FLOW OF AUDIT

STEP-I: WALK-THROUGH

Suppose, there are 100 risks in an area and, these risks are mitigated by 150 controls.

CONTROL RISK MANAGEMENT TABLE

| RISK | CONTROL | |
|------|---------|------------------------|
| A | 1, 2 | |
| B | 3 | Auditor will |
| C | 4, 5, 6 | select the |
| D | 7, 8 | irrelevant controls |

Identify the Significant Risk

STEP-II: TEST OF CONTROL

Test the irrelevant controls

Testing the result of Control

GF PASS

OKAY

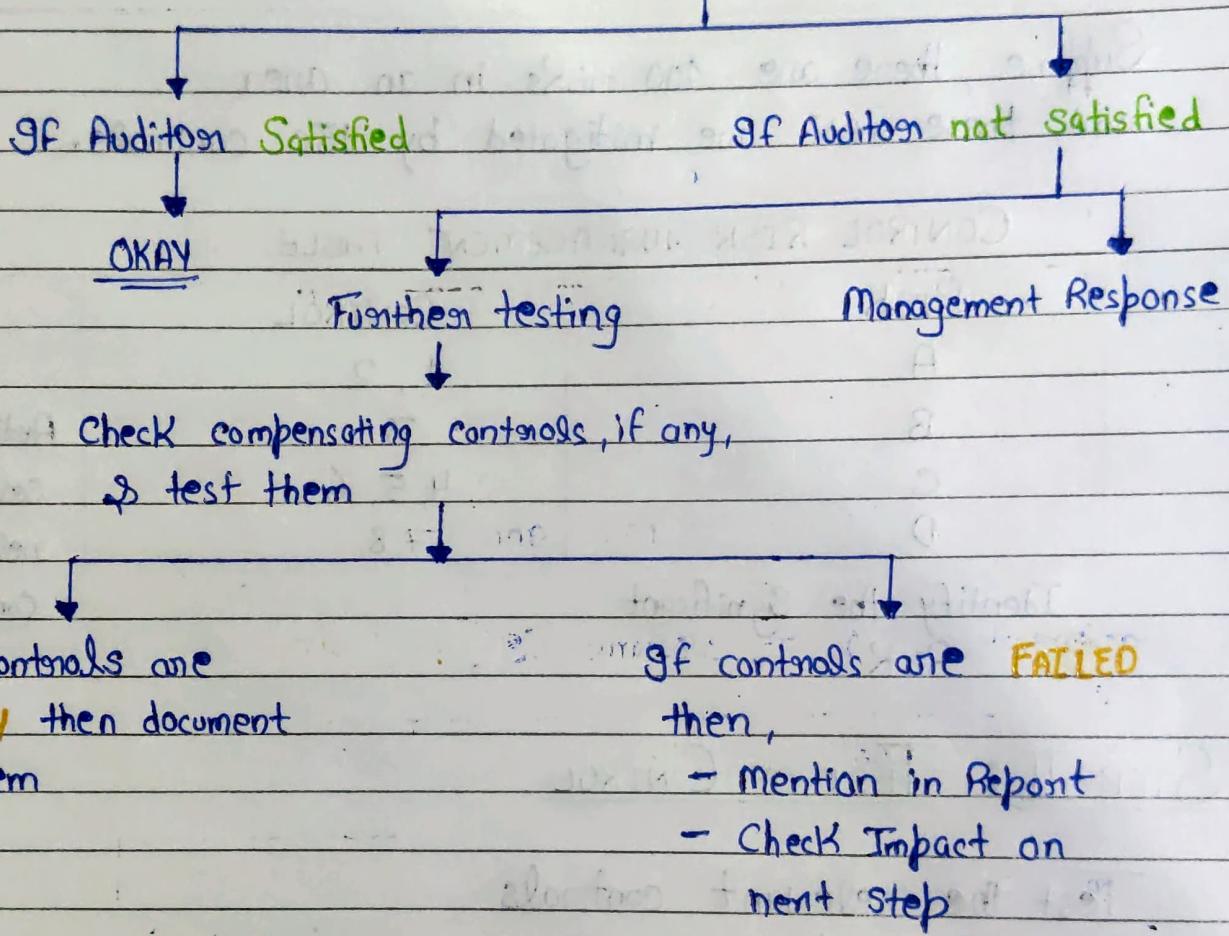

GF FAILS

GF some samples fails, for example
2 samples failed out of 12, then,
test another 40 Samples

and, also discuss with management for reason [in our example, the reason was - death of CFO's mother]

After control testing Auditon decides control risk, whether the control risk is

- Low, on
- Medium, on
- High

HOW TO DECIDE CONTROL TESTING SAMPLES

It depends on the nature and frequency of Controls

| <u>NATURE</u> | <u>FREQUENCY</u> |
|--------------------|-------------------|
| Manual | Daily |
| Automated | Weekly |
| Manual + Automated | Monthly Yearly |

STEP-III : FINANCIAL STATEMENT TESTING

Purchase of ₹ 10,000 cr. and there are 4,00,000 transactions related to purchase

therefore, 100% checking is NOT POSSIBLE

So, the auditor need to do sampling

But How ??

Sampling by Materiality
[Big transactions]
[SA - 320]

By tool on software
[Ex: IDEA in KPMG]

Purchase Data - 4,00,000 transactions
Materiality - SA - 320
[Ex - transaction above 50 L]
Control Risk - Low
Inherent Risk - Low
Minimum Sample Size - 400 for Ex.
(optional)

NOTE: Before putting the purchase data in the IDEA software, we will do IPE Testing [Information produced by Entity] check whether the data is

- Complete
- Accurate
- Reliable
- Relevant

then, IDEA will generate samples, say, 450 Samples

then, send the list of these 450 samples to the client

On these 450 Samples — Check Assertions

| ASSERTIONS | TOD Sample checking | Other Audit Procedures |
|-----------------------|------------------------------|--|
| COMPLETENESS | ✓ | Other Audit Procedures |
| EXISTANCE | ✗ | Physical Verification |
| ACCURACY | ✓ | |
| VALUATION | Transaction ✓ Valuation ✗ | Other Audit Procedures Other Audit Procedures |
| OBLIGATION/ RIGHTS | | |
| PRESENTATION | ✗ | Other Audit Procedures |

Sample checking TOD + Other Audit Procedures
= Substantive Audit Procedures

- To design and perform analytical procedures near the end of the audit that assist the auditor when forming an overall conclusion.

WHEN TO APPLY ANALYTICAL PROCEDURES

- At planning stage
- At Execution stage
- At snap-taking stage

AUDITOR SHOULD CONSIDER FOLLOWING FACTORS WHEN USING SUBSTANTIVE AUDIT PROCEDURES

1. Suitability of substantive audit procedure
2. Reliability of data to be compared i.e., input

AUDIT SAMPLING

Audit Sampling is to provide a reasonable basis for the auditor to draw conclusions.

SAMPLING RISK

The risk that the auditor's conclusion based on a sample may be different from the conclusion if the entire population were subjected to the same audit procedure. Sampling risk can lead to two types of erroneous conclusions:

1. In the case of a test of controls, that controls are more effective than they actually are, or in the case of test of details, that a material misstatement does not exist when in fact it does. The auditor is primarily concerned with this type of erroneous conclusion because it affects audit effectiveness and is more likely to lead to an inappropriate audit opinion.
2. In the case of a test of controls, that controls are less effective than they actually are, or in the case of a test of details, that a material misstatement exists when in fact it does not. This type of erroneous conclusion affects audit efficiency as it would usually lead to additional work to establish that initial conclusions were incorrect.

SAMPLE DESIGN

When designing an audit sampling, the auditor's consideration includes the specific purpose to be achieved and the combination of audit procedures that is likely to best achieve that purpose.

In considering the characteristics of the population from which the sample will be drawn, the auditor may determine that stratification or value-weighted selection is appropriate.

SAMPLE SIZE

The level of sampling risk that the auditor is willing to accept affects the sample size required. The lower the risk the auditor is willing to accept, the greater the sample size will need to be.

Factors affecting size of samples : [Examples]

- Risk,
- Materiality,
- Expected Error,
- Tolerable Error, etc..

SELECTION OF ITEMS FOR TESTING

The auditor shall determine a sample size sufficient to reduce sampling risk to an acceptably low level. The auditor shall select items for the sample in such a way that each sampling unit in the population has a chance of selection.

QUALITY ASPECTS WHILE CONSIDERING ERROR IN SAMPLE

- Evaluate the result of samples and effect on other areas of audit.
- Look for the common nature to evaluate the reason of misstatement.
- Consider the risk of fraud.

SA-540

AUDITING ACCOUNTING ESTIMATES, INCLUDING FAIR VALUE ACCOUNTING ESTIMATES AND RELATED DISCLOSURES

WHY WE DO ESTIMATION IN ACCOUNTING?
