Chapter 13 – Statistical Description of Data

Past Trends

Attempt	Theory	Practical	Total
May 2018	2	0	2
Nov 2018	6	1	7
Jun 2019	5	0	5
Nov 2019	1	0	1
Nov 2020	8	1	9
Jan 2021	10	0	10
Jul 2021	6	2	8
Dec 2021	3	4	7
Jun 2022	9	0	9
Dec 2022	4	0	4
June 2023	4	0	4
Dec 2023	5	2	7

Definition of Statistics	<ul style="list-style-type: none"> Plural Sense: Any data – quantitative or qualitative used for statistical analysis. Singular Sense: Scientific method of collecting, analyzing, and presenting data to draw statistical inferences. It is also called as Science of Averages or Science of Counting 															
Origin of Word	<table border="1"> <thead> <tr> <th>Language</th> <th>Actual Word</th> <th>Memorize by</th> </tr> </thead> <tbody> <tr> <td>Latin</td> <td>Status</td> <td>Latus</td> </tr> <tr> <td>Italian</td> <td>Statista</td> <td>Pasta</td> </tr> <tr> <td>German</td> <td>Statistic</td> <td>Breadstick</td> </tr> <tr> <td>French</td> <td>Statistique</td> <td>Barbeque</td> </tr> </tbody> </table>	Language	Actual Word	Memorize by	Latin	Status	Latus	Italian	Statista	Pasta	German	Statistic	Breadstick	French	Statistique	Barbeque
Language	Actual Word	Memorize by														
Latin	Status	Latus														
Italian	Statista	Pasta														
German	Statistic	Breadstick														
French	Statistique	Barbeque														
Publication	<table border="1"> <tbody> <tr> <td>Koutilya's Arthashastra</td> <td> <ul style="list-style-type: none"> Record of Birth and Death Chandragupta's reign 4th Century B.C </td> </tr> <tr> <td>Abu Fezal's Ain-i-Akbari</td> <td> <ul style="list-style-type: none"> Record on Agriculture Akbar Reign 16th Century A.D. </td> </tr> <tr> <td>First Census</td> <td> <ul style="list-style-type: none"> Egypt 300 BC to 2000 BC By Pharaoh </td> </tr> </tbody> </table>	Koutilya's Arthashastra	<ul style="list-style-type: none"> Record of Birth and Death Chandragupta's reign 4th Century B.C 	Abu Fezal's Ain-i-Akbari	<ul style="list-style-type: none"> Record on Agriculture Akbar Reign 16th Century A.D. 	First Census	<ul style="list-style-type: none"> Egypt 300 BC to 2000 BC By Pharaoh 									
Koutilya's Arthashastra	<ul style="list-style-type: none"> Record of Birth and Death Chandragupta's reign 4th Century B.C 															
Abu Fezal's Ain-i-Akbari	<ul style="list-style-type: none"> Record on Agriculture Akbar Reign 16th Century A.D. 															
First Census	<ul style="list-style-type: none"> Egypt 300 BC to 2000 BC By Pharaoh 															
Application of Statistics	<ul style="list-style-type: none"> Economics: Demand Analysis, Future Projection etc. Business Management: Decision making using quantitative techniques not intuition 															

Limitation of Statistics	<ul style="list-style-type: none"> Industry and Commerce: Profit maximization using business data – sales, purchase, market etc. by consulting experts It deals with aggregate data and not individual data Quantitative data can only be used, however for qualitative – it needs to be converted into quantitative Projections are based on conditions/ assumptions and any change in that will change the projection. Example: Future projections of sales Sampling based conclusions are used, improper sampling leads to improper results. Random Sampling is must. 				
Data	<ul style="list-style-type: none"> Quantitative information shown as number Primary: first time collected by agency/ investigator Secondary: collected data used by different person/ agency 				
Variable	<ul style="list-style-type: none"> Measurable Data – Value can vary <table border="1"> <tr> <td>Discrete Variable</td> <td> <ul style="list-style-type: none"> When a variable assumes a finite or countably infinite isolated values. Example: no. of petals in a flower, no. of road accident in locality </td> </tr> <tr> <td>Continuous Variable</td> <td> <ul style="list-style-type: none"> When a variable assumes any value from the given interval (can also be in decimals, fractions). Example: height, weight, sale, money </td> </tr> </table>	Discrete Variable	<ul style="list-style-type: none"> When a variable assumes a finite or countably infinite isolated values. Example: no. of petals in a flower, no. of road accident in locality 	Continuous Variable	<ul style="list-style-type: none"> When a variable assumes any value from the given interval (can also be in decimals, fractions). Example: height, weight, sale, money
Discrete Variable	<ul style="list-style-type: none"> When a variable assumes a finite or countably infinite isolated values. Example: no. of petals in a flower, no. of road accident in locality 				
Continuous Variable	<ul style="list-style-type: none"> When a variable assumes any value from the given interval (can also be in decimals, fractions). Example: height, weight, sale, money 				

Personal way

Special point about Money	<ul style="list-style-type: none"> In general, Money is a <u>discrete variable</u> However, from commercial point of view, money is a <u>continuous variable</u>. 								
Attribute	<ul style="list-style-type: none"> Qualitative Characteristics. Example: gender of a baby, the nationality of a person, the colour of a flower etc. <u>use words rather than Numbers</u> 								
Collection of Primary Data – Interview Method	<table border="1"> <thead> <tr> <th>Method</th> <th>Details</th> </tr> </thead> <tbody> <tr> <td>Personal Interview</td> <td> <ul style="list-style-type: none"> Where data is collected directly from respondents. Highly Accurate – <u>Low Coverage</u> Example: <u>Natural Calamity, Door to Door Survey</u> </td> </tr> <tr> <td>Indirect Interview</td> <td> <ul style="list-style-type: none"> When reaching respondent is difficult, data is collected by contacting associated persons. Highly Accurate – <u>Low Coverage</u> Example: <u>Rail accident</u> </td> </tr> <tr> <td>Telephone Interview</td> <td> <ul style="list-style-type: none"> Data is collected over phone Quick and non-expensive method <u>Low Accuracy – High Coverage</u> </td> </tr> </tbody> </table> <p><i>flood, car accident, quality</i></p>	Method	Details	Personal Interview	<ul style="list-style-type: none"> Where data is collected directly from respondents. Highly Accurate – <u>Low Coverage</u> Example: <u>Natural Calamity, Door to Door Survey</u> 	Indirect Interview	<ul style="list-style-type: none"> When reaching respondent is difficult, data is collected by contacting associated persons. Highly Accurate – <u>Low Coverage</u> Example: <u>Rail accident</u> 	Telephone Interview	<ul style="list-style-type: none"> Data is collected over phone Quick and non-expensive method <u>Low Accuracy – High Coverage</u>
Method	Details								
Personal Interview	<ul style="list-style-type: none"> Where data is collected directly from respondents. Highly Accurate – <u>Low Coverage</u> Example: <u>Natural Calamity, Door to Door Survey</u> 								
Indirect Interview	<ul style="list-style-type: none"> When reaching respondent is difficult, data is collected by contacting associated persons. Highly Accurate – <u>Low Coverage</u> Example: <u>Rail accident</u> 								
Telephone Interview	<ul style="list-style-type: none"> Data is collected over phone Quick and non-expensive method <u>Low Accuracy – High Coverage</u> 								
Collection of Primary Data – Mailed Questionnaire Method	<ul style="list-style-type: none"> In this method well <u>drafted</u> and <u>smoothly</u> sequence of questionnaire, covering all the important aspects of the data requirement is sent to respondent for filling. Here <u>coverage is wide</u> but amount of <u>non-responses will be maximum</u> 								

Collection of Primary Data – Observation Method	<ul style="list-style-type: none"> In this method data is collected by <u>direct observation</u> or <u>using instrument</u>. For example: data on height and weight for a group of students. Although <u>more accurate</u> but it is <u>time consuming, low coverage and laborious method</u>. 						
Collection of Primary Data – Questionnaire Filled and sent by Enumerators	<ul style="list-style-type: none"> Mix of Interview and Mailed Questionnaire <u>Enumerator</u> means a Person who directly interacts with respondent and fills the questionnaire. It is generally used in case of <u>Surveys</u> and <u>Census</u>. <p><i>Jo Japoi Data chakha kar jaha hai</i></p>						
Sources of Secondary Data	<table border="1"> <tr> <td>International Sources</td> <td>World Health Organization (WHO), International Monetary Fund (IMF), International Labor Organization (ILO), World Bank</td> </tr> <tr> <td>Government Sources</td> <td>In India – Central Statistics Office (CSO), Indian Agricultural Statistics by the Ministry of Food and Agri, National Sample Survey Office- NSSO, Regulators – RBI, SEBI, RERA, IRDA</td> </tr> <tr> <td>Private or Quasi-govt. sources</td> <td>Indian Statistical Institute (ISI), Indian Council of Agriculture, NCFRT</td> </tr> </table>	International Sources	World Health Organization (WHO), International Monetary Fund (IMF), International Labor Organization (ILO), World Bank	Government Sources	In India – Central Statistics Office (CSO), Indian Agricultural Statistics by the Ministry of Food and Agri, National Sample Survey Office- NSSO, Regulators – RBI, SEBI, RERA, IRDA	Private or Quasi-govt. sources	Indian Statistical Institute (ISI), Indian Council of Agriculture, NCFRT
International Sources	World Health Organization (WHO), International Monetary Fund (IMF), International Labor Organization (ILO), World Bank						
Government Sources	In India – Central Statistics Office (CSO), Indian Agricultural Statistics by the Ministry of Food and Agri, National Sample Survey Office- NSSO, Regulators – RBI, SEBI, RERA, IRDA						
Private or Quasi-govt. sources	Indian Statistical Institute (ISI), Indian Council of Agriculture, NCFRT						

Scrutiny of Data	<ul style="list-style-type: none"> checking <u>accuracy</u> and <u>consistency</u> of data There is no rule for it, one must apply his <u>intelligence</u>, <u>patience</u> and <u>experience</u> while scrutinizing the given information. <u>Internal Consistency</u>: When <u>two</u> or <u>more</u> series of related data are given, we should check consistency among them. 								
Presentation of Data – Classification / Organization of Data	<p>Classification or Organisation: putting data in a neat, precise, and condensed form, making it comparable, suitable for analysis, more understandable.</p> <table border="1"> <tr> <td style="background-color: #d9ead3;">Chronological/ Temporal/ Time Series Data</td> <td> <ul style="list-style-type: none"> Data arranged based on <u>Time</u> Example: Revenues YoY i.e. year on year </td> </tr> <tr> <td style="background-color: #d9ead3;">Geographical or Spatial Series Data</td> <td> <ul style="list-style-type: none"> Arrangement based on <u>regions</u> Example: Country wise Revenue of a global company </td> </tr> <tr> <td style="background-color: #d9ead3;">Qualitative or Ordinal Data</td> <td> <ul style="list-style-type: none"> Based on some attribute Nationality Wise Medal Winners in Olympics </td> </tr> <tr> <td style="background-color: #d9ead3;">Quantitative or Cardinal Data</td> <td> <ul style="list-style-type: none"> Based on some variable Example: Frequency Distribution of a Data </td> </tr> </table>	Chronological/ Temporal/ Time Series Data	<ul style="list-style-type: none"> Data arranged based on <u>Time</u> Example: Revenues YoY i.e. year on year 	Geographical or Spatial Series Data	<ul style="list-style-type: none"> Arrangement based on <u>regions</u> Example: Country wise Revenue of a global company 	Qualitative or Ordinal Data	<ul style="list-style-type: none"> Based on some attribute Nationality Wise Medal Winners in Olympics 	Quantitative or Cardinal Data	<ul style="list-style-type: none"> Based on some variable Example: Frequency Distribution of a Data
Chronological/ Temporal/ Time Series Data	<ul style="list-style-type: none"> Data arranged based on <u>Time</u> Example: Revenues YoY i.e. year on year 								
Geographical or Spatial Series Data	<ul style="list-style-type: none"> Arrangement based on <u>regions</u> Example: Country wise Revenue of a global company 								
Qualitative or Ordinal Data	<ul style="list-style-type: none"> Based on some attribute Nationality Wise Medal Winners in Olympics 								
Quantitative or Cardinal Data	<ul style="list-style-type: none"> Based on some variable Example: Frequency Distribution of a Data 								
Mode of Presentation of Data – Textual	<ul style="list-style-type: none"> This method comprises presenting data with the help of a <u>varagraph</u> or several paragraphs. This is <u>not a suitable mode of presentation</u> as it is dull, monotonous and non-comparable. 								

Mode of Presentation of Data – Tabular Form	<ul style="list-style-type: none"> When data is shown in the form of Table. Useful in easy comparison Complicated data can be presented Table is must to create a diagram No analysis possible without table Components of Table 												
Components of Table	<table border="1"> <thead> <tr> <th>Description</th> <th>Name of Component of Table</th> </tr> </thead> <tbody> <tr> <td>Entire Upper Part</td> <td>✓ Box Head</td> </tr> <tr> <td>Upper Part describing columns and sub-columns</td> <td>✓ Caption</td> </tr> <tr> <td>Left part of the table describing rows</td> <td>✓ Stub</td> </tr> <tr> <td>Main Data of Table</td> <td>✓ Body</td> </tr> <tr> <td>Source of Data at the bottom of Table</td> <td>✓ Footnote</td> </tr> </tbody> </table>	Description	Name of Component of Table	Entire Upper Part	✓ Box Head	Upper Part describing columns and sub-columns	✓ Caption	Left part of the table describing rows	✓ Stub	Main Data of Table	✓ Body	Source of Data at the bottom of Table	✓ Footnote
Description	Name of Component of Table												
Entire Upper Part	✓ Box Head												
Upper Part describing columns and sub-columns	✓ Caption												
Left part of the table describing rows	✓ Stub												
Main Data of Table	✓ Body												
Source of Data at the bottom of Table	✓ Footnote												
Mode of Presentation of Data – Diagrams	<ul style="list-style-type: none"> Can be used by educated and uneducated section of society Hidden trend can be traced If priority is accuracy, then tabulation is better 												

Line Diagram	<ul style="list-style-type: none"> Time Series is generally in x axis For wide fluctuation – <u>log chart</u> or <u>ratio chart</u> is used Y axis - log y Two or more series of same unit – Multiple Line Chart Two or more series of different unit – Multiple Axis Chart
Bar Diagram	<ul style="list-style-type: none"> Bar means <u>rectangle</u> of same <u>width</u> and of varying length drawn horizontally or vertically For comparable series – <u>multiple</u> or <u>grouped</u> bar diagrams can be used For data <u>divided</u> into multiple components – <u>subdivided</u> or <u>component</u> bar diagrams For <u>relative comparison</u> to whole, <u>percentage</u> bar diagrams or <u>divided</u> bar diagrams <u>Vertical Bar Diagram</u>: Useful for Data varying over <u>Time</u> and <u>Quantitative</u> Data <u>Horizontal Bar Diagram</u>: Useful for Data varying over <u>Space</u> and <u>Qualitative</u> Data
Pie Chart	<ul style="list-style-type: none"> Used for circular presentation of relative data (% of whole) Summation of values of all components/segments are equated to 360 Degree (total angle of circle) Segment angle = $\frac{\text{segment value} \times 360^\circ}{\text{total value}}$

(1)	Which of the following statements is false? a. Statistics is derived from the Latin word 'Status' b. Statistics is derived from the Italian word 'Statista' c. <input checked="" type="checkbox"/> Statistics is derived from the French word 'Statistik' d. None of these.	ICAI SM
(2)	Statistics is defined in terms of numerical data in the a. Singular sense b. <input checked="" type="checkbox"/> Plural sense c. Either (a) or (b) d. Both (a) & (b)	ICAI SM
(3)	Statistics is applied in a. Economics b. Business management c. Commerce and industry d. <input checked="" type="checkbox"/> All these.	ICAI SM
(4)	Statistics is <u>concerned with</u> a. Qualitative information b. Quantitative information c. (a) or (b) d. <input checked="" type="checkbox"/> Both (a) and (b)	ICAI SM Stats deals with quant. =

(5)	An attribute is a. <input checked="" type="checkbox"/> A qualitative characteristic b. A quantitative characteristic c. A measurable characteristic d. All these.	ICAI SM
(6)	Annual income of a person is a. An attribute b. <input checked="" type="checkbox"/> A discrete variable c. A continuous variable d. (b) or (c).	ICAI SM
(7)	Marks of a student is an example of a. An attribute b. <input checked="" type="checkbox"/> A discrete variable c. A continuous variable d. None of these.	ICAI SM

(8)	Nationality of a student is a. <input checked="" type="checkbox"/> An attribute b. A continuous variable c. A discrete variable d. (a) or (c).	ICAI SM
(9)	Drinking habit of a person is a. <input checked="" type="checkbox"/> An attribute b. A variable c. A discrete variable d. A continuous variable.	ICAI SM
(10)	Age of a person is a. An attribute b. A discrete variable c. <input checked="" type="checkbox"/> A continuous variable d. A variable.	ICAI SM
(11)	Data collected on religion from the census reports are a. <input checked="" type="checkbox"/> Primary data b. Secondary data c. Sample data d. (a) or (b).	ICAI SM

(12)	The data collected on the height of a group of students after recording their heights with a measuring tape are	ICAI SM
	<input checked="" type="checkbox"/> a. Primary data <input type="checkbox"/> b. Secondary data <input type="checkbox"/> c. Discrete data <input type="checkbox"/> d. Continuous data	
(13)	The primary data are collected by	ICAI SM
	<input type="checkbox"/> a. Interview method <input type="checkbox"/> b. Observation method <input type="checkbox"/> c. Questionnaire method <input checked="" type="checkbox"/> d. All these.	
(14)	The quickest method to collect primary data is	ICAI SM
	<input type="checkbox"/> a. Personal interview <input type="checkbox"/> b. Indirect interview <input checked="" type="checkbox"/> c. Telephone interview <input type="checkbox"/> d. By observation.	

(15)	The best method to collect data, in case of a natural calamity, is	ICAI SM
	<input checked="" type="checkbox"/> a. Personal interview <input type="checkbox"/> b. Indirect interview <input type="checkbox"/> c. Questionnaire method <input type="checkbox"/> d. Direct observation method.	
(16)	In case of a rail accident, the appropriate method of data collection is by	ICAI SM
	<input type="checkbox"/> a. Personal interview <input type="checkbox"/> b. Direct interview <input checked="" type="checkbox"/> c. Indirect interview <input type="checkbox"/> d. All these.	
(17)	Which method of data collection covers the widest area?	ICAI SM
	<input type="checkbox"/> a. Telephone interview method <input checked="" type="checkbox"/> b. Mailed questionnaire method <input type="checkbox"/> c. Direct interview method <input type="checkbox"/> d. All these.	
(18)	The amount of non-responses is maximum in	ICAI SM
	<input checked="" type="checkbox"/> a. Mailed questionnaire method <input type="checkbox"/> b. Interview method <input type="checkbox"/> c. Observation method <input type="checkbox"/> d. All these.	

(19)	Some important sources of secondary data are	ICAI SM
	<input checked="" type="checkbox"/> a. International and Government sources <input type="checkbox"/> b. International and primary sources <input type="checkbox"/> c. Private and primary sources <input type="checkbox"/> d. Government sources.	
(20)	Internal consistency of the collected data can be checked when	ICAI SM
	<input type="checkbox"/> a. Internal data are given <input type="checkbox"/> b. External data are given <input type="checkbox"/> c. Two or more series are given <input checked="" type="checkbox"/> d. A number of related series are given.	
(21)	The accuracy and consistency of data can be verified by	ICAI SM
	<input type="checkbox"/> a. Internal checking <input type="checkbox"/> b. External checking <input checked="" type="checkbox"/> c. Scrutiny <input type="checkbox"/> d. Both (a) and (b).	

(22)	The mode of presentation of data are	ICAI SM
a.	Textual, tabulation and diagrammatic	
b.	Tabular, internal and external	
c.	Textual, tabular and internal	
d.	Tabular, textual and external.	
(23)	The best method of presentation of data is	ICAI SM
a.	Textual	b. Tabular
c.	Diagrammatic	d. (b) and (c).
(24)	The most attractive method of data presentation is	ICAI SM
a.	Tabular	b. Textual
c.	Diagrammatic	d. (a) or (b).
(25)	For tabulation, 'caption' is	ICAI SM
a.	The upper part of the table	
b.	The lower part of the table	
c.	The main part of the table	
d.	The upper part of a table that describes the column and sub-column.	

(26)	'Stub' of a table is the	ICAI SM
a.	Left part of the table describing the columns	
b.	Right part of the table describing the columns	
c.	Right part of the table describing the rows	
d.	Left part of the table describing the rows.	
(27)	The entire upper part of a table is known as	ICAI SM
a.	Caption	b. Stub
c.	Box head	d. Body.
(28)	The unit of measurement in tabulation is shown in	ICAI SM
a.	Box head	b. Body
c.	Caption	d. Stub.
(29)	In tabulation source of the data, if any, is shown in the	ICAI SM
a.	Footnote	b. Body
c.	Stub	d. Caption.
(30)	Which of the following statements is untrue for tabulation?	ICAI SM
a.	Statistical analysis of data requires tabulation	
b.	It facilitates comparison between rows and <u>not</u> columns	
c.	Complicated data can be presented	
d.	Diagrammatic representation of data requires tabulation.	

(31)	Hidden trend, if any, in the data can be noticed in	ICAI SM
a.	Textual presentation	
b.	Tabulation	
c.	Diagrammatic representation	
d.	All these.	
(32)	Diagrammatic representation of data is done by	ICAI SM
a.	Diagrams	b. Charts
c.	Pictures	d. All these.
(33)	The most accurate mode of data presentation is	ICAI SM
a.	Diagrammatic method	
b.	Tabulation	
c.	Textual presentation	
d.	None of these.	
(34)	The chart that uses logarithm of the variable is known as	ICAI SM
a.	Line chart	
b.	Ratio chart	
c.	Multiple line chart	
d.	Component line chart.	

(35)	Multiple line chart is applied for	ICAI SM
	a. Showing multiple charts	
	b. <input checked="" type="checkbox"/> Two or more related time series when the variables are expressed in the same unit	
	c. Two or more related time series when the variables are expressed in different unit	
	d. Multiple variations in the time series.	
(36)	Multiple axis line chart is considered when	ICAI SM
	a. There is more than one line series	
	b. The units of the variables are different	
	c. (a) or (b)	
	d. <input checked="" type="checkbox"/> (a) and (b).	
(37)	Horizontal bar diagram is used for	ICAI SM
	a. Qualitative data	
	b. Data varying over time	
	c. Data varying over space	
	d. <input checked="" type="checkbox"/> (a) or (c).	

(38)	Vertical bar diagram is applicable when	ICAI SM
	a. The data are qualitative	
	b. <input checked="" type="checkbox"/> The data are quantitative.	
	c. <input checked="" type="checkbox"/> When the data vary over time.	
	d. (a) or (c).	
	Note: Error in options, option a and b should be swapped.	
(39)	Divided bar chart is considered for	ICAI SM
	a. Comparing different components of a variable	
	b. The relation of different components to the table	
	c. (a) or (b)	
	d. <input checked="" type="checkbox"/> (a) and (b).	
(40)	In order to compare two or more related series, we consider	ICAI SM
	a. Multiple bar chart	
	b. Grouped bar chart	
	c. <input checked="" type="checkbox"/> (a) or (b)	
	d. (a) and (b).	
(41)	Pie-diagram is used for	ICAI SM
	a. <input checked="" type="checkbox"/> Comparing different components and their relation to the total	
	b. Representing qualitative data in a circle	
	c. Representing quantitative data in circle	
	d. (b) or (c).	

Statistical Description of Data – Frequency Distribution

Frequency and Distribution	<ul style="list-style-type: none"> • Frequency means number of times a particular observation is repeated. • Frequency Distribution is table which contains observation or class intervals in one column and corresponding frequency in the other. • Definition: A frequency distribution may be defined as a <ul style="list-style-type: none"> - tabular representation of statistical data, usually in an ascending order, - relating to a measurable characteristic - according to individual value or a group of values of the characteristic under study. 				
Types of Frequency Distribution	<table border="1"> <tr> <td style="text-align: center; vertical-align: middle;">Ungrouped/ Simple Frequency Distribution</td> <td> <ul style="list-style-type: none"> • When there are limited number of distinct observations, frequency can be assigned to each one of them. • This distribution is simple </td> </tr> <tr> <td style="text-align: center; vertical-align: middle;">Grouped Frequency Distribution</td> <td> <ul style="list-style-type: none"> • When there are large no. of observations, grouping is done among them (generally in ascending order). • Each group is called as class interval and frequency is assigned to group and not individual values, • this is called Grouped Frequency Distribution </td> </tr> </table>	Ungrouped/ Simple Frequency Distribution	<ul style="list-style-type: none"> • When there are limited number of distinct observations, frequency can be assigned to each one of them. • This distribution is simple 	Grouped Frequency Distribution	<ul style="list-style-type: none"> • When there are large no. of observations, grouping is done among them (generally in ascending order). • Each group is called as class interval and frequency is assigned to group and not individual values, • this is called Grouped Frequency Distribution
Ungrouped/ Simple Frequency Distribution	<ul style="list-style-type: none"> • When there are limited number of distinct observations, frequency can be assigned to each one of them. • This distribution is simple 				
Grouped Frequency Distribution	<ul style="list-style-type: none"> • When there are large no. of observations, grouping is done among them (generally in ascending order). • Each group is called as class interval and frequency is assigned to group and not individual values, • this is called Grouped Frequency Distribution 				

Class Limit	<ul style="list-style-type: none"> For a class interval CL is the minimum and maximum value the class interval may contain Minimum Value – Lower Class Limit Maximum Value – Upper Class Limit 															
	<table border="1"> <thead> <tr> <th>Class Interval</th> <th>Frequency</th> <th>LCL</th> <th>UCL</th> </tr> </thead> <tbody> <tr> <td>10-19</td> <td>10</td> <td>10</td> <td>19</td> </tr> <tr> <td>20-29</td> <td>5</td> <td>20</td> <td>29</td> </tr> <tr> <td>30-39</td> <td>8</td> <td>30</td> <td>39</td> </tr> </tbody> </table>	Class Interval	Frequency	LCL	UCL	10-19	10	10	19	20-29	5	20	29	30-39	8	30
Class Interval	Frequency	LCL	UCL													
10-19	10	10	19													
20-29	5	20	29

Theory Concepts not in ICAI Study Material

Descriptive Statistics vs Inferential Statistics	Descriptive Statistics	<ul style="list-style-type: none"> When a statistic is used only to describe scores in a sample (and not used to make inferences about populations), that is a descriptive use. For example, a teacher may compute the mean test score for her class. She simply uses this number to think about how well her students did.
	Inferential Statistics	<ul style="list-style-type: none"> Inferential use of statistics occurs when a data analyst uses information from a sample (such as a mean or correlation) to make inferences or guesses about values of the corresponding mean or correlation in a population Statistical inference only works well when sample sizes are reasonably large For example, in a political poll, a polling organization obtains the percent of people who state an intention to vote for Candidate X for a sample of votes, perhaps selected by random digit telephone dialing from the population of all registered voters.

Simple Classification vs Manifold Classification	Simple Classification	<ul style="list-style-type: none"> When based on <u>only one attribute</u>, the given data is classified into <u>two classes</u>, which is known as <u>Simple Classification</u>. For example, when the population is divided into literate and illiterate, it is a simple classification.
	Manifold Classification	<ul style="list-style-type: none"> When based on <u>more than one attribute</u>, the given data is classified into <u>different classes</u>, and then sub-divided into more sub-classes, which is known as <u>Manifold Classification</u>. For example, when the population is divided into literate and illiterate, then sub-divided into male and female, and further sub-divided into married and unmarried, it is a manifold classification.
Ideographs/ Pictograms	<ul style="list-style-type: none"> A symbol that represents an idea or a <u>thing</u>, rather than the sounds of a word, is called an ideograph. A <u>smiley face emoji</u> is an ideograph that represents <u>happiness</u>. Many street signs are ideographs, meant to convey a specific meaning without using any words. 	

Qualitative Data Types	Nominal Data	<ul style="list-style-type: none"> Nominal data are used to label variables without any quantitative value. Common examples include hair color, nationalities, names of people, and so on. Nominal means Name means Labels
	Ordinal Data	<ul style="list-style-type: none"> Ordinal word comes from order Ordinal scales are often used for measures of satisfaction, happiness, and so on. Example: high-low-medium, strong-weak, etc.
Research Data	<p>Research data can be placed into two broad categories:</p> <p>Quantitative data</p> <ul style="list-style-type: none"> Quantitative data are used when a researcher is trying to quantify a problem, or address the "what" or "how many" aspects of a research question. It is data that can either be counted or compared on a numeric scale. For example, it could be the number of first year students at Macalester, or the ratings on a scale of 1-4 of the quality of food served at Cafe Mac. This data are usually gathered using instruments, such as a questionnaire which includes a ratings scale or a thermometer to collect weather data. Statistical analysis software, such as SPSS, is often used to analyze quantitative data. 	

Qualitative data	<ul style="list-style-type: none"> Qualitative data describes qualities or characteristics. It is collected using questionnaires, interviews, or observation, and frequently appears in narrative form. For example, it could be notes taken during a focus group on the quality of the food at Cafe Mac, or responses from an open-ended questionnaire. Qualitative data may be difficult to precisely measure and analyze. The data may be in the form of descriptive words that can be examined for patterns or meaning, sometimes through the use of coding.
Sturges' Rule	<p>In the early 20th century, German statistician Herbert Sturges formulated a method (now called Sturges' Rule) of choosing the optimum number of bins in a histogram that minimize the potential for these pitfalls. His formula is simple:</p> $k = 1 + 3.322 \log n$ <p>where: k = the number of bins n = the number of observations in the data set.</p>

(42)	A frequency distribution	ICAI SM
	<ol style="list-style-type: none"> Arranges observations in an increasing order Arranges observation in terms of a number of groups Relates to a measurable characteristic All these. 	
	Note: Given answer (b) in SM is incorrect

		ICAI SM
(54)	Relative frequency for a particular class a. <input checked="" type="checkbox"/> Lies between 0 and 1 b. Lies between 0 and 1, both inclusive c. Lies between -1 and 0 d. Lies between -1 to 1.	
		ICAI SM
(55)	Mode of a distribution can be obtained from a. <input checked="" type="checkbox"/> Histogram b. Less than type ogives c. More than type ogives d. Frequency polygon	

ICAI SM

(56) Median of a distribution can be obtained from
 a. Frequency polygon
 b. Histogram
 ✓ c. Less than type ogives
 d. None of these.

Note: Correct option c should be ogives not less than ogives.

ICAI SM

(57) A comparison among the class frequencies is possible only in
 a. Frequency polygon
 ✓ b. Histogram
 c. Ogives
 d. (a) or (b).

ICAI SM

(58) Frequency curve is a limiting form of
 a. Frequency polygon
 b. Histogram
 ✓ c. (a) or (b)
 d. (a) and (b).

Note: Given ans d in SM is incorrect.

ICAI SM

(59) Most of the commonly used frequency curves are
 a. Mixed
 b. Inverted J-shaped
 c. U-shaped
 ✓ d. Bell-shaped.

ICAI SM

(60) The distribution of profits of a company follows
 a. J-shaped frequency curve
 b. U-shaped frequency curve
 ✓ c. Bell-shaped frequency curve
 d. Any of these.

Numerical MCQs

ICAI SM

(66) Out of 1000 persons, 25 per cent were industrial workers and the rest were agricultural workers. 300 persons enjoyed world cup matches on TV. 30 per cent of the people who had not watched world cup matches were industrial workers. What is the number of agricultural workers who had enjoyed world cup matches on TV?
 ✓ a. 260
 b. 240
 c. 230
 d. 250

ICAI SM

(67) A sample study of the people of an area revealed that total number of women were 40% and the percentage of coffee drinkers were 45 as a whole and the percentage of male coffee drinkers was 20. What was the percentage of female non-coffee drinkers?
 a. 10
 ✓ b. 15
 c. 18
 d. 20

ICAI SM

(68) Cost of sugar in a month under the heads raw materials, labour, direct production and others were 12, 20, 35 and 23 units respectively. What is the difference between the central angles for the largest and smallest components of the cost of sugar?
 a. 72°
 b. 48°
 ✓ c. 56°
 d. 92°

	Agri	Indust	Total

 $35/90 \times 360^\circ = 140^\circ$
 diff 92°

ICAI SM

(69) The number of accidents for seven days in a locality are given < :

No. of accidents	0	1	2	3	4	5	6
Frequency	15	19	22	31	9	3	2

 What is the number of cases when 3 or less accidents occurred?
 a. 56
 b. 6
 c. 68
 ✓ d. 87

ICAI SM

(70) The following data relate to the incomes of 86 persons :

Income in Rs	500-999	1000-1499	1500-1999	2000-2499
No. of persons	15	28	36	7

 What is the percentage of persons earning more than Rs. 1500?
 ✓ a. 50
 b. 45
 c. 40
 d. 60

$\frac{43}{86} \times 100 = 50\%$

ICAI SM

(71) The following data relate to the marks of a group of students:

ICAI SM

- (1) Sampling can be described as a statistical procedure
- To infer about the unknown universe from a knowledge of any sample
 - To infer about the known universe from a knowledge of a sample drawn from it
 - To infer about the unknown universe from a knowledge of a random sample drawn from it
 - Both (a) and (b).

ICAI SM

- (5) Statistical decision about an unknown universe is taken on the basis of
- Sample observations
 - A Sampling frame
 - Sample survey
 - Complete Enumeration

Sampling (added in New Syllabus)

Population

- Aggregate of **all the** units under consideration
- Number of units of population is called as population size
- Types – Finite, Infinite, Existent, Hypothetical

ICAI SM

- (4) The population of roses in Salt Lake City is an example of
- A finite population
 - An infinite population
 - A hypothetical population
 - An imaginary population.

Sampling (added in New Syllabus)

Sample

- part of a population selected with a view to represent the population and all its characteristics.
- Number of units of in a sample is called as sample size
- Units forming the sample are known as “Sampling Units”
- A detailed and complete list of all the sampling units is known as a “Sampling Frame”

Sampling (added in New Syllabus)

Parameter

- characteristic of a population based on all the units of the population.
- Example: Population Mean, Population Variance etc.

Statistic

- statistical measure of sample observation
- function of sample observations
- It is used to estimate parameter hence it is also called as estimator
- Example of Statistic – Sample Mean, Sample Variance etc.

Population 100,000 units

Sample randomly 500 persons

/ estimator
Statistic

1-Apr-2024 . Sample I sample $\bar{x} = 54$ kg

15-Apr-2024 Sample II sample $\bar{x} = 55$ kg

30-Apr-2024 Sample III sample $\bar{x} = 56$ kg

population mean = 55 kg

(7)	A parameter is a characteristic of	ICAI SM
a. ✓	Population	b. Sample
c.	Both (a) and (b)	d. (a) or (b)

(8)	A statistic is	ICAI SM
a. ✓	A function of sample observations	b. A function of population units
c.	A characteristic of a population	d. A part of a population.

CA
PRANAV
POPAT

Sampling (added in New Syllabus)

Sampling Fluctuations

- value of Statistic varies from sample to sample
- this variation is called as sampling fluctuations

Sampling Distribution

- distribution of value of statistic for each sample along with its corresponding probability
- It is similar to Random Variable Probability Distribution
- Mean of Sampling Distribution is called as Expectation
- SD of Sampling Distribution is called as Standard Error

sampling dist

Statistic	Probability
54 kg	25%
55 kg	40%
56 kg	5%
57 kg	10%

Mean → Expectation

SD → Standard Error

(9) Sampling Fluctuations may be described as

a. ✓ The variation in the values of a statistic

b. The variation in the values of a sample ✗

c. The differences in the values of a parameter ✗

d. The variation in the values of observations. ✗

ICAI SM

(10) The sampling distribution is

a. The distribution of sample observations

b. The distribution of random samples

c. The distribution of a parameter

d. ✓ The probability distribution of a statistic.

ICAI SM

(11) Standard error can be described as

a. The error committed in sampling

b. The error committed in sample survey

c. The error committed in estimating a parameter

d. ✓ Standard deviation of a statistic.

ICAI SM

(12) A measure of precision obtained by sampling is given by

a. ✓ Standard Error

b. Sampling fluctuation

c. Sampling distribution

d. Expectation

ICAI SM

(13) As the sample size increases, standard error

a. Increases

b. ✓ Decreases

c. Remains constant

d. Decreases Proportionately

ICAI SM

Sampling (added in New Syllabus)

Formulas to find number of possible samples

- If population size is n and sample size is r then number of possible samples in both cases are below
- In case of without replacement: ${}^n C_r$
- In case of with replacement: n^r

$3^2 = 9$

ICAI SM

(23) If a random sample of size 2 with replacement is taken from the population containing the units 3, 6 and 1, then the samples would be

$n = 3$
 $r = 2$
 $n^r = 3^2 = 9$

a. (3,6),(3,1),(6,1) ✗
 b. (3,3),(6,6),(1,1) ✗
 c. ✓ (3,3),(3,6),(3,1),(6,6),(6,3),(6,1),(1,1),(1,3),(1,6)
 d. (1,1),(1,3),(1,6),(6,1),(6,2),(6,3),(6,6),(1,6),(1,1)

- (1,1) (1,3) (1,6)
 (3,3) (3,1) (3,6)
 (6,6) (6,1) (6,3)

ICAI SM

(24) If a random sample of size two is taken without replacement from a population containing the units a,b,c and d then the possible samples are

a. (a, b),(a, c),(a, d)
 b. (a, b),(b, c), (c, d)
 c. (a, b), (b, a), (a, c),(c,a), (a, d), (d, a)
 d. ✓ (a, b), (a, c), (a, d), (b, c), (b, d), (c,d)

$n = 4$
 $r = 2$

${}^n C_r$
 $= {}^4 C_2$
 $= \frac{4 \times 3}{2} = 6$

- a, b a, c a, d
 b, c b, d
 c, d
- 6 samples

$r = 2$ $n = 25$ ICAI SM

(14) If from a population with 25 members, a random sample without replacement of 2 members is taken, the number of all such samples is

✓ a. 300 b. 625
 c. 50 d. 600

${}^{25} C_2 = \frac{25 \times 24}{2} = 300$

$n = 5$ $r = 2$ ICAI SM

(15) A population comprises 5 members. The number of all possible samples of size 2 that can be drawn from it with replacement is

a. 100 b. 15
 c. 125 d. ✓ 25

$n^r = 5^2 = 25$

CA PRANAV POPAT

Sampling (added in New Syllabus)

Sample Survey

- study of the unknown population
- Based on proper representative sample drawn from it

Principle of Sample Survey

- Law of Statistical Regularity: for large sample size, its characteristics averagely match with populations'
- Principle of Inertia: result of large sample are more reliable and accurate
- Principle of Optimization: good sample design gives optimum efficiency at min cost
- Principle of validity: sample design is valid only if it is random

ICAI SM

- (2) *The Law of Statistical Regularity says that*
- Sample drawn from the population under discussion possesses the characteristics of the population*
 - A large sample drawn at random from the population would possess the characteristics of the population*
 - A large sample drawn at random from the population would possess the characteristics of the population on an average*
 - An optimum level of efficiency can be attained at a minimum cost.*

CA
PRANAV
POPAT

Sampling (added in New Syllabus)

$$\begin{array}{l} \text{complete} \quad \underline{20} \times 100,000 = \underline{20L} \\ \text{Samp} \quad \underline{50} \times 1000 = \underline{50k} \end{array}$$

Preference to Sample Survey over complete enumeration

- Speed
- Cost: In Sampling per unit cost is high if you hire trained staff but total is less as compared to complete enumeration
- Reliability: Trained Enumerators, Better Supervision, Modern Technique
- Accuracy: Sampling Errors can be reduced by proper design and size increase
- Necessity: If pop size is very large it is necessity not a choice

If population size is small then no need of sampling

Sampling (added in New Syllabus)

Errors

- Deviation between actual value and observed value
- Sampling Errors: defective design, substitution, wrong choice of statistic, high variability in population
- Non-Sampling Errors: lapse of memory, preference for certain digits, ignorance, non-responses, wrong measurement, communication gap

ICAI SM

- (3) A sample survey is prone to
- | | |
|----------------------|------------------------|
| a. Sampling errors | b. Non-sampling errors |
| c. Either (a) or (b) | d. Both (a) & (b) |

Sampling (added in New Syllabus)

Types of Sampling

- Probability: chance of each unit to get select is same. It is used in these sampling processes - Simple random sampling, Stratified sampling, Multi Stage sampling etc.
- Non-Probability: based entirely on the judgement of the sampler, it is also called as Purposive or Judgement Sampling.
- Mixed Sampling: based partly on some probabilistic law and partly on some pre decided rule. Systematic sampling belongs to this category.

ICAI SM

- (6) Random sampling implies
- | | | | |
|----|---------------------|------|--------------------------------------------------|
| a. | Haphazard sampling | b. | Probability sampling |
| c. | Systematic sampling | d. ✓ | Sampling with the same probability for each unit |

ICAI SM

- (22) Which sampling is subjected to the discretion of the sampler?
- | | | | |
|------|---------------------|----|------------------------|
| a. | Systematic sampling | b. | Simple random sampling |
| c. ✓ | Purposive sampling | d. | Quota sampling |

CA
PRANAV
POPAT

Sampling (added in New Syllabus)

Simple Random Sampling

- each unit belonging to the population has an equal chance of being a part of the sample
- Used when (i) the population is not very large (ii) the sample size is not very small and (iii) the population under consideration is not heterogeneous

ICAI SM

- (16) Simple random sampling is very effective if
- | | |
|------|------------------------------------------------------|
| a. | The population is not very large |
| b. | The population is not much heterogeneous |
| c. | The population is partitioned into several sections. |
| d. ✓ | Both (a) and (b) |

ICAI SM

- (17) Simple random sampling is
- | | |
|------|------------------------------|
| a. ✓ | A probabilistic sampling |
| b. | A non-probabilistic sampling |
| c. | A mixed sampling |
| d. | Both (b) and (c) |

Sampling (added in New Syllabus)

Stratified Sampling

- Used If the population is large and heterogeneous
- dividing the population into a number of strata or subpopulations
- Purpose is (i) to make representation of all the subpopulations (ii) to provide an estimate of parameter not only for all the strata but also and overall estimate (iii) reduction of variability and thereby an increase in precision.
- We consider "Proportional allocation" or "Bowley's allocation" where the sample sizes for different strata are taken as proportional to the population sizes.
- When the strata-variances differ significantly among themselves, we use "Neyman's allocation" where sample size vary jointly with population size and population standard deviation.

		ICAI SM
(18)	According to Neyman's allocation, in stratified sampling	
a.	Sample size is proportional to the population size 4 pop SD	
b.	Sample size is proportional to the sample SD	
c.	Sample size is proportional to the sample variance	
d.	Population size is proportional to the sample variance.	
		ICAI SM
(19)	Which sampling provides separate estimates for population means for different segments and also an over all estimate?	
a.	Multistage sampling	
b.	Stratified sampling	
c.	Simple random sampling	
d.	Systematic sampling	

Sampling (added in New Syllabus)

Multi-stage sampling

- Stage wise samples are drawn till we reach ultimate sample size
- Coverage is high and saved labour, cost effective
- Adds flexibility to sampling process
- Less accurate than stratified

Sampling (added in New Syllabus)

Systematic Sampling

- units constituting the sample are selected at regular interval after selecting the very first unit at random i.e., with equal probability
- is partly probability sampling
- It is less time consuming, less expensive and simple
- Drawback – due to any unknown periodicity, it may give highly biased result

It is less time consuming, less expensive and simple

- Drawback – due to any unknown periodicity, it may give highly biased result

		ICAI SM
(20)	Which sampling adds flexibility to the sampling process?	
a.	Simple random sampling	<input checked="" type="checkbox"/> b. Multistage sampling
c.	Stratified sampling	d. Systematic sampling
		ICAI SM
(21)	Which sampling is affected most if the sampling frame contains an undetected periodicity?	
a.	Simple random sampling	b. Stratified sampling
c.	Multistage Sampling	<input checked="" type="checkbox"/> d. Systematic sampling
