Budget Line

ICAI SM

88 A point below the budget line of a consumer

- Represents a combination of goods which costs the whole of consumer's income
- Represents a combination of goods which costs less than the consumer's income
- Represents a combination of goods which is unattainable to the consumer given his/her money income
- Represents a combination of goods which costs more than the consumers' income

ICAI SM

89 How would that budget line be affected if the price of both goods fell?

- The budget line would not shift.
- The new budget line must be parallel to the old budget line.
- The budget line must be shifting to the left
- The new budget line will have the same slope as the original so long as the prices of both goods change in the same proportion.

A.Q.

90 Budget line or price line is downward sloping because ____

- There is inverse relationship between the price and demand of a commodity.
- If a consumer wants to buy more of one good, he has to buy less of other good at given money income.
- If a consumer wants to buy more of one goods, he has to buy less of other goods as his money income falls.
- None of these

Basics of Supply

ICAI SM

1

The quantity supplied of a good or service is the amount that

- a) is actually bought during a given time period at a given price
- b) producers wish they could sell at a higher price
- c) producers plan to sell during a given time period at a given price
- d) people are willing to buy during a given time period at a given price

ICAI SM

2

Supply is the

- a) limited resources that are available with the seller
- b) cost of producing a good
- c) entire relationship between the quantity supplied and the price of good.
- d) Willingness to produce a good if the technology to produce it becomes available

ICAI SM

3

Supply is a ____ concept

- a) Stock
- b) Flow and stock
- c) Flow
- d) None of the above

A.Q.

4

Supply and stock are ____

- a) same things
- b) different
- c) having no comparison
- d) Both (B) and (C)

Determinants of Supply

ICAI SM

5

An increase in the supply of a good is caused by :

- a) Improvements in its production technology
- b) Fall in the prices of other goods which can be produced using the same inputs .
- c) Fall in the prices of factors of production used in its production .
- d) all of the above.

ICAI SM

6

An increase in the number of sellers of bikes will increase the

- a) The price of a bike
- b) Demand for bikes
- c) The supply of bikes
- d) Demand for helmets

ICAI SM

7

Which of the following statements is correct?

- a) When the price falls the quantity demanded falls
- b) Seasonal changes do not affect the supply of a commodity
- c) Taxes and subsidies do not influence the supply of the commodity
- d) With lower cost, it is profitable to supply more of the commodity.

MTP Mar 22

8

Behavior of Supply depends upon:

- a) Phenomenon Considered
- b) Degree of possible adjustment in supply
- c) Time Period under Consideration
- d) All the above

Chapter 2 - THEORY OF DEMAND AND SUPPLY

Notes

ICAI SM

- 9 Data on production of vegetables for the past two years showed that, despite stable prices, there is a substantial decline in output of cabbage leading to lower supply into the market. Which of the following can possibly be the reason?

- An increase in the price of cauliflower which is equally preferred by consumers
- Announcement of a subsidy by government on vegetable production
- More farmers producing cabbage and the increasing competition among them
- A substantial decrease in the price of capsicum

Law of Supply

MTP Mar 21

- 10 The relationship between price and quantity supplied in law of supply is:

- proportionate
- homogenous
- inverse
- direct

MTP May 20

- 11 Which of the following statements is correct?

- The Law of Demand states positive relationship between price and quantity demanded.
- The Law of Supply states positive relationship between price and quantity supplied.
- As per the Law of diminishing returns as the consumption of any commodity is increased, the average returns start diminishing.
- None of the above

MTP Apr 19

- 12 Supply of a good and its price have

- Negative relationship
- Inverse relationship
- No relationship
- Positive relationship

MTP Mar 22

- 13 Suppose we are drawing a supply curve of a farmer which of the following will not be held constant. :

- Price of Inputs
- Weather Conditions
- Technology
- The price of the Commodity under consideration

Changes in Supply

ICAI SM

- 14 Suppose that workers in a steel plant managed to force a significant increase in their wage package. How would the new wage contract be likely to affect the market supply of steel, other things remaining the same?

- Supply curve will shift to the left.
- Supply curve will shift to the right.
- Supply will not shift, but the quantity of cars produced per month will decrease.
- Supply will not shift, but the quantity of cars produced per month will increase.

ICAI SM

- 15 Contraction of supply is the result of :

- Decrease in the number of producers.
- Decrease in the price of the good concerned.
- Increase in the prices of other goods.
- Decrease in the outlay of sellers.

When supply curve moves to the left, it means

- a) lesser quantity is supplied at a given price
- b) larger quantity is supplied at a given price
- c) prices have fallen and quantity is supplied at a lower price
- d) none of the above

ICAI SM

20

When supply curve moves to right, it means

- a) supply increases and more quantity is supplied at a given price
- b) supply decreases and less quantity is supplied at a given price
- c) supply remains constant at a given price
- d) none of the above

MTP Oct 19, ICAI SM

21

The supply curve shifts to the right because of _____

- a) improved technology
- b) increased price of factors of production
- c) increased excise duty
- d) all of the above

ICAI SM

22

Which of the following alternatives would be true if the event presented in the following diagram occurs?

- a) A fall in wage costs of the firm along with a fall in consumer incomes
- b) A shortage of raw materials and consequent increase in raw material price
- c) An increase in subsidy by the government and a reduction in taxes
- d) Decrease in the market price of the commodity in question

- a) Teaching Economics to CA students in class.
- b) Singing a song before friends
- c) Flying kite for pleasure
- d) Teaching concept of Economics to friends in a library.

Factors of Production - Land

SEQ, ICAI SM

5 Which of the following is not a characteristic of land?

- a) Its supply for the economy is limited.
- b) It is immobile.
- c) Its usefulness depends on human efforts.
- d) It is produced by our forefathers.

PYQ June 22

6 'Land is heterogeneous' implies which of the following?

- a) Two lands are alike
- b) Two lands are not alike
- c) Two lands are fixed
- d) Two lands are mobile

Factors of Production - Labour

MTP Mar 19

7 Which of the following is not the characteristic of Labour?

- a) Labour is highly 'Perishable' in the sense that a day's labour lost cannot be completely recovered
- b) Labour is inseparable from the labourer himself
- c) Labour has a strong bargaining power
- d) The supply of labour and wage rate are directly related in the initial stages

Factors of Production - Capital

ICAI SM

8 Which of the following statements is true?

- a) Accumulation of capital depends solely on income of individuals.
- b) Savings can be influenced by government policies.
- c) External economies go with size and internal economies with location.

Production Function

ICAI SM	
21	Which of the following is the best definition of "production function"?
a) The relationship between market price and quantity supplied. b) The relationship between the firm's total revenue and the cost of production. c) The relationship between the quantities of inputs needed to produce a given level of output. d) The relationship between the quantity of inputs and the firm's marginal cost of production.	

SEQ	
22	A firm's production function:
a) Shows how much output and the level of input required for the firm to maximize profits b) Establishes the minimum level of output that can be produced using the available resources c) Shows the maximum output that can be produced with a given amount of inputs with available technology d) Shows labour force which is employed	

ICAI SM	
23	What is a production function?
a) Technical relationship between physical inputs and physical output. b) Relationship between fixed factors of production and variable factors of production. c) Relationship between a factor of production and the utility created by it. d) Relationship between quantity of output produced and time taken to produce the output	

ICAI SM	
24	The production function:
a) Is the relationship between the quantity of inputs used and the resulting quantity of product. b) Tells us the maximum attainable output from a given combination of inputs. c) Expresses the technological relationship between inputs and output of a product. d) All the above	

25	The production function is a relationship between a given combination of inputs and:
a) another combination that yields the same output. b) the highest resulting output c) the increase in output generated by one-unit increase in one output. d) all levels of output that can be generated by those inputs.	

Chapter 3 - THEORY OF PRODUCTION AND COST

MTP Mar 22

26 What are the main assumption of Production Function:

- Relationship between inputs and output exists for a specific period of time
- There is a given state of the art in production Technology.
- Input consideration Included in a particular function output resulting from their utilization is at the maximum level.
- All the above

Short Run Vs Long Run

ICAI SM

27 The short run, as economists use the phrase, is characterized by:

- at least one fixed factor of production and firms neither leaving nor entering the industry.
- generally a period which is shorter than one year.
- all factors of production are fixed and no variable inputs.
- all inputs are variable and production is done in less than one year

ICAI SM

28 To economists, the main difference between the short run and the long run is that:

- In the short run all inputs are fixed, while in the long run all inputs are variable.
- In the short run the firm varies all of its inputs to find the least-cost combination of inputs.
- In the short run, at least one of the firm's input levels is fixed.
- In the long run, the firm is making a constrained decision about how to use existing plant and equipment efficiently.

SEQ, ICAI SM

29 In describing a given production technology, the short run is best described as lasting:

- up to six months from now.
- up to five years from now.
- as long as all inputs are fixed.
- as long as at least one input is fixed

MTP Mar 21, ICAI SM

30 Laws of production does not include _____

- returns to scale.
- law of diminishing returns to a factor.
- law of variable proportions.
- least cost combination of factors.

ICAI SM

31 A fixed input is defined as

- That input whose quantity can be quickly changed in the short run, in response to the desire of the company to change its production.
- That input whose quantity cannot be quickly changed in the short run, in response to the desire of the company to change its production.
- That input whose quantities can be easily changed in response to the desire to increase or reduce the level of production.
- That input whose demand can be easily changed in response to the desire to increase or reduce the level of production.

A.Q.

32 In the long run which factor of production is fixed?

- Labour
- Capital
- Building
- None of these

Law of Variable Proportions

ICAI SM

34	Identify the correct statement:
a)	The average product is at its maximum when marginal product is equal to average product.
b)	The law of increasing returns to scale relates to the effect of changes in factor proportions.
c)	Economies of scale arise only because of indivisibilities of factor proportions.
d)	Internal economies of scale can accrue when industry expands beyond optimum.

MTP Mar 18, ICAI SM

35	The marginal product of a variable input is best described as:
a)	total product divided by the number of units of variable input
b)	the additional output resulting from a one unit increase in the variable input.
c)	the additional output resulting from a one unit increase in both the variable and fixed inputs.
d)	the ratio of the amount of the variable input that is being used to the amount of the fixed input that is being used.

ICAI SM

36	The "law of diminishing returns" applies to:
a)	the short run, but not the long run.
b)	the long run, but not the short run.
c)	both the short run and the long run.
d)	neither the short run nor the long run

ICAI SM

37	The marginal, average, and total product curves encountered by the firm producing in the short run exhibit all of the following relationships except
a)	when total product is rising, average and marginal product may be either rising or falling.
b)	when marginal product is negative, total product and average product are falling.
c)	when average product is at a maximum, marginal product equals average product, and total product is rising.
d)	when marginal product is at a maximum, average product equals marginal product, and total product is rising.

MTP Oct 19, ICAI SM

38	Diminishing returns occur:
a)	when units of a variable input are added to a fixed input and total product falls.
b)	when units of a variable input are added to a fixed input and marginal product falls.
c)	when the size of the plant is increased in the long run.
d)	when the quantity of the fixed input is increased and returns to the variable input falls.

42 If the marginal product of labour is below the average product of labour, it must be true that:

- a) the marginal product of labour is negative.
- b) the marginal product of labour is zero.
- c) the average product of labour is falling.
- d) the average product of labour is negative.

MTP Aug 18, ICAI SM

43 The average product of labour is maximized when marginal product of labour:

- a) equals the average product of labour.
- b) equals zero.
- c) is maximized.
- d) none of the above

ICAI SM

44 The law of variable proportions is drawn under all of the assumptions mentioned below except the assumption that:

- a) the technology is changing.
- b) there must be some inputs whose quantity is kept fixed.
- c) we consider only physical inputs and not economically profitability in monetary terms.
- d) the technology is given and stable.

ICAI SM

47 Average product is defined as

- a) total product divided by the total cost.
- b) total product divided by marginal product.
- c) total product divided by the number of units of variable input.
- d) marginal product divided by the number of units of variable input.

ICAI SM

48 Which of the following statements is true?

- a) After the inflection point of the production function, a greater use of the variable input induces a reduction in the marginal product.
- b) Before reaching the inevitable point of decreasing marginal returns, the quantity of output obtained can increase at an increasing rate.
- c) The first stage corresponds to the range in which the AP is increasing as a result of utilizing increasing quantities of variable inputs.
- d) All the above.

Cobb Douglas Production Function

A.Q.

97 The Cobb-Douglas homogeneous production function given as:
 $Q = L^{1/2}K^{1/2}$ exhibits-

- a) Constant returns to scale
- b) Decreasing returns to scale
- c) Increasing returns to scale
- d) All of the above at various level of output

A.Q.

98 Cobb-Douglas function
 When, P = Actual output
 L = Labour
 C = Capital
 b = No. of units of labour
 k = Exponent of labour
 j = Exponent of capital
 is represented as-

- a) $P = bL^jC^k$
- b) $P = bL^{1/j}C^{1/k}$
- c) $P = bL^kC^j$
- d) $P = 1/bL^kC^j$

Cost Concepts

MTP Aug 18, SEQ, ICAI SM

1 Which of the following is an example of "explicit cost"?

- a) The wages a proprietor could have made by working as an employee of a large firm.
- b) The income that could have been earned in alternative uses by the resources owned by the firm.
- c) The payment of wages by the firm.
- d) The normal profit earned by a firm

ICAI SM

2 Which of the following is an example of an "implicit cost"?

- a) Interest that could have been earned on retained earnings used by the firm to finance expansion.
- b) The payment of rent by the firm for the building in which it is housed.
- c) The interest payment made by the firm for funds borrowed from a bank.
- d) The payment of wages by the firm.

ICAI SM

3 Implicit cost can be defined as

- a) Money payments made to the non-owners of the firm for the self-owned factors employed in the business and therefore not entered into books of accounts.
- b) Money not paid out to the owners of the firm for the self-owned factors employed in a business and therefore not entered into books of accounts.
- c) Money payments which the self-owned and employed resources could have earned in their next best alternative employment and therefore entered into books of accounts.
- d) Money payments which the self-owned and employed resources earn in their best use and therefore entered into book of accounts

4 Economic costs of production differ from accounting costs of production because

- a) Economic costs include expenditures for hired resources while accounting costs do not.
- b) Accounting costs include opportunity costs which are deducted later to find paid out costs.
- c) Accounting costs include expenditures for hired resources while economic costs do not.
- d) Economic costs add the opportunity cost of a firm which uses its own resources.

Suppose that a sole proprietorship is earning total revenues of Rs. 10,00,000 and is incurring explicit costs of Rs. 7,50,000. The owner could work for another company for Rs.3,00,000 a year

5 What will be the implicit cost of the firm?

- a) Rs. 3,00,000
- b) Rs. 2,50,000
- c) Rs. 7,50,000
- d) insufficient data

SEQ

6 The above mentioned firm is earning:

- a) Accounting profit of Rs. 2,50,000.
- b) Economic loss of Rs. 50,000
- c) Both a and b are correct.
- d) None of the above is correct.

SEQ

7 Suppose in the above mentioned question, the owner had invested Rs. 500,000 by withdrawing from his saving accounts on which he was earning 5% interest per annum, the economic profit or loss is

- a) economic profit of Rs. 75,000
- b) economic loss of Rs. 75,000
- c) economic profit of Rs. 2,50,000

Suppose that, at the profit-maximizing level of output, a firm finds that market price is less than average total cost, but greater than average variable cost. Which of the following statements is correct?

- The firm should shutdown in order to minimise its losses.
- The firm should raise its price enough to cover its losses.
- The firm should move its resources to another industry.
- The firm should continue to operate in the short run in order to minimize its losses.

MTP Mar 19, ICAI SM

63

When price is less than average variable cost at the profit-maximising level of output, a firm should:

- produce where marginal revenue equals marginal cost if it is operating in the short run.
- produce where marginal revenue equals marginal cost if it is operating in the long run.
- shutdown, since it will lose nothing in that case.
- shutdown, since it cannot even cover its variable costs if it stays in business.
