

ECONOMICS

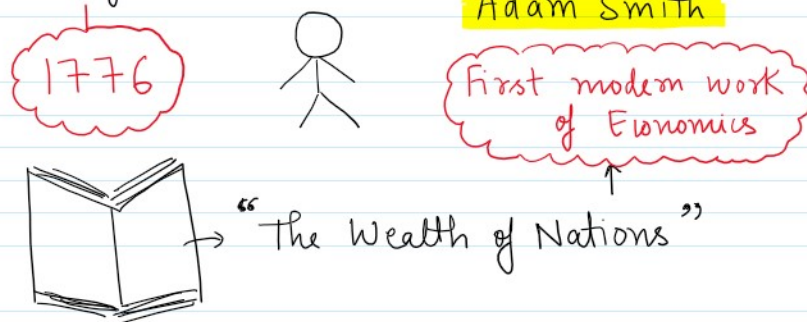

CH-1

UNIT - 1

Nature and Scope of Business Economics

→ Basic Introduction

- Economics is derived from Greek word **OIKONOMIA** (means Household)
- Till 19th century Economics was known as **Political Economy**
- Father of Economics

- Economics is study of processes by which the **relatively scarce resources** are allocated to satisfy **unlimited human wants**

Two fundamental facts

Unlimited human wants

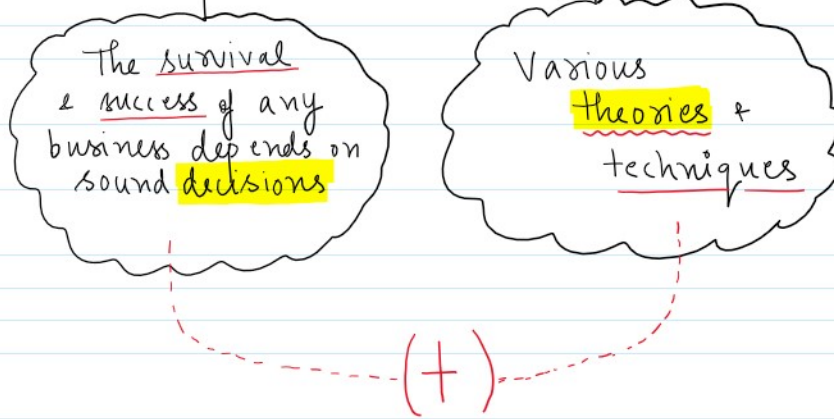

सिध्दत
(Resources)

Means to satisfy the wants are limited

* Modern Economists say that **it** is a narrow definition. In day to day events there are various **economic issues**. **Study of economics cannot ensure that all problems will be appropriately tackled, but it would enable us to examine a problem in its right perspective.**

Global crises 2007-2008
Corona Pandemic 2019-2020

→ Business Economics

Business Economics Integrates economic theory with Business Practice

* Business Economics is also known as **Managerial Economics** or **"Applied" Economics**

It fills the gap between economic theory and Business Practice

* Business economics has close connection with Economic theory (**Micro** + **Macro**), Statistics, Mathematics, Operation Research etc

* **Joel Dean** defined Business Economics in terms of the use of economic analysis in "formulation of Business policies"

→ NATURE of BUSINESS ECONOMICS

→ NATURE of BUSINESS ECONOMICS

Business Economics is **Science** → Cause + Effect Relationship

$$\begin{matrix} P \uparrow & D \downarrow \\ P \uparrow & S \uparrow \end{matrix}$$

Business Economics is an **ART** → कला

Based on **MICRO** Economics

Incorporates elements of **MACRO** analysis

Business Economics uses theory of **Markets**
 CH4

Business Economics is **PRAGMATIC** *
 Practical

Interdisciplinary in nature

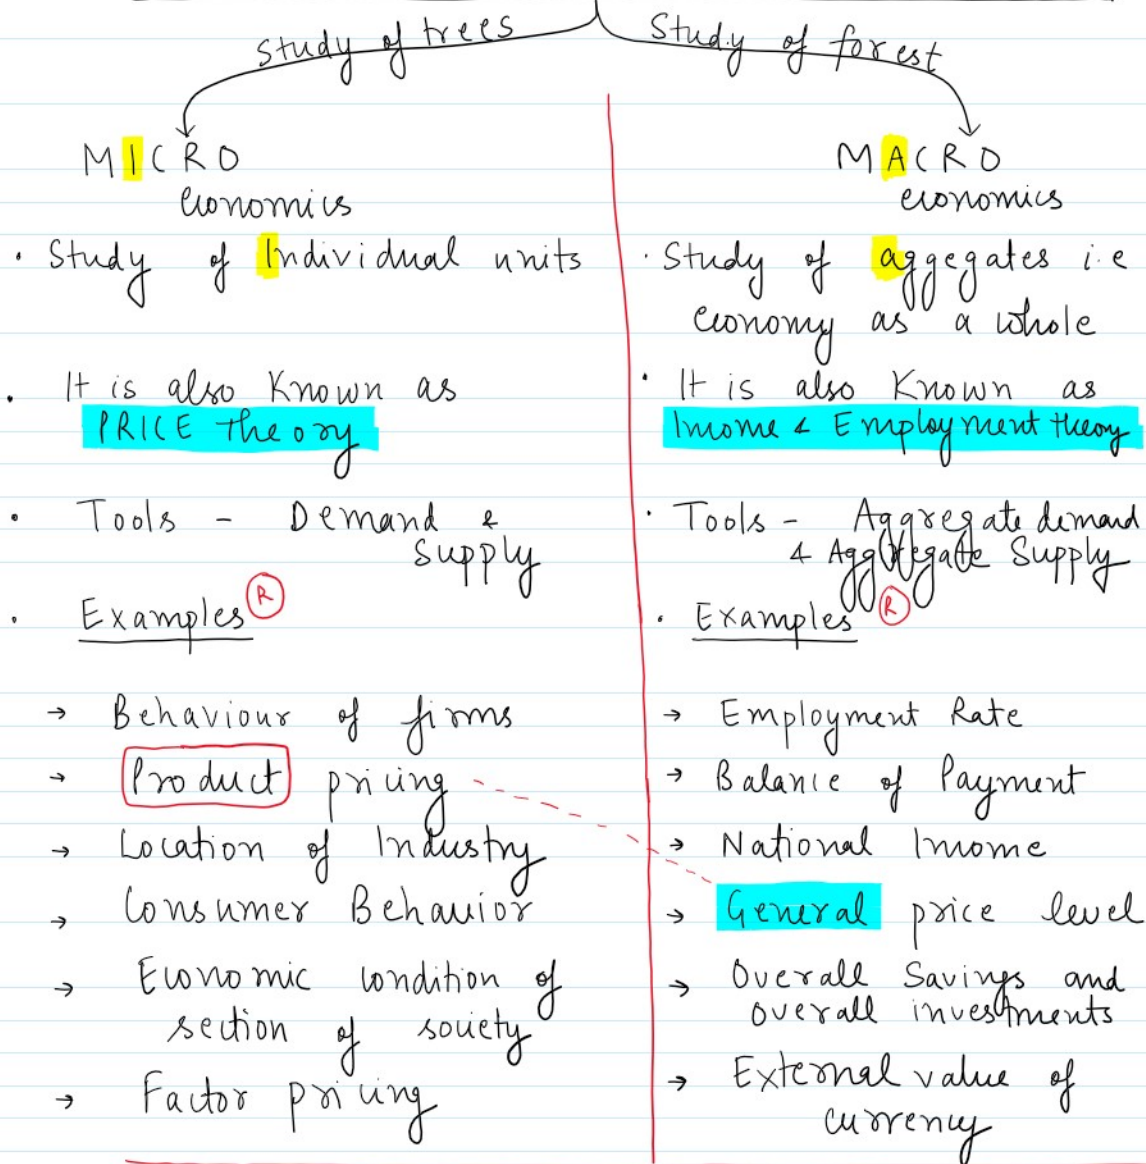

Business Economics is **NORMATIVE** → POSITIVE नहीं है

POSITIVE	NORMATIVE
① What is (क्या है)	what ^{should} <u>ought to be</u> (क्या होना चाहिए)
② It can be verified [Mercury is the largest planet]	It cannot be verified [Burger is better than Pizza]
③ It is not suggestive (सलह नहीं)	It is suggestive (सलह)

(सलहे नही)	(सलहे)
④ Value judgements (X) (judge नही करेगा)	Value judgements (✓) (judge करेगा)

→ **SUBJECT MATTER OF Business Economics**

* **SCOPE of Business Economics** *

- This can be solved using **MICRO ECONOMICS**
- **Demand** analysis and forecasting
- **Production** + **Cost** analysis
- **Inventory** management
- Market structure and "**pricing policies**"
- Resource allocation
- **Capital** and **Investment** decision
- "**Profit analysis**" - i.e. management of profits under conditions of uncertainty
- **Risk** and **Uncertainty** analysis
 - Can be predicted
 - Cannot be predicted

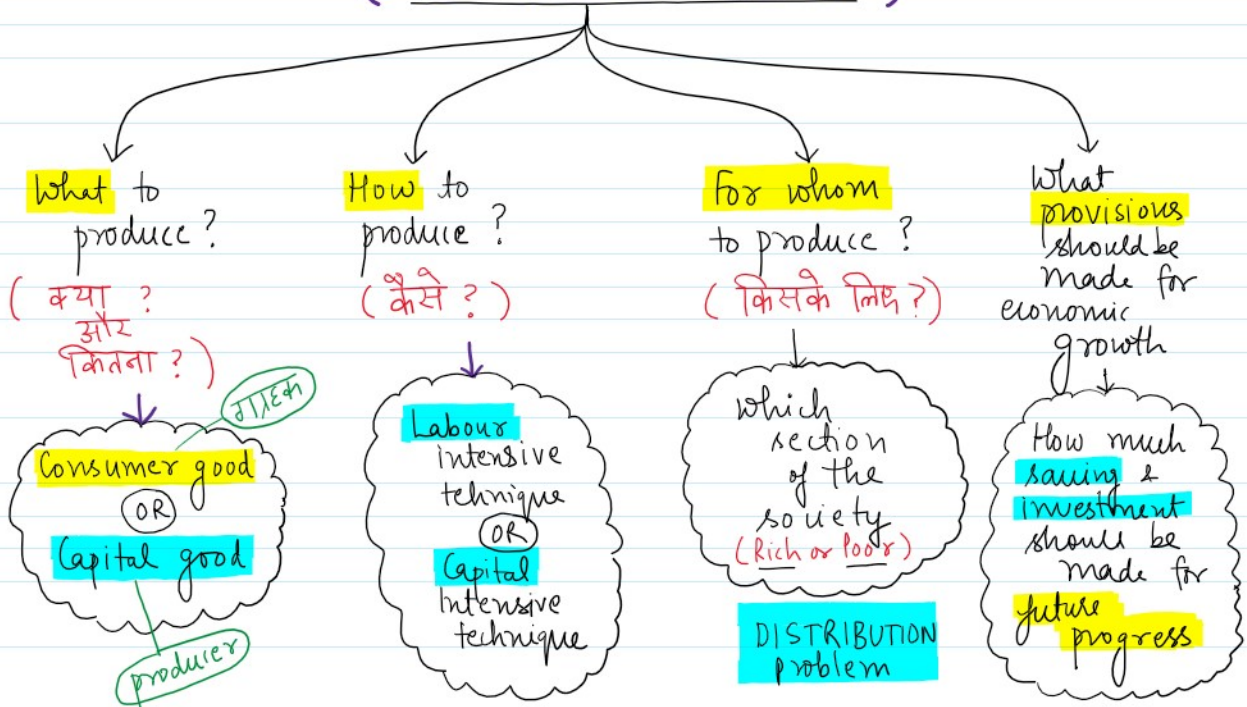

- This can be solved using **Macro Economics**
- Type of economic system (**Capitalist**, **socialist** + **Mixed**)
- Stage of **Business cycle** (45)
- **General trends** in **National Income**, **employment** etc
- Working of **Central Bank**
- Socio-Economic organisations eg - **Trade Unions**.
 - strike (W ↑)
- Social + Political environment

x ——— x ——— x ——— x ——— x ——— x

CH-1 Unit 2
ECONOMICS

BASIC PROBLEMS OF AN ECONOMY (CENTRAL PROBLEMS)

* CAPITALIST ECONOMY *

Free Market

CAPITALIST ECONOMY

Free Market Economy

OR

Laissez-Faire

US economy, Hong Kong, South Korea etc

policy of leaving things to take their own course

FEATURES

- (i) Right to private property
- (ii) Freedom of enterprise
- (iii) Freedom of economic choice
- (iv) Profit Motive
- (v) Consumer Sovereignty
"is KING"
- (vi) High competition.
- (vii) NO Government

MERITS

- (i) Self regulating price mechanism
- (ii) Greater efficiency & incentive to work
- (iii) Economic growth is faster
- (iv) "Optimum" allocation of resources
- (v) Consumers are benefitted
- (vi) Freedom of choice
- (vii) Rewards men of initiative and punishes inefficient.
- (viii) Democratic framework is there.
"सबको आज़ादी"

DEMERITS

- (i) **INEQUALITY** - Two classes of society
 - HAVES
 - HAVE-NOTS
- (ii) Property Rights > Human Rights
 - £10
 - Drugs
- (iii) Demand pattern does not represent real needs of society.
- (iv) NO security of employment
- (v) Consumer Sovereignty is a MYTH
 - producers profit
- (vi) Less merit goods
 - education, health etc.
- (vii) Economic instability & formation of "Monopolies".

* SOCIALIST ECONOMY *

(Command Economy or Centrally Planned Economy)

Eg :-
North Korea
CHINA
Earlier USSR

Propounded by Karl Marx and
Frederic Engels

1848

Communist

1848

Communist Manifesto

Features	Merits	Demerits
(1) Collective ownership 	(1) Equitable distribution of wealth.	(1) Inefficiency, corruption, Red tapism etc
(2) Economic Planning (5 years Plans)	(2) Balanced economic growth	(2) less freedom of choice.
(3) NO consumer choice.	(3) No wastage of resources on advertisement	(3) No incentive for hardwork in form of profit
(4) Relatively equal income distribution.	(4) Less unemployment + less business fluctuation.	(4) Administered prices.
(5) <u>Absence of competition</u>	(5) Ensures Right to work and freedom from hunger .	(5) "State monopolies "
(6) <u>Minimum Role of Price Mechanism</u> .	(6) Labourers are protected against exploitation	
(7) Social welfare motive		

MIXED ECONOMY

Benefits of Capitalist (+) Socialist

However it is not always a golden path

HOW TO SOLVE PROBLEMS ??

	WTP ?	H TP ?	FWTP ?
	on the basis	least lost	who have

	WTP ?	HTP ?	FWTP ?
→ Capitalist	On the basis of consumer's preference	Least lost of production	who have buying capacity
Socialist	Government decides	Government decides	Government decides.

Economics

CH 2

Unit 1 : Theory of Demand (Imp.)
+ Elasticity of Demand

① Demand : Desire (+) means to (+) purchase (+) willingness to use those means for that purchase
(चाहना) (इच्छा) (साधन)

Price (£)	Units (Qty)
£ 10	50 units
£ 1000	40 units
£ 5000	20 units

Given price → Quantity demanded is a FLOW concept

DEMAND

② Factors affecting Demand (Determinants of demand)

(i) Price of the Good (P_x)

Inverse Relation

Negatively sloped
(Downward sloping)

Negatively sloping
(Downward sloping)

(ii) Price of Related Good (PR)

there are two types of **Related Goods**

Substitute goods

 (Motor cycle)

Complimentary goods

 (petrol)

DIRECT relation
(Positive)

INVERSE relation
(Negative)

(iii) **INCOME of the consumer (Y)**

Normal Good

(High income group)

Y ↑ D ↑

Positive Income effect

Inferior good

(Low income group)

Y ↑ D ↓

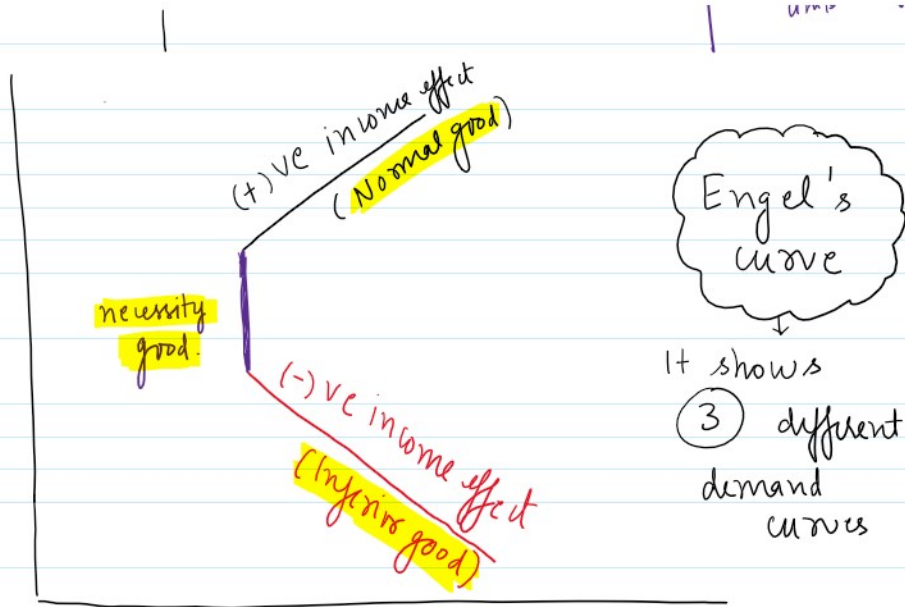

Negative Income effect

Necessity good

NO change in demand

(iv) **Taste + Preference (T)**

Favourable Taste $D (\uparrow)$
 Unfavourable Taste $D (\downarrow)$

(a) Demonstration effect - आपने पड़ोसी को देख कर आप Mobile खरीद रहे हो.

FOMO
 Fear of Out Missing

(b) Bandwagon effect - सब ले रहे हैं तो हम भी खरीद लेते हैं. (its in Fashion)

(c) Snob effect - When product is **too common** then $D \downarrow$

अदरक

(d) Veblen effect - **Conspicuous** Consumption
 "Very expensive"
 (Diamonds, expensive car etc)

(5) **Others (O)**

(i) Population (\uparrow) Demand (\uparrow)

(ii) ~~*~~ Consumer **expectation** about future prices

$$\underline{\underline{D(\uparrow)}}$$

(iii) Age Distribution

(iv) National Income & distribution

③

$$Q_x = f(P_x, P_R, Y, T, O)$$

Quantity of Good X is function of Price of Good X, Price of Related Good, Income, Taste preference, other factors

Dependent INDEPENDENT VARIABLE

Demand Function

$$y = f(x)$$

$$y = x^2 + 1$$

dependent: 10, 5, 2 independent: 1, 2, 3

④

Demand Curve & Demand Schedule

{ Graphical }

{ Tabular }

Graphical

Tabular

Price (£)	Qty/units
£10	500
£8	700
£6	1000
£3	1500

P(↓) Q(↑)

INVERSE relation

5

Law of Demand

$$Q_x = f(P_x, P_R, Y, T, O)$$

NO CHANGE

ASSUMPTION

→ ALFRED MARSHALL

→ P_R, Y, T, O do not change → CETERIS PARIBUS

being other things constant

→ Law of Demand is QUALITATIVE Statement

6 Market demand Curve + Market demand Schedule

Price	Qty (A)	Qty (B)	Qty (C)	Market demand
£1	100 units	140 units	160 units	400 units
£2	80 units	110 units	130 units	320 units
£3	60 units	80 units	100 units	240 units
£4	40 units	50 units	60 units	150 units
£5	20 units	30 units	20 units	60 units

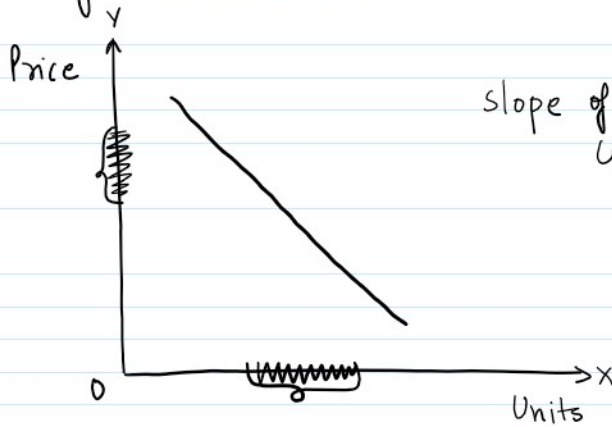

Individual Individual Individual

* Market demand curve is always **flatter** as compared to individual demand curve.

⑦ **Straight line demand Curve**

slope of demand curve = $(-) \frac{\Delta P}{\Delta Q}$

Slope is always Negative

ΔP = Change in Price

ΔQ = Change in Quantity

$\frac{(-)ve}{(+)ve} = (-)ve$

or

$\frac{(+)ve}{(-)ve} = (-)ve$

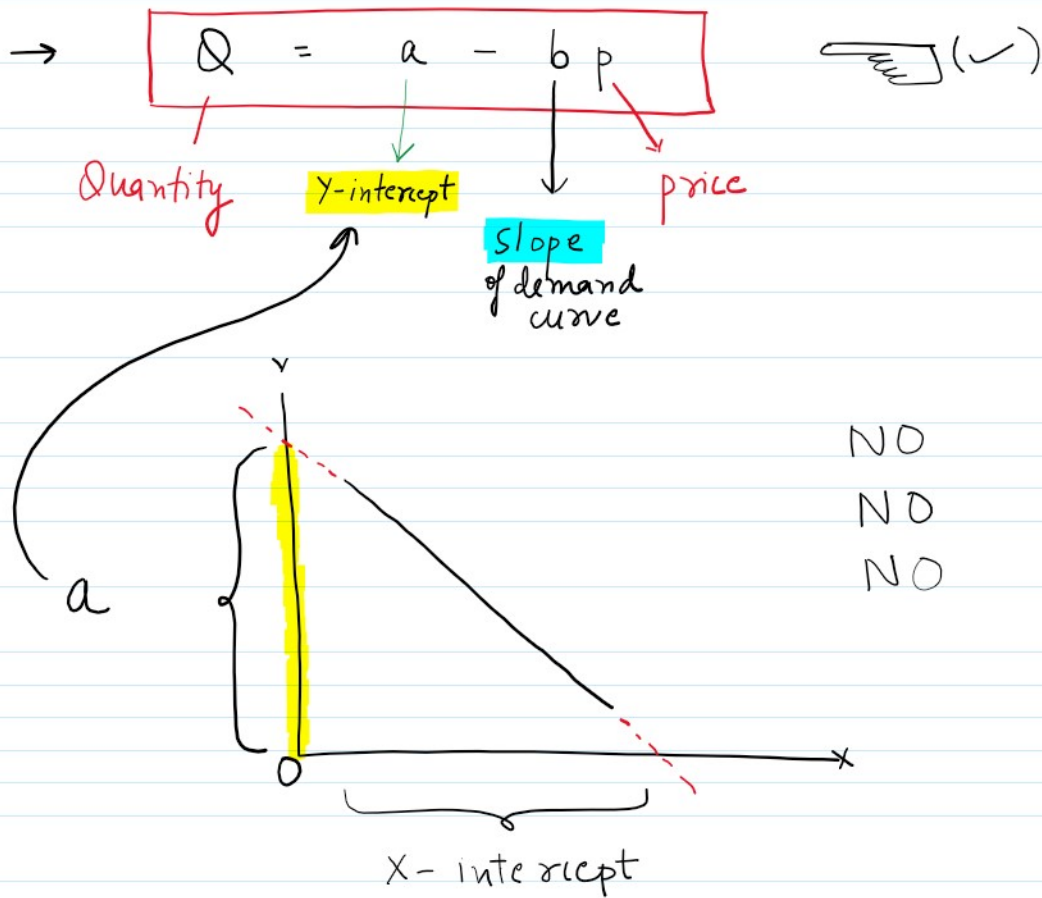

$\frac{(-) 2}{(+) 1} = (-) 2$

slope (ढाल) = $\frac{\text{Change in Y-axis}}{\text{Change in X-axis}}$

slope (ढलल) = $\frac{\text{change in Y-axis}}{\text{change in X-axis}}$

* 8
Imp

Why does law of demand Operate ???

WHY ??

(i) MARSHALL

Law of diminishing Marginal Utility
 - When a consumer consumes more & more of good, his utility (satisfaction) goes on decreasing.

Marshall:

Price	Burger (Units)	Utility	Law
₹100	1	50 utils	satisfaction ढलल
₹85	2	40 utils	
₹60	3	25 utils	
₹15	4	5 utils	
	-	-	" "

£15 ← 4

5 utils " "

£1 ← 5

0 util

INVERSE Relation.

(ii) **JR Hicks & Allen.**

Price effect = **Substitution effect (+) Income effect**

(a) **Substitution effect.**

(eg Tea, coffee)

Price Tea (↓)

Substitution effect.

Demand Tea (↑)

↓
coffee drinker

↓
Switch to Tea

* Substitution effect is always POSITIVE

* Substitution effect is **stronger** when :-

a) goods are **close substitute**

b) **low cost** of switching

c) **Lower** inconvenience while switching.

~~close~~

b) **Income effect**

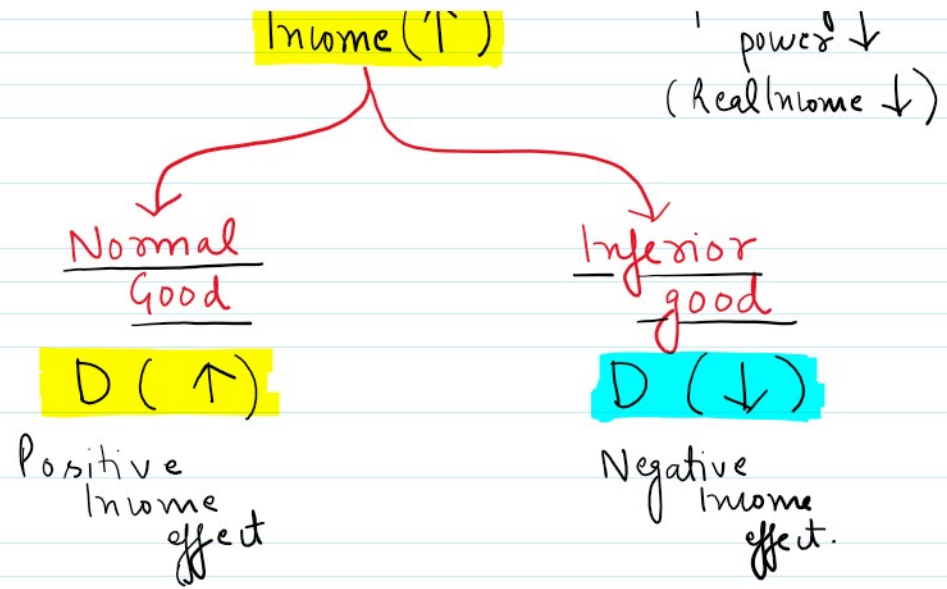

Price (↓) Real **Income** (↑)

£100 income

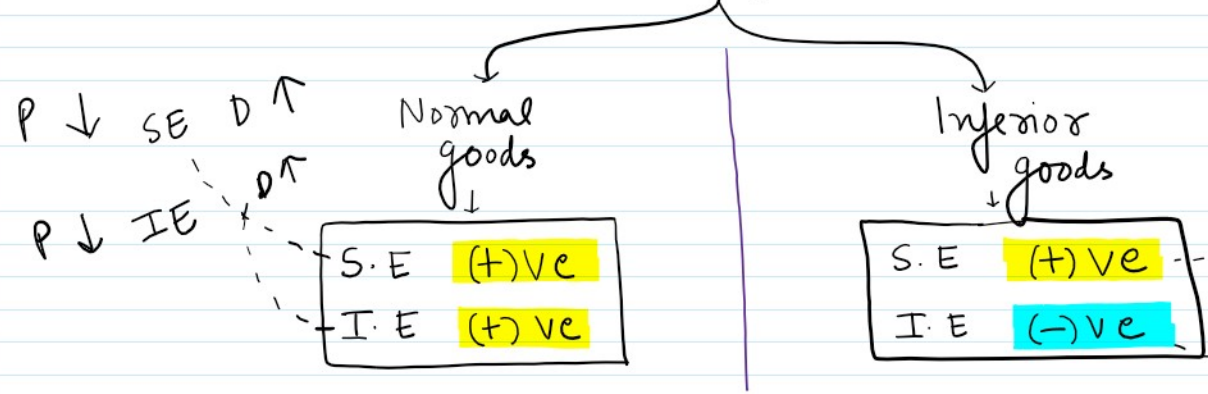

price ~~£50/-~~
£100

purchasing power ↓

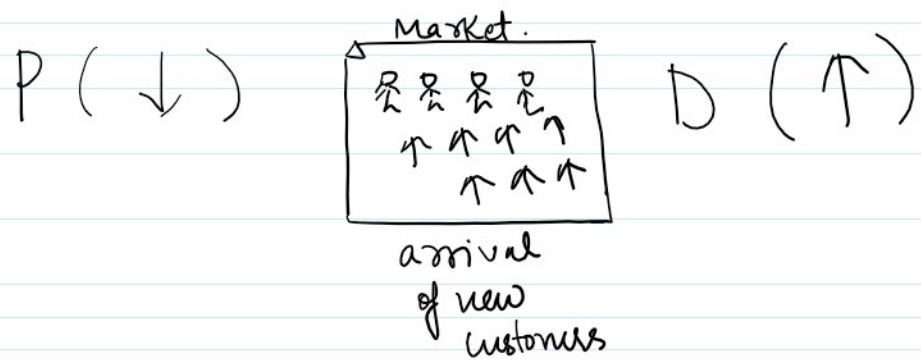

(Real Income ↓)

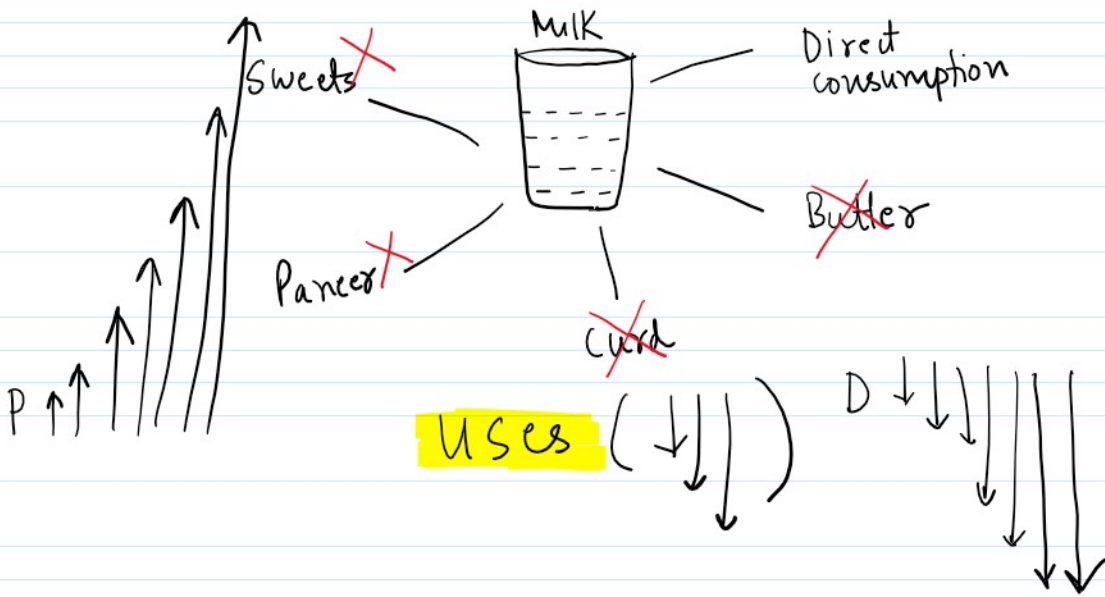

* Price effect

(iii) Arrival of new customers

(10) Different Uses (Milk, electricity) ^{of new customers}

* Exceptions of Law of Demand

(जो Law of demand follow नहीं करते)

$P \uparrow D \uparrow$

$P \downarrow D \downarrow$

(i) Conspicuous goods (Snob goods or Veblen goods)

$P \uparrow D \uparrow$

eg Very expensive goods (prestigious goods) like Diamonds

(ii) "Giffen" Goods

→ Sir Robert Giffen (Scottish Economist)

→ Meat & Bread

Meat
£500
Rich.

Bread
£~~500~~
Poor.

Rich.

Poor.

$P \uparrow D \uparrow$

~~Law of demand~~

$P \uparrow D \uparrow$

(R)*

All Giffen goods are inferior goods but all inferior goods are not Giffen

Not Giffen

g:- Toned Milk :- $P \uparrow D \downarrow$
(full cream Milk)
inferior
superior

(iii) conspicuous necessities

TV, Mobile, AC

જરૂર

$P \uparrow$

Demand do not change

(iv) future rise in prices.

future में और costlier एत आरणा

Gold

Shares ✓
Bitcoin ✓ $\uparrow \uparrow$

(v) Irrational Behavior, Speculative Goods

"Unsound"

Shares → BUY
Bitcoin → SELL

x — x — x — x — x — x — x

$$D_x = f(P_x, P_R, Y, T, O)$$

$$U_x = T(P_x, P_R, Y, I, U)$$

(आय) Paper Mothly Bad GF BE GDP

Change in Quantity demanded
 ↓
 Quantity is affected due to **Change in Price**
 Types : a) Expansion
 b) Contraction

Change in Demand
 ↓
 Quantity is affected due to **change in factors other than P_x** (P_R, Y, T, U)
 Types a) Increase
 b) Decrease

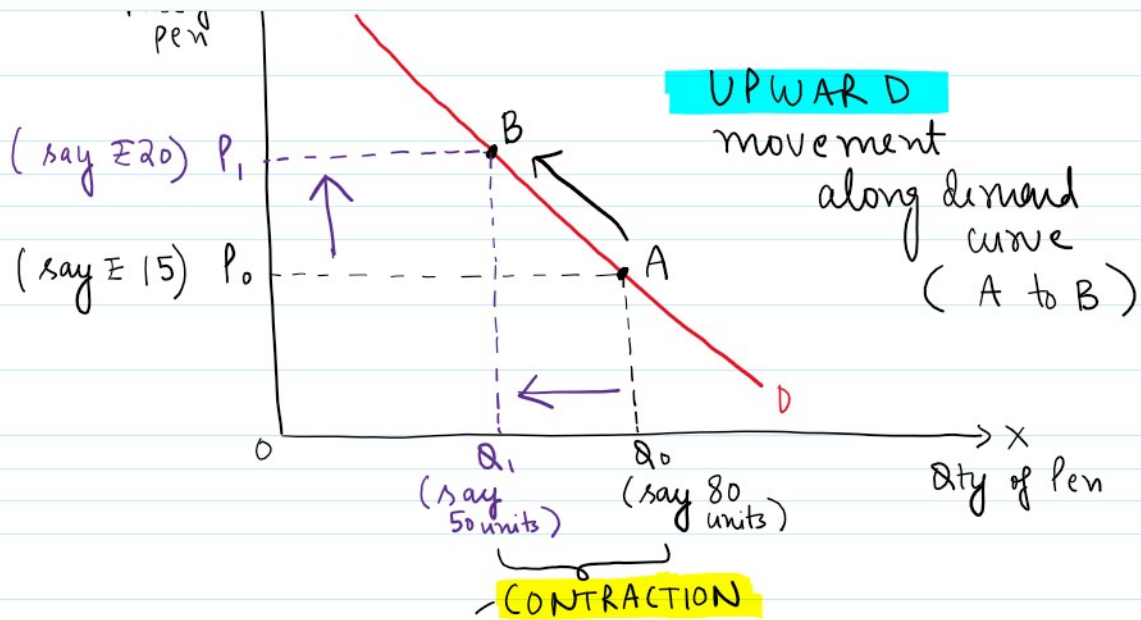

* EXPANSION & CONTRACTION

EXPANSION in Demand

Increase in Quantity Demanded

Decrease in Quantity Demanded

**

Increase in demand

Decrease in demand

P_x remains same

P_x remains same

(i) Rise in Price of Substitute good.

(i) Fall in Price of Substitute good

(ii) Fall in Price of complementary goods

(ii) Rise in price of complementary goods

(iii) Increase in Income (Normal good)

(iii) Decrease in Income (Normal good)

(iv) Fall in Income (Inferior good)

(iv) Rise in Income (Inferior good)

(v) Favourable change in Taste

(v) Unfavourable change in taste

(vi) Increase in population

(vi) Fall in population

(vii) Future expectation of Rise in price.

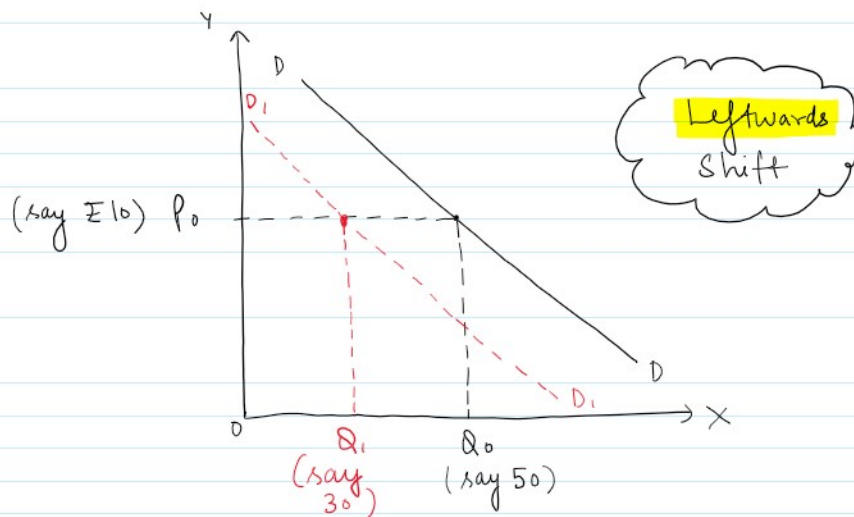

(vii) Future expectation of Fall in price

(viii) Number of consumer

(viii) Number of consumer decreases.

(iii) Number of consumer increases

(iii) Number of consumer decreases.

* ELASTICITY OF DEMAND *

→ Elasticity of demand means ³¹¹⁴ change in demand due to change in variable like price of the good (P_x), Price of related good (P_R), Income of consumer (Y) or Advertisement expenditure.

	Elasticity	Formula
→ (i)	Price elasticity (always negative)	$\frac{\% \text{ change in Quantity}}{\% \text{ change in Price of good } (P_x)}$
→ (ii)	Cross elasticity	$\frac{\% \text{ change in Quantity}}{\% \text{ change in Price of Related Good } (P_R)}$

→ (i)	Cross elasticity	$\frac{\% \text{ change in Price of Related Good (PR)}}{\% \text{ change in Quantity}}$
→ (ii)	Income elasticity	$\frac{\% \text{ change in Quantity}}{\% \text{ change in Income (Y)}}$
→ (iii)	Advertisement elasticity	$\frac{\% \text{ change in Quantity}}{\% \text{ change in Advertisement}}$

$$\% \text{ change} = \frac{\text{New} - \text{old}}{\text{old}} \times 100$$

$$= \frac{\text{नया} - \text{पुराना}}{\text{पुराना}} \times 100$$

$$\frac{87 - 72}{72} \times 100$$

eg :- class XI \Rightarrow 72
class XII \Rightarrow 87

$$\% \text{ change} = 20.833\%$$

→ Elasticity of demand has 5 degrees :-

(i) $E_d > 1$ - $\% \text{ change in } Q > \% \text{ change in Variable}$

(ii) $E_d = 1$ - $\% \text{ change in } Q = \% \text{ change in Variable}$

(iii) $E_d < 1$ - $\% \text{ change in } Q < \% \text{ change in Variable}$

(iv) $E_d = 0$ - $\% \text{ change in } Q = 0$

(v) $E_d = \infty$ - $\% \text{ change in Variable} = 0$

$$\frac{19}{17} \quad \frac{57}{14}$$

$$\frac{55}{68} \quad \frac{66}{66}$$

Fraction $\Rightarrow \frac{N}{D}$

$N > D$ \Rightarrow Answer > 1

$N < D$ \Rightarrow Answer < 1

$N = D$ \Rightarrow Answer = 1

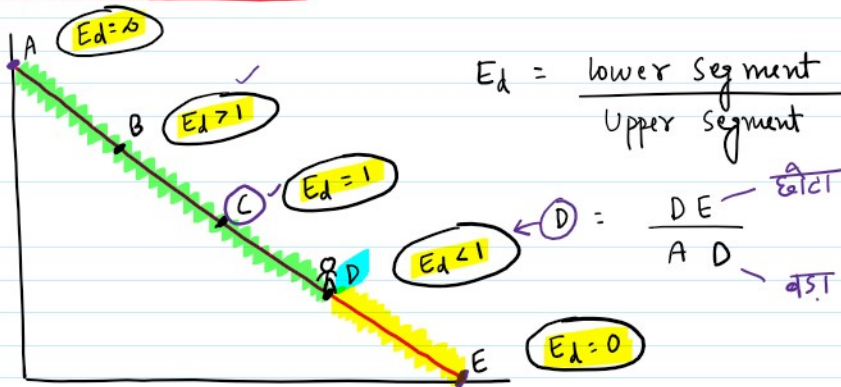

N is Zero \Rightarrow Ans = 0

D is Zero \Rightarrow Ans = ∞

$$E_d = \frac{1}{\text{slope of demand curve}} \times \frac{P_0}{Q_0}$$

(2) Geometric Method (Linear Demand curve)

(3) ARC Method (Non-linear demand curve)

$$E_d = \frac{Q_0 - Q_1}{Q_0 + Q_1} \times \frac{P_0 + P_1}{P_0 - P_1}$$

(4) Total Expenditure / Total Outlay / Total Revenue method

$$T \cdot E = P \times Q$$

	Case (1)	Case (2)	Case (3)
Price	₹1 → ₹2	₹3 → ₹4	₹5 → ₹6
Qty	6 units → 5 units	4 units → 3 units	2 units → 1 unit
T·E	₹6 → ₹10	₹12 → ₹12	₹10 → ₹6
P (↑)	TE (↑)	TE (do not change)	TE (↓)
Direction	SAME		OPPOSITE
Elasticity	$E_d < 1$	$E_d = 1$	$E_d > 1$

Q1- P (↑) ; $E_d > 1$; TE (↓)

Q2- P (↓) ; $E_d < 1$; TE (↓)

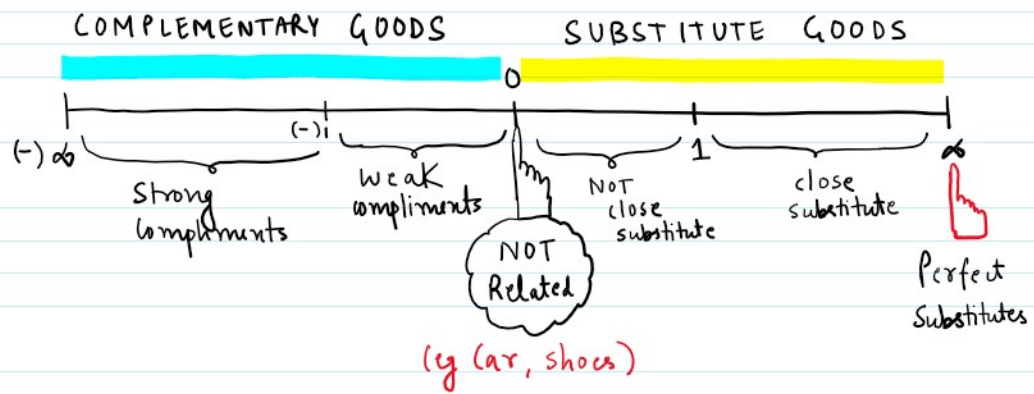

Q3- TE (↓) $E_d > 1$ P (↑)

* Income elasticity *

Good is not affected by income

* CROSS ELASTICITY *

* Factors affecting Elasticity of Demand *

Elastic $E_d > 1$
Inelastic $E_d < 1$

(i) Availability of Substitutes

Goods having close substitutes - $E_d > 1$

(ii) **Number of uses**

Milk
 → D.C
 → Sweet
 → Panner
 → Butter
 → Curd
 → etc
 $E_d > 1$

Book
 → पढ़ाई
 $E_d < 1$

(iii) **Share in consumer's Budget**

(iv) **Time Period**

→ Long (10 year) : $E_d > 1$
 → Short (1 second) : $E_d < 1$

(v) **Nature of Good**

→ LUXURY : $E_d > 1$
 → Necessity : $E_d < 1$

(vi) **Other factors**

a) Consumer habits → $E_d < 1$

b) Tied demand

printer → cartridge → $E_d < 1$

c) **Minor complementary goods**

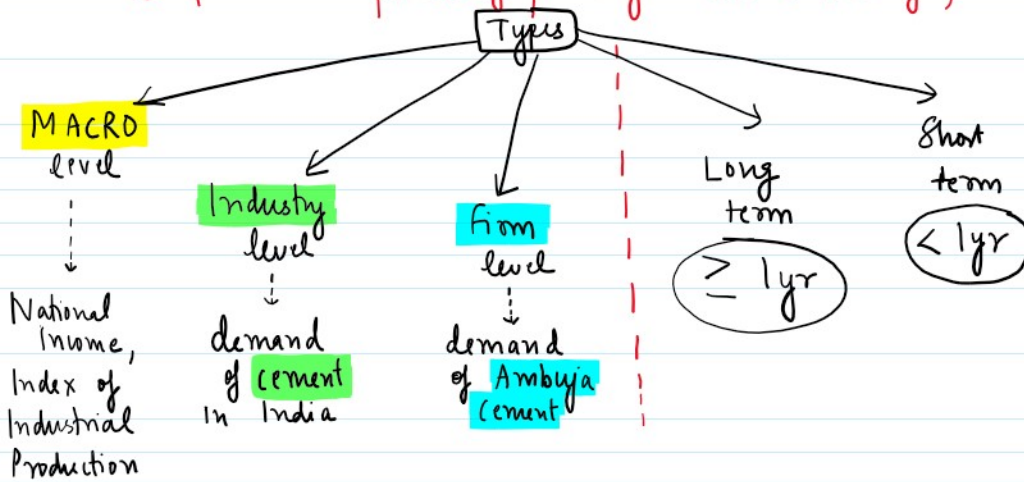

d) **Price Range** → EXTREMES

Very high : Diamond } inelastic

a) Price range → inelastic
 Very high : Diamond } inelastic
 Very low : Match box } $E_d < 1$

* Demand forecasting *

(Important in process of planning & decision making)

* Demand distinctions *

(i) Producer good VS Consumer good
 (Machine) (Bread)

(ii) Durable VS Non Durable
 (Non Perishable) (Perishable)
 (Fridge) (Milk)

(iii) Derived demand VS Autonomous demand
 product is demanded consequent on purchase of parent product
 { eg - Bricks required for construction of Building }
 demand is independent of demand of other good.

(iv) Industry demand VS Firm demand
 demand of cement in India
 demand of Ambuja cement

in India

Ambuja cement

(v) Short Run demand

vs

Long Run demand

< 1yr

≥ 1yr

Imp:

* Factors affecting Demand of "Consumer goods"

Demand of Machine (↑)

* Methods of Demand forecasting *

(i) Survey of Buyer's Intention

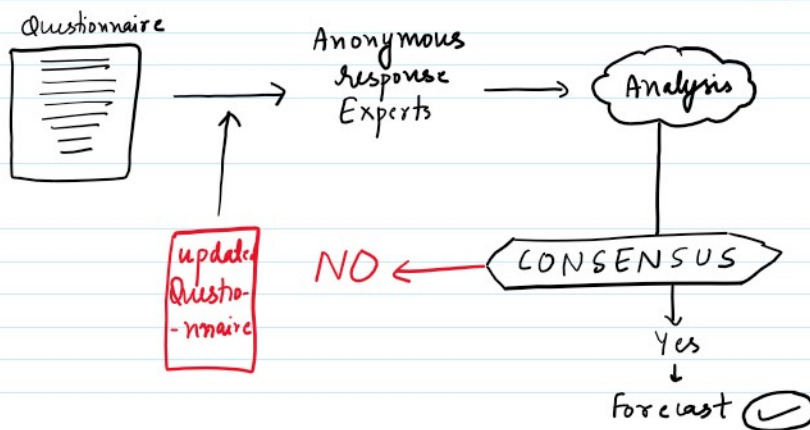

(ii) Collective Opinion method OR Sales Force method OR Grass Roots approach.

(iii) Expert Opinion Method

Delphi Technique — OLAF HELMER

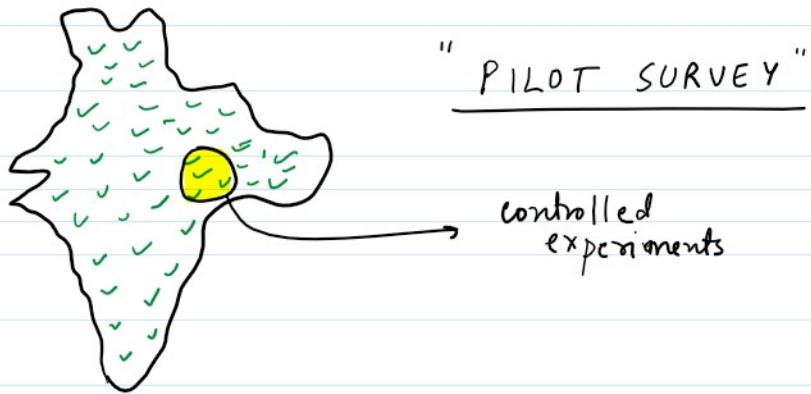

(iv) Statistical methods (Name only)

(v) Controlled Experiments

(v)

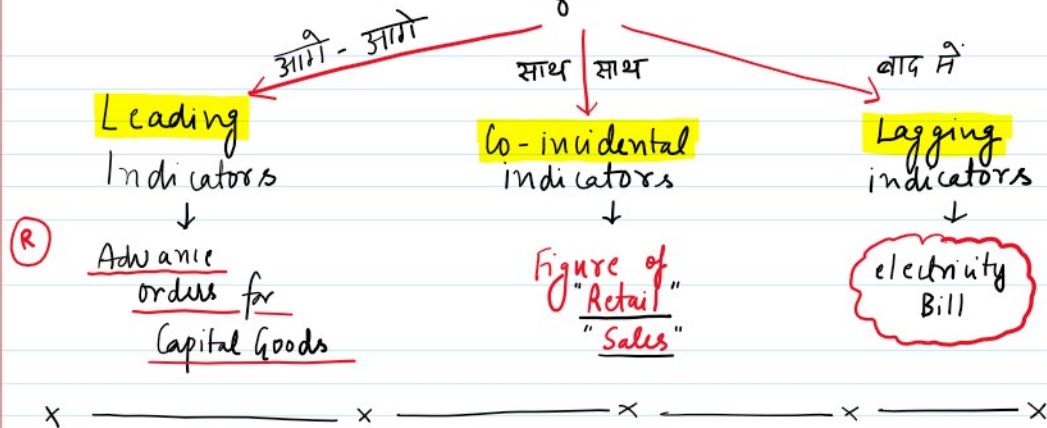

Controlled Experiments

(vi)

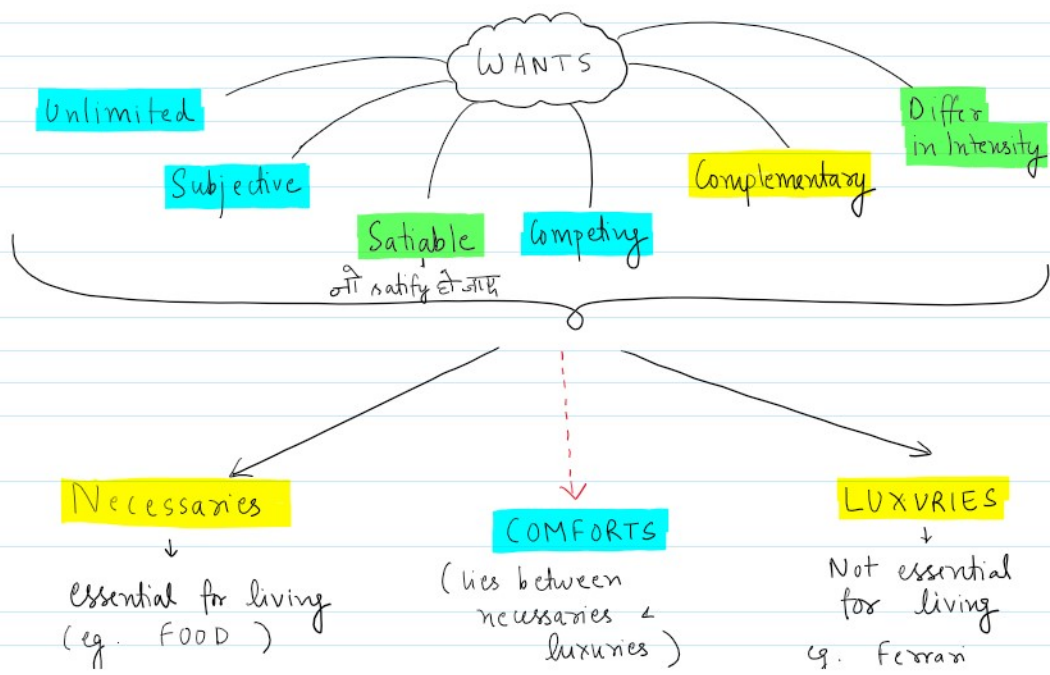

Barometric Methods

→ Based on past experience, trying to predict future

ECONOMICS

CH 2 Unit 2 : Consumer Behavior

Essential for living
(eg. FOOD)

(lies between
necessaries &
luxuries)
eg. Good House

... consumption
for living
eg. Ferrari

→ Utility

- Satisfaction
- Satiety
- ~~Usefulness~~

eg: Alcohol, Cigar

↓ Utility (✓)
↓ Usefulness (X)

Utility is "Ethically"
NEUTRAL

→ Theory of Consumer Behavior

CARDINAL
(Alfred Marshall)
↓
Quantifiable ✓
1 Burger ⇒ Satisfaction
↓
Measure ✓
Numerical ✓

ORDINAL
(Hicks + Allen)
Quantifiable X
Ranks (preference) ✓
Burger > Pizza

* MU Analysis (Alfred Marshall)

① Assumptions :-

a) Consumer is Rational -  who seek Maximum Satisfaction.

b) Utility is cardinal

c) Money is measuring rod of utility

d) Continuity in consumption i.e. no time gap between consumption

Burger 1 2 3 4 5 6 7 ---
| | | | | | |
8am 8:03am 8:10am ✓ ✓ ✓ ✓ ✓ ✓ ✓

e) Homogeneous product

e) Homogeneous product

f) Good should be divisible in nature
i.e. Quantifiable

(1) (2) (3) (4)

② Total Utility & Marginal Utility

	Burger (Units)	Marginal Utility (MU) <i>कितना मजा आया</i>	Total Utility (TU)
Satisfaction	1	10 utils	10 utils
	2	8 utils	18 utils
	3	5 utils	23 utils
Satiety (saturation)	4	0 utils	23 utils
Dissatisfaction	5	(-) 3 utils	20 utils

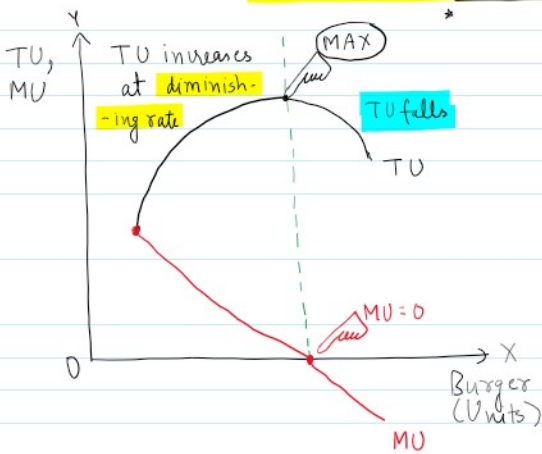

• Law of Diminishing Marginal Utility
Units ↑ MU ↓

• $TU = MU_1 + MU_2 + MU_3 + \dots + MU_N$
 $= \sum MU$

• $MU_N = TU_N - TU_{N-1}$

$MU = \frac{\Delta TU}{\Delta \text{units}}$

∴ MU is SLOPE of TU

- (i) When $MU > 0$; then TU increases at diminishing rate
- (ii) When $MU = 0$, then TU is MAX
- (iii) when $MU < 0$, then TU falls

• Limitations / Exceptions of Law of DMU

- Prestigious goods
- Hobbies

Units ↑ MU ↑

→ Hobbies ^V U

$$\text{WN} \left\{ \begin{aligned} \text{MU} &= \frac{\Delta TU}{\Delta \text{units}} \\ 4 &= \frac{x-5}{5-1} \\ 4 &= \frac{x-5}{4} \\ 16 &= x-5 \\ \boxed{21} &= x \end{aligned} \right.$$

Q4-

Units	MU	TU
3	10	43
Burger → 7	22	x

$$22 = \frac{x-43}{7-3}$$

$$22 = \frac{x - 43}{4}$$

$$88 = x - 43 \Rightarrow x = 131$$

Alfred Marshall

*** Consumer's equilibrium ***

Consumer gets maximum satisfaction by spending his entire income

Single commodity
(eg. Burger)

$$MU = P_x$$

It can be MU_x Marginal Utility of Good X
or MU_M Marginal Utility in terms of money

Two Commodities
(eg Burger & Pizza)

$$\frac{MU_x}{P_x} = \frac{MU_y}{P_y} = MU_M$$

Law of Equi-Marginal Utility

NO Diagram | NO schedule

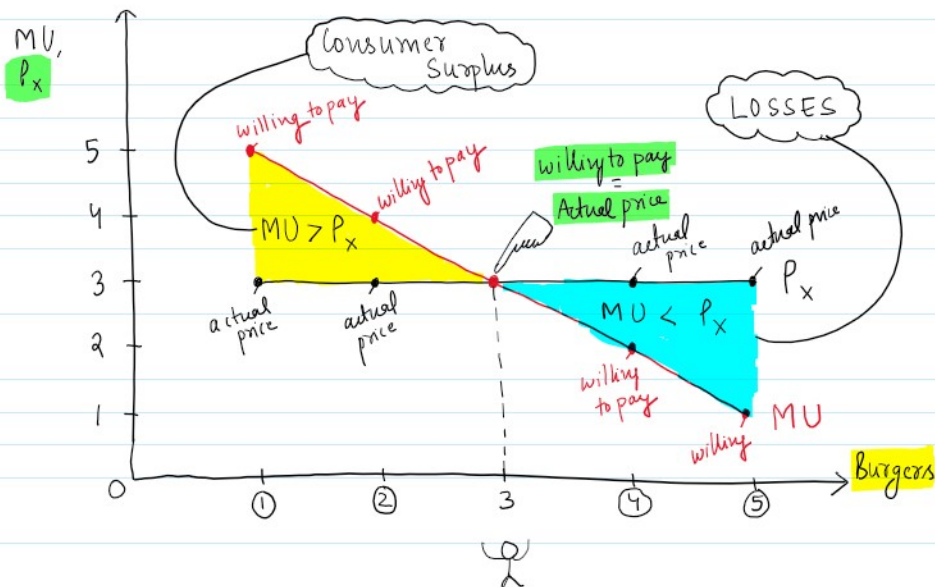

Marshall
A

Burgers (Units)	Price of Good X (Burger) P_x (Actual Price)	MU	Consumer Surplus
1	₹ 3	₹ 5	2
2	₹ 3	₹ 4	1
3	₹ 3	₹ 3	0
4	₹ 3	₹ 2	(-) 1
5	₹ 3	₹ 1	(-) 2

Willing to pay (कितने ₹ pay करता चाहते हैं)

C.E. (3)

$MU > P_x$ (Units 1, 2)
 $MU < P_x$ (Units 4, 5)

* Consumer Surplus

$$= MU (-) P_x$$

$$= \text{willing to pay} (-) \text{Actual price}$$

→ This concept is based on law of Diminishing Marginal Utility

→ At consumer equilibrium, Consumer Surplus is **Zero**

→ Application

- helps business managers
- helps finance minister

willing £ 6
 price = ~~£ 10~~
 = £ 5

→ LIMITATIONS

- Hypothetical
- Affected by various factors.

Liquor willing £ 10000
 price £ 2000 **Huge Tax**

Two Commodities (Burger + Pizza)

Let us assume

Price of Burger (P_x) = £ 1

Price of Pizza (P_y) = £ 2

Money Income (M) = £ 13

Burgers	MU_x	$\frac{MU_x}{P_x}$	Pizza	MU_y	$\frac{MU_y}{P_y}$
1	10	10	1	40	20
2	9	9	2	36	18
3	8	8	3	32	16
4	7	7	4	28	14
5	6	6	5	24	12
6	5	5	6	20	10

$$\frac{MU_x}{P_x} = \frac{MU_y}{P_y} = 10$$

10

20

10

X

Y

$$\frac{10}{1} = \frac{20}{2} = 10$$

1 Burger and 6 Pizza.

Total expenditure = £1 (+) £12 = £13 = Money Income

* Consumer's equilibrium

$$\frac{MU_x}{P_x} = \frac{MU_y}{P_y}$$

OR

$$\frac{MU_x}{MU_y} = \frac{P_x}{P_y}$$

Q1 ⇒ If $\frac{MU_x}{P_x} > \frac{MU_y}{P_y}$ then

consumer will **INCREASE** the consumption of Good X

Sol:-

Good X consumption ↑
increase
LD MU

$$\frac{10}{2} = \frac{10}{2}$$

~~$\frac{8}{5} = 5$~~

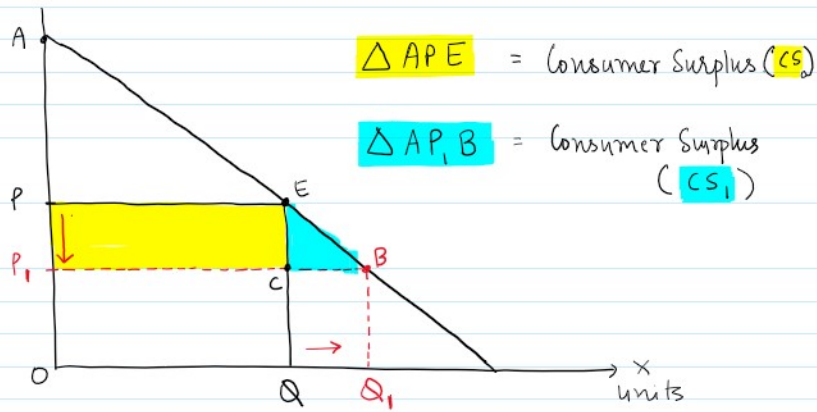

Q2 → If $\left\{ \frac{MU_x}{MU_y} < \frac{P_x}{P_y} \right\}$ then consumer

will **DECREASE** the consumption of "Good X"

$$\frac{MU_x \uparrow \uparrow}{P_x} = \frac{MU_y}{P_y}$$

* Application based on Consumer Surplus

* Application based on Consumer Surplus

$$CS_1 (-) CS_0 = PP_1BE$$

$$\text{Increase in Consumer Surplus} = PP_1CE + ECB$$

When price falls

existing buyers at P_1 start to buy

New Buyers

Q1 - MU curve is also Demand curve

Q2 - Area under MU curve is TU

* HICKS AND ALLEN *
(IC analysis)

① Assumptions

- (i) Consumer is Rational
- (ii) Consumer has monotonic preference

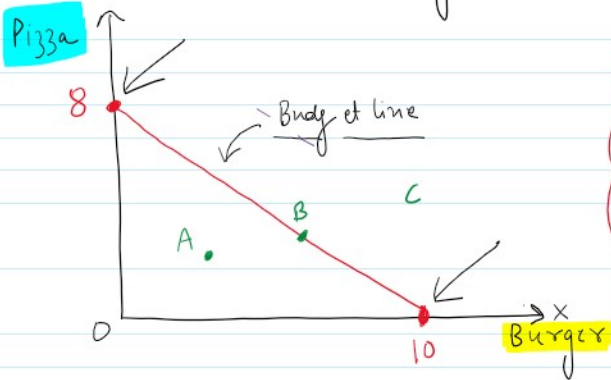

(iii) Choices are transitive

- 1) Burger^① > Pizza^②
- 2) Pizza > Momos^③
- Burger > Momos ✓

Burger Momos

② **Budget line** - shows all combinations of two goods which the consumer can buy spending his entire given income.

Assume
 Price Burger = ₹ 4
 Price Pizza = ₹ 5
 Money Income = ₹ 40

- ☐ A Not spending the entire income
- ☐ B Spending the entire income
- ☐ C Unattainable

Q1. Money Income = ₹ 80

$P_x = ₹ 5$

$P_y = ₹ 4$

slope = $\frac{5}{4}$
 = 1.25

$16 \times 5 = 80$
 $1 \times 4 = 4$

Write (i) 4 Bundles which are unattainable
 (ii) 5 Bundles which at below Budget line level.
 (iii) 3 Bundles exactly on Budget line.

Sol:- (i) (16, 1) (25, 5) (30, 10)
 (35, 40)

(ii) (2, 1) (1, 1) (5, 4) (6, 2) (4, 3)

(iii) (8, 10) (4, 15) (12, 5)

→ **Budget line equation**

$$P_x \cdot Q_x + P_y \cdot Q_y = M$$

Price of Good X Qty of Good X Price of Good Y Qty of Good Y Money Income

Expenditure on Good X Expenditure on Good Y

TOTAL EXPENDITURE = Money

$$\text{TOTAL EXPENDITURE} = \text{Money Income}$$

→ Budget constraint

$$P_x \cdot Q_x (+) P_y \cdot Q_y \leq M$$

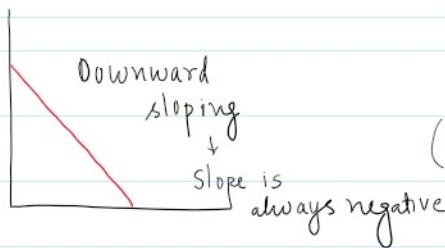

$$\text{OR } P_x \cdot Q_x (+) P_y \cdot Q_y \neq M$$

(Total expenditure cannot exceed Money Income)

→

Slope of Budget line

$$= \frac{P_x}{P_y}$$

(Ratio of Prices of two goods)

Market Rate of Exchange (MRE)

→ Shift in Budget line

It means that consumption of both goods can be increased

Reasons

- ① Increase in income
- ② Decrease in prices of goods.

It means that consumption of both goods decreased

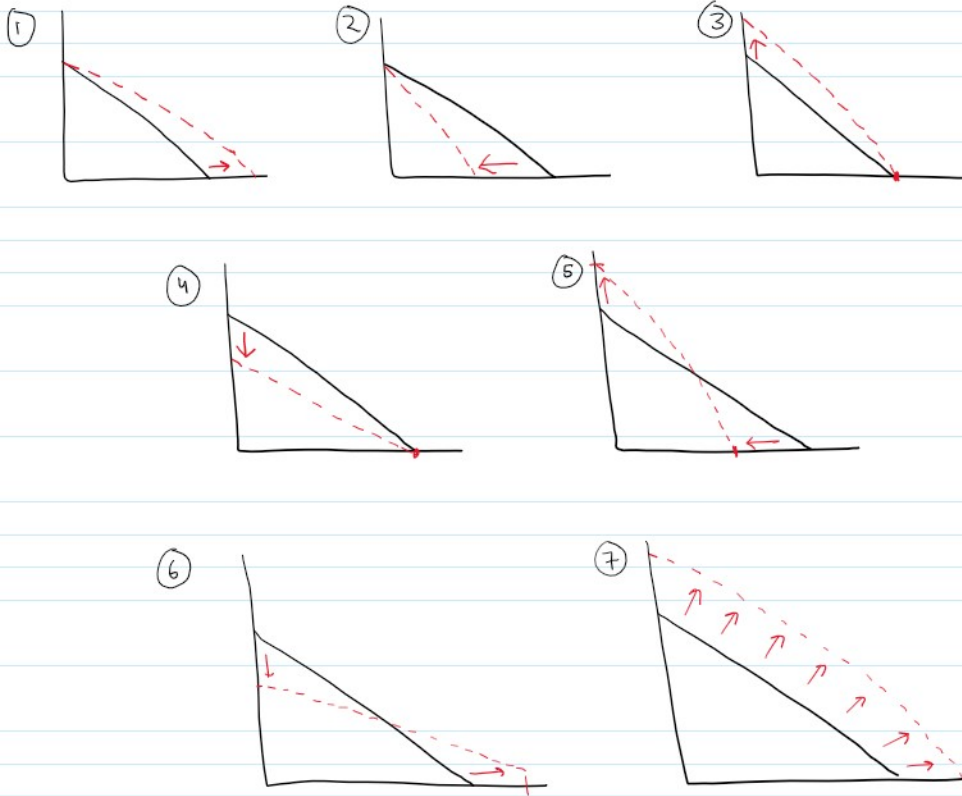

Reasons

- ① Decrease in income
- ② Increase in prices of goods.

Q → Show the effect of following on budget line :-

- (1) Price of Good X falls
- (2) " " " X Rise
- (3) " " " Y falls
- (4) " " " Y Rise

- (2) " " " X Rise
- (3) " " " Y falls
- (4) " " " Y rise
- (5) " " " X ^{सहज} rise + Good Y ^{सहज} falls
- (6) " " " " ^{सहज} falls + Good Y ^{सहज} rise
- (7) Price of both goods fall + income increases.

(8) Price of both goods as well as income decreases

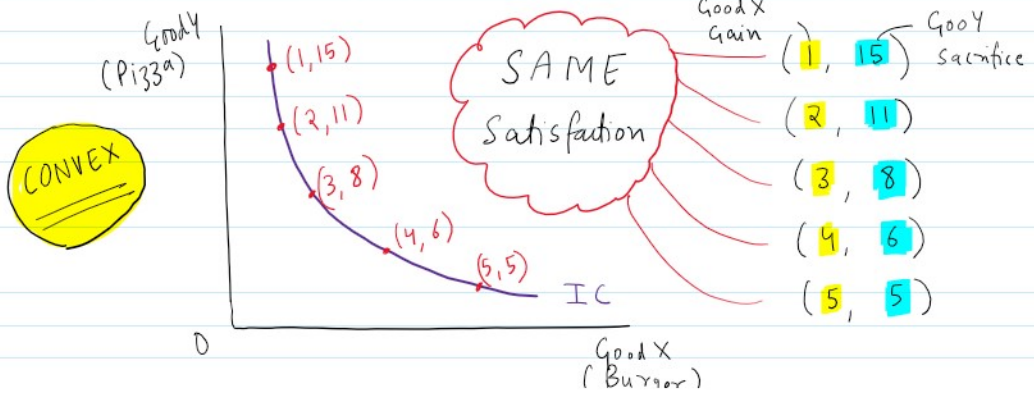

sol:-

No effect.

V. good (★)

(3) Indifference Curve **ISO-UTILITY CURVE** - IC

→ Slope of IC = Marginal Rate of Substitution (MRS_{xy})

$$\Rightarrow MRS_{xy} = \frac{\Delta \text{Goods Y}}{\Delta \text{Goods X}}$$

$$= \frac{\Delta \text{Goods Sacrificed}}{\Delta \text{Goods Gained}}$$

or $MRS_{xy} = \frac{MU_x}{MU_y}$

→ Why IC is CONVEX ??

Because of "DIMINISHING" MRS

Good X	Good Y	"MRS"
1	15	-
2	11	4 ÷ 1 = 4
3	8	3 ÷ 1 = 3
4	6	2 ÷ 1 = 2
5	5	1 ÷ 1 = 1

दमन की

Q1- IC is concave because of INCREASING MRS

Q2- IC is straight line because of CONSTANT MRS

→ Properties of Indifference Curve

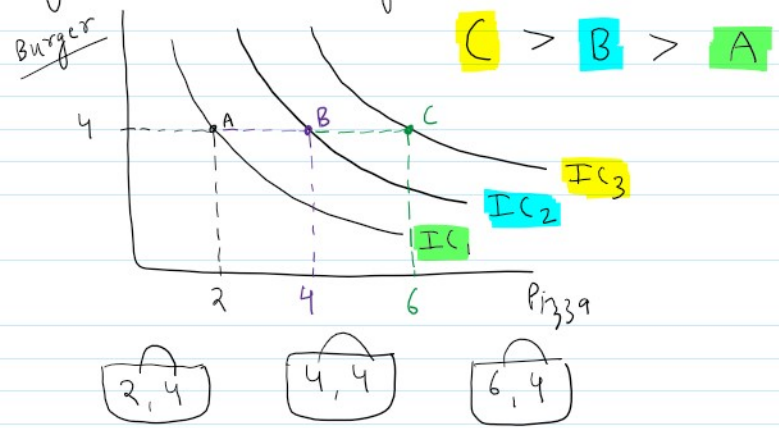

(1) IC is downward sloping and convex to the origin

because to gain one unit of Good X, we have to sacrifice some units of Good Y.

because of Diminishing MRS

(2) Two Indifference curves never intersect each other

- ② Two Indifference curves **never intersect** each other
- ③ Higher the IC, higher the satisfaction.

④ IC do not touch either of the axis

→ Consumer's Equilibrium by Hicks & Allen:

⊗ Condition 1

Slope of IC = Slope of Budget line

$$MRS = \frac{P_x}{P_y}$$

$$\underline{MU_x} = P_x$$

$$\frac{MU_x}{MU_y} = \frac{P_x}{P_y}$$

When Budget line is TANGENT to IC

Condition 2 : MRS should be diminishing i.e. "IC should be convex"

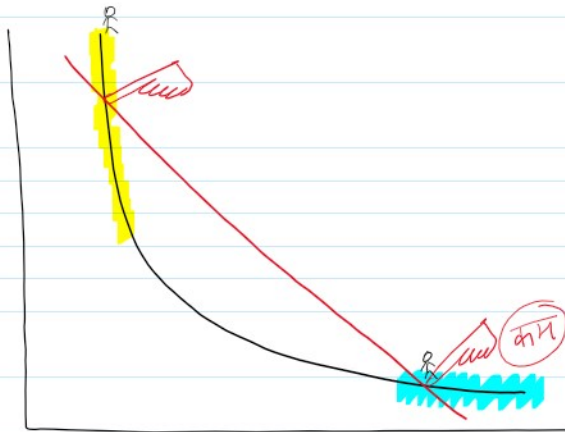

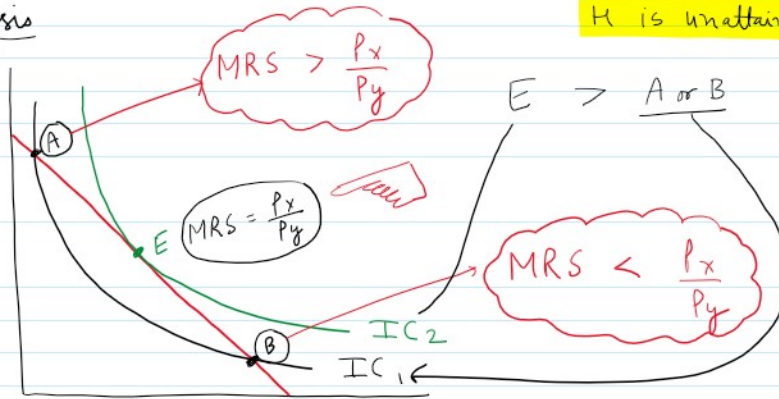

NO !!

NO !!

* Analysis

H is unattainable

Q1- If two goods are perfect substitutes then IC is straight line

Q2- If two goods are perfect complementary goods then IC is L-shaped / Right angled

Q3 - If $MRS > \frac{P_x}{P_y}$ then consumer will **INCREASE** the consumption of Good X.

Q4 - If $MRS < \frac{P_x}{P_y}$ then consumer will **DECREASE** the consumption of Good X.

ECONOMICS

CH 2 Unit 3 **SUPPLY** { ₹ producer ₹ }

① Supply :- amount of goods or services that a **producer** is **willing** and **able** to offer to the market at **various prices** during a given period of time

producer	₹ 10	1 phone
(+)	₹ 1000	10 phone

• Supply is a **FLOW** concept

~~3:17pm is a point~~

3:17pm
At this point

1 Jan ———— 31 Jan
Time dimension

② FACTORS affecting Supply (Determinants of supply)

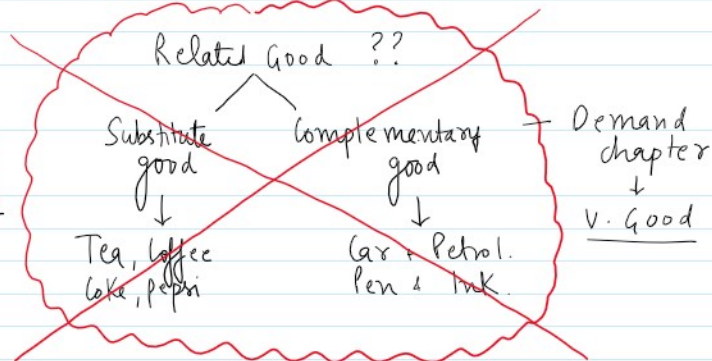

(a) Price of the commodity (P_x)

$P_x (\uparrow) \rightarrow S_x (\uparrow)$ or Vice versa

DIRECT relation

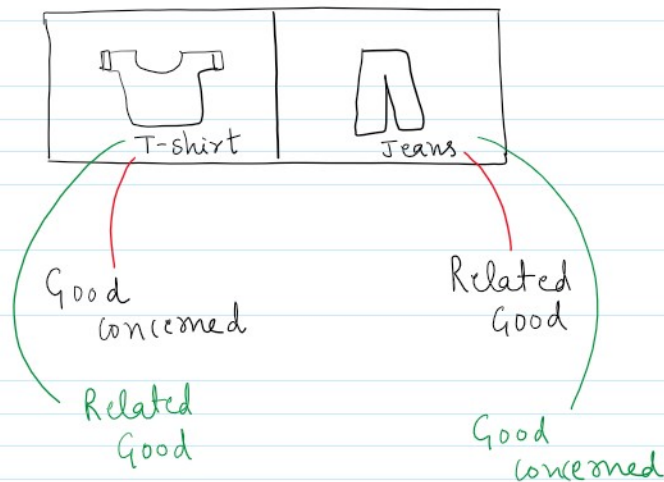

(ii) Price of Related (Competitive) Good (P_R)

BLUNDER

producer

 (Two goods produce)

eg:-
 producer.

 (Amul)

How Price of Butter (P_R) will affect supply of Milk (S_x) ??

→ Price of Butter (\uparrow) Supply of Milk (\downarrow)

Inverse relation

(iii) ^{input} COST of "Factors of Production" (F)
→ Inputs

⊿ Labour €100 → □

⊿ (Labour) €150 → □ Supply ??

COST (\uparrow) Supply (\downarrow)

Inverse Relation

(iv) Technology (T)

↳ Advanced Technology : COST (\downarrow) Supply (\uparrow)

↳ Obsolete technology : COST (\uparrow) Supply (\downarrow)

(v) Excise Duty : Tax on Manufacture (production)

(production)

Excise duty (↑) S_x (↓)

Inverse

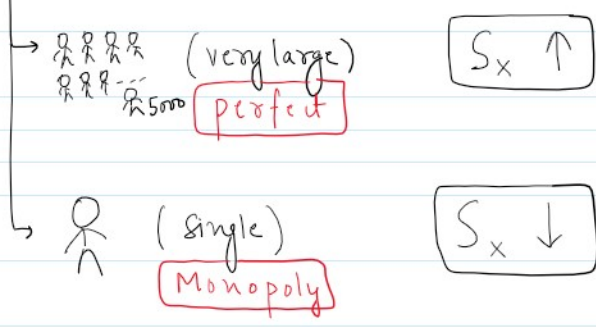

(vi) **Subsidy** - financial assistance provided by government

Subsidy (↑) Supply (↑)

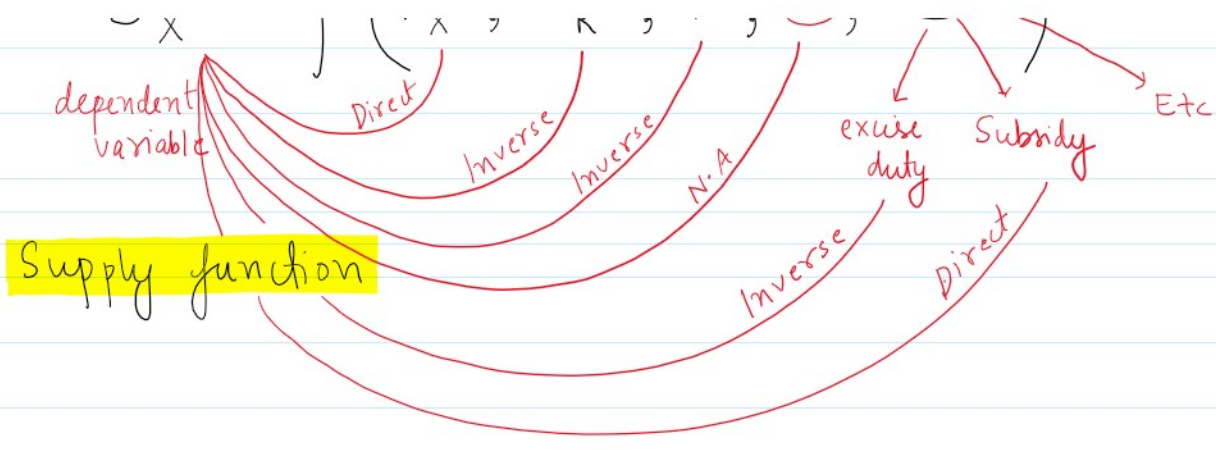

DIRECT relation

(vii) **Number of firms**

③ $S_x = f(P_x, P_R, F, T, O)$

dependent → P_x direct → P_R → F → T → O → Etc

(4) $S_x = f(P_x, P_R, F, T, O)$

ASSUME

CONSTANT

"being other things constant"

Direct relation

LAW OF SUPPLY

CETERIS PARIBUS

* Law of Supply is a **QUALITATIVE** statement.

X Quantitative - कितना ? $P_x \uparrow S_x \uparrow$
 $P \neq 2 S_x \uparrow ??$

✓ Qualitative - Relation (रिश्ता)

(5) **Supply Schedule and Supply Curve**

Price	Quantity
₹1	100 units
₹2	112 units
₹3	250 units
₹4	252 units
₹5	950 units

(6) **Change in Quantity Supplied** | **Change in Supply**

⑥

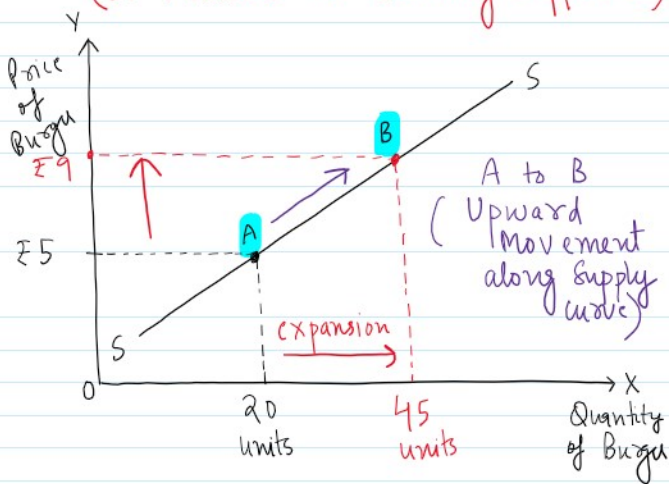

Change in Quantity Supplied

$$S_x = f(P_x, P_R, F, T, O)$$

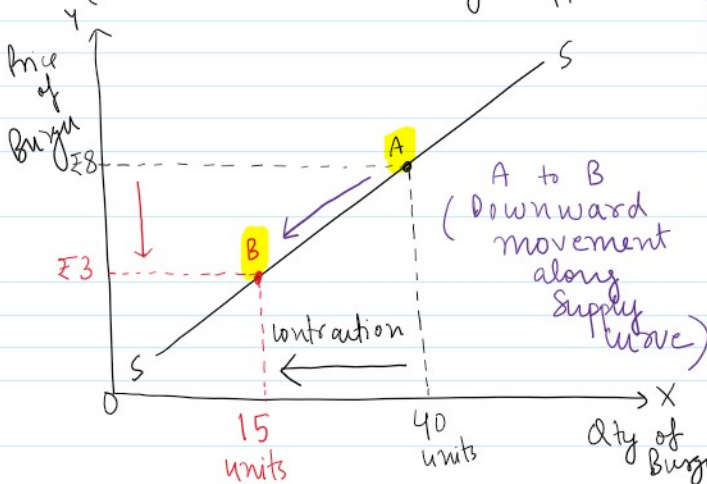

It is of two types :-

- a) Expansion in Supply
- b) Contraction in Supply

a) Expansion in Supply
(or Increase in Quantity Supplied)

b) Contraction in Supply
(Decrease in Quantity Supplied)

- ① Increase in P_R
- ② " " F
- ③ " " Excise duty
- ④ obsolete technology

Change in Supply

$$P_R, F, T, O$$

It is of two types :-

- a) Increase in Supply
- b) Decrease in Supply

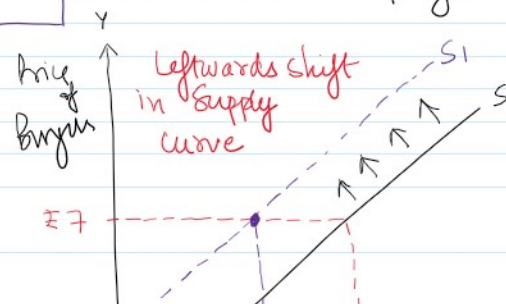

a) Increase in Supply

Reasons :-

- (i) Decrease in P_R
- (ii) Decrease in F
- (iii) Decrease in Excise duty
- (iv) Advancement in Technology
- (v) Increase in Subsidy
- (vi) Increase in Number of firms. etc

b) Decrease in Supply

- (3) " " Excess duty
- (4) obsolete technology
- (5) Decrease in Subsidy
- (6) " " in No. of firms etc

⑦ Price elasticity of Supply (E_s)

$$E_s = \frac{\% \text{ change in Quantity}}{\% \text{ change in Price}}$$

$$\% \text{ change in Quantity} = \frac{Q_1 - Q_0}{Q_0} \times 100$$

Q_1 = New Quantity
 Q_0 = old Quantity

$$\% \text{ change in Price} = \frac{P_1 - P_0}{P_0} \times 100$$

P_1 = New Price
 P_0 = old Price.

(i) $E_s = 0$	Perfectly Inelastic	$\% \Delta \text{ in } Q = 0$
(ii) $E_s < 1$	Less than elastic (or Inelastic)	$\% \Delta \text{ in } Q < \% \Delta \text{ in } P$
(iii) $E_s = 1$	Unitary elastic	$\% \Delta \text{ in } Q = \% \Delta \text{ in } P$
(iv) $E_s > 1$	More than elastic (or Elastic)	$\% \Delta \text{ in } Q > \% \Delta \text{ in } P$
(v) $E_s = \infty$	Perfectly Elastic	$\% \Delta \text{ in } P = 0$

① $E_s = 0$
 Parallel to Y-axis

② $E_s < 1$
 Steeper

③ $E_s = 1$

Q :- Price of a good rises from ₹ 7.50 to ₹ 8.25 and its quantity supplied rises from 475 units to 617.5 units. Find E_s

Sol:-

$$\begin{aligned} \% \text{ change in Quantity} &= \frac{Q_1 - Q_0}{Q_0} \times 100 \\ &= \frac{617.5 - 475}{475} \times 100 \\ &= 30\% \end{aligned}$$

$$\begin{aligned} \% \text{ change in Price} &= \frac{P_1 - P_0}{P_0} \times 100 \\ &= \frac{8.25 - 7.50}{7.50} \times 100 \\ &= 10\% \end{aligned}$$

$$\therefore E_s = \frac{\% \text{ Change in Quantity}}{\% \text{ Change in Price}} = \frac{30\%}{10\%} = 3$$

Q2 - E_s of supply curve passing through origin & making an angle of 75° is $E_s = 1$

Q3 - E_s of supply curve passing through origin & making an angle of 30° is $E_s = 1$

Q4 - E_s of supply curve cutting Y-axis on extension

Q4- E_s of supply wave cutting Y-axis on extension is $E_s > 1$

Q5 - E_s of Supply wave cutting X-axis on extension is $E_s < 1$

Q6- Is it possible that elasticity on same supply wave is not constant (i.e. varies) ??

हाँ $E_s > 1$ हाँ $E_s < 1$

Sol:- **YES** (in case of **Non-Linear** Supply Curve)
 ↓
 Curvilinear

* Methods of calculating E_s *

① Point elasticity *by default.*

$$E_s = \frac{\Delta Q}{\Delta P} \times \frac{P_0}{Q_0}$$

$$= \frac{Q_1 - Q_0}{P_1 - P_0} \times \frac{P_0}{Q_0}$$

② Arc elasticity

$$E_s = \frac{Q_1 - Q_0}{Q_1 + Q_0} \times \frac{P_1 + P_0}{P_1 - P_0}$$

* Factors affecting elasticity of Supply *

Flexible : change in Quantity very easy (very large)

Elastic $E_s > 1$

Not flexible :- change in Quantity very less

Inelastic $E_s < 1$

(i) Time Period

Producer:

→ (5 yr.) Long time period \div $E_s > 1$

→ (5 sec) Short time period $-$ $E_s < 1$

(ii) Expected cost of Production

→ Supply is inelastic

(iii) Supply is more elastic if firms are not working to full capacity

less elastic

not working to full capacity

Not working to full capacity

Less elastic
more elastic

(iv) Availability of Raw Materials

→ easily available ($E_s > 1$)

→ Not easily available ($E_s < 1$)

(v) Ease of factor substitution

Factor की अदला-बदली

Labour (represented by stick figures) and Machine

i) Easy :- ($E_s > 1$)

ii) Hard :- ($E_s < 1$)

(vi) Mobility of factors

→ easy - ($E_s > 1$)

→ Not mobile - ($E_s < 1$)

(vii) Future expectation

.. - ↑ - 2021 Ka

(vi) Future expectation

Supply inelastic

* EQUILIBRIUM & SOCIAL EFFICIENCY *

equilibrium

Q1-
=

$Q = (-) 100 + 10 P$

find E_s when $P = 15$

find E_s when $P = 15$

Sol:-

Quantity
 $P_0 = \text{₹} 15$
 $Q_0 = 50$

price.
 $P_1 = \text{₹} 16 / \text{₹} 17$
 $Q_1 = 60 / 70$ Any Value

$$E_s = \frac{Q_1 - Q_0}{P_1 - P_0} \times \frac{P_0}{Q_0}$$

$$= \frac{60 - 50}{16 - 15} \times \frac{15}{50}$$

$$= \frac{10}{1} \times \frac{15}{50} = 3$$

Q2- When price is ₹ 15, quantity is 400 units
 With fall in price by 20%, quantity falls by 120 units. Find E_s (i) Point method

$$E_s = \frac{Q_1 - Q_0}{P_1 - P_0} \times \frac{P_0}{Q_0}$$

$$= \frac{280 - 400}{12 - 15} \times \frac{15}{400}$$

$$= \frac{-120}{-3} \times \frac{15}{400}$$

$$= 1.5$$

(ii) Arc method.

$$E_s = \frac{Q_1 - Q_0}{Q_1 + Q_0} \times \frac{P_1 + P_0}{P_1 - P_0}$$

$$= \frac{280 - 400}{280 + 400} \times \frac{12 + 15}{12 - 15}$$

$$= \frac{-120}{680} \times \frac{27}{-3}$$

$$= 1.58$$

Q3- $Q = (-) 12 - 5P$
 find E_s when $P = \text{₹} 9$

Sol:-

$P_0 = 9$ $Q_0 = (-) 57$	$P_1 = 11$ $Q_1 = (-) 67$
-----------------------------	------------------------------

→ Any Value

sol.

$$r_0 = 10$$

$$Q_0 = (-)57$$

$$r_1 = 11$$

$$Q_1 = (-)67$$

$$\frac{Q_1 - Q_0}{P_1 - P_0} \times \frac{P_0}{Q_0} \Rightarrow \frac{(-)67 - (-)57}{11 - 9} \times \frac{9}{(-)57}$$

$$= \frac{(-)10}{2} \times \frac{9}{(-)57}$$

$$= 0.789$$

Q4 - E_s of Good X is half of E_s of Good Y.
 10% fall in price of Good Y results in
 fall in supply from 400 units to 280 units.
 Calculate % change in Quantity of Good X
 when its price falls from £20 to £18.

Sol

Good X

E_s

$$E_s = 1.5$$

$$P_0 = 20$$

$$P_1 = 18$$

$$\% \text{ Change in Price} = \frac{P_1 - P_0}{P_0} \times 100$$

$$= \frac{18 - 20}{20} \times 100$$

$$= (-) 10\%$$

$$E_s = \frac{\% \text{ C in } Q}{\% \text{ C in } P}$$

$$1.5 = \frac{\% \text{ C in } Q}{(-) 10\%}$$

Good Y

E_s

$$\% \text{ change in Price} = (-) 10\%$$

$$Q_0 = 400$$

$$Q_1 = 280$$

$$\% \text{ change in Qty} = \frac{Q_1 - Q_0}{Q_0} \times 100$$

$$= \frac{280 - 400}{400} \times 100$$

$$= (-) 30\%$$

$$E_s = \frac{\% \text{ C in } Q}{\% \text{ C in } P} = \frac{(-) 30\%}{(-) 10\%} = 3$$

← half

(-) 10%

∴ % (in Q) = (-) 15%

Q5- Price of a goods changes from £ 4 to £4.80
As a result quantity rises by 12 units.
Find Q_0 and Q_1 when $E_s = 1.5$

Sol:- $P_0 = 4$ $Q_0 = x$
 $P_1 = 4.80$ $Q_1 = x + 12$

$$E_s = \frac{Q_1 - Q_0}{P_1 - P_0} \times \frac{P_0}{Q_0}$$

$$1.5 = \frac{(x+12) - x}{4.80 - 4} \times \frac{4}{x}$$

H.W
Ch 2.
1-120

$$1.5 = \frac{12}{0.8} \times \frac{4}{x}$$

$$x = \frac{12 \times 4}{0.8 \times 1.5} = 40 \quad (Q_0)$$

$$\therefore Q_1 = 40 + 12 = 52$$

Economics

CH-3
(Unit-1)

Theory of Production

① Production

→ wider sense in Economics

→ It is a process by which man utilizes the resources of nature so as to make them satisfy human wants

प्रक्रिया

Resources

convert

?????

wood

sit on chair.

wood → sit chair.

→ Making of chair (+) Services of Doctor.
BOTH ARE PRODUCTION

→ Production can be defined as **CREATION/ ADDITION TO UTILITY** (i.e. Production is nothing but creation of utilities in the form of **GOODS** and **SERVICES**)
~~(video game :-) creation of utility :-)~~

→ Production is creation of **UTILITY**

2
V. Imp.

"FACTORS" OF PRODUCTION

INPUTS required
 ??????????

- Land } primary / original factor
- Labour } primary / original factor
- Capital - Produced factor
- Entrepreneur

A. LAND

- Wider Sense in Economics
- All FREE GIFTS of **NATURE** (Soil, Water, Air, Mountains, Rivers, etc etc)
- It cannot be created (nor destroyed)
- Its usefulness depends on **HUMAN EFFORTS**

- It is a **Passive** factor (Not Active)

- Land **cannot be shifted** from one place to another.

- Supply of Land is **PERFECTLY INELASTIC** (i.e. **FIXED / CONSTANT**)

B. LABOUR

→ Mental (+) Physical
EXERTION --- efforts
to produce goods & services

→ It is an Active factor

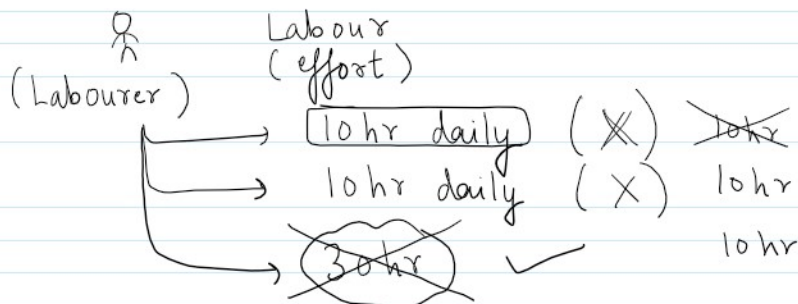

→ It **may not be productive**

7 → 100 " efforts " → (0)
 8 → 100 H-HR

→ Work done for sake of pleasure or love + affection is **NOT LABOUR**

Services of Housewife

→ Labour is **PERISHABLE** (i.e. Labour cannot be stored)

→ Labour has **poor bargaining power**

* → Supply of Labour & Wage Rate Relation

मेहनत की
 शक्ति

$W_R (\uparrow)$ $S_L (\uparrow)$ Leisure Time (\downarrow)

BUT after certain point even if

$W_R (\uparrow)$ S_L does not increase and they prefer Leisure time

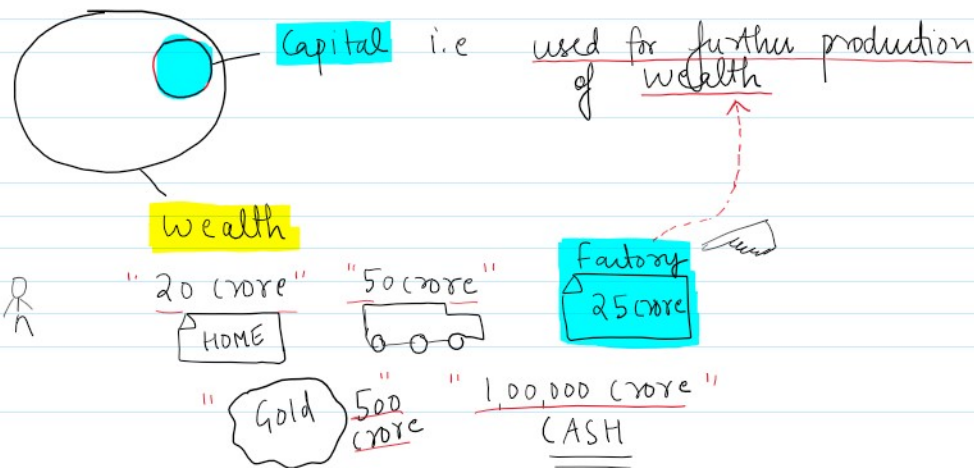

WR (1)

they prefer leisure time

$S_L (\downarrow)$ Leisure time (\uparrow)

C. CAPITAL (Produced Factor)

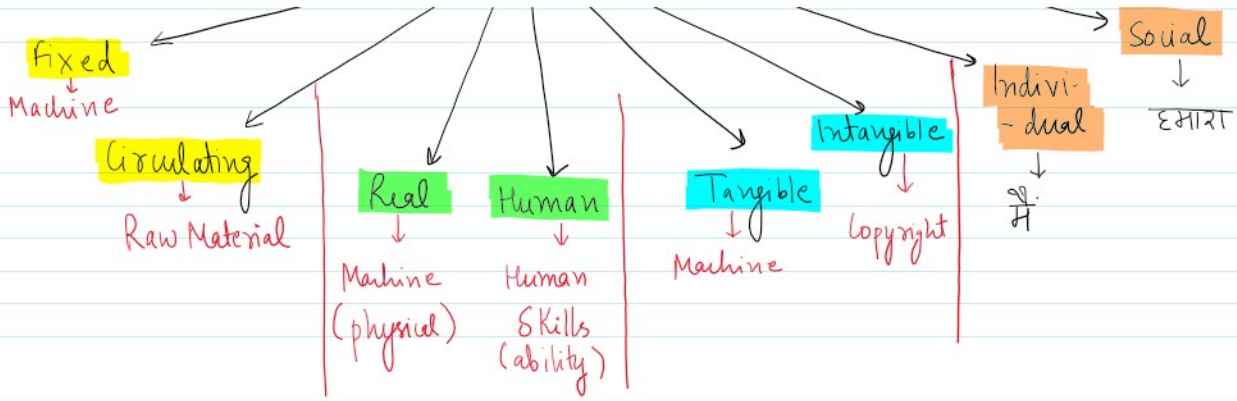

- Capital is a result of SAVINGS
- It is a STOCK concept
- If some resources (wealth) are lying idle; then these are not part of Capital

"production से करता"

- Capital is PRODUCED means of production

Types of Capital

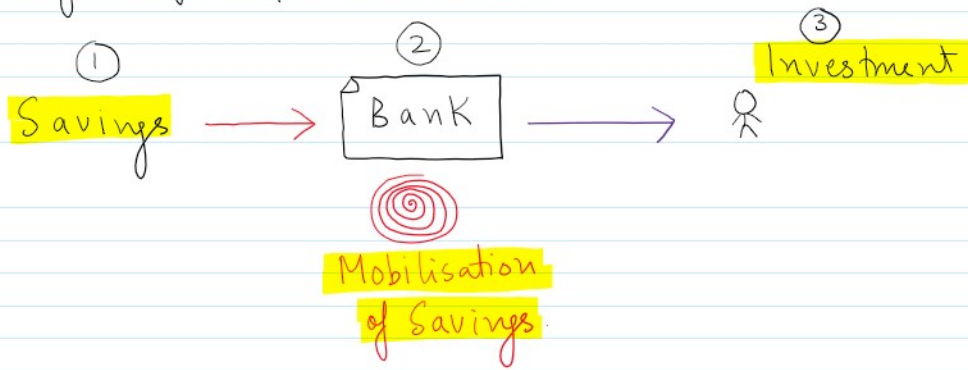

→ **Capital formation** - sustained increase in stock of Real Capital.

→ Stages of Capital formation

D. ENTREPRENEUR

(Organiser OR Manager OR Risk Taker)

Who mobilises the above three factors (i.e. Land, Labour, Capital)

→ He **initiate** the business and takes **Risk** and bears **uncertainty**

↓
Unforeseen

↓
Foreseen

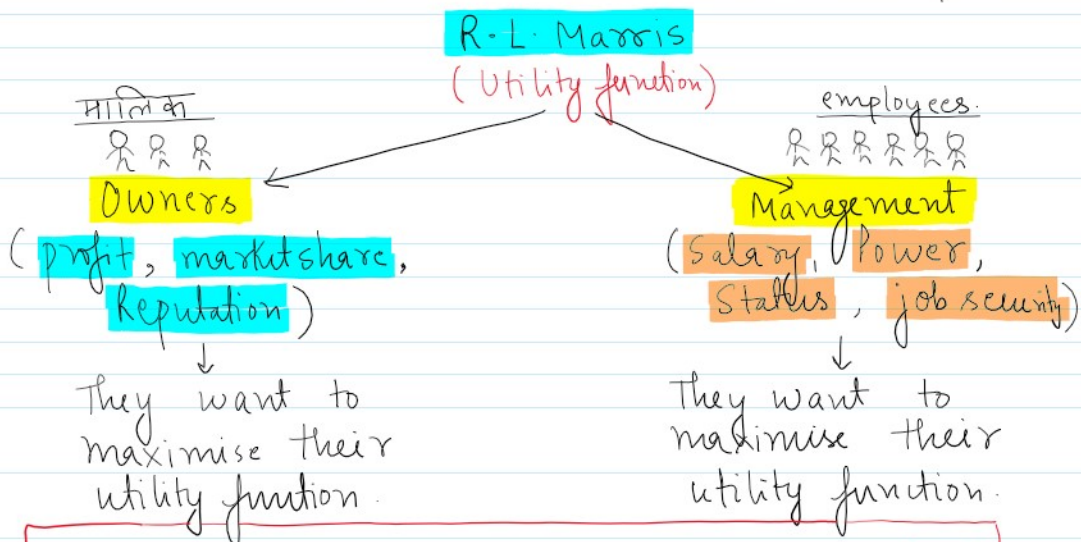

→ **Schumpeter** - **INNOVATION** is the main function of entrepreneur.

→ **Frank Knight** - **Profit** is the reward of Bearing "Uncertainties"

→ Enterprise Objectives.

D I V E R G E N C E

C O N V E R G E N C E

CONVERGENCE

② Economic objective

PROFIT MAXIMISATION

profit π $\frac{\pi}{E}$??

Details
in
COST
chapter

Accounting profit :- Total Revenue (-) Explicit COST

Economic profit :- Total Revenue (-) Economic COST

H A Simon	Baumol's theory	AA Berle & GC Means (Williamson's theory)	Cyert + March
Only Reasonable profit.	SALES Maximisation	Managers want to enjoy discretionary powers	profit (+) production goals (+) Inventory goals (+) Sales goals (+) Market share goals.

(iii) Social objectives

- Un adulterated goods.
- Avoid anti social practices

(iv) Human objectives

- fair deals to employees
- develop new skills & abilities

(v) National Objectives

- Remove inequality
- help the country to become self sufficient

→ help the country to become self sufficient

* Various objectives may **CONFLICT** with each other.

→ Enterprise Constraints (रुकावट)

- Lack of **Knowledge + information** → रुकावट
- Restrictions imposed by state in public interest
- Infrastructural inadequacies
- **Changes** in Business < economic conditions
- Events - Interest Rates, Inflation etc

→ Enterprise PROBLEMS.

- Problems relating to objectives - objectives are multifarious (conflicting)
- Problem relating to location & size of plant
- Problem relating to physical facilities **selecting** & **organising**

- Problem relating to **FINANCE**
- Problem relating to **Organisation structure**

आयता षंसा ?
 पंशया षंसा ?

- Problem relating to **Marketing**

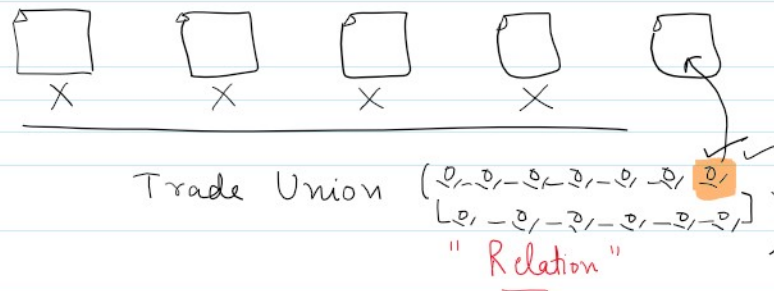

4 P's

- Problem relating to **legal** formalities

- Problem relating to **Industry Relations**

③ **PRODUCTION FUNCTION**

$$Q = f(F_1, F_2, F_3, \dots, F_n)$$

Resired Output (pointing to Q)

Factor Inputs (under the bracketed part of the function)

$$\text{Mango Shake} = f(\text{Milk, Mango, Sugar, Ice, Cream, } \dots)$$

→ (R) Basically it can be defined as **minimum***

→ (R) Basically it can be defined as **minimum quantities** of various inputs that are required to yield **given output**

- Given Inputs X
- Maximum inputs. X
- Maximum Output X
- Minimum Output X

→ Assumptions :-

- The above relationship is for "specific time period" only
- Technology remains constant
- In the production function we assume that "given output" is Maximum

→ Short Run (short period)

- At least 1 input is FIXED (Factor)
- Other inputs are variable

Returns to **FACTOR**

Long Run (Long period)

- All inputs are variable. (NO FIXED INPUT)

Returns to **SCALE**

* Marginal Product (MP) *

→ It is the **additional product** with every additional unit of **variable input** (Labour)

$$\rightarrow MP = \frac{\Delta TP}{\Delta N}$$

→ MP is **SLOPE** of TP

* **N** = No. of **Variable Inputs** (मजदूरों की संख्या)

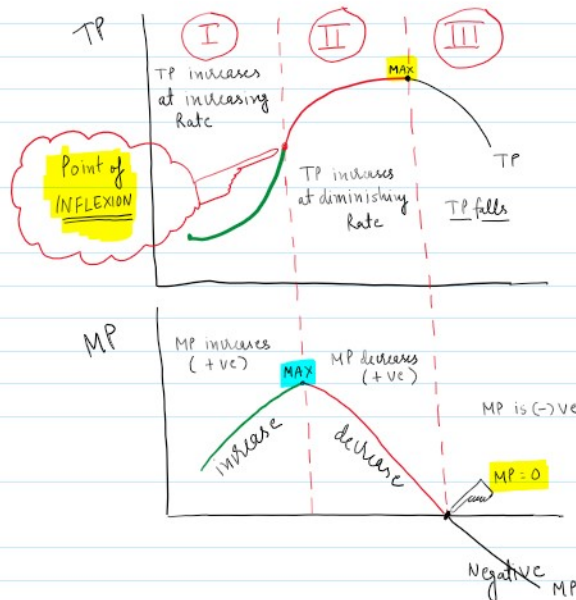

SHORT RUN →

Stage I

Stage II

Stage III

Fixed Input (LAND)	Variable Input (Labour)	Total Product (TP)	Average Product (AP)	Marginal Product (MP)
1	0	0	0	0
1	1	4	4	+4
1	2	10	5	+6
1	3	18	6	+8
1	4	24	6	+6
1	5	28	5.6	+4
1	6	30	5	+2
1	7 (Max)	30	4.2	0
1	8 (Dist)	28	3.5	-2
1	9	24	2.6	-4
1	10	20	2	-4

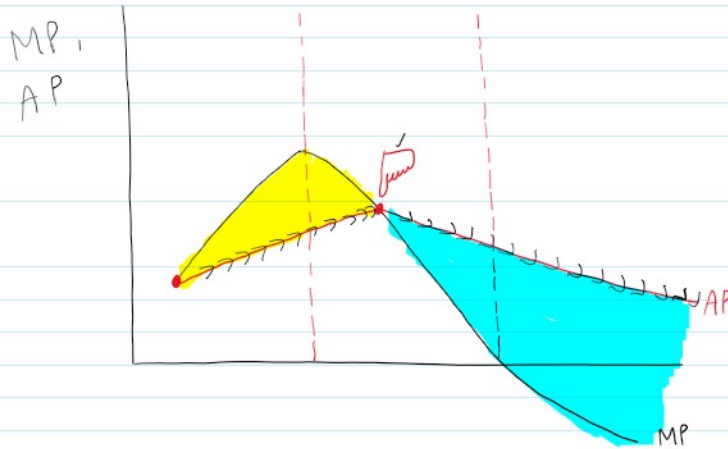

(i) When TP increases at increasing rate then MP is (+)ve and increasing.

(ii) When TP increases at diminishing rate then MP is decreasing (but positive)

MP is decreasing (but positive)

(iii) When TP is Maximum then MP is Zero

(iv) When TP falls then MP is Negative

- (i) When $MP > AP$; AP rises
- (ii) When $MP < AP$; AP falls
- (iii) When $MP = AP$; AP MAXIMUM

Law of Variable Proportion (Short Run)

Stage I :- Increasing Returns to Factor

→ TP increases at increasing rate

→ MP increases and reaches maximum

(Point of Inflection)

Reasons for Stage I

- Specialisation
- "Indivisibility" of Factors
- Efficiency of fixed Factors :-)

Stage II :- Diminishing Returns to Factor

→ TP increases at diminishing rate

→ MP falls and reaches Zero.

→ TP also reaches its Maximum.

- MR falls and reaches Zero.
- TP also reaches its Maximum.

* → After point of inflexion, fixed factors become inadequate i.e. loss of efficiency

Stage III :- Negative returns to factor

- TP falls
- MP becomes negative

* → Quantity of variable factor (i.e. labour) becomes "too excessive" relative to fixed factor. (poor coordination)

* Rational producer will "always produce" in STAGE - 2 (because TP is MAXIMUM)

* Stage 1 & Stage 3 are stages of Economic Absurdity (NonSense)

LONG RUN

(ALL factors are Variable)

Law of Returns to Scale

→ Change in scale means that, all factors of production are increased / decreased in Same proportion

eg	Inputs	Output
L = Labour K = Capital	1L + 2K	100 units
	2L + 4K	220 units
	4L + 8K	480 units
	8L + 16K	740 units
	16L + 32K	900 units
	32L + 64K	1040 units
	64L + 128K	1100 units

$32L + 64K$	1040 units
$64L + 128K$	1100 units

* In long run there are 3 stages of production

(i) **Stage I** : **Increasing Returns to Scale**

- TP increases at increasing rate
- MP increases

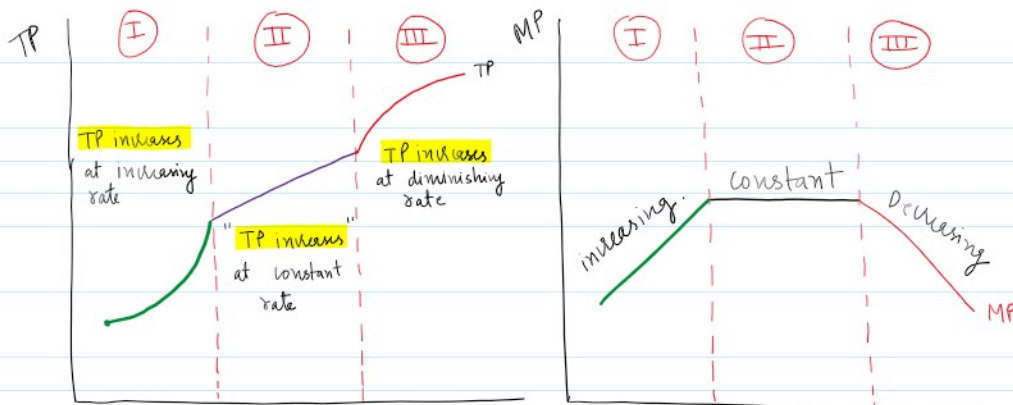

(ii) **Stage II** :- **Constant Returns to Scale**

- TP increases at constant rate
- MP is constant

(iii) **Stage III** :- **Decreasing Returns to Scale**

- TP increases at diminishing rate
- MP decreases.

NO Negative Returns in Long Run

* **Cobb & Douglas**

$$Q = K \cdot L^a \cdot C^b$$

$$Q = K \cdot L^a \cdot C^b$$

Output
Labour
Capital

K, a, b are positive constant

Increasing RTS : $a+b > 1$: % change in Output $>$ % change in all inputs
 (+25%) $>$ (+20%)

Constant RTS : $a+b = 1$: % change in Output $=$ % change in all inputs
 (+25%) $=$ (+25%)

Decreasing RTS : $a+b < 1$: % change in Output $<$ % change in all inputs
 (+25%) $<$ (+35%)

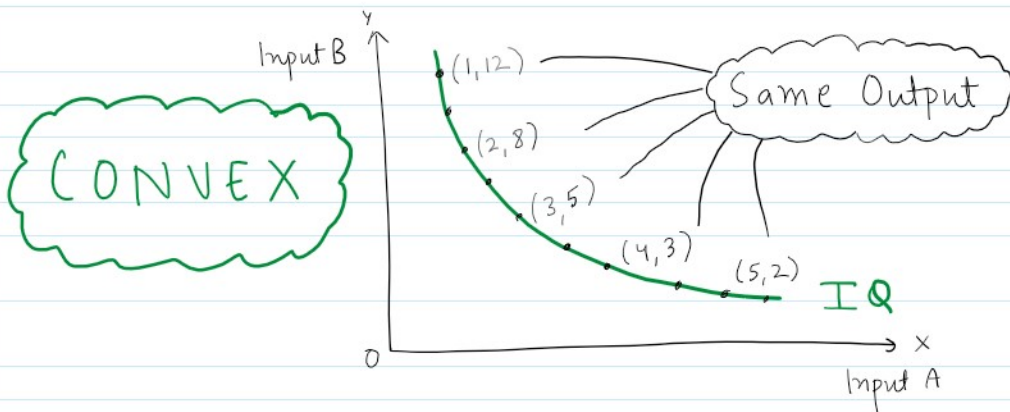

* **Constant Returns to Scale** is also known as **Linear Homogeneous production function**

1st line 1st line

* Product Optimisation *

① **Iso Quant curve** or **Equal Product Curve** or **Production Indifference Curve** or **Iso Product Curve**

	Labour Input A	Machine Input B	Output	Marginal Rate of Technical Substitution	MRTS
(1, 12)	1	12	100 units	-	=
(2, 8)	2	8	100 units	4	
(3, 5)	3	5	100 units	3	
(4, 3)	4	3	100 units	2	
(5, 2)	5	2	100 units	1	

* Iso Quant is convex because of **Diminishing MRTS**

↳ MRTS is the **SLOPE** of Iso-Quant

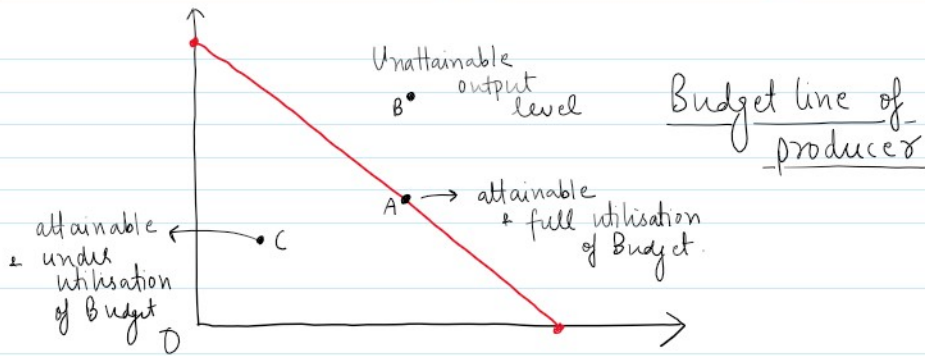

* Iso Quant is convex because of Diminishing MRTS

* MRTS is the SLOPE of Iso-Quant

$$\frac{\Delta \text{input sacrificed}}{\Delta \text{input gained}}$$

2

Iso-cost OR Equal cost lines

3

Product optimisation

$$IQ_4 > IQ_3 > IQ_2 > IQ_1$$

$$\cancel{E} > \cancel{D} > B > A, C$$

Point B is product optimisation Point. (✓)

Economics

CH-3 Unit 2

Theory of Cost

Imp

Economic Cost and Accounting Cost

→ Accounting cost is the cost which is accounted for i.e. recorded in the books of account
 Eg:- all payments made by firm. Eg- Rent paid, Salary paid etc. It is also known as Explicit cost

→ Economic cost includes :-
 a) Accounting cost +

→ Economic lost includes :-

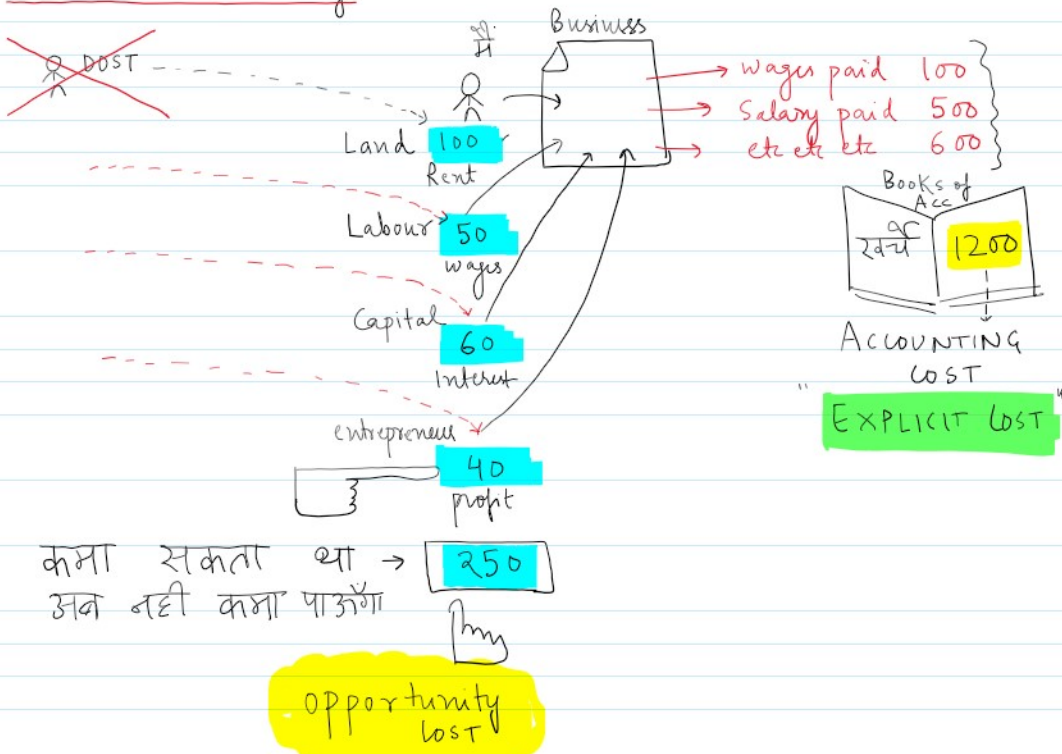

- Accounting lost
- Implicit lost.

→ Implicit lost :- Amount of money the entrepreneur could have been earned if he had invested his money & sold his money services in the next best alternative use. It includes normal profit also.

₹ 250

For own understanding

IMPLICIT COST

Link with chapter production

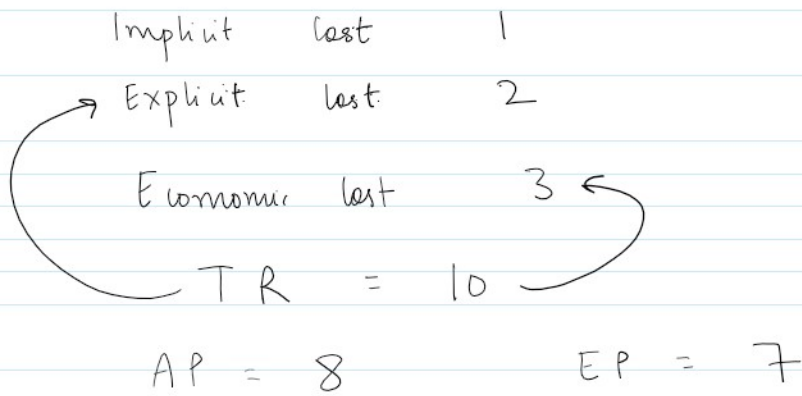

$$\text{Accounting Profit} = \text{Total Revenue} (-) \text{Accounting lost}$$

$$\text{Economic Profit} = \text{Total Revenue} (-) \text{Economic lost}$$

* Can AP > EP ? YES

* Can EP > AP ? NO

③ **Normal Profit** (No profit No loss situation)

$$\text{Revenue} = \text{Economic Cost}$$

→ Here Economic Profit = Revenue - Economic cost

$$= 1450 - 1450$$

$$= 0$$

* When Economic Profit is zero then it is point of "Normal profit"

then it is point of "Normal profit"

3. Outlay lost vs Opportunity lost

actual lost
i.e. recorded
in books
(Explicit)

lost of next
best alternative
foregone i.e. not
recorded in books.
(Implicit)

4. Direct lost vs Indirect lost

Traceable vs Non-Traceable

which are easily identified and traceable to a particular good or service
eg - Manufacturing lost

RM £50 + R £100 ways + etc 200 → product 350

NOT easily identified & traceable to a particular good or service
eg - Advertisement

5,00,00,000 Advertisement → DDD DDD

5. Historical lost vs Replacement lost

10,00,00,00,000 → 5 years bank.

Replace → 12,00,00,00,000 → 31st ft value

6. Individual lost vs Social lost

Factory → air pollution

Factory → water pollution

Individual lost vs Social lost

7

Fixed cost

or

Variable cost

Does not change with change in Output

Rent

- SUNK COST
- Inescapable cost
- Uncontrollable cost
- OVERHEADS

vary with change in Output

Raw Material
Wages

- INCREMENTAL COST.

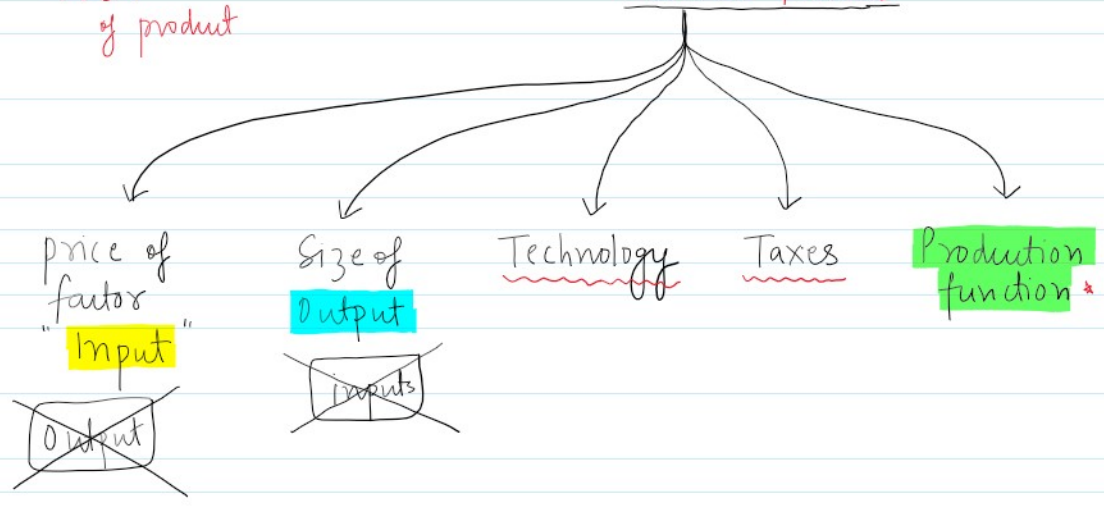

* COST FUNCTION *

→ It is a relation between cost of product and various determinants.

$$C = f(a, b, c, d, \dots, \infty)$$

COST of product

Various factors

→ Types of cost function

Short Run

|

Long Run

Short Run
Cost function

TC, TVC, TFC,
AVC, AFC, AC
, MC

Long Run
Cost function

only LAC

→ Short Run costs

① Total fixed cost (TFC)

Output	TFC
0	60
1	60
2	60
3	60
4	60
5	60

parallel
to x-axis

② Total Variable cost (TVC)

Output	TVC
0	0
1	10
2	18
3	24
4	28
5	40
6	55
7	80
8	150

Increasing at
diminishing
rate

Increasing at
increasing rate

Inverted
S shaped

3	44	10	54
4	40	10	50
5	60	10	70
6	95	10	105

$$TC = TVC (+) TFC$$

$$TC - TVC = TFC$$

④ Average fixed cost (AFC)

Output	TFC	AFC
0	60	-
1	60	60
2	60	30
3	60	20
4	60	15
5	60	12
6	60	10

$$AFC = \frac{TFC}{\text{Output}}$$

$$1 \times 60 = 60 \quad | \quad 30 \times 2 = 60 \quad | \quad 20 \times 3 = 60$$

* AFC can never be zero (i.e. it will not touch x-axis) because TFC can never be zero.

Output	TFC
0	1
1	1
2	1
100	1
1000	1
100,000	1

$$AFC = \frac{1}{100} = 0.01$$

⑤ **Average Variable Cost (AVC)**

$$AVC = \frac{TVC}{\text{Output}}$$

U-shaped

⑥ **Average Cost (AC)** or **Average Total Cost (ATC)**

$$AC = \frac{\text{Total Cost}}{\text{Output}} \quad \text{or} \quad AC = AVC + AFC$$

U-shaped

⑦ **Marginal Cost (MC)**

$$MC = \frac{\Delta TVC}{\Delta \text{Output}} \quad (\text{असली formula})$$

$$MC = \Delta TC \quad (\text{नकली formula})$$

$$MC = \frac{\Delta TC}{\Delta \text{output}} \quad (\text{short formula})$$

emergency

U-shaped

→ MC is the **SLOPE** of **TVC**

→ Area under MC curve is **TVC**

$$TVC = MC_1 + MC_2 + MC_3 + \dots + MC_N$$

$$TVC = \sum MC$$

→ Marginal cost changes due to change in **variable cost**

- a) Fixed cost
- b) Variable cost
- c) Both
- d) None

→ **Rising portion** of MC curve is **Supply Curve**

TVC & TC is Inverted-S
 AVC, AC, MC is U-shaped

WHY ???

PRODUCTION

MP

Law of Variable proportion.

(RETURNS)

Increasing Returns
= Diminishing cost

TVC

inversely related to
" COST "

TC

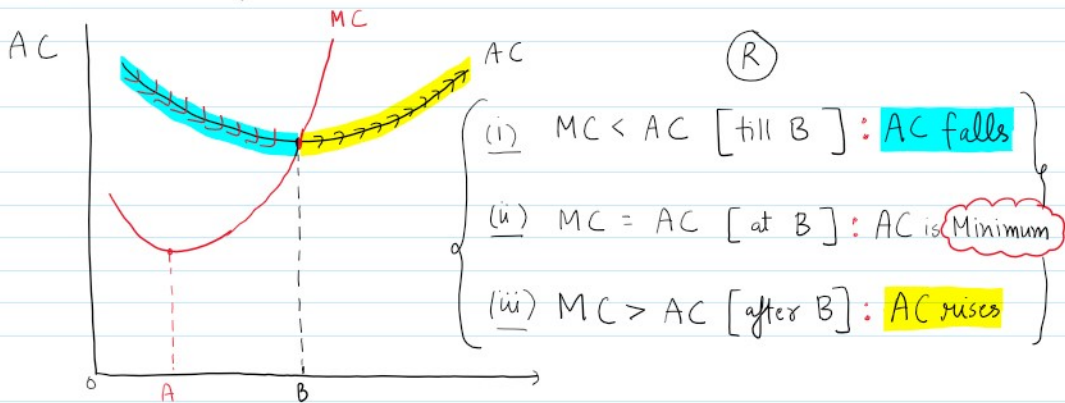

Diminishing Returns
=

Diminishing Returns
= Increasing Cost

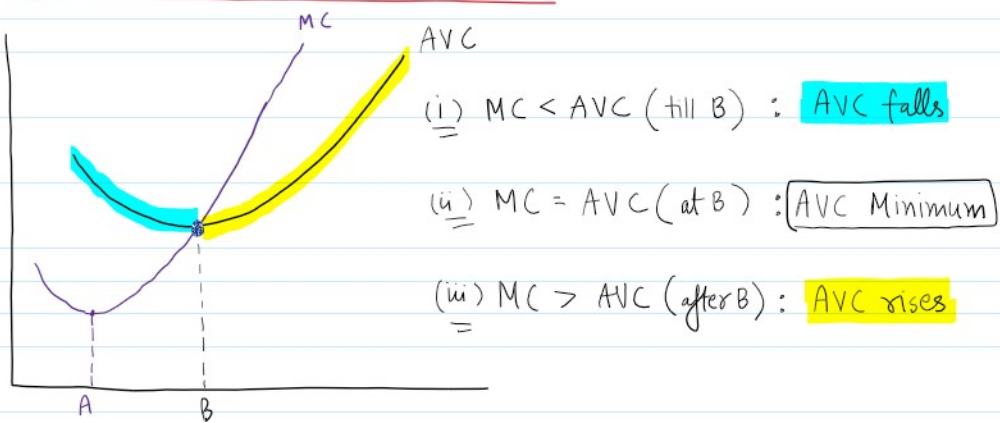

COST

* Relation of AC & MC

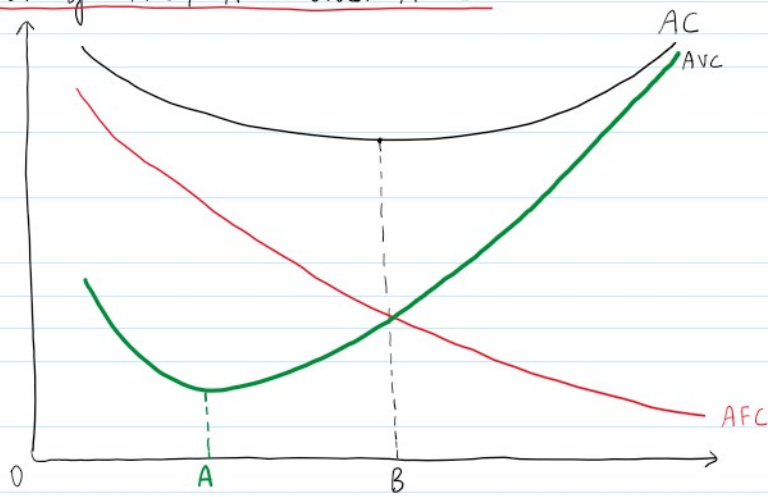

* Relation between AVC & MC

* Relation of AC, AVC and AFC

→ The gap between AC + AVC continuously falls, but they never "intersect each other"

→ The gap between AC & AVC is AFC
(AFC can never be zero)

$$\left\{ \begin{array}{l} AC = AVC + AFC \\ \underbrace{AC - AVC}_{\text{Gap between AC \& AVC}} = AFC \end{array} \right.$$

Formulae

① $TC = TFC + TVC$ OR $TC = AC \times \text{Output}$

② $TVC = TC - TFC$ OR $TVC = \sum MC_s$

OR $TVC = AVC \times \text{Output}$

③ $TFC = TC - TVC$ OR $TFC = AFC \times \text{Output}$

④ $AFC = \frac{TFC}{\text{output}}$ OR $AFC = AC - AVC$

⑤ $AVC = \frac{TVC}{\text{Output}}$ OR $AVC = AC - AFC$

⑥ $AC = \frac{TC}{\text{Output}}$ OR $AC = AVC + AFC$

⑦ $MC = \frac{\Delta TVC}{\Delta \text{Output}}$ OR $MC = \frac{\Delta TC}{\Delta \text{Output}}$

Δ Output

Δ Output

* When Output = 0 $\boxed{TC = TFC}$

* When Output = 1 $\boxed{TVC = AVC = MC}$

Q1- =

Output	TVC	MC
1	12	12
2	14	2
3	18	4
4	40	22

$\Delta TVC \div \Delta \text{output}$
 $(14-12) \div (2-1)$
 $(18-14) \div (3-2)$
 $(40-18) \div (4-3)$

Q2- =

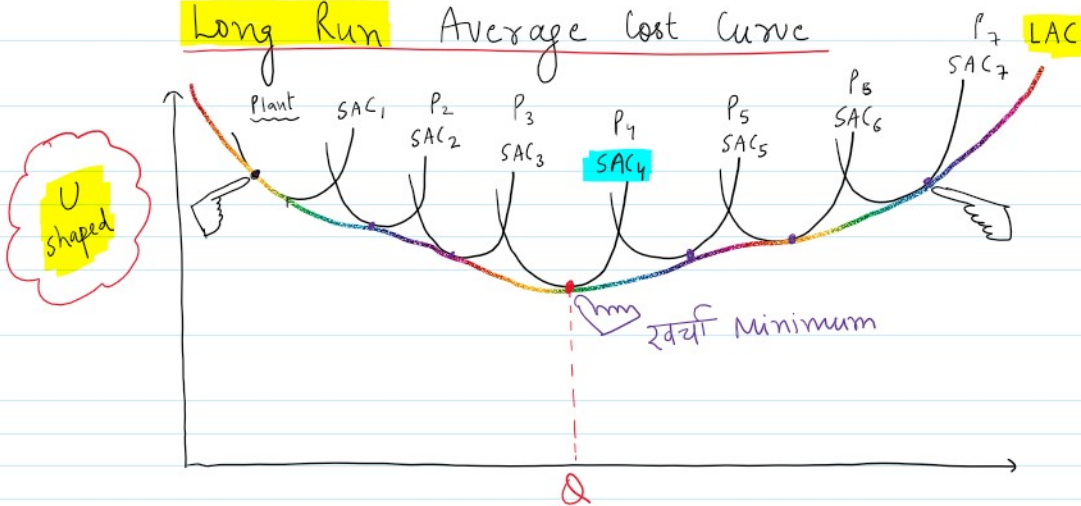

Output	TVC	MC	AVC
1	10	10	10
5	38	7	7.6

$TVC \div \text{output}$
 $38 \div 5$
 $(38-10) \div (5-1)$
 $28 \div 4$

Q3-

Output	TFC	MC	TC	TVC	AVC	AC
0	100	-	100	0	-	-
1	100	500	600	500	500	600
2	100	300	900	800	400	450
3	100	200	1100	1000	333.3	366.6
4	100	300	1400	1300	325	350
5	100	500	1900	1800	360	380
6	100	800	2700	2600	433.3	450

Long Run Average Cost Curve

LAC curve

Q

- LAC is known as ENVELOPE CURVE or PLANNING curve
- All the SACs are known as PLANT curves
- In long run, the firm examines on which SAC it should operate, so that total cost is Minimum
- LAC is TANGENT to each SAC
- But it is not tangent to minimum points of SACs.
- LAC is U-shaped because Law of Variable Proportion - short run
Returns to Scale
- LAC is L-shaped if technology changes
- LAC is U-shaped, if technology do not change.
- Increasing COST \square Diminishing Returns
Diminishing COST \square Increasing Returns

Q - Total product :- 10, 18, 30, 50, 62, 70, 75
find Decreasing cost level.

Sol:-

Total product	Marginal Product
10	-
18	8
30	12
50	20
62	12
70	8
75	5

Increasing Returns (MP > AP)
Diminishing Returns (MP < AP)

* Shut Down Point *

$$P = AVC$$

$$P = AC$$

$$TR = TVC$$

$$TR = TC$$

Q- Price = ₹ 10
AC = ₹ 11
AFC = ₹ 2

$$AVC = ₹ 9$$

Should the firm shut down.

Sol:-

NOT shut down

* Economies of Scale * → LONG Run

Advantages due to large scale production

Output ↑↑↑↑ Cost of production ↓↓↓↓

Increasing Returns to Scale is a result of this
(Returns ज्यादा है)

Internal

(Benefits which accrue to firm only)

- ① Technical - deals with labour, machine etc
- ② Managerial - deals with management
- ③ Financial - deals with

External

(Benefits accrue to all firms as a result of growth of industry)
(general advantages)

- (i) Cheaper Raw Materials
- (ii) Technological advancement

- ① management
- ③ **Commercial** - deals with Advestment/Selling lost
- ④ **Financial** - deals with "Finance lost"
- ⑤ **Risk bearing** - deals with Diversification

- (ii) Technological advancement
- (iii) Development of Skilled labour 5G
- (iv) Growth of **an ciliary** industries
supportive
- (v) Better transportation & marketing facilities
- (vi) Information

* Dis economies of Scale *

Dis advantages caused when scale of production expands beyond optimum capacity

Decreasing Returns to Scale is a result of this

Stage	Reason
1. Increasing Returns to Scale	Economies of Scale
2. Decreasing Returns to Scale	Dis economies of Scale

 (✓)

Ch - 3 Unit 1
Unit 2
Q1 - Q82

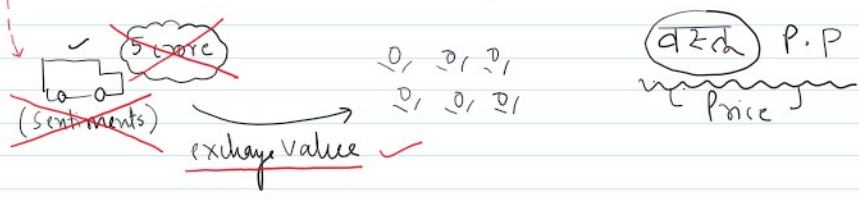

Economics

CH 4 — : Price determination in different Markets
Unit 1 : Meaning + Types of Market

→ MARKET :- a place where goods are purchased & sold

→ In market, only exchange value is significant, not sentimental value (Price denotes money value i.e. purchasing power of an article is expressed in money terms)

→ Elements of Market :-

- Buyers + Sellers
- Product or Service
- Bargaining for Price
- Knowledge about market conditions
- One price for a product at a given time

→ Markets are generally classified into :-

- (i) Factor market
- (ii) Product market

R, I, W, P (Factor incomes)

Imp →

Types of Market :-

On the basis of AREA

- Local - for "perishable" goods. (Bread)
- Regional - for semi-durable goods (Cloth)
- National - for Durable goods (Car, TV)
- International - for Precious goods (Gold, Diamond)

On the basis of TIME (Alfred Marshall)

- Very short - Supply CANNOT change
- Short - Supply can slightly change
- Long - Supply can change
- Very Long - Supply can easily change
↓
Secular Period

On the basis of transaction

- Spot - goods are physically transferred
- Future - contracts of future date

On the basis of Regulation

- Regulated - Stock exchange → SEBI
- Unregulated - NO Regulation (Free Market)

On the basis of Volume

- Wholesale - Bulk / large quantities

On the basis of Volume

- Wholesale - Bulk / large quantities
- Retail - for ultimate consumer (small quantity)

On the basis of competition

- Perfect competition
- Imperfect competition
 - Monopoly
 - Monopolistic
 - Oligopoly

BASIC CONCEPTS

① Total Revenue (TR)

$$= P \times Q$$

Price per unit \times Quantity sold

② Average Revenue (AR)

$$= \frac{TR}{Q}$$

$$= \frac{P \times \cancel{Q}}{\cancel{Q}}$$

$$AR = P$$

AR curve is also known as **DEMAND** curve

③ Marginal Revenue (MR)

$$= \frac{\Delta TR}{\Delta Q}$$

\therefore MR is **SLOPE** of TR

Q1 :-

Price	Quantity	TR	AR	MR
₹ 10	5	50	10	-
₹ 9	6	54	9	4
₹ 8	10	80	8	6.5

E9	6	54	9	4
E8	10	80	8	6.5
E7	14	98	7	4.5
E6	20	120	6	3.6

$\frac{\Delta TR}{\Delta Q}$

Q2-

Output	MR	TR
3	4	22
5	9	x

$$MR = \frac{\Delta TR}{\Delta \text{Output}}$$

$$9 = \frac{x - 22}{5 - 3}$$

$$9 = \frac{x - 22}{2}$$

$$\therefore x = 18 + 22 = 40$$

MOST IMPORTANT POINTS

① **TR, AR, MR**

(i) When $MR > 0$ i.e. (+)ve then TR increases at diminishing rate

(ii) When $MR = 0$ then TR is MAXIMUM

(iii) When $MR < 0$ i.e. (-)ve then TR falls.

② Relation of E_d , MR, AR (or TR)

(R)

② Relation of E_d , MK , MR (or IK)

$$MR = AR \times \frac{(E_d - 1)}{E_d}$$

E_d	MR	TR
$E_d > 1$ (elastic)	(+) Vc	Increasing at diminishing Rate
$E_d = 1$ (Unit elastic)	= 0	MAXIMUM
$E_d < 1$ (inelastic)	(-) Vc	Falls

③ Behavioral Principles

• For a firm to produce

$$* TR \geq TVC$$

• For PROFIT MAXIMISATION (Producer's equilibrium)

$$MR = MC$$

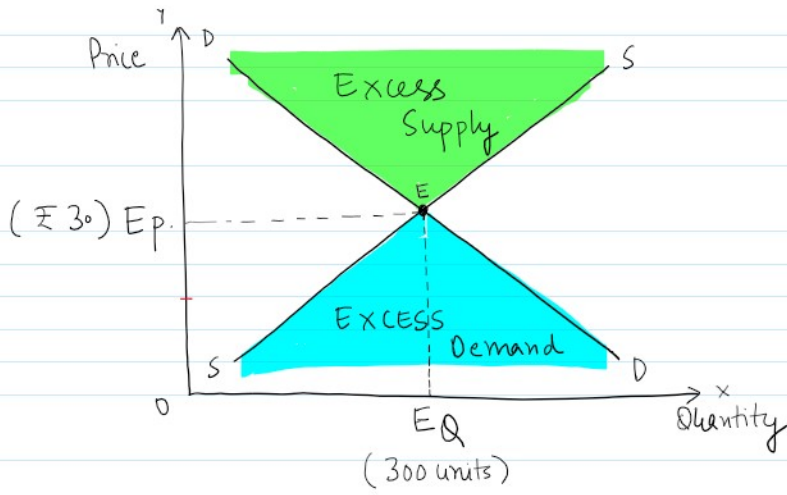

Unit 2 : Determination of Price

→ In general, interaction between demand & supply determines the price

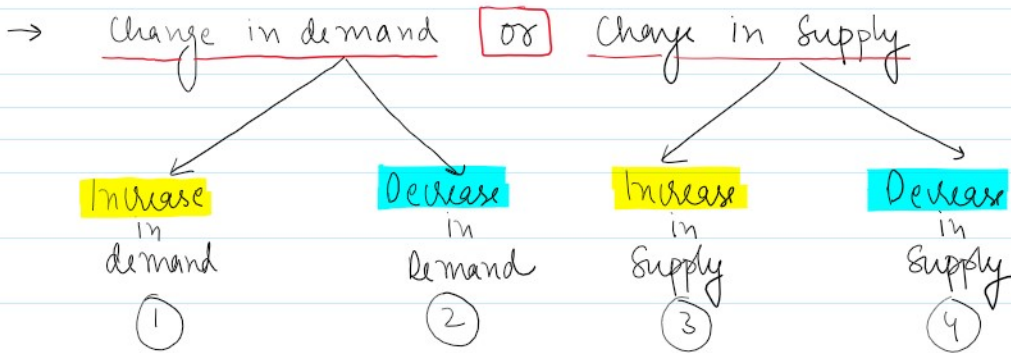

Price	(Consumers) Qty demanded	(Producers) Qty Supplied	
₹10	500 units	100 units	} EXCESS DEMAND
₹20	400 units	200 units	
₹30	300 units	300 units	- EQUILIBRIUM
₹40	200 units	400 units	} EXCESS SUPPLY
₹50	100 units	500 units	

Equilibrium price

But in some cases, **government intervenes** and determines the price [eg :- Fertilizers, Kerosene etc]

WE ALREADY KNOW THE REASONS FOR ABOVE

(1)

$E_p (\uparrow)$
 $E_Q (\uparrow)$

(2)

$E_p (\downarrow)$
 $E_Q (\downarrow)$

(3)

↑ 0 , S

③

$E_p (\downarrow)$
 $E_Q (\uparrow)$

④

$E_p (\uparrow)$
 $E_Q (\downarrow)$

→ Simultaneous Increase in Demand & Increase in Supply

(i)

(ii)

(iii)

$\uparrow D > \uparrow S$

$E_p (\uparrow)$
 $E_Q (\uparrow)$

$\uparrow D < \uparrow S$

$E_p (\downarrow)$
 $E_Q (\uparrow)$

$\uparrow D = \uparrow S$

E_p same
 $E_Q (\uparrow)$

→ Simultaneous Decrease in demand & decrease in Supply

→ Simultaneous Decrease in demand & increase in Supply

→ Simultaneous Increase in demand & decrease in Supply

CH4 Unit 3

Price and output determination under different market forms

I. PERFECT COMPETITION

(eg :- Agricultural products, Stock market, Metals etc)

1) Very large number of Buyers + Sellers

Individual buyer or individual seller cannot influence demand, supply or price.

2) Homogeneous Product

→ Identical products (NOT SIMILAR)

→ i.e Goods are PERFECT SUBSTITUTES

→ Price will remain SAME

3) Free Entry and Free exit of firms

All firms will earn NORMAL PROFITS in long Run. AR = AC

Why??

Abnormal profits

Free entry \Rightarrow No. of firms \uparrow

Supply \uparrow

Price \downarrow

Profits \downarrow

Normal Profits

(✓)

No. of firms \downarrow

Supply \downarrow

Price \uparrow

* Feature 1, 2 and 3 is known as

PURE COMPETITION

Perfect Competition

④ Perfect **Knowledge** of Market

④ Perfect **Knowledge** of Market
{ Buyers & Sellers }

⑤ **Free mobility** of factors of production
↓ Perfect (transferable) ↓ "Labour"
⊗

⑥ **NO** Selling cost / Transportation cost is involved
↓ Advertisement ↓

⑦ Firms are **PRICE TAKER**

Industry
(Price Maker)

Firms
(Price Taker)

⊗ Industry = Group of Firms ⊗

* Perfect market is also known as **IDEAL Market** or **COMPETITIVE market**

* In Perfect Competition,

Price = MR = AR = Demand Curve

$E_d = \infty$
(perfectly Elastic)

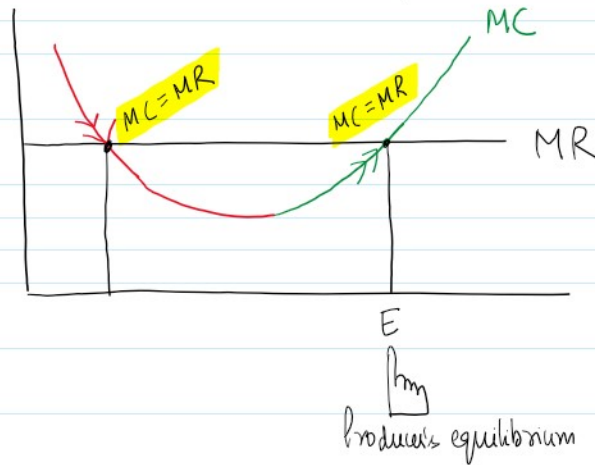

parallel to X-axis

* Producer's Equilibrium (i.e. **Profit Maximisation**)

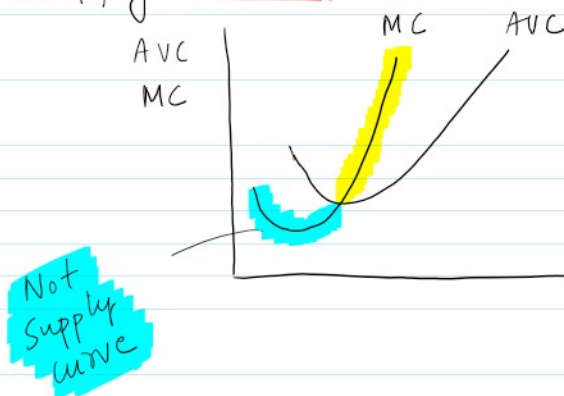

* Producer's Equilibrium (i.e. Profit Maximisation)

(i) $MC = MR$

(ii) MC should cut MR from below
i.e. MC should have positive slope
(i.e. $MC > MR$ after Intersection)

* Supply curve

The rising portion of MC is Supply curve
(after intersection)

* Profits of Perfect Market (Competitive firm)

- Abnormal profits : $AR > AC$
(Super Normal profits)
- Normal Profits : $AR = AC$
- Losses : $AR < AC$

* Price = £10, AC = £12, AVC = £9

Find (i) AFC

(ii) Should the firm continue?

find (i) AFC

(ii) Should the firm continue?

Sol:-

$$\begin{aligned} \text{(i) } AFC &= AC - AVC \\ &= 12 - 9 \\ &= 3 \end{aligned}$$

(ii) Yes, firm will continue.

$$\text{Price (£10)} > \text{AVC (£9)}$$

* **Long Run** Producer's Equilibrium (of Firm)

$$\underbrace{LMC = LAC = \text{Price}}$$

i.e. minimum point of LAC should be **Tangent** to demand curve (i.e. AR curve)

Also, $SMC = LMC = SAC = LAC = \text{Price} = MR$

* **Minima** of LAC & SAC " coincide"

* Point E shows **OPTIMUM COST**

* A firm producing Q level of output at optimum cost is called **OPTIMUM FIRM**

* **Long Run Equilibrium** of **Industry**

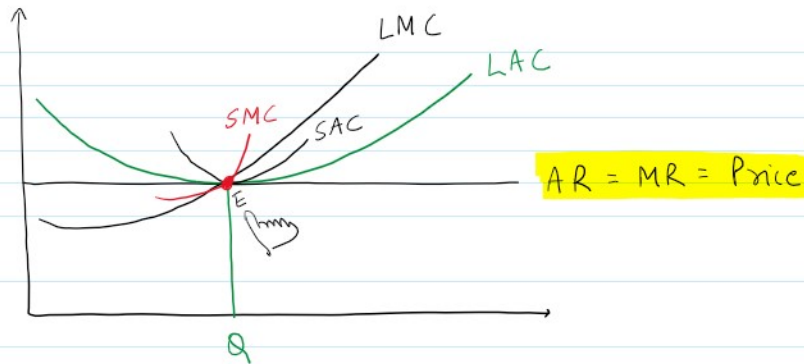

• when **all** the firms earn **Normal Profits**

AND

(TND)

• NO further entry or exit takes place.

100%
*
Ratta

At E Point

(i) $MC = AR$
Consumer pays Minimum Price (✓)

(ii) $MC = AC$
Plants are used at FULL capacity (✓)
(i.e. NO wastage of Resources)

(iii) $AC = AR$
Firms earn NORMAL PROFIT

(iv) $MC = MR$
Producer's equilibrium (Profit Maximisation)

II. MONOPOLY (eg. Railways)

Single

Seller

→ Monopoly means "alone to sell"

→ Here firm and Industry is Same

Features

(i) Single seller - Price Maker i.e.

Substantial control over Supply.

Substantial control over Supply.

(ii) **Restriction** in Entry

(iii) **NO** close substitute

∴ Cross elasticity is **ZERO**

∴ Demand curve is **NEGATIVELY SLOPED** **STEEPER** curve

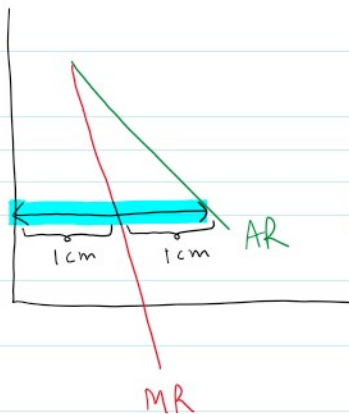

(iv) Monopolist has market power i.e. **charging price above MC**

(v) Monopolist may adopt **Price Discrimination**

(vi) Monopolist can also incur **Losses** $AR < AC$

(vii) Relation of AR & MR

→ Both MR + AR are downward sloping (negatively sloped)
→ AR can never be zero but MR can be zero or negative.

→ MR curve lies half way between AR curve + Y-axis.

* EQUILIBRIUM (profit Maximum)

MC

Profit Maximization (Profit Maximization)

$$MR = MC$$

* Profits

- Abnormal profits : $AR > AC$
- Normal profits : $AR = AC$
- Losses : $AR < AC$

* LONG RUN

→ In long run, monopolist can earn **Abnormal profits** since **outside entry of new firm is blocked**.

→ In long run, monopolist need not produce at **Optimum level** (i.e. Minimum point of LAC)

SUB-OPTIMAL LEVEL

* How do monopoly arise ?

- Strategic **control over** Resources
- Government granting exclusive rights (Patents or copyrights) **पानी**
- Business combinations i.e. **CARTEL**
- Extremely large startup (lost)
- Firm may use anti-competitive practice like **predatory / limit pricing**

practice like predatory / limit pricing

*
Imp.
100%

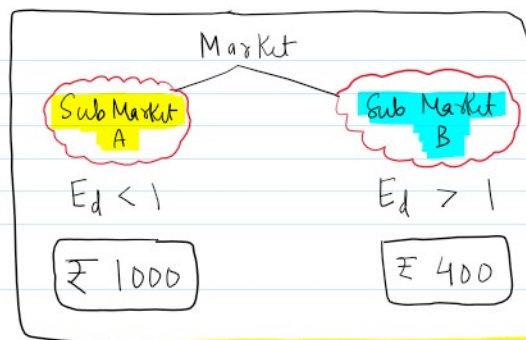

Price Discrimination

1) Objectives

- to earn maximum profits
- to capture foreign markets.
- to enjoy economies of Scale (dispose excess stock)

2) Price discrimination is possible only when the following conditions are satisfied

- Monopoly must exist
- Seller must be able to divide the market into sub markets
- Price elasticity is different in different sub markets.

Higher prices where demand is inelastic

→ No market arbitrage

NSE = ₹ 2,312/- } arbitrage
BSE = ₹ 2,325/- }

3) Degrees of Price Discrimination - A.C. Pigou

3) Degrees of Price Discrimination - A.C. Pigou

First Degree - Price is such that it takes away **ENTIRE** consumer surplus

Second Degree - Price is such that it takes away **ONLY PART** of consumer surplus

Third Degree - Price varies because of **LOCATION** or customer segment)

eg Popcorn in "Cinema Hall"

* Price discrimination may relate to time, size of purchase, income etc

x-----x-----x-----x-----x-----x

III MONOPOLISTIC COMPETITION

• This market is a blend of Perfect Competition and Monopoly

[eg:- **SOAP Industry**]
Features → ~~"LUX"~~

(i) Large number of buyers + Sellers

- Individual buyer or seller has a very small share in the market

(ii) **Product differentiation**

- Heterogeneous products (**Similar products**)

- Products are **close substitutes**

- Demand curve (or AR curve) is

DOWNWARD SLOPING (FLATTER) curve

(iii) Free entry and exit of firms

Firms will earn **normal profits** in long run

AR = AC

(iv) **Huge** Selling / Advertisement cost is involved

☹ ☹ *costs*

(v) **Non** Price Competition

~~Price War~~

* **EQUILIBRIUM (Profit Maximisation)**

(i) $MR = MC$

(ii) MC should cut MR from below

* **Profits**

→ Abnormal profits : $AR > AC$

→ Normal profits : $AR = AC$

→ Losses : $AR < AC$

* In long run, all the firms earn **Normal Profits.**

ZERO Super Normal Profit

IV. OLIGOPOLY

(eg **Cold drink** Industry)

(eg Cold drink Industry)

(i) Competition among FEW
2-10

(ii) Strategic Interdependence
(iii) Group Behavior
(iv) Price Rigidity ✓
collusive } Discussion Later.

(v) Product may be Homogeneous or Heterogeneous
cement, LPG industry }
Cold drink industry }

(vi) Entry of new firms are "Very difficult"

(vii) Huge selling & advertisement cost.

→ Types of Oligopoly

(1) Pure (or perfect) - deals with homogeneous product
(2) Differentiated (or Imperfect) - deals with heterogeneous product.

(3) Open - New firm can enter
(4) Closed - Entry is restricted

(5) Collusive - Commonly decide price & output
(6) Non-collusive - Compete with each other.
(Competitive)

(7) Partial - Industry is dominated by one large firm
(8) Full - NO leadership

(9) Syndicated - Small group control it i.e. centralised body
(10) Organised - All firms decide their
Pushpa

⑩ Organised - All firms decide their output (centrally organised)

* Demand Curve

→ Because of price rigidity, demand curve is **KINKED** - given by SWEEZY

→ Response to price increase is **MORE THAN** response to price decrease.

* Price & Output decision

(i) Interdependence is ignored then output is determined by **MR = MC** → profit Maximisation

(ii) Oligopolist tries to predict the reaction of his competitor.

COUR NOT model	Stackel Berg's Model	Best trend Model
↓	↓	↓
each firm decides its Output	Leader decides Output	Each firm decides its price

(iii) Oligopoly firms **acts as monopoly organisation** & fix their prices to enjoy maximum profits.

U & v fix their prices to enjoy v maximum profits.

OPEC

(Organisation of Petroleum Exporting Countries)

* **Price leadership**

Old, experienced, most respected firm becomes price leader.

* Other market forms

- 1) **Duopoly** - Two firms (sellers)
- 2) **Monopsony** - Single Buyer
- 3) **Oligopsony** - Few large Buyers
- 4) **Bilateral Monopoly** - One Buyer + One Seller

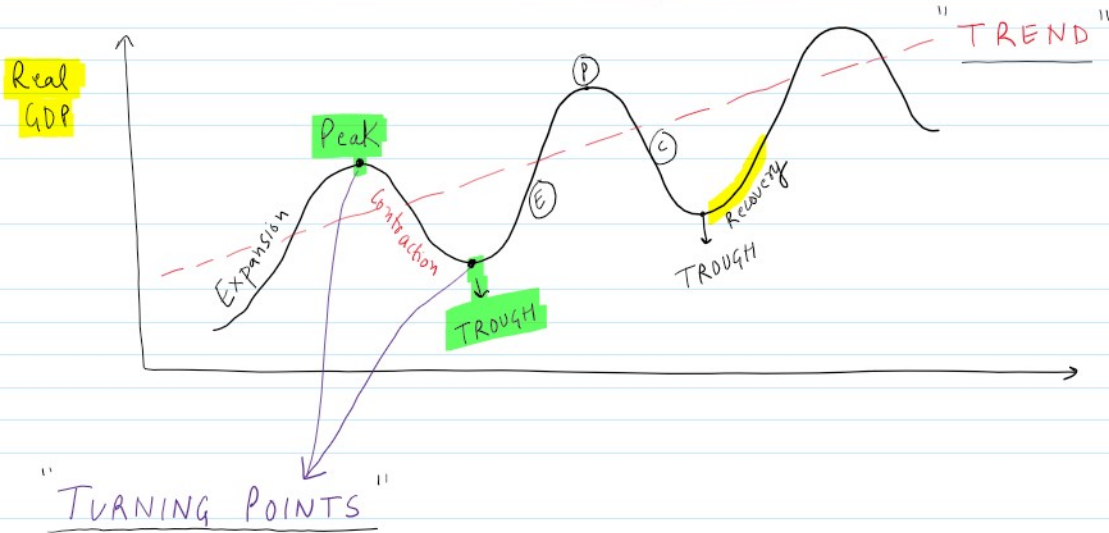

CH5 :-

"Business Cycles"

→ Rhythmic **Fluctuations** in aggregate economic activity that an economy experiences over a period of time are called business cycles or trade cycles

eg :- 1920 UK → GDP ↑↑↑
1929-30 Great Depression (US)

eg :- 1920 UK → GDP ↑↑↑
 1929-30 Great Depression (US)
 2020 China → Recession
 2007-2008 :- US Banks
 2000 :- IT Bubble burst.

Phases of Business Cycle

① Expansion

National Output, employment
 Aggregate demand, expenditure
 Sales, Profits, Stock prices,
 Bank rate, Investments,
 production, Confidence,
 factor Income etc etc

* **Involuntary unemployment** is almost zero.
 Only **Frictional** & **Structural** unemployment exists

willing to work
 but do not find
 work

change
 in Job

change in
 Structure

27 March Leave ↔ 3 May New Joining

② PEAK

- End of Expansion
 - Highest point
 - ⊛ → Inputs are difficult to find as they are short of their demand.
 - ⊛ → Actual demand stagnates.
- "एक जगते रुक जाना"

③ Contraction (Down Swing / Recession)

→ Supply > Demand

④ TROUGH (Depression)

- Growth rate becomes negative
- Occurs when "recession is complete"
- People's demand for liquid money increases
- National Income & expenditure declines rapidly

Great Depression 1929-33 (US)

* Recovery - Beginning of Expansion

* Economic Indicators *

Leading^(R)

- Change in stock price
- Profit margins
- Housing Interest Rates
- New Capital or Consumer good orders

Lagging^(R)

- Unemployment
- Corporate profits
- Labour cost per unit of Output
- "Interest Rates" (some times)
- Consumer Price Index

Coincidental^(R)

- GDP
- Inflation
- Industrial Production
- Retail Sales
- Personal Income

* Features of Business Cycle

1) Differ in duration & Intensity

2) NO Regularity

3) Length of each phase is not definite

4) Generally originate in Free Market (Capitalist) economy

5) It affects Industrial sector more than agricultural sector

6) Capital Good Industry & Durable Consumer good Industry is severely affected

Machine

Car
TV

Machine

7) Its effect can be felt on all economic variables.

8) Business cycle is contagious and international

* Causes of Business Cycle *

Internal

→ Fluctuations in effective demand (KEYNES)

$$AD = C + I + G + NX$$

→ Fluctuations in Investment (MOST VOLATILE)

→ fluctuations in Government expenditure

→ Fiscal & Monetary Policies

→ Changes in Money Supply by HAWTREY

→ Psychological factors

→ AC Pigou: Anticipation of optimism or pessimism

→ Schumpeter: due to Innovations

External

→ WAR

→ Post war Reconstruction

→ Technological shocks*

→ Natural factors (Floods, earthquake)

→ Population (increase)

→ Others:-

Savings ↓

Investments ↓

* CONCLUSION

(i) B. cycles have tremendous influence on business decisions

(ii) B. cycles do not affect all sectors uniformly

(iii)  Business whose fortune are closely linked to the rate of economic growth are referred to as **CYCLICAL Business**

Restaurants, Construction firms, Fashion Retailers, electric goods etc

(iv) Economic ^{*} **forecasts** ^{*} are not perfectly reliable but **can help** the business to prepare for changes

"H.W Q28."

x ————— x ————— x ————— x ————— x ————— x
