### Basics

<b>Reasons to pay/ receive Interest</b>	Opportunity Cost	▪ To lend money to others, we sacrifice the return on investing that money somewhere else
	Inflation	▪ Time Factor: Due to inflation a given amount of money buys fewer goods in the future than it will now
	Liquidity Preference	▪ After lending, money is not available for immediate use
	Risk Factor	▪ Due to inflation a given amount of money buys fewer goods in the future than it will now

<b>Basic Terms</b>	<b>Interest</b>	Interest is the <b>price paid</b> by a borrower for the <b>use of a lender's money</b> .
	<b>Principal</b>	Principal is initial value of <b>lending (or borrowing)</b> .
	<b>Rate of Interest</b>	The rate at which the interest is charged for a defined length of time for use of principal generally on a <b>yearly basis</b> is known to be the rate of interest.
	<b>Accumulated Balance</b>	Accumulated amount is the <b>final value</b> of an investment. It is the <b>sum total</b> of principal and interest earned.

### Simple Interest

<b>Concept</b>	<ul style="list-style-type: none"> <li>Simple interest is the interest computed on the principal for <b>the entire period</b> of borrowing.</li> <li>It is calculated on the <b>principal amount only</b> and not on interest previously earned.</li> <li>Value of Interest <b>remains constant</b> for each year</li> </ul>
<b>Formula of Simple Interest</b>	$SI = \frac{P.r.t}{100}$ <p>where, P = principal value, r = rate of interest per annum, t = time in years</p>
<b>Formula of Amount as per Simple Interest</b>	$A = P + SI$ $A = P + \frac{P.r.t}{100} = P\left(1 + \frac{rt}{100}\right)$

#### ICAI SM

- (8) Simple interest on ₹ 3500 for 3 years at 12% per annum is
- |    |        |    |        |
|----|--------|----|--------|
| a. | ₹ 1200 | b. | ₹ 1260 |
| c. | ₹ 2260 | d. | ₹ 2000 |

#### ICAI SM

- (9) The sum required to earn a monthly interest of Rs 1200 at 18% per annum Simple Interest is
- |    |          |    |               |
|----|----------|----|---------------|
| a. | ₹ 50,000 | b. | ₹ 60,000      |
| c. | ₹ 80,000 | d. | none of these |

#### MTP Nov 18

- (10) What principal will amount to ₹ 370 in 6 years at 8% p.a. at simple interest
- |    |       |    |       |
|----|-------|----|-------|
| a. | ₹ 210 | b. | ₹ 250 |
| c. | ₹ 310 | d. | ₹ 310 |

#### MTP May 19

- (11) A certain money doubles itself in 10 years when deposited on simple interest. It would triple itself in
- |    |          |    |          |
|----|----------|----|----------|
| a. | 30 years | b. | 20 years |
| c. | 25 years | d. | 15 years |

## ICAI SM

- (12) A sum of money amounts to ₹6,200 in 2 years and ₹7,400 in 3 years. The principal and rate of interest are
- |    |             |    |           |
|----|-------------|----|-----------|
| a. | 3800, 3.57% | b. | 3000, 20% |
| c. | 3500, 15%   | d. | None      |

## MTP May 20

- (13) A sum of ₹ 46,875 was lent out at simple interest and at the end of 1 year 8 months the total amount was ₹ 50,000. Find the rate of interest percent per annum.
- |    |    |    |    |
|----|----|----|----|
| a. | 5% | b. | 6% |
| c. | 4% | d. | 8% |

## PYQ June 22

- (14) In how much time a sum of amount doubles at simple interest at 12.5% rate?
- |    |         |    |          |
|----|---------|----|----------|
| a. | 7 years | b. | 8 years  |
| c. | 9 years | d. | 10 years |

## MTP Apr 21

- (15) Two equal sums were lent out at 7% and 5% simple interest respectively. The interest earned on the two loans adds up to ₹ 960 for four years. Find the total sum lent out.
- |    |        |    |        |
|----|--------|----|--------|
| a. | ₹ 4000 | b. | ₹ 3000 |
| c. | ₹ 5000 | d. | ₹ 6000 |

## MTP Oct 21

- (16) A sum of money gets doubled in 5 years at X% simple interest. If the interest was Y%, the sum of money would have become ten-fold in thirty years. What is Y – X (in %)
- |    |    |    |               |
|----|----|----|---------------|
| a. | 10 | b. | 5             |
| c. | 8  | d. | none of these |

## PYQ June 19

- (17) In simple interest if the principal is ₹ 2,000 and the rate and time are the roots of the equation  $x^2 - 11x + 30 = 0$  then simple interest is
- |    |       |    |       |
|----|-------|----|-------|
| a. | ₹ 500 | b. | ₹ 600 |
| c. | ₹ 700 | d. | ₹ 800 |

## PYQ Nov. 20

- (18) What sum of money will produce ₹ 42,800 as an interest in 3 years and 3 months at 2.5% p.a. simple interest?
- |    |            |    |            |
|----|------------|----|------------|
| a. | ₹ 3,78,000 | b. | ₹ 5,26,769 |
| c. | ₹ 4,22,000 | d. | ₹ 2,24,000 |

## PYQ Dec. 21

- (19) Rahul invested ₹ 70,000 in a bank at the rate of 6.5% p.a. simple interest rate. He received ₹ 85,925 after the end of term. Find out the period for which sum was invested by Rahul.
- |    |           |    |           |
|----|-----------|----|-----------|
| a. | 2 years   | b. | 3 years   |
| c. | 3.5 years | d. | 2.5 years |

MTP Nov 18

- (20) The simple interest of P % for P years will be ₹ P on a sum of :
- a. ₹  $p / 100$
- b. ₹  $\frac{100}{p}$
- c. ₹  $\left( \frac{p}{100} + 1 \right)$
- d. ₹  $\left( \frac{100}{p} - 1 \right)$

MTP March 22

- (21) How much time would the simple interest on a certain sum be 0.125 times the principal at 10% per annum
- a.  $1\frac{1}{4}$  years
- b.  $1\frac{3}{4}$  years
- c.  $2\frac{1}{4}$  years
- d.  $2\frac{3}{4}$  years

MTP Dec 22 – Series I

- (22) An investor is saving to pay off an obligation of ₹ 15,250 which will due in seven years, if the investor is earning 7.5% simple interest rate per annum, he must deposit ₹ \_\_\_\_\_ to meet the obligation.
- a. ₹ 8000
- b. ₹ 9000
- c. ₹ 10000
- d. ₹ 11000

MTP Jun 23 Series I

- (23) ₹ 80,000 is invested to earn a monthly interest of ₹ 1200 at the rate of \_\_\_\_\_ p.a. Simple interest.
- a. 12%
- b. 14%
- c. 16%
- d. 18%

### Compound Interest

<b>Basics</b>	<ul style="list-style-type: none"> <li>We can define the compound interest as the interest <b>that accrues</b> when earnings for each specified period <b>are added to the principal</b>.</li> <li>In CI, after every conversion period we increase the <b>principal base</b> on which <b>subsequent interest</b> is computed.</li> </ul>																				
<b>Conversion Period</b>	<p><b>Conversion Period:</b> Period for which interest is computed</p> <table border="1"> <thead> <tr> <th>Conversion Period</th> <th>Description</th> <th>Number of Conversion Period in a year</th> </tr> </thead> <tbody> <tr> <td>1 day</td> <td>Compounded Daily</td> <td>365</td> </tr> <tr> <td>1 month</td> <td>Compounded Monthly</td> <td>12</td> </tr> <tr> <td>3 months</td> <td>Compounded Quarterly</td> <td>4</td> </tr> <tr> <td>6 months</td> <td>Compounded Semi Annually</td> <td>2</td> </tr> <tr> <td>12 months</td> <td>Compounded Annually</td> <td>1</td> </tr> </tbody> </table>			Conversion Period	Description	Number of Conversion Period in a year	1 day	Compounded Daily	365	1 month	Compounded Monthly	12	3 months	Compounded Quarterly	4	6 months	Compounded Semi Annually	2	12 months	Compounded Annually	1
Conversion Period	Description	Number of Conversion Period in a year																			
1 day	Compounded Daily	365																			
1 month	Compounded Monthly	12																			
3 months	Compounded Quarterly	4																			
6 months	Compounded Semi Annually	2																			
12 months	Compounded Annually	1																			

<b>Formula for Amount as per Compound Interest</b>	$A = P(1+i)^n$ <p>where,  <math>P = \text{Initial Principal, } i = \text{adjusted interest rate, } n = \text{no. of periods}</math></p> $i = \frac{r\%}{\text{nocppy}}, \quad n = t \times \text{nocppy}$
<b>Formula for Compound Interest</b>	$CI = A - P$ $CI = P(1+i)^n - P$ $CI = P[(1+i)^n - 1]$ <p>where,  <math>P = \text{initial principal, } i = \text{adjusted interest rate, } n = \text{no. of periods}</math></p>
<b>Trick for Amount as per Compound Interest</b>	$P + i\% + i\% + \dots n \text{ times}$ <p>Suitable when value of <math>n</math> is small</p>
<b>Effective Rate of Interest</b>	<p>Equivalent <b>annual rate</b> of interest compounded annually if interest is compounded <b>more than once a year</b>. Effective rate is not dependent on Principal.</p> $E = [(1+i)^n - 1]$
<b>CI Concept in WDV Depreciation</b>	$A = P(1-i)^n$ <p>where, <math>P = \text{Historical Cost of Asset, } A = \text{Scrap Value/ Residual value of asset, } n = \text{no. of periods, } i = \text{Depreciation \%}</math></p>

		<b>ICAI SM</b>	
<b>(24)</b>	₹2000 is invested at annual rate of interest of 10%. What is the amount after two years if compounding is done (a) Annually (b) Semi-annually (c) Quarterly (d) Monthly		
a.	2420, 2605, 2436.8, 2440.58		
b.	2200, 2605, 2183.7, 2366.48		
c.	2420, 2431, 2436.8, 2440.58		
d.	2420, 2431, 2436.8, 2496.68		
		<b>PYQ Nov. 18</b>	
<b>(25)</b>	A man deposited ₹ 8,000 in a bank for 3 years at 5% per annum compound interest, after 3 years he will get		
a.	₹ 8,800	b.	₹ 9,261
c.	₹ 9,200	d.	₹ 9,000
		<b>PYQ Nov. 18</b>	
<b>(26)</b>	How much will ₹ 25,000 amount to in 2 years at compound interest if the rates for the successive years are 4% and 5% per year		
a.	₹ 27,300	b.	₹ 27,000
c.	₹ 27,500	d.	₹ 27,900

PYQ Nov. 18

(27) If ₹ 10,000 is invested at 8% per year compounded quarterly, then the value of the investment after 2 years is:

(Given  $(1+0.02)^8 = 1.171659$ )

- |    |             |    |               |
|----|-------------|----|---------------|
| a. | ₹ 11,716.59 | b. | ₹ 10,716.59   |
| c. | ₹ 117.1659  | d. | None of these |

PYQ Nov. 20

(28) Find the compound interest if an amount of ₹ 50,000 is deposited in bank for one year at the rate of 8% per annum compounded semi-annually.

- |    |         |    |         |
|----|---------|----|---------|
| a. | ₹ 3,080 | b. | ₹ 4,080 |
| c. | ₹ 5,456 | d. | ₹ 7,856 |

PYQ Nov. 20

(29) On what sum will the compound interest at 5% per annum for 2 years compounded annually be ₹ 3,280.

- |    |          |    |          |
|----|----------|----|----------|
| a. | ₹ 32,000 | b. | ₹ 16,000 |
| c. | ₹ 48,000 | d. | ₹ 64,000 |

PYQ Nov. 18

(30) The effective rate of interest for one year deposit corresponding to a nominal 7% rate of interest per annum convertible quarterly is

- |    |      |    |       |
|----|------|----|-------|
| a. | 7%   | b. | 7.5%  |
| c. | 7.4% | d. | 7.18% |

PYQ Nov. 20

(31) An amount is lent at a nominal rate of 4.5% per annum compounded quarterly. What would be the gain in rupees over when compounded annually?

- |    |       |    |      |
|----|-------|----|------|
| a. | 0.56  | b. | 0.45 |
| c. | 0.076 | d. | 0.85 |

PYQ Nov. 19

(32) Scrap value of a machine valued at ₹ 10,00,000, after 10 years within depreciation at 10% p.a.:

- |    |               |    |               |
|----|---------------|----|---------------|
| a. | ₹ 3,48,678.44 | b. | ₹ 3,84,679.45 |
| c. | ₹ 4,00,000    | d. | ₹ 3,00,000    |

PYQ Jan. 21

(33) The population of a town increase by 2% of the population at the beginning of the year. The number of year by which the total increases in population would be 40% is:

- |    |                    |
|----|--------------------|
| a. | 7 years            |
| b. | 10 years           |
| c. | 17 years           |
| d. | 19 years (approx.) |

PYQ Dec 22

(34) A sum of money invested of compound interest double itself in four years. In how many years it become 32 times of itself at the same rate of compound interest?

- |    |          |    |          |
|----|----------|----|----------|
| a. | 12 years | b. | 16 years |
| c. | 20 years | d. | 24 years |

PYQ Jun 23

- (35) The difference between compound interest and simple interest on a certain sum of money invested for 3 years at 6% per annum is ₹ 110.16. The principal is
- |    |          |    |          |
|----|----------|----|----------|
| a. | ₹ 3,000  | b. | ₹ 3,700  |
| c. | ₹ 12,000 | d. | ₹ 10,000 |

PYQ May 18

- (36) If an amount is kept at S.I. it earns an interest of ₹ 600 in first two years but when kept at compound interest it earns an interest of ₹ 660 for the same period, then the rate of interest and principal amount respectively are:
- |    |              |    |              |
|----|--------------|----|--------------|
| a. | 20%, ₹ 1,200 | b. | 20%, ₹ 1,500 |
| c. | 10%, ₹ 1,200 | d. | 10%, ₹ 1,500 |

PYQ Nov. 18

- (37) If compound interest on a sum for 2 years at 4% per annum is ₹ 102, then the simple interest on the same sum for the same period at the same rate will be
- |    |       |    |       |
|----|-------|----|-------|
| a. | ₹ 99  | b. | ₹ 101 |
| c. | ₹ 100 | d. | ₹ 95  |

PYQ June 19

- (38) A sum was invested for 3 years as per C.I. and the rate of interest for first year is 9%, 2<sup>nd</sup> year is 6% and 3<sup>rd</sup> year is 3% p.a. respectively. Find the sum if the amount in three years is ₹ 550?
- |    |          |    |       |
|----|----------|----|-------|
| a. | ₹ 250    | b. | ₹ 300 |
| c. | ₹ 462.16 | d. | ₹ 350 |

PYQ Nov. 19

- (39) The difference between CI and SI for 2 years, is 21. If rate of interest is 5% find principal
- |    |         |    |         |
|----|---------|----|---------|
| a. | ₹ 8,400 | b. | ₹ 4,800 |
| c. | ₹ 8,000 | d. | ₹ 8,200 |

PYQ Jan. 21

- (40) Which is a better investment 9% p.a. compounded quarterly or 9.1% p.a. simple interest?
- |    |                |
|----|----------------|
| a. | 9% compounded  |
| b. | 9.1% S.T.      |
| c. | Both are same  |
| d. | Cannot be said |

ICAI SM

- (41) The annual birth rates per 1,000 are 39.4 and 19.4 respectively. The number of years which the population will be doubled assuming there is no immigration or emigration is
- |    |          |    |               |
|----|----------|----|---------------|
| a. | 35 years | b. | 30 years      |
| c. | 25 years | d. | none of these |

MTP May 20

- (42) The compound interest on half-yearly rests on ₹ 10,000 the rate for the first and second years being 6% and for the third year 9% p.a. is
- |    |         |    |           |
|----|---------|----|-----------|
| a. | ₹ 2,200 | b. | ₹ 2,287   |
| c. | ₹ 2,285 | d. | ₹ 2290.84 |

MTP Oct 21

- (43) A sum of money gets doubled in 5 years at  $X\%$  simple interest. If the interest was  $Y\%$ , the sum of money would have become ten-fold in thirty years. What is  $Y - X$  (in %)
- |    |    |    |               |
|----|----|----|---------------|
| a. | 10 | b. | 5             |
| c. | 8  | d. | none of these |

MTP Dec 22 – Series I

- (44) Effective rate of interest does not depend upon
- Amount of Principal
  - Amount of Interest
  - Number of conversion periods
  - none of these

MTP Dec 22 Series II

- (45) The difference in simple interest of a sum invested of ₹ 1,500 for 3 years is ₹ 18. The difference in their rates is:
- |    |     |    |      |
|----|-----|----|------|
| a. | 0.4 | b. | 0.6  |
| c. | 0.8 | d. | 0.10 |

### Types of Cashflows

<b>Single Cashflow</b>	If single amount is paid or received initially and then direct finally at the end	
<b>Annuity</b>	Annuity can be defined as a sequence of <b>constant periodic</b> payments (or receipts) regularly over a specified period.	
<b>Types of Annuities</b>	Annuity Regular	First payment/receipt at the end of the period
	Annuity Due	First payment/receipt at the beginning of the period

### Future Value

<b>Future Value – Single Cashflow</b>	<ul style="list-style-type: none"> <li>Future value is the <b>cash value</b> of an <b>investment</b> at some time in the future.</li> <li>It is <b>tomorrow's value</b> of today's money <b>compounded</b> at the rate of interest.</li> </ul>
<b>Formula for FV of Single Cashflow</b>	$FV = CF(1+i)^n$ <p>where, CF = single cashflow for which FV is to be calculated, <math>i</math> = adjusted interest rate, <math>n</math> = no. of periods</p>
<b>FV of Annuity Regular</b>	<ul style="list-style-type: none"> <li>To calculate <b>final maturity value</b> of an investment like RD where sum is invested in the annuity pattern starting at the end of each period.</li> </ul>

	<ul style="list-style-type: none"> <li>To calculate the final value of Sinking Fund or Savings amount to achieve the <b>target maturity value</b>.</li> </ul>				
<p><b>Formula for Future Value - Annuity Regular</b></p>	$FVAR = A_i \times FVAF(n, i)$ $FVAR = A_i \times \left\{ \frac{[(1+i)^n - 1]}{i} \right\}$ <p>where, <b>FVAR</b> = Future Value of Annuity Regular, <b>A<sub>i</sub></b> = Annuity Value (Installment), <b>FVAF</b> = Future Value Annuity Factor, <b>i</b> = adjusted interest rate, <b>n</b> = no. of periods</p>				
<p><b>FV of Annuity Due</b></p>	<ul style="list-style-type: none"> <li>To calculate final maturity value of an investment like RD where sum is invested in the annuity pattern <b>at the beginning of each period</b></li> <li>To calculate final maturity value of an investment like RD where sum is invested in the annuity pattern at the beginning of each period</li> </ul>

<b>CAGR</b>	<i>Compounded Annual Growth rate is used to show annual growth as per CI</i>	

MTP Nov 19

- (58) A company is considering proposal of purchasing a machine either by making full payment of ₹ 4000 or by leasing it for four years at an annual rate of ₹ 1250. Which course of action is preferable if the company can borrow money at 14% compounded annually? [ $P(4, 0.14) = 2.9137$ ]
- leasing is not preferable
  - leasing is preferable
  - cannot determined
  - none of these

PYQ June 19

- (59) A person wants to lease out a machine costing ₹ 5,00,000 for a 10 year period. It has fixed a rental of ₹ 51,272 per annum payable annually starting from the end of first year. Suppose rate of interest is 10% per annum compounded annually on which money can be invested. To whom this agreement is favourable?
- Favour of Lessee
  - Favour of Lessor
  - Not for both
  - Can't be determined

PYQ June 22

- (60) ABC Ltd. Wants to lease out an asset costing ₹3,60,000 for a five year period. It has a fixed rental of ₹ 1,05,000, per annum payable annually starting from the end of first year. Suppose rate of interest is 14% per annum compounded annually on which money can be invested by the company. Is this agreement favourable to the company.
- Yes
  - No
  - It depends
  - None of these

## MTP May 19 Series II, ICAI SM

- (61) A machine can be purchased for ₹ 50,000. Machine will be contributing ₹ 12,000 per year for the next five years. Assuming borrowing cost is 10% per annum. Determine whether machine should be purchased or not
- Should be purchased
  - Should not be purchased
  - Can't say about purchase
  - none of the above

## MTP Jun 23 – Series I

- (62) A machine with useful life of 7 years costs ₹ 10,000 while another machine with useful life of 5 years costs ₹ 8000. The first machine saves labour expenses of ₹ 1900 annually and the second one saves labour expenses of ₹ 2200 annually. Determine the preferred course of action. Assume cost of borrowing as 10% compounded per annum.
- 1<sup>st</sup> machine should be purchased
  - 2<sup>nd</sup> machine should be purchased
  - Information is not sufficient
  - None of these

## ICAI SM

- (63) An investor intends purchasing a three year ₹1,000 par value bond having nominal interest rate of 10%. At what price the bond may be purchased now if it matures at par and the investor requires a rate of return of 14%?
- ₹ 907.125
  - ₹ 1033.54
  - ₹ 945.67
  - None of these

## MTP Dec 2022 Series II

- (64) A ₹1000 bond paying annual dividends at 8.5% will be redeemed at par at the end of 10 years. Find the purchase price of this bond if the investor wishes a yield rate of 8%
- ₹ 907.135
  - ₹ 1033.54
  - ₹ 945.67
  - None of these

## PYQ June 19

- (65) Determine the present value of perpetuity of ₹ 50,000 per month @ rate of interest 12% p.a. is \_\_\_\_\_
- ₹ 45,00,000
  - ₹ 50,00,000
  - ₹ 55,00,000
  - ₹ 60,00,000

## PYQ Nov. 20

- (66) A stock pays annually an amount of ₹ 10 from 6<sup>th</sup> year onwards. What is the present value of the perpetuity, if the rate of return is 20%?
- 20.1
  - 19.1
  - 21.1
  - 22.1

## PYQ Jun 23

- (67) Mr. Sharad got his retirement benefits amounting to ₹ 50,00,000. He want to receive a fixed monthly sum of amount for his rest of life, starting after one month and thereafter he want to pass on the same to future generation. He expects to earn an interest of 9% compounded annually. Determine how much perpetuity amount he will receive every month?
- ₹ 39,500
  - ₹ 38,500
  - ₹ 37,500
  - ₹ 36,600

## ICAI SM

- (75) Appu retires at 60 years receiving a pension of 14,400 a year paid in half-yearly installments for rest of his life after reckoning his life expectation to be 13 years and that interest at 4% p.a. is payable half-yearly. What single sum is equivalent to his pension?
- |    |          |    |          |
|----|----------|----|----------|
| a. | 1,45,000 | b. | 1,44,900 |
| c. | 1,44,800 | d. | 1,44,700 |

## PYQ Dec 22

- (76) 10 years ago the earning per share (EPS) of ABC Ltd. was ₹ 5 share. Its EPS for this year is ₹ 22. Compute at what rat, EPS of the company grow annually?
- ★
- |    |        |    |        |
|----|--------|----|--------|
| a. | 15.97% | b. | 16.77% |
| c. | 18.64% | d. | 14.79% |

## PYQ Jun 23

- (77) Suppose you have decided to make a Systematic Investment Plan (SIP) in a mutual fund with ₹ 1,00,000 every year from today for next 10 years where you get return at the rate of 10% per annum compounded annually. What is the future value of this annuity? Given  $1.1^{10} = 2.59374$
- |    |             |    |             |
|----|-------------|----|-------------|
| a. | ₹ 17,35,114 | b. | ₹ 17,53,411 |
| c. | ₹ 17,35,411 | d. | ₹ 17,53,114 |

## MTP Nov 20

- (78) A man borrows ₹ 4000 from a bank at 10% compound interest. At the end of every year ₹ 1,500 as part of repayment of loan and interest. How much is still owe to the bank after three such installments.
