Companies Act 2013, however, they will not be termed as separate financial statements since these entities do not have subsidiary, associate or joint venture.
Entity Q	No	
Entity R	No	
Entity S	No	

7.4 PREPARATION OF SEPARATE FINANCIAL STATEMENTS

In this section, we will discuss about following concepts relating to accounting in separate financial statements:

- Accounting of investments in subsidiaries, associates and joint ventures
- Accounting when a parent ceases to be an investment entity or becomes an investment entity
- Accounting of dividend from subsidiary, associate or joint venture
- Reorganisation of the group structure

7.4.1 Accounting of investments in subsidiaries, associates and joint ventures

An entity shall prepare its separate financial statements in accordance with all the applicable Ind ASs except that it shall account for investments in subsidiaries, associates and joint ventures **in one of the following ways**:

- At cost, or
- In accordance with Ind AS 109 (i.e. either at fair value through profit or loss or at fair value through other comprehensive income)

The entity shall apply the same accounting for each category of investments.

Investments accounted for at cost shall be accounted for in accordance with Ind AS 105 *'Non-current Assets Held for Sale and Discontinued Operations'* when they are classified as held for sale. The measurement of investments accounted for in accordance with Ind AS 109 is not changed in such circumstances.

Example 1

An entity has invested in a subsidiary and a joint venture. Entity has elected to measure investment in subsidiary at cost and measure investment in joint venture at fair value through profit or loss in accordance with Ind AS 109. Now, at the end of the year, both these investments are held for sale. In such case, the investment in subsidiary will be measured as per Ind AS 105 i.e. at lower of its carrying amount and fair value less costs to sell. However, investment in joint venture is continued to be accounted at fair value through profit or loss as per Ind AS 109.

Investments held by investment entities and similar entities

Ind AS 110 requires an investment entity to measure its investment in subsidiaries at fair value through profit or loss as per Ind AS 109. Then the investment entity shall account for those investments **in the same i.e. at fair value through profit or loss** in the separate financial statements.

Further, Ind AS 28 provides that an when an investment in an associate or a joint venture is held by, or is held indirectly through, an entity that is a venture capital reorganization, or a mutual fund, unit trust and similar entities including investment-linked insurance funds, the entity may elect to measure investments in those associates and joint ventures at fair value through profit or loss in accordance with Ind AS 109. Hence, if an entity makes such election, then it shall also account for those investments **in the same way i.e. at fair value through profit or loss** in its separate financial statements.

7.4.2 Accounting when a parent ceases to be an investment entity or becomes an investment entity

When a parent ceases to be an investment entity, or becomes an investment entity, it shall account for the change **from the date when the change in status occurred**, as follows:

When an entity ceases to be an investment entity

In such case, the entity shall account for an **investment in a subsidiary** in either of the following ways:

Account at cost. The fair value of the subsidiary at the date of the change of status shall be used as the **deemed cost** at that date

Continue to account in accordance with **Ind AS 109**

Example 2

A Ltd. was an investment entity and was measuring its investment in subsidiary X Ltd. at fair value. On 1 April 20X1, A Ltd. ceased to be an investment entity. On that date, the fair value of investment in X Ltd. recorded in its books was ₹ 1,00,000. Now, when A Ltd. ceased to be an investment entity, it can measure the investment in X Ltd. either:

- at cost (in such case, the carrying value of ₹ 1,00,000 will be its deemed cost at the date of change in status), or
- continue to measure in accordance with Ind AS 109

When an entity becomes an investment entity

In such case, the entity shall account for an investment in a subsidiary at fair value through profit or loss in accordance with Ind AS 109.

In that case, the difference between the previous carrying amount of the subsidiary and its fair value at the date of the change of status of the investor shall be recognized as a gain or loss in profit or loss. The cumulative amount of any fair value adjustment previously recognized in other comprehensive income in respect of those subsidiaries shall be reclassified to profit or loss as if the investment entity had disposed of those subsidiaries at the date of change in status.

Example 3

A Ltd. holds investment in a subsidiary X Ltd. and it measures its investment in subsidiary at cost. On 1 April 20X1, A Ltd. becomes an investment entity. On that date, the carrying value of investment in X Ltd. recorded in its books was ₹ 1,00,000. However, the fair value of that investment on the date of change in status was ₹ 1,50,000. Hence, A Ltd. should record a gain of ₹ 50,000 (1,50,000 – 50,000) in the profit of loss.

Join us t.me/caborntofight

In this case, assume that A Ltd. was measuring the above investment at fair value through other comprehensive income in accordance with Ind AS 109 prior to change in status. The cumulative gain recorded in other comprehensive income was ₹ 50,000 and the carrying value of investment was ₹ 1,50,000. Hence, on the date of change in status, A Ltd. shall reclassify the gain of ₹ 50,000 from other comprehensive income to profit or loss as if the investment has been disposed by A Ltd. on that date.

7.4.3 Accounting of dividend from subsidiary, associate or joint venture

An entity shall recognise a dividend from a subsidiary, an associate or a joint venture in profit or loss in its separate financial statements when its right to receive the dividend is established.

Generally, the right to receive the dividend is established when the dividend is approved by the shareholders in their general meeting.

7.4.4 Reorganisation of the group structure

A parent reorganisation the structure of its group by establishing a new entity as its parent.

Ind AS 27 provides guidance on how to calculate the cost of investment when a parent reorganisation the structure of its group by establishing a new entity as its parent in a manner that satisfies the following criteria:

a) the new parent obtains control of the original parent by **issuing equity instruments** in exchange for existing equity instruments of the original parent;

b) the **assets and liabilities** of the new group and the original group are the **same** immediately before and after the reorganisation; and

c) the owners of the original parent before the reorganisation have the **same absolute and relative interests** in the net assets of the original group and the new group immediately before and after the reorganisation,

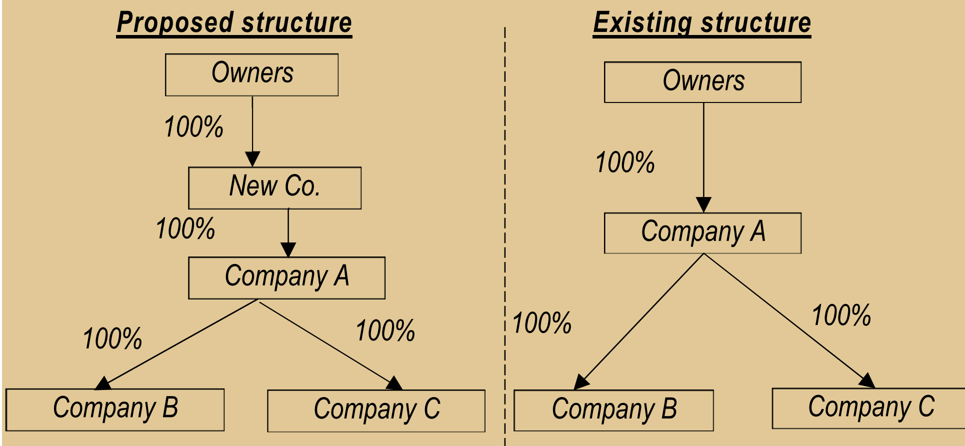
If above conditions are fulfilled and the new parent elects to account for its investment in the original parent at cost then the new parent shall measure cost at the **carrying amount of its share of the equity** items shown in the separate financial statements of the original parent at the date of the reorganisation.

This is explained in following illustration:

Join us t.me/caborntofight

Illustration 1: Reorganisation of the group structure

Following is the existing and proposed group structure of an original parent A Ltd.



As per the above structure, the Owners of Company A will transfer all their shareholding in Company A to New Co. in exchange of such shares, New Co. will issue its equity shares to the Owners. New Co. will issue the shares to the owners in the same ratio of their existing holding in Company A so that they have same absolute and relative interests in the net assets of the group immediately before and after the reorganisation. The assets and liabilities of the group immediately before and after the proposed restructuring will also be the same.

The cost of the investment in Company A in the books of the Owners is ₹ 10 lakh. Total equity of Company A (i.e. equity share capital and other equity attributable to the owners) as per its separate financial statements on the date of proposed restructuring is ₹ 15 lakh.

After the proposed restructuring, New Co. wants to record its investment in Company A at cost.

Determine how it should measure the cost of investment in Company A?

Solution:

In current case, New Co. should measure the cost of investment in Company A at the carrying amount of its share of the equity items shown in the separate financial statements of Company A at the date of the restructuring because:

a) New Co. obtains control of Company A by issuing equity instruments to the Owners in exchange for their existing equity instruments of Company A;

b) the assets and liabilities of the group immediately before and the proposed restructuring will be same; and

c) the Owners will have the same absolute and relative interests in the net assets of the group immediately before and after the proposed restructuring.

Hence, New Co. will measure the cost of investment in Company A at ₹ 15 lakh.

*****

Join us t.me/caborntofight

Merged By CA - Born To Fight

A entity that is not a parent establishes a new entity as its parent

The requirements of measuring cost of investment by a new parent as discussed above will equally apply in case where an entity that is not a parent (i.e. it does not have a subsidiary) establishes a new parent between itself and its owners.

Hence, in illustration 1 above, the same accounting treatment will have to be followed by New Co. even if Company A does not have any subsidiary.

7.5 MAJOR CHANGES IN IND AS 27 FROM IAS 27 NOT RESULTING INTO CARVE OUT

Ind AS 27, like other Ind AS, has been converged from the global standards, i.e., IFRS, which has been made applicable to the Indian entities (based on the net worth criteria) in a phased manner via Ministry of Corporate Affairs Roadmap. While converging from IAS 27, following are the carve outs given under Appendix 1 to Ind AS 27, keeping in mind, the requirements of other converged Ind AS and the economic environment in India.

IAS 27 allows the entities to use the equity method to account for investment in subsidiaries, joint ventures and associates in their Separate Financial Statements (SFS). Such option is not given in Ind AS 27, as the equity method is not a measurement basis like cost and fair value but is a manner of consolidation and therefore would lead to inconsistent accounting conceptually.

UNIT 8: DISCLOSURES

8.0 INTRODUCTION

This Unit is divided in two parts as follows:

- Part A: Disclosure of interest in other entities as per Ind AS 112
- Part B: Disclosure in separate financial statements as per Ind AS 27

Note: Only those disclosures which are significant from students' perspective have been covered here.

PART A: DISCLOSURE OF INTERESTS IN OTHER ENTITIES AS PER IND AS 112

8.1 OBJECTIVE OF IND AS 112

Ind AS 112 require an entity to disclose information (related to its interests in other entities) that enables users of its financial statements to evaluate:

the nature of, and risks associated with, its **interests in other entities** (defined below)	AND	the **effects of those interests** on its financial position, financial performance and cash flows.

Interests in other entities

Definition: For the purpose of Ind AS 112, an interest in another entity refers to **contractual and non-contractual involvement that exposes an entity to variability of returns** from the performance of the other entity. Consideration of the purpose and design of the other entity may help the reporting entity when assessing whether it has an interest in that entity and, therefore, whether it is required to provide the disclosures in Ind AS 112. That assessment shall include consideration of the risks that the other entity was designed to create and the risks the other entity was designed to pass on to the reporting entity and other parties.

- An interest in another entity can be evidenced by, but is not limited to, the holding of equity or debt instruments as well as other forms of involvement such as the provision of funding, liquidity support, credit enhancement and guarantees.

Join us t.me/caborntofight

- It includes the means by which an entity has control or joint control of, or significant influence over, another entity. An entity does not necessarily have an interest in another entity solely because of a typical customer supplier relationship.

A reporting entity is typically exposed to variability of returns from the performance of another entity by holding instruments (such as equity or debt instruments issued by the other entity) or having another involvement that absorbs variability.

Example 4

Assume a structured entity holds a loan portfolio. The structured entity obtains a credit default swap from another entity (the reporting entity) to protect itself from the default of interest and principal payments on the loans. The reporting entity has involvement that exposes it to variability of returns from the performance of the structured entity because the credit default swap absorbs variability of returns of the structured entity.

Some instruments are designed to transfer risk from a reporting entity to another entity. Such instruments create variability of returns for the other entity but do not typically expose the reporting entity to variability of returns from the performance of the other entity.

Example 5

Assume a structured entity is established to provide investment opportunities for investors who wish to have exposure to entity Z's credit risk (entity Z is unrelated to any party involved in the arrangement). The structured entity obtains funding by issuing to those investors notes that are linked to entity Z's credit risk (credit-linked notes) and uses the proceeds to invest in a portfolio of risk-free financial assets. The structured entity obtains exposure to entity Z's credit risk by entering into a credit default swap (CDS) with a swap counterparty. The CDS passes entity Z's credit risk to the structured entity in return for a fee paid by the swap counterparty. The investors in the structured entity receive a higher return that reflects both the structured entity's return from its asset portfolio and the CDS fee. The swap counterparty does not have involvement with the structured entity that exposes it to variability of returns from the performance of the structured entity because the CDS transfers variability to the structured entity, rather than absorbing variability of returns of the structured entity.

Meeting the objective

To meet the above objective, an entity shall disclose following:

Dislcosures related to interests in other entities

Significant judgements and assumptions it has made in determining:

- the nature of its interest in another entity or arrangement;
- the type of joint arrangement in which it has an interest;
- that it meets the definition of an investment entity, if applicable

Information about its interests in

- Subsidiaries;
- arrangements and associates; and
- structured entities that are not controlled by the entity (unconsolidated structured entities)

Each of the above disclosures are explained in detail subsequently in this unit.

If the disclosures required by Ind AS 112, together with disclosures required by other Ind AS, do not meet the objective mentioned above, then an entity shall disclose whatever additional information is necessary to meet that objective.

Aggregation

An entity shall decide, in the light of its circumstances, how much detail it provides to satisfy the information needs of users, how much emphasis it places on different aspects of the requirements and how it aggregates the information. It is necessary to strike a balance between burdening financial statements with excessive detail that may not assist users of financial statements and obscuring information as a result of too much aggregation.

An entity may aggregate the disclosures required by Ind AS 112 for interests in similar entities if aggregation is consistent with the disclosure objective and the requirement in next paragraph and does not obscure the information provided. An entity shall disclose how it has aggregated its interests in similar entities.

An entity **shall** present information **separately** for interests in:

a) subsidiaries;

b) joint ventures;

c) joint operations;

d) associates; and

e) unconsolidated structured entities (explained in this unit).

Merged By CA - Born To Fight

In determining whether to aggregate information, an entity shall consider quantitative and qualitative information about the different risk and return characteristics of each entity it is considering for aggregation and the significance of each such entity to the reporting entity. The entity shall present the disclosures in a manner that clearly explains to users of financial statements the nature and extent of its interests in those other entities.

Examples of aggregation levels **within the classes of entities mentioned above** that might be appropriate are:

(a) nature of activities (e.g. a research and development entity, a revolving credit card securitisation entity).

(b) industry classification.

(c) geography (e.g. country or region)

8.2 SCOPE OF IND AS 112

Scope inclusions

Disclosure requirements of Ind AS 112 **applies** to an entity that has an interest in any of the following:

Subsidiaries	Joint arrangements (i.e. joint operationss or joint ventures)	Associates	Unconsolidated structured entities

The disclosure requirements of Ind AS 112 also applies if an entity's interests listed as above are classified (or included in a disposal group that is classified) as held for sale or discontinued operations in accordance with Ind AS 105 *'Non-current Assets Held for Sale and Discontinued Operations'*.

Scope exclusions

Disclosure requirements of Ind AS 112 **does not apply** to the following:

Join us t.me/caborntofight

Post-employment benefit plans or other long-term employee benefit plans to which Ind AS 19 *'Employee Benefits'* applies.

- For example, Company A has set up an Employee Benefit Plan trust. So, Company A is not required to make diclosures as required by Ind AS 112 of its interest in such trust.

An entity's separate financial statements to which Ind AS 27 *'Separate Financial Statements'* applies. However,

- If and entity has interests in uncosolidated structured entities and prepares separate financial statements as its only financial statements then it shall apply the disclosure requirements of Ind AS 112
- An Investment entity that prepares financial statements in which all of its subsidiaries are measured at fair value through profit or loss in accordance with Ind AS 110 *'Consolidated Fiancial Statements'* shall present the disclosures relating to investment entities required by Ind AS 112

Interest held by an entity that participates in, but does not have joint control of, a joint arrangement unless that interest results in significant influence over the arrangement or is an interest in a structured entity.

Interest in another entity that is accounted for in accordance with Ind AS 109 *'Financial Instruments'*. However, an entity shall apply Ind AS 112:

- when that interest is an interest in an associate or a joint venture that, in accordance with Ind AS 28 '*Investments in Associates and Joint Ventures'* is measured at fair value through profit or loss; or
- when that interest is an interest in an unconsolidated structured entity

8.3 DISCLOSURES RELATED TO INTERESTS IN SUBSIDIARIES

An entity shall disclose information that enables users of its consolidated financial statements

Merged By CA - Born To Fight

to understand

- the composition of the group; and
- the **interest that non-controlling interests have** in the group's activities and cash flows; and

to evaluate

- the **nature and extent of significant restrictions** on its ability to access or use assets, and settle liabilities, of the group
- the **nature of, and changes in, the risks associated** with its interests in consolidated structured entities
- the **consequences of changes in its ownership interest** in a subsidiary that do not result in a loss of control; and
- the **consequences of losing control** of a subsidiary during the reporting period

When the financial statements of a subsidiary used in the preparation of consolidated financial statements are as of a date or for a period that is different from that of the consolidated financial statements, an entity shall disclose:

➢ the date of the end of the reporting period of the financial statements of that subsidiary; and

➢ the reason for using a different date or period.

8.3.1 The interest that non-controlling interests have in the group's activities and cash flows

An entity shall disclose for each of its subsidiaries that have non-controlling interests that are material to the reporting entity:

Join us t.me/caborntofight

the name of the subsidiary.

the principal place of business (and country of incorporation if different from the principal place of business) of the subsidiary.

the proportion of ownership interests held by non-controlling interests.

the proportion of voting rights held by non-controlling interests, if different from the proportion of ownership interests held.

the profit or loss allocated to non-controlling interests of the subsidiary during the reporting period.

accumulated non-controlling interests of the subsidiary at the end of the reporting period.

summarised financial information about the subsidiary (explained subsequently in this unit)

The nature and extent of significant restrictions

An entity shall disclose following:

Significant restrictions (eg statutory, contractual and regulatory restrictions) on its ability to access or use the assets and settle the liabilities of the group, such as:

- those that restrict the ability of a parent or its subsidiaries to transfer cash or other assets to (or from) other entities within the group.
- guarantees or other requirements that may restrict dividends and other capital distributions being paid, or loans and advances being made or repaid, to (or from) other entities within the group.

The **nature and extent** to which protective rights of non-controlling interests can significantly restrict the entity's ability to access or use the assets and settle the liabilities of the group (such as when a parent is obliged to settle liabilities of a subsidiary before settling its own liabilities, or approval of non-controlling interests is required either to access the assets or to settle the liabilities of a subsidiary).

The **carrying amounts** in the consolidated financial statements of the assets and liabilities to which those restrictions apply.

8.3.2 Nature of the risks associated with an entity's interests in consolidated structured entities

An entity shall disclose the terms of any contractual arrangements that could require the parent or its subsidiaries to provide financial support to a consolidated structured entity, including events or circumstances that could expose the reporting entity to a loss (e.g. liquidity arrangements or credit rating triggers associated with obligations to purchase assets of the structured entity or provide financial support).

If during the reporting period a parent or any of its subsidiaries has, without having a contractual obligation to do so, **provided financial or other support to a consolidated structured entity** (e.g. purchasing assets of or instruments issued by the structured entity), the entity shall disclose:

a) the type and amount of support provided, including situations in which the parent or its subsidiaries assisted the structured entity in obtaining financial support; and

b) the reasons for providing the support.

If during the reporting period a parent or any of its subsidiaries has, without having a contractual obligation to do so, **provided financial or other support to a previously unconsolidated structured entity** and that provision of support resulted in the entity controlling the structured entity, the entity shall disclose an explanation of the relevant factors in reaching that decision.

An entity shall disclose any current intentions to provide financial or other support to a consolidated structured entity, including intentions to assist the structured entity in obtaining financial support.

8.3.3 Consequences of changes in a parent's ownership interest in a subsidiary that do not result in a loss of control

An entity shall present a schedule that shows the effects on the equity attributable to owners of the parent of any changes in its ownership interest in a subsidiary that do not result in a loss of control.

8.3.4 Consequences of losing control of a subsidiary during the reporting period

An entity shall disclose the gain or loss, if any, calculated in accordance with Ind AS 110, and:

(a) the portion of that gain or loss attributable to measuring any investment retained in the former subsidiary at its fair value at the date when control is lost; and

(b) the line item(s) in profit or loss in which the gain or loss is recognised (if not presented separately).

Join us t.me/caborntofight

8.4 DISCLOSURES RELATED TO INTERESTS IN JOINT ARRANGEMENTS AND ASSOCIATES

An entity shall disclose information that enables users of its financial statements to evaluate:

(a) the **nature, extent and financial effects** of its interests in joint arrangements and associates, including the nature and effects of its contractual relationship with the other investors with joint control of, or significant influence over, joint arrangements and associates; and

(b) the nature of, and changes in, the **risks associated with its interests** in joint ventures and associates

The above disclosure requirements are discussed in detail in this section below.

8.4.1 Nature, extent and financial effects of an entity's interests in joint arrangements and associates

An entity shall disclose:

For each **joint arrangement and associate** that is material to the reporting entity:

- the name of the joint arrangement or associate.
- the nature of the entity's relationship with the joint arrangement or associate (by, for example, describing the nature of the activities of the joint arrangement or associate and whether they are strategic to the entity's activities).
- the principal place of business (and country of incorporation, if applicable and different from the principal place of business) of the joint arrangement or associate.
- the proportion of ownership interest or participating share held by the entity and, if different, the proportion of voting rights held (if applicable).

For each **joint venture and associate** that is material to the reporting entity:*

- whether the investment in the joint venture or associate is measured using the equity method or at fair value.
- summarised financial information about the joint venture or associate (explained subsequently in this unit)
- if the joint venture or associate is accounted for using the equity method, the fair value of its investment in the joint venture or associate, if there is a quoted market price for the investment.

Financial information (explained suequently in this unit) about the entity's investments in joint ventures and associates that are **not individually material**: *

- in aggregate for all individually immaterial joint ventures and, separately,
- in aggregate for all individually immaterial associates.

* This information is not required to be disclosed by an investment entity.

8.5 DISCLOSURES OF SUMMARISED FINANCIAL INFORMATION FOR SUBSIDIARIES, JOINT VENTURES AND ASSOCIATES

In this section, we will discuss disclosure requirements for following:

- Disclosures for subsidiary that has non-controlling interests that are material
- Disclosures for joint venture and associate

- Disclosure for subsidiary, associate or joint venture classified as held for sale

8.5.1 Disclosures for subsidiary that has non-controlling interests that are material

For each subsidiary that has non-controlling interests that are material to the reporting entity, an entity shall disclose:

a) dividends paid to non-controlling interests.

b) summarised financial information about the assets, liabilities, profit or loss and cash flows of the subsidiary that enables users to understand the interest that non-controlling interests have in the group's activities and cash flows. That information might include but is not limited to, for example, current assets, non-current assets, current liabilities, non-current liabilities, revenue, profit or loss and total comprehensive income. (This information shall be the amounts before inter-company eliminations).

8.5.2 Disclosures for joint venture and associate

For each **joint venture and associate that is material** to the reporting entity, an entity shall disclose:

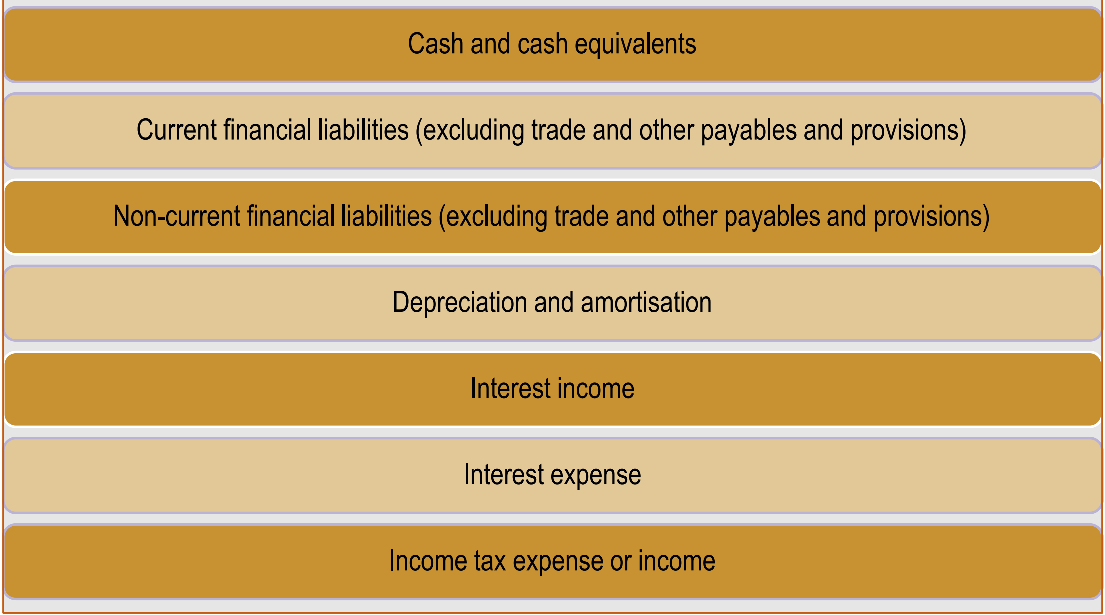
Dividends received from the joint venture or associate.

Summarised financial information for the joint venture or associate including, but not necessarily limited to:

- current assets
- non-current assets
- current liabilities
- non-current liabilities
- revenue
- profit or loss from continuing operations
- post-tax profit or loss from discontinued operations
- other comprehensive income
- total comprehensive income

In addition to the summarised financial information mentioned above, an entity shall disclose for **each joint venture that is material** to the reporting entity the amount of:

Join us t.me/caborntofight



The summarised financial information presented in accordance with above for joint venture and associate shall be the amounts included in the Ind AS financial statements of the joint venture or associate (and not the entity's share of those amounts). If the entity accounts for its interest in the joint venture or associate using the equity method:

a) the amounts included in the Ind AS financial statements of the joint venture or associate shall be adjusted to reflect adjustments made by the entity when using the equity method, such as fair value adjustments made at the time of acquisition and adjustments for differences in accounting policies.

b) the entity shall provide a reconciliation of the summarised financial information presented to the carrying amount of its interest in the joint venture or associate.

An entity may present the summarised financial information required for joint venture or associate on the basis of the joint venture's or associate's financial statements if:

a) the entity measures its interest in the joint venture or associate at fair value in accordance with Ind AS 28; and

b) the joint venture or associate does not prepare Ind AS financial statements and preparation on that basis would be impracticable or cause undue cost.

(In that case, the entity shall disclose the basis on which the summarised financial information has been prepared.)

An entity shall disclose, in aggregate, the **carrying amount of its interests in all individually immaterial joint ventures or associates** that are accounted for using the equity method. An

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

entity shall also disclose separately the aggregate amount of its share of those joint ventures' or associates':

(a) profit or loss from continuing operations.

(b) post-tax profit or loss from discontinued operations.

(c) other comprehensive income.

(d) total comprehensive income.

(An entity provides these disclosures separately for joint ventures and associates)

8.5.3 Disclosure for subsidiary, associate or joint venture classified as held for sale

When an entity's interest in a subsidiary, a joint venture or an associate (or a portion of its interest in a joint venture or an associate) is classified (or included in a disposal group that is classified) as **held for sale** in accordance with Ind AS 105, the entity is not required to disclose summarised financial information for that subsidiary, joint venture or associate as mentioned above.

Join us t.me/caborntofight

PART B:

DISCLOSURE IN SEPARATE FINANCIAL STATEMENTS AS PER IND AS 27

An entity shall apply all applicable Ind AS when providing disclosures in its separate financial statements, including the requirements mentioned below.

When a parent, in accordance with paragraph 4(a) of Ind AS 110, **elects not to prepare consolidated financial statements** and instead prepares separate financial statements, it shall disclose in those separate financial statements:

Dislcosures in separate financial statements		
The fact that: • the financial statements are separate financial statements; • the exemption from consolidation has been used; • the name and principal place of business (and country of incorporation, if different) of the entity whose consolidated financial statements that comply with Ind ASs have been produced for public use; and • the address where those consolidated financial statements are obtainable.	A list of significant investments in subsidiaries, joint ventures and associates, including: • the name of those investees. • the principal place of business (and country of incorporation, if different) of those investees. • its proportion of the ownership interest (and its proportion of the voting rights, if different) held in those investees.	A description of the method used to account for those investments.

When an investment entity that is a parent prepares separate financial statements as its only financial statements, it shall disclose that fact. The investment entity shall also present the disclosures relating to investment entities required by Ind AS 112.

When a parent (other than a parent covered by paragraphs mentioned above) or an investor with joint control of, or significant influence over, an investee prepares separate financial statements, the parent or investor shall **identify the financial statements prepared in accordance with Ind AS 110, Ind AS 111 or Ind AS 28** to which they relate. The parent or investor shall also disclose in its separate financial statements:

a) the fact that the statements are separate financial statements

b) a list of significant investments in subsidiaries, joint ventures and associates, including:

   I. the name of those investees.

II. the principal place of business (and country of incorporation, if different) of those investees.

III. its proportion of the ownership interest (and its proportion of the voting rights, if different) held in those investees.

c) a description of the method used to account for those investments.

Questions

1. X Limited was holding 100% of the equity share capital of Y Limited and Y Limited was treated as a subsidiary by X Limited. Now, Y Limited issues convertible preference shares to Z Limited. As per the issue document of convertible preference shares, Z Limited also gets the rights to participate in the relevant activities of Y Limited whereby Z Limited's consent is also necessary to pass any decision by the equity shareholder of Y Limited (i.e. X Limited). Determine how should X Limited account for its investment in Y Limited in its consolidated financial statements after the issue of convertible preference shares by Y Limited to Z Limited?

2. M Limited holds 90% interest in subsidiary N Limited. N Limited holds 25% interest in an associate O Limited. As at 31 March 20X1, the net assets of O Limited was ₹ 300 lakhs including profit of ₹ 40 lakhs for the year ended 31 March 20X1. Calculate how the investment in O Limited will be accounted in the consolidated financial statements of M Limited?

3. AB Limited holds 30% interest in an associate which it has acquired for a cost of ₹ 300 lakhs. On the date of acquisition of that stake, the fair value of net assets of the associate was ₹ 900 lakh. The value of goodwill on acquisition was ₹ 30 lakhs. After the acquisition, AB Limited accounted for the investment in the associate as per equity method of accounting and now the carrying value of such investment in the consolidated financial statements of AB Limited is ₹ 360 lakhs. The associate has now issued equity shares to some investors other than AB Limited for a consideration of ₹ 800 lakhs. This has effectively reduced the holding of AB Limited to 20%. Determine how AB Limited should account for such reduction in interest in the associate?

4. DEF Ltd. acquired 100% ordinary shares of ₹ 100 each of XYZ Ltd. on 1st October 20X1. On March 31, 20X2 the summarised Balance Sheets of the two companies were as given below:

	DEF Ltd.	XYZ Ltd.
Assets		
Property Plant Equipment		
Land & Buildings	15,00,000	18,00,000
Plant & Machinery	24,00,000	13,50,000
Investment in XYZ Ltd.	34,00,000	-
Inventory	12,00,000	3,64,000

© The Institute of Chartered Accountants of India

Total Equity & Liabilities	**4,280**	**450**

Prepare consolidated Balance Sheet after disposal as at 31st March, 20X2 when Reliance Ltd. group sold 90% shares of Reliance Jio Infocomm Ltd. to independent party for ₹ 1000 thousand.

11. Airtel Telecommunications Ltd. owns 100% share capital of Airtel Infrastructures Pvt. Ltd. On 1 April 20X1 Airtel Telecommunications Ltd. acquired a building from Airtel Infrastructures Pvt. Ltd., for ₹ 11,00,000 that the group plans to use it as its new headquarters office.

    Airtel Infrastructures Pvt. Ltd. had purchased the building from a third party on 1 April 20X0 for ₹ 10,25,000. At that time the building was assessed to have a useful life of 21 years and a residual value of ₹ 5,00,000. On 1 April 20X1 the carrying amount of the building was ₹ 10,00,000 in Airtel Infrastructures Pvt. Ltd.'s individual accounting records.

    The estimated remaining useful life of the building measured from 1 April 20X1 is 20 years and the residual value of the building is now estimated at ₹ 3,50,000. The method of depreciation is straight-line.

    Pass necessary accounting entries in individual and consolidation situations.

12. As at the beginning of its current financial year, AB Limited holds 90% equity interest in BC Limited. During the financial year, AB Limited sells 70% of its equity interest in BC Limited to PQR Limited for a total consideration of ₹ 56 crore and consequently loses

Merged By CA - Born To Fight

control of BC Limited. At the date of disposal, fair value of the 20% interest retained by AB Limited is ₹ 16 crore and the net assets of BC Limited are carry valued at ₹ 60 crore.

These net assets include the following:

(a) Debt investments classified as fair value through other comprehensive income (FVOCI) of ₹ 12 crore and related FVOCI reserve of ₹ 6 crore.

(b) Net defined benefit liability of ₹ 6 crore that has resulted in a reserve relating to net measurement losses of ₹ 3 crore.

(c) Equity investments (considered not held for trading) of ₹ 10 crore for which irrevocable option of recognising the changes in fair value in OCI has been availed and related FVOCI reserve of ₹ 4 crore.

(d) Net assets of a foreign operation of ₹ 20 crore and related foreign currency translation reserve of ₹ 8 crore.

In consolidated financial statements of AB Limited, 90% of the above reserves were included in equivalent equity reserve balances, with the 10% attributable to the non-controlling interest included as part of the carrying amount of the non-controlling interest.

What would be the accounting treatment on loss of control in the consolidated financial statements of AB Limited?

13. On 1st April 2019, Investor Ltd. acquires 35% interest in another entity, XYZ Ltd. Investor Ltd. determines that it is able to exercise significant influence over XYZ Ltd. Investor Ltd. has paid total consideration of ₹ 47,50,000 for acquisition of its interest in XYZ Ltd. At the date of acquisition, the book value of XYZ Ltd.'s net assets was ₹ 90,00,000 and their fair value was ₹ 1,10,00,000. Investor Ltd. has determined that the difference of ₹ 20,00,000 pertains to an item of property, plant and equipment (PPE) which has remaining useful life of 10 years.

    During the year, XYZ Ltd. made a profit of ₹ 8,00,000. XYZ Ltd. paid a dividend of ₹ 12,00,000 on 31st March, 2020. XYZ Ltd. also holds a long-term investment in equity securities. Under Ind AS, investment is classified as at FVTOCI in accordance with Ind AS 109 and XYZ Ltd. recognized an increase in value of investment by ₹ 2,00,000 in OCI during the year. Ignore deferred tax implications, if any.

    Calculate the closing balance of Investor Ltd.'s investment in XYZ Ltd. as at 31st March, 2020 as per the relevant Ind AS.

14. On 1st April 20X1 Alpha Ltd. commenced joint construction of a property with Gama Ltd. For this purpose, an agreement has been entered into that provides for joint operation and ownership of the property. All the ongoing expenditure, comprising maintenance plus borrowing costs, is to be shared equally. The construction was completed on 30th September

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

20X1 and utilisation of the property started on 1st January 20X2 at which time the estimated useful life of the same was estimated to be 20 years.

Total cost of the construction of the property was ₹ 40 crores. Besides internal accruals, the cost was partly funded by way of loan of ₹ 10 crores taken on 1st January 20X1. The loan carries interest at an annual rate of 10% with interest payable at the end of year on 31st December each year. The company has spent ₹ 4,00,000 on the maintenance of such property.

The company has recorded the entire amount paid as investment in Joint Venture in the books of accounts. Suggest the suitable accounting treatment of the above transaction as per applicable Ind AS.

15. Gamma Limited, a parent company, is engaged in manufacturing and retail activities. The group holds investments in different entities as follows:

- Gamma Limited holds 100% Investment in G Limited and D Limited;
- G Limited and D Limited hold 60% and 40% in GD Limited respectively;
- Delta Limited is a 100% subsidiary of GD Limited

Firstly, Gamma Limited wants you to suggest whether GD Limited can avail the exemption from the preparation and presentation of consolidated financial statements as per applicable Ind AS?

Secondly, if all other facts remain the same as above except that G Limited and D Limited are both owned by an Individual (say, Mr. X) instead of Gamma Limited, then explain whether GD Limited can avail the exemption from the preparation and presentation of consolidated financial statements.

Answers

1. As per the issue document of convertible preference shares, unanimous consent of both X Limited and Z Limited are required to pass any decision about the relevant activities of Y Limited. Hence, Y Limited is jointly controlled by X Limited and Z Limited and thereby, Y Limited becomes a joint arrangement between X Limited and Z Limited.

Y Limited is structured through a separate vehicle. The legal form of Y Limited, terms of the contractual arrangement or other facts and circumstances do not give X Limited and Z Limited rights to the assets, and obligations for the liabilities, relating to Y Limited. Hence, Y Limited is a joint venture between X Limited and Z Limited.

When the convertible preference shares are issued to Z Limited, X Limited losses control over Y Limited. Hence X Limited should derecognise the assets and liabilities of Y Limited from its consolidated financial statements. 100% equity shares in Y Limited is still held by X Limited. Hence such investment would be accounted at fair value on the date of loss of

control by X Limited. The difference between the fair value of 100% equity shares retained in Y Limited and the carrying value of assets and liabilities of Y Limited derecognised is recognised in profit or loss of X Limited. After the loss of control, the investment in Y Limited is accounted as per equity method of accounting by X Limited whereby the investment value in Y Limited will be adjusted for the change in the X Limited's share of the net assets Y Limited post the date of loss of control. Also, the difference between the fair value of investment in Y Limited and fair value of net identifiable assets of Y Limited shall be goodwill or capital reserve.

2. Since N Limited is a subsidiary of M Limited, the consolidated financial statements of M Limited will include 100% amounts of the consolidated financial statements of N Limited (including investment in O Limited accounted for using equity method). Accordingly, the investment in O Limited will be accounted as follows in the consolidated financial statements of M Limited:

		₹' lakh
Investment in O Limited (300 x 25%)		75
Share in profit of O Limited		
Attributable to M Limited (40 x 25% x 90%)	9	
Attributable to Non-controlling interest of N Limited (50 x 25% x 10%)	1	10

3. Because of the issue of shares by associate to other investors, AB Limited has effectively sold 10% (30 – 20) of its interest in the associate. The gain / loss on reduction in interest in associate in calculated as follows:

	₹' lakhs
AB Limited's share in the consideration received by the associate for issue of shares (800 x 20%) (1)	160
Less: Carrying value of interest sold (360 x 1/3)(2)	(120)
Gain on reduction in interest in associate(3)	**40**

Notes:

(1) The share in the consideration received by associate on issue of shares (i.e. ₹ 160 lakhs) would be recorded as part of investment in associate.

(2) The carrying amount of interest sold (i.e. ₹ 120 lakhs) will be derecognised, including proportionate goodwill of ₹ 10 lakhs (30 x 1/3).

(3) Gain of ₹ 40 lakhs will be recorded in the profit or loss.

4. **Consolidated Balance Sheet of DEF Ltd. and its subsidiary, XYZ Ltd. as at 31st March, 20X2**

Particulars	Note No.	₹
I. Assets		
(1) Non-current assets		
(i) Property Plant & Equipment	1	86,00,000
(2) Current Assets		
(i) Inventories	2	17,14,000
(ii) Financial Assets		
(a) Trade Receivables	3	9,98,000
(b) Cash & Cash equivalents	4	2,25,000
Total Assets		**1,15,37,000**
II. Equity and Liabilities		
(1) Equity		
(i) Equity Share Capital	5	50,00,000
(ii) Other Equity	6	49,92,000
(2) Current Liabilities		
(i) Financial Liabilities		
(a) Trade Payables	7	7,45,000
(b) Short term borrowings	8	8,00,000
Total Equity & Liabilities		**1,15,37,000**

Notes to Accounts

			₹
1.	**Property Plant & Equipment**		
	Land & Building	43,00,000	
	Plant & Machinery	43,00,000	86,00,000
2.	**Inventories**		
	DEF Ltd.	12,00,000	
	XYZ Ltd.	5,14,000	17,14,000

3.	**Trade Receivables**		
	DEF Ltd.	5,98,000	
	XYZ Ltd.	4,00,000	9,98,000
4.	**Cash & Cash equivalents**		
	DEF Ltd.	1,45,000	
	XYZ Ltd.	80,000	2,25,000
7.	**Trade payable**		
	DEF Ltd.	4,71,000	
	XYZ Ltd.	2,74,000	7,45,000
8.	**Shorter-term borrowings**		
	Bank overdraft		8,00,000

Statement of Changes in Equity:

5. Equity share Capital

Balance at the beginning of the reporting period	Changes in Equity share capital during the year	Balance at the end of the reporting period
50,00,000	0	50,00,000

6. Other Equity

	Share application money pending allotment	Equity component of compound financial instrument	Reserves & Surplus			Total
			Capital reserve	Retained Earnings	Other Reserves	
Balance at the beginning				0	24,00,000	24,00,000
Total comprehensive income for the year			0	5,72,000		5,72,000
Dividends			0	(2,00,000)		(2,00,000)
Total						

comprehensive income attributable to parent			0	3,35,000		3,35,000
Gain on Bargain purchase			18,85,000			18,85,000
Balance at the end of reporting period			18,85,000	7,07,000	24,00,000	49,92,000

It is assumed that there exists no clear evidence for classifying the acquisition of the subsidiary as a bargain purchase and, hence, the bargain purchase gain has been recognized directly in capital reserve. If, however, there exists such a clear evidence, the bargain purchase gain would be recognized in other comprehensive income and then accumulated in capital reserve. In both the cases, closing balance of capital reserve will be ₹ 18,85,000.

Working Notes:

1. **Adjustments of Fair Value**

   The Plant & Machinery of XYZ Ltd. would stand in the books at ₹ 14,25,000 on 1st October, 20X1, considering only six months' depreciation on ₹ 15,00,000 total depreciation being ₹ 1,50,000. The value put on the assets being ₹ 20,00,000 there is an appreciation to the extent of ₹ 5,75,000.

2. **Acquisition date profits of XYZ Ltd.** ₹

Reserves on 1.4. 20X1	10,00,000
Profit & Loss Account Balance on 1.4. 20X1 Profit for 20X2: Total ₹ 8,20,000 less ₹ 1,00,000 (3,00,000 – 2,00,000) i.e. ₹ 7,20,000; for 6 months i.e. up to 1.10.20X1	3,00,000
Total Appreciation including machinery appreciation (10,00,000 1,50,000 + 5,75,000 – 1,00,000)	3,60,000
Share of DEF Ltd.	16,25,000
	32,85,000

Merged By CA - Born To Fight

3. Post-acquisition profits of XYZ Ltd. ₹

Profit after 1.10. 20X1 [8,20,000-1,00,000]x 6/12	3,60,000
Less: 10% depreciation on ₹ 20,00,000 for 6 months less depreciation already charged for 2nd half of 20X1-20X2 on ₹ 15,00,000 (1,00,000-75,000)	(25,000)
Share of DEF Ltd.	3,35,000

4. Consolidated total comprehensive income ₹

DEF Ltd.	
Retained earnings on 31.3.20X2	5,72,000
Less: Retained earnings as on 1.4.20X1	(0)
Profits for the year 20X1-20X2	5,72,000
Less: Elimination of intra-group dividend	(2,00,000)
Adjusted profit for the year	3,72,000
XYZ Ltd.	
Adjusted profit attributable to DEF Ltd. (W.N.3)	3,35,000
Consolidated profit or loss for the year	7,07,000

5. No Non-controlling Interest as 100% shares of XYZ Ltd. are held by DEF Ltd.

6. Gain on Bargain Purchase ₹

Amount paid for 20,000 shares		34,00,000
Par value of shares	20,00,000	
DEF Ltd.'s share in acquisition date profits of XYZ Ltd.	32,85,000	(52,85,000)
Gain on Bargain Purchase		18,85,000

7. Value of Plant & Machinery ₹

DEF Ltd.		24,00,000
XYZ Ltd.	13,50,000	
Add: Appreciation on 1.10. 20X1	5,75,000	
	19,25,000	
Add: Depreciation for 2nd half charged on pre-revalued value	75,000	
Less: Depreciation on ₹ 20,00,000 for 6 months	(1,00,000)	19,00,000
		43,00,000

	3,85,000	
Add: Depreciation for 2nd half charged on pre-revalued value	15,000	
Less: Depreciation on ₹ 4,00,000 for 6 months	(20,000)	3,80,000
		8,60,000

7. Profit & Loss account consolidated

Ram Ltd. (as given)	1,14,400	
Less: Dividend	(24,000)	90,400
Share of Ram Ltd. in post-acquisition profits		40,200
		1,30,600

6. Blue Heavens Ltd. consolidated balance sheet at 31 March 20X2 will be calculated as follows: **(in lakhs)**

	Blue Heavens Ltd.	Orange County Ltd.	Consolidation adjustments	Consolidated Blue Heavens Ltd.
	Carrying amount	Carrying amount		
Assets				
Non-current assets				
Goodwill			1,300 (WN 1)	1,300
Buildings and other PPE	7,000	3,000	300	10,300
Financial Assets				
Investment in Orange County Ltd.	6,000		(6,000)	
Current assets				
Inventories	700	500	100	1,300
Financial Assets				
Trade receivables	300	250		550
Cash	1,500	700		2,200
Total assets	**15,500**	**4,450**		**15,650**

Equity and liabilities				
Equity				
Share capital	5,000	2,000	(2,000)	5,000
Other Equity	10,200	2,300	(2,300)	10,200
Trade payable	300	150		450
Total liabilities and equity	**15,500**	**4,450**		**15,650**

Consolidation involves:

- Adding the balance sheet of the parent and its subsidiary together line by line.
- Eliminating the carrying amount of the parent's investment in the subsidiary (because it is replaced by the goodwill and the fair value of the assets, liabilities and contingent liabilities acquired) and the pre-acquisition equity of the subsidiary (because that equity was not earned or contributed by the group but is part of what was purchased) and recognising the fair value adjustments together with the goodwill asset that arose on acquisition of the subsidiary.

1.	Working for goodwill:	(₹ in lakhs)
	Consideration paid	6,000
	Less: Acquisition date fair value of Orange County Ltd. net assets	(4,700)
	Goodwill	1,300

2. Working for the acquisition date fair value of Orange County Ltd. net assets: Acquisition date fair value of acquiree (Orange County Ltd.) assets

Buildings and other PPE	3,300
Inventories	600
Trade receivables	250
Cash	700
Less: fair value of trade payables	(150)
Fair value of net assets acquired	4,700

7. Non-controlling interest

= 25 % × Orange County Ltd. identifiable net assets at fair value of ₹ 4,700

= ₹ 1,175.

Blue Heavens Ltd.'s consolidated balance sheet at 31 March 20X2 will be calculated as follows: **(in lakhs)**

	Blue Heavens Ltd.	**Orange County Ltd.**	**Consolidation adjustments**	**Consolidated Blue Heavens Ltd.**
	Carrying amount	**Carrying amount**		
Assets				
Non-current assets				
Goodwill			975 (WN 1)	975
Buildings and other PPE	7,000	3,000	300	10,300

Investment in Orange County Ltd.	4,500		(4,500)	
Current assets				
Inventories	700	500	100	1,300
Financial Assets				
Trade receivables	300	250		550
Cash	3,000	700		3,700
Total assets	**15,500**	**4,450**		**16,825**
Equity and liabilities				
Equity				
Share capital	5,000	2,000	(2,000)	5,000
Other Equity	10,200	2,300	(2,300)	10,200
Non-controlling interest			1,175	1,175
Current liabilities				
Financial Liabilities				
Trade payables	300	150		450
Total liabilities and equity	**15,500**	**4,450**		**16,825**

Note: In this question, Blue Heavens Ltd.'s (and consequently the group's) cash balance is ₹ 1,500 lakh higher than in Question above because, here Blue Heavens Ltd. paid ₹ 1,500 less to acquire Orange County Ltd. (i.e. ₹ 6,000 less ₹ 4,500).

Join us t.me/caborntofight

1. **Working for goodwill**:

	(₹ in lakhs)
Consideration paid	4,500
Non- controlling interest	1,175
Less: Acquisition date fair value of Orange County Ltd. net assets	
(cal. as above)	4,700
Goodwill	975

(Goodwill recognized in the consolidated balance sheet relates solely to the acquirer's proportion of the subsidiary; it does not include the non-controlling interest's share).

8. Alternative I for calculation of Non-controlling Interest:

The Non-controlling Interest proportion of Orange County Ltd. is 25%.

At 31 March 20X3, the NCI in the consolidated balance sheet would be calculated as:

	₹ (lakh)
NCI at date of acquisition (31 March 20X2) (see solution to Question 7)	1,175
NCI's share of profit for the year ended 31 March 20X3, being 25% Of ₹ 435 lakh (being ₹ 550 profit of Orange County Ltd. as per Orange County Ltd. financial statements less ₹ 100 group inventory Fair value adjustment less ₹ 15 group depreciation on building fair value adjustment)*	109
NCI as at 31 March 20X3	1,284

*In calculating the NCI's share of profit for the year ended 31 March 20X3, no deduction is made for goodwill amortization because, as explained above, the goodwill arising on consolidation relates solely to the acquirer's proportion of the subsidiary and does not include the non-controlling interest's share.

Alternative II for calculation of Non-controlling Interest:

As an alternative to the above three-step approach, at 31 March 20X3 the NCI in the consolidated balance sheet is calculated as 25% (the NCI's proportion) of ₹ 5,135, which is ₹ 1,284. ₹ 5,135 is Orange County Ltd. net assets at 31 March 20X3 as shown in Orange County Ltd. balance sheet (₹ 4,850, being ₹ 5,020 assets less ₹ 170 liabilities) plus the fair value adjustment to those assets as made in preparing the group balance sheet (₹ 285, being the fair value adjustment in respect of Orange County Ltd. building, ₹ 300, less one year's depreciation of that adjustment, ₹ 15).

Total assets	**16,350**	**5,020**		**18,032**
Equity and liabilities Equity				
Share capital	5,000	2,000	(2,000)	5,000
Other Equity	11,000	2,850	(2,622) (WN 5)	11,228
Non-controlling interest			1,284	1,284
Current liabilities Financial Liabilities				
Trade payables	350	170		520
Total liabilities and equity	**16,350**	**5,020**		**18,032**

Consolidation involves:

- Adding the balance sheet of the parent and its subsidiary together line by line.
- Eliminating the carrying amount of the parent's investment in the subsidiary (because it is replaced by the goodwill and the fair value of the assets, liabilities and contingent liabilities acquired) and the pre-acquisition equity of the subsidiary (because that equity was not earned or contributed by the group but is part of what was purchased), and recognising the fair value adjustments together with the goodwill asset that arose on acquisition of the subsidiary as adjusted to reflect the first year post-acquisition
- Recognising the non-controlling interest in the net assets of Entity B.

Working Notes:

(1) Cost of sales adjustment:

₹ 100 = fair value adjustment in respect of inventories at 31 March 20X2.

(2) Administrative expenses adjustment:

₹ 113 = Impairment of goodwill ₹ 98 (WN 3) + additional depreciation on building ₹ 15 (WN 4).

For simplicity it is assumed that all the goodwill impairment and the additional depreciation on buildings (on account of fair value adjustment) is adjusted against administrative expenses.

(3) Working for goodwill:

Goodwill at the acquisition date, ₹ 975, less accumulated impairment, ₹ 98 = ₹ 877.

(4) Working for building consolidation adjustment:

The fair value adjustment at 31 March 20X2 in respect of Orange County Ltd. building was ₹ 300, that is, the carrying amount at 31 March 20X2 was ₹ 300 lower than was recognized in the group's consolidated balance sheet. The building is being depreciated over 20 years from 31 March 20X2. Thus, at 31 March 20X3 the adjustment required on consolidation to the balance sheet will be ₹ 285, being ₹ 300 × 19/20 years' estimated useful life remaining. The additional depreciation recognized in the consolidated statement of comprehensive income is ₹ 15 (being ₹ 300 x 1/20).

(5) Reserves adjustment:

₹ 2,300 adjustment at the acquisition date (Question 7)

plus ₹ 98 (WN 3) impairment of goodwill

plus ₹ 15 (WN 4) additional depreciation on building

plus ₹ 100 (WN 1) fair value adjustment in respect of inventories

plus ₹ 109 NCI's share of Orange County Ltd. profit for the year (as included in the consolidated statement of comprehensive income)

= ₹ 2,622.

8. When 100% shares sold to independent party Consolidated Balance Sheet of P Pvt. Ltd. and its remaining subsidiaries as at 31st March, 20X2

12. Paragraph 25 of Ind AS 110 states that if a parent loses control of a subsidiary, the parent:

(a) derecognises the assets and liabilities of the former subsidiary from the consolidated balance sheet.

(b) recognises any investment retained in the former subsidiary at its fair value when control is lost and subsequently accounts for it and for any amounts owed by or to the former subsidiary in accordance with relevant Ind ASs. That fair value shall be regarded as the fair value on initial recognition of a financial asset in accordance with Ind AS 109 or, when appropriate, the cost on initial recognition of an investment in an associate or joint venture.

(c) recognises the gain or loss associated with the loss of control attributable to the former controlling interest."

Paragraph B98(c) of Ind AS 110 states that on loss of control over a subsidiary, a parent shall reclassify to profit or loss, or transfer directly to retained earnings if required by other Ind AS, the amounts recognized in other comprehensive income in relation to the subsidiary on the basis specified in paragraph B99.

As per paragraph B99, if a parent loses control of a subsidiary, the parent shall account for all amounts previously recognized in other comprehensive income in relation to that subsidiary on the same basis as would be required if the parent had directly disposed of the related assets or liabilities.

Therefore, if a gain or loss previously recognized in other comprehensive income would be reclassified to profit or loss on the disposal of the related assets or liabilities, the parent shall reclassify the gain or loss from equity to profit or loss (as a reclassification adjustment) when it loses control of the subsidiary. If a revaluation surplus previously recognized in other comprehensive income would be transferred directly to retained earnings on the disposal of the asset, the parent shall transfer the revaluation surplus directly to retained earnings when it loses control of the subsidiary.

In view of the basis in its consolidated financial statements, AB Limited shall:

(a) re-classify the FVOCI reserve in respect of the debt investments of ₹ 5.4 crore (90% of ₹ 6 crore) attributable to the owners of the parent to the statement of profit or loss in accordance with paragraph B5.7.1A of Ind AS 109, Financial Instruments which requires that the cumulative gains or losses previously recognised in OCI shall be recycled to profit and loss upon derecognition of the related financial asset. This is reflected in the gain on disposal. Remaining 10% (i.e., ₹ 0.6 crore) relating to non-controlling interest (NCI) is included as part of the carrying amount of the non-controlling interest that is derecognised in calculating the gain or loss on loss of control of the subsidiary;

(b) transfer the reserve relating to the net measurement losses on the defined benefit liability of ₹ 2.7 crore (90% of ₹ 3 crore) attributable to the owners of the parent within

equity to retained earnings. It is not reclassified to profit or loss. The remaining 10% (i.e., ₹ 0.3 crore) attributable to the NCI is included as part of the carrying amount of NCI that is derecognised in calculating the gain or loss on loss of control over the subsidiary. No amount is reclassified to profit or loss, nor is it transferred within equity, in respect of the 10% attributable to the non-controlling interest.

(c) reclassify the cumulative gain on fair valuation of equity investment of ₹ 3.6 crore (90% of ₹ 4 crore) attributable to the owners of the parent from OCI to retained earnings under equity as per paragraph B5.7.1 of Ind AS 109, Financial Instruments, which provides that in case an entity has made an irrevocable election to recognise the changes in the fair value of an investment in an equity instrument not held for trading in OCI, it may subsequently transfer the cumulative amount of gains or loss within equity. Remaining 10% (i.e., ₹ 0.4 crore) related to the NCI are derecognised along with the balance of NCI and not reclassified to profit and loss.

(d) reclassify the foreign currency translation reserve of ₹ 7.2 crore (90% × ₹ 8 crore) attributable to the owners of the parent to statement of profit or loss as per paragraph 48 of Ind AS 21, The Effects of Changes in Foreign Exchange Rates, which specifies that the cumulative amount of exchange differences relating to the foreign operation, recognised in OCI, shall be reclassified from equity to profit or loss on the disposal of foreign operation. This is reflected in the gain on disposal. Remaining 10% (i.e., ₹ 0.8 crore) relating to the NCI is included as part of the carrying amount of the NCI that is derecognised in calculating the gain or loss on the loss of control of subsidiary, but is not reclassified to profit or loss in pursuance of paragraph 48B of Ind AS 21, which provides that the cumulative exchange differences relating to that foreign operation attributed to NCI shall be derecognised on disposal of the foreign operation, but shall not be reclassified to profit or loss.

The impact of loss of control over BC Limited on the consolidated financial statements of AB Limited is summarized below:

(₹ in crore)

Particular		Amount (Dr)	Amount (Cr)	PL Impact	RE Impact

Adjustment to reflect effect of fair valuation [35% of (₹ 20,00,000/10 years)]	(70,000)	
Share of profit in XYZ Ltd. recognised in income by Investor Ltd.		**2,10,000**
Long term equity investment		
FVTOCI gain recognised in OCI (35% of ₹ 2,00,000)		70,000
Dividend received by Investor Ltd. during the year [35% of ₹ 12,00,000]		(4,20,000)
Closing balance of Investor Ltd.'s investment in XYZ Ltd.		**46,10,000**

14. As provided in Ind- AS 111 - Joint Arrangements - this is a joint arrangement because two or more parties have joint control of the property under a contractual arrangement. The arrangement will be regarded as a joint operation because Alpha Ltd. and Gama Ltd. have rights to the assets and obligations for the liabilities of this joint arrangement. This means that the company and the other investor will each recognise 50% of the cost of constructing the asset in property, plant and equipment.

The borrowing cost incurred on constructing the property should under the principles of Ind AS 23 'Borrowing Costs', be included as part of the cost of the asset for the period of construction.

In this case, the relevant borrowing cost to be included is ₹ 50,00,000 (₹ 10,00,00,000 x 10% x 6/12).

The total cost of the asset is ₹ 40,50,00,000 (₹ 40,00,00,000 + ₹ 50,00,000) ₹ 20,25,00,000 crores is included in the property, plant and equipment of Alpha Ltd. and the same amount in the property, plant and equipment of Gama Ltd.

The depreciation charge for the year ended 31 March 20X2 will therefore be ₹ 1,01,25,000 (₹ 40,50,00,000 x 1/20 x 6/12) ₹ 50,62,500 will be charged in the statement of profit or loss of the company and the same amount in the statement of profit or loss of Gama Ltd.

The other costs relating to the arrangement in the current year totalling ₹ 54,00,000 (finance cost for the second half year of ₹ 50,00,000 plus maintenance costs of ₹ 4,00,000) will be charged to the statement of profit or loss of Alpha Ltd. and Gama Ltd. in equal proportions- ₹ 27,00,000 each.

15. As per paragraph 4(a) of Ind AS 110, an entity that is a parent shall present consolidated financial statements. This Ind AS applies to all entities, except as follows:

A parent need not present consolidated financial statements if it meets all the following conditions:

Merged By CA - Born To Fight

(i) it is a wholly-owned subsidiary or is a partially-owned subsidiary of another entity and all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the parent not presenting consolidated financial statements;

(ii) its debt or equity instruments are not traded in a public market (a domestic or foreign stock exchange or an over-the-counter market, including local and regional markets);

(iii) it did not file, nor is it in the process of filing, its financial statements with a securities commission or other regulatory organisation for the purpose of issuing any class of instruments in a public market; and

(iv) its ultimate or any intermediate parent produces financial statements that are available for public use and comply with Ind ASs, in which subsidiaries are consolidated or are measured at fair value through profit or loss in accordance with this Ind AS.

In accordance with the above, it may be noted that as per paragraph 4(a)(i) above, a parent need not present consolidated financial statements if it is a:

— wholly-owned subsidiary; or

— is a partially-owned subsidiary of another entity and all its other owners, including those not otherwise entitled to vote, have been informed about, and do not object to, the parent not presenting consolidated financial statements.

Although GD Limited is a partly-owned subsidiary of G Limited, it is the wholly-owned subsidiary of Gamma Limited (and therefore satisfies the condition 4(a)(i) of Ind AS 110 without regard to the relationship with its immediate owners, i.e. G Limited and D Limited). Thus, GD Limited being the wholly owned subsidiary fulfils the conditions as mentioned under paragraph 4(a)(i) and is not required to inform its other owner D Limited of its intention not to prepare the consolidated financial statements.

Thus, in accordance with the above, GD Limited may take the exemption given under paragraph 4(a) of Ind AS 110 from presentation of consolidated financial statements.

In Alternative Scenario, where both G Limited and D Limited are owned by an individual Mr. X, then GD Limited is ultimately wholly in control of Mr. X (i.e., an individual) and hence it cannot be considered as a wholly owned subsidiary of an entity.

This is because Ind AS 110 makes use of the term 'entity' and the word 'entity' includes a company as well as any other form of entity. Since, Mr. X is an 'individual' and not an 'entity', therefore, GD Limited cannot be considered as wholly owned subsidiary of an entity.

Therefore, in the given case, GD Limited is a partially-owned subsidiary of another entity. Accordingly, in order to avail the exemption under paragraph 4(a), its other owner, D Limited should be informed about and do not object to GD Limited not presenting consolidated financial statements. Further, for the purpose of consolidation of G Limited and D Limited, GD Limited will be required to provide relevant financial information as per Ind AS.

CHAPTER 14

INDIAN ACCOUNTING STANDARD 101: FIRST-TIME ADOPTION OF IND AS

LEARNING OUTCOMES

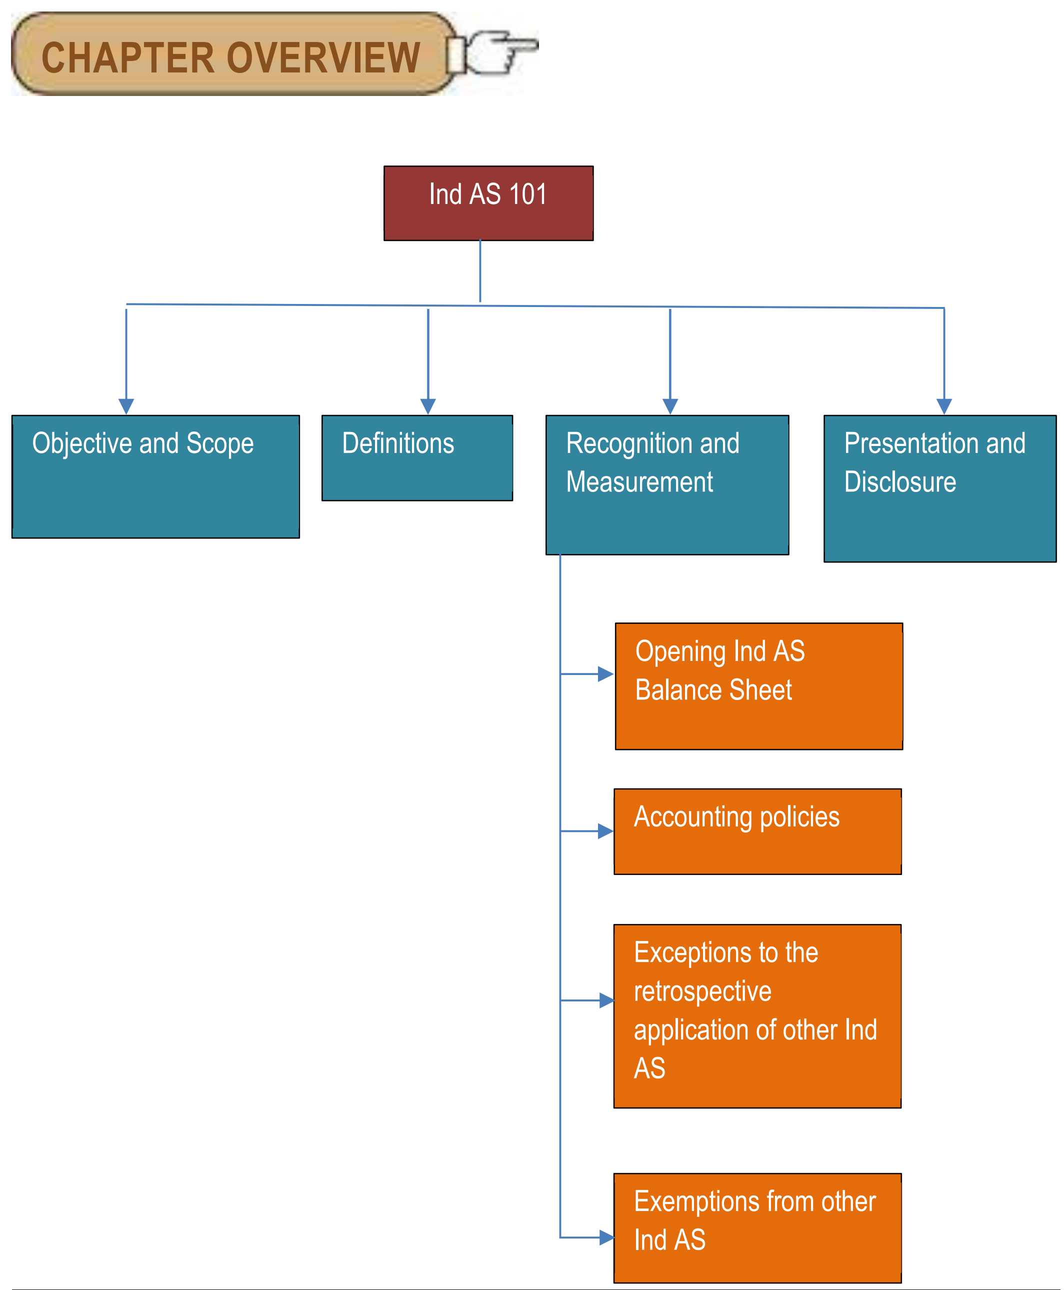
After studying this chapter, you will be able to:

- Understand the objective for issuing this standard
- Appreciate the applicability and non-applicability of this standard
- Define the relevant terms like 'First Ind AS Financial Statements', 'First –time adopter', 'Opening Ind AS Balance sheet', 'Date of Transition to Ind AS', 'First Ind AS reporting period', 'Deemed cost' and 'Previous GAAP'
- Apply the recognition and measurement principles in the preparation of opening Ind AS Balance Sheets
- Evaluate the mandatory exceptions in which Ind AS prohibits retrospective application of Ind AS
- Examine when Ind AS 101 grants voluntary exemptions from some specific requirements of other Ind AS
- Know the carve outs in Ind AS 101 from IFRS 1

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

CHAPTER OVERVIEW



1. INTRODUCTION

Ind AS 101 prescribes the accounting principles for first - time adoption of Ind AS. It lays down various 'transition' requirements when a company adopts Ind AS for the first time, i.e., a move from Accounting Standards (Indian GAAP) to Ind AS.

Conceptually, the accounting under Ind AS should be applied retrospectively at the time of transition to Ind AS. However, Ind AS 101 grants limited **exemptions** from these requirements in specified areas where the cost of complying with them would be likely to exceed the benefits to users of financial statements. Ind AS 101 also prohibits retrospective application of Ind AS in some areas (called **exceptions**), particularly where retrospective application would require judgments by management about past conditions after the outcome of a particular transaction is already known.

Ind AS 101 also prescribes presentation and disclosure requirements to explain the transition to the users of financial statements including explaining how the transition from Indian GAAP to Ind AS affected the company's financial position, financial performance and cash flows.

Ind AS 101 does not provide any exemption from the disclosure requirements in other Ind AS.

2. OBJECTIVE

The objective of this Ind AS is to ensure that an entity's first Ind-AS financial statements, and its interim financial reports for part of the period covered by those financial statements, contain high quality information that:

- is transparent for users and comparable;
- provides a suitable starting point; and
- at a cost that does not exceed the benefits.

3. DEFINITIONS

1. First Ind AS Financial Statements

- The first annual financial statements in which an entity adopts Ind AS, by an explicit and unreserved statement of compliance with Ind AS.
- This means compliance with ALL Ind-AS, partial compliance is not enough to make entity Ind AS compliant.

Join us t.me/caborntofight

2. First –time adopter

An entity that presents its first Ind AS financial statements, that entity is known as first time adopter

3. Opening Ind AS Balance sheet

An entity's balance sheet at the date of transition to Ind AS

4. Date of Transition to Ind AS

The beginning of the earliest period for which an entity presents full comparative information under Ind ASs in first Ind AS Financial statements.

Illustration 1

X Ltd. is required to adopt Ind AS from April 1, 20X1, with comparatives for one year, i.e., for 20X0-20X1.

What will be its date of transition?

Solution

The date of transition for X Ltd. will be April 1, 20X0 being the beginning of the earliest comparative period presented. To explain it further, X Ltd. is required to adopt an Ind AS from April 1, 20X1 (i.e. year 20X1-20X2), and it will give comparatives as per Ind AS for 20X0-20X1. Accordingly, the beginning of the comparative period will be April 1, 20X0 which will be considered as date of transition.

*****

5. First Ind AS reporting period

- The latest reporting period covered by an entity's first Ind AS financial statements

Example 1

XYZ Ltd. is a BSE listed company having net worth of ₹ 100 cr. XYZ Ltd. has to prepare financial statements as per Ind AS from 1st April 20X1.

The first Ind AS Financial Statements would be for period ending as on 31.3.20X2

First–time adopter - "XYZ Ltd" with effect from 1.4.20X1

Opening Ind AS Balance sheet – 1.4.20X0

Date of Transition to Ind AS – 1.4.20X0

First Ind AS reporting period – 1.4.20X1 to 31.3.20X2

The financial statements for the period 1.4.20X0 to 31.3.20X1 shall be the comparative period for the first Ind AS reporting period.

Join us t.me/caborntofight

Merged By CA - Born To Fight

6. Deemed cost

An amount used as a surrogate for cost or depreciated cost at a given date. Subsequent depreciation or amortisation assumes that the entity had initially recognised the asset or liability at the given date and that its cost was equal to the deemed cost. This definition will be used in measurement, at the date of transition to Ind AS, of

(i) investments in subsidiaries, joint ventures and associates

(ii) property, plant and equipment, an investment property, an intangible asset or a right-of-use asset

(iii) assets acquired and liabilities assumed in a business combination when the exemption under Ind AS 101 is availed.

7. Previous GAAP

The basis of accounting that a first-time adopter used for its statutory reporting requirements in India immediately before adopting Ind AS. For instance, companies required to prepare their financial statements in accordance with Section 133 of the Companies Act, 2013, shall consider those financial statements as previous GAAP financial statements. Those previous GAAP financial statements were prepared as per the Companies (Accounting Standards) Rules, 2006 and hence such accounting standards are the "Previous GAAP" for those companies in India.

Illustration 2

Company B is a foreign subsidiary of Company A and has adopted IFRS as issued by IASB as its primary GAAP for its local financial reporting purposes. Company B prepares its financial statements as per Accounting Standards specified under Section 133 of the Companies Act, 2013 read with Rule 7 of the Companies (Accounts) Rules, 2014 for the purpose of consolidation with Company A.

On transition of Company A to Ind-AS, what would be the previous GAAP of the foreign subsidiary Company B for its financial statements prepared for consolidation with Company A?

Solution

Ind AS 101 defines previous GAAP as the basis of accounting that a first-time adopter used for its statutory reporting requirements in India (***emphasis added***) immediately before adopting Ind AS. For instance, companies preparing their financial statements in accordance with the Accounting Standards specified under Section 133 of the Companies Act, 2013 read with Rule 7 of the Companies (Accounts) Rules, 2014 shall consider those financial statements as previous GAAP financial statements.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Accordingly, the previous GAAP of the foreign subsidiary for the purpose of consolidation under Ind-AS with the parent company would be accounting standards specified under Section 133 of the Companies Act, 2013 read with Rule 7 of the Companies (Accounts) Rules, 2014 and not the IFRS as issued by the IASB since the first time adoption has to be considered in the context of India only.

*****

4. SCOPE

Ind AS 101 applies to:

- First Ind AS financial statements
- Each interim financial report for part of the period covered by its first Ind AS financial statements. For example, if the period covered by the first Ind AS financial statements is year ended 31 March 20X2 and the company prepares quarterly financial results (i.e. interim financial report) for each quarter of that year, Ind AS 101 shall be applied in preparation of those financial results.

However, it does not apply to:

- Changes in accounting policies made by an entity that already applied Ind AS.

Illustration 3

E Ltd. is required to first time adopt Indian Accounting Standards (Ind AS) from 1 April 20X1. The management of E Ltd. has prepared its financial statements in accordance with Ind AS and an explicit and unreserved statement of compliance with Ind AS has been given by the management. However, there is a disagreement on application of one Ind AS between the management and the auditor.

Can such financial statements of E Ltd. be treated as first Ind AS financial statements?

Solution

Ind AS 101 defines first Ind AS financial statements as "The first annual financial statements in which an entity adopts Indian Accounting Standards (Ind AS), by an explicit and unreserved statement of compliance with Ind AS." In accordance with the above definition, if an explicit and unreserved statement of compliance with Ind AS has been given in the financial statements, even if the auditor's report contains a qualification because of disagreement on application of Indian Accounting Standard(s), it would be considered that E Ltd. has done the first time adoption of Ind AS. In such a case, exemptions given under Ind AS 101 cannot be availed again. If, however, the unreserved statement of compliance with Ind AS is not given in the

Join us t.me/caborntofight

financial statements, such financial statements would not be considered to be first Ind AS financial statements.

*****

5. RECOGNITION AND MEASUREMENT

5.1 Opening Ind AS Balance Sheet

An entity shall prepare and present an opening Ind AS balance sheet at the date of transition to Ind AS. This is the starting point for its accounting in accordance with Ind AS.

5.2 Accounting policies

Entity uses the same accounting policies in its opening Ind AS Balance Sheet and through all periods presented in its first Ind AS financial statements. Those accounting policies shall comply with each Ind AS effective at the end of its first Ind AS reporting period, subject to:

- Mandatory exceptions and
- Optional exemptions

Example 2: Consistent application of latest version of Ind AS

The end of entity A's first Ind AS reporting period is 31 March 20X2. Entity A decides to present comparative information in those financial statements for one year only. Therefore, its date of transition to Ind AS is the beginning of business on 1 April 20X0 (or, equivalently, close of business on 31 March 20X0).

Entity A presented financial statements in accordance with its previous GAAP annually to 31 March each year up to, and including, 31 March 20X1.

Application of requirements:

Entity A is required to apply the Ind AS effective for periods ending on 31 March 20X2 in:

a) preparing and presenting its opening Ind AS balance sheet at 1 April 20X0; and

b) preparing and presenting its balance sheet for 31 March 20X2 (including comparative amounts for the year ended 31 March 20X1), statement of profit and loss, statement of changes in equity and statement of cash flows for the year to 31 March 20X2 (including comparative amounts for the year ended 31 March 20X1) and disclosures (including comparative information for the year ended 31 March 20X1).

If a new Ind AS is not yet mandatory but permits early application, entity A is permitted, but not required, to apply that Ind AS in its first Ind AS financial statements.

Join us t.me/caborntofight

The general principle of Ind AS 101

It may be noted that the way Ind AS 101 is structured, it first lays down the general principle that all Ind AS, as effective for the first Ind AS reporting period, should be applied retrospectively i.e. at the starting point, which is the opening Ind AS balance sheet, should carry the balances as if Ind AS has always been applied by the company in the past.

Once the general principle has been specified, Ind AS 101 then talks about certain (a) exemptions and (b) exceptions, the former being voluntary and the latter being mandatory, as mentioned above.

So lets talk of the general principle first - an entity shall, in its opening Ind AS Balance sheet:

- Recognise all assets and liabilities whose recognition is required by Ind AS. For example, recognition of derivative assets and liabilities for which a different guidance was followed under Indian GAAP or intangible assets arising in a business combination, which were not carried in the books of the acquiree entity under Indian GAAP;
- Not recognise items as assets or liabilities if Ind AS do not permit such recognition. For example, Ind AS 115, Revenue from Contracts with Customers, has different thresholds for revenue recognition as compared to AS 9 under Indian GAAP and hence an item that is recognized as a trade receivable in Indian GAAP, may not be so recognized under Ind AS;
- Reclassify items that it recognised in accordance with previous GAAP as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity in accordance with Ind AS. For example, Ind AS requires classification of assets given on operating lease as investment property whereas the same are presented as property, plant and equipment under Indian GAAP; and
- Apply Ind AS in measuring all recognised assets and liabilities. For example, Ind AS has well-defined measurement principles for financial assets and liabilities, like certain investments are measured at fair value under Ind AS, whereas the same are measured at lower of cost and fair value under Indian GAAP.

6. EXCEPTIONS/ EXEMPTIONS

There are two categories of provisions in Ind AS 101 under which the general principle mentioned above is applied in a modified manner:

1. Mandatory exceptions to the retrospective application of other Ind AS
2. Optional exemptions from retrospective application of other Ind AS

Join us t.me/caborntofight

6.1 Mandatory exceptions to the retrospective application of other Ind AS

1. Estimates

An entity's estimates in accordance with Ind AS at the date of transition to Ind AS shall be consistent with estimates made for the same date in accordance with previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error.

Step 1 Estimates required by previous GAAP? If yes, then go to Step 2 otherwise Step 3.

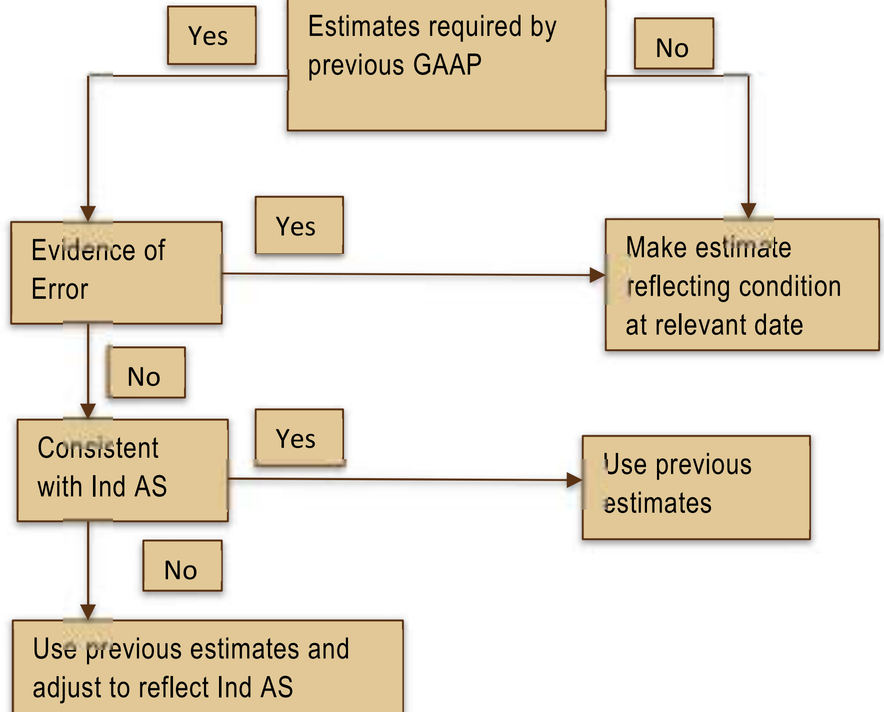
Step 2 Evidence of Error? If yes then go to Step 3 otherwise Step 4.

Step 3 Make estimate reflecting condition at relevant date i.e. the date to which the estimate relates.

Step 4 Consistent with Ind AS? If yes then go to step 5 otherwise Step 6

Step 5 Use previous estimates

Step 6 Use previous estimates and adjust to reflect Ind AS.



2. Derecognition of financial assets and liabilities

A first-time adopter shall apply the derecognition requirements in Ind AS 109 **prospectively** for transactions occurring on or after the date of transition to Ind AS.

Example 3

If a first time adopter derecognised non-derivative financial assets or non-derivative financial liabilities in accordance with its previous GAAP as a result of a transaction that occurred before the date of transition to Ind AS, it shall not recognise those assets and liabilities in accordance with Ind AS (unless they qualify for recognition as a result of a later transaction or event). A practical example of such financial assets could be securitization of a loan portfolio by a NBFC to a Trust before the date of transition resulting in derecognition of the same from books under Indian GAAP, whereas under Ind AS, the derecognition criteria may not have been met.

An entity may apply the derecognition requirements in Ind AS 109 **retrospectively** from a date of the entity's choosing, provided that the information needed to apply Ind AS 109 to financial assets and financial liabilities derecognised as a result of past transactions was obtained at the time of initially accounting for those transactions.

3. Hedge accounting

At the date of transition to Ind AS an entity shall:

(a) measure all derivatives at fair value; and

(b) eliminate all deferred losses and gains arising on derivatives that were reported in accordance with previous GAAP as if they were assets or liabilities.

An entity shall not reflect in its opening Ind AS Balance Sheet a hedging relationship of a type that does not qualify for hedge accounting in accordance with Ind AS 109 (for example, many hedging relationships where the hedging instrument is a stand-alone written option or a net written option; or where the hedged item is a net position in a cash flow hedge for another risk than foreign currency risk). In other words, if the hedge relationship:

(A) is of a type that qualifies for hedge accounting (i.e. hedge relationship consists of eligible hedging instruments and eligible hedged items as per Ind AS 109), and

(B) is designated under Indian GAAP

then:

(1) the hedge relationship is required to be reflected in the opening Ind AS Balance Sheet, irrespective of whether other conditions for applying hedge accounting (i.e. documentation and effectiveness) are met; and

(2) if those conditions are not met, requirements of Ind AS 109 with respect to discontinuance of hedge accounting are applied subsequently.

Join us t.me/caborntofight

As a corollary to this principle, if either of (A) or (B) above are not met, barring a specific exception (dealt with in subsequent paragraph), the hedge relationship is required to be removed from the opening Ind AS Balance Sheet.

If an entity designated a net position as a hedged item in accordance with previous GAAP, which is not a qualifying hedged item otherwise under Ind AS 109, it may designate as a hedged item in accordance with Ind AS an individual item within that net position, or a net position if that meets the requirements in Ind AS 109, provided that it does so no later than the date of transition to Ind AS.

Hedge accounting is followed only from the date the qualifying criteria are met, irrespective of the conditions stated at (A) and (B) above. Transactions entered into before the date of transition to Ind AS shall not be retrospectively designated as hedges.

4. Non-controlling interests

A first-time adopter shall apply the following requirements of Ind AS 110 prospectively from the date of transition to Ind AS:

a) Total comprehensive income is attributed to the owners of the parent and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance;

b) Accounting for changes in the parent's ownership interest in a subsidiary that do not result in a loss of control; and

c) Accounting for a loss of control over a subsidiary, and the related requirements of Ind AS 105, Non-current Assets Held for Sale and Discontinued operations i.e. classification of all the assets and liabilities of that subsidiary as held for sale.

However, if a first-time adopter elects to apply Ind AS 103 retrospectively to past business combinations, it shall also apply Ind AS 110 from that date.

Illustration 4

Ind AS requires allocation of losses to the non-controlling interest, which may ultimately lead to a debit balance in non-controlling interests, even if there is no contract with the non-controlling interest holders to contribute assets to the Company to fund the losses.

Whether this adjustment is required or permitted to be made retrospectively?

Solution

In case an entity elects not to restate past business combinations, Ind AS 101 requires the measurement of non-controlling interests (NCI) to follow from the measurement of other assets and liabilities on transition to Ind AS. However, Ind AS 101 contains a mandatory exception that prohibits retrospective allocation of accumulated profits between the owners of the parent and the NCI. In case an entity elects not to restate past business

Join us t.me/caborntofight

combinations, the previous GAAP carrying value of NCI is not changed other than for adjustments made (remeasurement of the assets and liabilities subsequent to the business combination) as part of the transition to Ind AS. As such, the carrying value of NCI in the opening Ind AS balance sheet cannot have a deficit balance on account of recognition of the losses attributable to the non-controlling interest, which was not recognised under the previous GAAP as part of NCI in the absence of contract to contribute assets to fund such a deficit.

However, the NCI could have a deficit balance due to remeasurement of the assets and liabilities subsequent to the business combination as part of the transition to Ind AS.

In case an entity restates past business combination, Ind AS 101 requires that the balance in NCI as at the date of transition shall be determined retrospectively in accordance with Ind AS, taking into account the impact of other elections made as part of the adoption of Ind AS.

As such, the NCI could have a deficit balance on account of losses attributable to the NCI, even if there is no obligation on the holders of NCI to contribute assets to fund such a deficit.

*****

5. Classification and measurement of financial instruments

Ind AS 109 contains principles for classification of a financial asset as at (a) amortised cost or (b) fair value through other comprehensive income or (c) fair value through profit or loss. Such classification depends on assessment of features of the financial asset on the date of its initial recognition.

Ind AS 101 provides an exception to this general principle by requiring that such assessment should be done on the date of transition to Ind AS.

Ind AS 101 further provides that if it is impracticable to assess the below mentioned features of a financial asset as at the date of transition to Ind AS, the "contractual cash flow characteristics test" shall be done without taking into account those features:

- Modified time value of money element
- Significance of the fair value of a prepayment feature

An entity shall disclose the carrying amount of such financial assets until those financial assets are derecognized.

Ind AS 109 requires the measurement of amortised cost of a financial asset or a financial liability using effective interest method. As an exception to this general measurement principle, Ind AS 101 provides that if it is impracticable (as defined in Ind AS 8) for an entity to apply retrospectively the effective interest method in Ind AS 109, the fair value of the financial asset or the financial liability at the date of transition to Ind AS shall be the new

gross carrying amount of that financial asset or the new amortised cost of that financial liability at the date of transition to Ind AS.

6. Impairment of financial assets

An entity shall apply the impairment requirements of Ind AS 109 retrospectively subject to the below:

- At the date of transition to Ind AS, an entity shall use reasonable and supportable information that is available without undue cost or effort to determine the credit risk at the date that financial instruments were initially recognised.
- An entity is not required to undertake an exhaustive search for information when determining, at the date of transition to Ind AS, whether there have been significant increases in credit risk since initial recognition.
- If, at the date of transition to Ind ASs, determining whether there has been a significant increase in credit risk since the initial recognition of a financial instrument would require undue cost or effort, an entity shall recognise a loss allowance at an amount equal to lifetime expected credit losses at each reporting date until that financial instrument is derecognised, unless that financial instrument is low credit risk at a reporting date.

7. Embedded derivatives

A first-time adopter shall assess whether an embedded derivative is required to be separated from the host contract and accounted for as a derivative on the basis of the conditions that existed at the later of (a) the date it first became a party to the contract and (b) the date a reassessment is required by Ind AS 109 i.e. when there is a change in the terms of the contract that significantly modifies the cash flows that otherwise would be required under the contract.

8. Government loans

A first-time adopter shall classify all government loans received as a financial liability or an equity instrument in accordance with Ind AS 32, Financial Instruments: Presentation.

A first-time adopter shall apply the requirements in Ind AS 109, Financial Instruments, and Ind AS 20, Accounting for Government Grants and Disclosure of Government Assistance, **prospectively** to government loans existing at the date of transition to Ind AS and **shall not recognise the corresponding benefit** of the government loan at a below-market rate of interest **as a government grant**.

Example 4

Government of India provides loans to MSMEs at a below-market rate of interest to fund the set-up of a new manufacturing facility.

Company A's date of transition to Ind AS is 1 April 20X5.

In 20X2, Company A had received a loan of ₹ 1 crore at a below-market rate of interest from the government. Under Indian GAAP, Company A accounted for the loan as equity and the carrying amount was ₹ 1 crore at the date of transition. The amount repayable at 31 March 20X9 will be ₹ 1.25 crore.

The loan meets the definition of a financial liability in accordance with Ind AS 32. Company A therefore reclassifies it from equity to liability. It also uses the previous GAAP carrying amount of the loan at the date of transition as the carrying amount of the loan in the opening Ind AS balance sheet. It calculates the annual effective interest rate (EIR) starting 1 April 20X5 as below:

EIR = Amount / Principal$^{(1/t)}$ i.e. 1.25/1$^{(1/4)}$ i.e. 5.74%. approx.

At this rate, ₹ 1 crore will accrete to ₹ 1.25 crore as at 31 March 20X9.

During the next 4 years, the interest expense charged to statement of profit and loss shall be:

Year ended	Opening amortised cost (₹)	Interest expense for the year (₹) @ 5.74% p.a. approx.	Closing amortised cost (₹)
31 March 20X6	1,00,00,000	5,73,713	1,05,73,713
31 March 20X7	1,05,73,713	6,06,627	1,11,80,340
31 March 20X8	1,11,80,340	6,41,430	1,18,21,770
31 March 20X9	1,18,21,770	6,78,230	1,25,00,000

Calculations have been done on full scale calculator. However, in case calculations are done taking EIR as exact 5.74%, then there will be difference of a few ₹ due to rounding off.

An entity may apply the requirements in Ind AS 109 and Ind AS 20 retrospectively to any government loan originated before the date of transition to Ind AS, provided that the information needed to do so had been obtained at the time of initially accounting for that loan.

6.2 Optional exemptions from retrospective application of other Ind AS

1. Business combination

Ind AS 103 need not be applied to business combinations before date of transition. But, if one business combination is restated to comply with Ind AS 103, all subsequent business combinations are restated.

When the exemption is used:

Join us t.me/caborntofight

- There won't be any change in classification from previous GAAP.

For **example,** if the "pooling of interests" method is applied as per AS 14, the balances of assets and liabilities arising therefrom shall be carried forward.
Another **example** is regarding the identification of the acquirer – irrespective of the fact that a business combination could have been a reverse acquisition as per Ind AS 103, the accounting adopted in previous GAAP shall be continued.

❖ **Recognition exemptions:**

The table below summarises the provisions of paragraph C4(b) and (c) of Ind AS 101:

Case	Asset / liability recognised in previous GAAP	Asset / liability qualifies for recognition in Ind AS	Is the change an intangible asset?	Result: whether asset or liability recognised in opening Ind AS Balance Sheet?	How is the resulting change accounted for?
1	No	No	Not Applicable		
2	No	Yes	No	Yes*	Retained Earnings
3	No	Yes	Yes	Yes	Goodwill
4	Yes	No	Yes	No	Goodwill**
5	Yes	No	No	No	Retained Earnings

* Unless a financial asset or financial liability was derecognised in previous GAAP (refer mandatory exception below)

** Including any resulting changes to deferred tax and non-controlling interests

❖ **Measurement exemptions:**

- If an asset acquired or liability assumed was not recognized in previous GAAP but would have been recognised in Ind AS, it shall not have a deemed cost of zero and shall be measured at the amount at which Ind AS would require it to be measured. The resulting change is recognised in retained earnings.

- If an asset acquired or liability assumed was recognized in previous GAAP but Ind AS would require its subsequent measurement at other than original cost (for example, investments in certain equity instruments as per Ind AS 109), it shall be measured at such basis and not its original cost. The resulting change is recognised in retained earnings. Refer Example 5 below.

Join us t.me/caborntofight

In all other cases, no measurement adjustment shall be made to the carrying amounts of the assets acquired and liabilities assumed.

- Therefore, it should be evident that the balance of goodwill or capital reserve as per previous GAAP is not adjusted for any reason other than:
  - Recognition of an intangible asset that was earlier subsumed in goodwill or capital reserve but Ind AS requires it to be recognised separately; or
  - Vice versa, an asset that was recognised as an intangible asset under previous GAAP but is not permitted to be recognised as an asset under Ind AS.

- Regardless of whether there is any indication that the goodwill may be impaired, the goodwill has to be tested for impairment at the date of transition to Ind AS and any resulting impairment loss is to be recognised in retained earnings (or, if so required by Ind AS 36, in revaluation surplus). The impairment test is based on conditions at the date of transition to Ind AS.

Example 5

If the acquirer had not, in accordance with its previous GAAP, capitalised leases acquired in a past business combination in which acquiree was a lessee, it shall capitalise those leases in its consolidated financial statements, as Ind AS 116, would require the acquiree to do in its Ind AS Balance Sheet.

Similarly, if the acquirer had not, in accordance with its previous GAAP, recognised a contingent liability that still exists at the date of transition to Ind AS, the acquirer shall recognise that contingent liability at that date unless Ind AS 37 would prohibit its recognition in the financial statements of the acquiree.

As discussed in the chapter on consolidation, Ind AS 110 requires an entity to be consolidated based on assessment of "control". This assessment may sometimes result in consolidation of entities which were not consolidated in the previous GAAP financial statements.

Let's understand the implications of this in the context of first Ind AS financial statements through an illustration.

Illustration 5

A Ltd. had made certain investments in B Ltd.'s convertible debt instruments. The conversion rights are substantive rights and would provide A Ltd. with a control over B Ltd. A Ltd. has evaluated that B Ltd. would be treated as its subsidiary under Ind AS and, hence, would require consolidation in its Ind AS consolidated financial statements. B Ltd. was not considered as a subsidiary, associate or a joint venture under previous GAAP.

How should B Ltd. be consolidated on transition to Ind AS assuming that A Ltd. has opted to avail the exemption from retrospective restatement of past business combinations?

Solution

Ind AS 101 prescribes an optional exemption from retrospective restatement in relation to past business combinations. Ind AS 101 prescribes that when the past business combinations are not restated and a parent entity had not consolidated an entity as a subsidiary in accordance with its previous GAAP (either because it was not regarded as a subsidiary or no consolidated financial statements were required under previous GAAP), then the subsidiary's assets and liabilities would be included in the parent's opening consolidated financial statements at such values as would appear in the subsidiary's separate financial statements if the subsidiary were to adopt the Ind AS as at the parent's date of transition. For this purpose, the subsidiary's separate financial statements would be prepared as if it was a first-time adopter of Ind AS i.e. after applying the relevant first-time adoption mandatory exceptions and voluntary exemptions. In other words, the parent will adjust the carrying amount of the subsidiary's assets and liabilities to the amounts that Ind AS would require in the subsidiary's balance sheet.

The deemed cost of goodwill equals the difference at the date of transition between:

(a) the parent's interest in those adjusted carrying amounts; and

(b) the cost in the parent's separate financial statements of its investment in the subsidiary.

The measurement of non-controlling interest and deferred tax follows from the measurement of other assets and liabilities.

It may be noted here that the above exemption is available only under those circumstances where the parent, in accordance with the previous GAAP, has not presented consolidated financial statements for the previous year; or where the consolidated financial statements were prepared in accordance with the previous GAAP but the entity was not treated as a subsidiary, associate or joint venture under the previous GAAP.

*****

Illustration 6

A Ltd. has a subsidiary B Ltd. On first time adoption of Ind AS by B Ltd., it availed the optional exemption of not restating its past business combinations. However, A Ltd. in its consolidated financial statements has decided to restate all its past business combinations.

Whether the amounts recorded by subsidiary need to be adjusted while preparing the consolidated financial statements of A Ltd. considering that A Ltd. does not avail the business combination exemption? Will the answer be different if A Ltd. adopts Ind AS after B Ltd?

Solution

As per Ind AS 101: "A first-time adopter may elect not to apply Ind AS 103 retrospectively to past business combinations (business combinations that occurred before the date of transition to Ind AS). However, if a first-time adopter restates any business combination to comply with Ind AS 103, it shall restate all later business combinations and shall also apply Ind AS 110 from that same date.

For example, if a first-time adopter elects to restate a business combination that occurred on 30 June 20X0, it shall restate all business combinations that occurred between 30 June 20X0 and the date of transition to Ind AS, and it shall also apply Ind AS 110 from 30 June 20X0." Based on the above, if A Ltd. restates past business combinations, it would have to be applied to all business combinations of the group including those by subsidiary B Ltd. for the purpose of Consolidated Financial Statements. Ind AS 101 states, "However, if an entity becomes a first-time adopter later than its subsidiary (or associate or joint venture) the entity shall, in its consolidated financial statements, measure the assets and liabilities of the subsidiary (or associate or joint venture) at the same carrying amounts as in the financial statements of the subsidiary (or associate or joint venture), after adjusting for consolidation and equity accounting adjustments and for the effects of the business combination in which the entity acquired the subsidiary." Thus, in case where the parent adopts Ind AS later than the subsidiary (for example, if the parent is a non-banking financial company and the subsidiary is a trading or manufacturing company) then it does not change the amounts already recognised by the subsidiary.

*****

2. Insurance contracts

Ind AS 104 will apply for annual periods beginning on or after date of transition to Ind AS.

If an insurer changes its accounting policies for insurance liabilities, it is permitted to reclassify some or all of its financial assets as FVTPL (fair value through profit or loss).

3. Share based payment transactions

A first-time adopter is encouraged, but not required, to apply Ind AS 102, Share-based Payment, to equity instruments that vested before date of transition to Ind AS.

However, a first-time adopter may apply Ind AS 102 to equity instruments, if it has disclosed publicly the fair value of those equity instruments, determined at the measurement date.

It is encouraged to apply Ind AS 102 to liabilities arising from share-based payment transactions that were settled before the date of transition to Ind AS.

Join us t.me/caborntofight

Illustration 7

X Ltd. is a first-time adopter of Ind AS. The date of transition is April 1, 20X1. It has given 200 stock options to its employees. Out of these, 75 options have vested on November 30, 20X0 and the remaining 125 will vest on November 30, 20X1.

What are the options available to X Ltd. at the date of transition?

Solution

Ind AS 101 provides that a first-time adopter is encouraged, but not required, to apply Ind AS 102 on 'Share-based Payment' to equity instruments that vested before the date of transition to Ind AS. However, if a first-time adopter elects to apply Ind AS 102 to such equity instruments, it may do so only if the entity has disclosed publicly the fair value of those equity instruments, determined at the measurement date, as defined in Ind AS 102.

Having regard to the above, X Ltd. has the following options:

- For 75 options that vested before the date of transition:

  (a) To apply Ind AS 102 and account for the same accordingly, provided it has disclosed publicly the fair value of those equity instruments, determined at the measurement date, as defined in Ind AS 102.

  (b) Not to apply Ind AS 102.

  However, for all grants of equity instruments to which Ind AS 102 has not been applied, i.e., equity instruments vested but not settled before date of transition to Ind AS, X Ltd. would still need to disclose the information.

- For 125 options that will vest after the date of transition: X Ltd. will need to account for the same as per Ind AS 102.

*****

4. Deemed cost for PPE, intangible assets and right of use assets

An entity has the following options with respect to measurement of its property, plant and equipment (Ind AS 16), intangible assets (Ind AS 38) and right of use assets (Ind AS 116) in the opening Ind AS balance sheet:

- Measurement basis as per the respective standards applied retrospectively. This measurement option can be applied on an item-by-item basis. For example, Plant A can be measured applying Ind AS 16 retrospectively and Plant B can be measured applying the "fair value" or "revaluation" options mentioned below.
- Fair value at the date of transition to Ind AS. This measurement option can be applied on an item-by-item basis in similar fashion as explained above.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Previous GAAP revaluation, if such revaluation was, at the date of revaluation, broadly comparable to (a) fair value or (b) cost or depreciated cost in accordance with other Ind AS adjusted to reflect changes in general or specific price index. This measurement option can be applied on an item-by-item basis in similar fashion as explained above.
- Previous GAAP carrying amounts (provided there is no change in functional currency). This measurement option can be applied only if applied to "all" of the assets classes and items therein. In addition, this measurement option can be applied to investment property (Ind AS 40) as well.

For Investment Property

Ind AS 40, Investment Property permits only the cost model. Therefore, option of availing fair value as deemed cost for investment property is not available for first time adopters of Ind AS for its financial statements.

Illustration 8

X Ltd. is the holding company of Y Ltd. X Ltd. is required to adopt Ind AS from April 1, 20X1. X Ltd. wants to avail the optional exemption of using the previous GAAP carrying values in respect of its property, plant and equipment whereas Y Ltd. wants to use fair value of its property, plant and equipment as its deemed cost on the date of transition.

Examine whether X Ltd. can do so for its consolidated financial statements. Also, examine whether different entities in a group can use different basis for arriving at deemed cost for property, plant and equipment in their respective standalone financial statements

Solution

Where there is no change in its functional currency on the date of transition to Ind AS, a first-time adopter to Ind AS may elect to continue with the carrying value of all of its property, plant and equipment as at the date of transition measured as per the previous GAAP and use that as its deemed cost at the date of transition after making necessary adjustments. If a first-time adopter chooses this option then the option of applying this on selective basis to some of the items of property, plant and equipment and using fair value for others is not available. Nothing prevents different entities within a group to choose different basis for arriving at deemed cost for the standalone financial statements. However, in Consolidated Financial Statements, the entire group should be treated as one reporting entity. Accordingly, it will not be permissible to use different basis for arriving at the deemed cost of property, plant and equipment on the date of transition by different entities of the group for the purpose of preparing Consolidated Financial Statements.

Illustration 9

For the purpose of deemed cost on the date of transition, an entity has the option of using the carrying value as the deemed cost.

In this context, suggest which carrying value is to be considered as deemed cost: original cost or net book value? Also examine whether this would have any impact on future depreciation charge?

Solution

For the purpose of deemed cost on the date of transition, if an entity uses the carrying value as the deemed cost, then it should consider the net book value on the date of transition as the deemed cost and not the original cost because carrying value here means net book value. The future depreciation charge will be based on the net book value and the remaining useful life on the date of transition. Further, as per the requirements of Ind AS 16, the depreciation method, residual value and useful life need to be reviewed atleast annually. As a result of this, the depreciation charge may or may not be the same as the depreciation charge under the previous GAAP.

*****

Illustration 10

Is it possible for an entity to allocate cost as per the previous GAAP to a component based on its fair value on the date of transition even when it does not have the component-wise historical cost?

Solution

Yes, an entity can allocate cost to a component based on its fair value on the date of transition. This is permissible even when the entity does not have component-wise historical cost.

*****

Illustration 11

Revaluation under previous GAAP can be considered as deemed cost if the revaluation was, at the date of the revaluation, broadly comparable to fair value or cost or depreciated cost of assets in accordance with Ind AS, adjusted to reflect, e.g., changes in a general or specific price index.

What is the acceptable time gap of such revaluation from the date of transition? Can adjustments be made to take effects of events subsequent to revaluation?

Solution

There are no specific guidelines in Ind AS 101 to indicate the acceptable time gap of such revaluation from the date of transition. The management of an entity needs to exercise judgement in this regard. However, generally, a period of 2–3 years may be treated as an acceptable time gap of such revaluation from the date of transition. In any case,

adjustments should be made to reflect the effect of material events subsequent to revaluation.

*****

5. Cumulative translation difference

No need to:

- Recognise some translation differences in other comprehensive income.
- Reclassify cumulative translation differences for foreign operation from entity to profit or loss as part of gain or loss on its disposal

If first time adopter uses this exemption:

- Cumulative translation differences set to zero for all foreign operations.
- Gain / loss on subsequent disposal of a foreign operation shall exclude these differences that arose before transition

6. Long-term foreign currency monetary items

Paragraph 46A of AS 11 notified under the Companies (Accounting Standards) Rules, 2006 permitted companies to recognise foreign currency exchange gain / loss arising on long-term foreign currency monetary items in either of the following ways:

- In profit or loss
- If such monetary item was entered into to acquire property, plant and equipment or intangible asset - in the cost thereof
- If such monetary item was entered into for any other purpose – accumulated in foreign currency monetary item translation difference account (FCMITDA)

A first time adopter may continue the accounting policy adopted for accounting for exchange differences arising from long term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period, as per previous GAAP.

To be clear, this exemption is not a permanent exemption from the requirements of Ind AS 21. It is available only for those long-term foreign currency monetary items which are recognised before the first Ind AS reporting period began. For example, if the transition date is 1 April 20X5, the first reporting period will be 1 April 20X6 to 31 March 20X7. Therefore, this exemption is available only if such monetary items were recognised in the last previous GAAP financial statements i.e. financial statements for the year ended 31 March 20X6.

Illustration 12

Y Ltd. is a first time adopter of Ind AS. The date of transition is April 1, 20X1. On the date of transition, there is a long- term foreign currency monetary liability of ₹ 60 crores (US $ 10 million converted at an exchange rate of US $ 1 = ₹ 21 60). The accumulated exchange difference on the date of transition is nil since Y Ltd. was following AS 11 notified under the Companies (Accounting Standards) Rules, 2006 and has not exercised the option provided in paragraph 46/46A of AS 11. The Company wants to avail the option under paragraph 46A of AS 11 prospectively or retrospectively on the date of transition to Ind AS.

How should it account for the translation differences in respect of this item under Ind AS 101?

Solution

Ind AS 101 provides that a first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP.

If the Company wants to avail the option prospectively

The Company cannot avail the exemption given in Ind AS 101 and cannot exercise option under paragraph 46/46A of AS 11, prospectively, on the date of transition to Ind AS in respect of Long term foreign currency monetary liability existing on the date of transition as the company has not availed the option under paragraph 46/46A earlier. Therefore, the Company need to recognise the exchange differences in accordance with the requirements of Ind AS 21, The Effects of Changes in Foreign Exchange Rates which requires all foreign exchange differences to be recognised in profit or loss, except such foreign exchange differences which are accounted for as an adjustment to borrowing costs in accordance with Ind AS 23.

If the Company wants to avail the option retrospectively

The Company cannot avail the exemption given in Ind AS 101 and cannot exercise the option under paragraph 46/46A of AS 11 retrospectively on the date of transition to Ind AS in respect of long-term foreign currency monetary liability that existed on the date of transition since the option is available only if it is in continuation of the accounting policy followed in accordance with the previous GAAP. Y Ltd. has not been using the option provided in Para 46/ 46A of AS 11, hence, it will not be permitted to use the option given in Ind AS 101 retrospectively.

Illustration 13

Y Ltd. is a first time adopter of Ind AS. The date of transition is April 1, 20X5. On April 1, 20X1, it obtained a 7 year US$ 1,00,000 loan. It has been exercising the option provided in Paragraph 46/46A of AS 11 and has been amortising the exchange differences in respect of this loan over the balance period of such loan. On the date of transition, the company wants to continue the same accounting policy with regard to amortising exchange differences.

Whether the Company is permitted to do so?

Solution

Ind AS 101 provides that a first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP. In view of the above, the Company can continue to follow the existing accounting policy of amortising the exchange differences in respect of this loan over the balance period of such long-term liability.

*****

7. Investment in subsidiaries, joint ventures and associates

Ind AS 27 requires measurement of investments in subsidiaries, joint ventures and associates either at (a) cost or (b) in accordance with Ind AS 109 (i.e. at fair value, either through other comprehensive income or through profit or loss).

Ind AS 101 permits a first-time adopter to measure such investments at:

- Cost determined in accordance with Ind AS 27 (as above) or
- Deemed cost:
  - Fair value at the date of transition; or
  - Previous GAAP carrying amount at the date of transition.

Illustration 14

A Ltd. acquired B Ltd. in a business combination transaction. A Ltd. agreed to pay certain contingent consideration (liability classified) to B Ltd. As part of its investment in its separate financial statements, A Ltd. did not recognise the said contingent consideration (since it was not considered probable). A Ltd. considered the previous GAAP carrying amounts of investment as its deemed cost on first-time adoption.

In that case, does the carrying amount of investment required to be adjusted for this transaction?

Solution

In accordance with Ind AS 101, an entity has an option to treat the previous GAAP carrying values, as at the date of transition, of investments in subsidiaries, associates and joint ventures as its deemed cost on transition to Ind AS. If such an exemption is adopted, then the carrying values of such investments are not adjusted. Accordingly, any adjustments in relation to recognition of contingent consideration on first time adoption shall be made in the statement of profit and loss.

*****

8. Compound financial instruments

A first time adopter need not split the compound financial instruments into separate liability and equity component, if liability component is not outstanding as at transition date.

Illustration 15

On April 1, 20X1, Sigma Ltd. issued 30,000 6% convertible debentures of face value of ₹ 100 per debenture at par. The debentures are redeemable at a premium of 10% on 31 March 20X5 or these may be converted into ordinary shares at the option of the holder. The interest rate for equivalent debentures without conversion rights would have been 10%. The date of transition to Ind AS is 1 April 20X3.

Suggest how should Sigma Ltd. account for this compound financial instrument on the date of transition. The present value of ₹ 1 receivable at the end of each year based on discount rates of 6% and 10% can be taken as:

End of year	6%	10%
1	0.94	0.91
2	0.89	0.83
3	0.84	0.75
4	0.79	0.68

Solution

The carrying amount of the debenture on the date of transition under previous GAAP, assuming that all interest accrued other than premium on redemption have been paid, will be ₹ 31,50,000 [(30,000 x 100) + (30,000 x 100 x 10/100 x 2/4)]. The premium payable on redemption is being recognised as borrowing costs as per para 4(b) of AS 16 ie under previous GAAP on straight-line basis.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

As per para D18 of Ind AS 101, Ind AS 32, Financial Instruments: Presentation, requires an entity to split a compound financial instrument at inception into separate liability and equity components. If the liability component is no longer outstanding, retrospective application of Ind AS 32 would involve separating two portions of equity. The first portion is recognised in retained earnings and represents the cumulative interest accreted on the liability component. The other portion represents the original equity component. However, in accordance with this Ind AS, a first-time adopter need not separate these two portions if the liability component is no longer outstanding at the date of transition to Ind AS.

In the present case, since the liability is outstanding on the date of transition, Sigma Ltd. will need to split the convertible debentures into debt and equity portion on the date of transition. Accordingly, we will first measure the liability component by discounting the contractually determined stream of future cash flows (interest and principal) to present value by using the discount rate of 10% p.a. (being the market interest rate for similar debentures with no conversion option).

	(₹)
Interest payments p.a. on each debenture	6
Present Value (PV) of interest payment for years 1 to 4 (6 × 3.17) (Note 1)	19.02
PV of principal repayment (including premium) 110 × 0.68 (Note 2)	74.80
Total liability component per debenture	93.82
Equity component per debenture (Balancing figure)	6.18
Face value of debentures	100.00
Total equity component for 30,000 debentures	1,85,400
Total debt amount (30,000 x 93.82)	28,14,600

Thus, on the date of initial recognition, the amount of ₹ 30,00,000 being the amount of debentures will be split as under:

Debt	₹ 28,14,600
Equity	₹ 1,85,400

However, on the date of transition, unwinding of ₹ 28,14,600 will be done for two years as follows:

Year	Opening balance	Finance cost @ 10%	Interest paid	Closing balance
1	28,14,600	2,81,460	1,80,000	29,16,060
2	29,16,060	2,91,606	1,80,000	30,27,666

Therefore, on transition date, Sigma Ltd. shall –

a. recognise the carrying amount of convertible debentures at ₹ 30,27,666;

b. recognise equity component of compound financial instrument of ₹ 1,85,400;

c. debit ₹ 63,066 to retained earnings being the difference between the previous GAAP amount of ₹ 31,50,000 and ₹ 30,27,666 and the equity component of compound financial instrument of ₹ 1,85,400; and

d. derecognise the debenture liability in previous GAAP of ₹ 31,50,000.

Notes:

1. 3.17 is present value of annuity factor of ₹ 1 at a discount rate of 10% for 4 years.
2. On maturity, ₹ 110 will be paid (₹ 100 as principal payment + ₹ 10 as premium)

*****

9. Fair value measurement of financial assets or financial liabilities

As per Ind AS 109, if:

- the fair value of the financial asset or financial liability at initial recognition differs from the transaction price, and
- such fair value is not based on:
  - Level 1 inputs (refer Ind AS 113), or
  - Valuation technique that uses only data from observable markets

then, such difference (referred to in first bullet above) is deferred and amortised in profit or loss on the basis stated in Ind AS 109.

Ind AS 101 permits an entity to apply this requirement of Ind AS 109 prospectively to transactions entered into on or after the date of transition.

10. Decommissioning liabilities included in Property, Plant and Equipment

Appendix 'A' to Ind AS 16 "Changes in Existing Decommissioning, Restoration and Similar Liabilities" requires specified changes in a decommissioning, restoration or similar liability to be added to or deducted from the cost of the asset to which it relates; the adjusted depreciable amount of the asset is then depreciated prospectively over its remaining useful life.

An entity need not comply with this requirement for changes in such liabilities that occurred before the date of transition. If an entity avails of this exemption, it shall:

- Measure the liability as at the transition date as per Ind AS 37 i.e. based on the facts and circumstances, including the risk-adjusted discount rate, as at the transition date,
- If the liability is in the scope of Appendix A to Ind AS 16, roll-back that liability to the

date that liability first arose using best estimate of historical risk-adjusted discount rate and include it in the cost of the asset, and

- Calculate accumulated depreciation on the transition date on the basis of estimated useful life as at that date.

11. Designation of previously recognised financial instruments

All financial instruments are initially measured at fair value. As regards subsequent measurement, Ind AS 109 permits that upon initial recognition, an entity may designate financial instruments as subsequently measured at fair value if certain criteria are met. Ind AS 101 exempts an entity from retrospective designation of financial instruments and permits that such designation be done on the basis of the facts and circumstances that exist at the date of transition to Ind AS. In particular the exemption is provided for below mentioned financial instruments:

- Designation of any financial liability or asset at fair value through profit or loss
- Designation of investment in an equity instrument at fair value through other comprehensive income

12. Extinguishing financial liabilities with equity instruments

Appendix D of Ind AS 109 provides for accounting principles to be applied when an entity's equity instruments are issued to extinguish all or part of its financial liability. A first time adopter may apply Appendix D of Ind AS 109 from the date of transition to Ind AS.

13. Severe Hyperinflation

In hyperinflationary economy, when an entity's date of transition to Ind AS, is on, or after, the functional currency normalization date, then all assets and liabilities held before the functional currency normalization date may be measured at fair value on the date of transition.

This fair value may be used as deemed cost of those assets and liabilities in the opening Ind AS statement of financial position.

When the functional currency normalisation date falls within a 12- month comparative period, the comparative period may be less than 12 months, provided that a complete set of financial statements (as required by paragraph 10 of Ind AS 1) is provided for that shorter period.

14. Leases

A first time adopter may determine whether an arrangement existing at the date of transition to Ind AS contain a lease (including classification by a lessor of each land and building element as finance or an operating lease) on the basis of facts and circumstances existing on the date of transition.

Join us t.me/caborntofight

A lessee which is a first-time adopter of Ind AS shall recognise lease liabilities and right-of-use assets, by applying the following approach to all of its leases at the date of transition to Ind AS:

(a) measure a lease liability at the present value of the remaining lease payments discounted using the lessee's incremental borrowing rate at the date of transition to Ind AS;

(b) measure a right-of-use asset on a lease-by-lease basis either at:

(i) its carrying amount as if Ind AS 116 had been applied since the commencement date of the lease, but discounted using the lessee's incremental borrowing rate at the date of transition to Ind AS; or

(ii) an amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments relating to that lease recognised in the Balance Sheet immediately before the date of transition to Ind AS.

(c) apply Ind AS 36 to right-of-use assets.

A first-time adopter that is a lessee may do one or more of the following at the date of transition to Ind AS, applied on a lease-by lease basis:

(1) apply a single discount rate to a portfolio of leases with reasonably similar characteristics.

(2) elect not to apply the above requirements given in (a) to (c) to leases for which the lease term ends within 12 months of the date of transition to Ind AS. Instead, the entity shall account for (including disclosure of information about) these leases as if they were short-term leases accounted as per Ind AS 116.

(3) elect not to apply the above requirements given in (a) to (c) to leases for which the underlying asset is of low value. Instead, the entity shall account for (including disclosure of information about) these leases as per Ind AS 116.

(4) exclude initial direct costs from the measurement of the right-of-use asset at the date of transition to Ind AS.

(5) use hindsight, such as in determining the lease term if the contract contains options to extend or terminate the lease.

15. Financial asset or intangible assets accounted for in accordance with Appendix D to Ind AS 115, Service Concession Arrangements

Change in accounting policy pursuant to the requirements of this Appendix to be accounted for retrospectively except for amortization policy for intangible assets relating to toll roads adopted as per previous GAAP.

If impracticable for an operator to apply the requirements of the Ind AS retrospectively at the date of transition to Ind AS, it shall recognise financial assets and intangible assets that existed at the date of transition to Ind AS using the previous carrying amounts.

16. Designation of contracts to buy or sell a non-financial item

Ind AS 109 permits some contracts to buy or sell a non-financial item to be designated **at inception** as measured at fair value through profit or loss (see paragraph 2.5 of Ind AS 109). Despite this requirement an entity is permitted to designate, a**t the date of transition to Ind AS**, contracts that already exist on that date as measured at fair value through profit or loss but only if they meet the requirements of paragraph 2.5 of Ind AS 109 at that date and the entity designates all similar contracts.

17. Striping costs in the production of surface mine

A first time adopter may apply Appendix B to Ind AS 16, Stripping costs in the production phase of a surface mine, from the date of transition to Ind AS. As at the transition date to Ind AS, any previously recognised asset balance that resulted from stripping activity undertaken during the production phase shall be reclassified as a part of an existing asset to which the stripping activity related, to the extent that there remains an identifiable component of the ore body with which the predecessor stripping asset can be associated.

18. Non-current assets held for sale and discounted operations

A first time adopter can:

- Measure noncurrent assets held for sale or discontinued operation at the lower carrying value and fair value less cost to sell at the date of transition to Ind AS in accordance with Ind AS 105; and
- Recognize directly in retain earnings any difference between that amount and the carrying amount of those assets at the date of transition to Ind AS determined under the entity's previous GAAP

19. Assets and liabilities of subsidiaries, associates and joint ventures

If a subsidiary becomes a first-time adopter later than its parent, the subsidiary shall measure its assets and liabilities at either:

- The carrying amounts that would be included in the parent's consolidated financial statements, based on the parent's date of transition to Ind AS. or
- The carrying amounts required by Ind AS 101, based on the subsidiary's date of transition to Ind AS.

If an entity becomes first time adopter later than its subsidiary, the entity shall measure the assets and liabilities at the subsidiary at the same carrying amounts as in the financial statements of the subsidiary, after adjusting for consolidation and equity accounting adjustments and for the effects of the business combination in which the entity acquired the subsidy.

Join us t.me/caborntofight

20. Revenue from Contract with Customers

Any of the following exemption may be used in applying Ind AS 115 retrospectively:

- For completed contracts: Need not restate contracts that begin and end within the same annual reporting period;
- For completed contracts that have variable consideration: Option to use the transaction price at the date the contract was completed rather than estimating variable consideration amounts in the comparative reporting periods;
- For all reporting periods presented before the beginning of the first Ind AS reporting period, an entity need not disclose the amount of the transaction price allocated to the remaining performance obligations and an explanation of when the entity expects to recognize that amount as revenue.

21. Joint arrangements:

Transition from Proportionate Consolidation to Equity Method

- To measure initial investment at transition date at the aggregate of carrying amount of assets and liabilities that the entity had previously proportionately consolidated including goodwill arising on acquisition.
- To test the investment for impairment, regardless of whether there are indicators of such impairment. Any resulting impairment shall be recognised as an adjustment to retained earnings at the date of transition to Ind AS.
- If aggregate of all previously recognized assets/liabilities results in negative asset and if having legal or constructive obligation, then recognize corresponding liability otherwise adjust retained earnings.

Transition from Equity Method to accounting for assets and liabilities

- To derecognize previous investment and recognize share of each asset and liability in respect of its interest in joint operation.
- Difference between amount of net assets (including goodwill) as per Ind AS and previously recognized;

  (a) If carrying amount of previous investment is lower:

  Offset against goodwill relating to investment and thereafter retained earning

  (b) If carrying amount of previous investment is higher:

  Adjust against retained earning

Transitional provisions in entity's Separate FS

- To derecognise the investment and recognise assets and liabilities as per transition from equity method to accounting for assets and liabilities

- Provide reconciliation between amount derecognized, recognized and adjustment to retained earnings.

7. PRESENTATION AND DISCLOSURE

I. Comparative Information

- Ind AS does not require historical summaries to comply with the recognition and measurement requirement of Ind AS.
- In any financial statements containing historical summaries or comparative information in accordance with previous GAAP, an entity shall:
  - Label the previous GAAP information prominently as not being prepared in accordance with Ind AS; and
  - Disclose the nature of the main adjustments that would make it comply with Ind AS. An entity need not quantify those adjustments.

II. Explanation of transition to Ind AS

- Reconciliation of

  (a) Equity from previous GAAP to Ind AS at transition and last year end;

  (b) Last year's total comprehensive income under previous GAAP to Ind AS.

- Sufficient detail to understand adjustments to each line item.
- Reconciliation to distinguish correction of errors identified during transition from change in accounting policy.
- Fair value as deemed cost and the amount of the adjustment.
- Ind AS 36 disclosures for impairment during transition.
- If adopted first time exemption option, to disclose the fact and accounting policy until such time those PPE, Intangible Assets, investment properties or intangible assets significantly depreciated/impaired/derecognized.
- Interim financial reports to include reconciliation with equity and profit or loss under previous GAAP.
- Further information to comply with Ind AS 34.

Illustration 16

H Ltd. has the following assets and liabilities as at March 31, 20X1, prepared in accordance with previous GAAP:

© The Institute of Chartered Accountants of India

Particulars	Notes	Amount (₹)
Property, Plant & Equipment	1	1,34,50,000
Investments in S. Ltd.	2	48,00,000
Trade Receivables		2,00,000
Advances for purchase of inventory		50,00,000
Inventory		8,00,000
Cash		49,000
Total assets		2,42,99,000
VAT deferral loan	3	60,00,000
Creditors		30,00,000
Short term borrowing		8,00,000
Provisions		12,00,000
Total liabilities		1,10,00,000
Share capital		1,30,00,000
Reserves:		2,99,000
Cumulative translation difference	4	1,00,000
ESOP reserve	4	20,000
Retained earnings		1,79,000
Total equity		1,32,99,000
Total equity and liabilities		2,42,99,000

The following GAAP differences were identified by the Company on first-time adoption of Ind AS with effect from April 1, 20X1:

1. *In relation to property, plant and equipment, the following adjustments were identified:*
   - *Property, plant and equipment comprise land held for capital appreciation purposes costing ₹ 4,50,000 and was classified as investment property as per Ind AS 40.*
   - *Exchange differences of ₹ 1,00,000 were capitalised to depreciable property, plant and equipment on which accumulated depreciation of ₹ 40,000 was recognised.*
   - *There were no asset retirement obligations.*
   - *The management intends to adopt deemed cost exemption for using the previous GAAP carrying values as deemed cost as at the date of transition for PPE and investment property.*
2. *The Company had made an investment in S Ltd. (subsidiary of H Ltd.) for ₹ 48,00,000 that carried a fair value of ₹ 68,00,000 as at the transition date. The Company intends to recognise the investment at its fair value as at the date of transition.*

3. *Financial instruments:*

   - ***VAT deferral loan ₹ 60,00,000 :***

     The VAT deferral loan of ₹ 60,00,000 was obtained on March 31, 20X1, for setting up a business in a backward region with a condition to create certain defined targets for employment of local population of that region. The loan does not carry any interest and is repayable in full at the end of 5 years. In accordance with Ind AS 109, the discount factor on the loan is to be taken as 10%, being the incremental borrowing rate. Accordingly, the fair value of the loan as at March 31, 20X1, is ₹ 37,25,528. The entity chooses to exercise the option given in paragraph B11 of Ind AS 101, i.e., the entity chooses to apply the requirements of Ind AS 109, Financial Instruments and Ind AS 20, Accounting for Government Grants and Disclosure of Government Assistance, retrospectively as required information had been obtained at the time of initially accounting for VAT deferral loan

4. *The retained earnings of the Company contained the following:*

   - ***ESOP reserve of ₹ 20,000:***

     The Company had granted 1,000 options to employees out of which 800 have already vested. The Company followed an intrinsic value method for recognition of ESOP charge and recognised ₹ 12,000 towards the vested options and ₹ 8,000 over a period of time as ESOP charge and a corresponding reserve. If fair value method had been followed in accordance with Ind AS 102, the corresponding charge would have been ₹ 15,000 and ₹ 9,000 for the vested and unvested shares respectively. The Company intends to avail Ind AS 101 exemption for share-based payments for not restating the ESOP charge as per previous GAAP for vested options.

   - ***Cumulative translation difference :***

     The Company had a non-integral foreign branch in accordance with AS 11 and had recognised a balance of ₹ 1,00,000 as part of reserves. On first-time adoption of Ind AS, the Company intends to avail Ind AS 101 exemption of resetting the cumulative translation difference to zero.

Prepare transition date Ind AS balance sheet of Company H showing adjustments to the values of assets and liabilities.

Solution

Adjustments for opening balance sheet as per Ind AS 101

1. **Property, Plant & Equipment:** As the land held for capital appreciation purposes qualifies as investment property, such investment property should be reclassified from property, plant and equipment (PPE) to investment property and presented separately. As the Company has adopted the previous GAAP carrying values as deemed cost, all items of PPE and investment property should be carried at its previous GAAP carrying values. As such, the past capitalised exchange differences require no adjustment in this case.

Join us t.me/caborntofight

Merged By CA - Born To Fight

2. **Investment in subsidiary:** On first time adoption of Ind AS, a parent company has an option to carry its investment in subsidiary at fair value as at the date of transition in its separate financial statements. As such, the company can recognise such investment at a value of ₹ 68,00,000.

3. **Financial instruments:** As the VAT deferral loan is a financial liability under Ind AS 109, that liability should be recognised at its present value discounted at an appropriate discounting factor. Consequently, the VAT deferral loan should be recognised at ₹ 37,25,528 and the remaining ₹ 22,74,472 would be recognised as deferred government grant.

4. **ESOPs:** Ind AS 101 provides an exemption of not restating the accounting as per the previous GAAP in accordance with Ind AS 102 for all options that have vested by the transition date. Accordingly, out of 1000 ESOPs granted, the first-time adoption exemption is available on 800 options that have already vested. As such, its accounting need not be restated. However, the 200 options that are not vested as at the transition date, need to be restated in accordance with Ind AS 102. As such, the additional impact of ₹ 1,000 (i.e., 9,000 less 8,000) would be recognised in the opening Ind AS balance sheet.

5. **Cumulative translation difference :** As per paragraph D12 of Ind AS 101, the first-time adopter can avail an exemption regarding requirements of Ind AS 21 in context of cumulative translation differences. If a first-time adopter uses this exemption the cumulative translation differences for all foreign operation are deemed to be zero as at the transition date. In that case, the balance is transferred to retained earnings. As such, the balance of ₹ 1,00,000 should be transferred to retained earnings

6. **Retained earnings:**

	₹
Increase in fair value of investment in subsidiary (note 2)	20,00,000
Additional ESOP charge on unvested options (note 4)	(1,000)
Transfer of cumulative translation difference balance to retained earnings (note 5)	1,00,000
Increase in Retained Earnings	20,99,000

The transition date Ind AS Balance Sheet after the above adjustments in the carrying values of assets and liabilities is as under:

Transition date Ind AS Balance Sheet of H Ltd. as at 1st April, 20X1

Shaurya Limited is the company having its registered and corporate office at New Delhi. 60% of Shaurya Limited's shares are held by the Government of India and rest by other investors.

This is the first time that Shaurya limited would be applying Ind AS for the preparation of its financials for the current financial year 2019-2020. Following balance sheet is prepared as per earlier GAAP as at the beginning of the preceding period along with the additional information:

Balance Sheet as at 31 March 2018

(All figures are in '000, unless otherwise specified)

Particulars	Amount
EQUITY AND LIABILITIES	
(1) Shareholders' Funds	
(a) Share Capital	10,00,000
(b) Reserves & Surplus	25,00,000
(2) Non-Current Liabilities	
(a) Long Term Borrowings	4,50,000
(b) Long Term Provisions	3,50,000
(c) Deferred tax liabilities	3,50,000
(3) Current Liabilities	
(a) Trade Payables	22,00,000
(b) Other Current Liabilities	4,50,000
(c) Short Term Provisions	12,00,000
TOTAL	85,00,000
ASSETS	
(1) Non-Current Assets	
(a) Property, Plant & Equipment (net)	20,00,000
(b) Intangible assets	2,00,000
(c) Goodwill	1,00,000
(d) Non-current Investments	5,00,000
(e) Long Term Loans and Advances	1,50,000
(f) Other Non-Current Assets	2,00,000
(2) Current Assets	
(a) Current Investments	18,00,000
(b) Inventories	12,50,000

© The Institute of Chartered Accountants of India

(c) Trade Receivables	9,00,000
(d) Cash and Bank Balances	10,00,000
(e) Other Current Assets	4,00,000
TOTAL	85,00,000

Additional Information (All figures are in '000) :

1. *Other current liabilities include ₹ 3,90,000 liabilities to be paid in cash such as expense payable, salary payable etc. and ₹ 60,000 are statutory government dues.*

2. *Long term loans and advances include ₹ 40,000 loan and the remaining amount consists Advance to staff of ₹ 1,10,000.*

3. *Other non-current assets of ₹ 2,00,000 consists Capital advances to suppliers.*

4. *Other current assets include ₹ 3,50,000 current assets receivable in cash and Prepaid expenses of ₹ 50,000.*

5. *Short term provisions include Dividend payable of ₹ 2,00,000. The dividend payable had been as a result of board meeting wherein the declaration of dividend for financial year 2017-2018 was made. However, it is subject to approval of shareholders in the annual general meeting.*

Chief financial officer of Shaurya Limited has also presented the following information against corresponding relevant items in the balance sheet:

a) *Property, Plant & Equipment consists a class of assets as office buildings whose carrying amount is ₹ 10,00,000. However, the fair value of said office building as on the date of transition is estimated to be ₹ 15,00,000. Company wants to follow revaluation model as its accounting policy in respect of its property, plant and equipment for the first annual Ind AS financial statements.*

b) *The fair value of Intangible assets as on the date of transition is estimated to be ₹ 2,50,000. However, the management is reluctant to incorporate the fair value changes in books of account.*

c) *Shaurya Ltd. had acquired 80% shares in a company, Excel private limited few years ago thereby acquiring the control upon it at that time. Shaurya Ltd. recognised goodwill as per erstwhile accounting standards by accounting the excess of consideration paid over the net assets acquired at the date of acquisition. Fair value exercise was not done at the time of acquisition.*

d) *Trade receivables include an amount of ₹ 20,000 as provision for doubtful debts measured in accordance with previous GAAP. Now as per latest estimates using hindsights, the provision needs to be revised to ₹ 25,000.*

Merged By CA - Born To Fight

e) *Company had given a loan of ₹ 1,00,000 to an entity for the term of 10 years six years ago. Transaction costs were incurred separately for this loan. The loan carries an interest rate of 7%. The principal amount is to be repaid in equal installments over the period of ten years at the year end. Interest is also payable at each year end. The fair value of loan as on the date of transition is ₹ 50,000 as against the carrying amount of loan which at present amounts to ₹ 40,000. However, Ind AS 109 mandates to recognise the interest income as per effective interest method after the adjustment of transaction costs. Management says it is tedious task in the given case to apply the effective interest rate changes with retrospective effect and hence is reluctant to apply the same retrospectively in its first-time adoption.*

f) *In the long-term borrowings, ₹ 4,50,000 of component is due towards the State Government. Interest is payable on the government loan at 4%, however the prevailing rate in the market at present is 8%. The fair market value of loan stands at ₹ 4,20,000 as on the relevant date.*

g) *Under Previous GAAP, the mutual funds were measured at cost or market value, whichever is lower. Under Ind AS, the Company has designated these investments at fair value through profit or loss. The value of mutual funds as per previous GAAP is ₹ 2,00,000 as included in 'current investment'. However, the fair value of mutual funds as on the date of transition is ₹ 2,30,000.*

h) *Ignore separate calculation of deferred tax on above adjustments. Assume the net deferred tax income to be ₹ 50,000 on account of Ind AS transition adjustments.*

Requirements:

- *Prepare transition date balance sheet of Shaurya Limited as per Indian Accounting Standards*
- *Show necessary explanation for each of the items presented by chief financial officer in the form of notes, which may or may not require the adjustment as on the date of transition.*

Solution

Transition date (opening) IND-AS Balance Sheet of Shaurya Limited
As at 1 April 2018

	Retained Earnings (₹)	Fair value reserve	Total
As at 31 March, 2018	27,90,000 (W.N.1)	5,00,000	32,90,000

Working Note 1:

Retained earnings balance:	
Balance as per Earlier GAAP	25,00,000
Transitional adjustment due to loan's fair value	10,000
Transitional adjustment due to increase in mutual fund's fair value	30,000
Transitional adjustment due to decrease in deferred tax liability	50,000
Transitional adjustment due to decrease in provisions (dividend)	2,00,000
Total	27,90,000

Disclosure forming part of financial statements:

Proposed dividend on equity shares is subject to the approval of the shareholders of the company at the annual general meeting and should not recognized as liability as at the Balance Sheet date.

Note 1: Property, plant & Equipment:

As per para D5 of Ind AS 101, an entity may elect to measure an item of property, plant and equipment at the date of transition to Ind AS at its fair value and use that fair value as its deemed cost at that date.

Para D7AA has to be applied for all items of property, plant and equipment. So, if D5 exemption is taken for buildings, Ind AS will have to be applied retrospectively for other assets as well. Since, an entity elect to measure an item of property, plant and equipment at the date of transition to Ind AS at its fair value and use that fair value as its deemed cost at that date, it is assumed that the carrying amount of other assets based on retrospective application of Ind AS is equal to their fair value of ₹ 10 lakhs.

Note 2: Goodwill:

Ind AS 103 mandatorily requires measuring the assets and liabilities of the acquiree at its fair value as on the date of acquisition. However, a first time adopter may elect to not apply the provisions of Ind AS 103 with retrospective effect that occurred prior to the date of transition to Ind AS.

Hence company can continue to carry the goodwill in its books of account as per the previous GAAP.

Note 3: Intangible assets:

Para D7 read with D6 of Ind AS 101 states that a first-time adopter may elect to use a previous GAAP revaluation at, or before, the date of transition to Ind AS as deemed cost at the date of the revaluation, if the revaluation was, at the date of the revaluation, broadly comparable to:

(a) Fair value; or

(b) Cost or depreciated cost in accordance with Ind AS, adjusted to reflect, for example, changes in a general or specific price index.

However, there is a requirement that Intangible assets must meet the definition and recognition criteria as per Ind AS 38.

Hence, company can avail the exemption given in Ind AS 101 as on the date of transition to use the carrying value as per previous GAAP.

Note 4: Loan:

Para B8C of Ind AS 101 states that if it is impracticable (as defined in Ind AS 8) for an entity to apply retrospectively the effective interest method in Ind AS 109, the fair value of the financial asset or the financial liability at the date of transition to Ind ASs shall be the new gross carrying amount of that financial asset or the new amortised cost of that financial liability at the date of transition to Ind AS.

Accordingly, ₹ 50,000 would be the gross carrying amount of loan and difference of ₹ 10,000 (₹ 50,000 – ₹ 40,000) would be adjusted to retained earnings.

Note 5: Mutual Funds:

Para 29 of Ind AS 101 states that an entity is permitted to designate a previously recognised financial asset as a financial asset measured at fair value through profit or loss in accordance with paragraph D19A. The entity shall disclose the fair value of financial assets so designated at the date of designation and their classification and carrying amount in the previous financial statements.

D19A states that an entity may designate a financial asset as measured at fair value through profit or loss in accordance with Ind AS 109 on the basis of the facts and circumstances that exist at the date of transition to Ind AS.

Note 6: Trade receivables:

Para 14 of Ind AS 101 states that an entity's estimates in accordance with Ind AS at the date of transition to Ind AS shall be consistent with estimates made for the same date in accordance with previous GAAP (after adjustments to reflect any difference in accounting policies), unless there is objective evidence that those estimates were in error.

Para 15 of Ind AS 101 further states that an entity may receive information after the date of transition to Ind AS about estimates that it had made under previous GAAP. In accordance with

© The Institute of Chartered Accountants of India

paragraph 14, an entity shall treat the receipt of that information in the same way as non-adjusting events after the reporting period in accordance with Ind AS 10, Events after the Reporting Period.

The entity shall not reflect that new information in its opening Ind AS Balance Sheet (unless the estimates need adjustment for any differences in accounting policies or there is objective evidence that the estimates were in error). Instead, the entity shall reflect that new information in profit or loss (or, if appropriate, other comprehensive income) for the year ended 31 March 2019.

Note 7: Government Grant:

Para 10A of Ind AS 20 states that the benefit of a government loan at a below-market rate of interest is treated as a government grant. The loan shall be recognised and measured in accordance with Ind AS 109, Financial Instruments. The benefit of the below-market rate of interest shall be measured as the difference between the initial carrying value of the loan determined in accordance with Ind AS 109, and the proceeds received. The benefit is accounted for in accordance with this Standard.

However, Para B10 of Ind AS 101 states, a first-time adopter shall classify all government loans received as a financial liability or an equity instrument in accordance with Ind AS 32, Financial Instruments: Presentation. Except as permitted by paragraph B11, a first-time adopter shall apply the requirements in Ind AS 109, Financial Instruments, and Ind AS 20, Accounting for Government Grants and Disclosure of Government Assistance, *prospectively* to government loans existing at the date of transition to Ind ASs and shall not recognise the corresponding benefit of the government loan at a below-market rate of interest as a government grant. Consequently, if a first-time adopter did not, under its previous GAAP, recognise and measure a government loan at a below-market rate of interest on a basis consistent with Ind AS requirements, it shall use its previous GAAP carrying amount of the loan at the date of transition to Ind AS as the carrying amount of the loan in the opening Ind AS Balance Sheet. An entity shall apply Ind AS 109 to the measurement of such loans after the date of transition to Ind AS.

Note 8: Dividend

Dividend should be deducted from retained earnings during the year when it has been declared and approved. Accordingly, the provision declared for preceding year should be reversed (to rectify the wrong entry). Retained earnings would increase proportionately due to such adjustment.

8. CARVE OUTS IN IND AS 101 FROM IFRS 1

(i) Definition of previous GAAP under Ind AS 101

As per IFRS

IFRS 1 defines previous GAAP as the basis of accounting that a first - time adopter used immediately before adopting IFRS.

Carve out

Ind AS 101 defines previous GAAP as the basis of accounting that a first-time adopter used for its reporting requirement in India immediately before adopting Ind AS. The change made it mandatory for Indian entities to consider the financial statements prepared in accordance with notified Accounting Standards as was applicable to them as previous GAAP when it transitions to Ind AS.

Reason

The change makes it mandatory for Indian companies to consider the financial statements prepared in accordance with Accounting Standards notified under the Companies (Accounting Standards) Rules, 2006 as previous GAAP when it transitions to Ind AS as the law prevailing in India recognises only the financial statements prepared in accordance with the Companies Act, 2013.

(ii) Allowing the use of carrying cost of Property, Plant and Equipment (PPE) on the date of transition of Ind AS 101

As per IFRS

IFRS 1 *First time Adoption of International Accounting Standards* provides that on the date of transition, either the items of Property, Plant and Equipment shall be determined by applying IAS 16 *Property, Plant and Equipment* retrospectively or the same should be recorded at fair value or a previous GAAP revaluation, subject to certain requirements.

Carve out

Paragraph D7AA of Ind AS 101 provides an additional option to use carrying values of all items of property, plant and equipment on the date of transition in accordance with previous GAAP as an acceptable starting point under Ind AS.

Reason

In case of old companies, retrospective application of Ind AS 16 or fair values at the date of transition to determine deemed cost may not be possible for old assets. Accordingly, Ind AS 101 provides relief to an entity to use carrying values of all items of property, plant

and equipment on the date of transition in accordance with previous GAAP as an acceptable starting point under Ind AS.

(iii) Long Term Foreign Currency Monetary Items

As per IFRS

No provision in IFRS 1.

Carve out

Paragraph D13AA of Appendix D to Ind AS 101 provides that a first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP. Consequently, Ind AS 21 also provides that it does not apply to long-term foreign currency monetary items for which an entity has opted for the exemption given in paragraph D13AA of Appendix D to Ind AS 101. Such an entity may continue to apply the accounting policy so opted for such long-term foreign currency monetary items.

Reason

Para 46A of AS 11 provides an option to recognise long term foreign currency monetary items as a part of the cost of property, plant and equipment or to defer its recognition in the statement of profit and loss over the period of loan in case the loan is not related to acquisition of fixed assets. To provide transitional relief, such entities have been given an option to continue the capitalisation or deferment of exchange differences, as the case may be, on foreign currency borrowings obtained before the beginning of first Ind AS reporting period.

(iv) Intangible assets arising from service concession arrangements related to toll roads accounted for in accordance with Appendix D, Service Concession Arrangements to Ind AS 115, Revenue from Contracts with Customers

As per IFRS

No provision in IFRS 1.

Carve Out

Ind AS 101 permits a first-time adopter to continue with the policy adopted for amortization of intangible assets arising from service concession arrangements related to toll roads recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP.

As a consequence to the above, paragraph 7AA has been inserted in Ind AS 38 to scope out the entity, to apply amortisation method, that opts to amortise the intangible assets arising from service concession arrangements in respect of toll roads recognised in the

© The Institute of Chartered Accountants of India

financial statements for the period ending immediately before the beginning of the first Ind AS reporting period as per the exception given in paragraph D22 of Appendix D to Ind AS 101.

Reason

Schedule II to the Companies Act, 2013, allows companies to use revenue based amortisation of intangible assets arising from service concession arrangements related to toll roads while Ind AS 38, Intangible Assets, allows revenue based amortisation only in the circumstances in which the predominant limiting factor that is inherent in an intangible asset is the achievement of revenue threshold. In order to provide relief to such entities, Ind AS 38 and Ind AS 101 have been amended to allow the entities to continue to use the accounting policy adopted for amortization of intangible assets arising from service concession arrangements related to toll roads recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial statements. In other words, Ind AS 38 would be applicable to the amortisation of intangible assets arising from service concession arrangements related to toll roads entered into after the implementation of Ind AS.

(v) Land and building element in lease contracts

As per IFRS

No provisions under IFRS 1.

Carve Out

Paragraph D9AA provides that an entity which is a lessor can use the transition date facts and circumstances for lease arrangements which includes both land and building elements to assess the classification of each element as finance or an operating lease at the transition date to Ind AS. Also, if there is any land lease newly classified as finance lease then the first time adopter may recognise assets and liability at fair value on that date; any difference between those fair values is recognised in retained earnings.

Reason

This aspect is quite common in the Indian environment and it was felt that the first time adopters may face hardship if they were to retrospectively assess the two elements of the contract.

TEST YOUR KNOWLEDGE

Questions

1. Company A intends to restate its past business combinations with effect from 30 June 20X0 (being a date prior to the transition date).

   If business combinations are restated, whether certain other exemptions, such as the deemed cost exemption for property, plant and equipment (PPE), can be adopted?

2. X Ltd. was using cost model for its property, plant and equipment till March 31, 20X2 under previous GAAP. The Ind AS become applicable to the company for financial year beginning April 1, 20X2. On April 1, 20X1, i.e., the date of its transition to Ind AS, it used fair value as the deemed cost in respect of its property, plant and equipment. X Ltd. wants to follow revaluation model as its accounting policy in respect of its property, plant and equipment for the first annual Ind AS financial statements.

   Whether use of fair values as deemed cost on the date of transition and use of revaluation model in the first annual Ind AS financial statements would amount to a change in accounting policy?

3. Y Ltd. is a first time adopter of Ind AS. The date of transition is April 1, 20X5. On April 1, 20X0, it obtained a 7 year US $ 1,00,000 loan. It has been exercising the option provided in Paragraph 46/46A of AS 11 and has been amortising the exchange differences in respect of this loan over the balance period of such loan. On the date of transition to Ind AS, Y Ltd. wants to discontinue the accounting policy as per the previous GAAP and follow the requirements of Ind AS 21 with respect to recognition of foreign exchange differences.

   Whether the Company is permitted to do so?

4. A company has chosen to elect the deemed cost exemption in accordance with Ind AS 101. However, it does not wish to continue with its existing policy of capitalising exchange

© The Institute of Chartered Accountants of India

fluctuation on long term foreign currency monetary items to property, plant and equipment i.e. it does not want to elect the exemption available as per Ind AS 101.

In such a case, how would the company be required to adjust the foreign exchange fluctuation already capitalised to the cost of property, plant and equipment under previous GAAP?

5. XYZ Pvt. Ltd. is a company registered under the Companies Act, 2013 following Accounting Standards notified under Companies (Accounting Standards) Rules, 2006. The Company has decided to voluntarily adopt Ind AS w.e.f 1st April, 20X2 with a transition date of 1st April, 20X1.

The Company has one Wholly Owned Subsidiary and one Joint Venture which are into manufacturing of automobile spare parts.

The consolidated financial statements of the Company under Indian GAAP are as under:

Consolidated Financial Statements

The Investment is in the nature of Joint Venture as per Ind AS 111.

Suggest the accounting adjustments which are required to be made in the opening Balance Sheet as on 1st April, 20X1.

6. Mathur India Private Limited has to present its first financials under Ind AS for the year ended 31st March, 20X3. The transition date is 1st April, 20X1.

The following adjustments were made upon transition to Ind AS:

(a) The Company opted to fair value its land as on the date on transition.

The fair value of the land as on 1st April, 20X1 was ₹ 10 crores. The carrying amount as on 1st April, 20X1 under the existing GAAP was ₹ 4.5 crores.

(b) The Company has recognised a provision for proposed dividend of ₹ 60 lacs and related dividend distribution tax of ₹ 18 lacs during the year ended 31st March, 20X1. It was written back as on opening balance sheet date.

(c) The Company fair values its investments in equity shares on the date of transition. The increase on account of fair valuation of shares is ₹ 75 lacs.

(d) The Company has an Equity Share Capital of ₹ 80 crores and Redeemable Preference Share Capital of ₹ 25 crores.

(e) The reserves and surplus as on 1st April, 20X1 before transition to Ind AS was ₹ 95 crores representing ₹ 40 crores of general reserve and ₹ 5 crores of capital

Merged By CA - Born To Fight

reserve acquired out of business combination and balance is surplus in the Retained Earnings.

(f) The company identified that the preference shares were in nature of financial liabilities.

What is the balance of total equity (Equity and other equity) as on 1st April, 20X1 after transition to Ind AS? Show reconciliation between total equity as per AS (Accounting Standards) and as per Ind AS to be presented in the opening balance sheet as on 1st April, 20X1.

Ignore deferred tax impact.

7. ABC Ltd is a government company and is a first-time adopter of Ind AS. As per the previous GAAP, the contributions received by ABC Ltd. from the government (which holds 100% shareholding in ABC Ltd.) which is in the nature of promoters' contribution have been recognised in capital reserve and treated as part of shareholders' funds in accordance with the provisions of AS 12, Accounting for Government Grants.

   State whether the accounting treatment of the grants in the nature of promoters' contribution as per AS 12 is also permitted under Ind AS 20 Accounting for Government Grants and Disclosure of Government Assistance. If not, then what will be the accounting treatment of such grants recognised in capital reserve as per previous GAAP on the date of transition to Ind AS.

Answers

1. Ind-AS 101 prescribes that an entity may elect to use one or more of the exemptions of the Standard. As such, an entity may choose to adopt a combination of optional exemptions in relation to the underlying account balances.

When the past business combinations after a particular date (30 June 20X0 in the given case) are restated, it requires retrospective adjustments to the carrying amounts of acquiree's assets and liabilities on account of initial acquisition accounting of the acquiree's net assets, the effects of subsequent measurement of those net assets (including amortisation of non-current assets that were recognised at its fair value), goodwill on consolidation and the consolidation adjustments. Therefore, the goodwill and equity (including non-controlling interest (NCI)) cannot be computed by considering the deemed cost exemption for PPE. However, the entity may adopt the deemed cost exemption for its property, plant and equipment other than those acquired through business combinations.

2. In the instant case, X Ltd. is using revaluation model for property, plant and equipment for the first annual Ind AS financial statements and using fair value of property, plant and equipment on the date of the transition, as deemed cost. Since the entity is using fair value at the transition date as well as in the first Ind AS financial statements, there is no change in accounting policy and mere use of the term 'deemed cost' would not mean that there is a change in accounting policy.

Join us t.me/caborntofight

3. Ind AS 101 provides that a first-time adopter may continue the policy adopted for accounting for exchange differences arising from translation of long-term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP. Ind AS 101 gives an option to continue the existing accounting policy. Hence, Y Ltd. may opt for discontinuation of accounting policy as per previous GAAP and follow the requirements of Ind AS 21. The cumulative amount lying in the Foreign Currency Monetary Item Translation Difference Account (FCMITDA) as per AS 11 should be derecognised by an adjustment against retained earnings on the date of transition.

4. Ind AS 101 permits to continue with the carrying value for all of its property, plant and equipment as per the previous GAAP and use that as deemed cost for the purposes of first time adoption of Ind AS. Accordingly, the carrying value of property, plant and equipment as per previous GAAP as at the date of transition need not be adjusted for the exchange fluctuations capitalized to property, plant and equipment. Separately, it allows a company to continue with its existing policy for accounting for exchange differences arising from translation of long term foreign currency monetary items recognised in the financial statements for the period ending immediately before the beginning of the first Ind AS financial reporting period as per the previous GAAP. Accordingly, given that Ind AS 101 provides these two choices independent of each other, it may be possible for an entity to choose the deemed cost exemption for all of its property, plant and equipment and not elect the exemption of continuing the previous GAAP policy of capitalising exchange fluctuation to property, plant and equipment. In such a case, in the given case, a harmonious interpretation of the two exemptions would require the company to recognise the property, plant and equipment at the transition date at the previous GAAP carrying value (without any adjustment for the exchanges differences capitalized under previous GAAP) but for the purposes of the first (and all subsequent) Ind AS financial statements, foreign exchange fluctuation on all long term foreign currency borrowings that arose after the transition date would be recognised in the statement of profit and loss.

5. As per paras D31AA and D31AB of Ind AS 101, when changing from proportionate consolidation to the equity method, an entity shall recognise its investment in the joint venture at transition date to Ind AS.

That initial investment shall be measured as the aggregate of the carrying amounts of the assets and liabilities that the entity had previously proportionately consolidated, including any goodwill arising from acquisition. If the goodwill previously belonged to a larger cash-generating unit, or to a group of cash-generating units, the entity shall allocate goodwill to the joint venture on the basis of the **relative** carrying amounts of the joint venture and the cash-generating unit or group of cash-generating units to which it belonged. The balance of the investment in joint venture at the date of transition to Ind AS, determined in accordance with paragraph D31AA above is regarded as the deemed cost of the investment at initial recognition.

© The Institute of Chartered Accountants of India

Accordingly, the deemed cost of the investment will be

Property, Plant & Equipment	1,200
Goodwill (Refer Note below)	119
Long Term Loans & Advances	405
Trade Receivables	280
Other Current Assets	50
Total Assets	2,054
Less: Trade Payables	75
Short Term Provisions	35
Deemed cost of the investment in JV	1,944

Calculation of proportionate goodwill share of Joint Venture ie ABC Pvt. Ltd.

Property, Plant & Equipment	22,288
Goodwill	1,507
Long Term Loans & Advances	6,350
Trade Receivables	1,818
Other Current Assets	104
Total Assets	32,067
Less: Trade Payables	8,455
Short Term Provisions	475
	23,137

Note: Only those assets and liabilities have been taken into account for calculation of 'proportionate goodwill share of Joint Venture', which were given in the question as 'proportionate share of assts and liabilities of ABC Ltd. added to XYZ Ltd.'

Proportionate Goodwill of Joint Venture

= [(Goodwill on consolidation of subsidiary and JV/Total relative net asset) x Net asset of JV]

= (1507 / 23,137) x 1825 = 119 (approx.)

Accordingly, the proportional share of assets and liabilities of Joint Venture will be removed from the respective values assets and liabilities appearing in the balance sheet on 31.3.20X1 and Investment in JV will appear under non-current asset in the transition date balance sheet as on 1.4.20X1.

Adjustments made in previous GAAP balance sheet to arrive at Transition date Ind AS Balance Sheet

Transition Date Ind AS Balance Sheet of XYZ Pvt. Ltd. as at 1st April, 20X1

Increase in the value of investment due to remeasurement at fair value	0.75	6.25
Equity as on 1st April, 20X1 after transition to Ind AS		182.03

7. Paragraph 2 of Ind AS 20, "Accounting for Government Grants and Disclosure of Government Assistance" inter alia states that the Standard does not deal with government participation in the ownership of the entity.

Since ABC Ltd. is a Government company, it implies that government has 100% shareholding in the entity. Accordingly, the entity needs to determine whether the payment

is provided as a shareholder contribution or as a government. Equity contributions will be recorded in equity while grants will be shown in the Statement of Profit and Loss.

Where it is concluded that the contributions are in the nature of government grant, the entity shall apply the principles of Ind AS 20 retrospectively as specified in Ind AS 101 'First Time Adoption of Ind AS'. Ind AS 20 requires all grants to be recognised as income on a systematic basis over the periods in which the entity recognises as expenses the related costs for which the grants are intended to compensate. Unlike AS 12, Ind AS 20 requires the grant to be classified as either a capital or an income grant and does not permit recognition of government grants in the nature of promoter's contribution directly to shareholders' funds.

Where it is concluded that the contributions are in the nature of shareholder contributions and are recognised in capital reserve under previous GAAP, the provisions of paragraph 10 of Ind AS 101 would be applied which states that except in certain cases, an entity shall in its opening Ind AS Balance Sheet:

(a) recognise all assets and liabilities whose recognition is required by Ind AS;

(b) not recognise items as assets or liabilities if Ind AS do not permit such recognition;

(c) reclassify items that it recognised in accordance with previous GAAP as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity in accordance with Ind AS; and

(d) apply Ind AS in measuring all recognised assets and liabilities.

Accordingly, as per the above requirements of paragraph 10(c) in the given case, contributions recognised in the Capital Reserve should be transferred to appropriate category under 'Other Equity' at the date of transition to Ind AS.

CHAPTER 15

ANALYSIS OF FINANCIAL STATEMENTS

LEARNING OUTCOMES

After studying this chapter, you would be able to:

- Examine the key features of the financial statements and its relevancy for better reporting.
- Examine the key factors to be kept in mind in the preparation of financial statements.
- Follow the best practices in the preparation of financial statements.
- Analyse the common mistakes incurred by the preparers of the financial statements in the presentation of financial statements with respect to Schedule III.
- Rectify the mistakes found in the financial statements by addressing the issues and prescribing the correct presentation and disclosures.

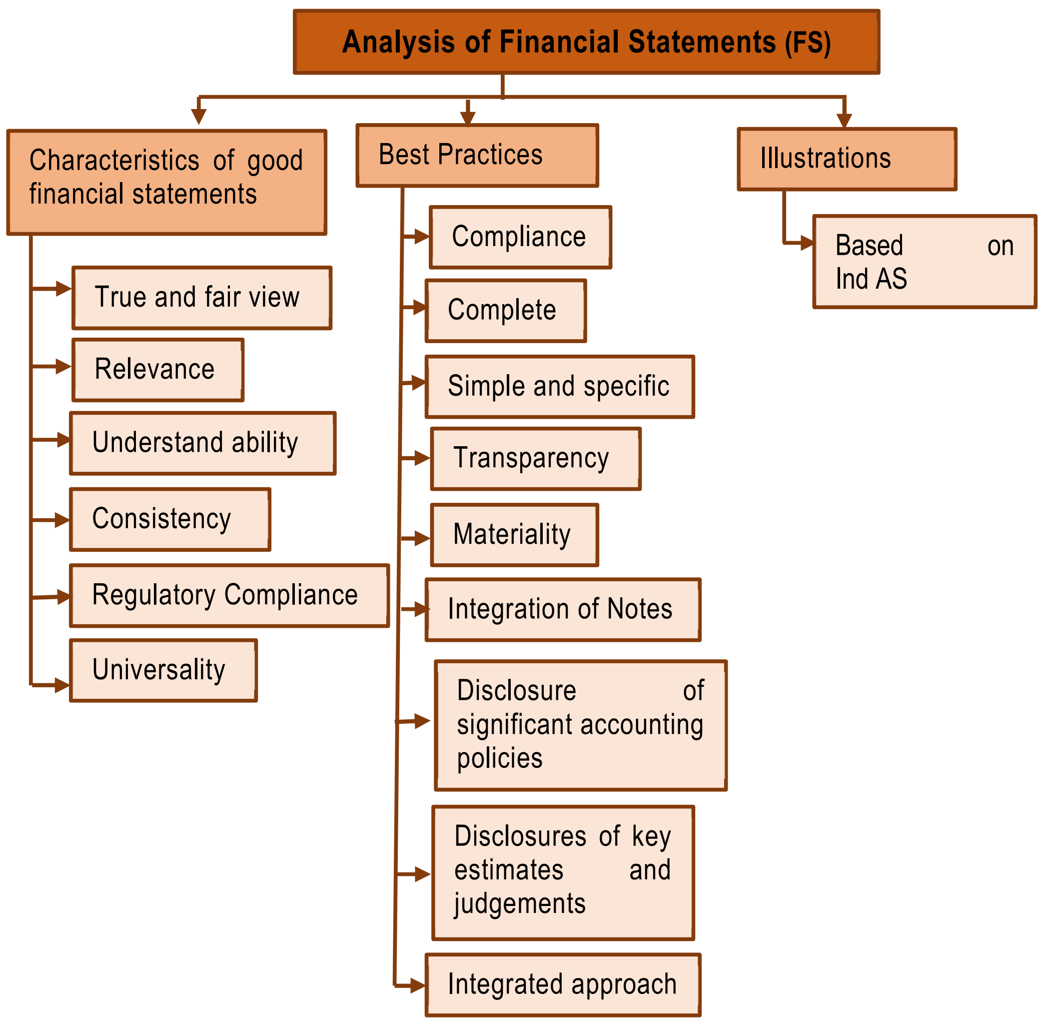
CHAPTER OVERVIEW



1. INTRODUCTION

Business is important organ of society that helps in its overall development. A typical business has a variety of stakeholder that include its employees, owners, banks, trade associations, government, general public and so on. These stakeholders, particularly investors are keenly interested in knowing about the financial well-being of business organisations.

Financial reporting is an important means of communication for entities to disseminate information of its operations to various stakeholders. With the increased focus on governance the significance of financial reporting has exponentially increased. The importance of robust financial reporting cannot be emphasized enough. As India and Indian enterprises move ahead in the growth path at much faster pace and exposure of Indian entities to global environment expands, ever increasing complexities of transactions throws up newer challenges in financial reporting and related guidance. Presentation and disclosures, in this context, are assuming greater significance as enterprises aim to achieve excellence in financial reporting. Today, there are a number of requirements mandated by the regulators. It has now become imperative for entities to keep pace with the fast evolving requirements in the area of financial reporting.

The financial statements are a source of critical communication between an entity and the investors and other stakeholders. They act as the barometer to assess the performance, both past and future, for any enterprise. Decades back when enterprises were mostly proprietary owned, the financial statements were simpler in content and were presented annually just to provide the historical data. However, with globalization and increased dependence on technology, where companies are expanding both horizontally and vertically, many even spanning across geographies; the number of stakeholders – be it be investors, suppliers, employees, or even tax authorities, have increased manifold.

The financial statements are supplemented with the disclosures which are the key source of information and help the users in interpreting the financial statements in a better manner in taking appropriate decisions. Therefore, one can say that disclosures are added for good reasons. Disclosures are not the only requirement which will make a financial statement to be a good financial statement. The presentation and the compliance of formats are also the important factors which are taken into consideration in the evaluation of a financial statement.

This chapter enumerates some of the practices currently being followed in financial reporting and sets out suggested 'best practice' to enhance the quality of financial reporting to enable preparers of financial statements in benchmarking their financial statements. It intends to bring to the notice of the preparers and reviewers of the financial statements some common errors or omissions which they shall avoid while preparing the financial statements.

2. FINANCIAL STATEMENTS OF CORPORATE ENTITIES

The format and content of the financial statements for companies is required to be in accordance with Schedule III to the Companies Act, 2013. Further, there are several additional disclosure requirements both with respect to the balance sheet and statement of profit and loss.

Certain industries have formats specified by their industry regulators, which need to be followed by them. This fact has also been recognised in the Companies Act, 2013 in the proviso to Section 129(1) which implies that the format set out in Schedule III will not be applicable to insurance companies and banking companies. The formats for these companies are prescribed by specific regulators.

In terms of format, Schedule III only prescribes the vertical format of balance sheet and does not provide the alternative of using the horizontal format. Further, Schedule III sets out the minimum requirements for disclosure on the face of the balance sheet and the statement of profit and loss. It allows line items, sub-line items and sub-totals to be presented as an addition or substitution on the face of the financial statements when such presentation is relevant to an understanding of the company's financial position or performance or to cater to industry/sector-specific disclosure requirements or when required for compliance with the amendments to the Companies Act or under the Standards. Schedule III now requires all disclosures to be made as a part of the notes.

Apart from granting an overriding status to the Standards, cognizance has also been given to the requirements of Standards in the format of the balance sheet and accordingly elements such as deferred tax assets and intangible assets have been included in the balance sheet. Also, it has been clearly stated that the disclosure requirements specified in Part I and Part II or Part III of the Schedule III are in addition to and not in substitution of the disclosure requirements specified in the respective notified Standards. The terms used in Schedule III are to be considered as per the respective notified Standards.

One of the pertinent aspects which needs to be considered in the preparation of financial statements with regard to Schedule III is that it does not prescribe the accounting treatment to be adopted by the entity; it only prescribes the format and content. Consequently, the fact that a particular item has been included in the format of the balance sheet in Schedule III does not imply that the particular item can be recognized in the balance sheet. Schedule III prescribes only presentation and not treatment which is a subject matter of Standards, which has also been specifically acknowledged in Schedule III.

3. CHARACTERISTICS OF GOOD FINANCIAL STATEMENTS

In the Indian scenario, the ICAI has been the recognized accounting body issuing generally accepted accounting policies and has made the standards mandatory for enterprises operating within India. Besides Accounting Standards, ICAI has also issued the converged set of Ind AS

Join us t.me/caborntofight

Merged By CA - Born To Fight

that is adopted and notified by MCA, and many large entities have already implemented it or are in the transition phase for adoption (depending on the net worth or other specified criteria).

The key features to any set of financial statements are:

1. **True and fair view of the affairs of the enterprise:** This is the most important feature of any set of financial statements. The user of the financial statements depends fully on the same and hence the reliability factor is supreme.

2. **Relevance:** The financial statements should provide the relevant information for the period it is presented. There is no point in presenting historical data of past several years that are redundant as of date. The key here is that the user of the financial statements should be in a position to take independent decision after reading the financial statements. This decision can be different for different users – for an investor the decision whether to hold the shares of the enterprise will stem from the set of statements, for a senior employee of the company it can be the future growth prospects of the company etc. But what is important is that the users should be empowered to make decisions through the financial statements

3. **Understandability:** For the user to make sense, the financial statements should be readable and content lucid to digest. Even a layman should be able to read the same, and understand the basic information, if not the accounting policies and procedures.

4. **Consistency:** The users of the financial statements will be benefitted only if the statements are released in periodic intervals and in standard formats. Else, the entire purpose of furnishing financials will be defeated. That is the reason that laws are prescribed for presentation formats and periodicity.

5. **Regulatory Compliance:** Needless to say, the tax authorities, market regulators etc. rely hugely on financial statements to understand and gauge the compliances met by the enterprise.

6. **Universality:** Last but not the least; the financial statements should be comparable both within the industry and outside. So financial statements by two different companies should look in similar lines if both are engaged in, say, manufacturing steel. Likewise, the financials of a company manufacturing steel in India should be comparable to the set of financial statements of a company based out of US engaged in the similar line of business.

The need to have the above key characteristics have brought the accounting bodies world over to come together to have a set of common standards for better integration and harmonization of accounting principles and practices.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

4. BEST PRACTICES - APPLICABLE TO ALL COMPANIES

Following are some of the practices, if followed by the preparers of the financial statements, it would lead to better presentation and disclosure and will also serve the meaningful purpose for various stakeholders in understanding the functioning, financial position and financial performance of the entity and in appropriate decision making:

1. Compliance

Financial reporting is a regulated activity and compliance with the requirements is a must. Comply with the standards and regulations but also ensure your financial statements are an effective part of your wider communication with your stakeholders. It should be simple and understandable without any change in the interpretation.

2. Complete

The information disclosed in the financial statements should be complete and should not lead to any further cross questioning in the mind of the users. Ensure consistency of disclosures across the financial statements.

Example :

Where the accounting policy states that "Balances of debtors, creditors and loans and advances are subject to reconciliations and confirmations". This indicates that these

balances may or may not be appropriately stated as well as raising questions regarding the appropriateness of the audit process.

3. Simple and specific

- Draft your notes, accounting policies, commentary on more complex areas in simple and plain English. Ensuring that there are no vague or ambiguous notes.

Example :

The definition of a derivative and a hedged item and how the company uses such items:

"A derivative is a type of financial instrument the company uses to manage risk. It is something that derives its value based on an underlying asset. It's generally in the form of a contract between two parties entered into for a fixed period. Underlying variables, such as exchange rates, will cause its value to change over time. A hedge is where the company uses a derivative to manage its underlying exposure. The company's main exposure is to fluctuation in foreign exchange risk. We manage this risk by hedging forex movements, in effecting the boundaries of exchange rate changes to manageable, affordable amounts."

- Make your policies clear and specific.
- Ensure that there should not be any vague or ambiguous notes, with no further information or explanation which may lead to misinterpretation of information.
- Reduce generic disclosures and focus on company specific disclosures that explain how the company applies the policies.

Example :

A note stated "Land not registered in the name of the company has been given for the use of group companies". However, there are no disclosures regarding such lease elsewhere in the financial statements. This leads to ambiguity regarding whether the land has been capitalized in the books of account or not.

A better disclosure would be to include this note in the note relating to 'Property, plant and Equipment' with an asterix against land and a note which states "Land includes area measuring XX acres, towards which the registration process is still in progress. This land has been given on lease to group companies."

4. Transparency

In preparation of financial statements many a times certain assumptions, or other bases are taken. Disclose those assumptions and bases transparently, so that they users are not misled. Rather such transparency shall provide useful additional information and substantiate your decision/judgement.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

5. Materiality

- The lack of clarity in how to apply the concept of materiality is perceived to be one of the main drivers for overloaded financial statements. Make effective use of materiality to enhance the clarity and conciseness of your financial statements.
- Information should only be disclosed if it is material. It is material if it could influence users' decisions which are based on the financial statements.
- Your materiality assessment is the 'filter' in deciding what information to disclose and what to omit.
- Once you have determined which specific line items require disclosure, you should assess what to disclose about these items, including how much detail to provide and how best to organise the information.

Example: Capital Commitments

A company has committed to purchase several items of property, plant and equipment. Individually each purchase is immaterial. However, the total amounts to a material commitment for the company and therefore some disclosure should be made regarding this commitment.

Example : New Revenue Stream

A company in the software sector has communicated to its stakeholders a strategic intention to focus its new development efforts in cloud-based solutions. In a particular financial year cloud-based revenues are less than 5% of the total but have grown rapidly. The company therefore decides to provide separate disclosure about this revenue stream in accordance with Ind AS 108 'Operating Segments' even though other revenue streams of similar size are typically combined into 'other revenue.'

6. Integration of Notes

- Notes cover the largest portion of the financial statements. They are an effective tool of communication and have the greatest impact on the effectiveness of your financial statements.
- Group notes into categories, place the most critical information more prominently or a combination of both.
- Integrate your main note of a line item with its accounting policy and any relevant key estimates and judgements.

Example: Inventories

1. Accounting Policy

Inventories are stated at the lower of cost and net realisable value. Cost includes all expenses directly attributable to the manufacturing process as well as suitable portions

of related production overheads, based on normal operating capacity. Costs of ordinarily interchangeable items are assigned using the first in, first out cost formula. Net realisable value is the estimated selling price in the ordinary course of business less any applicable selling expenses.

2. Significant Estimation of Uncertainty

Management estimates the net realisable values of inventories, taking into account the most reliable evidence available at each reporting date. The future realisation of these inventories may be affected by future technology or other market-driven changes that may reduce future selling prices.

3. Inventories consist of the following: (₹ in crores)

	31st March, 20X2	31st March, 20X1
Raw materials and consumables	7,000	6,000
Merchandise	11,000	9,000
	18,000	15,000

- Ensuring that the accounting policies are disclosed in one place and not scattered across various notes.

  For example, in one case it was observed that the policy of recognizing 100% depreciation on assets costing less than ₹ 5,000 was specified in the note on fixed assets, rather than in the accounting policy for fixed assets.

7. Disclosure of Material Accounting Policies

- The financial statements should disclose your material accounting policies. Disclose only your material accounting policies – remove your non-material disclosures that do not add any value.
- Your disclosures should be relevant, specific to your company and explain how you apply your policies.
- The aim of accounting policy disclosures is to help your investors and other stakeholders to properly understand your financial statements.
- Use judgement to determine whether your accounting policies are material, considering not only the materiality of the balances or transactions affected by the policy but also other factors including the nature of the company's operations.

Example:

Taxable temporary differences arise on certain brands and licenses that were acquired in past business combinations. Management considers that these assets have an indefinite

© The Institute of Chartered Accountants of India

life and are expected to be consumed by use in the business. For these assets deferred tax is recognised using the capital gains tax applicable on sale.

8. Disclosures of Key Estimates and Judgements

- Effective disclosures about the most important estimates and judgements enable investors to understand your financial statements.
- Focus on the most difficult, subjective and complex estimates.
- Include details of how the estimate was derived, key assumptions involved, the process for reviewing and an analysis of its sensitiveness.
- Provide sufficient background information on the judgement, explain how the judgement was made and the conclusion reached.

9. Integrated Approach

- Financial statements are just one part of your communication with the stakeholders. An annual report typically includes financial statements, a management commentary and information about governance, strategy and business developments, CSR Reporting, Business Responsibility Reporting etc. There is also a growing trend towards integrated reporting.
- To ensure overall effective communication consider the annual report as a whole and deliver a consistent and coherent message throughout.
- Ind AS 1 also acknowledges that one may present, outside the financial statements, a financial review that describes and explains the main features of the company's financial performance and financial position, and the principal uncertainties it faces.
- Many companies also present, outside the financial statements, reports and statements such as environmental reports and value added statements, particularly in industries in which environmental factors are significant and when employees are regarded as an important user group.
- Even though the reports and statements presented outside financial statements are outside the scope of AS / Ind AS, they are not out of the scope of regulation.

Example :

CSR disclosures, as required by the Companies Act, 2013. in section 134 and Schedule VII.

5. CASE STUDIES BASED ON IND AS

Case Study 1

On 1 April 20X1, Star Limited has advanced a housing loan of ₹ 15 lakhs to one of its employees at an interest rate of 6% per annum which is repayable in 5 equal annual installments along with interest at each year end. Employee is not required to give any specific performance against this benefit. The market rate of similar loan for housing finance by banks is 10% per annum.

The accountant of the company has recognized the staff loan in the balance sheet equivalent to the amount of housing loan disbursed i.e. ₹ 15 lakhs. The interest income for the year is recognized at the contracted rate in the Statement of Profit and Loss by the company i.e. ₹ 90,000 (6% of ₹ 15 lakhs).

Analyze whether the above accounting treatment made by the accountant is in compliance with the relevant Ind AS. If not, advise the correct treatment of housing loan, interest and other expenses in the financial statements of Star Limited for the year 20X1-20X2 along with workings and applicable Ind AS.

You are required to explain how the housing loan should be reflected in the Ind AS compliant Balance Sheet of Star Limited on 31 March 20X2.

Solution

The accounting treatment made by the accountant is not in compliance with Ind AS 109 'Financial Instruments'. As per Ind AS 109, at initial recognition, an entity shall measure a financial asset or financial liability at its fair value. The fair value of a financial instrument at initial recognition is normally the transaction price i.e. the fair value of the consideration given or received.

After initial recognition, an entity shall measure a financial asset either at amortised cost or at fair value through profit and loss or fair value through other comprehensive income.

Here, the loan given to employee is not at market rate. Hence, the fair value of the loan will not be equal to its initial loan proceeds. As per Ind AS 109, a financial instrument is initially measured and recorded in the books at its fair value. Further, interest income to be recognised in the Statement of Profit and Loss will be the finance income recognised at effective rate of interest i.e. @ 10% and not the rate of interest charged by the company i.e. @ 6%.

The correct accounting treatment as per Ind AS 109 will be as under:

For measuring the fair value or present value of the loan at initial recognition, market rate of interest of similar loan is considered (level 1 observable input) ie @ 10%, to discount the cash outflows.

The fair value of the loan shall be as follows:

Join us t.me/caborntofight

Date	Outstanding loan	Principal	Interest income @ 6%	Total inflow	Discount factor @ 10%	PV
31 March 20X2	15,00,000	3,00,000	90,000	3,90,000	0.909	3,54,510
31 March 20X3	12,00,000	3,00,000	72,000	3,72,000	0.826	3,07,272
31 March 20X4	9,00,000	3,00,000	54,000	3,54,000	0.751	2,65,854
31 March 20X5	6,00,000	3,00,000	36,000	3,36,000	0.683	2,29,488
31 March 20X6	3,00,000	3,00,000	18,000	3,18,000	0.621	1,97,478
Fair value of the loan						13,54,602

As per Ind AS 19, employee benefits are all forms of consideration given by an entity in exchange for service rendered by employees or for termination of employment. Difference of loan proceeds and present value of the loan (fair value) will be treated as prepaid employee cost irrespective of the fact that employee is not required to give any specific performance against this benefit. This is because employee is required to be in service of the company to continue availing the benefits of concessional rate of interest on housing loan. Practically, once the employee leaves the organisation, they have to repay the outstanding loan because the company provides the loan at concessional rate of interest only to its employees.

Hence, it is an employee benefit given by the company to its employees. This deemed employee cost of ₹ 1,45,398 (15,00,000 – 13,54,602) will be deferred and amortised over the period of loan on straight line basis.

Calculation of amortised cost of loan to employees

Financial year ending on 31 March	Amortised cost (opening balance)	Interest to be recognised @ 10%	Repayment (including interest)	Amortised cost (closing balance)
20X2	13,54,602	1,35,460	3,90,000	11,00,062
20X3	11,00,062	1,10,006	3,72,000	8,38,068
20X4	8,38,068	83,807	3,54,000	5,67,875
20X5	5,67,875	56,788	3,36,000	2,88,663
20X6	2,88,663	29,337*	3,18,000	-

* 2,88,663 x 10% = ₹ 28,866. Difference of ₹ 471 (29,337 – 28,866) is due to approximation in computation.

Journal Entries to be recorded at every period end:

1. On 1 April 20X1

Particulars		Dr. Amount (₹)	Cr. Amount (₹)
Loan to employee A/c	Dr.	13,54,602	
Prepaid employee cost A/c	Dr.	1,45,398	
To Bank A/c			15,00,000
(Being loan asset recorded at initial fair value)			

2. On 31 March 20X2

Particulars		Dr. Amount (₹)	Cr. Amount (₹)
Bank A/c	Dr.	3,90,000	
To Finance income A/c (profit and loss) @10%			1,35,460
To Loan to employee A/c			2,54,540
(Being first instalment of repayment of loan accounted for using the amortised cost and effective interest rate @ 10%)			
Employee benefit cost (profit and loss) A/c Dr.		29,080	
To Prepaid employee cost A/c (1,45,398/5)			29,080
(Being amortization of pre-paid employee cost charged to profit and loss as employee benefit cost)			

The Following housing loan balances should appear in the financial statements:

Extracts of Balance sheet of Star Ltd. as at 31 March 20X2

Non-current asset	
Financial asset	
Loan to employee (11,00,062 – 3,72,000 + 1,10,006)	8,38,068
Other non-current asset	
Prepaid employee cost	87,238
Current asset	
Financial asset	
Loan to employee (3,72,000-1,10,006)	2,61,994
Other current asset	
Prepaid employee cost	29,080

Deferred tax on temporary differences arising on the above-mentioned account balances (appearing in the balance sheet) should be recognised. However, in the absence of any tax rate in the question no deferred tax has been recognised.

Case Study 2

Pluto Ltd. has purchased a manufacturing plant for ₹ 6 lakhs on 1st April, 20X1. The useful life of the plant is 10 years. On 30th September, 20X3, Pluto temporarily stops using the manufacturing plant because demand has declined. However, the plant is maintained in a workable condition and it will be used in future when demand picks up.

The accountant of Pluto ltd. decided to treat the plant as held for sale until the demands picks up and accordingly measures the plant at lower of carrying amount and fair value less cost to sell.

Also, the accountant has also stopped charging the depreciation for the rest of period considering the plant as held for sale. The fair value less cost to sell on 30th September, 20X3 and 31st March, 20X4 was ₹ 4 lakhs and ₹ 3.5 lakhs respectively.

The accountant has performed the following working: ₹

Carrying amount on initial classification as held for sale		
Purchase Price of Plant	*6,00,000*	
Less: Accumulated dep (6,00,000/ 10 Years) x 2.5 years	*(1,50,000)*	*4,50,000*
Fair Value less cost to sell as on 30th September, 20X3		*4,00,000*
The value will be lower of the above two		*4,00,000*

Balance Sheet extracts as on 31st March, 20X4

Assets	
Current Assets	
Other Current Assets	
Assets classified as held for sale	*3,50,000*

Analyse whether the above accounting treatment made by the accountant is in compliance with the Ind AS. If not, advise the correct treatment alongwith the necessary workings.

Solution:

The above treatment needs to be examined in the light of the provisions given in Ind AS 16 '*Property, Plant and Equipment*' and Ind AS 105 '*Non-current Assets Held for Sale and Discontinued Operations'*.

Para 6 of Ind AS 105 *'Non-current Assets Held for Sale and Discontinued Operations'* states that:

"An entity shall classify a non-current asset (or disposal group) as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use".

Paragraph 7 of Ind AS 105 states that:

"For this to be the case, the asset (or disposal group) must be available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets (or disposal groups) and its sale must be highly probable. Thus, an asset (or disposal group) cannot be classified as a non-current asset (or disposal group) held for sale, if the entity intends to sell it in a distant future".

Further, paragraph 8 of Ind AS 105 states that:

"For the sale to be highly probable, the appropriate level of management must be committed to a plan to sell the asset (or disposal group), and an active programme to locate a buyer and complete the plan must have been initiated. Further, the asset (or disposal group) must be actively marketed for sale at a price that is reasonable in relation to its current fair value. In addition, the sale should be expected to qualify for recognition as a completed sale within one year from the date of classification and actions required to complete the plan should indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn."

Paragraph 13 of Ind AS 105 states that:

"An entity shall not classify as held for sale a non-current asset (or disposal group) that is to be abandoned. This is because its carrying amount will be recovered principally through continuing use."

Paragraph 14 of Ind AS 105 states that:

"An entity shall not account for a non-current asset that has been temporarily taken out of use as if it had been abandoned."

Paragraph 55 of Ind AS 16 states that:

"Depreciation does not cease when the asset becomes idle or is retired from active use unless the asset is fully depreciated."

Going by the guidance given above,

© The Institute of Chartered Accountants of India

The Accountant of Pluto Ltd. has treated the plant as held for sale and measured it at the fair value less cost to sell. Also, the depreciation has not been charged thereon since the date of classification as held for sale which is not correct and not in accordance with Ind AS 105 and Ind AS 16.

Accordingly, the manufacturing plant should neither be treated as abandoned asset nor as held for sale because its carrying amount will be principally recovered through continuous use. Pluto Ltd. shall not stop charging depreciation or treat the plant as held for sale because its carrying amount will be recovered principally through continuing use to the end of their economic life.

The working of the same for presenting in the balance sheet is given as below:

Calculation of carrying amount as on 31st March, 20X4	
Purchase Price of Plant	6,00,000
Less: Accumulated depreciation (6,00,000/ 10 Years) x 3 Years	(1,80,000)
	4,20,000
Less: Impairment loss	(70,000)
	3,50,000

Balance Sheet extracts as on 31st March, 20X4

Assets	
Non-Current Assets	
Property, Plant and Equipment	3,50,000

Working Note:

Fair value less cost to sell of the Plant = ₹ 3,50,000

Value in Use (not given) or = Nil (since plant has temporarily not been used for manufacturing due to decline in demand)

Recoverable amount = higher of above i.e. ₹ 3,50,000

Impairment loss = Carrying amount – Recoverable amount

Impairment loss = ₹ 4,20,000 - ₹ 3, 50,000 = ₹ 70,000.

Case Study 3

On 5th April, 20X2, fire damaged a consignment of inventory at one of the Jupiter's Ltd.'s warehouse. This inventory had been manufactured prior to 31st March, 20X2 costing ₹ 8 lakhs. The net realisable value of the inventory prior to the damage was estimated at ₹ 9.60 lakhs. Because of the damage caused to the consignment of inventory, the company was required to

spend an additional amount of ₹ 2 lakhs on repairing and re-packaging of the inventory. The inventory was sold on 15th May, 20X2 for proceeds of ₹ 9 lakhs.

The accountant of Jupiter Ltd treats this event as an adjusting event and adjusted this event of causing the damage to the inventory in its financial statement and accordingly re-measures the inventories as follows: *₹ lakhs*

	₹ lakhs
Cost	*8.00*
Net realisable value (9.6 -2)	*7.60*
Inventories (lower of cost and net realisable value)	*7.60*

Analyse whether the above accounting treatment made by the accountant in regard to financial year ending on 31.0.20X2 is in compliance of the Ind AS. If not, advise the correct treatment alongwith working for the same.

Solution:

The above treatment needs to be examined in the light of the provisions given in Ind AS 10 *'Events after the Reporting Period'* and *Ind AS 2 'Inventories'*.

Para 3 of Ind AS 10 *'Events after the Reporting Period'* defines *"Events after the reporting period are those events, favourable and unfavourable, that occur between the end of the reporting period and the date when the financial statements are approved by the Board of Directors in case of a company, and, by the corresponding approving authority in case of any other entity for issue. Two types of events can be identified:*

(a) those that provide evidence of conditions that existed at the end of the reporting period (adjusting events after the reporting period); and

(b) those that are indicative of conditions that arose after the reporting period (non-adjusting events after the reporting period).

Further, paragraph 10 of Ind AS 10 states that:

"An entity shall not adjust the amounts recognised in its financial statements to reflect non-adjusting events after the reporting period".

Further, paragraph 6 of Ind AS 2 defines:

"Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale".

Further, paragraph 9 of Ind AS 2 states that:

"Inventories shall be measured at the lower of cost and net realisable value".

© The Institute of Chartered Accountants of India

Accountant of Jupiter Ltd. has re-measured the inventories after adjusting the event in its financial statement which is not correct and nor in accordance with provision of Ind AS 2 and Ind AS 10.

Accordingly, the event causing the damage to the inventory occurred after the reporting date and as per the principles laid down under Ind AS 10 '*Events After the Reporting Date'* is a non-adjusting event as it does not affect conditions at the reporting date. Non-adjusting events are not recognised in the financial statements, but are disclosed where their effect is material.

Therefore, as per the provisions of Ind AS 2 and Ind AS 10, the consignment of inventories shall be recorded in the Balance Sheet at a value of ₹ 8 Lakhs calculated below: *₹' lakhs*

Cost	8.00
Net realisable value	9.60
Inventories (lower of cost and net realisable value)	8.00

Case Study 4

On 1st April, 20X1, Sun Ltd. has acquired 100% shares of Earth Ltd. for ₹ 30 lakhs. Sun Ltd. has 3 cash-generating units A, B and C with fair value of ₹ 12 lakhs, ₹ 8 lakhs and ₹ 4 lakhs respectively. The company recognizes goodwill of Rs 6 lakhs that relates to CGU 'C' only.

During the financial year 20X2-20X3, the CFO of the company has a view that there is no requirement of any impairment testing for any CGU since their recoverable amount is comparatively higher than the carrying amount and believes there is no indicator of impairment.

Analyse whether the view adopted by the CFO of Sun Ltd is in compliance of the Ind AS. If not, advise the correct treatment in accordance with relevant Ind AS

Solution

The above treatment needs to be examined in the light of the provisions given in Ind AS 36: Impairment of Assets.

Para 9 of Ind AS 36 *'Impairment of Assets'* states that *"An entity shall assess at the end of each reporting period whether there is any indication that an asset may be impaired. If any such indication exists, the entity shall estimate the recoverable amount of the asset."*

Further, paragraph 10(b) of Ind AS 36 states that:

"Irrespective of whether there is any indication of impairment, an entity shall also test goodwill acquired in a business combination for impairment annually."

Sun Ltd has not tested any CGU on account of not having any indication of impairment is partially correct i.e. in respect of CGU A and B but for CGU C. Hence, the treatment made by the Company is not in accordance with Ind AS 36.

Accordingly, impairment testing in respect of CGU A and B are not required since there are no indications of impairment. However, Sun Ltd shall test CGU C irrespective of any indication of impairment annually as the goodwill acquired on business combination is fully allocated to CGU 'C'.

Case Study 5

Deepak started a new company Softbharti Pvt. Ltd. with Iktara Ltd. wherein investment of 55% is done by Iktara Ltd. and rest by Deepak. Voting powers are to be given as per the proportionate share of capital contribution. The new company formed was the subsidiary of Iktara Ltd. with two directors, and Deepak eventually becomes one of the directors of company. A consultant was hired and he charged ₹ 30,000 for the incorporation of company and to do other necessary statuary registrations. ₹ 30,000 is to be charged as an expense in the books after incorporation of company. The company, Softbharti Pvt. Ltd. was incorporated on 1st April 20X1.

The financials of Iktara Ltd. are prepared as per Ind AS.

An accountant who was hired at the time of company's incorporation, has prepared the draft financials of Softbharti Pvt. Ltd. for the year ending 31st March, 20X2 as follows:

Statement of Profit and Loss

Particulars	Amount (₹)
Revenue from operations	10,00,000
Other Income	1,00,000
Total Revenue (a)	**11,00,000**
Expenses:	
Purchase of stock in trade	5,00,000
(Increase)/Decrease in stock in trade	(50,000)
Employee benefits expense	1,75,000
Depreciation	30,000
Other expenses	90,000
Total Expenses (b)	**7,45,000**
Profit before tax (c) = (a)-(b)	**3,55,000**
Current tax	1,06,500
Deferred tax	6,000
Total tax expense (d)	**1,12,500**
Profit for the year (e) = (c) – (d)	**2,42,500**

Balance Sheet

Particulars	Amount (₹)
EQUITY AND LIABILITIES	
(1) Shareholders' Funds	
(a) Share Capital	1,00,000
(b) Reserves & Surplus	2,27,500
(2) Non-Current Liabilities	
(a) Long Term Provisions	25,000
(b) Deferred tax liabilities	6,000
(3) Current Liabilities	
(a) Trade Payables	11,000
(b) Other Current Liabilities	45,000
(c) Short Term Provisions	1,06,500
TOTAL	**5,21,000**
ASSETS	
(1) Non Current Assets	
(a) Property, plant and equipment (net)	1,00,000
(b) Long-term Loans and Advances	40,000
(c) Other Non Current Assets	50,000
(2) Current Assets	
(a) Current Investment	30,000
(b) Inventories	80,000
(c) Trade Receivables	55,000
(d) Cash and Bank Balances	1,15,000
(e) Other Current Assets	51,000
TOTAL	**5,21,000**

Additional information of Softbharti Pvt Ltd.:

i. Deferred tax liability of ₹ 6,000 is created due to following temporary difference:

Difference in depreciation amount as per Income tax and Accounting profit

ii. There is only one property, plant and equipment in the company, whose closing balance as at 31st March, 20X2 is as follows:

Asset description	As per Books	As per Income tax
Property, plant and equipment	₹ 1,00,000	₹ 80,000

Merged By CA - Born To Fight

iii. Pre incorporation expenses are deductible on straight line basis over the period of five years as per Income tax. However, the same are immediately expensed off in the books.

iv. Current tax is calculated at 30% on PBT - ₹ 3,55,000 without doing any adjustments related to Income tax. The correct current tax after doing necessary adjustments of allowances / disallowances related to Income tax comes to ₹ 1,25,700.

v. After the reporting period, the directors have recommended dividend of ₹ 15,000 for the year ending 31st March, 20X2 which has been deducted from reserves and surplus. Dividend payable of ₹ 15,000 has been grouped under 'other current liabilities' alongwith other financial liabilities.

vi. There are 'Government statuary dues' amounting to ₹ 15,000 which are grouped under 'other current liabilities'.

vii. The capital advances amounting to ₹ 50,000 are grouped under 'Other non-current assets'.

viii. Other current assets of ₹ 51,000 comprise Interest receivable from trade receivables.

ix. Current investment of ₹ 30,000 is in shares of a company which was done with the purpose of trading; current investment has been carried at cost in the financial statements. The fair value of current investment in this case is ₹ 50,000 as at 31st March, 20X2.

x. Actuarial gain on employee benefit measurements of ₹ 1,000 has been omitted in the financials of Softbharti private limited for the year ending 31st March, 20X2.

The financial statements for financial year 20X1-20X2 have not been yet approved.

You are required to ascertain that whether the financial statements of Softbharti Pvt. Ltd. are correctly presented as per the applicable financial reporting framework. If not, prepare the revised financial statements of Softbharti Pvt. Ltd. after the careful analysis of mentioned facts and information.

Solution

If Ind AS is applicable to any company, then Ind AS shall automatically be made applicable to all the subsidiaries, holding companies, associated companies, and joint ventures of that company, irrespective of individual qualification of set of standards on such companies.

In the given case it has been mentioned that the financials of Iktara Ltd. are prepared as per Ind AS. Accordingly, the results of its subsidiary Softbharti Pvt. Ltd. should also have been prepared as per Ind AS. However, the financials of Softbharti Pvt. Ltd. have been presented as per accounting standards (AS).

Hence, it is necessary to revise the financial statements of Softbharti Pvt. Ltd. as per Ind AS after the incorporation of necessary adjustments mentioned in the question.

The revised financial statements of Softbharti Pvt. Ltd. as per Ind AS and Division II to Schedule III of the Companies Act, 2013 are as follows:

STATEMENT OF CHANGES IN EQUITY

For the year ended 31st March, 20X2

A. EQUITY SHARE CAPITAL

	Balance (₹)
As at 31st March, 20X1	-
Changes in equity share capital during the year	1,00,000
As at 31st March, 20X2	1,00,000

B. OTHER EQUITY

	Reserves & Surplus
	Retained Earnings (₹)
As at 31st March, 20X1	-
Profit for the year	2,44,500
Other comprehensive income for the year	700
Total comprehensive income for the year	2,45,200
Less: Dividend on equity shares (refer note – 4)	-
As at 31st March, 20X2	2,45,200

DISCLOSURE FORMING PART OF FINANCIAL STATEMENTS:

Proposed dividend on equity shares is subject to the approval of the shareholders of the company at the annual general meeting and not recognized as liability as at the Balance Sheet date. (refer note 4)

Notes:

1. Current investment are held for the purpose of trading. Hence, it is a financial asset classified as FVTPL. Any gain in its fair value will be recognised through profit or loss. Hence, ₹ 20,000 (₹ 50,000 – ₹ 30,000) increase in fair value of financial asset will be recognised in profit and loss. However, it will attract deferred tax liability on increased value (Refer W.N).
2. Assets for which the future economic benefit is the receipt of goods or services, rather than the right to receive cash or another financial asset, are not financial assets.
3. Liabilities for which there is no contractual obligation to deliver cash or other financial asset to another entity, are not financial liabilities.
4. As per Ind AS 10, 'Events after the Reporting Period', If dividends are declared after the reporting period but before the financial statements are approved for issue, the dividends are not recognized as a liability at the end of the reporting period because no obligation exists at that time. Such dividends are disclosed in the notes in accordance with Ind AS 1, Presentation of Financial Statements.
5. Other current financial liabilities:

	(₹)
Balance of other current liabilities as per financial statements	45,000
Less: Dividend declared for FY 20X1 – 20X2 (Note – 4)	(15,000)
Reclassification of government statuary dues payable to 'other current liabilities'	(15,000)
Closing balance	15,000

Working Note:

Calculation of deferred tax on temporary differences as per Ind AS 12 for financial year 20X1 – 20X2

Item	Carrying amount (₹)	Tax base (₹)	Difference (₹)	DTA / DTL @ 30% (₹)
Property, Plant and Equipment	1,00,000	80,000	20,000	6,000-DTL
Pre-incorporation expenses	Nil	24,000	24,000	7,200-DTA
Current Investment	50,000	30,000	20,000	6,000-DTL
			Net DTL	4,800-DTL

Case Study 6

Mumbai Challengers Ltd., a listed entity, is a sports organization owning several cricket and hockey teams. The issues below pertain to the reporting period ending 31 March 20X2.

(a) Owing to the proposed schedules of Indian Hockey League as well as Cricket Premier Tournament, Mumbai Challengers Ltd. needs a new stadium to host the sporting events. This stadium will form a part of the Property, Plant and Equipment of the company. Mumbai Challengers Ltd. began the construction of the stadium on 1 December, 20X1. The construction of the stadium was completed in 20X2-20X3. Costs directly related to the construction amounted to ₹ 140 crores in December 20X1. Thereafter, ₹ 350 crores have been incurred per month until the end of the financial year. The company has not taken any specific borrowings to finance the construction of the stadium, although it has incurred finance costs on its regular overdraft during the period, which were avoidable had the stadium not been constructed. Mumbai Challengers Ltd. has calculated that the weighted average cost of the borrowings for the period 1 December 20X1 to 31 March 20X2 amounted to 15% per annum on an annualized basis.

The company seeks advice on the treatment of borrowing costs in its financial statements for the year ending 31 March 20X2.

(b) Mumbai Challengers Ltd. acquires and sells players' registrations on a regular basis. For a player to play for its team, Mumbai Challengers Ltd. must purchase registrations for that player. These player registrations are contractual obligations between the player and the company. The costs of acquiring player registrations include transfer fees, league levy fees, and player agents' fees incurred by the club.

At the end of each season, which happens to also be the reporting period end for Mumbai Challengers Ltd., the club reviews its contracts with the players and makes decisions as to whether they wish to sell/transfer any players' registrations. The company actively markets

these registrations by circulating with other clubs a list of players' registrations and their estimated selling price. Players' registrations are also sold during the season, often with performance conditions attached. In some cases, it becomes clear that a player will not play for the club again because of, for example, a player sustaining a career threatening injury or being permanently removed from the playing squad for any other reason. The playing registrations of certain players were sold after the year end, for total proceeds, net of associated costs, of ₹ 175 crores. These registrations had a net book value of ₹ 49 crores.

Mumbai Challengers Ltd. seeks your advice on the treatment of the acquisition, extension, review and sale of players' registrations in the circumstances outlined above.

(c) Mumbai Challengers Ltd. measures its stadiums in accordance with the revaluation model. An airline company has approached the directors offering ₹ 700 crores for the property naming rights of all the stadiums for five years. Three directors are on the management boards of both Mumbai Challengers Ltd. and the airline. Additionally, statutory legislations regulate the financing of both the cricket and hockey clubs. These regulations prevent contributions to the capital from a related party which 'increases equity without repayment in return'. Failure to adhere to these legislations could lead to imposition of fines and withholding of prize money.

Mumbai Challengers Ltd. wants to know how to take account of the naming rights in the valuations of the stadium and the potential implications of the financial regulations imposed by the legislations.

Solution:

(a) Borrowing Costs

As per Ind AS 23 *Borrowing Costs*, an entity shall capitalize borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset (i.e. an asset that necessarily takes a substantial period of time to get ready for its intended use or sale) as part of the cost of that asset. The borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are those borrowing costs that would have been avoided if the expenditure on the qualifying asset had not been made. To the extent that an entity borrows funds generally and uses them for the purpose of obtaining a qualifying asset, the entity shall determine the amount of borrowing costs eligible for capitalization by applying a capitalization rate to the expenditures on that asset. The capitalization rate shall be the weighted average of the borrowing costs applicable to all borrowings of the entity that are outstanding during the period.

The capitalization rate of the borrowings of Mumbai Challengers Ltd. during the period of construction is 15% per annum (as given in the question), and therefore, the total amount of borrowing costs to be capitalized is the expenditures incurred on the asset multiplied by the capitalization rate, which is as under:

Particulars	₹ in crores
Costs incurred in December 20X1: (₹ 140 crores x 15% x 4/12)	7.000
Costs incurred in January 20X2: (₹ 350 crores x 15% x 3/12)	13.125
Costs incurred in February 20X2: (₹ 350 crores x 15% x 2/12)	8.750
Costs incurred in March 20X2: (₹ 350 crores x 15% x 1/12)	4.375
Borrowing Costs to be capitalized in 20X1-X2	**33.250**

OR

Weighted average carrying amount of the stadium during 20X1-X2 is:

₹ (140 + 490 + 840 + 1,190) crores/4 = ₹ 665 crores

Applying the weighted average rate of borrowings of 15% per annum, the borrowing cost to be capitalized is computed as:

₹ 665 crores x (15% x 4/12) = ₹ 33.25 crores

(b) Players' Registrations

Acquisition

As per Ind AS 38 *Intangible Assets*, an entity should recognize an intangible asset where it is probable that the expected future economic benefits that are attributable to the asset will flow to the entity and the cost of the asset can be measured reliably. Accordingly, the **costs** associated with the acquisition of players' registrations would need to be **capitalized which would be the amount of cash or cash equivalent paid or the fair value of other consideration given to acquire such registrations**. In line with Ind AS 38 *Intangible Assets*, costs would include transfer fees, league levy fees, and player agents' fees incurred by the club, along with other directly attributable costs, if any. Amounts capitalized would be fully amortized over the period covered by the player's contract.

Sale of registrations

Player registrations would be classified as assets held for sale under Ind AS 105 *Non-Current Assets Held for Sale and Discontinued Operations* when their carrying amount is expected to be recovered principally through a sale transaction and a sale is considered to be highly probable. To consider a sale to be 'highly probable', the assets (in this case, player registrations) should be actively marketed for sale at a price that is reasonable in relation to its current fair value. In the given case, it would appear that the management is committed to a plan to sell the registration, that the asset is available for immediate sale and that an active plan to locate a buyer is already in place by circulating clubs. Ind AS 105 stipulates that it should be unlikely that the plan to sell the registrations would be significantly changed or withdrawn. To fulfil this requirement, it would be prudent if only

those registrations are classified as held for sale where unconditional offers have been received prior to the reporting date.

Once the conditions for classifying assets as held for sale in accordance with Ind AS 105 have been fulfilled, the player registrations would be stated at lower of carrying amount and fair value less costs to sell, with the carrying amount stated in accordance with Ind AS 38 prior to application of Ind AS 105, subjected to impairment, if any.

Profits and losses on sale of players' registrations would be computed by deducting the carrying amount of the players' registrations from the fair value of the consideration receivable, net of transactions costs. In case a portion of the consideration is receivable on the occurrence of a future performance condition (i.e. contingent consideration), this amount would be recognized in the Statement of Profit and Loss only when the conditions are met.

The players registrations disposed of, subsequent to the year end, for ₹ 175 crores, having a corresponding book value of ₹ 49 crores would be disclosed as a non-adjusting event in accordance with Ind AS 10 *Events after the Reporting Period*.

Impairment review

Ind AS 36 *Impairment of Assets* requires companies to **annually test their assets for impairment**. An asset is said to be impaired if the carrying amount of the asset exceeds its recoverable amount. The recoverable amount is higher of the asset's fair value less costs to sell and its value in use (which is the present value of future cash flows expected to arise from the use of the asset). In the given scenario, it is not easy to determine the value in use of any player in isolation as that player cannot generate cash flows on his/her own unless via a sale transaction or an insurance recovery. Whilst any individual player cannot really be separated from the single cash-generating unit (CGU), being a cricket team or a hockey team in the instant case, there may be certain instances where a player is taken out of the CGU when it becomes clear that he/she will not play for the club again. If such circumstances arise, the **carrying amount of the player should be assessed against the best estimate of the player's fair value less any costs to sell and an impairment charge should be recognized in the profit or loss**, which reflects any loss arising.

(c) Valuation of stadiums

In terms of Ind AS 113 *Fair Value Measurement*, stadiums would be valued at the **price which would be received to sell the asset in an orderly transaction between market participants** at the measurement date (i.e. exit price). The price would be the one which **maximizes the value of the asset** or the group of assets using the principle of the highest and best use. The price would essentially use Level 2 inputs which are inputs other than quoted market prices included within Level 1 which are observable for the asset or liability, either directly or indirectly. Property naming rights present complications when valuing property. The status of the property indicates its suitability for inviting sponsorship attached

to its name. It has nothing to do with the property itself but this can be worth a significant amount. Therefore, Mumbai Challengers Ltd. could include the property naming rights in the valuation of the stadium and write it off over three years.

Ind AS 24 *Related Party Disclosures* lists the criteria for two entities to be treated as related parties. Such criteria include being members of the same group or where a person or a close member of that person's family is related to a reporting entity if that person has control or joint control over the reporting entity. Ind AS 24 deems that parties are not related simply because they have a director or a key manager in common. In this case, there are three directors in common and in the absence of any information to the contrary, it appears as though the entities are not related. However, the regulator will need to establish whether the sponsorship deal is a related party transaction for the purpose of the financial control provisions. There would need to be demonstrated that the airline may be expected to influence, or be influenced by, the club or a related party of the club. If the deal is deemed to be a related party transaction, the regulator will evaluate whether the sponsorship is at fair value or not.

Case Study 7

(a) Neelanchal Gas Refinery Ltd. (hereinafter referred to as Neelanchal), a listed company, is involved in the production and trading of natural gas and oil. Neelanchal jointly owns an underground storage facility with another entity, Seemanchal Refineries Ltd. (hereinafter referred to as Seemanchal). Both the companies are engaged in extraction of gas from offshore gas fields, which they own and operate independently of each other. Neelanchal owns 60% of the underground facility and Seemanchal owns 40%. Both the companies have agreed to share services and costs accordingly, with decisions relating to the storage facility requiring unanimous agreement of the parties. The underground facility is pressurised so that the gas is pushed out when extracted. When the gas pressure is reduced to a certain level, the remaining gas is irrecoverable and remains in the underground storage facility until it is decommissioned. As per the laws in force, the storage facility should be decommissioned at the end of its useful life.

Neelanchal seeks your advice on the treatment of the agreement with Seemanchal as well as the accounting for the irrecoverable gas.

(b) Neelanchal has entered into a ten-year contract with Uttaranchal Refineries Pvt. Ltd. (hereinafter referred to as Uttaranchal) for purchase of natural gas. Neelanchal has paid an advance to Uttaranchal equivalent to the total quantity of gas contracted for ten years based on the forecasted price of gas. This advanced amount carries interest at the rate of 12.5% per annum, which is settled by Uttaranchal way of supply of extra gas. The contract requires fixed quantities of gas to be supplied each month. Additionally, there is a price adjustment mechanism in the contract whereby the difference between the forecasted price of gas and the prevailing market price is settled in cash on a quarterly

basis. If Uttaranchal does not deliver the gas as agreed, Neelanchal has the right to claim compensation computed at the current market price of the gas.

Neelanchal wants to account for the contract with Uttaranchal in accordance with Ind AS 109 *Financial Instruments* and seeks your inputs in this regard.

Solution

(a) Joint Arrangement

As per Ind AS 111 *Joint Arrangements*, a joint arrangement is an arrangement of which two or more parties have joint control. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control. The structure and form of the arrangement determines the nature of the relationship. However, irrespective of the purpose, structure or form of the arrangement, the classification of joint arrangements depends upon the parties' rights and obligations arising from the arrangement. Accordingly, a joint arrangement could be classified as a joint operation or as a joint venture. A joint arrangement which is NOT structured through a separate vehicle is a joint operation. In such cases, the contractual arrangement establishes the parties' rights and obligations. A joint operator accounts for the assets, liabilities, revenues and expenses relating to its involvement in a joint operation in accordance with the relevant Ind AS. Based on the information provided, the arrangement with Seemanchal Refineries Ltd. is a joint operation as no separate vehicle is formed and the companies have agreed to share services and costs with decisions regarding the storage facility requiring unanimous agreement of the parties. Neelanchal Gas Refinery Ltd. should recognize its share of the asset as Property, Plant and Equipment.

As per Para 16 of Ind AS 16 Property, Plant and Equipment, the cost of an item of property, plant and equipment comprises the initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located. Ind AS 37 *Provisions, Contingent Liabilities and Contingent Assets* provides guidance on measuring decommissioning, restoration and similar liabilities. Para 45 of Ind AS 37 provides that where the effect of the time value of money is material, the amount of a provision shall be the present value of the expenditures expected to be required to settle the obligation. Thus, costs incurred by an entity in respect of obligations for dismantling, removing and restoring the site on which an item of property, plant and equipment is situated are recognized and measured in accordance with Ind AS 16 and Ind AS 37, with the journal entry being as under:

Property, Plant and Equipment	Dr.	xxx	
To Provision for Dismantling, Removal and Restoration			xxx

Neelanchal Gas Refinery Ltd. should recognize 60% of the cost of decommissioning of the underground storage facility. However, in line Para 29 of Ind AS 37 where an entity is jointly

and severally liable for an obligation, **the part of the obligation that is expected to be met by other parties is treated as a contingent liability**. Accordingly, Neelanchal Gas Refinery Ltd. should also disclose 40% of the cost of decommissioning of the underground facility as a contingent liability, should there arise future events that prevent Seemanchal Refineries Ltd. from fulfilling its obligations under the arrangement.

As per Ind AS 16, Property, Plant and Equipment are tangible items that:

(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and

(b) are expected to be used during more than one period.

Thus, Neelanchal Gas Refinery Ltd. should classify and account for its share of irrecoverable gas as property, plant and equipment, as the irrecoverable gas is necessary for the storage facility to perform its function. Therefore, the **irrecoverable gas, being a part of the storage facility, should be capitalized as a component of the storage facility asset**, and should be depreciated to its residual value over the life of the storage facility. However, if the gas is recoverable in full upon decommissioning of the storage facility, then depreciation against the irrecoverable gas component will be recorded only if the estimated residual value of the gas decreases below cost during the life of the facility. Upon decommissioning of the storage facility, when the cushion gas is extracted and sold, the sale of irrecoverable gas is accounted as a disposal of an item of property, plant and equipment in accordance with Ind AS 16 and the resulting gain or loss is recognized in the Statement of Profit and Loss. The natural gas in excess of the irrecoverable gas which is injected into the facility would be treated as inventory in accordance with Ind AS 2 *Inventories*.

(b) Contract with Uttaranchal Refineries Pvt. Ltd.

As per para 2.4 of Ind AS 109 *Financial Instruments,* this standard applies to those contracts to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments, as if the contracts were financial instruments, **with the exception** of contracts that were entered into and continue to be held for the purpose of the receipt or delivery of a non-financial item in accordance with the entity's expected purchase, sale or usage requirements (i.e. own use contracts). This contract will result in physical delivery of the commodity i.e. extra gas.

Para 2.5 of Ind AS 109 further provides that a contract to buy or sell a non-financial item that can be settled net in cash or another financial instrument, or by exchanging financial instruments, as if the contract was a financial instrument, may be irrevocably designated as measured at fair value through profit or loss even if it was entered into for the purpose of the receipt or delivery of a non-financial item in accordance with the entity's expected purchase, sale or usage requirements. This designation is available only at inception of the contract and only if it eliminates or significantly reduces a recognition inconsistency

(sometimes referred to as an 'accounting mismatch') that would otherwise arise from not recognising that contract because it is excluded from the scope of this Standard.

There are various ways in which a contract to buy or sell a non-financial item can be settled net in cash or another financial instrument or by exchanging financial instruments. These include:

(a) when the terms of the contract permit either party to settle it net in cash or another financial instrument or by exchanging financial instruments;

(b) when the ability to settle net in cash or another financial instrument, or by exchanging financial instruments, is not explicit in the terms of the contract, but the entity has a practice of settling similar contracts net in cash or another financial instrument or by exchanging financial instruments (whether with the counterparty, by entering into offsetting contracts or by selling the contract before its exercise or lapse);

(c) when, for similar contracts, the entity has a practice of taking delivery of the underlying and selling it within a short period after delivery for the purpose of generating a profit from short-term fluctuations in price or dealer's margin; and

(d) when the non-financial item that is the subject of the contract is readily convertible to cash.

A written option to buy or sell a non-financial item, such as a commodity, that can be settled net in cash or another financial instrument, or by exchanging financial instruments, is within the scope of Ind AS 109. Such a contract is accounted as a derivative. Such a contract cannot be entered into for the purpose of the receipt or delivery of the non-financial item in accordance with the entity's expected purchase, sale or usage requirements. Judgment would be required in this area as net settlements caused by unique events beyond management's control may not necessarily prevent the entity from applying the 'own use' exemption to all similar contracts.

In the given case, the contract with Uttaranchal Refineries Pvt. Ltd. will result in physical delivery of extra gas (which is a commodity and not cash, or a financial instrument) for the use of Neelanchal Gas Refinery Ltd. Accordingly, it appears that this contract would be an own use contract falling outside the scope of Ind AS 109 and therefore, would be treated as an executory contract. However, arguments could be placed that the contract is net settled due to the penalty mechanism requiring Uttaranchal Refineries Pvt. Ltd. to compensate Neelanchal Gas Refinery Ltd. at the current prevailing market price. Further, if natural gas is readily convertible into cash at the location of delivery, the contract could be considered net settled. Additionally, if there is volume flexibility, the contract could be regarded as a written option which falls within the scope of Ind AS 109.

However, the contract will probably continue to be regarded as 'own use' as long as it has been entered into and continues to be held for expected counterparties' sale / usage requirements. Additionally, the entity has not irrevocably designated the contract as measured at fair value through profit or loss, thus emphasizing the 'own use' designation.

TEST YOUR KNOWLEDGE

Questions

1. Venus Ltd. is a multinational entity that owns three properties. All three properties were purchased on 1st April, 20X1. The details of purchase price and market values of the properties are given as follows:

Particulars	Property 1	Property 2	Property 3
	Factory	Factory	Let-Out
Purchase price	15,000	10,000	12,000
Market value 31.03.20X2	16,000	11,000	13,500
Life	10 Years	10 Years	10 Years
Subsequent Measurement	Cost Model	Revaluation Model	Revaluation Model

Property 1 and 2 are used by Venus Ltd. as factory building whilst property 3 is let-out to a non-related party at a market rent. The management presents all three properties in balance sheet as 'property, plant and equipment'.

The Company does not depreciate any of the properties on the basis that the fair values are exceeding their carrying amount and recognise the difference between purchase price and fair value in Statement of Profit and Loss.

Required:

Analyse whether the accounting policies adopted by the Venus Ltd. in relation to these properties is in accordance with Ind AS. If not, advise the correct treatment alongwith working for the same.

2. On 1st January, 20X2, Sun Ltd. was notified that a customer was taking legal action against the company in respect of a financial losses incurred by the customer. Customer alleged that the financial losses were caused due to supply of faulty products on 30th September, 20X1 by the Company. Sun Ltd. defended the case but considered, based on the progress of the case up to 31st March, 20X2, that there was a 75% probability they would have to pay damages of ₹ 10 lakhs to the customer.

However, the accountant of Sun Ltd. has not recorded this transaction in its financial statement as the case is not yet finally settled. The case was ultimately settled against the company resulting in to payment of damages of ₹ 12 lakhs to the customer on 15th May, 20X2. The financials have been authorized by the Board of Directors in its meeting held on 18th May, 20X2.

Analyse whether the above accounting treatment made by the accountant is in compliance of the Ind AS. If not, advise the correct treatment along with working for the same.

3. Mercury Ltd. is an entity engaged in plantation and farming on a large scale diversified across India. On 1st April, 20X1, the company has received a government grant for ₹ 10 lakhs subject to a condition that it will continue to engage in plantation of eucalyptus tree for a coming period of five years. Eucalyptus trees are not considered as bearer plant in this case.

   The management has a reasonable assurance that the entity will comply with condition of engaging in the plantation of eucalyptus tree for specified period of five years and accordingly it recognises proportionate grant for ₹ 2 lakhs in Statement of Profit and Loss as income following the principles laid down under *Ind AS 20 Accounting for Government Grants and Disclosure of Government Assistance*.

   Analyse whether the above accounting treatment made by the management is in compliance of the Ind AS. If not, advise the correct treatment alongwith working for the same.

4. Mercury Ltd. has sold goods to Mars Ltd. at a consideration of ₹ 10 lakhs, the receipt of which receivable in three equal installments of ₹ 3,33,333 over a two year period (receipts on 1st April, 20X1, 31st March, 20X2 and 31st March, 20X3).

   The company is offering a discount of 5 % (i.e. ₹ 50,000) if payment is made in full at the time of sale. The sale agreement reflects an implicit interest rate of 5.36% p.a.

   The total consideration to be received from such sale is at ₹ 10 Lakhs and hence, the management has recognised the revenue from sale of goods for ₹ 10 lakhs.

   Analyse whether the above accounting treatment made by the accountant is in compliance of the Ind AS. If not, advise the correct treatment along with working for the same.

5. Master Creator Private Limited (a subsidiary of listed company) is an Indian company to whom Ind AS are applicable. Following draft balance sheet is prepared by the accountant for year ending 31st March 20X2.

Balance Sheet of Master Creator Private Limited as at 31st March, 20X2

Particulars	**₹**
ASSETS	
Non-current assets	
Property, plant and equipment	85,37,500
Financial assets	
Other financial assets (Security deposits)	4,62,500

Other non-current assets (capital advances)	17,33,480
Deferred tax assets	2,54,150
Current assets	
Trade receivables	7,25,000
Inventories	5,98,050
Financial assets	
Investments	55,000
Other financial assets	2,17,370
Cash and cash equivalents	1,16,950
TOTAL ASSETS	**1,27,00,000**
EQUITY AND LIABILITIES	
Equity share capital	10,00,000
Non-current liabilities	
Other Equity	25,00,150
Deferred tax liability	4,74,850
Borrowings	64,00,000
Long term provisions	5,24,436
Current liabilities	
Financial liabilities	
Other financial liabilities	2,00,564
Trade payables	6,69,180
Current tax liabilities	9,30,820
TOTAL EQUITY AND LIABILITIES	**1,27,00,000**

Additional Information:

1. On 1st April 20X1, 8% convertible loan with a nominal value of ₹ 64,00,000 was issued by the entity. It is redeemable on 31st March 20X5 also at par. Alternatively, it may be converted into equity shares on the basis of 100 new shares for each ₹ 200 worth of loan.

   An equivalent loan without the conversion option would have carried interest at 10%. Interest of ₹ 5,12,000 has already been paid and included as a finance cost.

   Present Value (PV) rates are as follows:

© The Institute of Chartered Accountants of India

Year End	@ 8%	@ 10%
1	0.93	0.91
2	0.86	0.83
3	0.79	0.75
4	0.73	0.68

2. After the reporting period, the board of directors have recommended dividend of ₹ 50,000 for the year ending 31st March, 20X1. However, the same has not been yet accounted by the company in its financials.

3. 'Other current financial liabilities' consists of the following:

Particulars	Amount (₹)
Wages payable	21,890
Salary payable	61,845
TDS payable	81,265
Interest accrued on trade payables	35,564

4. Property, Plant and Equipment consists following items:

Particulars	Amount (₹)	Remarks
Building	37,50,250	It is held for administration purposes
Land	15,48,150	It is held for capital appreciation
Vehicles	12,37,500	These are used as the conveyance for employees
Factory premises	20,01,600	The construction was started on 31st March 20X2 and consequently no depreciation has been charged on it. The construction activities will continue to happen, and it will take 2 years to complete and be available for use.

5. The composition of 'other current financial assets' is as follows:

Particulars	Amount (Rs.)
Interest accrued on bank deposits	57,720
Prepaid expenses	90,000
Royalty receivable from dealers	69,650

6. Current Investments consist of securities held for trading which are carried at fair value through profit & loss. Investments were purchased on 1st January,20X2 at

₹ 55,000 and accordingly are shown at cost as at 31st March 20X2. The fair value of said investments as on 31st March 20X2 is ₹ 60,000.

7. Trade payables and Trade receivables are due within 12 months.
8. There has been no changes in equity share capital during the year.
9. Entity has the intention to set off a deferred tax asset against a deferred tax liability as they relate to income taxes levied by the same taxation authority and the entity has a legally enforceable right to set off taxes.
10. Other Equity consists retained earnings only. The opening balance of retained earnings was ₹ 21,25,975 as at 1st April 20X1.
11. No dividend has been actually paid by company during the year.
12. Assume that the deferred tax impact, if any on account of above adjustments is correctly calculated in financials.

Being Finance & Accounts manager, you are required to identify the errors and misstatements if any in the balance sheet of Master Creator Private Limited and prepare corrected balance sheet with details on the face of the balance sheet i.e. no need to prepare notes to accounts, after considering the additional information. Provide necessary explanations/workings for the treated items, wherever necessary.

6. HIM Limited having net worth of ₹ 250 crores is required to adopt Ind AS from 1st April, 20X2 in accordance with the Companies (Indian Accounting Standard) Rules 2015.

Rahul, the senior manager, of HIM Ltd. has identified following issues which need specific attention of CFO so that opening Ind AS balance sheet as on the date of transition can be prepared:

Issue 1 : As part of Property, Plant and Equipment, Company has elected to measure land at its fair value and want to use this fair value as deemed cost on the date of transition. The carrying value of land as on the date of transition was ₹ 5,00,000. The land was acquired for a consideration of ₹ 5,00,000. However, the fair value of land as on the date of transition was ₹ 8,00,000.

Issue 2 : Under Ind AS, the Company has designated mutual funds as investments at fair value through profit or loss. The value of mutual funds as per previous GAAP was ₹ 4,00,000 (at cost). However, the fair value of mutual funds as on the date of transition was ₹ 5,00,000.

Issue 3 : Company had taken a loan from another entity. The loan carries an interest rate of 7% and it had incurred certain transaction costs while obtaining the same. It was carried at cost on its initial recognition. The principal amount is to be repaid in equal instalments over the period of loan. Interest is also payable at each year end. The fair value of loan as

on the date of transition is ₹ 1,80,000 as against the carrying amount of loan which at present equals ₹ 2,00,000.

Issue 4 : The company has declared dividend of ₹ 30,000 for last financial year. On the date of transition, the declared dividend has already been deducted by the accountant from the company's 'Reserves & Surplus' and the dividend payable has been grouped under 'Provisions'. The dividend was only declared by board of directors at that time and it was not approved in the annual general meeting of shareholders. However, subsequently when the meeting was held it was ratified by the shareholders.

Issue 5 : The company had acquired intangible assets as trademarks amounting to ₹ 2,50,000. The company assumes to have indefinite life of these assets. The fair value of the intangible assets as on the date of transition was ₹ 3,00,000. However, the company wants to carry the intangible assets at ₹ 2,50,000 only.

Issue 6 : After consideration of possible effects as per Ind AS, the deferred tax impact is computed as ₹ 25,000. This amount will further increase the portion of deferred tax liability. There is no requirement to carry out the separate calculation of deferred tax on account of Ind AS adjustments.

Management wants to know the impact of Ind AS in the financial statements of company for its general understanding.

Prepare Ind AS Impact Analysis Report (Extract) for HIM Limited for presentation to the management wherein you are required to discuss the corresponding differences between Earlier IGAAP (AS) and Ind AS against each identified issue for preparation of transition date balance sheet. Also pass journal entry for each issue.

Answers

1. The above issue needs to be examined in the umbrella of the provisions given in Ind AS 1 '*Presentation of Financial Statements'*, Ind AS 16 *'Property, Plant and Equipment'* in relation to property '1' and '2' and *Ind AS 40 'Investment Property'* in relation to property '3'.

Property '1' and '2'

Para 6 of Ind AS 16 '*Property, Plant and Equipment'* defines:

"Property, plant and equipment are tangible items that:

(a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and

(b) are expected to be used during more than one period."

Join us t.me/caborntofight

Paragraph 29 of Ind AS 16 states that:

"An entity shall choose either the cost model or the revaluation model as its accounting policy and shall apply that policy to an entire class of property, plant and equipment".

Further, paragraph 36 of Ind AS 16 states that:

"If an item of property, plant and equipment is revalued, the entire class of property, plant and equipment to which that asset belongs shall be revalued".

Further, paragraph 39 of Ind AS 16 states that:

"If an asset's carrying amount is increased as a result of a revaluation, the increase shall be recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus. However, the increase shall be recognised in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognised in profit or loss".

Further, paragraph 52 of Ind AS 16 states that:

"Depreciation is recognised even if the fair value of the asset exceeds its carrying amount, as long as the asset's residual value does not exceed its carrying amount".

Property '3'

Para 6 of Ind AS 40 '*Investment property*' defines:

"Investment property is property (land or a building—or part of a building—or both) held (by the owner or by the lessee under a finance lease) to earn rentals or for capital appreciation or both, rather than for:

(a) use in the production or supply of goods or services or for administrative purposes; or

(b) sale in the ordinary course of business".

Further, paragraph 30 of Ind AS 40 states that:

"An entity shall adopt as its accounting policy the cost model to all of its investment property".

Further, paragraph 79 (e) of Ind AS 40 requires that:

"An entity shall disclose the fair value of investment property".

Further, paragraph 54 (2) of Ind AS 1 '*Presentation of Financial Statements*' requires that:

"As a minimum, the balance sheet shall include line items that present the following amounts:

(a) property, plant and equipment;

(b) investment property;

As per the facts given in the question, Venus Ltd. has

(a) presented all three properties in balance sheet as 'property, plant and equipment';

(b) applied different accounting policies to Property '1' and '2';

(c) revaluation is charged in statement of profit and loss as profit; and

(d) applied revaluation model to Property '3' being classified as Investment Property.

These accounting treatment is neither correct nor in accordance with provision of Ind AS 1, Ind AS 16 and Ind AS 40.

Accordingly, Venus Ltd. shall apply the same accounting policy (i.e. either revaluation or cost model) to entire class of property being property '1' and '2". It also required to depreciate these properties irrespective of that, their fair value exceeds the carrying amount. The revaluation gain shall be recognised in other comprehensive income and accumulated in equity under the heading of revaluation surplus.

There is no alternative of revaluation model in respect to property '3' being classified as Investment Property and only cost model is permitted for subsequent measurement. However, Venus ltd. is required to disclose the fair value of the property in the Notes to Accounts. Also the property '3' shall be presented as separate line item as Investment Property.

Therefore, as per the provisions of Ind AS 1, Ind AS 16 and Ind AS 40, the presentation of these three properties in the balance sheet is as follows:

Case 1: Venus Ltd. has applied the Cost Model to an entire class of property, plant and equipment.

Balance Sheet (extracts) as at 31st March, 20X2 ₹

Assets		
Non-Current Assets		
Property, Plant and Equipment		
Property '1'	13,500	
Property '2'	9,000	22,500
Investment Properties		
Property '3'		10,800

Case 2: Venus Ltd. has applied the Revaluation Model to an entire class of property, plant and equipment.

Balance Sheet (extracts) as at 31st March, 20X2 ₹

Assets		
Non-Current Assets		
Property, Plant and Equipment		
Property '1'	16,000	
Property '2'	11,000	27,000
Investment Properties		
Property '3'		10,800
Equity and Liabilities		
Other Equity		
Revaluation Reserve		
Property '1' [16,000 – (15,000 – 1,500)]	2,500	
Property '2' [11,000 – (10,000 – 1,000)]	2,000	4,500

The revaluation reserve should be routed through Other Comprehensive Income (subsequently not reclassified to Profit and Loss) in Statement of Profit and Loss and shown in a separate column under Statement of Changes in Equity.

2. The above treatment needs to be examined in the light of the provisions given in Ind AS 37 'Provisions, Contingent Liabilities and Contingent Assets' and Ind AS 10 'Events After the Reporting Period'.

Para 10 of Ind AS 37 *'Provisions, Contingent Liabilities and Contingent Assets'* defines:

"Provision is a liability of uncertain timing or amount.

Liability is a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits".

Further, paragraph 14 of Ind AS 37, states:

"A provision shall be recognised when:

(a) an entity has a present obligation (legal or constructive) as a result of a past event;

(b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and

(c) *a reliable estimate can be made of the amount of the obligation".*

Further, paragraph 36 of Ind AS 37, states:

"The amount recognised as a provision shall be the best estimate of the expenditure required to settle the present obligation at the end of the reporting period".

Further, paragraph 3 of Ind AS 10 *'Events after the Reporting Period'* defines:

"Events after the reporting period are those events, favourable and unfavourable, that occur between the end of the reporting period and the date when the financial statements are approved by the Board of Directors in case of a company, and, by the corresponding approving authority in case of any other entity for issue. Two types of events can be identified:

(a) *those that provide evidence of conditions that existed at the end of the reporting period (adjusting events after the reporting period); and*

(b) *those that are indicative of conditions that arose after the reporting period (non-adjusting events after the reporting period).*

Further, paragraph 8 of Ind AS 10 states that:

"An entity shall adjust the amounts recognised in its financial statements to reflect adjusting events after the reporting period."

The Accountant of Sun Ltd. has not recognised the provision and accordingly not adjusted the amounts recognised in its financial statements to reflect adjusting events after the reporting period is not correct and nor in accordance with provision of Ind AS 37 and Ind AS 10.

As per given facts, the potential payment of damages to the customer is an obligation arising out of a past event which can be reliably estimated. Therefore, following the provision of Ind AS 37 '*Provisions, Contingent Liabilities and Contingent Assets'* – a provision is required. The provision should be for the best estimate of the expenditure required to settle the obligation at 31st March, 20X2 which comes to ₹ 7.5 lakhs (₹ 10 lakhs x 75%).

Further, following the principles of Ind AS 10 '*Events After the Reporting Period'* evidence of the settlement amount is an adjusting event. Therefore, the amount of provision created shall be increased to ₹ 12 lakhs and accordingly be recognised as a current liability.

3. As per given facts, the company is engaged in plantation and farming. Hence Ind AS 41 Agriculture shall be applicable to this company.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Merged By CA - Born To Fight

The above facts need to be examined in the light of the provisions given in *Ind AS 20 'Accounting for Government Grants and Disclosure of Government Assistance'* and *Ind AS 41 'Agriculture'.*

Para 2(d) of Ind AS 20 *'Accounting for Government Grants and Disclosure of Government Assistance'* states:

"This Standard does not deal with government grants covered by Ind AS 41, Agriculture".

Further, paragraph 1 (c) of Ind AS 41 *'Agriculture'*, states:

"This Standard shall be applied to account for the government grants covered by paragraphs 34 and 35 when they relate to agricultural activity".

Further, paragraph 1 (c) of Ind AS 41 *'Agriculture'*, states:

"If a government grant related to a biological asset measured at its fair value less costs to sell is conditional, including when a government grant requires an entity not to engage in specified agricultural activity, an entity shall recognise the government grant in profit or loss when, and only when, the conditions attaching to the government grant are met".

Understanding of the given facts, The Company has recognised the proportionate grant for ₹ 2 lakhs in Statement of Profit and Loss before the conditions attaching to government grant are met which is not correct and nor in accordance with provision of Ind AS 41 *'Agriculture'*.

Accordingly, the accounting treatment of government grant received by the Mercury Ltd. is governed by the provision of Ind AS 41 *'Agriculture'* rather Ind AS 20 *'Accounting for Government Grants and Disclosure of Government Assistance'.*

Government grant for ₹ 10 lakhs shall be recognised in profit or loss when, and only when, the conditions attaching to the government grant are met i.e. after the expiry of specified period of five years of continuing engagement in the plantation of eucalyptus tree.

Balance Sheet extracts showing the presentation of Government Grant as on 31st March, 20X2 ₹

Liabilities	
Non-Current liabilities	
Other Non-Current Liabilities	
Government Grants	10,00,000

4. The revenue from sale of goods shall be recognised at the fair value of the consideration received or receivable. The fair value of the consideration is determined by discounting all future receipts using an imputed rate of interest where the receipt is deferred beyond normal

Join us t.me/caborntofight

credit terms. The difference between the fair value and the nominal amount of the consideration is recognised as interest revenue.

The fair value of consideration (cash price equivalent) of the sale of goods is calculated as follows: ₹

Year	Consideration (Installment)	Present value factor	Present value of consideration
Time of sale	3,33,333	-	3,33,333
End of 1st year	3,33,333	0.949	3,16,333
End of 2nd year	3,33,334	0.901	3,00,334
	10,00,000		**9,50,000**

The Company that agrees for deferring the cash inflow from sale of goods will recognise the revenue from sale of goods and finance income as follows:

Initial recognition of sale of goods		₹	₹
Cash	Dr.	3,33,333	
Trade Receivable	Dr.	6,16,667	
To Sale			9,50,000
Recognition of interest expense and receipt of second installment

Disclosure forming part of Financial Statements:

Proposed dividend on equity shares is subject to the approval of the shareholders of the company at the annual general meeting and not recognized as liability as at the Balance Sheet date. (Note 9)

Merged By CA - Born To Fight

Notes/ Workings: (for adjustments/ explanations)

1. Property, plant and equipment are tangible items that: (a) are held for use in the production or supply of goods or services, for rental to others, or for administrative purposes; and (b) are expected to be used during more than one period. Therefore, the items of PPE are Buildings (₹ 37,50,250) and Vehicles (₹ 12,37,500), since those assets are held for administrative purposes.
2. Property, plant and equipment which are not ready for intended use as on the date of Balance Sheet are disclosed as "Capital work-in-progress". It would be classified from PPE to Capital work-in-progress.
3. Investment property is property (land or a building—or part of a building—or both) held (by the owner or by the lessee as a right-of-use asset) to earn rentals or for capital appreciation or both, rather than for:

   (a) use in the production or supply of goods or services or for administrative purposes; or

   (b) sale in the ordinary course of business.

   Therefore, Land held for capital appreciation should be classified as Investment property rather than PPE.
4. Assets for which the future economic benefit is the receipt of goods or services, rather than the right to receive cash or another financial asset, are not financial assets.
5. Current investments here are held for the purpose of trading. Hence, it is a financial asset classified as FVTPL. Any gain in its fair value will be recognised through profit or loss. Hence, ₹ 5,000 (60,000 – 55,000) increase in fair value of financial asset will be recognised in profit and loss.
6. A contractual right to receive cash or another financial asset from another entity is a financial asset. Trade receivables is a financial asset in this case and hence should be reclassified.
7. Cash is a financial asset. Hence it should be reclassified.
8. Other current financial assets:

Particulars	Amount (₹)
Interest accrued on bank deposits	57,720
Royalty receivable from dealers	69,650
Total	1,27,370

   Prepaid expenses does not result into receipt of any cash or financial asset. However, it results into future goods or services. Hence, it is not a financial asset.

Join us t.me/caborntofight

9. As per Ind AS 10, 'Events after the Reporting Period', If dividends are declared after the reporting period but before the financial statements are approved for issue, the dividends are not recognized as a liability at the end of the reporting period because no obligation exists at that time. Such dividends are disclosed in the notes in accordance with Ind AS 1, Presentation of Financial Statements.

10. 'Other Equity' cannot be shown under 'Non-current liabilities'. Accordingly, it is reclassified under 'Equity'.

11. There are both 'equity' and 'debt' features in the instrument. An obligation to pay cash i.e. interest at 8% per annum and a redemption amount will be treated as 'financial liability' while option to convert the loan into equity shares is the equity element in the instrument. Therefore, convertible loan is a compound financial instrument.

Calculation of debt and equity component and amount to be recognised in the books:

S. No	Year	Interest amount @ 8%	Discounting factor @ 10%	Amount
Year 1	20X2	5,12,000	0.91	4,65,920
Year 2	20X3	5,12,000	0.83	4,24,960
Year 3	20X4	5,12,000	0.75	3,84,000
Year 4	20X5	69,12,000	0.68	47,00,160
Amount to be recognised as a liability				59,75,040
Initial proceeds				(64,00,000)
Amount to be recognised as equity				4,24,960

* In year 4, the loan note will be redeemed; therefore, the cash outflow would be ₹ 69,12,000 (₹ 64,00,000 + ₹ 5,12,000).

Presentation in the Financial Statements:

In Statement of Profit and Loss for the year ended on 31 March 20X2

Finance cost to be recognised in the Statement of Profit and Loss (59,75,040 x 10%)	₹ 5,97,504
Less: Already charged to the Statement of Profit and Loss	(₹ 5,12,000)
Additional finance charge required to be recognised in the Statement of Profit and Loss	₹ 85,504

In Balance Sheet as at 31 March 20X2

Equity and Liabilities	
Equity	
Other Equity (8% convertible loan)	4,24,960
Non-current liability	
Financial liability [8% convertible loan – [(59,75,040+ 5,97,504– 5,12,000)]	60,60,544

12. Since entity has the intention to set off deferred tax asset against deferred tax liability and the entity has a legally enforceable right to set off taxes, hence their balance on net basis should be shown as:

Particulars	Amount (₹)
Deferred tax liability	4,74,850
Deferred tax asset	(2,54,150)
Deferred tax liability (net)	2,20,700

13. A liability that is a contractual obligation to deliver cash or another financial asset to another entity is a financial liability. Trade payables is a financial liability in this case.

14. 'Other current financial liabilities':

Particulars	Amount (₹)
Wages payable	21,890
Salary payable	61,845
Interest accrued on trade payables	35,564
Total	1,19,299

15. Liabilities for which there is no contractual obligation to deliver cash or other financial asset to another entity, are not financial liabilities. Hence, TDS payable should be reclassified from 'Other current financial liabilities' to 'Other current liabilities' since it is not a contractual obligation.

Join us t.me/caborntofight

6. Assessment of Preliminary Impact Assessment of Transition to Ind AS on Him Limited's Financial Statements

Issue 1: Fair value as deemed cost for property plant and equipment:

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
As per AS 10, Property, Plant and Equipment is recognised at cost less depreciation.	Ind AS 101 allows entity to elect to measure Property, Plant and Equipment on the transition date at its fair value or previous GAAP carrying value (book value) as deemed cost.	The company has decided to adopt fair value as deemed cost in this case. Since fair value exceeds book value, so the book value should be brought up to fair value. The resulting impact of fair valuation of land ₹ 3,00,000 should be adjusted in other equity.

Journal Entry on the date of transition

Particulars	Debit (₹)	Credit (₹)
Property Plant and Equipment Dr.	3,00,000	
To Revaluation Surplus (OCI- Other Equity)		3,00,000

Issue 2: Fair valuation of Financial Assets:

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
As per Accounting Standard, investments are measured at lower of cost and fair value.	On transition, financial assets including investments are measured at fair values except for investments in subsidiaries, associates and JVs' which are recorded at cost.	All financial assets (other than Investment in subsidiaries, associates and JVs' which are recorded at cost) are initially recognized at fair value. The subsequent measurement of such assets are based on its categorization either Fair Value through Profit & Loss (FVTPL) or Fair Value through Other Comprehensive Income (FVTOCI) or at Amortised Cost based on business model assessment and contractual cash flow characteristics. Since investment in mutual fund are designated at FVTPL, increase of ₹ 1,00,000 in mutual funds fair value

		would increase the value of investments with corresponding increase to Retained Earnings.

Journal Entry on the date of transition

Particulars	Debit (₹)	Credit (₹)
Investment in mutual funds Dr.	1,00,000	
To Retained earnings		1,00,000

Issue 3: Borrowings - Processing fees/transaction cost:

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
As per AS, such expenditure is charged to Profit and loss account or capitalised as the case may be	As per Ind AS, such expenditure is amortised over the period of the loan. Ind AS 101 states that if it is impracticable for an entity to apply retrospectively the effective interest method in Ind AS 109, the fair value of the financial asset or the financial liability at the date of transition to Ind AS shall be the new gross carrying amount of that financial asset or the new amortised cost of that financial liability.	Fair value as on the date of transition is ₹ 1,80,000 as against its book value of ₹ 2,00,000. Accordingly, the difference of ₹ 20,000 is adjusted through retained earnings.

Journal Entry on the date of transition

Particulars	Debit (₹)	Credit (₹)
Borrowings / Loan payable Dr.	20,000	
To Retained earnings		20,000

Issue 4: Proposed dividend:

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
As per AS, provision for proposed divided is made in the year when it has been	As per Ind AS, liability for proposed dividend is recognised in the	Since dividend should be deducted from retained earnings during the year when it has been declared and approved. Therefore, the provision

declared and approved.	year in which it has been declared and approved.	declared for preceding year should be reversed (to rectify the wrong entry). Retained earnings would increase proportionately due to such adjustment

Journal Entry on the date of transition

Particulars	Debit (₹)	Credit (₹)
Provisions Dr.	30,000	
To Retained earnings		30,000

Issue 5 : Intangible assets:

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
The useful life of an intangible asset cannot be indefinite under IGAAP principles. The Company amortised brand/trademark on a straight line basis over maximum of 10 years as per AS 26.	The useful life of an intangible asset like brand/trademark can be indefinite. Not required to be amortised and only tested for impairment. Company can avail the exemption given in Ind AS 101 as on the date of transition to use the carrying value as per previous GAAP.	Consequently, there would be no impact as on the date of transition since company intends to use the carrying amount instead of book value at the date of transition.

Issue 6: Deferred tax

Accounting Standards (Erstwhile IGAAP)	Ind AS	Impact on Company's financial statements
As per AS, deferred taxes are accounted as per income statement approach.	As per Ind AS, deferred taxes are accounted as per balance sheet approach.	On date of transition to Ind AS, deferred tax liability would be increased by ₹ 25,000.

Journal Entry on the date of transition

Particulars	Debit (₹)	Credit (₹)
Retained earnings Dr.	25,000	
To Deferred tax liability		25,000

CHAPTER 16

PROFESSIONAL AND ETHICAL DUTY OF A CHARTERED ACCOUNTANT

LEARNING OUTCOMES

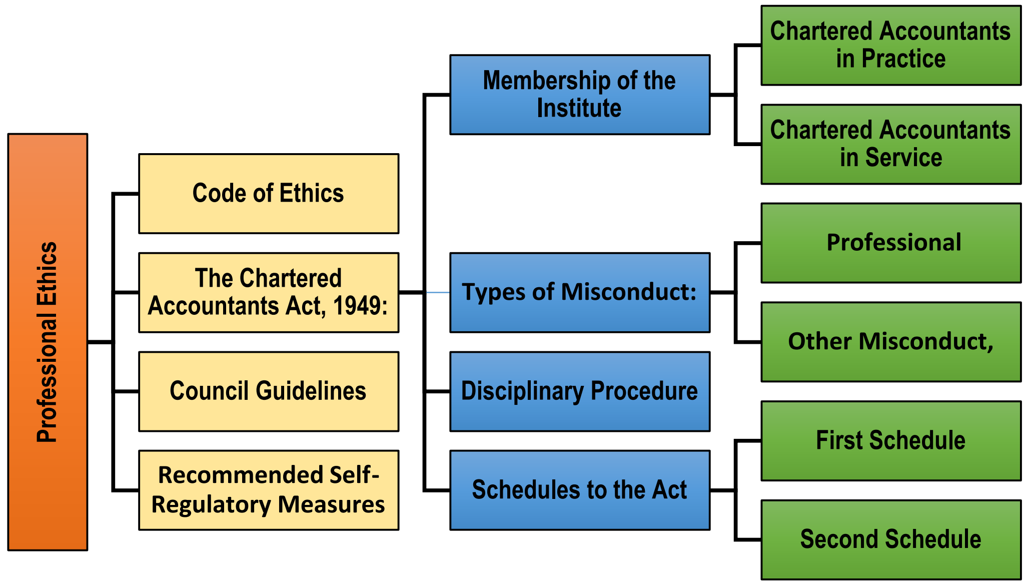
After studying this chapter, you will be able to:

- Comply with the Code of Ethics, Fundamental Principles and Conceptual Framework (applicable to all Chartered Accountants); and
- Comply with the Code of Ethics relevant for the Chartered Accountants in Service and Practice.
- Realise the implications of various Schedules of Chartered Accountants Act relating to professional and other misconduct.

© The Institute of Chartered Accountants of India

Join us t.me/caborntofight

CHAPTER OVERVIEW



Merged By CA - Born To Fight

1. WHAT ARE ETHICS?

The Merriam-Webster dictionary defines ethic / ethics to be a set of moral principles: a theory or system of moral values, the principles of conduct governing an individual or the discipline dealing with what is good and bad and with moral duty and obligation.

2. ETHICAL PRINCIPLES IN FINANCIAL REPORTING

ICAI's Code of Ethics (2019), the "Code", which was developed on adopting the provisions of International Federation of Accountants (IFAC) Code of Ethics for the Chartered Accountants identifies the fundamental principles relevant to accountants. This Code of Ethics is applicable from 1st July, 2020.

This Code has been derived from the International Ethics Standards Board for Accountants (IESBA) Code of Ethics, 2018 issued by the International Federation of Accountants (IFAC).

A. The Code of Ethics ("the Code") sets out fundamental principles of ethics for Chartered Accountants (hereinafter also called as "accountants"), reflecting the recognition and responsibility of the profession 'chartered accountant' in public interest. These principles establish the standard of behaviour expected of a Chartered Accountant.

B. The Code provides a conceptual framework that Chartered Accountants are to apply in order to identify, evaluate and address threats to compliance with the fundamental principles. The Code sets out requirements and application material on various topics to help accountants apply the conceptual framework to those topics.

Note: The principles laid down in the Code of Ethics pertaining to the case of audits, reviews and other assurance engagements, including Independence Standards, established by the application of the conceptual framework to threats to independence in relation to these engagements are dealt with in detail in the 'Advanced Auditing, Assurance and Professional Ethics'.

3. THE CHARTERED ACCOUNTANTS ACT, 1949

A person qualifying as a Chartered Accountant becomes the member on registration with the Institute of the Chartered Accountants of India. Every member has to carry on their professional and other conduct as per the Chartered Accountants Act, 1949.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

A member is liable to disciplinary action under Section 21 of the Chartered Accountants Act, if he is found guilty of any Professional or Other Misconduct.

4. WHAT IS PROFESSIONAL OR OTHER MISCONDUCT FOR A CHARTERED ACCOUNTANT?

According to section 22 of the Act, the expression "professional or other misconduct" shall be deemed to include any act or omission provided in any of the Schedules (of the Act).

4.1 Professional Misconduct

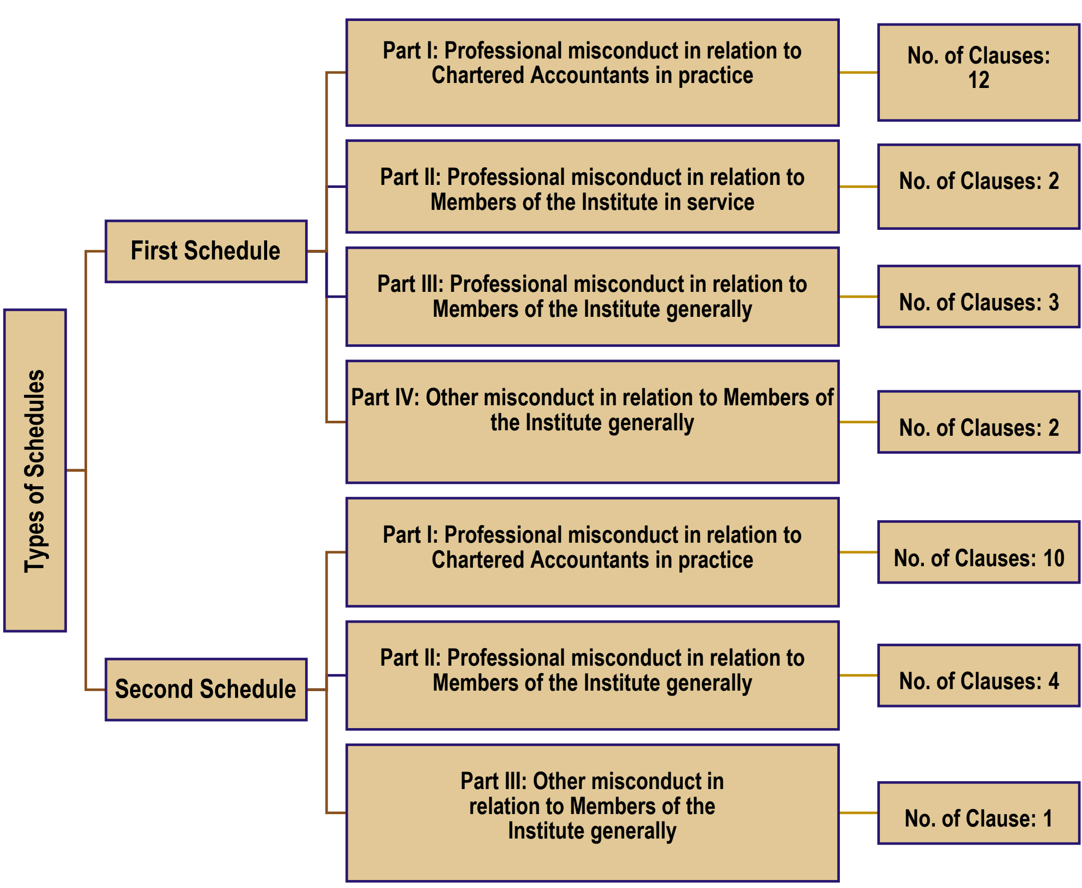
Professional misconduct has been defined in Part I, II and III of the First Schedule; and Part I and II of the Second Schedule. A member who is engaged in the profession of accountancy whether in practice or in service should conduct/restrict his actions in accordance with the provisions contained in the respective parts of the schedules. If the member is found guilty of any of the acts or omissions stated in any of the respective parts of the Schedule, he/she shall be deemed to be guilty of professional misconduct.

4.2 Other Misconduct

Other misconduct has been defined in part IV of the First Schedule and part III of the Second Schedule. These provisions empower the Council to inquire into any misconduct of a member even if it does not arise out of his professional work. This is considered necessary because a chartered accountant is expected to maintain the highest standards of integrity even in his personal affairs and any deviation from these standards, even in his non-professional work, would expose him to disciplinary action.

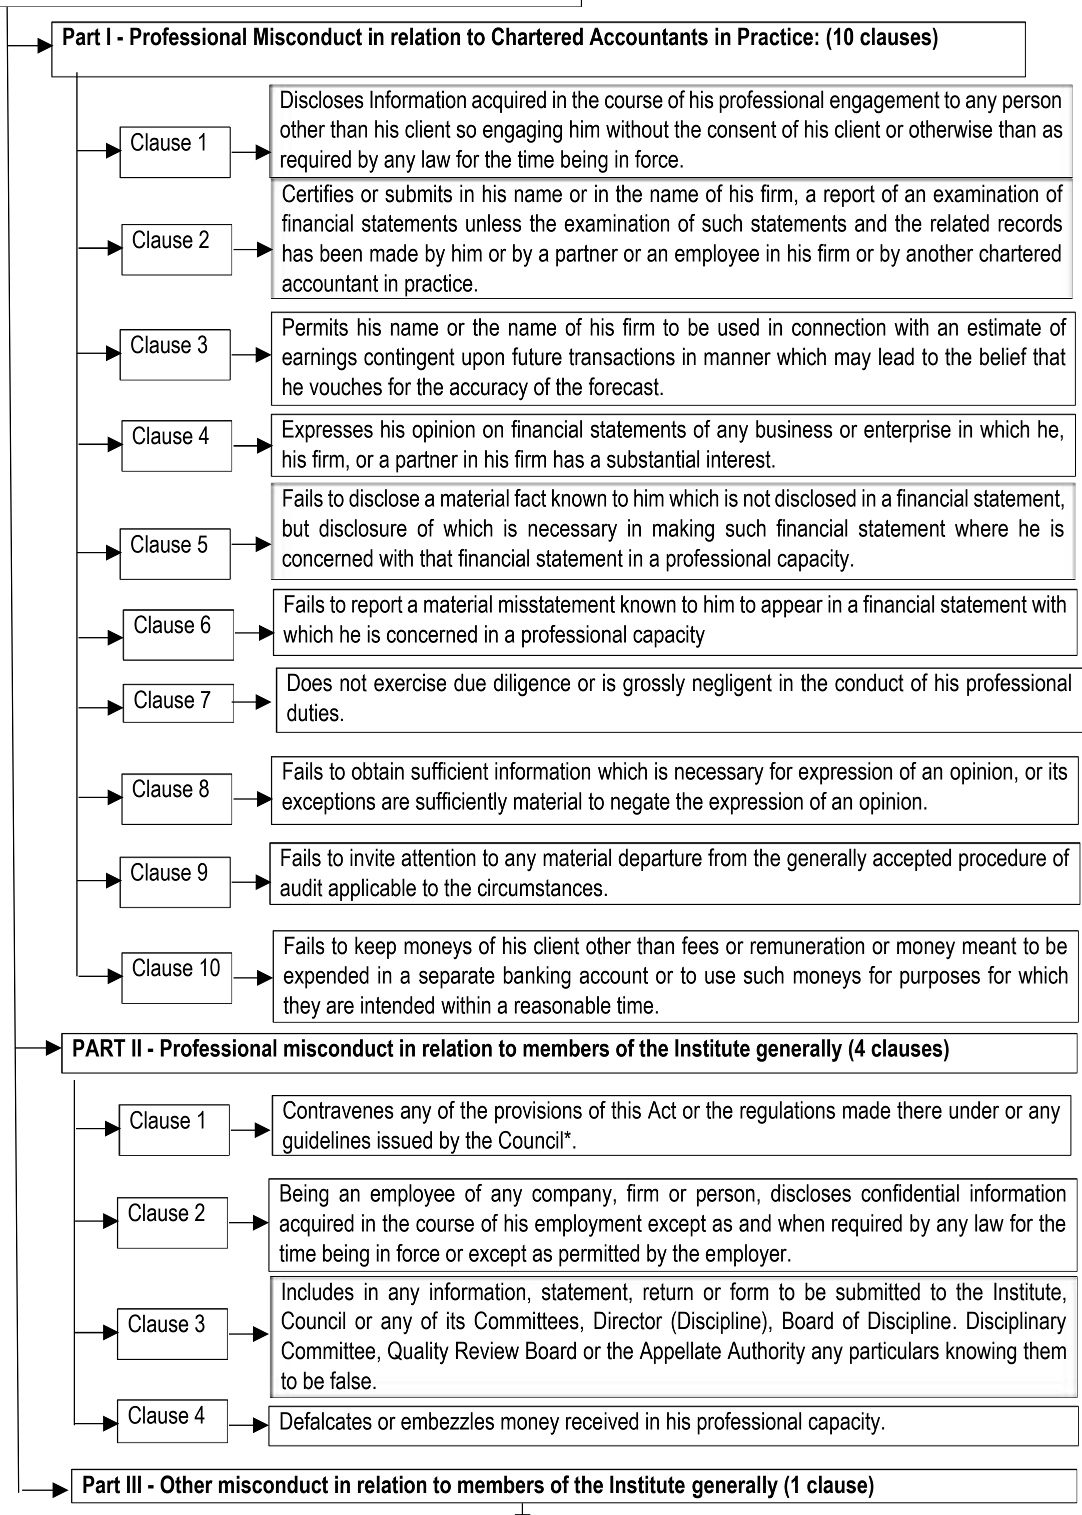
Join us t.me/caborntofight

Merged By CA - Born To Fight



The clauses covered in Part I, II and III of Second Schedule have been shown in the form of flowchart below. However, for detail explanation, one must refer the Chapter on 'Professional Ethics' of Final Paper 3 'Advanced Auditing, Assurance and Professional Ethics'.

Join us t.me/caborntofight



Second Schedule to The Chartered Accountants Act, 1949
Part I - Professional Misconduct in relation to Chartered Accountants in Practice: (10 clauses)
Clause 1
Discloses Information acquired in the course of his professional engagement to any person other than his client so engaging him without the consent of his client or otherwise than as required by any law for the time being in force.
Clause 2
Certifies or submits in his name or in the name of his firm, a report of an examination of financial statements unless the examination of such statements and the related records has been made by him or by a partner or an employee in his firm or by another chartered accountant in practice.
Clause 3
Permits his name or the name of his firm to be used in connection with an estimate of earnings contingent upon future transactions in manner which may lead to the belief that he vouches for the accuracy of the forecast.
Clause 4
Expresses his opinion on financial statements of any business or enterprise in which he, his firm, or a partner in his firm has a substantial interest.
Clause 5
Fails to disclose a material fact known to him which is not disclosed in a financial statement, but disclosure of which is necessary in making such financial statement where he is concerned with that financial statement in a professional capacity.
Clause 6
Fails to report a material misstatement known to him to appear in a financial statement with which he is concerned in a professional capacity
Clause 7
Does not exercise due diligence or is grossly negligent in the conduct of his professional duties.
Clause 8
Fails to obtain sufficient information which is necessary for expression of an opinion, or its exceptions are sufficiently material to negate the expression of an opinion.
Clause 9
Fails to invite attention to any material departure from the generally accepted procedure of audit applicable to the circumstances.
Clause 10
Fails to keep moneys of his client other than fees or remuneration or money meant to be expended in a separate banking account or to use such moneys for purposes for which they are intended within a reasonable time.
PART II - Professional misconduct in relation to members of the Institute generally (4 clauses)
Clause 1
Contravenes any of the provisions of this Act or the regulations made there under or any guidelines issued by the Council*.
Clause 2
Being an employee of any company, firm or person, discloses confidential information acquired in the course of his employment except as and when required by any law for the time being in force or except as permitted by the employer.
Clause 3
Includes in any information, statement, return or form to be submitted to the Institute, Council or any of its Committees, Director (Discipline), Board of Discipline. Disciplinary Committee, Quality Review Board or the Appellate Authority any particulars knowing them to be false.
Clause 4
Defalcates or embezzles money received in his professional capacity.
Part III - Other misconduct in relation to members of the Institute generally (1 clause)
A member of the Institute, whether in practice or not, shall be deemed to be guilty of other misconduct, if he is held guilty by any civil or criminal court for an offence which is punishable with imprisonment for a term exceeding six months.

Merged By CA - Born To Fight

***Note : Council Guidelines**

For conduct of a member being an employee, the Council Guidelines in its Appendix 34 of the Chartered Accountants Act, 1949, states that a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

The following part of the Code of Ethics shall be dealt with in Financial Reporting:

- Complying with the Code, Fundamental Principles and Conceptual Framework (applicable to all Chartered Accountants) (relevant part of this Section covered in detail in subsequent pages); and
- Chartered Accountants in Service (relevant part of this Section covered in detail in subsequent pages).

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

PART 1: COMPLYING WITH THE CODE, FUNDAMENTAL PRINCIPLES AND CONCEPTUAL FRAMEWORK

1. COMPLYING WITH THE CODE

A distinguishing mark of the accountancy profession is its acceptance of the responsibility to act in the public interest. A Chartered Accountant's responsibility is not exclusively to satisfy the needs of an individual client or employing organization. Therefore, the Code contains requirements and application material to enable Chartered Accountants to meet their responsibility to act in the public interest.

A Chartered Accountant shall comply with the Code. There might be circumstances where laws or regulations preclude an accountant from complying with certain parts of the Code. In such circumstances, those laws and regulations prevail, and the accountant shall comply with all other parts of the Code.

The principle of professional behaviour requires a Chartered Accountant to comply with relevant laws and regulations. Accountants need to be aware of differences in local regulations from the provisions as set out in the Code and comply with the more stringent provisions unless prohibited by law or regulation.

2. THE FUNDAMENTAL PRINCIPLES

There are five fundamental principles of ethics for Chartered Accountants:

(a) **Integrity** – to be straightforward and honest in all professional and business relationships.

(b) **Objectivity** – not to compromise professional or business judgments because of bias, conflict of interest or undue influence of others.

(c) **Professional Competence and Due Care** – to:

(i) attain and maintain professional knowledge and skill at the level required to ensure that a client or employing organization receives competent professional service, based on current technical and professional standards and relevant legislation; and

(ii) act diligently and in accordance with applicable technical and professional standards.

(d) **Confidentiality** – to respect the confidentiality of information acquired as a result of professional and business relationships.

(e) **Professional Behaviour –** to comply with relevant laws and regulations and avoid any conduct that the Chartered Accountant knows or should know might discredit the profession.

A Chartered Accountant shall comply with each of the fundamental principles.

Join us t.me/caborntofight

Merged By CA - Born To Fight

A Chartered Accountant might face a situation in which complying with one fundamental principle conflicts with complying with one or more other fundamental principles. In such a situation, the accountant might consider consulting, with:

- Others within the firm or employing organization.
- Those charged with governance.
- Institute
- Legal counsel.

However, such consultation does not relieve the accountant from the responsibility to exercise professional judgment to resolve the conflict or, if necessary, and unless prohibited by law or regulation, disassociate from the matter creating the conflict.

3. INTEGRITY

A Chartered Accountant shall comply with the principle of integrity, which requires an accountant to be straightforward and honest in all professional and business relationships.

A Chartered Accountant shall not knowingly be associated with reports, returns, communications or other information where the accountant believes that the information:

- Contains a materially false or misleading statement;
- Contains statements or information provided negligently; or
- Omits or obscures required information where such omission or obscurity would be misleading.

4. OBJECTIVITY

A Chartered Accountant shall comply with the principle of objectivity, which requires an accountant not to compromise professional or business judgment because of bias, conflict of interest or undue influence of others.

Illustration 1:

Infostar Ltd. is a listed company engaged in the provision of IT services in India. The directors are paid a bonus based on the profits achieved by the company during the year as per the bonus table given below:

Range of Profit after tax	*Bonus to Directors*
Less than ₹ 1 crore	*NIL*
₹ 1 crore to < ₹ 5 crores	*2% of Net Profit after tax*
₹ 5 crores to < ₹ 10 crores	*4% of Net Profit after tax*

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

₹ 10 crores to < ₹ 20 crores	*6% of Net Profit after tax*
₹ 20 crores to < ₹ 30 crores	*8% of Net Profit after tax*
₹ 30 crores and above	*10% of Net Profit after tax*

The draft Statement of Profit and Loss for the year ended 31 March 20X2 currently shows a profit of ₹ 2 crores.

Issue:

On 25 March 20X2, Infostar Ltd. sold land located adjacent to its head office to a third party Zest Ltd. for a consideration of ₹ 40 crores, with an option to purchase the land back on 25 May 20X2 for ₹ 40 crores plus a premium of 6%. The amount received from the transaction eliminated the bank overdraft of Infostar Ltd. as on 31 March 20X2. On instructions of the Chief Financial Officer of the company, who is a chartered accountant, the transaction was treated as a sale, including the profit arising on disposal in the Statement of Profit and Loss for the year ending 31 March 20X2.

Required:

Discuss the ethical and accounting implications of the above issues with respect to a chartered accountant in service, referring to the relevant Ind AS wherever appropriate.

Solution

Accounting Treatment

The sale of land meets the conditions specified in Ind AS 115, *Revenue from Contracts with Customers* for qualifying as a repurchase agreement as Infostar Ltd. has an option to buy back the land from Zest Ltd. and therefore, control is not transferred as Zest Ltd.'s ability to use and gain benefit from the land is limited. Infostar Ltd. must treat the transaction as a financing arrangement and record both the asset (land) and the financial liability (the amount received which is repayable to Zest Ltd.).

Infostar Ltd. should not have derecognized the land from the financial statements because the risks and rewards of ownership are not transferred. Thus, the substance of the transaction is a loan of ₹ 40 crores, with the 6% 'premium' on repurchase effectively reflecting interest payment.

Recording the aforesaid transaction as a sale is an attempt to manipulate the financial statements in order to show an improved profit figure and a more favourable cash position. The sale must be reversed and the land should be reinstated at its carrying amount prior to the transaction.

Merged By CA - Born To Fight

Ethical Issues

Chartered Accountants are required to comply with the fundamental principles laid down in the Code of Ethics. This includes acting with integrity. It appears that the integrity of CFO is compromised in this situation as he had accounted the transaction as sale and not as a loan or financial arrangement. The effect of accounting it as sale just before the year end is merely to improve profits and eliminate the bank overdraft, thereby making the cash position seem better than it is. This effectively amounts to 'window dressing', which is not honest as it does not present the actual performance and position of Infostar Ltd.

Accountants must also act with objectivity, which means they must not allow bias, conflict or undue influence of others to override professional or business judgments. Therefore, the management must put the interests of the company and the shareholders before their own interests. The pressure to show profits and achieve a bonus is in the self-interest of the directors and seems to have been partly driven the transaction and the subsequent accounting, which is clearly a conflict of interest.

It is further necessary for the accountants to comply with the principles of professional behaviour, which require compliance with relevant laws and regulations. In the instant case, the accounting treatment is not in conformity with Ind AS. The given facts do not make it clear whether CFO is aware of this or not. If he is aware but still applied the incorrect treatment, he has not complied with the principle of professional behaviour. It may be that he was under undue pressure from the directors to record the transaction in this manner. If, however, he is not aware that the treatment is incorrect, then he has not complied with the principle of professional competence as his knowledge and skills are not updated.

In such a case, he is subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949. Clause 1 states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, if he contravenes any of the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

*****

5. PROFESSIONAL COMPETENCE AND DUE CARE

Maintaining professional competence requires a continuing awareness and an understanding of relevant technical, professional and business developments. Continuing professional development enables a Chartered Accountant to develop and maintain the capabilities to perform competently within the professional environment.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Diligence encompasses the responsibility to act in accordance with the requirements of an assignment, carefully, thoroughly and on a timely basis.

In complying with the principle of professional competence and due care, a Chartered Accountant shall take reasonable steps to ensure that those working in a professional capacity under the accountant's authority have appropriate training and supervision.

Illustration 2:

Rustom Ltd., a company engaged in oil extraction, has a present obligation to dismantle the oil rig installed by it at the end of the useful life of 10 years. Rustom Ltd. cannot cancel this obligation or transfer it. Rustom Ltd. intends to carry out the dismantling work itself and estimates the cost of the work to be ` 100 crores at the end of 10 years.

The directors of Rustom Ltd. are aware of the requirements of Ind AS 37 'Provisions, Contingent Liabilities and Contingent Assets', read with Ind AS 16 'Property, Plant and Equipment'. However, they propose to expense the costs of dismantling the oil rig as and when incurred, with no entries or disclosures in the latest financial statements. They argue that application of Ind AS involves judgment, and although prudence is mentioned in the Conceptual Framework, it is only one among the many ways of achieving faithful representation.

Required:

Discuss whether the directors are acting unethically in the above instance what should be the practising Chartered Accountant's course of action in this regard.

Solution

The treatment proposed by the director is in contravention of Ind AS 37. As per Ind AS 16 and Ind AS 37, an entity, at the time of initial recognition of the asset, capitalises the present value of the cost of dismantling to be occurred at the end of the life of the asset, to the cost of the asset by simultaneously creating a provision for the same. In the given case, it appears to be a deliberate intention to contravene Ind AS 16 and Ind AS 37, and not an unintentional mistake.

Though the directors can exercise strong or undue influence over the chartered accountant, the chartered accountant is bound to act with integrity and remain unbiased, recommending to the directors that Ind AS 16 and Ind AS 37 must be complied with, and ensure appropriate entries are passed in the financial statements. The matter may be raised before the non-executive directors, explaining the issue to them and ensure the financial statements are true and fair and comply with the relevant Ind AS.

It is essential for the chartered accountant to inform those in governance (directors) about the necessary corrective measures in this case. By doing so, he uphold the fundamental principle of professional behaviour and demonstrate compliance with relevant laws and regulations. By

Merged By CA - Born To Fight

communicating the corrective measures to those responsible for governance, the chartered accountant can ensure that the contravention of Ind AS 16 and Ind AS 37 is addressed and rectified.

However, if he does not communicate the corrective measures to the directors, the fundamental principle of **professional behaviour** will be breached. Members should comply with relevant laws and regulations and avoid any action that discredits the profession. By knowingly allowing the directors not to apply the requirements of an Ind AS, the Chartered Accountant would not be acting diligently in accordance with applicable guidance and would not be demonstrating professional competence and due care. In such a situation, he will be subject to professional misconduct under Clauses 5, 6 and 7 of Part I of Second Schedule of the Chartered Accountants Act, 1949.

Clause 5 states that a chartered accountant is guilty of professional misconduct when he fails to disclose a material fact known to him which is not disclosed in a financial statement, but disclosure of which is necessary in making such financial statement where he is concerned with that financial statement in a professional capacity.

Clause 6 states that a CA is guilty of professional misconduct when he fails to report a material misstatement known to him to appear in a financial statement with which he is concerned in a professional capacity.

Clause 7 states that a Chartered Accountant is guilty of professional misconduct when he does not exercise due diligence or is grossly negligent in the conduct of his professional duties.

*****

6. CONFIDENTIALITY

A Chartered Accountant shall comply with the principle of confidentiality, which requires an accountant to respect the confidentiality of information acquired as a result of professional and employment relationships. An accountant shall:

(a) Be alert to the possibility of inadvertent disclosure, including in a social environment, and particularly to a close business associate or an immediate or a close family member;

(b) Maintain confidentiality of information within the firm or employing organization;

(c) Maintain confidentiality of information disclosed by a prospective client or employing organization;

(d) Not disclose confidential information acquired as a result of professional and employment relationships outside the firm or employing organization without proper and specific authority, unless there is a legal or professional duty or right to disclose;

Join us t.me/caborntofight

(e) Not use confidential information acquired as a result of professional and employment relationships for the personal advantage of the accountant or for the advantage of a third party;

(f) Not use or disclose any confidential information, either acquired or received as a result of a professional or employment relationship, after that relationship has ended; and

(g) Take reasonable steps to ensure that personnel under the accountant's control, and individuals from whom advice and assistance are obtained, respect the accountant's duty of confidentiality.

For instance, confidentiality is a paramount ethical principle that should not be breached when providing payroll services to clients, unless required by law or authorized by the client. Chartered Accountants have a duty to uphold the confidentiality of payroll-related information and ensure the security and protection of sensitive data of the organisation.

Confidentiality serves the public interest because it facilitates the free flow of information from the Chartered Accountant's client or employing organization to the accountant in the knowledge that the information will not be disclosed to a third party. Nevertheless, the following are circumstances where Chartered Accountants are or might be required to disclose confidential information or when such disclosure might be appropriate:

(a) Disclosure is required by law, for example:

  (i) Production of documents or other provision of evidence in the course of legal proceedings; or

  (ii) Disclosure to the appropriate public authorities of infringements of the law that come to light;

(b) Disclosure is permitted by law and is authorized by the client or the employing organization; and

(c) There is a professional duty or right to disclose, when not prohibited by law:

  (i) To comply with the requirements of peer review or quality review of the Institute

  (ii) To respond to an inquiry or investigation by a professional or regulatory body;

  (iii) To protect the professional interests of a Chartered Accountant in legal proceedings; or

  (iv) To comply with technical and professional standards, including ethics requirements.

Breaches of confidentiality may occur in the scenario like insider trading, where chartered accountants must avoid using or sharing material information of the entity for personal gain.

Similarly, hiding material facts which require disclosure like reporting fraud, illegal activities, or non-compliance with laws and regulations does not constitute confidentiality. Chartered accountants have an ethical duty to report fraudulent or manipulative activities that could impact the end users.

Merged By CA - Born To Fight

Nonetheless, confidentiality should be applied cautiously with justifiable legal or ethical grounds, and professional judgment and after due legal advice, wherever necessary.

A Chartered Accountant shall continue to comply with the principle of confidentiality even after the end of the relationship between the accountant and a client or employing organization. When changing employment or acquiring a new client, the accountant is entitled to use prior experience but shall not use or disclose any confidential information acquired or received as a result of a professional or employment relationship.

7. PROFESSIONAL BEHAVIOUR

When promoting himself and his work, a Chartered Accountant shall not bring the profession into disrepute. A Chartered Accountant is required to conduct his affairs in a manner that he remains outside the boundaries of professional and other misconduct. A Chartered Accountant shall be honest and truthful and shall not make:

(a) Exaggerated claims for the services offered by, or the qualifications or experience of, the accountant; or

(b) Disparaging references or unsubstantiated comparisons to the work of others.

Any direct or indirect measures to advertise any professional/other facts which are in violation of Advertisement Guidelines issued by the Council of the Institute from time to time.

THE CONCEPTUAL FRAMEWORK

The ***Chartered Accountant shall apply the*** conceptual framework to ***identify, evaluate and address threats to compliance with the fundamental principles***.

(a) Identify threats to compliance with the fundamental principles;

(b) Evaluate the threats identified; and

(c) Address the threats by eliminating or reducing them to an acceptable level.

When applying the conceptual framework, the Chartered Accountant shall:

(a) Exercise professional judgment;

(b) Remain alert for new information and to changes in facts and circumstances; and

Use the reasonable and informed third party test.

Exercise of Professional Judgment

Professional judgment involves the application of relevant training, professional knowledge, skill and experience commensurate with the facts and circumstances, including the nature and scope of the particular professional activities, and the interests and relationships involved. In relation to undertaking professional activities, the exercise of professional judgment is required when the

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Chartered Accountant applies the conceptual framework in order to make informed decisions about the courses of actions available, and to determine whether such decisions are appropriate in the circumstances.

An understanding of known facts and circumstances is a prerequisite to the proper application of the conceptual framework. Determining the actions necessary to obtain this understanding and coming to a conclusion about whether the fundamental principles have been complied with also require the exercise of professional judgment.

In exercising professional judgment to obtain this understanding, the Chartered Accountant might consider, among other matters, whether:

- There is reason to be concerned that potentially relevant information might be missing from the facts and circumstances known to the accountant.
- There is an inconsistency between the known facts and circumstances and the accountant's expectations.
- The accountant's expertise and experience are sufficient to reach a conclusion.
- There is a need to consult with others with relevant expertise or experience.
- The information provides a reasonable basis on which to reach a conclusion.
- The accountant's own preconception or bias might be affecting the accountant's exercise of professional judgment.
- There might be other reasonable conclusions that could be reached from the available information.

Reasonable and Informed Third Party

The reasonable and informed third party test is a consideration by the Chartered Accountant about whether the same conclusions would likely be reached by another party. Such consideration is made from the perspective of a reasonable and informed third party, who weighs all the relevant facts and circumstances that the accountant knows, or could reasonably be expected to know, at the time the conclusions are made. The reasonable and informed third party does not need to be an accountant but would possess the relevant knowledge and experience to understand and evaluate the appropriateness of the accountant's conclusions in an impartial manner.

PART 2: CHARTERED ACCOUNTANTS IN SERVICE

A. CONFLICTS OF INTEREST

A Chartered Accountant shall not allow a conflict of interest to compromise professional or business judgment.

Examples of circumstances that might create a conflict of interest include:

(a) Serving in a management or governance position for two employing organizations and acquiring confidential information from one organization that might be used by the Chartered Accountant to the advantage or disadvantage of the other organization.

(b) Undertaking a professional activity for each of two parties in a partnership, where both parties are employing the accountant to assist them to dissolve their partnership.

(c) Preparing financial information for certain members of management of the accountant's employing organization who are seeking to undertake a management buy-out.

(d) Being responsible for selecting a vendor for the employing organization when an immediate family member of the accountant might benefit financially from the transaction.

(e) Serving in a governance capacity in an employing organization that is approving certain investments for the company where one of those investments will increase the value of the investment portfolio of the accountant or an immediate family member.

1. Conflict Identification

A Chartered Accountant shall take reasonable steps to identify circumstances that might create a conflict of interest, and therefore a threat to compliance with one or more of the fundamental principles. Such steps shall include identifying:

(a) The nature of the relevant interests and relationships between the parties involved; and

(b) The activity and its implication for relevant parties.

2. Threats created by Conflict of Interest

In general, the more direct the connection between the professional activity and the matter on which the parties' interests conflict, the more likely the level of the threat is not at an acceptable level.

An example of an action that might eliminate threats created by conflicts of interest is withdrawing from the decision-making process related to the matter giving rise to the conflict of interest.

Examples of actions that might be safeguards to address threats created by conflicts of interest include:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(a) Restructuring or segregating certain responsibilities and duties.

(b) Obtaining appropriate oversight, for example, acting under the supervision of an executive or non-executive director.

3. Disclosure and Consent

It is generally necessary to:

(a) Disclose the nature of the conflict of interest and how any threats created were addressed to the relevant parties, including to the appropriate levels within the employing organization affected by a conflict; and

(b) Obtain consent from the relevant parties for the Chartered Accountant to undertake the professional activity when safeguards are applied to address the threat.

When addressing a conflict of interest, the Chartered Accountant is encouraged to seek guidance from within the employing organization or from the Institute, legal counsel or another accountant. When making such disclosures or sharing information within the employing organization and seeking guidance of third parties, the principle of confidentiality applies.

Illustration 3:

Alaap Ltd.'s directors feel that the company needs a significant injection of capital in order to modernize plant and equipment as the company has been promised firm orders if it can produce goods of international standards. The current lending policies of the banks require prospective borrowers to demonstrate strong projected cash flows, coupled with a Debt Service Coverage Ratio exceeding 10. However, the current projected statement of cash flows does not satisfy the bank's criteria for lending. The directors have told the bank that the company is in an excellent financial position, the financial results and cash flow projections will meet the criteria and the chartered accountant will submit a report to this effect shortly. The chartered accountant has recently joined Alaap Ltd. and has openly stated that he cannot afford to lose his job because of financial commitments.

Required:

Discuss the potential ethical conflicts which may arise in the above scenario and the ethical principles which would guide how the chartered accountant should respond to the situation.

Solution

The given scenario presents a twofold conflict of interest:

(i) *Pressure to obtain finance and chartered accountant's personal circumstances*

The chartered accountant is under pressure to provide the bank with a projected cash flow statement that will meet the bank's criteria when in fact the actual projections do not meet

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Merged By CA - Born To Fight

the criteria. The chartered accountant's financial circumstances mean that he cannot lose his job, thus **the ethical and professional standards required of the accountant are at odds with the pressures of his personal circumstances**.

(ii) *Duty to shareholders, employees and bank*

The **directors have a duty to act in the best interests of the company's shareholders and employees, and a duty to present fairly any information the bank may rely on**. The injection of capital to modernise plant and equipment appears to be for capacity expansion which will lead to greater profits, thus being in the interests of the shareholders and the employees. However, if such finance is obtained based on misleading information, it could actually be detrimental to the going concern status of the company.

It could be argued that there is a **conflict between the short-term and medium-term interests of the company** (the need to modernise the company) **and its long-term interests** (the detriment to the company's reputation if its directors do not conform to ethics).

Ethical principles guiding the chartered accountant's response

The chartered accountant's financial circumstances coupled with the pressure from the directors could end up in him knowingly disclosing incorrect information to the bank, thereby compromising the fundamental principles of **objectivity, integrity** and **professional competence**.

By exhibiting **bias** due to the **risk of losing his job** through reporting favourable cash flows to the bank, **objectivity** is compromised. Further, **integrity** is also compromised as by not acting in a straightforward and honest manner, **incorrect information is knowingly disclosed**. Forecasts, unlike financial statements, do not specify that they have been prepared in accordance with Ind AS. However, the principle of **professional competence** requires the accountant to prepare the cash flow projections to the **best of his professional judgment** which would not be the case if the projections showed a more positive position than what is actually anticipated.

Appropriate action

The **chartered accountant faces an immediate ethical dilemma** and must apply his moral and ethical judgment. As a professional, he is responsible for presenting the truth, and not to indulge in 'creative accounting' owing to pressure.

Thus, **the chartered accountant should put the interests of the company and professional ethics first** and insist that the report to the bank be an honest reflection of the company's current financial position. Being an advisor to the directors, he must prevent deliberate misrepresentation to the bank, no matter what the consequences to him are personally. The accountant should not allow any undue influence from the directors to override his professional judgment or integrity. This is in the long-term interests of the company and its survival.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

It is suggested that the chartered accountant should communicate to the directors to submit the projected statement of cash flows to the bank, which reflects the current position of the company.

Knowingly providing incorrect information is considered as professional misconduct. To prevent such misconduct, a chartered accountant should not provide incorrect projected cash flows to the bank and colour the financial position of the entity. By adhering to the ethical principles, the chartered accountant will maintain his professional integrity and contribute to the trust and reliability placed in the work expected from him.

However, if he submits the incorrect projected statement of cash flows, he would be subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949. The Clause 1 states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, if he contravenes any of the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

*****

B. PREPARATION AND PRESENTATION OF INFORMATION

When preparing or presenting information, a Chartered Accountant shall:

(a) Prepare or present the information in accordance with a relevant reporting framework, where applicable;

(b) Prepare or present the information in a manner that is intended neither to mislead nor to influence contractual or regulatory outcomes inappropriately;

(c) Exercise professional judgment to:

 (i) Represent the facts accurately and completely in all material respects;

 (ii) Describe clearly the true nature of business transactions or activities; and

 (iii) Classify and record information in a timely and proper manner; and

(d) Not omit anything with the intention of rendering the information misleading or of influencing contractual or regulatory outcomes inappropriately.

An example of influencing a contractual or regulatory outcome inappropriately is using an unrealistic estimate with the intention of avoiding violation of a contractual requirement such as a debt covenant or of a regulatory requirement such as a capital requirement for a financial institution.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Merged By CA - Born To Fight

1. Use of Discretion in Preparing or Presenting Information

Preparing or presenting information might require the exercise of discretion in making professional judgments. The Chartered Accountant shall not exercise such discretion with the intention of misleading others or influencing contractual or regulatory outcomes inappropriately.

Examples of ways in which discretion might be misused to achieve inappropriate outcomes include:

- Determining estimates, for example, determining fair value estimates in order to misrepresent profit or loss.
- Selecting or changing an accounting policy or method among two or more alternatives permitted under the applicable financial reporting framework, for example, selecting a policy for accounting for long-term contracts in order to misrepresent profit or loss.
- Determining the timing of transactions, for example, timing the sale of an asset near the end of the fiscal year in order to mislead.
- Determining the structuring of transactions, for example, structuring financing transactions in order to misrepresent assets and liabilities or classification of cash flows.
- Selecting disclosures, for example, omitting or obscuring information relating to financial or operating risk in order to mislead.

When performing professional activities, the Chartered Accountant shall exercise professional judgment to identify and consider:

(a) The purpose for which the information is to be used;

(b) The context within which the information is given; and

(c) The audience to whom it is addressed.

For example, when preparing or presenting pro forma reports, budgets or forecasts, the inclusion of relevant estimates, approximations and assumptions, where appropriate, would enable those who might rely on such information to form their own judgments.

2. Relying on the Work of Others

A Chartered Accountant who intends to rely on the work of others, either internal or external to the employing organization, shall exercise professional judgment to determine what steps to take, if any, in order to fulfil the responsibilities.

Factors to consider in determining whether reliance on others is reasonable include:

- The reputation and expertise of, and resources available to, the other individual or organization.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Whether the other individual is subject to applicable professional and ethics standards.

Such information might be gained from prior association with, or from consulting others about, the other individual or organization.

3. Addressing Information that Is or Might be Misleading

When the Chartered Accountant knows or has reason to believe that the information with which the accountant is associated is misleading, the accountant shall take appropriate actions to seek to resolve the matter.

- Actions that might be appropriate include:
- Discussing concerns that the information is misleading with the Chartered Accountant's superior and/or the appropriate level(s) of management within the accountant's employing organization or those charged with governance and requesting such individuals to take appropriate action to resolve the matter. Such action might include:
  - Having the information corrected.
  - If the information has already been disclosed to the intended users, informing them of the correct information.

Consulting the policies and procedures of the employing organization (for example, an ethics or whistle-blowing policy) regarding how to address such matters internally

The Chartered Accountant might determine that the employing organization has not taken appropriate action. If the accountant continues to have reason to believe that the information is misleading, the following further actions might be appropriate provided that the accountant remains alert to the principle of confidentiality:

- Consulting with:
  - The Institute
  - The internal or external auditor of the employing organization
  - Legal counsel.
- Determining whether any requirements exist to communicate to:
  - Third parties, including users of the information.
  - Regulatory and oversight authorities.

If after exhausting all feasible options, the Chartered Accountant determines that appropriate action has not been taken and there is reason to believe that the information is still misleading, the accountant shall refuse to be or to remain associated with the information.

Join us t.me/caborntofight

In such circumstances, it might be appropriate for a Chartered Accountant to resign from the employing organization.

Illustration 4:

Sunshine Ltd., a listed company in the cosmetics industry, has debt covenants attached to some of its borrowings which are included in Financial Liabilities in the Balance Sheet. These covenants mandate the company to repay the debt in full if Sunshine Ltd. fails to maintain a liquidity ratio and operating margin above the specified limit.

The directors alongwith the CFO of the Company who is a chartered accountant are considering entering into a fresh five-year leasing arrangement but are concerned about the negative impact any potential lease obligations may have on the above-mentioned covenants. Accordingly, the directors and CFO propose that the lease agreement be drafted in such a way that it is a series of six ten-month leases rather than a single five-year lease in order to utilize the short-term lease exemption available under Ind AS 116, Leases. This would then enable accounting for the leases in their legal form. The directors believe that this treatment will meet the requirements of the debt covenant, though such treatment may be contrary to the accounting standards.

Required:

Discuss the ethical and accounting implications of the above issue from the perspective of CFO.

Solution

Lease agreement substance presentation

Stakeholders make informed and accurate decisions based on the information presented in the financial statements and as such, ensuring the financial statements are reliable and of utmost importance. The directors of Sunshine Ltd. are ethically responsible to produce financial statements that comply with Ind AS and are transparent and free from material error. Lenders often attach covenants to the terms of the agreement in order to protect their interests in an entity. They would also be of crucial importance to potential debt and equity investors when assessing the risks and returns from any future investment in the entity.

The proposed action by Sunshine Ltd. appears to be a deliberate attempt to circumvent the terms of the covenants. The legal form would require treatment as a series of short-term leases which would be recorded in the profit or loss, without any right-of-use asset and lease liability being recognized as required by Ind AS 116, *Leases*. This would be a form of 'off-balance sheet finance' and would not report the true assets and obligations of Sunshine Ltd. As a result of this proposed action, the liquidity ratios would be adversely misrepresented. Further, the operating profit margins would also be adversely affected, as the expenses associated with the lease are likely to

be higher than the deprecation charge if a leased asset was recognized, hence the proposal may actually be detrimental to the operating profit covenant.

Sunshine Ltd. is aware that the proposed treatment may be contrary to Ind AS. Such manipulation would be a clear breach of the fundamental principles of objectivity and integrity as outlined in the Code of Ethics. It is important for a chartered accountants to exercise professional behaviour and due care all the time. The proposals by Sunshine Ltd. are likely to mislead the stakeholders in the entity. This could discredit the profession by creating a lack of confidence within the profession. The directors of Sunshine Ltd. must be reminded of their ethical responsibilities and persuaded that the accounting treatment must fully comply with the Ind AS and principles outlined within the framework should they proceed with the financing agreement.

However, if the CFO fails to comply with his professional duties, he will be subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949. The Clause 1 states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, if he contravenes any of the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

*****

C. ACTING WITH SUFFICIENT EXPERTISE

A Chartered Accountant shall not intentionally mislead an employing organization as to the level of expertise or experience possessed.

A self-interest threat to compliance with the principle of professional competence and due care might be created if a Chartered Accountant has:

- Insufficient time for performing or completing the relevant duties.
- Incomplete, restricted or otherwise inadequate information for performing the duties.
- Insufficient experience, training and/or education.
- Inadequate resources for the performance of the duties.

Examples of actions that might be safeguards to address such a self-interest threat include:

- Obtaining assistance or training from someone with the necessary expertise.
- Ensuring that there is adequate time available for performing the relevant duties.

If a threat to compliance with the principle of professional competence and due care cannot be addressed, a Chartered Accountant shall determine whether to decline to perform the duties in

Join us t.me/caborntofight

question. If the accountant determines that declining is appropriate, the accountant shall communicate the reasons.

Illustration 5:

Agastya Ltd. is a listed company engaged in the manufacturing of automotive spare parts. The company is preparing the financial statements for the year ended 31 March 20X3. The directors of Agastya Ltd. are entitled to an incentive based on the operating profit margin of the company. You have been appointed as a consultant to advise on the preparation of the financial statements, and you notice the following issue:

Issue:

On 1 April 20X2, Agastya Ltd.'s defined benefit pension scheme was amended to increase the pension entitlement from 12% of final salary to 18.5% of final salary. This amendment was made due to the salary cuts made on account of the pandemic. The chartered accountant has shown such increase in the pension entitlement (amounting to ₹ 85 crores) under the head 'Employee Benefits' forming part of the operating profit. The directors are unhappy with this presentation. They believe that the pension scheme is not integral to the operations of the company since it is paid post-retirement of the employees, and thus insist that such presentation would be misleading in computing the operating profit or loss. Accordingly, the directors propose a change in accounting policy so that all such gains or losses on pension scheme would be recognized under Other Comprehensive Income. The directors believe that this policy choice will make the financial statements more consistent, understandable thereby justifying the same on grounds of fair presentation as defined in the Framework. The pension scheme of Agastya Ltd. is currently in deficit.

Required:

Discuss the ethical and accounting implications of the above issues, referring to the relevant Ind AS wherever appropriate from the perspective of the consultant.

Solution

Ethical Implications of change in accounting policy

Ind AS 8, Accounting Policies, Changes in Accounting Estimates and Errors only permits a change in accounting policy if the change is: (i) required by an Ind AS or (ii) results in the financial statements providing reliable and more relevant information about the effects of transactions, other events or conditions on the entity's financial position, financial performance or cash flows. A retrospective adjustment is required unless the change arises from a new accounting policy with transitional arrangements to account for the change. It is permissible to depart from the requirements of Ind AS but only in extremely rare circumstances where compliance would be so

misleading that it would conflict with overall objectives of the financial statements. Practically, this override is rarely, if ever, invoked.

Ind AS 19, Employee Benefits requires all gains and losses on a defined benefit pension scheme to be recognised in profit or loss except for the remeasurement component relating to plan assets and defined benefit obligations, which must be recognized in Other Comprehensive Income. Accordingly, current service cost, past service cost and net interest cost on the net defined benefit obligation must all be recognized in profit or loss. Ind AS 19 does not offer any alternative treatment as an accounting policy choice in terms of Ind AS 8, and therefore the directors' proposals cannot be justified on the grounds of fair presentation. The directors are ethically bound to prepare financial statements which reflect a true and fair view of the entity's performance and financial position and comply with all Ind AS.

It is the self-interest in the pension scheme that is making the directors consider a change in accounting policy in order to maximize profits for maximizing their bonus potential. The amendment to the pension scheme is a past service cost in terms of Ind AS 19 which should be expensed to the profit or loss during the period such plan amendment has occurred, i.e., immediately. This would impact the operating profits of Agastya Ltd. thereby reducing the potential bonus.

Additionally, it appears that the directors wish to manipulate aspects of the pension scheme such as current service cost and, since the pension scheme is given to be in deficit, the net finance cost. The directors are purposely manipulating the presentation of these items by recording them in equity instead of Profit or Loss. The financial statements would not be compliant with Ind AS and would not give a reliable picture of the true costs to the company of operating the pension scheme and this treatment would make the financial statements less comparable with other entities correctly applying Ind AS 19. Further, the explicit statement given in the financial statements stating that all compliance with Ind AS is achieved would be an incorrect statement to make in the event of the above non-compliance. Further, such treatment would be against the fundamental principles of objectivity, integrity and professional behaviour as stated in the Code of Ethics. The directors need to understand their ethical responsibilities and avoid implementing the proposed change in policy.

As a meaningful addition, the directors could use other tools/indicators within the financial statements to explain the company's results such as drawing attention of the users to the cash generated from operations which would exclude the non-cash pension expense. Alternative measures such as EBITDA could be disclosed where non-cash items are consistently eliminated for comparison purposes.

When a Chartered Accountant discovers that a company's financial position has been compromised through misstatement, they have two options. They can either report the non-

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

compliance to the authorities or consider withdrawing from the engagement. Both the actions ensure integrity, transparency, and the interests of stakeholders at large.

In case the consultant-chartered accountant is influenced by the director's suggestions and report accordingly, he will be subject to professional misconduct under Clauses 5,7 and 8 of Part I of Second Schedule of the Chartered Accountants Act, 1949.

Clause 5 states that a Chartered Accountant is guilty of professional misconduct when he fails to disclose a material fact known to him which is not disclosed in a financial statement, but disclosure of which is necessary in making such financial statement where he is concerned with that financial statement in a professional capacity.

Clause 7 states that a Chartered Accountant is guilty of professional misconduct when he does not exercise due diligence or is grossly negligent in the conduct of his professional duties.

Clause 8 of Part I of the Second Schedule of the Chartered Accountants Act 1949 states that a CA is guilty of professional misconduct when he fails to obtain sufficient information which is necessary for expression of an opinion or its exceptions are sufficiently material to negate the expression of an opinion.

*****

D. FINANCIAL INTERESTS, COMPENSATION AND INCENTIVES LINKED TO FINANCIAL REPORTING AND DECISION MAKING

A Chartered Accountant shall not manipulate information or use confidential information for personal gain or for the financial gain of others.

Chartered Accountants might have financial interests or might know of financial interests of immediate or close family members that, in certain circumstances, might create threats to compliance with the fundamental principles. Financial interests include those arising from compensation or incentive arrangements linked to financial reporting and decision making.

Examples of circumstances that might create a self-interest threat include situations in which the Chartered Accountant or an immediate or close family member:

- Has a motive and opportunity to manipulate price- sensitive information in order to gain financially.
- Holds a direct or indirect financial interest in the employing organization and the value of that financial interest might be directly affected by decisions made by the accountant.
- Is eligible for a profit-related bonus and the value of that bonus might be directly affected by decisions made by the accountant.
- Holds, directly or indirectly, deferred bonus share rights or share options in the employing organization, the value of which might be affected by decisions made by the accountant.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Participates in compensation arrangements which provide incentives to achieve targets or to support efforts to maximize the value of the employing organization's shares. An example of such an arrangement might be through participation in incentive plans which are linked to certain performance conditions being met.

Illustration 6:

The directors of Spinz Ltd. are eligible for an incentive computed as a percentage of 'Cash Generated from Operations' as defined in Ind AS 7, Statement of Cash Flows in accordance with the terms of their appointment. Due to the onset of the pandemic, the company has not performed well, and it has, in fact, lost Cash from Operations. In order to meet the cash requirements, the directors of Spinz Ltd. are planning to dispose off under-utilized equipment and investments (not subsidiaries or associates). The directors opine that since the cash generated from sale of such equipment and investments would be used for operations, the inflows on such sale would be presented in the Statement of Cash Flows under 'Cash from Operations'. The directors are concerned about meeting the targets in order to ensure security of their jobs and feel that this treatment would enhance the 'cash flow picture' of the business. The inflows on sale of such equipment and investments have the potential to make the 'Cash from Operations' figure positive.

Required:

Discuss the ethical responsibility of Spinz Ltd.'s Chartered Accountant who is an employee to ensure that the manipulation of the Statement of Cash Flows, as suggested by the directors, does not occur.

Solution

In order to meet targets, it is quite possible that management may want to **present a company's results in a favourable manner**. Such an objective could be achieved by employing creative accounting techniques such as window dressing, or as can be seen in the case, **inaccurate classification**.

As per para 16 of Ind AS 7, separate disclosure of cash flows arising from investing activities is important because the cash flows represent the extent to which expenditures have been made for resources intended to generate future income and cash flows. Only expenditures that result in a recognized asset in the balance sheet are eligible for classification as investing activities. Example of cash flows arising from investing activities are cash receipts from sales of property, plant and equipment, intangibles and other long-term assets.

Presenting proceeds of sale of investments and under-utilized equipment as part of 'Cash from Operations' gives a **misleading picture** of the financial statements. Operating cash flows are crucial for the long-term survival of the company, and a negative cash from operations figure could be a possible indicator of cash shortage in the short-term, and possibly question the going concern

Merged By CA - Born To Fight

assumption of the entity in the long-run. Further, operating cash flows are recurring, whereas investing and financing cash flows tend to be one-off.

In the given case, it may appear that to meet cash requirements for its operations, the company is selling its investments and equipment. Selling of equipment and investments is not usually a part of trading operations. Such sales generate short-term cash flow and cannot be repeated on a regular basis. The proposed misclassification could be regarded as a deliberate attempt to mislead stakeholders about the performance of Spinz Ltd. and its future performance, which is unethical.

Chartered Accountants have a duty, not only to the **company** they work for, but also to their **professional body (i.e., ICAI)**, and to the **stakeholders** of the company. Proceeds received from sale of equipment and investment should be presented under **'Cash Flows from Investing Activities'** (instead of 'Operating Activities') in accordance with Ind AS 7, Statement of Cash Flows. As per the Code of Ethics, a Chartered Accountant should follow the fundamental principle of **professional competence and due care** which includes preparing financial statements in compliance with Ind AS. In case the accountant permits the treatment of the matter as proposed by the management, it would result in a breach of the principle of professional competence and due care. This treatment may be permitted by the accountant under pressure from the management.

The chartered accountant should **prevent the management not to proceed with the aforesaid accounting treatment** which violates Ind AS 7. In case the management insists on continuing with their suggested treatment, then the chartered accountant must **bring this to the attention of the auditors**. Otherwise, the chartered accountant would be subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949. The Clause 1 states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, if he contravenes any of the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

*****

Illustration 7:

Infostar Ltd. is a listed company engaged in the provision of IT services in India. The directors are paid a bonus based on the profits achieved by the company during the year as per the bonus table given below:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

Profit Range	*Bonus to Directors*
NIL < Profit < ₹ 1 crore	*NIL*
₹ 1 crore < Profit < ₹ 5 crores	*2% of Net Profit*
₹ 5 crores < Profit < ₹ 10 crores	*4% of Net Profit*
₹ 10 crores < Profit < ₹ 20 crores	*6% of Net Profit*
₹ 20 crores < Profit < ₹ 30 crores	*8% of Net Profit*
Profit > ₹ 30 crores	*10% of Net Profit*

The draft Statement of Profit and Loss for the year ended 31 March 20X2 currently shows a profit of ₹ 2 crores.

Issue:

The employees of Infostar Ltd. have historically been paid an individual-performance-based discretionary incentive for the last 15 years. Based on the past trends and performance, the bonus amount for the year 20X1-20X2 would be ₹ 3 crores. In view of the possibility of the directors not receiving the bonus on account of the company's poor performance, Infostar Ltd.'s Chief Financial Officer (CFO), who is a chartered accountant, has suggested that the discretionary incentive usually payable to the employees could be avoided in the current year, which would result in the company reporting profits. As a part of its annual report, Infostar Ltd. reports employee satisfaction scores, staff attrition rates, gender equality and employee absenteeism rates as non-financial performance measures. The CFO has also told the directors over mail that no stakeholder reads the non-financial information anyway, and thus his aforesaid suggestion of not paying the discretionary incentive would not impact the company greatly.

Required:

Discuss the ethical and accounting implications of the above issues, referring to the relevant Ind AS wherever appropriate from perspective of CA. Sushil Bhupathy.

Solution

Ethical Considerations

Long-term success of any organization strongly depends on the fair treatment of employees, which in turn is based on the ethical behaviour of the management as well as how the same is perceived by the stakeholders. In the given case, the CFO has suggested not paying the discretionary bonus, which the directors are considering as it will enable the company to record profits of ₹ 2 crores, thereby ensuring a bonus pay out to the directors. This suggestion is not illegal at all as the bonus is discretionary rather than statutory/contractual. In other words, the company has no

Merged By CA - Born To Fight

legal obligation to pay the bonus to the employees. However, the reason behind non-payment of the bonus is what gives rise to ethical considerations. The suggestion by the CFO will have the aforesaid impact of reducing expenses and improving profits.

On a moral ground, the suggestion is likely to have negative consequences for the company. The employees would be dissatisfied that the bonus has been withdrawn, and further, when they would see the directors withdrawing bonuses out of the profits arising on a saving in bonus costs, it would have a negative impact on employee morale, which would result in low employee satisfaction scores and poor retention rates, which are reported as non-financial information in the financial statements. Companies are also under increasing pressure to reduce the wage gap between the management and its employees. By not paying a bonus, this metric will be adversely affected.

The CFO's statement that the above action will not negatively impact the company as the non-financial reporting indicators are not widely read by the users is misleading. The non-financial information is becoming increasingly important to the users of financial statements as they care about companies' treatment of their employees and view it as being important in the long-term success of the company.

A chartered accountant has a responsibility to exercise due diligence and clearly consider both financial and non-financial information while discharging his professional duty. It would be unethical for a chartered accountant to guide the management on matters which may result into any kind of disadvantage (it includes even non-financial matters) to the stakeholders.

Further, a distinguishing mark of the accountancy profession is its acceptance of the responsibility to act in the public interest. A chartered accountant's responsibility is not exclusively to satisfy the needs of an individual client or employing organization. Therefore, the Code contains requirements and application material to enable chartered accountants to meet their responsibility to act in the public interest. *(Refer Section 100.1 A1, Code of Ethics issued by ICAI)*

Hence, it is essential for a chartered accountant to uphold the professional standards and act in accordance with the ethical principles by ensuring transparency and accuracy in financial reporting.

*****

E. INDUCEMENTS, INCLUDING GIFTS AND HOSPITALITY

An inducement is an object, situation, or action that is used as a means to influence another individual's behaviour, but not necessarily with the intent to improperly influence that individual's behaviour. Inducements can range from minor acts of hospitality between business colleagues to

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

acts that result in non-compliance with laws and regulations. An inducement can take many different forms, for example:

- Gifts.
- Hospitality.
- Entertainment.
- Political or charitable donations.
- Appeals to friendship and loyalty.
- Employment or other commercial opportunities.
- Preferential treatment, rights or privileges

1. Immediate or Close Family Members

A Chartered Accountant shall remain alert to potential threats to the accountant's compliance with the fundamental principles created by the offering of an inducement:

(a) By an immediate or close family member of the accountant to a counterparty with whom the accountant has a professional relationship; or

(b) To an immediate or close family member of the accountant by a counterparty with whom the accountant has a professional relationship.

Where the Chartered Accountant becomes aware of an inducement being offered to or made by an immediate or close family member and concludes there is intent to improperly influence the behaviour of the accountant or of the counterparty or considers a reasonable and informed third party would be likely to conclude such intent exists, the accountant shall advise the immediate or close family member not to offer or accept the inducement.

One of the factors that is relevant in determining whether there is actual or perceived intent to improperly influence the behaviour of the Chartered Accountant or of the counterparty is the nature or closeness of the relationship, between:

(a) The accountant and the immediate or close family member;

(b) The immediate or close family member and the counterparty; and

(c) The accountant and the counterparty.

For example, the offer of employment, outside of the normal recruitment process, to the spouse of the accountant by a counterparty with whom the accountant is negotiating a significant contract might indicate such intent.

F. RESPONDING TO NON-COMPLIANCE WITH LAWS AND REGULATIONS IN CASE OF EMPLOYMENT WITH LISTED ENTITIES

A Chartered Accountant might encounter or be made aware of non-compliance or suspected non-compliance in the course of carrying out professional activities. This section guides the accountant in assessing the implications of the matter and the possible courses of action when responding to non-compliance or suspected non-compliance with:

(a) Laws and regulations generally recognized to have a direct effect on the determination of material amounts and disclosures in the employing organization's financial statements; and

(b) Other laws and regulations that do not have a direct effect on the determination of the amounts and disclosures in the employing organization's financial statements, but compliance with which might be fundamental to the operating aspects of the employing organization's business, to its ability to continue its business, or to avoid material penalties.

A distinguishing mark of the accountancy profession is its acceptance of the responsibility to act in the public interest. When responding to non-compliance or suspected noncompliance, the objectives of the Chartered Accountant are:

(a) To comply with the principles of integrity and professional behaviour;

(b) By alerting management or, where appropriate, those charged with governance of the employing organization, to seek to:

  (i) Enable them to rectify, remediate or mitigate the consequences of the identified or suspected non-compliance; or

  (ii) Deter the non-compliance where it has not yet occurred; and

  (iii) To take such further action as appropriate in the public interest.

Non-compliance with laws and regulations ("non-compliance") comprises acts of omission or commission, intentional or unintentional, which are contrary to the prevailing laws or regulations committed by the following parties:

(a) The Chartered Accountant's employing organization;

(b) Those charged with governance of the employing organization;

(c) Management of the employing organization; or

(d) Other individuals working for or under the direction of the employing organization.

Examples of laws and regulations which this section addresses include those that deal with:

- Fraud, corruption and bribery.
- Money laundering, terrorist financing and proceeds of crime.
- Securities markets and trading.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Banking and other financial products and services.
- Data protection.
- Tax and pension liabilities and payments.
- Environmental protection.
- Public health and safety.

1. Responsibilities of All Chartered Accountants

If protocols and procedures exist within the Chartered Accountant's employing organization to address non-compliance or suspected non-compliance, the accountant shall consider them in determining how to respond to such non-compliance.

2. Responsibilities of Senior Chartered Accountants in Service

Senior Chartered Accountants in service ("senior Chartered Accountants") are directors, officers or senior employees able to exert significant influence over, and make decisions regarding, the acquisition, deployment and control of the employing organization's human, financial, technological, physical and intangible resources. There is a greater expectation for such individuals to take whatever action is appropriate in the public interest to respond to non-compliance or suspected noncompliance than other Chartered Accountants within the employing organization. This is because of senior Chartered Accountants' roles, positions and spheres of influence within the employing organization.

1. Addressing the Matter

If the senior Chartered Accountant identifies or suspects that non-compliance has occurred or might occur, the accountant shall, subject to the considerations mentioned above under the responsibilities for all Chartered Accountants, discuss the matter with the accountant's immediate superior, if any. If the accountant's immediate superior appears to be involved in the matter, the accountant shall discuss the matter with the next higher level of authority within the employing organization.

The senior Chartered Accountant shall also take appropriate steps to:

(a) Have the matter communicated to those charged with governance;

(b) Comply with applicable laws and regulations, including legal or regulatory provisions governing the reporting of non-compliance or suspected non-compliance to an appropriate authority;

(c) Have the consequences of the non-compliance or suspected non-compliance rectified, remediated or mitigated;

(d) Reduce the risk of re-occurrence; and

Merged By CA - Born To Fight

(e) Seek to deter the commission of the non-compliance if it has not yet occurred.

In addition to responding to the matter in accordance with the provisions of this section, the senior Chartered Accountant shall determine whether disclosure of the matter to the employing organization's external auditor, if any, is needed.

Such disclosure would be pursuant to the senior Chartered Accountant's duty or legal obligation to provide all information necessary to enable the auditor to perform the audit.

2. Determining Whether Further Action Is Needed

The senior Chartered Accountant shall assess the appropriateness of the response of the accountant's superiors, if any, and those charged with governance.

Examples of circumstances that might cause the senior Chartered Accountant no longer to have confidence in the integrity of the accountant's superiors and those charged with governance include situations where:

- The accountant suspects or has evidence of their involvement or intended involvement in any non-compliance.
- Contrary to legal or regulatory requirements, they have not reported, or authorized the reporting of, the matter to an appropriate authority within a reasonable period.

Further action that the senior Chartered Accountant might take includes:

- Informing the management of the parent entity of the matter if the employing organization is a member of a group.
- Disclosing the matter to an appropriate authority as specified under respective law.
- Resigning from the employing organization.

Resigning from the employing organization is not a substitute for taking other actions that might be needed to achieve the senior Chartered Accountant's objectives under this section. However, there might be limitations as to the further actions available to the accountant. In such circumstances, resignation might be the only available course of action.

3. Seeking Advice

As assessment of the matter might involve complex analysis and judgments, the senior Chartered Accountant might consider:

- Consulting internally.
- Obtaining legal advice to understand the accountant's options and the professional or legal implications of taking any particular course of action.
- Consulting on a confidential basis with the Institute.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

4. Determining Whether to Disclose the Matter to an Appropriate Authority

Disclosure of the matter to an appropriate authority would be precluded if doing so would be contrary to law or regulation. Otherwise, the purpose of making disclosure is to enable an appropriate authority to cause the matter to be investigated and action to be taken in the public interest.

5. Responsibilities of Chartered Accountants Other than Senior Chartered Accountants

If, in the course of carrying out professional activities, a Chartered Accountant becomes aware of information concerning non-compliance or suspected non-compliance, the accountant shall seek to obtain an understanding of the matter. This understanding shall include the nature of the non-compliance or suspected non-compliance and the circumstances in which it has occurred or might occur.

If the Chartered Accountant identifies or suspects that noncompliance has occurred or might occur, the accountant shall, subject to the considerations mentioned above under the responsibilities for all Chartered Accountants, inform an immediate superior to enable the superior to take appropriate action. If the accountant's immediate superior appears to be involved in the matter, the accountant shall inform the next higher level of authority within the employing organization.

In exceptional circumstances, the Chartered Accountant may determine that disclosure of the matter to an appropriate authority is an appropriate course of action. If the accountant does so, that disclosure is permitted. When making such disclosure, the accountant shall act in good faith and exercise caution when making statements and assertions.

Illustration 8:

Agastya Ltd. is a listed company engaged in the manufacturing of automotive spare parts. The company is preparing the financial statements for the year ended 31 March 20X3. The directors of Agastya Ltd. are entitled to an incentive based on the operating profit margin of the company. You have been appointed as a consultant to advise on the preparation of the financial statements, and you notice the following issue:

Issue:

The draft financial statements include an amount of ₹ 75 lakhs given as loan to a director. The loan has no specific repayment terms; the same is repayable on demand. The directors have included such loan under the heading 'Cash and Cash Equivalents'. They have reasoned that since such loan, which is advanced to one of the directors, is repayable on demand, it is readily convertible to cash. Further the directors opine that such presentation should not be a problem even under the Ind AS Framework as financial statements are essentially prepared in accordance

Merged By CA - Born To Fight

with accounting policies which is the choice of the company, and in this case, Agastya Ltd. has made a policy choice to show such loan as a cash equivalent.

Required:

Discuss the ethical and accounting implications of the above issues, referring to the relevant Ind AS wherever appropriate.

Solution

The directors have included a loan made to a director as a part of Cash and Cash Equivalents. It appears that the directors have misunderstood the definition of Cash and Cash Equivalents, believing the loan to be a cash equivalent. As per Ind AS 7, *Statement of Cash Flows*, cash equivalents are short-term, highly liquid investments readily convertible to known amounts of cash and which are subject to insignificant risk of changes in value. However, the loan given to the directors is not in place to enable Agastya Ltd. to manage its short-term cash commitments, it has no fixed repayment date and the likelihood of the director defaulting is also not known. Thus, the classification as a cash equivalent is inappropriate.

Instead, the loan should be regarded as a financial asset under Ind AS 109, *Financial Instruments*. Further information would be required, for example is ₹ 75 lakhs fair value? It could be said that the loan will never be repaid, and accordingly could be regarded as a component of directors' remuneration, and if so, the same should be expensed and disclosed accordingly. Further, since the director is likely to fall into the category of key management personnel, related party disclosures under Ind AS 24, *Related Party Disclosures* are likely to be necessary.

The treatment of loan as a cash equivalent breached two fundamental qualitative characteristics prescribed in the Conceptual Framework for Financial Reporting, namely:

(i) Relevance: The information should be disclosed separately as it is relevant to users.

(ii) Faithful representation: Information must be complete, neutral and free from error. Clearly, this will not be the case if loan to a director is shown as Cash Equivalents.

The said treatment is also violative of the Conceptual Framework's key enhancing qualitative characteristics:

(i) **Understandability:** if the loan is shown as Cash Equivalents, it masks the true nature of company's practices, thereby reducing the understandability of the financial statements to the users.

(ii) **Verifiability:** Verifiability ensures that different knowledgeable and independent observers can reach consensus that a particular depiction of a transaction / account balance is a faithful representation. Verifiability gives assurance to the users that the information faithfully

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

represents the economic phenomena it intends to represent. The treatment given by the directors of Agastya Ltd. does not meet this benchmark as it reflects the subjective bias of the directors.

(iii) **Comparability:** For financial statements to be comparable year-on-year and with other companies, transactions must be correctly classified and presented, which is not happening here. If the cash balance of one year includes a loan to a director and the next year it does not, then you are not comparing like with like.

There is a potential **conflict of interest** between that of the director and that of the company, which mandates a separate disclosure as a minimum. Further, issues with compliance of section 185 of the Companies Act, 2013 would arise, which is why probably the directors want to hide such loan balance under cash equivalents. Directors are responsible for the financial statements required by statute, and thus it is their responsibility to put right any errors that result in the financial statements not complying with Ind AS. The directors are also legally bound to maintain proper accounting records and recording a loan as cash equivalent clashes with this requirement.

By masking the nature of the transaction, it is possible that the directors are **motivated by personal interest** and are thus failing in their duty to act honestly and ethically. If one transaction is misleading, it casts doubt on the credibility of the financial statements as a whole.

As a consultant, it becomes his responsibility to get the financial statements rectified and guide the directors about the principles enunciated in Ind AS and the correct treatment in accordance with the standards. Otherwise, he will be subject to professional misconduct under Clause 6 and 7 of Part I of Second Schedule of the Chartered Accountants Act, 1949.

Clause 6 of Part I of the Second Schedule of the Chartered Accountants Act 1949 states that a CA is guilty of professional misconduct when he fails to report a material misstatement known to him to appear in a financial statement with which he is concerned in a professional capacity.

The Clause 7, states that a Chartered Accountant is guilty of professional misconduct when he does not exercise due diligence or is grossly negligent in the conduct of his professional duties.

*****

G. PRESSURE TO BREACH THE FUNDAMENTAL PRINCIPLES

A Chartered Accountant shall not:

(a) Allow pressure from others to result in a breach of compliance with the fundamental principles; or

(b) Place pressure on others that the accountant knows, or has reason to believe, would result in the other individuals breaching the fundamental principles.

Join us t.me/caborntofight

A Chartered Accountant might face pressure that creates threats to compliance with the fundamental principles, for example an intimidation threat, when undertaking a professional activity. Pressure might be explicit or implicit and might come from:

- Within the employing organization, for example, from a colleague or superior.
- An external individual or organization such as a vendor, customer or lender.
- Internal or external targets and expectations.

Examples of pressure that might result in threats to compliance with the fundamental principles include:

- Pressure related to conflicts of interest:
  - Pressure from a family member bidding to act as a vendor to the Chartered Accountant's employing organization to select the family member over another prospective vendor.

Discussing the circumstances creating the pressure and consulting with others about those circumstances might assist the Chartered Accountant to evaluate the level of the threat. Such discussion and consultation, which requires being alert to the principle of confidentiality, might include:

- Discussing the matter with the individual who is exerting the pressure to seek to resolve it.
- Discussing the matter with the accountant's superior, if the superior is not the individual exerting the pressure.
- Escalating the matter within the employing organization, including when appropriate, explaining any consequential risks to the organization, for example with:
  - Higher levels of management.
  - Internal or external auditors.
  - Those charged with governance.
- Disclosing the matter in line with the employing organization's policies, including ethics and whistleblowing policies, using any established mechanism, such as a confidential ethics hotline.
- Consulting with:
  - A colleague, superior, human resources personnel, or another Chartered Accountant;
  - Institute or industry associations; or
  - Legal counsel.

An example of an action that might eliminate threats created by pressure is the Chartered Accountant's request for a restructure of, or segregation of, certain responsibilities and duties so that the accountant is no longer involved with the individual or entity exerting the pressure.

Illustration 9:

As at 31 March 20X4, Mitra Ltd. had a plan to dispose off its 75% subsidiary Dosti Ltd. This plan had been approved by the board and was reported in the media as well as to the Stock Exchange where Mitra Ltd. was listed. It is expected that Jaya Ltd., the non-controlling shareholder in Dosti Ltd. holding 25% stake, will acquire the 75% equity interest as well. The sale is expected to be completed by October 20X4. Dosti Ltd. is expected to have substantial trading losses in the period up to the sale. Mr. X, a chartered accountant, who is an employee in the finance department of Mitra Ltd., wishes to show Dosti Ltd. as held for sale in the financial statements and to create a restructuring provision to include the expected costs of disposal and future trading losses. However, the Chief Operating Officer (COO) does not wish Dosti Ltd. to be categorized as held for sale nor to provide for the expected losses. The COO is concerned as to how this may affect the sales and would surely result in bonus targets not being met. He has argued that as the management, it is his duty to secure a high sales price to maximize the return for shareholders of Mitra Ltd. He has also hinted that Mr. X's job could be at stake if such a provision were to be made in the financial statements. The expected costs from the sale are as follows:

Future Trading Losses:	*₹ 20 crores*
Various legal costs of sale	*₹ 1.5 crores*
Redundancy costs for Dosti Ltd.'s employees	*₹ 4 crores*
Impairment losses on Property, Plant and Equipment	*₹ 7 crores*

Required:

(a) Discuss the accounting treatment which Mitra Ltd. should adopt to address the issue above for the financial statements.

(b) Discuss the ethical issues which may arise in the above scenario, including any actions which Mitra Ltd. and Mr. X should take.

Solution

(a) In terms of Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations, an entity shall classify a non-current asset (or disposal group) as held for sale if its carrying amount will be recovered principally through a sale transaction rather than through continuing use.

For this to be the case, the asset (or disposal group) must be available for immediate sale in its present condition subject only to terms that are usual and customary for sales of such assets (or disposal groups) and its sale must be *highly probable*.

For the sale to be highly probable, the appropriate level of management must be committed to a plan to sell the asset (or disposal group), and an active programme to locate a buyer and complete the plan must have been initiated. Further, the asset (or disposal group) must be actively marketed for sale at a price that is reasonable in relation to its current fair value. In addition, the **sale should be expected to qualify for recognition as a completed sale within one year from the date of classification**, except in specific cases as permitted by the Standard, and actions required to complete the plan should indicate that it is unlikely that significant changes to the plan will be made or that the plan will be withdrawn. The probability of required approvals (as per the jurisdiction) should be considered as part of the assessment of whether the sale is highly probable.

An entity that is committed to a sale plan involving loss of control of a subsidiary shall classify all the assets and liabilities of that subsidiary as held for sale when the criteria set out above are met, regardless of whether the entity will retain a non-controlling interest in its former subsidiary after the sale.

Based on the provisions highlighted above, the disposal of Dosti Ltd. appears to meet the criteria of **held for sale**. Jaya Ltd. is the probable acquirer, and the sale is highly probable, expected to be completed seven months after the year end, well within the 12-months criteria highlighted above. Accordingly, Dosti Ltd. should be treated as a disposal group, since a single equity transaction is the most likely form of disposal. In case Dosti Ltd. is deemed to be a separate major component of business or geographical area of the group, the losses of the group should be presented separately as a discontinued operation within the Financial Statements of Mitra Ltd.

In terms of Ind AS 105, Non-current Assets Held for Sale and Discontinued Operations, an entity shall measure a non-current asset (or disposal group) classified as held for sale at the **lower of its carrying amount and fair value less costs to sell**. The carrying amount of Dosti Ltd. (i.e., the subsidiary of Mitra Ltd.) comprises of the net assets and goodwill less the non-controlling interest. The impairment loss recognised to reduce Dosti Ltd. to fair value less costs to sell should be allocated first to goodwill and then on a pro-rata basis across the other non-current assets of the Company.

The Chief Operating Officer (COO) is incorrect to exclude any form of restructuring provision in the Financial Statements. Since the disposal is communicated to the media as well as the Stock Exchange, a constructive obligation exists. However, ongoing costs of business should not be provided for, only **directly attributable costs of restructuring** should be provided. Future operating losses should be excluded as no obligating event has arisen, and no provision is required for impairment losses of Property, Plant and Equipment as it is already

considered in the remeasurement to fair value less costs to sell. Thus, a provision is required for ₹ 5.5 crores (₹ 1.5 crores + ₹ 4 crores).

(b) **Ethics**

Accountants have a duty to ensure that the financial statements are **fair**, **transparent** and **comply with the accounting standards**. Mr. X have committed several mistakes. In particular, he was unaware of which costs should be included within a restructuring provision and has failed to recognise that there is no obligating event in relation to future operating losses. A chartered accountant is expected to carry his work with **due care and attention** for lending credibility to the financial statements. Accordingly, he must update his knowledge and ensure that work is carried out in accordance with relevant ethical and professional standards. Failure to do so would be a breach of **professional competence**. Accordingly, Mr. X must ensure that this issue is addressed, for example by attending regular training and professional development courses.

It appears that the chief operating officer is looking for means to **manipulate** the financial statements for meeting the bonus targets. Neither is he is willing to reduce the profits of the group by applying held for sale criteria in respect of Dosti Ltd. nor is he willing to create appropriate restructuring provisions. Both the adjustment which comply with the requirements of Ind AS will result in reduction of profits. His argument that the management has a duty to maximize the returns for the shareholders is true, but such maximization must not be achieved at the cost of **objective** and **faithful representation** of the performance of the Company. In the given case, it appears that the chief operating officer is motivated by bonus targets under the garb of maximizing returns for the shareholders, thereby resulting in misrepresentation of the results of the group.

Further, by threatening to dismiss Mr. X, the COO has acted unethically. **Threatening and intimidating behaviour** is unacceptable and against all ethical principles. This has given rise to an **ethical dilemma** for Mr. X. He has a duty to produce financial statements but doing so in a fair manner could result in a loss of job for him. The chartered accountant should approach the chief operating officer and remind him the basic ethical principles and communicate him to do the necessary adjustments in the accounts so that they are fair and objective.

In case Mr. X, falls under undue influence of COO and applies the incorrect accounting treatment, he will be subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949. The Clause 1 states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, for contravening the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

TEST YOUR KNOWLEDGE

Question

1. Shastra Ltd. desires to upgrade its production process since the directors believe that technology-led production is the only way the company can remain competitive. On 1 April 20X5, the company entered into a property lease arrangement in order to obtain tax benefits. However, the draft financial statements do not show a lease asset or a lease liability as on date.

   A new financial controller, CA. Sunil Raghavan, joined Shastra Ltd. before the financial year ending 31 March 20X6 and was engaged in the review of financial statements to prepare for the upcoming audit and to begin making a loan application to finance the new technology. CA. Sunil Raghavan believes that the lease arrangement should be recognized in the Balance Sheet. However, the Managing Director, Ms. Anusha Shrivastava, an MBA (Finance), strongly disagrees. She wishes to charge the lease rentals to the Statement of Profit or Loss. Her opinion is based on the understanding that the lease arrangement is merely a monthly rental payment, without any corresponding asset or obligation, since there is no 'invoice' for transfer of asset to Shastra Ltd. Her disagreement also stems from the fact that showing a lease obligation in the Financial Statements would impact the gearing ratio of the company, which could have an adverse impact on the upcoming loan application. Ms. Anusha has made it clear to CA. Sunil Raghavan that at stake is not only the loan application but also his future prospects at Shastra Ltd.

   Required:

   Discuss the potential ethical conflicts which may arise in the above scenario and the ethical principles which would guide how the financial controller should respond to the situation.

Answer

1. As per Ind AS 116, Leases, at the inception of a contract, an entity shall assess whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

   In accordance with the above definition, Shastra Ltd. must recognise a right-of-use asset representing the property and a corresponding lease liability for the obligation to make lease payments. At the commencement date, the right-of-use asset so recognised would include:

   - The amount of the initial measurement of lease liability;

- Any initial direct costs;
- Any costs to be incurred for dismantling or removing the underlying asset or restoring the site at the end of the lease term.

The liability for the lease obligation would be measured as the present value of future lease payments including payments that would be made towards any residual value guarantee, discounted using the rate implicit in the lease or the incremental rate of borrowing of the lessor, whichever is available.

The fact that there is no 'invoice' evidencing transfer of the asset cannot be a reason to avoid recognition of the right-of-use asset. In fact, what is being recognised is not an asset, since ownership rights are not transferred. What is sought to be recognised under Ind AS 116 is the right to use the asset in the manner required by the lessee Shastra Ltd. Further, since the lease represents an obligation to pay lease rentals in the future, a corresponding lease liability should be recognised. Not recognising the right-of-use asset or lease liability would not only be a violation of Ind AS 116, Leases, but would also be an incorrect presentation of the financial position, which is critical given that Shastra Ltd. is interested in taking a loan for its operations.

Ethical issues:

The managing director's threat to the financial controller results in an ethical dilemma for the financial controller. This pressure is greater because the financial controller is new.

Threats to fundamental principles

The fact that the position of the financial controller has been threatened if the treatment suggested by the managing director is not followed indicates that there is an **intimidation threat** to the fundamental principles of **objectivity** and **integrity**.

Further, as the manging director has flagged the risk that the company may not obtain loan financing if the lease obligation is recorded in the balance sheet, there is an **advocacy threat** because the financial controller may be compelled to follow an incorrect treatment to maximise the chances of obtaining the loan. This pressure again is greater because the financial controller is new.

Professional competence

When preparing the financial statements, the financial controller should ensure that the fundamental principle of **professional competence** should be followed, which requires that accounts should be prepared in **compliance with Ind AS**.

Thus, since the arrangement meets the Ind AS 116 criteria for a lease, the right-of-use asset and a corresponding lease liability should be recognised, as otherwise the liabilities of

Join us t.me/caborntofight

Merged By CA - Born To Fight

Shastra Ltd. would be understated. The ICAI Code of Ethics and Conduct sets boundaries beyond which accountants should not act. If the managing director refuses application of Ind AS 116, Leases, the financial controller should **disclose this to the appropriate internal governance authority**, and thus feel confident that his actions were ethical.

If the financial controller were to bend under pressure and **accept the managing director's proposed treatment**, this would contravene Ind AS 116 and **breach the fundamental principle of professional competence**. In such a case, he would be subject to professional misconduct under Clause 1 of Part II of Second Schedule of the Chartered Accountants Act, 1949, which states that a member of the Institute, whether in practice or not, shall be deemed to be guilty of professional misconduct, if he contravenes any of the provisions of this Act or the regulations made thereunder or any guidelines issued by the Council. As per the Guidelines issued by the Council, a member of the Institute who is an employee shall exercise due diligence and shall not be grossly negligent in the conduct of his duties.

CHAPTER 17

ACCOUNTING AND TECHNOLOGY

LEARNING OUTCOMES

After studying this chapter, you will be able to:

- Delve into various technologies that have had a significant impact on the accounting profession like Cloud Computing, Artificial Intelligence and Cybersecurity etc.
- Recognise the benefits of each technology and how they have changed the way accountants perform their tasks.
- Examine the challenges that accounting professionals face in adapting to new technologies.
- Appreciate the importance of accounting professionals staying up-to-date with the latest technologies.
- Automate the accounting process with various technologies for various Ind AS based situations.

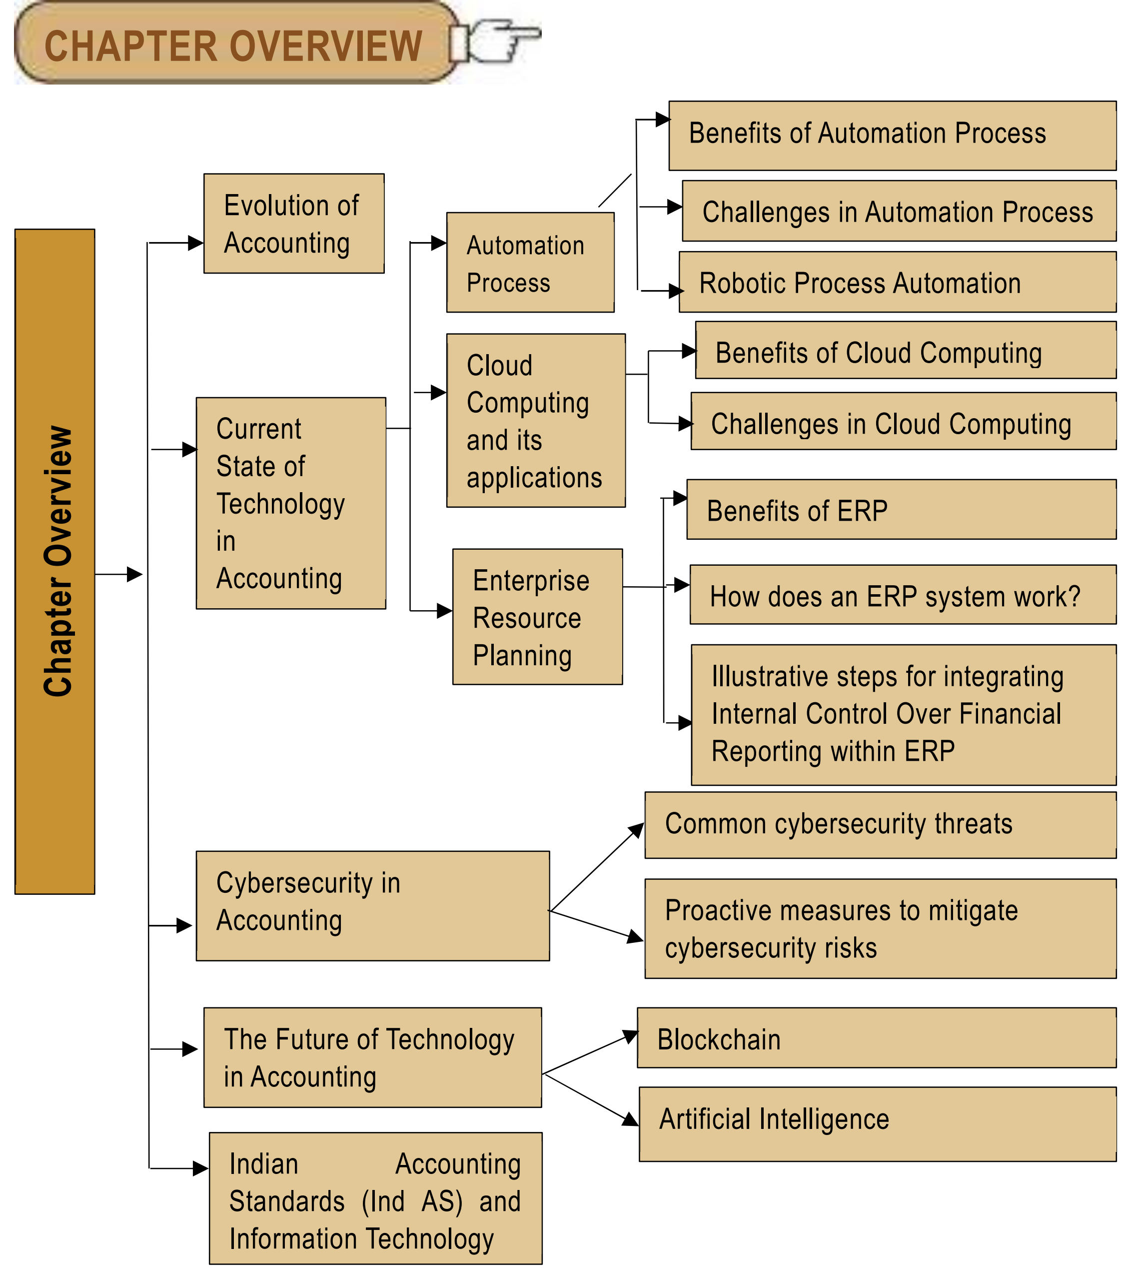
CHAPTER OVERVIEW



Join us t.me/caborntofight

Merged By CA - Born To Fight

1. INTRODUCTION

Accounting is a critical function for all businesses, as it enables them to track and manage their financial transactions, budgets, and investments. The field of accounting has undergone significant changes in recent years, primarily due to advancements in technology. As businesses have embraced digital transformation, the accounting profession has evolved, becoming more efficient and accurate with the help of new technologies.

It is not the intent of the chapter to discuss a particular accounting software in detail, hence this chapter will not contain for instance, commands to pass vouchers in software like Tally or SAP. This chapter intends to provide an overview of the impact of technology on the accounting profession. It highlights the trends that are transforming the industry and the challenges that accounting professionals face in adapting to new technologies.

The chapter commences with a discussion on the history of accounting and its evolution over time. Accounting practices were once manual and paper-based, but advancements in technology have enabled automation, making accounting processes faster and more efficient.

The chapter then delves into the various technologies that have had a significant impact on the accounting profession. These technologies include cloud computing, artificial intelligence, and cybersecurity etc. The chapter discusses the benefits of each technology and how they have changed the way accountants perform their tasks. For example, cloud computing has made it possible for accountants to access financial data from anywhere in the world.

The chapter also examines the challenges that accounting professionals face in adapting to new technologies. For example, the implementation of new technologies can be costly, and many businesses may not have the resources to invest in them. Additionally, some accounting professionals may be resistant to change, preferring to stick with the traditional methods they are comfortable with.

The chapter concludes by highlighting the importance of accounting professionals staying up-to-date with the latest technologies. As businesses continue to embrace digital transformation, accountants must be able to adapt to new technologies to remain competitive in the industry. The chapter emphasizes the need for ongoing education and training to ensure that accounting professionals have the skills they need to succeed in an increasingly digital world.

2. EVOLUTION OF ACCOUNTING

This section provides a detailed history of accounting from its earliest origins to modern-day practices. Understanding the history of accounting is essential to comprehending the current state of the profession and the role technology has played in its evolution.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

The origins of accounting can be traced back to ancient civilizations such as the Egyptians, Greeks, and Romans. In these early civilizations, accounting primarily involved record-keeping for tax purposes and for the management of government resources. These early accounting systems were manual and paper-based, and the process was labour intensive. By the time of the Roman Empire, the government had access to detailed financial information.

In India, Chanakya authored a manuscript similar to a financial management book during the period of the Mauryan Empire. His book 'Arthashastra' contains few detailed aspects of maintaining books of accounts for a sovereign state.

The Italian Luca Pacioli, recognized as The Father of accounting and bookkeeping was the first person to publish a work on double-entry bookkeeping, thereby introducing the field in Italy. Subsequently, accounting practices evolved to include double-entry bookkeeping. This system enabled businesses to create a balance sheet, which showed the financial position of the company at a given time. The introduction of double-entry bookkeeping was a significant milestone in the history of accounting and laid the foundation for modern-day accounting practices.

With the industrial revolution, significant changes came to the accounting profession. Due to the advent of machines and mass production, accounting became more complex, requiring more detailed records of financial transactions. This period also saw the rise of the accounting profession, with the establishment of the first professional accounting organizations. The Institute of Chartered Accountants of Scotland is the world's oldest and first professional chartered accountants' body, being established by the Royal Charter in 1854. Subsequently, organizations such as the Institute of Chartered Accountants in England and Wales, Certified Practising Accountant Australia, American Institute of Certified Public Accountants and Chartered Accountants Ireland were established in the 19th Century. With the advent of the 20th Century, the Association of Chartered Certified Accountants was established, followed by organizations such as the Institute of Chartered Accountants of India and the Institute of Singapore Chartered Accountants.

In the post-industrial period, technological advancements such as the computer, transformed the accounting profession. The introduction of computers enabled accountants to automate many of the manual processes associated with accounting, making the process faster and more accurate. To elucidate further, interest calculation in banks, which is currently system driven was once computed manually by the bank staff. Given the huge volume of transactions, interest computation usually took over a month for each branch, and the chances of errors were very high since the same was manual.

Currently, there is an upsurge of technology in the accounting field on account of cloud computing and artificial intelligence, all of which are transforming the accounting profession, making it more efficient and accurate. However, these new technologies also present challenges for accounting professionals, who must adapt to new systems and processes to remain competitive.

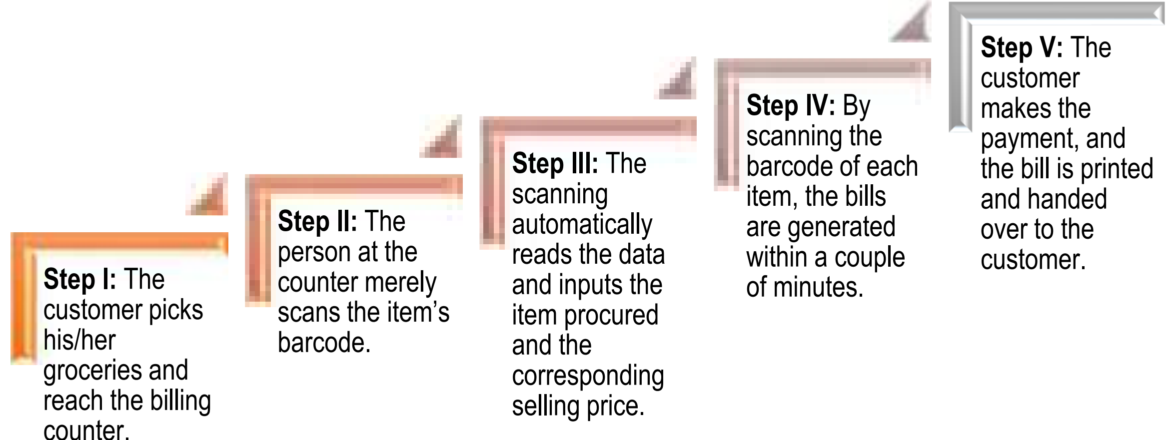
3. THE CURRENT STATE OF TECHNOLOGY IN ACCOUNTING

This section provides an in-depth overview of the current state of technology in the accounting profession. It discusses the various technologies used in accounting and their impact on the profession, including automation, cloud computing, and artificial intelligence

3.1 Automation Process

The major change visible is the automation of the accounting process. Automation is the use of software and other tools to automate manual processes, making them faster and more accurate. We can understand this with the help of the below example:

For instance, let us consider the activities involved in the process of procuring groceries from a departmental store such as Walmart or Reliance Smart Bazaar **at the Front-End.**



The entire process happens in a fraction of a second, saving valuable time and mitigating all errors.

However, **at the backend, the below activities take place:**

As and when the barcode of an item is scanned at the billing counter, the inventory of the said item at the departmental store is simultaneously updated recording the issue/sale of the same. This ensures accuracy in maintenance of inventory data.

A periodical physical check of inventory will give conclusive evidence of the correctness of data generated by the system, thereby giving comfort on the management assertions of accuracy, valuation and existence of the inventory.

In certain cases, the software is so programmed that the indirect taxes (GST) levied on the sale value as per the invoice is updated simultaneously, which can get uploaded on the GST portal at the end of the day by the accounting team in the backend.

This ensures accuracy in returns uploaded, thereby minimizing the need for manual reconciliation and data maintenance.

Software are also programmed to ensure that the bill amount is automatically displayed on the Point of Sale Machine, through which the customer makes the payment either through debit/credit card or through UPI. In case the customer opts to make payment in cash, entering the amount on the Screen will open the cash drawer in which the cash paid is deposited.

Since the cash drawer is opened through the system only after logging in by the concerned person, in case of mismatch in cash balances, the concerned person can be identified, thereby reducing the chances of misappropriation of cash.

3.1.1 Benefits of Automation Process

1. **Streamlining Data Entry:** Automation tools, such as optical character recognition (OCR) or barcode recognition technology, can help to automate the entry of data from source documents such as receipts and invoices. This can reduce the amount of time and effort required for manual data entry, as well as minimizing the potential for human error.

2. **Accelerating Data Processing:** Automation can help to process large amounts of data / large volumes of transactions more quickly and accurately than manual methods. For example, software can automatically categorize transactions into the appropriate accounts, calculate tax amounts, and generate financial statements, among other tasks.

3. **Enhancing Accuracy:** Automation can help to reduce errors and discrepancies in accounting processes. By automating tasks such as data entry and calculations, businesses can minimize the risk of errors caused by human error, improving the accuracy and reliability of their financial data.

Join us t.me/caborntofight

4. **Improving Decision-Making:** Automation can provide real-time insights into financial data, enabling businesses to make informed decisions more quickly. With automated reporting, the time spent on routine tasks is greatly minimized, enabling businesses to gain deeper insights into their financial performance, identify trends and patterns, and adjust their strategies accordingly.

5. **Saving Time and Money:** Automation reduces the amount of time and resources required to perform manual tasks such as data entry and reconciliations. This results in businesses saving on staffing costs and increases productivity and enabling accountants to focus on higher-level tasks such as analysis and planning.

6. **Facilitating Compliance:** Automation helps business to stay compliant with regulations and standards by ensuring accounting practices meet the necessary requirements. As seen above, automation ensures accurate data for the purposes of return filing. Further, in case the systems are so programmed, reporting tools can generate financial statements that meet the criteria of Ind AS or Indian GAAP as the case may be. This would ensure minimizing the risk of non-compliance and potential penalties.

3.1.2 Challenges in Automation Process

Automation also comes with its own set of potential drawbacks and challenges, some of them are mentioned below:

- It arises the need for ongoing training and education to keep up with the latest technology.
- Automation also presents a risk of data breaches and cyber-attacks, which can compromise the security and confidentiality of financial data.
- Due to automation, there exists potential loss of jobs. However, this can be mitigated by ensuring appropriate training to the workforce to remain updated with the technology.

To summarize, automation helps businesses achieve efficiency, accuracy and decision-making in accounting while saving time and money and facilitating compliance with regulations and standards.

3.1.3 Robotic Process Automation

Robotic Process Automation (RPA) is an emerging technology that revolutionizes financial reporting processes. RPA utilizes software robots or "bots" to automate manual and repetitive tasks in financial data processing, analysis, and reporting. By mimicking human interactions with digital systems, RPA bots can extract and consolidate data, perform calculations, generate reports, and ensure compliance with accounting standards. The adoption of RPA in financial reporting improves accuracy, enhances efficiency, and frees up valuable time for finance professionals to focus on more strategic activities. Moreover, RPA enables organizations to

achieve timely reporting, cost savings, and increased data integrity, ultimately leading to more reliable and insightful financial information.

Example 1: Using RPA in Financial Reporting

Let us consider XYZ Company, a group of companies that prepares consolidated financial statements in accordance with Ind AS 110. To streamline their financial reporting processes, XYZ Company decides to leverage Robotic Process Automation (RPA). In that case, the steps involved would be:

- As XYZ Company has multiple subsidiaries, each maintaining their own financial data, RPA bots are implemented to automate the process of extracting financial data from the subsidiary systems and consolidating it into the parent company's financial system.
- The bots retrieve the relevant financial information, perform necessary currency conversions, and reconcile intercompany transactions, ensuring accurate and timely consolidation.
- As per Ind AS 110, intercompany transactions need to be eliminated to avoid double counting and provide a true representation of the group's financial position. RPA bots are programmed to identify intercompany transactions within the consolidated financial data.
- The bots automatically eliminate these transactions by adjusting the corresponding accounts and generating elimination entries, simplifying the process and reducing the potential for errors.
- The bots retrieve the consolidated financial data from the parent company's financial system and apply the necessary consolidation adjustments.
- They perform calculations for non-controlling interests, equity, and comprehensive income attributable to the parent and non-controlling interests.
- The bots generate the consolidated balance sheet, income statement, statement of changes in equity, and cash flow statement, ensuring accuracy and consistency in the financial reporting process.

3.2 Cloud Computing

Cloud computing refers to the delivery of computing services over the internet. It allows accountants to access their data and software from any device with an internet connection.

The entire world was hit in 2020 with probably the biggest black swan event of the past couple of decades– the COVID-19 pandemic. The continuous lockdowns severely impacted businesses, and operations came to a standstill. This in turn led to viewing cloud computing as a serious alternative compared to traditional client-server architecture in physical locations controlled by the entities themselves.

Join us t.me/caborntofight

With the advent of cloud computing, persons could access the systems from their respective locations, work remotely during the lockdown and ensure that the accounting process and reporting requirements did not suffer adversely.

3.2.1 Common Applications / Cases of Cloud Computing

1. **Cloud Storage**: Services like Dropbox, Google Drive, and Microsoft OneDrive offer cloud storage solutions that allow users to store and access their files and data from anywhere with an internet connection. Users can save documents, photos, videos, and other files in the cloud and synchronize them across multiple devices.

2. **Software as a Service (SaaS)**: SaaS platforms provide cloud-based software applications that users can access and utilize via the internet. Examples include Salesforce for customer relationship management (CRM), Slack for team collaboration, and QuickBooks Online for accounting and financial management.

3. **Infrastructure as a Service (IaaS)**: IaaS providers offer virtualized computing resources, including servers, storage, and networking infrastructure, on a pay-as-you-go basis. Examples include Amazon Web Services (AWS), Microsoft Azure, and Google Cloud Platform. These platforms allow businesses to scale their IT infrastructure based on demand without the need for physical hardware.

4. **Platform as a Service (PaaS)**: PaaS providers offer cloud-based platforms that enable developers to build, deploy, and manage applications without the complexity of infrastructure management. Examples include Microsoft Azure App Service, and Google App Engine.

5. **Cloud-based Communication and Collaboration**: Applications like Microsoft Teams, Google Workspace (formerly G Suite), and Zoom provide cloud-based communication and collaboration tools that facilitate real-time messaging, video conferencing, file sharing, and project management.

6. **Cloud-based E-commerce**: Few platforms enable businesses to set up and manage online stores using cloud infrastructure. These platforms provide features like product catalogues, payment processing, inventory management, and customer analytics.

7. **Big Data Analytics**: Cloud computing enables organizations to process and analyze large volumes of data efficiently. Services like Amazon Redshift, Google BigQuery, and Microsoft Azure Data Lake Analytics provide scalable infrastructure for big data processing and analytics, empowering businesses to derive valuable insights from their data.

Join us t.me/caborntofight

3.2.2 Benefits of Cloud Computing

Following are some of the ways in which Cloud Computing has positively impacted accounting:

1. **Improved accessibility:** Cloud-based accounting software allows users to access their financial data from any location with an internet connection. This has increased accessibility and flexibility for accountants and business owners, allowing them to work remotely and collaborate in real-time.
2. **Enhanced security:** Cloud-based accounting software providers typically offer advanced security features such as encryption, firewalls, and multi-factor authentication helping in the protection of sensitive financial data from cyber threats and data breaches.
3. **Increased scalability:** Cloud-based accounting software allows businesses to easily scale up or down based on their changing needs. As a business grows, it can easily add new users and features without having to invest in additional hardware or software.
4. **Reduced costs:** Cloud-based accounting software typically requires less upfront investment in hardware and software, as well as ongoing maintenance costs. This can help businesses save money on IT expenses and redirect those funds to other areas of the business. For example, the costs of installing Microsoft Office Suite on a laptop or desktop is far more expensive than subscribing to the Office 365 Suite, which is a web-based download. Further, the web-based download also provides the options of continuous free updates unlike its Office Suite offline counterpart.
5. **Streamlined collaboration:** Cloud-based accounting software allows multiple users to collaborate in real-time, reducing the need for manual data entry and communication. This can help to streamline workflows and reduce errors caused by miscommunication.
6. **Improved reporting and analytics:** Cloud-based accounting software often includes powerful reporting and analytics tools that allow businesses to gain deeper insights into their financial performance. This can help businesses make more informed decisions and identify areas for improvement.

3.2.3 Challenges in Cloud Computing

Following are the potential challenges which may emerge in cloud computing:

- Since cloud-based software are completely online, they could be prone to hackers who could 'steal' data or passwords or compromise the integrity of the processed data, thereby causing disruptions to the businesses.
- Strong net connectivity is a must for cloud-computing to be a success. Though there has been a huge surge in network and mobile connectivity in the past decade, connectivity in

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

non-metros, tier-2 or tier-3 cities is not well-developed, which could create accessibility issues to the users of the cloud-based accounting software.

Example 2: Using Cloud Computing

The finance team at XYZ Company, consisting of chartered accountants and financial analysts, collaborates on the preparation of the Income Statement. They utilize cloud-based collaboration tools, such as Microsoft Teams or Google Workspace, to enhance their efficiency and ensure accuracy in the reporting process.

- Using cloud-based spreadsheets or shared documents, the finance professionals from various locations input the relevant financial data into the Income Statement template. They update revenue figures, operating expenses, cost of goods sold, and other relevant information, ensuring accurate and comprehensive data collection.
- Through cloud collaboration platforms, team members can work on the Income Statement simultaneously, regardless of their physical locations. They can review, edit, and make real-time updates to the document. For example, the finance team in Mumbai can update the revenue figures based on the sales data received, while the team in Bengaluru can revise the operating expenses based on the cost information provided.
- Cloud-based collaboration tools offer version control features, allowing the team to track changes made to the Income Statement over time. This ensures that the latest version is always accessible and helps in maintaining an audit trail for any revisions or modifications made during the reporting process.
- Once the Income Statement is prepared, the finance team can use cloud-based communication channels, such as instant messaging or video conferencing, to discuss the document and address any queries or concerns. The team lead or finance manager can review the Income Statement, provide feedback, and approve the final version before submission.
- Cloud-based collaboration ensures that all team members have secure access to the Income Statement from their respective locations. User access controls and permissions can be managed to restrict access to authorized personnel only, maintaining data confidentiality and security.

3.3 Enterprise Resource Planning (ERP)

Enterprise resource planning (ERP) is a type of software that organizations use for managing day-to-day business activities like procurement, project management, accounting, risk management, compliance, and supply chain operations.

ERP systems connects and corelates a multitude of business processes and enable the flow of data between them. It collects an organization's shared transactional data from multiple sources and thus eliminate data duplication and provide data integrity with a single source of authentication.

Nowadays, ERP systems are used by many organisations as it is critical for managing thousands of businesses of varied sizes covering all industries. Cloud-based ERP applications are embedded with next-generation technologies, such as AI, machine learning (ML), and digital assistants.

ERP systems are designed around a single, defined data structure (schema) that typically has a common database. This helps to ensure that the information used across the enterprise is normalized and based on common definitions and user experiences. These core constructs are then interconnected with business processes driven by workflows across business departments (e.g. finance, human resources, engineering, marketing, and operations), connecting systems and the people who use them.

Since data is the lifeblood of every modern company, ERP makes it easier to collect, organize, analyze, and distribute this information to every individual and system that needs it to best fulfill their role and responsibility. ERP also ensures that these data fields and attributes roll up to the correct account in the company's general ledger so that all costs are properly tracked and represented.

A key ERP principle is the central collection of data for wide distribution. With a secure and centralized data repository, everyone in the organization can be confident that data is correct, up-to-date, and complete. Data integrity is assured for every task performed throughout the organization, from a quarterly financial statement to a single outstanding receivables report.

3.3.1 Benefits of ERP

It's impossible to ignore the impact of ERP in today's business world. As enterprise data and processes are caged into ERP systems, businesses can align separate departments and improve workflows, resulting in significant bottom-line savings. Examples of specific business benefits include:

1. Improved business insight from real-time information generated by reports
2. Less operational costs through streamlined business processes and best practices
3. Enhanced collaboration of users sharing data in contracts, requisitions, and purchase orders
4. Better efficiency through a common user experience across many business functions and well-defined business processes
5. Consistent infrastructure from the back office to the front office

Join us t.me/caborntofight

6. Increased user-adoption rates from a common user experience and design
7. Reduction in risk through improved data integrity and financial controls
8. Less management and operational costs through uniform and integrated systems

3.3.2 How does an ERP system work?

ERP systems work by using a defined, standard data structure. Information entered by one department is immediately available to authorized users across the business. This uniform structure helps keep everyone on the same page.

Real-time data is then woven into business processes and workflows across departments. Managers check if one location is doing significantly better than another site and can figure out why. Finance department can use ERP for comparison of sales, profits and other financial data to help executives in understanding the performance of the organisation and also for setting new targets.

ERP systems deliver the most value when a company has modules for each major business function and ensures timely and accurate data entry. When a company uses business systems from multiple vendors, integrations are generally possible to make data automatically flow into the ERP. This real-time data can then be used throughout the ERP instance to benefit any process or workflow.

3.3.3 Illustrative steps for integrating Internal Control Over Financial Reporting with an ERP

Integrating Internal Control over Financial Reporting (ICOFR) with an Enterprise Resource Planning (ERP) system offers the key advantage of streamlining financial processes, ensuring data integrity, and promoting effective internal controls. By automating and standardizing procedures, the ERP system reduces manual effort and minimizes the risk of errors. It enables segregation of duties, real-time visibility into financial data, comprehensive audit trails, enhanced reporting capabilities, and proactive risk mitigation. This integration strengthens financial control, accuracy, and compliance, ultimately enabling better decision-making and reducing the likelihood of fraud or errors.

The following are illustrative steps for integrating ICOFR within ERP:

1. Verify that the process includes identification and updating of internal and external financial reporting requirements and deadlines.

   The finance team regularly reviews the regulatory guidelines and reporting requirements set by the regulators and ensures that the ERP system's financial closing process is aligned with these requirements. Examples are listed companies to declare quarterly results as per LODR, filing of periodical returns under GST, Income Tax, Labour laws, etc.,

2. Review the documented process to ensure it aligns with the organization's financial reporting policies and regulatory guidelines.

   The finance team reviews the documented process in the ERP system and cross-checks it with the organization's financial reporting policies and regulatory guidelines to ensure consistency. Examples are accounting polices relating to Property plant and equipment, depreciation, Inventory etc.,

3. Use the ERP system's change management functionality to track and validate changes made to the financial closing and reporting process.

   When changes are made to the financial closing and reporting process, the finance team uses the ERP system's change management functionality to track and record these changes. They review system logs and audit trail for changes made to the financial closing and reporting process are as per defined roles and responsibilities for change control, including change initiators, approvers, and change management teams.

4. Verify that changes to the process are authorized by designated individuals with appropriate authority using system logs.

   The finance team reviews the system logs, audit trail and confirms that any changes to the financial closing and reporting process were authorized by designated individuals with the appropriate authority, such as the CFO or finance manager.

5. Review the change requests, approvals, and documentation within the ERP system to ensure proper authorization and validation of process changes.

6. Validate that roles and responsibilities in the financial closing and reporting process are clearly defined within the ERP system by reviewing users access matrix configurations and system logs.

   Review system logs and audit trail with Responsibility assignment matrix (RAM). RAM is a tool used in project management and enterprise resource planning (ERP) implementations to define and communicate the roles and responsibilities of individuals or teams involved in a project or process. The matrix clarifies who is responsible, accountable, consulted, and informed for each task or deliverable within the ERP implementation.

7. Assess the qualifications and training records of individuals assigned to financial reporting roles within the ERP system.

8. Validate that individuals responsible for financial reporting have the necessary understanding of the organization's operations and appropriate accounting knowledge.

   The finance team validates that individuals responsible for financial reporting within the ERP system have a comprehensive understanding of the organization's operations and possess

appropriate accounting knowledge. For example, verify HR records of those involved in accounting have appropriate knowledge.

9. Validate that decisions on alternative accounting treatments for significant events or transactions are documented and approved by management.

   Reviewing the Journal vouchers listing by identifying non routine transactions. Review the system of Standardizing voucher types. This involves defining a set of predefined templates or formats for different types of journal entries to ensure consistency and accuracy in recording financial data.

10. Review the ERP system for documentation of accounting treatment decisions, including approvals and communication to the audit committee.

    Documentation of accounting treatment decisions refers to the process of recording and maintaining comprehensive documentation regarding the rationale, analysis, and conclusions related to accounting treatments chosen for specific transactions or events like recognising long term construction projects.

11. Review the ERP system's user administration functionality to ensure appropriate individuals have access to the financial reporting process.

    Review system logs and audit trail with Responsibility assignment matrix (RAM).

12. Review whether proper KYC validation controls are in place for creating account masters and review the process for identifying related party transactions.

    Separate ledger coding for related parties for auto tabulating transactions to present as per Schedule III of Companies Act, 2013.

13. Validate that the ERP system captures and documents the appropriate accounting treatment for each non-routine event, transaction, and account balance by reviewing Journal Vouchers listing.

14. Use the ERP system's audit trail and reporting capabilities to validate that all postings have occurred in the correct accounting period reviewing accounting period configuration controls.

    In an ERP system, the accounting date and transaction date are captured and stored as part of the transactional data. They are used in various processes, such as journal entry creation, financial statement generation, period-end closing activities, and audit trails. Understanding the distinction between these dates is important for accurate financial reporting, compliance, and analysis of business transactions within the ERP system.

15. Review the system's controls for preventing backdating or unauthorized adjustments to postings by reviewing the posting date and transactions date of entries.

4. CYBERSECURITY IN ACCOUNTING

This section seeks to provide an overview of cybersecurity threats and risks and explores the impact of cybersecurity breaches on accounting firms and their clients which may range from accessing the financial data of the firm or client, to an extent of modifying the financial statements without the knowledge of the management. This section also discusses best practices for mitigating cybersecurity risks. This section seeks to provide an overview of cybersecurity threats and risks and explores the impact of cybersecurity breaches on accounting firms and their clients which may range from accessing the financial data of the firm or client, to an extent of modifying the financial statements without the knowledge of the management. Protecting financial information is crucial to prevent unauthorized access and data breaches. Legal and regulatory frameworks, like the Information Technology Act, 2000 (Amended in 2008), govern the collection, storage, and transmission of financial data. Non-compliance with data protection laws can lead to financial penalties and reputational damage. This section also discusses best practices for mitigating cybersecurity risks.

Organizations have legal and ethical obligations to disclose cybersecurity incidents with financial implications. Cybersecurity incidents can affect financial reporting through financial losses, reputational damage, and legal consequences. Reporting guidelines of various regulators such as SEBI, RBI etc., address the disclosure of cybersecurity incidents in financial statements.

Cybersecurity is a critical concern for accounting professionals, as sensitive financial data is often stored and transmitted digitally. With the increasing reliance on technology in accounting, the risk of cybersecurity threats and breaches has also increased. A cybersecurity breach can have significant consequences, including financial losses, reputational damage, and loss of sensitive client data. Some of the common cybersecurity threats are highlighted below. In all the cases, the aim of the attack would be either stealing sensitive financial data or disrupting operations or demand ransom money.

4.1 Common cybersecurity threats

(a) **Phishing attacks:** Phishing attacks are a common cybersecurity threat that involves tricking users into clicking on malicious links or providing sensitive information.

(b) **Malware attacks:** Malware attacks involve infecting computers or networks with malicious software that can steal data or disrupt operations.

(c) **Ransomware attacks:** Ransomware attacks involve encrypting files or locking users out of systems and demanding a ransom payment in exchange for restoring access.

(d) **Insider threats:** Insider threats involve malicious actions by employees or other insiders who have access to sensitive data.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

(e) **Denial of Service (DoS) attacks:** DoS attacks involve overwhelming a system or network with traffic to disrupt operations.

(f) **Supply chain attacks:** Supply chain attacks involve compromising third-party software or hardware to gain access to a system or network.

4.2 Proactive measures to mitigate cybersecurity risks

In view of the cybersecurity attacks and threats discussed above, it is important to taking proactive measures to mitigate cybersecurity risks as listed below:

(a) **Password management:** Strong passwords are critical for protecting sensitive financial data. Accounting professionals should ensure that all passwords are complex and changed regularly.

(b) **Encryption:** Encryption can be used to protect sensitive data during transmission and storage. The IT Team of an organization should ensure that all sensitive data is encrypted using appropriate methods.

(c) **Access control:** Access control is critical for preventing unauthorized access to financial data. Accounting professionals should ensure that access to sensitive data is limited to authorized personnel and that appropriate access controls are in place. The access controls should be continuously reviewed and updated based on any changes in the management or employee structure.

(d) **Network security:** Network security is critical for protecting financial data from cyberattacks. It should be ensured that firewalls and other security measures are in place to prevent unauthorized access to the network.

(e) **Employee training:** Employee training is critical for ensuring that all staff members are aware of the importance of cybersecurity and understand how to protect sensitive financial data.

(f) **Data backup:** Regular data backups are critical for ensuring that financial data is not lost in the event of a cyberattack. Accounting professionals should ensure that data backups are performed regularly and that backups are stored securely.

(g) **Incident response planning:** Accounting professionals should have a clear incident response plan in place in the event of a cyberattack. This plan should include procedures for detecting, containing, and mitigating the impact of a cyberattack.

Overall, cybersecurity is a critical concern for accounting professionals, and it is essential to take appropriate measures to protect sensitive financial data

5. THE FUTURE OF TECHNOLOGY IN ACCOUNTING

5.1 Blockchain

Blockchain technology is revolutionizing the financial landscape, and its impact on financial statement preparation is undeniable. As a Chartered Accountant involved in financial reporting, understanding blockchain is crucial for staying ahead in this rapidly evolving digital era. At its core, blockchain is a decentralized and transparent ledger that enables secure and immutable transactions. Unlike traditional centralized systems, blockchain offers a distributed network where information is shared and verified by multiple participants, eliminating the need for intermediaries and enhancing data integrity. From a financial statement preparation perspective, blockchain holds immense potential to streamline processes, enhance transparency, and improve the accuracy and reliability of financial reporting. By leveraging blockchain, financial professionals can ensure trustworthy and real-time financial information, revolutionizing how financial statements are prepared, audited, and shared with stakeholders. In this dynamic landscape, embracing blockchain technology is essential for Chartered Accountants to navigate the future of financial reporting effectively.

5.1.1 Key impacts of blockchain on financial reporting

1. **Enhanced Transparency**: Blockchain technology provides a decentralized and immutable ledger, where transactions are recorded and stored in a transparent and tamper-proof manner. This increased transparency ensures that financial data is accurately captured and can be easily audited, promoting trust and reliability in financial reporting.

2. **Improved Data Integrity**: Blockchain's distributed ledger ensures that each transaction is verified and encrypted, preventing unauthorized modifications or tampering. This feature enhances data integrity, reducing the risk of fraudulent activities and errors in financial reporting.

3. **Streamlined Audit Processes**: Blockchain technology enables real-time access to financial data, eliminating the need for time-consuming and manual data reconciliation processes. Auditors can directly access the blockchain ledger to verify transactions, reducing audit time and enhancing efficiency in financial reporting.

4. **Enhanced Security**: Blockchain incorporates advanced cryptographic algorithms, making it highly secure against unauthorized access or data breaches. Financial data stored on the blockchain is encrypted and protected, minimizing the risk of data manipulation or unauthorized disclosure, thus strengthening the security of financial reporting.

Join us t.me/caborntofight

Merged By CA - Born To Fight

5. **Simplified Reconciliation**: Blockchain's decentralized ledger eliminates the need for reconciling multiple versions of data across different systems. With a single shared source of truth, financial reporting processes become more streamlined, reducing reconciliation efforts and potential errors.

6. **Cost Reduction**: By eliminating intermediaries and central authorities, blockchain reduces the costs associated with traditional financial reporting processes. It eliminates the need for third-party verification and reconciliation, leading to cost savings for organizations.

7. **Enhanced Audit Trail**: Blockchain maintains a comprehensive and immutable audit trail of all transactions, providing a transparent and traceable record of financial activities. This audit trail simplifies the identification and investigation of any irregularities or discrepancies, improving the accuracy and reliability of financial reporting.

8. **Real-time Financial Reporting**: With blockchain's real-time data availability and consensus mechanism, financial reporting can be performed more frequently and with greater accuracy. Organizations can generate up-to-date financial statements, enabling stakeholders to make informed decisions based on the most current financial information.

Examples 3 – 5 : Using Blockchain

3. Imagine a finance professional working for a multinational corporation that engages in complex supply chain operations. With blockchain technology, the company can create a decentralized ledger that records every step of the supply chain process, from raw material sourcing to final product delivery. Each transaction is securely recorded on the blockchain, providing real-time visibility and transparency to all stakeholders involved. The finance professional can easily access the blockchain to verify the authenticity and accuracy of transactions, ensuring compliance with regulatory requirements and building trust with customers, investors, and auditors.

4. Consider a finance professional responsible for conducting an audit of a large e-commerce platform. Traditionally, audits involve manually reviewing numerous financial transactions and reconciling data from different sources, which can be time-consuming and prone to errors. However, with blockchain technology, the e-commerce platform can implement a blockchain-based payment system that automatically records and timestamps every transaction. During the audit process, the finance professional can access the blockchain ledger to instantly verify transaction details, reconcile data, and ensure compliance with accounting standards and regulatory guidelines. This streamlined approach improves audit efficiency, reduces the risk of human error, and enhances the accuracy of financial reporting.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

5. Imagine a finance professional working for a financial institution that handles sensitive customer data, such as personal information and transaction records. By utilizing blockchain technology, the institution can implement a secure and encrypted blockchain network to store and share customer data. The finance professional can ensure the integrity and security of the data by leveraging blockchain's cryptographic algorithms and consensus mechanisms. This eliminates the risk of unauthorized access, data tampering, or data loss. With blockchain, the finance professional can confidently handle customer data, knowing that it is protected by a robust and transparent system, enhancing data privacy, and maintaining the trust of customers and regulatory bodies.

5.2 Artificial Intelligence (AI)

AI refers to the simulation of human intelligence in machines, enabling them to perform tasks that would typically require human intervention. Apart from the aspects of automation, accuracy, fraud detection and cost savings, the most important feature is enabling predictive analytics. AI can be used to analyze large amounts of data and make predictions about future trends, which can be useful for forecasting financial performance and identifying potential risks. Thus, AI has the potential to transform the accounting profession by enabling accountants to provide more accurate and timely financial information to their clients.

While technology has transformed the accounting profession, it has also presented challenges such as the need for ongoing training and education, the risk of data breaches, and the potential loss of jobs due to automation. However, technology also presents opportunities for accountants to expand their skill sets, offer new services to clients, and automate routine activities thereby freeing up human resources for tasks requiring greater application of knowledge and skill sets.

This section seeks to provide an understanding of how AI and machine learning are transforming/disrupting the accounting profession. The chapter provides an introduction to AI and machine learning, explores their applications in accounting, and discusses the benefits and challenges associated with their adoption.

Artificial Intelligence (AI) and Machine Learning (ML) are technologies that enable computers to learn and perform tasks without being explicitly programmed to do so. AI and ML are having a significant impact on the accounting profession, enabling accounting professionals to automate routine tasks, improve decision-making processes, and reduce errors.

5.2.1 Benefits of AI and ML when used in accounting

1. **Automated Data Entry:** AI and ML algorithms can process and extract data from invoices, receipts, and other documents, reducing the need for manual data entry. If programmed, AI and ML algorithms can also review bank statements and pass entries in the system, followed

Merged By CA - Born To Fight

by a bank reconciliation, thereby automating the entire process, saving time and improving efficiency.

2. **Fraud Detection:** AI can help detect fraud by analysing large amounts of data and identifying patterns that may indicate fraudulent activity.

3. **Financial Forecasting:** ML can be used to develop predictive models that can forecast financial performance based on historical data, market trends, and other factors. The predictive models can be of particular advantage where estimates are required to be made in financial reporting. For instance, where a store sells goods and offers a voucher giving the customer a discount on subsequent purchases, Ind AS 115 requires a degree of estimation of the likelihood of availing such discount to record Revenue. Predictive models can track customers' preferences and likelihood of availing the voucher, in which case the estimation of revenue as required under Ind AS 115 becomes more realistic.

4. **Accounting Automation:** AI can analyse financial statements and other data to identify errors or inconsistencies, making accounting more efficient and accurate.

5. **Tax Compliance:** AI can help automate tax compliance by analysing financial data and identifying tax obligations, ensuring that businesses remain compliant with tax regulations.

5.2.2 Challenges with Artificial Intelligence

Along with the advantages of AI and ML, there are following potential challenges and risks associated with the adoption of AI and machine learning like:

1. data privacy
2. security concerns
3. technical complexity
4. need to train employees in an organization to extract capabilities of AI from the system

AI and ML technology is expected to continue transforming the accounting landscape, with the development of more advanced applications such as natural language processing and cognitive computing. However, the adoption of AI and ML in accounting will require careful consideration of its benefits and risks, as well as ongoing education and training for accounting professionals.

Emerging technologies are changing the accounting landscape and holds a future for accounting professionals.

Emerging technologies, such as artificial intelligence (AI), machine learning (ML), and Robotic Process Automation (RPA), have had a revolutionary impact on the accounting profession. These technologies have the potential to revolutionize the way accounting is done, by automating routine tasks, reducing errors, and providing real-time insights into business performance. For example,

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

AI and machine learning can be used to automate tasks such as data entry, account reconciliation, and financial analysis.

The potential benefits of these technologies for accounting professionals could include increased efficiency, accuracy, and cost savings. However, technology also comes with its own potential challenges and risks, such as the need for specialized skills and expertise, the risk of job displacement, and the need to maintain security and privacy.

Accounting professionals must be willing to adapt to these changes and develop new skills and competencies to stay relevant in the industry. The preceding sections emphasize the need for ongoing education and training to ensure that accounting professionals have the skills and knowledge required to leverage these emerging technologies.

The emergence of these technologies is likely to lead to significant changes in the industry, such as the need for new business models and the rise of new types of accounting services. As accounting professionals, it becomes imperative to understand new business models based on which accounting can be done to give a true and fair view of the affairs of the business. Accounting professionals who are willing to adapt to these changes and develop new skills and competencies will be better positioned to provide value-added services to their clients or organizations and maintain a competitive edge in the industry.

Illustrative examples on the use of Artificial Intelligence in Financial Reporting:

Examples: 6 – 9 : Using Artificial Intelligence in Financial Reporting

6. XYZ Company, a large multinational corporation, needs to prepare its financial statements according to Ind AS. The company has a vast amount of financial data stored in various formats, including spreadsheets, PDFs, and scanned documents. Manually extracting and analysing this data is time consuming and error prone. By implementing AI-driven optical character recognition (OCR) technology, the company automates the data extraction process from diverse sources and converts it into structured formats. This enables seamless analysis and financial reporting, reducing human effort and minimizing the risk of errors.

7. PQR Company, a financial institution, needs to comply with Ind AS requirements while monitoring and mitigating fraud risks. AI-powered algorithms can analyse large volumes of financial transactions, identify patterns, and detect potential anomalies indicative of fraudulent activities. By implementing machine learning techniques, the company can create predictive models that learn from historical data, enabling early detection of suspicious transactions and reducing the risk of financial fraud.

8. ABC Company, a manufacturing entity, wants to forecast its financial performance based on various scenarios to comply with Ind AS guidelines. AI can assist in generating accurate financial forecasts by analysing historical data, market trends, and relevant external factors.

Join us t.me/caborntofight

Merged By CA - Born To Fight

By leveraging machine learning algorithms, the company can simulate different scenarios, such as changes in market demand, input costs, or regulatory requirements. This helps management make informed decisions, assess potential risks, and develop robust financial strategies in accordance with Ind AS principles.

9. A to Z Company Ltd., a publicly listed entity, faces the challenge of timely financial reporting and compliance with Ind AS regulations. AI-powered tools can integrate with the company's financial systems and automatically extract relevant data in real-time. These tools apply data validation rules, perform calculations, and generate accurate financial reports. By leveraging natural language processing (NLP), AI systems can also assist in reviewing financial statements, identifying potential errors, and ensuring compliance with Ind AS requirements. This improves the accuracy, efficiency, and speed of financial reporting processes.

6. INDIAN ACCOUNTING STANDARDS (IND AS) AND INFORMATION TECHNOLOGY

Ind AS is predominantly a principle-based framework. Ind AS consists of specific principles for various accounting topics, such as revenue recognition, leasing, financial instruments, employee benefits, consolidation, and many more. These principles provide detailed guidance on how to account for transactions in accordance with the principles of measurement and recognition.

For implementation of Ind AS, the technology will play key role in automating the process of validating while generating the reports. However, the role of technology for such processing is directly related to the configuration at the Account level with rule-based validations. Configuration implements pre-defined validation rules within the system to identify discrepancies or non-compliance with Ind AS.

If the account level configuration is not done properly, then the next phase of using technology will be after generating the reports. In such scenario, the use of technology is about applications such as Microsoft Excel or Google Sheets which can be used to perform such validations from the Ind AS point of view and then generate the report. This is purely dependent on human intelligence rather than on technology, except for the cases where Artificial Intelligence is involved with proper training using machine learning.

Illustration 1

A listed company's financial transactions are carried out in ERP. Following financial reporting weaknesses were observed during internal control over financial reporting:

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

1. *There is no appropriate documented process with respect to financial closing and reporting, including the identification and updating of internal and external financial reporting requirements and deadlines.*
2. *Changes made to the financial closing and reporting process are not valid and properly authorised.*
3. *Roles and responsibilities in the financial closing and reporting process are not clearly defined, documented, updated, and not communicated to appropriate departments and individuals on a timely basis.*
4. *Individuals in financial reporting roles do not have the necessary understanding of the organisation's operations and appropriate accounting knowledge to properly perform their assigned responsibilities.*
5. *When alternative accounting treatments are available for a significant event or transaction, the decisions on which treatments to select are not documented, approved by management, and are not communicated to the audit committee.*
6. *General policies are not established and documented regarding permissible overrides of existing policies and procedures for the financial closing and reporting process.*
7. *User profiles (on General Ledger (G/L) system) are not monitored / maintained to ensure that appropriate individuals have access to financial reporting process.*
8. *The appropriate accounting treatment is not specified for each non-routine event, transaction, and account balance, including those requiring the use of accounting estimates and judgment in the selection and application of accounting principles.*
9. *Relevant, sufficient, and reliable data necessary to record, process, and report each non-routine event or transaction is not captured.*
10. *There are no procedures to ensure all postings have occurred in the correct period.*
11. *The application of the entity's accounting policies to each non-routine event or transaction is not performed on a timely basis and appropriately documented by knowledgeable and qualified personnel using approved methods and formats.*
12. *All non-routine events and transactions are not accurately processed in the appropriate accounting period.*
13. *There is no independent review of application of the entity's accounting policies to each non-routine event or transaction for appropriateness and absence of bias by an individual with the appropriate level of authority and experience.*

© The Institute of Chartered Accountants of India

Merged By CA - Born To Fight

14. There is no basis for significant estimates and judgments associated with each non-routine event or transaction.

15. No analysis is prepared accurately and consistently in accordance with the entity's defined financial closing process and in the appropriate accounting period.

16. All sources of information for routine and non-routine events and transactions are not identified and analysed.

17. There are no reconciliations for all significant accounts and no independent review of such reconciliation.

18. All intercompany transactions and balances are not identified, reconciled, and appropriately eliminated in consolidation in the appropriate accounting period.

19. All suspense accounts are not identified and monitored.

20. The trial balance(s) used to prepare the financial statements are not generated from the final general ledger(s).

21. All trial-balance accounts are not appropriately and consistently grouped for presentation in the financial statements for accounting periods presented.

22. There are no restrictions to access and to run transactions in the automated consolidation software which may compromise the integrity of financial data

23. All related-party events and transactions are not identified and authorised, appropriately accounted for, and disclosed in the appropriate accounting period.

24. There are no procedures to ensure all postings have occurred in the correct period.

25. Entries recorded directly to the financial statements are not valid.

Provide illustrative steps for Financial Closing and Reporting.

Solution

Following are the illustrative steps for Financial Closing and Reporting:

1. Verify that the process includes identification and updating of internal and external financial reporting requirements and deadlines.
2. Review the documented process to ensure it aligns with the organization's financial reporting policies and regulatory guidelines.
3. Use the ERP system's change management functionality to track and validate changes made to the financial closing and reporting process using system logs and audit trail.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

4. Verify that changes to the process are authorized by designated individuals with appropriate authority using system logs.

5. Review the change requests, approvals, and documentation within the ERP system to ensure proper authorization and validation of process changes.

6. Validate that roles and responsibilities in the financial closing and reporting process are clearly defined within the ERP system by reviewing users access matrix configurations and system logs

7. Assess the qualifications and training records of individuals assigned to financial reporting roles within the ERP system.

8. Validate that individuals responsible for financial reporting have the necessary understanding of the organization's operations and appropriate accounting knowledge.

9. Validate that decisions on alternative accounting treatments for significant events or transactions are documented and approved by management by reviewing the Journal vouchers listing.

10. Review the ERP system for documentation of accounting treatment decisions, including approvals and communication to the audit committee.

11. Review the ERP system's user administration functionality to ensure appropriate individuals have access to the financial reporting process.

12. Review whether proper KYC validation controls in place for creating account masters and review the process for identifying related party transactions.

13. Validate that the ERP system captures and documents the appropriate accounting treatment for each non-routine event, transaction, and account balance by reviewing Journal Vouchers listing.

14. Use the ERP system's audit trail and reporting capabilities to validate that all postings have occurred in the correct accounting period reviewing accounting period configuration controls.

15. Review the system's controls for preventing backdating or unauthorized adjustments to postings by reviewing the posting date and transactions date of entries.

*****

Illustration 2

Company XYZ is a manufacturing company that implements Ind AS 2 and wants your advice on utility of an ERP system for inventory management. They also aim to integrate ICOFR controls into their ERP system to ensure accurate inventory valuation, minimize the risk of inventory fraud,

Merged By CA - Born To Fight

and enhance process efficiency and accordingly they need your guidance in integrating ICOFR in ERP system.

Also, advice the steps to be followed if the company cannot afford a ERP system but still want to ensure proper implementation of Ind AS 2 to the extent possible.

Solution

A. ERP System for inventory management

ERP system integrates all relevant modules, such as inventory management, production, purchasing, and cost accounting. This ensures data consistency and reduces manual errors in recording and processing transactions. Following illustrative steps may be followed to configure and enable ERP with following modules:

- Maintain an updated and accurate Bill of Materials (BOM) Management within the ERP system, specifying the components required for each control unit. This allows the system to calculate the total cost of materials accurately by considering the quantities and costs of each component.
- Implement Purchase order controls within the ERP system to manage the procurement process effectively. This includes verifying purchase requisitions, obtaining appropriate approvals, and ensuring that the correct quantities and costs of materials are recorded.
- Define appropriate costing methods within the ERP system to allocate costs to inventory accurately. The ERP system should be configured to apply the chosen costing method consistently across all inventory transactions.
- Track labour costs within the ERP system by integrating with timekeeping or attendance systems. This ensures accurate recording of the number of hours worked by production workers and enables the calculation of labour costs based on the defined hourly rate.
- Define an overhead absorption rate within the ERP system to allocate production overheads to inventory. This rate should be based on the normal level of production per month. The ERP system should apply the overhead rate consistently to all units produced during the period.
- Integrate the ERP system with the general ledger and expense allocation modules to accurately allocate non-production expenses such as factory rent, energy costs, and selling and administrative costs. This ensures that these expenses are appropriately recorded and reflected in the cost of inventory.
- Perform periodic reconciliations between the inventory records within the ERP system and physical inventory counts. This helps identify any discrepancies and ensures the accuracy of inventory valuation.

© The Institute of Chartered Accountants of India
Join us t.me/caborntofight

- Utilise the reporting and analytics capabilities of the ERP system to generate accurate and timely reports on inventory costs. These reports should provide detailed breakdowns of material costs, labour costs, overheads, and any other relevant cost components.

Integration of ICOFR in ERP system:

The management of company XYZ may integrate ICOFR controls in ERP system by using following points:

1. The integration of ICOFR into ERP system is configured to enforce segregation of duties within the inventory management process. For example, the system restricts the ability to initiate purchase orders, receive goods, and update inventory records to separate individuals. This segregation ensures that no single employee has the ability to manipulate inventory quantities or values without appropriate checks and balances.

2. ICOFR is incorporated by implementing access controls in the ERP system. Users are granted access to inventory-related functions based on their roles and responsibilities. For instance, only authorized personnel can modify inventory master data, update cost information, or perform inventory counts. This prevents unauthorized access and reduces the risk of data manipulation or theft.

3. To ensure proper authorization, the ERP system includes workflow approval processes for inventory transactions. For example, when a purchase requisition is raised, the system automatically routes it through predefined approval hierarchies based on transaction value or other criteria. This ensures that inventory purchases are authorized by the appropriate individuals before they are processed.

4. The company utilizes barcode or radio-frequency identification (RFID) technology to enhance inventory control and accuracy. The ERP system is integrated with barcode scanners or RFID readers, allowing real-time tracking of inventory movements. This reduces manual data entry errors and provides accurate and up-to-date inventory information within the system.

5. ICOFR requires periodic physical inventory counts to verify the accuracy of recorded inventory quantities. The ERP system supports this process by generating inventory count sheets or reports based on predefined criteria such as product categories or locations. The system can also reconcile the physical count results with the recorded quantities, highlighting any discrepancies for further investigation and adjustment.

6. Technology-driven data analytics tools can be integrated into the ERP system to identify inventory-related exceptions or anomalies. For example, the system can analyse inventory turnover ratios, slow-moving or obsolete items, or abnormal inventory cost fluctuations. These analytics help in detecting potential control weaknesses or irregularities, enabling timely action by management.

Join us t.me/caborntofight

Merged By CA - Born To Fight

7. The ERP system can provide management dashboards or customized reports that display key inventory control indicators. These dashboards summarize information such as inventory turnover, stock levels, and valuation accuracy. They facilitate monitoring and decision-making, enabling management to assess the effectiveness of ICOFR controls and take corrective actions if needed.

B. Inventory management in the absence of efficient ERP system

In the absence of ERP system or in the absence of properly configured ERP system, the alternative procedure available is by exporting the data to a spreadsheet and perform the following steps:

1. Export the relevant data from the accounting package, including information such as quantities, costs, labour hours, and overhead expenses into a spreadsheet. Ensure that the exported data contains all the necessary details to calculate the inventory costs accurately.
2. Organize the exported data in appropriate columns. Label each column with the corresponding data, such as item codes, quantities, costs, labour hours, and overhead expenses.
3. Use the formulas to calculate the material costs for each item. Multiply the quantities of each component by their respective costs. If there are multiple components, sum up the costs of all components to get the total material cost for each item.
4. Use the formulas to calculate the labour costs for each item. Multiply the labour hours for each item by the defined hourly rate to obtain the labour cost.
5. Determine the overhead absorption rate based on the normal level of production per month. Multiply the rate by the total labour hours to calculate the total overhead cost. Divide the overhead cost by the total quantity of items produced to get the overhead cost per item.
6. If there are non-production expenses such as rent, energy costs, or administrative costs, allocate them to each item using an appropriate method. This can be based on quantities, labour hours, or other relevant factors. Apply formulas to distribute the expenses accordingly.
7. Sum up the material costs, labour costs, overhead costs, and allocated non-production expenses for each item to obtain the total inventory cost.
8. If you have physical inventory counts, compare the calculated inventory costs in spreadsheet with the physical counts. Identify any discrepancies and investigate the causes. Adjust the inventory costs as necessary to reconcile them with the physical counts.
9. Create reports in spreadsheet that provide a breakdown of the inventory costs for each item. Include material costs, labour costs, overhead costs, and allocated non-production expenses. Use formatting and charts to present the information clearly.

*****

Illustration 3

Company Z is engaged in the business of importing oil seeds for further processing as well as trading purposes. It enters into the following types of contracts as on 1st October 20X1:

Particulars	**Contract 1**	**Contract 2**	**Contract 3**
Nature of Contract	*Import of oil seeds from a foreign supplier*	*Purchase of oil seeds from a domestic producer / supplier*	*Contract to sell oil seeds on the commodity exchange*
Quantity and rate	*100 MT at USD 400 per MT to be delivered as on 31st March 20X2*	*50 MT at ` 30,000 per MT to be delivered as on 31st January 20X2*	*50 MT at USD 450 per MT, maturing as on 15th January 20X2*
Net settlement clause included in the contract	*Yes*	*Yes*	*Yes*
Net settlement in practice for similar contracts	*There have also been several instances of the oil seeds being sold prior to or shortly after taking delivery.* *These instances of net settlement constitute approximately 30 per cent of the value of total import contracts.*	*Yes – company Z has net settled some of the domestic purchase contracts.* *However, these instances constitute only 1 per cent of the total domestic purchase contracts in value.* *The remaining contracts are settled by taking delivery of oil seeds which are used for further processing.*	*Yes – these contracts are required to be net settled with the exchange on the maturity date.* *Company Z enters into these types of derivative contracts to hedge the risks on its domestic oil seeds purchase contracts*

Company Z wants to determine if the contracts entered into for purchase and sale of oil seeds are derivatives within the scope of Ind AS 109 or are executory contracts outside the scope of Ind AS 109. Though the Company Z is using an ERP accounting package it is not properly configured to provide the required reports for above said decision making. Therefore, Company Z requires your

advice on whether such process of determining the nature of contracts is possible through use of external sources of technology.

Solution

Yes, it is possible by extracting the data from the accounting package or by connecting to the database of the accounting package.

For example, the same can be done by connecting the spreadsheet with database through ODBC connectivity or by extracting the data from accounting package into a spreadsheet. In case the data is being extracted from accounting package, the following steps may be followed:

1. Identify the relevant data fields in the accounting package that contain the contract information, such as contract particulars, quantities, rates, and settlement details.
2. Export the required data from the accounting package in a compatible format (e.g., CSV, Excel, or other supported formats).
3. Open the exported data in Microsoft Excel.
4. Clean the data by removing any unnecessary or irrelevant columns and rows.
5. Ensure that the data is properly formatted and aligned for further analysis.
6. Define the rules or criteria for categorizing the contracts as derivative or executory based on the requirements of Ind AS 109.
7. Establish conditions using Excel formulas or logical functions to evaluate the contract data.
8. Apply the defined rules or criteria to the contract data using Excel formulas or logical functions.
9. Use functions such as IF, AND, OR, or VLOOKUP to evaluate the conditions and determine the nature of each contract.
10. Create additional columns in Excel to categorize the contracts based on the analysis results.
11. Assign appropriate labels or values to indicate whether a contract is a derivative or an executory contract.

*****

Illustration 4

An entity provides broadband services to its customers along with voice call service. Customer buys modem from the entity. However, customer can also get the connection from the entity and modem from any other vendor. The installation activity requires limited effort and the cost involved

is almost insignificant. It has various plans where it provides either broadband services or voice call services or both.

Comment on how to identify whether the performance obligations under the contract is distinct by using an automated process?

Solution

To identify the performance obligations under the contract and determine if they are distinct, an automated process can be implemented using technology. The following steps can be taken:

a. Analyze the clauses in the contract related to the services provided (broadband services, voice call services, modem sales).

b. Each clause should be codified using appropriate parameters or tags to capture the relevant information.

c. Assign Boolean values (0 or 1) to each parameter or tag in the codified clauses.

d. Use "0" to represent "No" and "1" to represent "Yes" for each parameter.

e. Define the criteria for evaluating the performance obligations based on the parameters and their Boolean values.

f. Consider factors such as the type of service involved, benefits derived by the customer, and promises made in the contract regarding the transfer of goods or services.

g. Develop an automated algorithm or script that evaluates the Boolean values of the parameters according to the defined criteria.

h. Calculate scores or weights for each parameter based on their significance in determining performance obligations.

i. Utilize the scores or weights assigned to the parameters to determine if the performance obligations are distinct.

j. If the total score exceeds a certain threshold, consider it a separate performance obligation.

The automated process should flag and identify these distinct performance obligations based on the evaluation results.

Questions

1. T Ltd is engaged in transport sector, running a fleet of buses at different routes. T Ltd has identified 3 operating segments:

- Segment 1: Local Route
- Segment 2: Inter-city Route
- Segment 3: Contract Hiring

The characteristics of each segment are as under:

Segment 1: The local transport authority awards the contract to ply the buses at different routes for passengers. These contracts are awarded following a competitive tender process; the ticket price paid by passengers are controlled by the local transport authority. T Ltd would charge the local transport authority on a per kilometer basis.

Segment 2: T Ltd operates buses from one city to another, prices are set by T Ltd on the basis of services provided (Deluxe, Luxury or Superior).

Segment 3: T Ltd also leases buses to schools under a long-term arrangement.

While Segment 1 has been showing significant decline in profitability, Segment 2 is performing well in respect of higher revenues and improved margins. The management of the company is not sure why is the segment information relevant for users when they should only be concerned about the returns from overall business. They would like to aggregate the Segment 1 and Segment 2 for reporting under 'Operating Segment'.

Required

What are the steps involved to automate the process to determine whether it is appropriate to aggregate Segments 1 and 2 with reference to Ind AS 108 'Operating Segments'?

2. New Way Ltd. decides to enter a new market that is currently experiencing economic difficulty and expects that in future the economy will improve. New Way Ltd. enters into an arrangement with a customer in the new region for networking products for promised consideration of ` 12,50,000.

At contract inception, New Way Ltd. wants to

(i) Define criteria for identifying contracts with customers, such as enforceable rights and obligations, agreement terms, and consideration.

(ii) Establish rules to link relevant transactions to specific contracts and assign unique identifiers to each contract

Required

Advice the steps to automate the process to perform the above tasks on behalf of New Way Ltd.

Answers

1. Following steps should be followed to automate the process to determine whether it is appropriate to aggregate Segments 1 and 2 with reference to Ind AS 108 'Operating Segments':

1. Extract the relevant financial data related to Segments 1 and 2 from your accounting system.
2. Ensure that the data includes segment-specific information such as revenue, expenses, assets, liabilities, and any other relevant metrics.
3. Define the criteria for evaluating whether the segments should be aggregated.
4. Consider factors such as the nature of the business activities, economic characteristics, customer base, pricing policies, and risks and returns associated with each segment.
5. Utilize automated analysis tools or software capable of processing large volumes of financial data.
6. Apply predefined algorithms or rules to evaluate the financial performance and characteristics of Segments 1 and 2 based on the defined criteria.
7. Conduct a comparative analysis of the financial metrics and performance indicators between Segments 1 and 2.
8. Based on the analysis and findings, evaluate whether it is appropriate to aggregate Segments 1 and 2.
9. Document the rationale behind the decision, including the analysis results and supporting evidence.
10. Use tools such as business intelligence software, data visualization platforms, or custom-built reporting modules to present the aggregated and segmented data in a meaningful way.

2. A contract management system may be implemented which allows to store and organize contract documents electronically. This system can help you define and capture key contract details, such as enforceable rights and obligations, agreement terms, and consideration.

Join us t.me/caborntofight

Accordingly, the said contract management system shall be enabled to configure a mechanism to assign unique identifiers to each contract.

- Integrate the contract management system or accounting software with other operational systems, such as sales, CRM, or project management systems. This integration allows for the automatic capture and synchronization of contract-related data, ensuring that transactions associated with specific contracts are accurately linked.
- Assign specific tags or attributes to contracts based on the defined criteria, such as contract type, customer name, contract start and end dates, or specific service offerings, to enable efficient searching, filtering, and grouping of contracts based on various criteria.
- Use custom queries or predefined templates to extract information on the number of contracts identified, their characteristics, and the associated transactions. This provides visibility into the implementation of Ind AS 115 and helps to monitor compliance.

In addition to the above, the following may be adopted:

- Consider utilizing OCR technology to extract relevant information automatically. OCR can convert printed or handwritten text into machine-readable format, enabling efficient extraction of contract details for further processing and analysis.
- Apply machine learning and Neuro-Linguistic Programming (NLP) techniques to analyze and extract contract data automatically. These technologies can help identify specific contract terms, clauses, or obligations, aiding in the accurate identification and classification of contracts based on predefined criteria.
- Utilize workflow automation tools to streamline the contract identification process. Establish predefined rules or triggers within your system that automatically identify new contracts based on specific criteria and assign unique identifiers. This automation reduces manual effort and ensures consistency in contract identification.
