Onnortunitu	• To lend money to others, we sacrifice the return on
Cost	investing that money somewhere else
Inflation	• <i>Time Factor: Due to inflation a given amount of money</i>
Timiliu	buys fewer goods in the future than it will now
Liquiaity Preference	 After lending, money is not available for immediate use
Risk Factor	 Due to inflation a given amount of money buys fewer goods in the future than it will now
	Inflation Liquidity Preference

	Interest	<i>Interest is the price paid by a borrower for the use of a <i>lender's</i> money.</i>
	Principal	Principal is initial value of lending (or borrowing).
	Rate of	The rate at which the interest is charged for a defined
Basic Terms	Interest	length of time for use of principal generally on a yearly
		basis is known to be the rate of interest.
	Accumulated	Accumulated amount is the <i>final value</i> of an investment.
	Balance	It is the sum total of principal and interest earned.

Simple Interest				
Concept	 Simple interest is the interest computed on the principal for the entire period of borrowing. It is calculated on the principal amount only and not on interest previously earned. Value of Interest remains constant for each year 			
Formula of Simple Interest	$SI = \frac{P.r.t}{100}$ where, P = principal value, r = rate of interest per annum, t = time in years			
Formula of Amount as per Simple Interest	$A = P + SI$ $A = P + \frac{P.r.t}{100} = P(1 + \frac{rt}{100})$

Compound Interest					
Basics	 We can define the compound interest as the interest that accrues when earnings for each specified period are added to the principal. In CI, after every conversion period we increase the principal base on which subsequent interest is computed. 				
	Conversion Period: Period for which interest is conConversionDescriptionPeriod		omputed Number of Conversion Period in a year		
	1 day	Compounded Daily	365		
Conversion Period	1 month	1 month Compounded Monthly			
	3 months	Compounded Quarterly	4		
	6 months	Compounded Semi	2		
		Annually			
	12 months	Compounded Annually	1		

	$A = P(1+i)^n$		
Formula for Amount	where,		
as per Compound	<i>P</i> = <i>Initial Principal, i</i> = <i>adjusted interest rate, n</i> = <i>no. of periods</i>		
Interest	$i = \frac{r\%}{nocppy}, n = t \times noccpy$		
	CI = A - P		
T 1 ($CI = P(1+i)^n - P$		
Formula for	$CI = P[(1+i)^n - 1]$		
Compound Interest	where,		
	P = initial principal, i = adjusted interest rate, n = no. of periods		
Trick for Amount as	P + i % + i % +n times		
per Compound Interest	Suitable when value of n is small		
	Equivalent annual rate of interest compounded annually if interest is		
Effective Rate of	compounded more than once a year. Effective rate is not dependent on		
Interest	Principal.		
	$E = [(1+i)^n - 1]$		
CI Concept in	$A = P(1-i)^n$		
WDV Depreciation	where, <i>P</i> = Historical Cost of Asset, <i>A</i> = Scrap Value/ Residual value of		
	asset, $n = no.$ of periods, $i = Depreciation \%$

Types of Cashflows					
Single Cashflow	If single amount is paid or received initially and then direct finally at the end				
Annuity	Annuity can be defined as a sequence of constant periodic payments (or receipts) regularly over a specified period.				
Types of Annuities		First payment/receipt at the end of the period First payment/receipt at the beginning of the period			

Future Value					
Future Value – Single Cashflow	 Future value is the cash value of an investment at some time in the future. It is tomorrow's value of today's money compounded at the rate of interest. 				
Formula for FV of Single Cashflow	$FV = CF(1+i)^n$ where, CF = single cashflow for which FV is to be calculated, i = adjusted interest rate, n = no. of periods				
FV of Annuity Regular	• To calculate <i>final maturity value</i> of an investment like RD where sum is invested in the annuity pattern starting at the end of each period.				

	 To calculate the final value of Sinking Fund or Savings amount to achieve the target maturity value. 				
Formula for Future Value - Annuity Regular $FVAR = A_i \times FVAF(n,i)$ $FVAR = A_i \times \left\{ \frac{[(1+i)^n - 1]}{i} \right\}$ where, FVAR = Future Value of Annuity Regular, A_i = Annuity 					
FV of Annuity Due	 To calculate final maturity value of an investment like RD where sum is invested in the annuity pattern at the beginning of each period To calculate final maturity value of an investment like RD where sum is invested in the annuity pattern at the beginning of each period 				
FVAD = $A_i \times FVAF(n,i) \times (1+i)$ Formula for FutureValue - Annuity Duewhere, FVAD = Future Value of Annuity Due, A_i = Annuity V(Installment), FVAF = Future Value Annuity Factor, i = adjusinterest rate, n = no. of periods					
Sinking Fund	 It is the <i>fund credited</i> for a specified purpose by way of sequence of periodic payments over a time-period at a specified interest rate. Interest is compounded at the end of every period. Size of the sinking fund deposit is same as Future Value of Annuity 				
Compounding and Discounting	Compounding (Adding the interest) $\times (1+i)^n$ Discounting (Removing the interest) $\times \frac{1}{(1+i)^n}$				

Present Value

Present Value of	 Present value is today's value of tomorrow's money 			
Single Cashflow	<i>discounted</i> at the interest rate			
Formula for PV of Single Cashflow	$PV = \frac{CF}{(1+i)^n}$ where, CF = Single Cashflow for which PV is to be calculated, <i>i</i> = adjusted interest rate, <i>n</i> = no. of periods			
Present Value – Annuity Regular	Use: To calculate loan amount when periodic installments value are given and vice versa.Application: Leasing, Capital Expenditure etc.			
Formula for PV of Annuity Regular	$PVAR = A_i \times PVAF(n, i)$ $PVAR = A_i \times \left[\frac{1}{i} \times \left\{1 - \frac{1}{(1+i)^n}\right\}\right]$ where, PVAR = Present Value of Annuity Regular, A _i = Annuity Value (Installment), PVAF = Present Value Annuity Factor, <i>i</i> = adjusted interest rate, <i>n</i> = no. of periods			
Calculator Trick for PVAF	$1+i \div = =n - times GT$			
Formula for Present Value of Annuity Due	$PVAD = \left[A_i \times PVAF\left\{(n-1), i\right\}\right] + A_i$
