INTRODUCTION

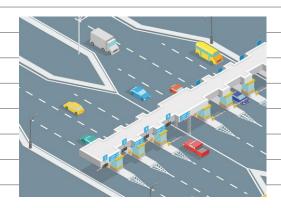

- Service sector, being a fastest growing sector and having a significant contribution towards the GDP in India, is a very important sector where the role of the cost and management accounting is inevitable.
- The services sector is a key driver of India's economic growth. The sector contributed 55.39% to India's Gross Value Added at current price in FY20
- The competitiveness of a service entity is very much dependent on a robust cost and management accounting system for competitive pricing and identification of value adding activities.
- Service costing is also known as operating costing.

APPLICATION OF SERVICE COSTING

Application of Service Costing

Internal

External

- The service costing is required for in-house services provided by a service cost Centre to other responsibility centers as support services.
- Examples of support services are canteen and hospital for staff, boiler house for supplying steam to production departments, IT department service used by other departments, quality assurance ,etc.
- When services are offered to outside customers as a profit center.
- Where services are the main output of the business like goods or passenger transport service provided by a transporter, hospitality services provided by a hotel, provision of services by financial institution, insurance and it companies etc.

SERVICE COSTING VS PRODUCT COSTING

- Unlike products, services are intangible and cannot be stored, hence, there is no inventory for the services.
- Use of Composite cost units for cost measurement and to express the volume of outputs.
- Unlike a product manufacturing, employee (labour) cost constitutes a major cost element than material cost.
- Indirect costs like administration overheads are generally have a significant proportion in total cost of a service as unlike manufacturing sector, service sector heavily depends on support services and traceability of costs to a service may not economically . feasible

SERVICE COST UNIT

- To compute the Service cost, it is necessary to understand the unit for which the cost is to be computed.
- All the costs incurred during a period are collected and analyzed and then expressed in terms of a cost per unit of service.
- One specific issue with service costing is the difficulty in defining a realistic cost unit
 that represents a suitable measure of the service provided
- A composite cost unit may be deemed more appropriate
- Sometime two measurement units are combined together to know the cost of service or operation. These are called composite cost units.

	Service Industry	Unit of Cost (examples)		
	Transport Services	Passenger-km (in public transportation)		
		Quintal-km, or Ton-km (in goods carriage)		
	Electricity Supply Service	kilowatt=-hour (kwh)		
	Hospital	Patient per day, room per day or per bed,		
		Per operation etc.		
	Canteen	Per item, per meal etc.		
	Cinema	Per ticket.		
	Hotels	Guest days or Room Days		
	Bank or Financial Institutions	Per transaction, per services, (e.g. per		
		letter of credit, per application, per		
		project)		
	Educational Institute	Per Course, per student, per batch, per		
		lecture etc.		
	IT & ITES	Cost per project, per module ,etc.		Ĺ
	Insurance	Per policy, per claim, per TPA, etc	_	

EQUIVALENT COST UNIT/ EQUIVALENT SERVICE UNIT

- To calculate cost or pricing of two more different grade of services which uses common resources, each grade of service is assigned a weight and converted into equivalent units.
- Converting services into equivalent units make different grade of services equivalent and comparable.

Example 1		Type of Suit	Number of rooms	Room Tarrif			
		Standard	100				
		Deluxe	50	2.5 times of the standard suits			
		Luxurious	30	Twice of the deluxe suits

Ch-12 Service Costing

COS	TTNG	OF T	TRANS	PORT	SERV	TCES

- Transport organizations can be divided into two categories viz. Goods transport and Passenger transport.
- The cost unit for Goods transport organization is Ton-Kilometer that means cost of carrying one Ton of goods over a distance of one kilometer.
- Cost unit for Passenger transport organization is Passenger-Kilometer that means cost of carrying one Passenger over a distance of one kilometer.

	Standing Charges	Insurance , Salary to Driver, Conductor, Cleaner etc. ,				
	or Fixed Costs	If it is paid on monthly basis , License Fees, Garage				
		Costs , Depreciation ,Taxes , Admin Expenses ;				
	Variable Costs/	Petrol and Diesel ; Lubricant Oils ; Wages to Driver,				
	Running Charges	Conductor , Cleaner etc. if it is related to running ;				
	Semi -Variable Costs	Repairs and maintenance cost , tyres and spares				
	/ maintenance					
	charges					
	The heads for a cost n	nay change as per the situation or condition. For an				
	example salary of driver may be treated as standing charges or running cost					
	depending on the situa	ition and nature of his employment.				

TYPES OF TON-KM

- Weighted Average or Absolute basis:
 - -- This is the sum total of Tonne-Kms arrived by multiplying various distances by respective load quantities carried in each trip
 - -- Numerically, Σ "(Distance × Respective Load Quantity)"

	Simple Average or Commercial basis:						
	It is derived by multiplying total distance of all trips by average load quantity						
	Nu	merically, "Average Load in tons × Total Distance covered	"				
	Note: If	que. is silent we will use Absolute Ton Km					
Que 1	SM Illus	tration 1 Note	book Page No.				
	A Lorry s	starts with a load of 20 MT of Goods from Station 'A'. It	unloads 8 MT in S	Station			
	'B' and bo	alance goods in Station 'C'. On return trip, it reaches Stati	ion 'A' with a load	of 16			
	MT, load	ed at Station 'C'. The distance between A to B, B to C and	C to A are 80 Km	s, 120			
	Kms and	160 Kms, respectively. COMPUTE "Absolute MT- Kilomete	er" and "Commerci	ial MT			
	- Kilomet	er". (MT = Metric Ton or Ton).

		each pa	assenger to earn a profit of 30% on total taking	gs. The fares are to be indicated per
		passeng	ger for the journeys:	
		(i)	Delhi to Chandigarh (ii) Delhi to Agra and (i	iii) Delhi to Jaipur

		_		
Que 6	SM Illustration 4 Notebook Page No.			
	SMC is a public school having five buses each plying in different directions for the			
	transport of its school students. In view of a larger number of students availing of the			
	bus service the buses work two shifts daily both in the morning and in the afternoon. The	:		
	buses are garaged in the school. The work-load of the students has been so arranged tha	t		
	in the morning the first trip picks up senior students and the second trip plying an hour			
	later picks up the junior students. Similarly, in the afternoon the first trip takes the			
	junior students and an hour later the second trip takes the senior students home.			
	The distance travelled by each bus one way is 8 km. The school works 25 days in a month			
	and remains closed for vacation in May, June and December. Bus fee, however, is payable			
	by the students for all 12 months in a year.			
	The details of expenses for a year are as under:			
	Driver's salary ₹ 4,500 per month per driver			
	Cleaner's salary ₹ 3,500 per month			
	(Salary payable for all 12 months)			
	(One cleaner employed for all the five buses)			
	License fee, taxes, etc. ₹ 8,600 per bus per annum			
	Insurance ₹ 10,000 per bus per annum			
	Repairs & maintenance ₹ 35,000 per bus per annum			
	Purchase price of the bus ₹ 15,00,000 each			
	Life of each bus 12 years			
	Scrap value of buses at the end of life ₹ 3,00,000			
	Diesel cost ₹ 45.00 per liter			
	Each bus gives an average mileage of 4 km. per liter of diesel. Seating capacity of each			
	bus is 50 students.			
	The seating capacity is fully occupied during the whole year.			
	Students picked up and dropped within a range up to 4 km. of distance from the school			
	are charged half fare and fifty per cent of the students travelling in each trip are in this	; —		
	category. Ignore interest. Since the charges are to be based on average cost you are			
	required to:			
	(i) PREPARE a statement showing the expenses of operating a single bus and the			

	fleet of five buses for a year.						
	(ii) WORK OUT the average cost per student per month in respect of -						
	(A) students coming from a distance of upto 4 km. from the school and						
	((B) students coming from a dista	ance beyond 4 km. from the school.

	A lodg	ging home is being run in a	small hill station w	ith 100 sing	gle rooms. The ho	ome offers
	concessional rates during six off- season (Winter) months in a year when numbers of					
	visitor are limited. During this period, half of the full room rent is charged. The					
	management's profit margin is targeted at 20% of the room rent. The following are the					
	cost e	stimates and other details	for the year endi	ng on 31st <i>l</i>	March. [Assume	a month to
	be of	30 days].				
	(i)	Occupancy during the				•
	(ii)	Total investment in th	ne home is ₹ 200 lo	ikhs of whic	ch 80% relate to	buildings
	and balance for furniture and equipment.					

(iii)	Expenses:					
	Staff salary [Excluding room attendants]:	₹ 5,50,000				
	Repairs to building:	₹ 2,61,000				
	Laundry charges :	₹ 80, 000				
	Interior:	₹ 1,75,000				
	Miscellaneous expenses :	₹ 1,90,800				
(iv)	Annual depreciation is to be provided for buildings	@ 5% and on furniture and				
	equipment @ 15% on straight-line basis.					
(v)	Room attendants are paid ₹ 10 per room day on the	e basis of occupancy of the				
	rooms in a month.					
(vi)	Monthly lighting charges are ₹ 120 per room, exce	pt in four months in winter				
	when it is $ = 30 $ per room.					
You	are required to WORK OUT the room rent chargeable pe	er day both during the season				
and	the off-season months on the basis of the foregoing info	ormation.				
	COSTING OF HOSPITALS					
- 4	A Hospital is providing various types of medical services to	o the patients. Hospital				
С	costing is applied to decide the cost of these services.					
= (Common unit of costs of various departments are as follow	NS:				
	Out Patient - Per Out-patient					
	In Patient - Per Room Day					
	Scanning - Per Case					
	Laundry - Per 100 items laundered					
- T	The cost of hospital can be divided in to fixed costs and v	ariable costs.				
	- Fixed costs are based on timelines and irrespective	of services provided. For				
	example, Staff salaries, Depreciation on Building and	l Equipment, etc.				
	- Variable costs vary with the level of services render	red. For example, Laundry				
	charges, Cost of food supplied to patients, Power, etc	2.				
OPt	O (Out Patient Department)					
An	OPD is structured to be the primary point of communicat	ion among the patient and				
the	medical professionals in a medical department. A patient	who first arrives at the				
hos	pital goes straight to OPD, and then the OPD decides the	unit to which a patient will				

go.

Que 10	SM Illustration 8 PYQ May 18 Notebook Page No.				
	ABC Hospital runs a Critical Care Unit (CCU) in a hired building. CCU consists of 35 beds				
	and 5 more beds can be added, if required.				
	Rent per month - ₹ 75,000				
	Supervisors - 2 persons - ₹ 25,000 Per month - each ;				
	Nurses - 4 persons - ₹ 20,000 per month - each ;				
	Ward Boys - 4 persons - ₹5,000 per month - each ;				
	Doctors paid ₹ 2,50,000 per month – paid on the basis of number of patients attended				
	and the time spent by them				
	Other expenses for the year are as follows:				
	Repairs (Fixed) - ₹ 81,000				
	Food to Patients (Variable) - ₹8,80,000				
	Other services to patients (Variable) - ₹ 3,00,000 ;				
	Laundry charges (Variable) - ₹ ₹ 6,00,000 ;				
	Medicines (Variable) - ₹ 7,50,000				
	Other fixed expenses - ₹ 10,80,000 ;				
	Administration expenses allocated - ₹ 10,00,000				
	It was estimated that for 150 days in a year 35 beds are occupied and for 80 days only				
	25 beds are occupied.				
	The hospital hired 750 beds at a charge of ₹ 100 per bed per day, to accommodate the				
	flow of patients. However, this does not exceed more than 5 extra beds over and above				
	the normal capacity of 35 beds on any day.				
	You are required to -				
	(1) CALCULATE contribution per Patient day, if the hospital recovers on an				
	average ₹ 2,000 per day from each patient				
	(2) FIND OUT Breakeven point for the hospital				
	COSTING OF TOLL ROADS				
	The Construction of roads brings about a variety of benefits that are enjoyed				
	practically by all sectors of the economy.				
	 Highway economic analysis is a technique whereby the cost and benefit from a scheme 				
	are quantified over a selected time horizon and evaluated by a common yardstick.				

Cost of Toll Road

	_	
Capital Costs (Construction Period)		Operating and Maintenance Costs
 Preliminary and Pre-operative 		Patching of potholes;
expenses;		Sealing of cracks;
Land Acquisition;		■ Edge Repair ;
Interest during construction;		Surface Renewal;
Material , Labour , Overheads ;		Cost of operating toll booths;

BOT APPROACH

- In recent years a growing trend emerged among Governments in many countries to solicit investments for public projects from the private sector under BOT scheme.
 BOT is an option for the Government to outsource public projects to the private.
 sector.
- With BOT, the private sector designs, finances, constructs and operate the facility and eventually, after specified concession period, the ownership is transferred to the Government. Therefore, BOT can be seen as a developing technique for infrastructure projects by making them amenable to private sector participation.
- The fundamental principle in determining user levy is, 'if the price for a transport facility is set at a level that reflects the benefit, each user gains from improvements in the facility, it will result in traffic flow levels that equate social costs with user benefits.

	8	Maintenance, repairing and rehabilitation	12,429.60	
	9	Environmental management	982.00	
		Total Project Cost	1,14,495.25	

An estimated cost of ₹1,120 lakh has to be incurred on administration and toll plaza operation.

On the basis of the vehicle specifications (i.e. weight, size, time saving etc.), the following weights has been assigned to the passing vehicles:

5.No.	Type of Vehicle		
1.	Two wheelers	5%	
2.	Car and SUVs	20%	
3.	Bus and LCV	30%	
4.	Heavy commercial vehicles	45%	

Required:

- (i) CACULATE the total project cost per day of concession period.
- COMPUTE toll fee to be charged for per vehicle of each type, if the company (ii) wants to earn a profit of 15% on total cost.

[Note: Concession period is a period for which an infrastructure is allowed to operate and recovers its investment]

COSTING OF IT/ ITES

- Information Technology (IT) and Information Technology Enabled Services (ITES) organizations provide their customers with services or intangible products. These organizations are highly labour intensive.
- In this sector employee (labour) cost constitutes a significant portion of the total operating costs. In addition to employee cost, significant overhead costs for offering the services are incurred and are classified as service overhead.

CONCEPT OF PROJECT

- In general IT & ITES industries, the jobs undertaken are considered as Project.
 - Each project is unique in nature and varies in size, functionality requirements, duration and staffing requirements.
- Project Scheduling;

Ch-12

Service Costing

- Effort Estimation;
- Man Power Identification;

COST OF IT COMPANIES

		_		
	Effort Cost in IT / ITES		Other Costs

Effort Cost Unit: Cost per Person day or cost per Person week or cost per Person month.

(depends on size) That means cost incurred for a person for rendering services per day or per week or per month.

Que 13 | SM illustration 9

Notebook Page No.

Following are the data pertaining to Infotech Pvt. Ltd, for the year 2020-21

	Amount (₹)	
Salary to Software engineers (5 persons)	15,00,000	
Salary to Project Leaders (2 persons)	9,00,000	
Salary to Project manager	6,00,000	
Repairs & maintenance	3,00,000	
Administration Overheads	12,00,000	

The company executes a Project XYZ, the details of the same as are as follows: Project duration - 6 months.

One Project Leader and three Software Engineers were involved for the entire duration of the project, whereas Project Manager spends 2 months' efforts, during the execution of the project.

Travel expenses incurred for the project - ₹ 1,87,500.

Two Laptops were purchased at a cost of ₹ 50,000 each, for use in the project and the life of the same is estimated to be 2 years.

PREPARE Project cost sheet considering overheads are absorbed on the basis of salary

COSTING OF EDUCATIONAL INSTITUTIONS

- Educational institutions like schools, colleges, technical institutes for education and training, are run to impart education and training to students.
- The objective of running these institutions may be 'Not-for profit' or 'For profit'.
- Like other business entities, cost and management accounting is also inevitable for this sector.
- The Government, Local body of any other organization which provides education and training to students with an objective to benefit and upliftment of the society, are also need cost and management accounting system for cost-social benefit analysis, allocation of funds and budgeting (zero-based budgeting), performance measurement and evaluation etc.

	Costs
Operational Cost	Salary to teaching /non teaching staff; Laboratory Maintenance
	Computer Maintenance; Building Maintenance; General Admins.;
Cost Centers	Primary or Direct cost centers (like Civil Engineering
	department, Mechanical Engineering department, etc.);
	Service cost centers (like Laboratory, Library, Sports, etc.);
	 Student's Self-Supporting Services (like Transport, Hostel &
	Mess, etc.);
	 Administration Cost centers (like Research & Improvement,
	Examination);
Publication Cost	In an educational institution, there will be a separate department
	for conducting research publication related exercise. The cost
	incurred would be directly allocated to that department.
Research &	Educational institutions undertake academic research on
Development	Various fields of specialisations.
	The costs of such research including personal costs, books
	etc. are to be collected through a cost centre approach.

Ch-12

Service Costing

	All costs incurred in that cost centre are collected and set off	
	Against revenue generated from such research projects.	
	If any balance is left out as undistributed, then such balance costs	
	can be collectively distributed to all other course cost centre as a	
	separate cost element namely "Research costs"	Ī

Income

- One Time Fees: Fees once in course period like Admission Fee, Development Fee, Annual Fee etc.
- Recurring Fees: Tuition fee, laboratory, computer and internet fee, library fee,
 training fee, amenities fee, sports fee, extracurricular activities fee etc.

Chapter 6

GOST SHEFT

COST SHEET
One of the objectives of cost accounting system is ascertainment of cost for a cost
object.
Ascertainment of cost includes elementwise collection of costs, accumulation of the
costs so collected for a certain volume or period and then arrange all these
accumulated costs into a sheet to calculate total cost for the cost object.
A Cost Sheet or Cost Statement is "a document which provides a detailed cost
information.
 In a typical cost sheet, cost information are presented on the basis of functional
classification. However,other classification may also be adopted as per the
requirements of users of the information.
FUNCTIONAL CLASSIFICATION OF ELEMENTS OF COST
Direct Material Cost
■ Direct Employee (labour) Cost
Direct Expenses
Production/ Manufacturing Overheads
Administration Overheads .
Selling Overheads
Distribution Overheads
 Research and Development costs etc
COST HEADS IN A COST SHEET
 The costs as classified on the basis of functions are grouped into the following cost
heads in a cost sheet:
☐ Prime Cost.
☐ Cost of Production.
☐ Cost of Goods Sold.
□ Cost of Sales.
PRIME COST
 Prime cost represents the total of direct materials costs, direct employee (labour)
costs and direct expenses

 The total of cost for each element has to be calculated sepa 	, , , , , , , , , , , , , , , , , , ,						
Direct Material Cost	xxx						
Direct Labour (Employeee) Cost	xxx						
Direct Expenses	xxx						
Prime Cost	xxx						
DIRECT MATERIAL COST							
 It is the cost of direct material consumed. The cost of direct 	ct material consumed is						
calculated as follows:-							
Opening stock of material	xxx						
Add: purchases/additions	xxx						
Less: closing stock of material	xxx						
Direct Material Consumed	xxx						
Additions:							
□ Cost of material;							
☐ Freight inwards;							
☐ Insurance and other expenditure directly attributable to procurement;							
☐ Trade discounts or rebates (to be deducted);							
☐ Duties & Taxes (if input tax credit is not available/ availed) etc.							
☐ Realised Value of material scrapped (to be deducted)							
DIRECT EMPLOYEE COST							
 It is the total of payment made to the employees who are en 	ngaged in the production of						
goods and provision of services. Employee cost is also known	as labour cost; it includes						
the following:							
■ Wages and salary;							
□ Allowances and incentives;							
☐ Payment for overtimes;							
□ Bonus/ ex-gratia;							
Employer's contribution to welfare funds such as I	Provident fund and other						
similar funds;							
lue Other benefits (medical, leave with pay, free or s	ubsidised food, leave travel						
concession)							

DIRECT EXPENSES		
 Expenses which are incurred to manufacture a product or for product 	rovision of service	and
can be directly traced in an economically feasible manner to a co	ost object.	
The following costs are examples for direct expenses:-		
☐ Cost of utilities such as power & fuel, steam etc.;		
Royalty paid/ payable for production or provision of service	e;	
 Hire charges paid for hiring specific equipment; 		
☐ Fee for technical assistance and know-how;		
Amortized cost of moulds, patterns, patents etc.;		
Cost for product/ service specific design or drawing;		
Cost of product/ service specific software;		
Other expenses which are directly related with the produce	ction of goods or	
provision of service.		
COST OF PRODUCTION		
In a conventional cost sheet, this item of cost can be seen. It is th	ne total of prime co	ost
and factory related costs and overheads.		
Prime Cost	xxx	
add: Factory Overheads	xxx	
Gross Work Cost	xxx	
Add: Opening stock of Work-in-process	xxx	
Less: Closing Stock of work-in-process	xxx	
Factory/Works Cost	xxx	
Add: Quality Control Cost		
Add: Research & Development Cost (Process related)	xxx	
Add: Administration overheads related with Production	xxx	
Less: Credit for recoveries (miscellaneous income)	(xx)	
Add: Packing Cost (Primary Packing)	xxx	
Cost of Production	xxx	
STOCK OF WIP		
 The cost of opening and closing stock of work-in-process (WIP) 	is adjusted to arr	ive at
factory/ works cost.		
 The WIP stock is valued on the basis of percentage of completi 	on in respect of ea	ch
element of cost. Refer the 'Chapter- Process & Operation Cost	ing' .	T

FACTORY OVERHEADS
 It is also known as works/ production/ manufacturing overheads
It includes following:
☐ Consumable stores and spares;
Depreciation of plant and machinery, factory building etc.
☐ Lease rent of production assets;
Repair and maintenance of plant and machinery, factory building etc.
 Indirect employees cost related with production activities;
Drawing and Designing department cost;
☐ Insurance of plant and machinery, factory building, stock of raw material &
WIP etc.
Amortized cost of jigs, fixtures, tooling etc.
 Service department cost such as Tool Room, Engineering & Maintenance,
Pollution Control etc.
OTHER ITEMS OF COP
• Quality Control Cost: This is the cost of resources consumed towards quality control
procedures.
Research & Development cost: It includes only those research and development
related cost which is incurred for the improvement of process, system, product or
services.
 Administrative Overheads (Production): It includes only those administration
overheads which are related to production. The general administration overhead is not
included in production cost.
• Credit for recoveries: The realised or realisable value of scrap or waste is deducted
as it reduces the cost of production.
 Packing Cost (primary): Packing material which is essential to hold and preserve the
product for its use by the customer.

COST OF GOODS SOLD

 It is the cost of production for goods sold. It is calculated after adjusting the values of opening and closing stocks of finished goods. It can be calculated as below:

Cost of Production	xxx	
Add: Cost of opening stock of finished goods	xxx	
Less: Cost of closing stock of finished goods	(xx)	
Cost of goods sold	xxx	

COST OF SALES

• It is the total cost of a product incurred to make the product available to the customer or consumer. It includes Cost of goods sold, administration and marketing expenses. It is calculated as below:-

Cost of Sales	xxx	
Add:- Interest and Finance Charges	xxx	
Add:- Distribution Overheads	xxx	
Add:- Packing Cost (Secondary)	xxx	
Add:- Selling overheads	xxx	
Add:- Administrative Overheads (General)	xxx	
Cost of goods sold	xxx	

ADMINISTRATIVE OVERHEADS

- It is the cost related with general administration of the entity. It includes the followings:
 - Depreciation and maintenance of, building, furniture etc. of corporate or general
 - □ management.
 - $lue{}$ Salary of administrative employees, accountants, directors, secretaries etc.
 - ☐ Rent, rates & taxes, insurance, lighting, office expenses etc.
 - $\hfill \square$ Indirect materials- printing and stationery, office supplies etc.
 - ☐ Legal charges, audit fees, corporate office expenses like directors' sitting fees, remuneration and commission, meeting expenses etc.

SELLING OVERHEADS

- It is the cost related with sale of products or services. It includes the following costs:
 - $lue{}$ Salary and wages related with directly related with selling of goods.
 - $oldsymbol{\square}$ Rent, depreciation, maintenance and other cost related with sales department.
 - Cost of advertisement, maintenance of website for online sales, market research etc.

PACKING COST - SECONDARY

 Packing cost (secondary): Packing material that enables to store, transport, inform the customer, promote and otherwise make the product marketable.

DISTRIBUTION OVERHEADS

- It includes the cost related with making the goods available to the customers. The costs are:
 - Salary and wages of employees engaged in distribution of goods.
 - ☐ Transportation and insurance costs related with distribution.
 - ☐ Depreciation, hire charges, maintenance and other operating costs related with distribution vehicles etc.

TREATMENT OF OTHER ITEMS

- Abnormal costs Any abnormal cost, where it is material and quantifiable, shall not form part of cost of production or acquisition or supply of goods or provision of service.
 - **Examples** of abnormal costs are:
 - ☐ Cost pertaining to or arising out of a pandemic e.g. COVID-19
 - ☐ Cost associated with employees due to sudden lockdown.
- Subsidy/ Grant/ Incentives Any such type of payment received/ receivable are reduced from the cost objects to which such amount pertains.
- Penalty, fine, damages, and demurrage These types of expenses are not form part of cost.
- Interest and other finance costs Interest, including any payment in the nature of interest for use of non- equity funds and incidental cost that an entity incurs in arranging those funds. Interest and finance charges are not included in cost sheet.

Notebook Page no.

The following data relates to the manufacture of a standard product during the month of April, 20X8:

	On June 1	On June	
	2020	30,2020	
Cost of raw materials	60,000	50,000	
Cost of work-in-process	12,000	15,000	
Cost of stock of finished goods	90,000	1,10,000	
Purchase of raw materials during June Rs. 20X8		4,80,000	
Wages paid		2,40,000	
Factory overheads		1,00,000	

	Administration overheads (related to production)	50,000	
	Selling & distribution overheads	25,000	
	Sales	10,00,000	

Prepare a statement giving the following information:

- (a) Raw materials consumed;
- (b) Prime cost;
- (c) Factory cost;
- (d) Cost of goods sold; and
- (e) Net profit.

Que 2 | SM Exercise Que 1

Notebook Page no.

The books of Adarsh Manufacturing Company present the following data for the month of April, 20X9:

- Direct labour cost Rs. 17,500 being 175% of works overheads
- Cost of goods sold excluding administrative expenses Rs. 56,000
- Inventory accounts showed the following opening and closing balances:

	April 1 (Rs.)	April 30 (Rs.)	
Raw Material	8.000	10,600	
Work-in-Progress	10,500	14,500	
Finished Goods	17,600	19,000	

Other data are:

	₹	
Selling expenses	3,500	
General & Administration expenses	2,500	
Sales for the month	75,000	

You are required to:

- (i) Compute the value of materials purchased.
- (ii) Prepare a cost statement showing the various elements of cost and also the profit earned.

Que 3 | SM Illustration 1

Notebook Page no.

The following data relates to the manufacture of a standard product during the month of April, 20X8:

Particular	Amount	
Raw material	₹1,80,000	
Direct Wages	₹ 90,000	
Machine hours worked (hours)	10,000	
Machine hour rate (per hour)	₹8	
Administration overheads (general)	₹35,000	
Selling overheads (per unit)	₹5	
Units produced	4,000	
Units sold	3,600	
Selling price per unit	₹125	

You are required to prepare a cost sheet in respect of the above showing:

- (i) Cost per unit
- (ii) Profit for the month

SM Illustration 3 Que 4

Cost-Sheet

- (vi) Each unit of raw material yields scrap which is sold at the rate of ₹ 5 per unit.
- (vii) In year 2019, the factory worked at 50% capacity for the first three months but it was expected that it would work at 80% capacity for the remaining nine months.
- (viii) During the first three months, the selling price per unit was ₹ 145.

You are required to:

- (i) Prepare a cost sheet showing Prime Cost, Works Cost, Cost of Production and Cost of Sales.
- (ii) Calculate the selling price per unit for remaining none months to achieve the total annual profit of ₹ 8,76,600.

Que 9 PYQ Que 3(b) Nov-19

XYZ a manufacturing firm, has revealed following information for September .2019:

	1st September	30 th September	ı
	₹	₹	
Raw Materials	2,42,000	2,92,000	
Works-in-Process	2,00,000	5,00,000	

The firm incurred following expenses for a targeted production of 1,00,000 units during the month:

Particular	₹	
Consumable Stores and spares of factory	3,50,000	
Research & Development cost for process improvements	2,50,000	
Quality Control Cost	2,00,000	
Packing cost (Secondary) per unit of goods sold	2	
Lease Rent of production asset	2,00,000	
Administrative Expenses (general)	2,24,000	
Selling and distribution expenses	4,13,000	
Finished Goods (opening)	Nil	
Finished Goods (closing)	5,000 units	

Defective output which is 4% of targeted production, realizes ₹ 61 per unit.

Closing stock is valued at cost of production (excluding administrative expense)

Cost of goods sold, excluding administrative expenses amount to ₹ 78,26,000.

Direct employees cost is $\frac{1}{2}$ of the cost of material consumed.

Selling price of the output is ₹ 110 per unit.

You are required to:

- (i) Calculate the value of material purchased.
- (ii) Prepare Cost Sheet showing the profit earned by the firm.

BUDGET MEANING

- It is a Planning Document
- Quantitative expression of a plan for a defined period of time

BUDGETING

Entire process of preparation, execution and evaluation of budget system

ESSENTIALS OF BUDGETING

- Clear Organisation Structure
- In Line with Co's Vision
- Clear Responsibility
- Flexible and Adjustable
- Commitment of All
- Linkage with Reward System
- Periodic Monitoring

COMPONENTS OF BUDGETARY CONTROL SYSTEM

Components

Physical Budgets

Those budgets which contain information in quantitative terms such as the physical units of sales, production etc.

This may include quantity of sales, quantity of production, inventories, and manpower budgets are physical budgets

Cost budgets

Budgets which provides cost information in respect manufacturing, administration, selling and distribution, etc. Example, manufacturing costs, selling costs, administration cost, and research and development cost

budgets are cost

budgets.

Profit Budget

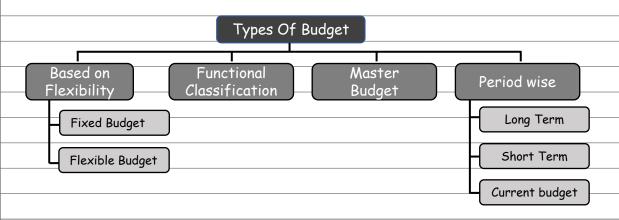

budget which

enables the ascertainment of profit. For example, sales budget, profit and loss budget, etc

Financial budgets

A budget which facilitates in ascertaining the financial position of a concern, Example, cash budgets, capital expenditure budget, budgeted balance sheet etc.

BUDGET BASED ON FLEXIBILITY

Fixed Budget:

- A budget prepared on the basis of standard or fixed level of activity is known as fixed budget. It does not change with a change in the level of activities.
- A fixed budget shows the expected results of a responsibility center for only one activity level.
- Once the budget is prepared, it is not changed, even if the level of activity changes.
- Fixed budgeting is used by many service companies and for some administrative functions of manufacturing companies, such as purchasing, engineering, and accounting.
- Fixed budget is suitable for fixed expenses. It is also known as a static budget.
- Demerits: It does not suite a dynamic organization and may give misleading results

Flexible Budget

- A flexible budget is a budget which, by recognizing the difference in behavior between fixed and variable costs in relation to fluctuations in output, turnover, or other variable factors, is designed to change appropriately with such fluctuations.
- Unlike static (fixed) budgets, the flexible budgets show the expected results of a responsibility center for different activity levels.

	Ch-15 Budget •
	 Unlike static (fixed) budgets, the flexible budgets show the expected results of a
	responsibility center for different activity levels.
	One can view a flexible budget as a series of static budgets for different levels of
	activity.
	Such budgets are especially useful in estimating and controlling factory costs and
	operating expenses.
	It is more realistic and practicable because it gives due consideration to behaviour of
	revenue and cost at different levels of activity.
	SPLIT OF SEMI VARIABLE COST INTO FIXED AND VARIABLE
	■ In case of semi-variable cost, we can calculate variable cost per unit by using below
	formula:
	Variable Cost p.u. = Change in Cost Change in Units
	Variable Cost p.u Change in Units
	Once the variable cost per unit is obtained, use total cost of any level and subtract
	variable cost from it to obtain Fixed Cost
Que 1	SM Illustration 3 Notebook Page no.
	Action Plan Manufacturers normally produce 8,000 units of their product in a month, in
	their Machine Shop. For the month of January, they had planned for a production of
	10,000 units. Owing to a sudden cancellation of a contract in the middle of January, they
	could only produce 6,000 units in January.
	Indirect manufacturing costs are carefully planned and monitored in the Machine Shop:
	and the Foreman of the shop is paid a 10% of the savings as bonus when in any month the
	indirect manufacturing cost incurred is less than the budgeted provision.
	The Foreman has put in a claim that he should be paid a bonus of ₹ 88.50 for the month
	of January. The Works Manager wonders how anyone can claim a bonus when the Company
	has lost a sizeable contract. The relevant figures are as under:

	Indirect Manufacturing	Expenses for a	Planned for	Actual in costs
		normal month (₹)	January (₹)	January (₹)
	Salary of foreman	1,000	1,000	1,000
	Indirect labour	720	900	600
	Indirect Material	800	1,000	700
	Repairs and maintenance	600	650	600
	Power	800	875	740
	Tools consumed	320	400	300
	Rates and taxes	150	150	150
	Depreciation	800	800	800
	Insurance	100	100	100
		5,290	5,875	4,990
\neg			_	

Do you agree with the Works Manager? Is the Foreman entitled to any bonus for the performance in January? Substantiate your answer with facts and figures. EXPLAIN.

		Office and administrative	e Expenses (100%	fixed)	20 per unit		

The company anticipates that in FY 2021-22, the variable costs will go up by 20% and
fixed costs will go up by 15%. The colling price per unit will increase by 10° to ₹880 Dequired:
The selling price per unit will increase by 10% to ₹ 880 Required:
 (i) CALCULATE the budgeted profit/loss for the FY 2020-21. (ii) PREPARE an Expense budget on marginal cost basis for the FY 2021-22 for the
company at 50% and 60% level of activity and FIND OUT the profits at respective levels
FUNCTIONAL BUDGETS
 A functional budget is one which is related to function of the business
 For Example, production budget relating to the manufacturing function.
 Functional budgets are prepared for each function and they are subsidiary to the
Master budget of the business.
 They are also called as Schedules to Master Budget
 The various types of functional budgets to be prepared will vary according to the size
and nature of the business.
The various commonly used functional budgets are:
□ Sales Budget
□ Production Budget
☐ Plant Utilisation Budget
□ Direct Material Usage Budget
□ Direct Material Purchase Budget
□ Direct Labour Budget
□ Factory Overhead Budget
☐ Production Cost Budget
☐ Ending-Inventory Budget
□ Cost of Goods Sold Budget
☐ Selling and Distribution Cost Budget
☐ Administration Expenses Budget
☐ Research and Development Cost Budget
□ Capital Expenditure Budget
□ Cash Budget
SALES BUDGET
 Sales forecast is the commencement of budgeting and hence sales budget assumes
primary importance.

The quantity which can be sold may be the principal budget factor in many business

underta	kings.

- Once an estimate of the sales volume is obtained, the expected sales revenue can be determined by multiplying the volume by the expected unit sales price.
- The sales budget may be prepared under the following classification or combination of classifications:
 - ☐ Product wise
 - ☐ Areas, Agents, Salesman
 - ☐ Types of Customers Govt, Export, Home Sales
 - ☐ Period wise Quarterly, Monthly, Weekly etc.

Illustrative Format of Sales Budget

The illustrative format of a sales budget is as under:

Product B	10,000	80	8,00,000
			11,75,000

PRODUCTION BUDGET

- Production Budget is a forecast of the production for the budget period of an organization.
- It is a physical budget, so number of units to be manufactured to meet budgeted sales
 and inventory needs for each product is set forth in the production budget.

of an organization.

It is based on:	Example of production budget:						
Sales Budget	— XYZ COMPANY Production budget in units for the year ending March 31, 20						
Production Capacity		Products					
Planned Inventories	Budgeted sales	5,000 10,000					
Flanned Inventories	Add: Desired closing stock	500 1,000					
	Total quantity required Less: Opening stock	5,500 11,000 1,500 2,000 —					
	Units to be produced	4,000 9,000					
PLAN U	TILIZATION BUDGET						
 Plant utilisation budget represents 	, in terms of working hours, weig	iht or other					
convenient units of plant facilities i	required to carry out the progra	ımme laid down in					
the production budget.							
Purpose:							
☐ To determine the load on each	n process, cost or groups of mac	hines for the budget					
period.							
☐ To indicate the processes or a	cost centres which are overload	ed so that corrective					
action may be taken such as: ((i) working overtime (ii) sub-con	tracting (iii)					
expansion of production facil	lity, etc.						
DIRECT MA	ATERIAL USAGE BUDGET						
It includes the physical units of each	ch Raw Material based on the pr	oduction budget					
and corresponding rate to also show	v the cost.						
 While setting standard quantity, no 	ormal loss should be considered.						
 Standard prices for each item of m 	naterials should be set after giv	ing consideration to					
stock and contracts entered into.	XYZ COMPANY						
	Direct material usage in units						
	for the year ending Mare	:h 31, 20					
	Type of material Product A Product B Total	direct Material Total cost					
	-	aterial cost per of material

Notebook Page no.

K Ltd. produces and markets a very popular product called 'X'. The company is interested in presenting its budget for the second quarter of 2020-21.

The following information are made available for this purpose:

- (i) It expects to sell 1,50,000 bags of 'X' during the second quarter of 2020- 21 at the selling price of ₹ 1,200 per bag.
- (ii) Each bag of 'X' requires 2.5 mtr. of raw material 'Y' and 7.5 mtr. of raw material 'Z'.
- (iii) Stock levels are planned as follows

Particular	Beginning of	End of	
	Quarter	Quarter	
Finished bags of 'X' (Nos.)	45,000	33,000	
Raw Material "Y" (mtr.)	96,000	78,000	
Raw Material "Z" (mtr.)	1,71,000	1,41,000	
Empty bag (Nos.)	1,11,000	84,000	

- (iv) 'Y' cost ₹160 per mtr., 'Z' costs ₹30 per mtr. and 'Empty Bag' costs ₹110 each.
- (v) It requires 9 minutes of direct labour to produce and fill one bag of 'X'. Labour cost is ₹ 70 per hour.
- (vi) Variable manufacturing costs are ₹ 60 per bag. Fixed manufacturing costs ₹ 40,00,000 per quarter.
- (vii) Variable selling and administration expenses are 5% of sales and fixed administration and selling expenses are ₹ 3,75,000 per quarter.

Required:

(i) PREPARE a production budget for the said quarter in quantity.

Ch-15

Budget

- (ii) PREPARE a raw material purchase budget for 'Y', 'Z' and 'Empty Bags' for the said quarter in quantity as well as in rupees.
- (iii) COMPUTE the budgeted variable cost to produce one bag of 'X'.

Que 9 SM Exercise Que 1

Notebook Page no.

B Ltd manufactures two products viz., X and Y and sells them through two divisions, East and West. For the purpose of Sales Budget to the Budget Committee, following information has been made available for the year 2020-21:

Product	Budgete	ed Sales	Actual S ales			
	East Division	West Division	East Division	West Division		
X	800 units at ₹18	1,200 units at	1,000 units at	1,400 units at		
		₹18	₹18	₹18		
У	600 units at	1,000 units at	400 units at	800 units at		
	₹42	₹42	₹42	₹42		

Adequate market studies reveal that product X is popular but underpriced. It is expected that if the price of X is increased by \mathbb{Z} 2, it will, find a ready market. On the other hand Y is overpriced and if the price of Y is reduced by \mathbb{Z} 2 it will have more demand in the market. The company management has agreed for the aforesaid price changes. On the basis of these price changes and the reports of salesmen, following estimates have been prepared by the Divisional Managers:

Percentage increase in sales over budgeted sales

Product	East Division	West Division	
X	+12.5%	+ 7.5%	
У	+ 22.5%	+ 12.5%	

With the help of intensive advertisement campaign, following additional sales (over and above the above-mentioned estimated sales by Divisional Mangers) are possible:

Product	East Division	West Division	
X	120 units	140 units	
У	80 units	100 units	

You are required to PREPARE Sales Budget for 2021-22 after incorporating above . estimates and also SHOW the Budgeted Sales and Actual Sales of 2020-21.

	Heavyhigh (HH) for the year 2021-22. The company's policy is to h	rold closing stoc	ck of				

Ch-15

Budget

finished goods at 25% of the anticipated volume of sales of the succeeding month. The following are the estimated data for two products:

Particular	Minimax (MM)	HeavyHigh (HH)	
Budgeted Production units	1,80,000	1,20,000	
	(₹)	(₹)	
Direct material cost per unit	220	280	
Direct labour cost per unit	130	120	
Manufacturing Overhead	4,00,000	5,00,000	

The estimated units to be sold in the first four months of the year 2021-22 are as under

	April	May	June	July	
Minimax	8,000	10,000	12,000	16,000	
HeavyHigh	6,000	8,000	9,000	14,000	

Prepare production budget for the first quarter in month-wise.

Que 12 SM Illustration 5

Notebook Page no.

A company is engaged in the manufacture of specialised sub-assemblies required for certain electronic equipment. The company envisages that in the forthcoming month, December, the sales will be in the ratio of 3:4:2 respectively of sub-assemblies, ACB, MCB and DP.

The following is the schedule of components required for manufacture:

Component Requirements								
Sub-assembly	Selling Price	Base Board	I <i>C</i> 08	IC12	IC26			
ACB	520	1	8	4	2			
MCB 500		1	2	10	6			
DP	350	1	2	4	8			
Purchase price (₹)		60	20	12	8			

The direct labour time and variable overheads required for each of the sub-assemblies are:

	Labour Hours		Variable	
	Grade A Grade B		Overheads (₹)	
ACB	8	16	36	
MCB	6	12	24	
DP	4	8	24	
Direct wage rate per hour (₹)	5	4	-	

The labourers work 8 hours a day for 25 days a month.

The opening stocks of sub-assemblies and components for December are as under:

	•			
Sub-assemblies		Components		
ACB	800	Base board	1,600	
MCB	1,200	IC08	1,200	
DP	2,800	IC12	6,000	
		IC26	4,000	

Fixed overheads amount to ₹7,57,200 for the month and a monthly profit target of ₹12 lacs has been set.

The company is eager for a reduction of closing inventories for the month of December of sub-assemblies and components by 10% of quantity as compared to the opening stock.

PREPARE the following budgets for the month of December:

- (a) Sales budget in quantity and value.
- (b) Production budget in quantity
- (c) Component usage budget in quantity.
- (d) Component purchase budget in quantity and value.
- (e) Manpower budget showing the number of workers and the amount of wages payable.

Concorde Ltd. manufactures two products using two types of materials and one grade of labour. Shown below is an extract from the company's working papers for the next month's budget:

		Product	Product	
		Α	В	
	Budgeted sales (in units)	2,400	3,600	
	Budgeted material consumption per unit			
	(in kg.) Material X	5	3	
	Material Y	4	6	
	Standard labour hours allowed per unit			
	of product	3	5	

Material-X and Material-Y cost ₹4 and ₹ 6 per kg and labours are paid ₹ 25 per hour.

Overtime premium is 50% and is payable, if a worker works for more than 40 hours a

	Ch-15 Budge	t •
	a week. There are 180 direct workers	s.
	The target productivity ratio (or eff	iciency ratio) for the productive hours worked by the
	direct workers in actually manufactur	ring the products is 80%. In addition, the
	non-productive down-time is budgete	d at 20% of the productive hours worked.
	There are four 5-days weeks in the b	oudgeted period and it is anticipated that sales and
	production will occur evenly througho	out the whole period.
	It is anticipated that stock at the be	ginning of the period will be:
	Product-A	400 units
	Product-B	200 units
	Material-X	1,000 kg.
	Material-Y	500 kg.
	The anticipated closing stocks for bu	ıdget period are as below:
	Product-A	4 days sales
	Product-B	5 days sales
	Material-X	10 days consumption
	Material-Y	6 days consumption
	Required:	
	CALCULATE the Material Purchase B	Budget and the Wages Budget for the direct workers,
	showing the quantities and values, for	r the next month.
	N	MASTER BUDGET
	The summary budget, incorporating	g its component functional budgets, which is finally
	approved, adopted and employed.	
	When all the necessary functional	budgets have been prepared, the budget officer will
	prepare the master budget which	may consist of budgeted profit and loss account and
	budgeted balance sheet.	
Que 14	SM Illustration 6	Notebook Page no.
	Float glass Manufacturing Company r	equires you to PREPARE the Master budget for the
	next year from the following informa	ition:
	Sales:	
	Toughened Glass	₹ 6,00,000
CA Pr	ranav Popat 15.17	

Bent Glass	₹ 2,00,000	
Direct material cost	60% of sales	
Direct wages	20 workers @ ₹150 per month	
Factory overheads:		
Indirect labour –		
Works manager	₹ 500 per month	
Foreman	₹400 per month	
Stores and spares	2.5% on sales	
Depreciation on machinery	₹ 12,600	
Light and power	₹ 3,000	
Repairs and maintenance	₹ 8,000	
Others sundries	10% on direct wages	
Administration, selling		
And distribution expenses	₹ 36,000 per year	

BUDGET CLASSIFICATION BASED ON TIE PERIOD

Long Term Budget:

- Long Term Budget is a budget prepared covering a period of more than a year.
- The Budgets are prepared to depict long term planning of the business.
- The period of long term Budgets varies between three to ten years.
- These budgets are useful for those industries where gestation period is long i.e. the business entities manufacturing machinery, electricity etc.

Short Term Budget:

- These budgets are generally for one or two years and are in the form of monetary terms.
- The consumer's good industries like Sugar, Cotton, and textile use short term budgets.

Current Budget:

- The period of current budgets is generally of months and weeks.
- These budgets relate to the current activities of the business

ZERO BASED BUDGETING (ZBB)

 Zero-based Budgeting (ZBB) is defined as a method of budgeting which requires each cost element to be specifically justified, though the activities to which the budget relates are not being undertaken for the first time.

Ch-15 Budget

- The cost of each activity has to be justified and without justification, the budget allowance is zero.
- Zero based budgeting differs from the conventional system of budgeting because it
 mainly starts from scratch or zero and not on the basis of trends or historical levels of
 expenditure.
- ZBB is an activity based budgeting system where budgets are prepared for each activities rather than functional department.

BUDGET RATIO

- Budget ratios provide information about the performance level, i.e., the extent of deviation of actual performance from the budgeted performance and whether the actual performance is favourable or unfavorable.
- If the ratio is 100% or more, the performance is considered as favourable and if ratio is less than 100% the performance is considered as unfavourable.

Budget Ratio

(i) Efficiency Ratio =
$$\frac{\text{Standard Hours}}{\text{Actual Hours}} \times 100$$

(ii) Activity Ratio =
$$\frac{\text{Standard Hours}}{\text{Budgeted Hours}} \times 100$$

(iii) Calendar Ratio =
$$\frac{A \text{vailable Working Days}}{B \text{udgeted Working Days}} \times 100$$

- (iv) Standard Capacity Usage Ratio = $\frac{\text{Budgeted Hours}}{\text{Max possible Hours}} \times 100$
- (v) Actual Capacity Usage Ratio = $\frac{\text{Budgeted Hours}}{\text{Max possible Hours}} \times 100$
- (vi) Actual Usage of Budgeted Capacity Ratio = $\frac{Actual Working Hours}{Budgeted Hours} \times 100$

Que 15	SM Illustration 7		Notebook Page no.
	Following data is available f	or DKG and Co:	
	Standard working hours	8 hours per day of 5 days	s per week
	Maximum capacity	50 employees	
	Actual working	40 employees	
	Actual hours expected to b	e worked per four week	6,400 hours
	Std. hours expected to be	earned per four weeks	8,000 hours
	Actual hours worked in the	four- week period	6,000 hours
	Standard hours earned in t	he four- week period	7,000 hours.
	The related period is of 4 v	as a one special day holiday due to	
	national event.		
	CALCULATE the following r	ratios:	
	(1) Efficiency Ratio, (2) Act	tivity Ratio, (3) Calendar Ratio	o, (4) Standard Capacity Usage
	Ratio, (5) Actual Capacity U	of Budgeted Capacity Ratio

COST ACCOUNTING SYSTEM

Ch-7 Cost Accounting System•

May18	Nov18	May19	Nov19	Nov20	Jan21	Jul21	Dec21	May22	
15	10	10	5	5	0	10	5	10	

COST ACCOUNTING SYSTEMS

- To operate business operations **efficiently and successfully**, it is necessary to make use of an appropriate accounting system.
- Such a system should state in clear terms whether cost and financial transactions should be integrated or kept separately.

Cost Accounting system

Non-Integrated Accounting system Integrated Accounting system

NON- INTEGRATED ACCOUNTING SYSTEM

- It is a system of accounting under which separate ledgers are maintained for both cost and financial accounts
- This system is also known as cost ledger accounting system.
- Under this system the cost accounts restrict itself to recording only those transactions which relate to the product or service being supplied.
- Items of expenses which are related to sales, production or other matters of factory management are the ones dealt with in such accounts.
- This leads to the exclusion of certain expenses like interest, bad debts and revenue/income from 'other than the sale of product or service' and all the Balance Sheet items like fixed assets, debtors, creditors.
- Items of accounts which are excluded are represented by an account known as Cost ledger control account.

Cost Accounting System

Main Accounts under Non-Integrated System:
☐ Cost Ledger Control Account
☐ Stores Ledger Control Account
☐ Wages Control Account
☐ Manufacturing/Production/Works/ Factory Overhead Control Account
☐ Work-in-Process Control Account
☐ Administrative Overhead Control Account
☐ Finished Goods Control Accounts
☐ Selling and Distribution Overhead Control Account
☐ Cost of Sales Account
□ Costing Profit & Loss Account
☐ Overhead Adjustment Account
COST LEDGER CONTROL ACCOUNT
This account is also known as General Ledger Adjustment Account.
This account is made to complete double entry.
 All items of expenditure are credited to this account.
 Sales are debited to this account and net profit/loss from Costing Profit & Loss
Account is transferred to this account.
The balance in this account at the end of the particular period represents the net total
of all the balances of the impersonal accounts
STORES LEDGER CONTROL ACCOUNT
 This account is debited for the purchase of material and credited for issue of
materials from the stores.
 The balance in this account indicates the total balance of all the individual stores
accounts.
 Abnormal losses or gains if any in this account are transferred to Costing Profit & Loss
Account.
 Entries are made on the basis of goods received notes and stores requisitions etc.

Cost Accounting System •

int
ial,
hould
r
as
overed.

Cost Accounting System

- The overhead recovered are debited to Finished Goods Control Account, if administrative overhead is related with production activities otherwise to Cost of Sales A/c.
 - The difference between administrative overheads incurred and recovered is transferred to Overhead Adjustment Account.

FINISHED GOODS CONTROL ACCOUNTS

- This account is debited with the value of goods transferred from Work-in-process Control Account and administration costs recovered (if relates to production activities).
- This account is credited with Cost of Sales Account.
- The balance of this account represents the value of goods unsold at the end of the period.

SELLING & DISTRIBUTION OVERHEAD CONTROL ACCOUNT

- This account is debited with selling and distribution overheads incurred and credited with the selling and distribution overheads recovered.
- The difference between overheads incurred and recovered is transferred usually to . Overhead Adjustment Account

COST OF SALES ACCOUNT

- This account is debited with the cost of finished goods transferred from Finished Goods Control Account for sale, General Administrative overhead recovered, Selling and distribution overhead recovered.
- The balance of this account is ultimately transferred to Costing Profit & Loss Account.

COSTING PROFIT \ LOSS ACCOUNT

- This account is debited with cost of sales, under-absorbed overheads and abnormal losses and is credited with sales value, over-absorbed overhead and abnormal gains.
- The net profit or loss in this account is transferred to Cost Ledger Control Account.

OVERHEAD ADJUSTMENT ACCOUNT

• This account is to be debited for under recovery of overhead and credited with

over-recovery of overhead amount.

	A cor	npany operates on historic job cost accounting syste	m, which is r	not integrat	ed with	
	the f	inancial accounts. At the beginning of a month, the o	pening balar	ices in cost	ledger	
	were	:				
			(₹ in l	akhs)		
		Stores Ledger Control Account		80		
		Work-in-Progress Control Account		20		
		Finished Goods Control Account		430		
		Building Construction Account		10		
		Cost Ledge Control Account		540		
	Durir	uring the month , the following transactions took place :				

Ch-7 Cost Accounting System • (Amounts in lakh) Materials :- Purchased 40 Issued to production 50 Issued to factory maintenance Issued to building construction 4 Wages:-Gross wages paid 150 40 Indirect wages For building construction 10 Works Overheads:-Actual amount incurred 160 (excluding items shown above) Absorbed in building construction 20 Under absorbed 8 Royalty paid (related to production) 5 Selling, distribution and administration overheads 25 Sales 450 At the end of the month, the stock of raw material and work-in-Process was ₹ 55 lakhs and ₹ 25 lakhs respectively. The loss arising in the raw material accounts is treated as factory overheads. The building under construction was completed during the month. Company's gross profit margin is 20% on sales. PREPARE the relevant control accounts to record the above transactions in the cost ledger of the company. INTEGRATED ACCOUNTING SYSTEM What is Integrated Accounting? ☐ Integrated Accounts is the name given to a system of accounting, whereby cost and financial accounts are kept in the same set of books. ☐ Integrated accounts provide or meet out fully the information requirement for Costing as well as for Financial Accounts.

□ No need for Reconciliation - The question of reconciling costing profit and

☐ Less efforts - Due to use of one set of books, there is a significant saving in

financial profit does not arise, as there is only one figure of profit.

• Advantages:

efforts made.

Cost Accounting System □ Less time consuming - No delay is caused in obtaining information as it is provided from books of original entry. □ Economical process - It is economical also as it is based on the concept of " Centralization of Accounting function". Features: ☐ In the integrated accounting system, general ledger adjustment account/ CLC is eliminated and detailed accounts for assets and liabilities are maintained. ☐ The Cost ledger control account of non-integrated accounting is replaced by use of following accounts: Bank account · Receivables (Debtors) account · Payables (Creditors) account Provision for depreciation account · Fixed assets account Share capital account SM Illustration 3 Que 4 Notebook Page no. JOURNALISE the following transactions assuming that cost and financial transactions are integrated: (₹) Raw material purchased 2,00,000 Direct Material issued to production 1,50,000 Wages paid (30% indirect) 1,20,000 Wages charged to production 84,000 Manufacturing expenses incurred 84,000 Manufacturing overhead charged to production 92,000 Selling and distribution costs 20,000 Finished products (at cost) 2,00,000 2,90,000 Sales Nil Closing Stock 69,000 Receipts from debtors 1,10,000 Payments to creditors

Cost Accounting System •

RECONCILIATION OF COST AND FINANCIAL ACCOUNTS	
Causes of differences in Financial and Cost Accounts:	
☐ Items included only in Financial Accounts:	
(a) Purely Financial Expenses :	
(i) Interest on loans or bank mortgages.	
(ii) Expenses and discounts on issue of shares, debentures etc.	
(iii) Other capital losses i.e. loss by fire not covered by insurance etc.	
(iv) Losses on the sales of fixed assets and investments.	
(v) Goodwill written off	
(vi) Preliminary expenses written off	
(vii) Incomes tax, donations, subscriptions	
(viii) Expenses of the company's share transfer office, if any.	
(b) Purely Financial income:	
(i) interest received on bank deposits, loans and investments.	
(ii) Dividend received	
(iii) Profits on the sale of fixed assets and investments	
(iv) Transfer fee received	
(v) Rent receivables	
• Item included in Cost Accounts only (notional expenses):	
(i) Charges in lieu of rent where premises are owned	
(ii) interest on capital at notional figure though not incurred	
(iii) Salary for the proprietor at notional figure though not incurred.	
(iv) notional Depreciation on the assets fully depreciated for which book value is n	il.
• Items whose treatment is different in the two sets of accounts:	
- The objective of cost accounting is to provide information to management for	
decision making and control purposes while financial accounting conforms to external	
reporting requirements. Hence there are chances that certain items are treated .	
differently in the two sets of accounts. For example, LIFO method is not allowed for	
inventory valuation in India as per the Accounting Standard 2 issued by the Council of th	e
ICAI. However, this method may be adopted for cost accounts as it is more suitable for	
arriving at costs which may be used as a base for deciding selling prices. Similarly cost	
accounting may use a different method of depreciation than what is allowed under	
financial accounting.	

Cost Accounting System

	Varying basis of Valuation: This another factor which compatings is responsible for the difference. This wall						
		- It is another factor which sometimes is responsible for the difference. It is well known that in financial accounts stock are valued either at cost or market price,					
	known	that in financial accounts stock are valued ei	ther at cost or m	arket price,			
	whiche	ever is lower. But in Cost Accounts, stocks are	e only valued at c	ost.

Chapter 10 PROCESS COST

Ch-10 Process Costing

May18	Nov18	May19	Nov19	Nov20	Jan21	Jul21	Dec21	May22	
10	5	10	10	10	5	15	5	10	

MEANING

- Process Costing is a method of costing used in industries where the material has to pass through two or more processes for being converted into a final product.
- It is a method of Cost Accounting whereby costs are charged to processes or operations and averaged over units produced
- A separate account for each process is opened and all expenditure pertaining to a process is charged to that process account.
- Examples of Industries where Process Costing is used:
 - Steel
 - Paper
 - Medicines
 - Soaps
 - · Chemicals
 - Rubber
 - Paints etc.

Notebook Page no.

From the following data, PREPARE process accounts indicating the cost of each process and the total cost. The total units that pass through each process were 240 for the period.

	Process I (₹)	Process II (₹)	Process III (₹)	
Material	1,50,000	50,000	20,000	
Labour	80,000	2,00,000	60,000	
Other Expenses	26,000	72,000	25,000	

Indirect expenses amounting to ₹ 85,000 may be apportioned on the basis of wages.

There was no opening or closing stock.

NORMAL LOSS IN PROCESS

Normal Process Loss:

- It is also known as normal wastage.
- It is defined as the loss of material which is inherent in the nature of work.
- Such a loss can be reasonably anticipated from the nature of the material, nature
 of operation, the experience and technical data.

	Ch-10 Process Costing •	
	 It is unavoidable because of nature of the material or the process. 	
	 It also includes units withdrawn from the process for test or sampling. 	
		_
	Treatment in Cost Accounts:	
	The cost of normal process loss in practice is absorbed by good units produced	
	under the process.	
	 The amount realized by the sale of normal process loss units should be credited 	
	to the process account.	
Example 1		
	A product passes through Process- I and Process- II. Materials issued to Process- I	
	amounted to ₹ 40,000, Wages ₹ 30,000 and manufacturing overheads were	
	₹ 27,000. Normal loss anticipated was 5% of input. 4,750 units of output were produced	
	and transferred-out from Process-I. There were no opening stocks. Input raw material	
	issued to Process I were 5,000 units. Scrap has no realizable value.	
	You are required to PREPARE Process- I account, value of normal loss and units	
	transferred to Process-II	
Example 2		
	A product passes through Process- I and Process- II. Materials issued to Process- I	
	amounted to ₹ 40,000, Wages ₹ 30,000 and manufacturing overheads were	
	₹ 27,000. Normal loss anticipated was 5% of input. 4,750 units of output were produced	
	and transferred-out from Process-I. There were no opening stocks. Input raw material	
	issued to Process I were 5,000 units. Scrap has realisable value of ₹ 2 per unit.	
	You are required to PREPARE Process- I account, value of normal loss and units	
	transferred to Process-II.	
	ABNORMAL LOSS IN PROCESS	
	Abnormal Process Loss:	
	It is also known as abnormal wastage.	
	 It is defined as the loss in excess of the pre-determined loss (Normal process 	
	loss).	
	 This type of loss may occur due to the carelessness of workers, a bad plant design 	n
	or operation, sabotage etc.	
	 Such a loss cannot obviously be estimated in advance. But it can be kept under 	
CA Pr	ranav Popat 10.3	

control by taking suitable measures. ■ Treatment in Cost Accounts : • The cost of an abnormal process loss unit is equal to the cost of a good unit. The total cost of abnormal process loss is credited to the process account from which it arises. Cost of abnormal process loss is not treated as a part of the cost of the product. In fact, the total cost of abnormal process loss is debited to costing profit and loss account. Example 3 A product passes through Process- I and Process- II. Materials issued to Process- I amounted to ₹ 40,000, Wages ₹ 30,000 and manufacturing overheads were ₹ 27,000. Normal loss anticipated was 5% of input. 4,550 units of output were produced and transferred-out from Process-I. There were no opening stocks. Input raw material issued to Process I were 5,000 units. Scrap has realisable value of ₹2 per unit. You are required to PREPARE Process- I account, value of normal loss, abnormal loss and units transferred to Process-II ABNORMAL GAIN IN PROCESS Abnormal Process Gain : Abnormal gain may be defined as an unexpected gain in production under the normal conditions. • This arises due to over- estimation of process loss, improvements in work efficiency of workers, use of better technology in production etc. Treatment in Cost Accounts: The process account under which abnormal gain arises is debited with the abnormal gain and credited to abnormal gain account which will be closed by transferring to the Costing Profit and Loss account only with the amount of net actual gain. The value of abnormal gain is computed on the basis of normal production. Example 4 A product passes through Process- I and Process- II. Materials issued to Process- I

amounted to ₹ 40,000, Wages ₹ 30,000 and manufacturing overheads were ₹27,000.

6,000 units of finished goods were sold at a profit of 15% on cost. Assume that there was no opening or closing stock of work-in-process.

VALUATION OF WORK-IN-PROGRESS

- As done in earlier examples, Average Cost per unit can be determined easily by dividing the total cost incurred during a given period of time by the total number of units produced during the same period.
- But, in reality in most of the process type industries where manufacturing is a continuous activity cost incurred represents the cost of work carried on opening work-in-process, closing work-in-process and completed units.
- The valuation of work-in-process presents a good deal of difficulty because it has units under different stages of completion from those in which work has just begun to those which are only a step short of completion.
- We can crack this difficulty by converting partly finished units into equivalent finished units.

CONCEPT OF EQUIVALENT UNITS -

- Equivalent units or equivalent production units, means converting the incomplete production units into their equivalent completed units.
- Under each process, an estimate is made of the percentage completion of work-in process with regard to different elements of costs, viz., material, labour and overheads.

EQUIVALENT COMPLETED UNITS -

 Actual Number of units in the process of manufacture x percentage of work completed.

P.T.O.

Ch-10 Process Costing

Que 4	SM illustration 4 Notebook Page no.	
	Opening work-in-process 1,000 units (60% complete); Cost ₹ 1,10,000. Units introduced	
	during the period 10,000 units; Cost ₹19,30,000. Transferred to next process - 9,000	
	units.	
	Closing work-in-process - 800 units (75% complete). Normal loss is estimated at 10% of	
	total input including units in process at the beginning. Scraps realise ₹ 10 per unit. Scraps	5
	are 100% complete.	
	Using FIFO method, COMPUTE equivalent production and cost per equivalent unit. Also	
	evaluate the output.	
	EXPLANATION OF STEPS IN ILLUS-4	
	 Total Units completed and Transferred is 9,000 units. Out of these 9,000 units, 1,000)
	units has been taken from opening WIP and the rest is from the fresh units	
	introduced.	
	■ The opening WIP is 60% complete in respect of costs, hence, 40% more work is to be	
	done during the period.	
	 Total cost for cost elements for the period (current period only) is accumulated. 	
	The realizable value of scrap (i.e. normal loss) is deducted from the total cost as	
	accumulated above.	
	 Total cost less realisable value is divided by equivalent units to get cost per equivalent 	_
	unit.	
	The equivalent cost as calculated above is multiplied by the equivalent units of	
	completely processed goods, abnormal loss and closing WIP to get the value.	
		_
	 Cost of units completed and transferred is calculated separately for Opening WIP and 	
	fresh inputs.	

FIFO AND WEIGHTED AVERAGE IN PROCESS COSTING

FIFO

Weighted Average

- Under this method the units completed and transferred are taken from both work-in-process freshly introduced materials/inputs.
- The cost to complete the opening WIP and other completed units are calculated separately.
- The cost of opening WIP is added to cost incurred on completing the incomplete (WIP) units into complete one.
- The total cost of units completed and transferred is calculated by adding opening WIP cost to cost on freshly introduced inputs.
- In this method the closing stock of work in process is valued at current cost.

- Under this method, the cost of opening work-in-process and cost of the current period are aggregated and the aggregate cost is divided by output in terms of completed units.
- The equivalent production in this case consists of work-load already contained in opening work-in-process and work-load of current period.
- The main difference between FIFO method and average method is that units of opening work in process and their cost are taken in full under average method
- Under FIFO method only the remaining work done now is considered.

Que 5 SM Illustration 5

Notebook Page no.

Refer to information provided in Illustration 4 above and solve this by Weighted Average Method:

EXPLANATION OF STEPS IN ILLUS-5

- Total Units completed and Transferred is 9,000 units. All the 9,000 units has been considered as equally complete in respected of cost.
- Total cost for cost elements for the period and opening WIP is accumulated.
- The realizable value of scrap (i.e. normal loss) is deducted from the total cost as accumulated above.
- Total cost less realizable value is divided by equivalent units to get cost per equivalent unit.
- The equivalent cost as calculated above is multiplied by the equivalent units of completely processed goods, abnormal loss and closing WIP to get the value.

Que 10	SM Exercise Que 5 Notebook Page	z no.	
	A company produces a component, which passes through two processes. Dur	ing the month	l
	of April, materials for 40,000 components were put into Process I of which	30,000 were	
	completed and transferred to Process II. Those not transferred to Process	; II were 100	%
	complete as to materials cost and 50% complete as to labour and overheads	cost.	
	The Process I costs incurred were as follows:		
	Direct material ₹ 15,000		
	Direct wages ₹ 18,000		
	Factory overheads ₹12,000		

Of those transferred to Process II, 28,000 units were completed and transferred to finished goods stores. There was a normal loss with no salvage value of 200 units in Process II. There were 1,800 units, remained unfinished in the process with 100% complete as to materials and 25% complete as regard to wages and overheads. No further process material costs occur after introduction at the first process until the end of the second process, when protective packing is applied to the completed components.

The process and packing costs incurred at the end of the Process II were:

Packing materials	₹ 4,000
-------------------	---------

Direct wages ₹ 3,500

Factory overheads ₹ 4,500

Required:

- PREPARE Statement of Equivalent Production, Cost per unit and Process I A/c. (i)
- PREPARE Statement of Equivalent Production, Cost per unit and Process II (ii) A/c.

INTER PROCESS PROFITS

- To control cost and to measure performance, different processes within an organization are designated as separate profit centres.
- In this type of organizational structure, the output of one process is transferred to the next process not at cost but at market value or cost plus a percentage of profit.
- The difference between cost and the transfer price is known as inter-process profits

ADVANTAGES:

- Comparison between the cost of output and its market price at the stage of completion is facilitated.
- Each process is made to stand by itself as to the profitability.

DISADVANTAGES:

- The use of inter-process profits involves complication.
- The system shows profits which are not realised because of stock not sold out

CONTRACT COSTING

- Contract costing is a form of specific order costing where
 - job undertaken is relatively large and
 - normally takes period longer than a year to complete
- Contract costing is usually adopted by the contractors engaged in any type of contracts
 like
 - · construction of building, road, bridge,
 - · erection of tower, setting up of plant etc.

FEATURE OF CONTRACT COSTING

- The major part of the work in connection with each contract is ordinarily carried out of the site of the contract.
- The bulk of the expenses incurred by the contractor are considered as direct.
- The indirect expenses mostly consist of office expenses, stores and works.
- A separate account is usually maintained for each contract.
- The number of contracts undertaken by a contractor at a time is usually few.
- The cost unit in contract costing is the contract itself.

PROFIT ACCOUNTING IN CONTRACT COSTING

- A contract takes longer period to complete and the result of the contract can be known only after the completion of the contract.
- To have a better control over the contract and cost, it is necessary to have an idea of profitability of contracts at regular intervals or at least in a year.
- For this purpose, a contractor needs to calculate expected profit or notional profit for a known contract.
- It also helps in profit comparison for a period and provide a good basis for performance measurement and evaluation of those who are engaged in the contract.
- The expected or notional profit in respect of each contract in progress (i.e. incomplete contracts) is transferred to the costing profit and loss account (consolidated) for the year to determine overall profitability of the contractor.

ACCOUNTING OF CONTRACT COSTS

- For all the costs incurred on contract, Contract Account is debited instead of WIP
 Control Account.
- Material: There can be issue from store or direct purchase

Plant and Machinery:

- The value of the plant in a contract may be either debited to contract account and the written down value thereof at the end of the year entered on the credit closing the contract account, or
- only a charge (depreciation) for use of the plant may be debited to the contract account.

P.T.O

Special Terms:

- Work-in-Progress:
 - in contract costing, it refers to the contract which is not complete at the reporting date. In Contract Accounts, the work-in-progress consists of
 - the cost of work completed, both certified and uncertified;
 - · the cost of work not yet completed; and
 - the amount of estimated/notional profit.
- Cost of Work Certified or value of Work certified:
 - A contract is a continuous process and to know the cost or value of the work
 completed as on a particular date, assessment of the completion of work is carried
 out by an expert (it may be any professional like surveyor, architect, engineer
 etc.).
 - The expert, based on his assessment, certifies the work completion in terms of percentage of total work.

Cost of work certified = Cost incurred till date - (Cost of Work uncertified + Material in hand + Plant in Hand)

Value of work certified = Value of Contract x Work Certified %

- Cost of Work Uncertified
 - It represents the cost of the work which has been carried out by the contractor but has not been certified by the expert.
 - It is always shown at cost price.

	(₹)	(₹)	
Total Cost to date		xxx	
Less: Cost of work certified	xxx		_
Material in hand	xxx		
Plant at site	xxx	(xxx)	
Cost of work ucertified		xxx	

- Notional Profit
 - It represents the difference between the value of work certified and cost of : work certified. It is determined

Notional Profit = Value of Work Certified - Cost of Work Certified

Ch-9

Job & Contract Costing

Transportation	30,000	90,000	75,000	
Other expenses	30,000	75,000	24,000	
Cumulative work certified	13,50,000	45,00,000	60,00,000	
Cumulative work uncertified	15,000	75,000	-	

Plant costing ₹ 3,00,000 was bought at the commencement of the contract. Depreciation wasto be charged at 25% per annum, on the written down value method. The contractee pays75% of the value of work certified as and when certified and makes the final payment on completion of the contract.

You are required to PREPARE a contract account for three years and total estimated profit/loss from the contract.

Progress Payment :

- A Contractor gets payments for work done on a contract based on work completion. Since, a contract takes longer period to complete and requires large investment in working capital to progress the contract work,
- It is desirable by the contractor to have periodic payments from the contractee against the work done to avoid working capital shortage.
- For this a contactor enters into an agreement with the contractee and agrees on payment on some reasonable basis, which generally, includes percentage of work completion as certified by an expert.

Retention Money

- In a contract, a contractee generally keeps some amount payable to contractor with himself as security deposit.
- To have a cushion against any defect or undesirable work, the contractee upholds some money payable to contractor. This security money upheld by the contractee is known as retention money.
- Earnest Money: In some contracts the contractor has to deposit some security money before staring of the contract as a term of contract.

Retention Money = Value of Work Certified - Payment Actually Made

Job & Contract Costing

Cost Plus Contract

- Cost- plus contract is a contract where the value of the contract is determined by adding an agreed percentage of profit to the total cost.
- These types of contracts are entered into when it is not possible to estimate the
 contract cost with reasonable accuracy due to unstable condition of factors that
 affect the cost of material, employees, etc.

Cost plus contracts have the following advantages and disadvantages:

- The Contractor is assured of a fixed percentage of profit. There is no risk of incurring any loss on the contract.
- It is useful specially when the work to be done is not definitely fixed at the time of .
 making the estimate.
- Contractee can ensure himself about 'the cost of the contract', as he is empowered to examine the books and documents of the contractor to ascertain the veracity of the cost of the contract.
- Disadvantages: The contractor may not have any inducement to avoid wastages and effect economy in production to reduce cost

ESCALATION CLAUSE CONTRACT

- Escalation clause in a contract empowers a contractor to revise the price of the contract in case of increase in the prices of inputs due to some macroeconomic or other agreed reasons.
- A contract takes longer period to complete and the factors based on which price negotiation is done at the time of entering into the contract may change till the contract completes.
- This protect the contractor from adverse financial impacts and empowers the contractor to recover the increased prices.
- As per this clause, the contractor increases the contract price if the cost of materials, employees and other expenses increase beyond a certain limit.

Job & Contract Costing

Inclusion of such a clause in a contract deed is called an "Escalation Clause".

Que 6 SM Illustration 7

Notebook Page no.

A contractor has entered into a long term contract at an agreed price of ₹ 17,50,000 subject to an escalation clause for materials and wages as spelt out in the contract and corresponding actual are as follows:

	Standard		Actual		
Material	Qty (tons)	Rate (₹)	Qty (tons)	Rate (₹)	
Α	5,000	50	5,050	48	
В	3,500	80	3,450	79	
С	2.500	60	2,600	66	

	Wages	Hours	Hourly Rate (₹)	Hours	Hourly rate (₹)	
	×	2,000	70	2,100	72	
	У	2,500	75	2,450	75	
	Z	3,000	65	3,100	66	

Reckoning the full actual consumption of material and wages, the company has claimed a final price of \pm 17,73,600. Give your ANALYSIS of admissible escalation claim and indicate the final price payable.

Que 7 | SM Exercise Que 3

Notebook Page no.

AKP Builders Ltd. commenced a contract on April 1, 2020. The total contract was for ₹ 5,00,000. Actual expenditure for the period April 1, 2020 to March 31, 2021 and estimated expenditure for April 1, 2021 to December 31, 2021 are given below:

· · · · · · · · · · · · · · · · · · ·			
Particular	2020-21	2021-22	
	(actual)	(9 months (estimated))	
Materials issued	90,000	85,750	
Wage: paid	75,000	87,325	
Outstanding at the end	6,250	8,300	
Plant	25,000	-	
Sundry expenses :paid	7,250	6,875	
Prepaid at the end	625,	-	
Establishment charges	14,625	•	
	-		

Job & Contract Costing

A part of the material was unsuitable and was sold for ₹ 18,125 (cost being ₹15,000) and a part of plant was scrapped and disposed- off for ₹ 2,875. The value of plant at site on 31 March, 2021 was ₹ 7,750 and the value of material at site was ₹ 4,250.

Cash received on account to date was ₹ 1,75,000, representing 80% of the work certified.

The cost of work uncertified was valued at ₹ 27,375.

The contractor estimated further expenditure that would be incurred in completion of the contract:

- The contract would be completed by 31st December, 2021.
- A further sum of ₹ 31,250 would have to be spent on the plant and the residual value of the plant on the completion of the contract would be ₹3,750.
- Establishment charges would cost the same amount per month as in the previous year.
- ₹ 10,800 would be sufficient to provide for contingencies.

Required:

PREPARE a Contract Account for the year ended 31st March, 2021, and CALCULATE estimated total profit on this contract.

Que 8 | SM Exercise Que 4

Notebook Page no.

RST Construction Ltd. commenced a contract on April 1, 2020. The total contract was for ₹ 49,21,875. Actual expenditure for the period April 1, 2020 to March 31, 2021 and estimated expenditure for April 1, 2021 to September 30, 2021 are given below

	April 1, 2020 to	April 1 ,2021 to							
	March 31,2021	March 31, 2021							
	(Actual) (₹)	(estimated) (₹)							
Materials issued	7,76,250	12,99,375							
Wages: Paid	5,17,500	6,18,750							
Prepaid	37,500								
Outstanding	12,500	5,750							
Plant Purchased	4,00,000								
Expenses: Paid	2,25,000	3,75,000							
Outstanding	25,000	10,000							
Prepaid	15,000								
Plant returns to store (historical cost)	1,00,000	3,00,000							
	(Set.30,2020)	(Sept. 30 ,2021)							

Ch-9 Job & Contract Costing

Work certified	22,50,000	Full	
Work uncertified	25,000	-	
Cash received	18,75,000		
Materials at site	82,500	42,500	

The plant is subject to annual depreciation @ 25% on written down value method. The contract is likely to be completed on September 30, 2021.

Required:

PREPARE the Contract A/c for the year ended 31st March, 2021 and determine. the estimated profit on the contract

JOB COSTING

 Job costing is carried out for the purpose of ascertaining cost of each job and takes into account the cost of materials, employees and overhead etc.

PROCESS OF JOB COSTING

- Disclose Cost of Materials issued for the Job
- Employee Cost Incurred
- When Job is completed Charging of OH
- Prepare a separate cost sheet for each Job

SUITABILITY OF JOB COSTING

- When jobs are executed for different customers according to their specifications
- When no two orders are alike and each order/job needs special treatment.
- Where the work-in-progress differs from period to period on the basis of the number of jobs in hand.

Que 9 | SM Exercise Que 1

Notebook Page no.

In a factory following the Job Costing Method, an abstract from the work- in-progress as on 30th September was prepared as under

Job No.	Materials	Direct Hrs.	Labour (₹)	Factory Over-	
	(₹)			head applied (₹)	
115	1325	400hrs.	800	640	
118	810	250hrs.	500	400	
120	765	300 hrs.	475	380	
	2900		1775	1420	

Job & Contract Costing

Materials used in October were a follows

Materials Requisition No.	Job No.	Cost (₹)	
54	118	300	
55	118	425	
56	118	515	
57	120	665	
58	121	910	
59	124	720	
		3,535	

A summary for labour hours deployed during October is as under:

<u> </u>		
Job No.	Number of	Hours
	Shop A	Shop B
115	25	25
118	90	30
120	75	10
121	65	-
124	25	10
	275	75
Indirect Labour; Waiting of		
materials	20	10
Machine breakdown	10	5
Idle time	5	6
Overtime premium	6	5
	316	101

A shop credit slip was issued in October, that material issued under Requisition No. 54 was returned back to stores as being not suitable. A material transfer note issued in October indicated that material issued under Requisition No. 55 for Job 118 was directed to Job 124.

The hourly rate in shop A per labour hour is \exists 3 per hour while at shop B, it is \exists 2 per hour. The factory overhead is applied at the same rate as in September. Job 115, 118 and 120 were completed in October.

You are asked to COMPUTE the factory cost of the completed jobs. It is the practice of the management to put a 10% on the factory cost to cover administration and selling overheads and invoice the job to the customer on a total cost plus 20% basis. ?

Job & Contract Costing

DETERMINE the invoice price of these three jobs

Que 10 SM Illustration 2

Notebook Page no.

A shop floor supervisor of a small factory presented the following cost for Job No. 303, to determine the selling price.

	Per unit (₹)	
Materials	70	
Direct Wages 18 hours @ ₹2.50	45	
(Dept x 8hours, Dept. x 6hours , Dept Z x 4 hours)		
Chargeable expenses	5	
	120	
Add: 33-1/3% for expenses cost	40	
	160	

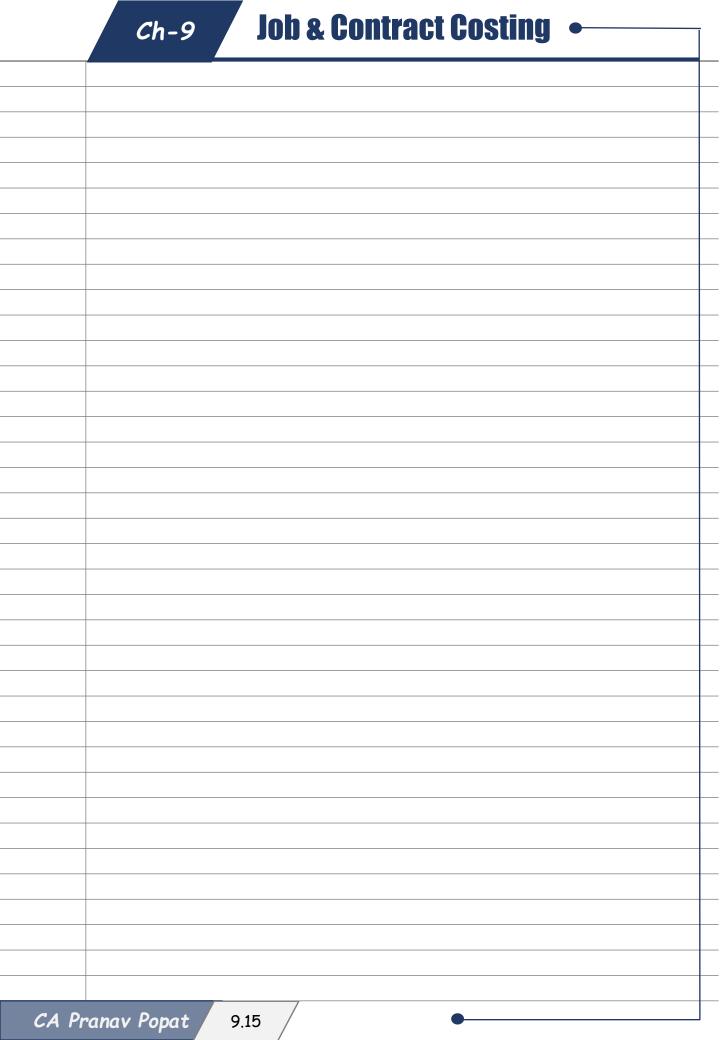

Analysis of the Profit / Loss Account

(for the current financial year)

				_
	(₹)		(₹)	
Material used	1,50,000	Sales less returns	2,50,000	
Direct Wages:				
Deptt. X 10,000				
Deptt. Y 12,000				
Deptt. Z 8,000	30,000			
Special Stores items	4,000			
Overheads				
Deptt X 5,000				
Deptt. Y 9,000				Ī
Deptt. Z 2,000	16,000			
Works cost	2,00,000			
Gross Profit x/d	50,000			
	2,50,000		2,50,000	
Selling expenses	30,000	Gross profit b/d	50,000	Ī
Net profit	50,000			Ī
	50,000		50,000	
				Ī

It is also noted that average hourly rates for the three Departments X, Y and Z are . similar

Job & Contract Costing You are required to: PREPARE a job cost sheet. (ii) CALCULATE the entire revised cost using current financial year actual figures as basis. (iii) Add 20% to total cost to DETERMINE selling price. Que 11 SM Illustration 1 Notebook Page no. The manufacturing cost of a work order is 1,00,000; 8% of the production against that order spoiled and the rejection is estimated to have a realisable value of ₹ 2,000 only. The normal rate of spoilage is 2%. RECORD this in the costing journal.

Chapter 11 JOINT PRODUCT & BY PRODUCT

Ch-11 Joint Product & By Product

May 18	Nov 18	May19	Nov19	Nov20	Jan21	Jul21	Dec21	May 22	
0	5	5	5	5	10	0	5	5	

INTRODUCTION AND NEED

- Agricultural product industries, chemical process industries, sugar industries, and extractive industries are some of the industries where two or more products of equal or unequal importance are produced either simultaneously or in the course of processing operation of a main product.
- In all such industries, the management is faced with the problems such as, valuation of inventory, pricing of product and income determination, problem of taking decision in matters of further processing of by-products and/or joint products after a certain stage etc.
- In fact, the various problems relate to
 - apportionment of common costs incurred for various products and
 - aspects other than mere apportionment of costs incurred up to the point of separation.

JOINT PRODUCTS

- Joint Products: In other words, two or more products of equal importance, produced, simultaneously from the same process, with each having a significant relative sale value are known as joint products.
- For example, in the oil industry, gasoline, fuel oil, lubricants, paraffin, coal tar, asphalt and kerosene are all produced from crude petroleum. These are known as joint products.

BY PRODUCTS

- By-Products: These are defined as "products recovered from material discarded in a main process, or from the production of some major products, where the material value is to be considered at the time of severance from the main product."
- Thus by-products emerge as a result of processing operation of another product or they are produced from the scrap or waste of materials of a process.

- In short a by-product is a secondary or subsidiary product which emanates (originate) as a result of manufacture of the main product.
- Examples: molasses in the manufacture of sugar, tar, ammonia and benzole obtained on carbonization of coal and glycerin obtained in the manufacture of soap.

CO-PRODUCTS

- Joint products and co-products are used synonymously in common parlance, but strictly speaking a distinction can be made between two.
- Co-products may be defined as two or more products which are contemporary but do not emerge necessarily from the same material in the same process.
- For example, wheat and gram produced in two separate farms with separate processing of cultivation are the co-products. Similarly, timber boards made from different trees are co-products.

SPLIT OFF POINT

 Point of Separation of two or more products (joint/by) from the common process in the production line.

JOINT COST

- Joint costs are the expenditures incurred up to the point of separation i.e. split-off point.
- The main problem faced in the case of joint products/ byproducts is the apportionment of this joint costs to joint products/ or by products.
- For costs incurred after the split off point there is no problem, as these costs can be directly allocated to individual joint products or by-products.

METHODS OF APPORTIONMENT OF JOINT COST

- Main Methods:
 - Physical Units Method
 - Net Realizable Value at split-off point
 - Using Technical Estimates

	Other Methods:	
	- Market value at the point of separation	
	- Market value after further processing	
	- Average unit cost method	
	- Contribution margin method	
	PHYSICAL UNIT METHOD	
	This method is based on the assumption that the joint products are capable of being	
	measured in the same units. Accordingly, joint costs here are apportioned on the basis	3
	of some physical base, such as weight, numbers etc.	
	 Any loss arises during the joint production process is also apportioned over the 	
	products on the same basis.	
	 This method cannot be applied if the physical units of the two joint products are 	
	different.	
	 The main defect of this method is that it gives equal importance and value to all the 	
	joint products.	
Que 1	3	
	A coke manufacturing company produces the following products by using 5,000 tons of .	
	coal @ ₹ 1,100 per ton into a common process.	
	Coke 3,500 tons	
	Tar 1,200 tons	
	Sulphate of ammonia 52 tons	
	Benzol 48 tons	
	PREPARE a statement apportioning the joint cost amongst the products on the basis of	
	the physical unit method.	
	NET REALISABLE VALUE AT SPILT-OFF POINT METHOD	
	 In this method of joint cost apportionment the followings are deducted from the sales 	3
	value of joint products at final stage i.e. after processing:	
	> Estimated profit margins;	
	> Selling and distribution expenses, if any, and	
CAD	romov Popot / 11.2	

- Post split- off costs/ Further Processing Costs
- > The net realizable value at split-off point method is widely used in the industries.

	Product-A	Product-B	Product-C	
	Amount (₹)	Amount (₹)	Amount (₹)	
Sales Value (units after				
processing x Selling price)	xxx	xxx	xxx	
Less: Selling & Distribution				
costs	(xx)	(xx)	(xx)	
Less: Post spilt off cost	(xx)	(xx)	(xx)	
Net Realizable Value	xxx	xxx	xxx	

Example 1 Notebook Page no.

An entity incurs a joint cost of ₹ 64,500 in producing two products A (200 units) and B (200 units) and earns a sales revenue of ₹86,000 by selling @ ₹ 170 per unit of product A and product B @ ₹ 260 per unit. Further processing costs for products A and B are ₹ 4,000 and ₹32,000 respectively. How the Joint cost can be apportioned to products A and B by net realizable value?

Que 2 | SM Illustration 4

Notebook Page no.

Inorganic Chemicals purchases salt and processes it into more refined products such as Caustic Soda, Chlorine and PVC. In the month of July, Inorganic Chemicals purchased Salt for ₹ 40,000. Conversion cost of ₹ 60,000 were incurred upto the split off point, at which time two sealable products were produced. Chlorine can be further processed into PVC.

The July production and sales information is as follows

		Production	Sales Quantity	Selling price	
		(in ton)	(in ton)	Per ton (₹)	
	Caustic Soda	1,200	1,200	50	
	Chlorine	800			
	PVC	500	500	200	

All 800 tons of Chlorine were further processed, at an incremental cost of ₹ 20,000 to yield 500 tons of PVC. There was no beginning or ending inventories of Caustic Soda, Chlorine or PVC in July.

There is active market for Chlorine. Inorganic Chemicals could have sold all its July

production of Chlorine at ₹75 per ton.	
Required:	
(1) SHOW how joint cost of ₹1,00,000 would be apportioned between Caustic Soda and	
Chlorine under each of following methods:	
(a) sales value at split- off point ;	
(b) physical unit method, and	
(c) estimated net realizable value.	
(2) Lifetime Swimming Pool Products offers to purchase 800 tonnes of Chlorine in Augus	;†
at ₹ 75 per tonne. This sale of Chlorine would mean that no PVC would be produced in	
August. EXPLAIN how the acceptance of this offer for the month of August would	
affect operating income ?	
METHOD- USING TECHNICAL ESTIMATES	
 This method uses technical estimates to apportion the joint costs over the joint 	
products.	
 This method is used when the result obtained by the above methods does not match 	
with .the resources consumed by joint products or the realisable value of the joint	
products are not readily available.	
OTHER METHODS:	
MARKET VALUE AT THE POINT OF SEPARATION	
This method is used for the apportionment of joint costs to joint products upto the	
split off point.	
 It is difficult to apply this method if the market value of the products at the point of 	
separation is not available.	
 It is a useful method where further processing costs are incurred disproportionately. 	
To determine the apportionment of joint costs over joint products, a factor known as	
multiplying factor is determined. This multiplying factor on multiplication with the	
sales values of each joint product gives rise to the proportion of joint cost.	

E	xample 2							
		An entity incurs a joint cost of ₹ 64,500 in producing two products A (200 units) and B						
		(200 units) and earns a sales revenue of ₹86,000 by selling @ ₹ 170 per unit of product A						
		and product B @ ₹260 per unit.						
		MARKET VALUE AFTER FURTHER PROCESSING						
		 Here the basis of apportionment of joint cost is the total sales value of finished 						
		products and involves the same principle as discussed above.						
		 The use of this method is unfair where further processing costs after the point of 						
		separation are disproportionate or when all the joint products are not subjected to						
		further processing.						
		 The net realizable value method which is discussed as above overcomes the 						
		shortcoming of this method.						
E	xample 3							
		Suppose that in the example - 2 given above, if sales prices of products A and B after						
		further processing are ₹ 200 and ₹300 respectively the joint cost apportioned over						
		Products A and B is as follows:						
		AVERAGE UNIT COST METHOD						
		 Under this method, total process cost (upto the point of separation) is divided by total 						
		units of joint products produced.						
		 On division average cost per unit of production is obtained. 						
		This is a simple method. The effect of application of this method is that all joint						
		products will have uniform cost per unit. If this method is used as the basis for price						
		fixation, then all the products may have more or less the same price.						
		 Under this method customers of high quality items are benefitted as they have to 						
		pay less price on their purchase.

costs. The sale proceeds in fact should be deducted either from the production	
cost or from the cost of sales.	
■ When the by-products are of considerable total value: Where by-products are of	
considerable total value, they may be regarded as joint products rather than as	
by-products.	
	_
Special Point: If bye product requires further processing:	_
In this case, the net realizable value of the by-product at the split-off point may be	
arrived at by subtracting the further processing cost from the realizable value of	
by-products.	_
METHODS TO VALUE BY PRODUCTS	
Net Realizable Value method:	_
☐ The realisation on the disposal of the byproduct may be deducted from the total	_
cost of production so as to arrive at the cost of the main product.	_
	_
☐ These expenses should be deducted to arrive at NRV : Further processing cost if	_
any, selling expenses if any.	_
	_
Standard cost in Technical Estimates:	_
☐ By-products may be valued at standard costs.	_
	_
☐ The standard may be determined by averaging costs recorded in the past and	_
making technical estimates of the number of units of original raw material going	_
into the main product and the number forming the byproduct or by adopting some	2
other consistent basis.	_
This method may be adepted where the by product is not selectle in the condition	_
This method may be adopted where the by-product is not saleable in the condition in which it emerges or comparative prices of similar products are not available.	<i>r</i>
in which it enterges or comparative prices of similar products are not available.	_
Comparative price:	-
☐ Under this method, the value of the by-product is ascertained with reference to	-
the price of a similar or an alternative material. Suppose in a large automobile	_
plant, a blast furnace not only produces the steel required for the car bodies but	-
also produces gas which is utilised in the factory. This gas can be valued at the	_
price which would have been paid to a gas company if the factory were to buy it	-
price which were nate been paid to a gas company if the factory work to buy if	_

			/						

Products	Production (in	Sales quantity	Selling price	
	Kl /ton)	(in kl / ton)	Per Litre/kg.	
Buttermilk	28	28	30	
Butter	20	-		
Ghee	16	16	480	
Gnee	16	16	480	

All 20 tonne of butter were further processed at an incremental cost of \mathbb{Z} 1,20,000 to yield 16 Kilolitre of Ghee. There was no opening or closing inventories of buttermilk, butter or ghee in the month of January.

Required:

- (i) SHOW how joint cost would be apportioned between Buttermilk and Butter under estimated net Realizable Value Method.
- (ii) 'Healthy Bones' offers to purchase 20 tonne of butter in February at ₹ 360 per kg. In case 'Buttery Butter' accepts this offer, no Ghee would be produced in February. SUGGEST whether 'Buttery Butter' shall accept the offer affecting its operating income or further process butter to make Ghee itself

Que 8 | SM Exercise Question 4

Notebook Page no.

NN Manufacturing company uses joint production process that produces three products at the split off point. Joint productions costs during September were ₹ 8,40,000. Product information for September was as follows:

Particulars	Product-A	Product-B	Product-C	
Unit produced	1,500	3,000	4,500	
Units sold	2,000	6,000	7,500	
Sales price:				
At the split-off	₹100			
After further processing	₹150	₹175	₹50	
Costs to process after split-off	₹1,50,000	₹1,50,000	₹1,50,000	

Assume that product C is treated as a by-product and the company accounts for the by-product at net realizable value as a reduction of joint cost. Assume also that Product B&C must be processed further before they can be sold. FIND OUT the total cost of Product A in September if joint cost allocation is based on net realizable values?

GROUPING OF MANUFACTURING INDUSTRIES

Industry doing job work:

- An entity which is engaged in the execution of special orders, each order being distinguishable from each other, such a concern is thought of involved in performing job works.
- Jobs are worked strictly in accordance with the customer's specifications and requirements, thus, each job order is unique.
- Examples of job order types of production are: ship building, construction of road and bridges, manufacturing of heavy electrical machineries and tools, wood and furniture works etc.
- Here, each job or unit of production is treated as a separate identity for the purpose of costing.
- The methods of costing for ascertaining cost of each job are known as a job costing, contract costing and batch costing.

* Continuous or process type of industries

- The continuous or process type of industries are characterised by the continuous production of uniform products according to the standard specifications.
- In such a case the successive lots are generally indistinguishable as to size and form and, even if there is some variation in specifications, it is of a minor character.
- Examples of continuous type of industries are chemical and pharmaceutical products, paper/food products, canning, paints and varnish oil, rubber, textile etc.
- Here the methods of costing used for the purpose of ascertaining costs are: process costing; single output costing; operating costing etc.

	UNIT COSTING							
	 Unit costing is that method of costing where the output produced is identical and each 							
	unit of output r	unit of output requires identical cost.						
	Unit costing is s	synonymously known as single or out	tput costing, but these o	are				
	sub-division of (unit costing method.						
	 This method of 	costing is followed by industries w	hich produce single outp	out or few				
	variants of a sir	igle output.						
	 Under this meth 	nod, costs are collected and analys	ed element wise and the	n total cost				
	per unit is ascer	tained by dividing the total cost w	ith the number of units	produced.				
	 This method of 	costing, therefore finds its applica	ation in industries like p	aper, cement,				
	steel works, mir	ning, breweries etc. These types of	industries produce ider	ntical				
	products and therefore have identical costs.							
	Cost per unit - Total cost of production

BATCH COSTING

- Batch Costing is a type of specific order costing where articles are manufactured in predetermined lots, known as batch.
- Under this costing method, the cost object for cost determination is a batch for production rather output as seen in unit costing method.
- A batch consists of certain number of units which are processed simultaneously to be for manufacturing operation.
- Under this method of manufacturing, the inputs are accumulated in the assembly line till
 it reaches minimum batch size. Soon after a batch size is reached, all inputs in a batch is
 processed for further operations.
- Reasons for batch manufacturing may be either technical or economical or both.
- For example, in pen manufacturing industry, it would be too costly to manufacture one per of a particular design at a time to meet the demand of one customer. On the other hand, the production, of say 10,000 pens, of the same design will reduce the cost to a sizeable extent.

Special Point:

To initiate production process, an entity has to incur expenditures on engaging workers for production and supervision, setting-up of machine to run for production etc. These are the minimum level of expenditures which have to be incurred each time a batch is run irrespective of number of units produced.
