Formula 44	Quartile Deviation: $QD = \frac{Q_3 - Q_1}{2}$						
Formula 45	Coefficient of Quartile Deviation: $\frac{Q_3 - Q_1}{Q_3 + Q_1} \times 100$						
Formula 46	Relationship between SD, MD and QD 4SD=5MD=6QD OR SD:MD:QD=15:12:10						
Formula 47	Basic Formula of Probability: $P(A) = \frac{No. \text{ of favorable events to A}}{\text{Total no. of events}}$						
Formula 48	Odds in favour of Event A:						
Formula 49	Odds against an Event A: no- of unfav events no of fav events						
Formula 50	Number of total outcomes of a random experiment: If an experiment results in <u>p</u> outcomes and if it is repeated <u>q</u> times, then Total number of outcomes						
Formula 51	Relative Frequency Probability no. of times the event occurred during experimental trials total no. of trials $= \frac{f_A}{n}$						
Formula 52	Set Based Probability: $P(A) = \frac{\text{no.of sample points in A}}{\text{no.of sample points in S}} = \frac{n(A)}{n(S)}$ here A is Event Set and S is Sample Space						
Formula 53	Addition Theorem 1: In case of two mutually exclusive events A and B $P(A \cup B) = P(A + B) = P(A \text{ or } B) = P(A) + P(B)$						
Formula 54	Addition Theorem 2: In case of two or more mutually exclusive events $P(A_1 \cup A_2 \cup A_3 \cup) = P(A_1) + P(A_2) + P(A_3) +$						

Formula 55	Addition Theorem 3: For any two events $P(A \cup B) = P(A) + P(B) - P(A \cap B)$					
Formula 56	Addition Theorem 4: In case of any three events $P(A \cup B \cup C) = P(A) + P(B) + P(C) - P(A \cap B) - P(B \cap C)$ $- P(A \cap C) + P(A \cap B \cap C)$					
Formula 57	Conditional Probability of Event B when Event A is already occurred $ \frac{P(B/A) = P(A \cap B)}{P(A)} $ provided $P(A) \neq 0$					
Formula 58	Conditional Probability of Event A when Event B is already occurred $P(A/B) = P(AB)$ provided $P(B) \neq 0$					
Formula 59	Compound Theorem: In case of two dependent events $P(A \cap B) = P(B) \times P(A/B) \text{ or}$ $P(A \cap B) = P(A) \times P(B/A)$					
Formula 60	Compound Theorem: In case of two independent events $P(A \cap B) = P(A) \times P(B)$					
Formula 61	Expected value of a Probability Distribution: $ E(x) = \sum_{\mu \in \mathcal{F}} \sum_{\mu \in \mathcal{F}} X $ Also, $E(x) = \mu$ (here μ means mean of probability distribution)					
Formula 62	Variance of Probability Distribution: $V(x) = E(x - \mu)^2 = E(x^2) - (E(x))^2$					
Formula 63	Probability Mass Function in case of Binomial Distribution: $f(x) = P(X = x) = {}^{n}C_{x} p^{x}q^{n-x}$					

	Mean of Binomial Distribution:					
Formula	$\mu = \frac{n\rho}{n}$					
64	Variance of Binomial Distribution:					
	$\sigma^2 = \eta \rho q$					
	1 1					
	Mode in case of Binomial Distribution: Step 1 Calculate (n+1)p					
Formula	· Calculate (11 + 2/P					
65	Step 2A If $(n+1)p$ is an integer, there will be two modes: $\mu_0 = (n+1)p \& [(n+1)p-1]$					
	Step 2B If (n+1)p is a non-integer, there will be only one mode:					
	μ_0 = largest integer contained in (n+1)p					
_	Probability Mass Function in case of Poisson Distribution:					
Formula 66	$f(x) = P(X = x) = e^{-m} \cdot m^{x}$ $e = 2.71828$					
	×					
	Mean of Poisson Distribution: μ = \mathbf{m}					
Formula	Variance of Poisson Distribution: $\sigma^2 = m$					
67	SD of Poisson Distribution: $\sigma = \sqrt{m}$					
	Mode in case of Poisson Distribution:					
Formula	If m is an integer there will be two modes: $\mu_0 = m\&m-1$					
68	If m is a non- there will be only one mode: largest integer					
	integer contained in m					
	Probability Density Function in case of Normal Distribution					
Formula 69	$f(x) = \frac{1}{\sigma \sqrt{2\pi}} \cdot e^{\left(\frac{x-\mu}{\sigma}\right)^2 \frac{1}{2}}$					
03	$I(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-x}$					
Formula	NAD D					
70	Mean Deviation in case of Normal Distribution: $MD = 0.8$					
	Quartiles in case of Normal Distribution:					
Formula	$Q_1 = 4 - 0.675 \sigma$					
71						
	$Q_3 = 2 + 0.675 \sigma$					

Formula 72	Quartile Deviation in case of Normal Distribution: $QD = 0.675\sigma$						
Formula 73	Points of Inflex of Normal Curve:						
Formula 74	In case of Normal Distribution, Ratio between QD: MD: SD = 10:12:15						
Formula 75	Conditions of Standard Normal Distribution: Mean = 0, SD = 1 $4=0$, $5=1$						
Formula 76	Z Score: $Z = \frac{\chi - 4}{5}$						
	Area under Normal Curve (Popular Intervals) From To Area under Normal Curve Probability						
Formula 77	μ $μ+σ$ 34.135% $μ+σ$ $μ+2σ$ 13.59% $μ+2σ$ $μ+3σ$ 2.14%						
Formula 78	$ \begin{array}{ c c c c c c c c c c c c c c c c c c c$						
Formula 79	Karl Pearson's Product Moment Correlation Coefficient: $91 = \frac{\text{Cov}(x,y)}{\text{Sox} \text{SDy}}$						
Formula 80	Covariance between two variables: $cov(x,y) = \frac{\sum(x-\bar{x})(y-\bar{y})}{n} \propto \frac{\sum xy}{n} - \bar{x}$						

	Spearman's Rank Correlation Coefficient:				
Formula 81	$\mathfrak{A}_{R} = 1 - \frac{6 \xi d^{2}}{n (n^{2} - 1)}$				
Formula 82	here d means difference in ranks of both variables Spearman's Rank Correlation Coefficient (in case of tied values) $ r_{R} = 1 - \frac{6\left(\Sigma d^{2} + \frac{A}{A}\right)}{n(n^{2} - 1)} $ here A is adjustment value				
	$A = \frac{\Sigma(t^3 - t)}{12}$ where t = tie length (calculate t value for each of the ties)				
-	Coefficient of Concurrent Deviations $ \eta_{c} = \pm \int_{-\infty}^{\infty} \pm \left(\frac{Qc - m}{Qc - m} \right) \qquad \eta_{c} = + \frac{1}{2} \int_{-\infty}^{\infty} \frac{dc}{dc} = \frac{1}{2} \int_{-\infty}^{\infty} \frac{dc}{$				
Formula 83	where c is number of concurrent deviations (same direction)				
	m is number of pairs compared (equals to n-1)				
	Regression Coefficients:				
Formula 84	Y on X: $b_{YX} = 91 \frac{SDy}{SDx}$ $b_{YX} = \frac{Cov(x_{iy})}{var of x}$ $x on Y:$				
	$bxy = 91\frac{SDx}{SDy}$ $bxy = \frac{Cov(x,y)}{vay of y}$				
	Correlation Coefficient is the GM of regression coefficients:				
Formula 85	91xy = ± \(byx \times bxy				
	Note: r _{xy} , b _{yx} , b _{yx} all will have same sign				

	Change of Origin/ Scale for Regression Coefficients: Origin no impact,
	Scale impact of both magnitude and sign.
Formula	$b_{vu} = b_{yx} \times \frac{\text{change of scale of y}}{\text{change of scale of x}} b_{yy} b_{yx}$
86	· · · · · · · · · · · · · · · · · · ·
	$b_{vu} = b_{yx} \times \frac{c}{change \text{ of scale of } x}$ $b_{uv} = b_{xy} \times \frac{change \text{ of scale of } x}{change \text{ of scale of } y}$ $b_{uv} = b_{xy} \times \frac{change \text{ of scale of } x}{change \text{ of scale of } y}$
Formula 87	Two regression lines (if not identical) will intersect at the point
	(\bar{x},\bar{y})
Formula 88	Coefficient of Determination/ Explained Variance/ Accounted Variance:
	J7 ²
	Coefficient of Non-determination/ Un-explained Variance/ Un-accounted
Formula 89	Variance: $1-91^2$
	1' 31
Formula	Price Relatives: $\frac{P_n}{P_0}$, Quantity Relatives: $\frac{Q_n}{Q_0}$, Value Relatives: $\frac{V_n}{V_0}$
90	Cincula Appropriation Indov
Formula	Simple Aggregative Index:
91	ΣP _o ^
	Simple Average of Relatives – Method Index:
	<u> </u>
Formula 92	$\sum \frac{P_n}{P_0}$

About CA. Pranav Popat Sir

- He is a Chartered Accountant (Inter and Final Both Groups in First Attempt) with 7+ years of experience.
- He is an Educator by Passion and his Choice (Dil Se ♥)
- He teaches subjects of Maths, LR and Stats (Paper 3) at CA Foundation Level and Cost & Management Accounting (Paper 3) at CA Intermediate Level.

Hope this formula book helps you in revising all formulas and become helpful to you during exam time, I made this with my whole heart, make best use of it and I just want one thing in return - share these notes to every student who really needs this.

Wishing you ALL THE BEST for upcoming examinations, see you soon in Inter Costing!!!

Ab mushkil nahi kuch bhi, nahi kuch bhi!!!

With Lots of Love

CA. Pranav Popat (P^2 SIR)
