

**CA Foundation – Business Economics**

# **Economics Chp 8**

## **Last Minute Notes**

**(Only Important Points)**

**By CA Mohnish Vora (MVSIR)**

Disclaimer- These notes are meant only for **last-minute revision**. They are **not a substitute of Super Chart book**. In exams, students must explain each point in more detail & should refer to chart book for complete understanding of every concept.

## CHAPTER 8 – Money Market | UNIT 1 - THE CONCEPT OF MONEY DEMAND: IMPORTANT THEORIES

1	<b><u>Fiat Money</u></b> <ul style="list-style-type: none"> <li>Aka. token money → <b>no intrinsic value</b>.</li> <li>Used as <b>medium of exchange</b> as govt made them "<b>legal tender</b>"</li> </ul>	5	<b><u>Demand for money</u></b> <ul style="list-style-type: none"> <li>➤ If <b>people desire to hold money (in cash)</b>, we say there is demand for money.</li> <li>➤ Demand for money is <b>derived demand</b></li> </ul>
2	<b><u>Definition of Money</u></b> For policy purposes → set of <b>liquid financial assets</b> → <b>variation in stock</b> of which → <b>impact</b> on <b>agg. economic activity</b> .  As <b>statistical concept</b> → include <b>liquid liabilities</b> of <b>financial intermediaries/issuers (RBI)</b>	6	<b><u>Theories of demand for money</u></b> <b><u>1) Classical Approach: Quantity Theory of Money</u></b> <ul style="list-style-type: none"> <li>➤ Given by <b>Irving Fisher</b> → book 'The Purchasing Power of Money' (1911).</li> <li>➤ As per QTM, <b>money in circulation (M)</b> &amp; <b>price level (P)</b> are directly <b>related</b> to each other.</li> <li>➤ Aka. '<b>equation of exchange</b>' or '<b>transaction approach</b>'</li> </ul> $MV = PT$ <p>PT = Total demand of money ; MV = Total supply of money</p> <ul style="list-style-type: none"> <li>➤ Later, Fisher <b>extended above equation</b> to include <b>credit money (M')</b> &amp; its <b>velocity (V')</b></li> </ul> $\text{Expanded Form : } MV + M'V' = PT$ <ul style="list-style-type: none"> <li>➤ As per QTM → More Transactions → More Demand of Money</li> </ul>
3	<b><u>Characteristics of Money</u></b> Generally <b>acceptable, durable</b> , effortlessly <b>recognizable, difficult to counterfeit</b> , relatively <b>scarce, portable</b> , possessing <b>uniformity, divisible</b> into smaller parts <b>without losing value</b>		
4	<b><u>Functions of Money</u></b> <ol style="list-style-type: none"> <li>1) Convenient medium of exchange</li> <li>2) Explicitly defined unit of value or unit of account</li> <li>3) Serves as a unit or standard of deferred payment</li> <li>4) Store of value</li> </ol>		

## CHAPTER 8 – Money Market | UNIT 1 - THE CONCEPT OF MONEY DEMAND: IMPORTANT THEORIES

6.1	<p><b>II) Cambridge Approach (Aka Cash Balance Approach)</b></p> <p>➤ <b>Money increases utility in two ways-</b></p> <p>1) <b>Split-up of sale and purchase</b> to two different point of time</p> <p>2) <b>hedge against uncertainty.</b> (money- a temporary store of wealth)</p> <p>➤ <b>Higher income -&gt; greater transactions -&gt; greater demand for money.</b></p> <p style="text-align: center;"><b><math>M_d = k PY</math></b></p> <p>Where; k = Cambridge k = proportion of nominal income (PY) that people want to <b>hold as cash</b></p>	7.2	<p><b>b) Precautionary motive</b></p> <p>Keeping a portion of income to <b>finance unanticipated exp</b> → due to <b>unforeseen contingencies.</b></p> <p>Prec. demand is <b>income elastic &amp; interest inelastic</b></p>
7	<p><b>III) Keynesian Theory of Demand for Money (Liquidity Preference Theory)</b></p> <p>Demand for money = <b>Transactions Demand (+) Precautionary Demand (+) Speculative Demand</b></p>	<p><b>c) Speculative motive</b></p> <p>Money demand to <b>take advantage of future changes in rate of interest</b> or bond prices.</p> <p>To <b>exploit attractive investment opportunity</b></p> <p>Return on money → <b>zero</b></p> <p>Returns on bonds → two types → <b>interest payment &amp; expected rate of capital gain</b></p>	
7.1	<p><b>a) Transactions motive</b></p> <p>Money demanded to <b>bridge time gap</b> between receipt of <b>income</b> &amp; planned <b>exp.</b></p> <p>Trans. demand → <b>directly related</b> to income</p> <p style="text-align: center;"><b><math>L_r = kY</math></b></p> <p>Where, k → ratio of earnings kept for trans. Purposes</p>	<p><b>Market Value of Bond inversely related to Market Rate of Interest</b></p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Current rate of interest (<math>r_n</math>)</p> <p>&gt;</p> <p>Critical rate of interest (<math>r_c</math>)</p> <ul style="list-style-type: none"> <li>• People <b>expect a fall in intt</b> rate (<b>rise</b> in bond prices)</li> <li>• People will <b>convert their cash balances into bonds</b></li> </ul> </div> <div style="text-align: center;"> <p>Current rate of interest (<math>r_n</math>)</p> <p>&lt;</p> <p>Critical rate of interest (<math>r_c</math>)</p> <ul style="list-style-type: none"> <li>• People <b>expect a rise in intt</b> rate (<b>fall</b> in bond prices)</li> <li>• People would hold their wealth in the form of <b>liquid cash</b> rather than bonds</li> </ul> </div> </div>	

## CHAPTER 8 – Money Market | UNIT 1 - THE CONCEPT OF MONEY DEMAND: IMPORTANT THEORIES

Liquidity Trap

- 9
- When after a huge fall in **interest rates** → **expectation** is it **cannot further fall**.
  - So now when in future → **interest rates will rise** → **bond prices will fall**
  - To **hold bonds** at this low interest rate is to take **almost certain risk** of a **capital loss**
  - Thus,
    - ❑ desire to **hold bonds** is **very low** & **approaches zero**, and
    - ❑ demand to **hold money** in liquid form **approaches infinity**.
  - **Speculative money demand (SMD)** curve becomes **perfectly elastic** with respect to interest rate & becomes **parallel to X axis**.
  - This is '**Liquidity trap**' → aka. ineffective monetary policy.
  - Empirical evidence of Liquidity Trap is found during "**Global Financial Crisis of 2008**"

Post-Keynesian developments in Theory of Demand for MoneyIV) Inventory Approach to Transaction Balances

- 10
- Given by Baumol & Tobin
  - Aka **Inventory Theoretic Approach**), in which money is viewed as **inventory held for transaction purposes**.
  - People hold **optimum combination** of **bonds & cash balance** → which **minimizes opp. cost**.
  - Level of inventory holding (money demand)- is DIRECTLY RELATED to
    - ❑ **Income**
    - ❑ **Cost of making transfer** from money to bonds
  - & is INDIRECTLY RELATED to
    - ❑ **Carrying cost (opp. cost)**– (interest income foregone by holding money)
    - ❑ **Number of bond transactions**

## CHAPTER 8 – Money Market | UNIT 1 - THE CONCEPT OF MONEY DEMAND: IMPORTANT THEORIES

10.1	<p><b>V) Friedman's Restatement of Quantity Theory</b></p> <p>Given by <b>Milton Friedman</b> → <b>asset price theory</b>.</p> <p>Friedman's <b>4 determinants</b> of demand for money</p> <p><b>1) Total wealth = Permanent Income / discount rate</b></p> <p>2) Positively related to the <b>Price Level, P</b></p> <p>3) Rises if <b>opportunity costs</b> of money holdings decline</p> <p><b>4) Inflation</b> - Positive inflation rate reduces real value of money &amp; increases opportunity costs of money holdings</p>
10.2	<p><b>VI) Demand for Money as Behaviour toward Risk</b></p> <p>Given by <b>Tobin</b> in</p> <p>Based on principles of <b>Portfolio Management</b></p> <p>People hold an <b>optimally structured wealth portfolio</b> which <b>comprises both</b></p> <p>&gt; <b>Bonds</b>- (provides return for risk)</p> <p>&gt; <b>Money</b>- (No return, but also no risk)</p> <p>Demand for money <b>depends negatively</b> on <b>interest rate</b>.</p>

## UNIT 2 - CONCEPT OF MONEY SUPPLY

11	<p>Money supply = <b>Total qty of money available with public</b></p> <p>'Public' is defined to include <b>all economic units except the producers of money</b> (i.e. Govt., &amp; banking system- RBI &amp; banks).</p>
12	<p>Supply of money → <b>stock variable</b></p> <p>Change in stock of money → <b>flow variable</b></p> <p>Stock of money <b>available to 'public'</b> → <b>always smaller</b> than total stock of money in an <b>economy</b>.</p> <p><b>Total money stock of a country</b> = High powered money + Credit Money</p>
13	<p>➤ <b>Supply of money' EXCLUDES</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> <b>interbank deposits</b> and</li> <li><input type="checkbox"/> money held by <b>government</b> and</li> <li><input type="checkbox"/> money held by <b>banking system</b></li> </ul>
14	<p><b>Empirical analysis</b> of money supply is important as it-</p> <ol style="list-style-type: none"> <li>1) Facilitates <b>analysis of monetary developments</b></li> <li>2) Evaluate whether stock of money in economy is consistent <b>standards for price stability</b> &amp; helps RBI in <b>making monetary policy</b></li> </ol>

## CHAPTER 8 – Money Market | UNIT 2 - CONCEPT OF MONEY SUPPLY

15

Measurement of money supply

Reserve money (M0) is also known as-  
**central bank money, base money or, high-powered money**

	Currency in circulation		Currency with Public
+	Bankers' deposits with RBI	+	Demand deposits with banks (Current A/c & Saving A/c)
+	Other deposits with the RBI	+	Other deposits with RBI
	<b>Reserve Money (M0)</b>		<b>M1 (Narrow Money)</b>
	M1		M1
+	Savings dep with Post Office	+	Time deposits with Banks
	<b>M2</b>		<b>M3 (Broad Money)</b>
	M3		Notes in Circulation
+	Total dep. with Post Office (excl. National Savings Cert.)	+	Circulation of Rupee Coin
		+	Circulation of Small Coins
		-	Cash on Hand with Banks
	<b>M4</b>		<b>Currency with Public</b>

➤ **Descending order of liquidity –**  
**M1 (Most Liquid) &**  
**M4 (Least Liquid)**

Money Multiplier (m)

Money multiplier process explains **how an increase in monetary base** the **money supply to increase by a multiplied amount**.

**1<sup>st</sup> Formula**

$$\text{Money Multiplier (m)} = \frac{\text{Money supply (M)}}{\text{Monetary Base (MB)}}$$

**2<sup>nd</sup> Formula**

$$\text{Money Multiplier (m)} = \frac{1 + c}{r + e + c}$$

where,

c = currency ratio = currency / deposits

r = required reserve ratio = required reserves / deposits

e = excess reserve ratio = excess reserves / deposits

**3<sup>rd</sup> Formula**

If we **assume-**

1) **Banks never hold excess reserves.** ( e = 0 )

2) People **never hold currency** ( c = 0 ) Then,

**Money Multiplier (m) = 1 / Required Reserve Ratio = 1 / R**  
**Above can aka. → Credit Multiplier or Deposit Multiplier or Deposit Expansion Multiplier**

## CHAPTER 8 – Money Market

17	<u><b>Determinants of Money Supply</b></u> (By Milton Friedman & Anna Schwartz) <b>1) Stock of high-powered money (H)</b> Depends upon Behaviour of Central Bank
17.1	<b>2) Reserve-ratio (r) = <math>R / D</math></b> ✓ Depends upon Behaviour of Commercial Bank If required reserve ratio <b>increases</b> - ➤ banks will decrease lending, ➤ causing a decline in deposits and hence money supply will <b>decline</b> . ✓ <b>Smaller</b> r → <b>larger</b> the money multiplier
17.2	<u><b>Excess Reserves (ER)</b></u> ER are funds that bank keeps as reserve beyond what is required → <b>buffer against unexpected events requiring cash</b> . <b>ER = Total reserve (TR) – Req'd. Reserve (RR)</b> ✓ Excess Reserves of commercial banks <b>do not lead to any additional loans</b> , and thus, do <b>not lead to creation of money</b> ✓ <b>Smaller</b> the excess reserve ratio → <b>larger</b> will be the money multiplier ✓ When <b>costs to bank of holding ER</b> (market rate of interest) <b>rises</b> , level of <b>ER falls</b> → <b>m will be larger</b>

17.3	<b>3) Currency Deposit Ratio (c) = <math>C / D</math></b> Depends upon Behaviour of Public ✓ If public keeps <b>more money in their pocket</b> & less in bank → <b>increase in currency ratio</b> → <b>banks create less credit money</b> → <b>m falls</b> . ✓ <b>Increase</b> in Time deposit-demand deposit ratio TD/DD ratio → <b>higher the multiplier</b>
------	---

## UNIT 3 - MONETARY POLICY

18	<u><b>Monetary Policy Defined</b></u> ➤ RBI uses monetary policy to <b>manage economic fluctuations</b> & achieve <b>price stability</b> (inflation is <b>low &amp; stable</b> ) ✓ When RBI <b>lower interest rates</b> , monetary policy is <b>easing</b> . ✓ When it <b>raises</b> interest rates, monetary policy is <b>tightening</b>
19	<u><b>The Monetary Policy Framework</b></u> 3 basic components- (i) <b>objectives</b> of monetary policy, (ii) <b>analytics</b> of monetary policy (transmission mechanisms) (iii) <b>operating procedure</b>

## CHAPTER 8 – Money Market | UNIT 3 - MONETARY POLICY

20	<u>Objectives of monetary policy</u> Primary objective → maintaining <b>balance</b> between <b>price stability</b> & <b>economic growth</b> .		<u>Indirect Instruments-</u> <b>a) Repos</b> <b>b) Open market operations</b> <b>c) Standing facilities</b> <b>d) Market-based discount window</b>
21	<u>Objectives of Monetary Policy in case of developing countries</u> 1) maintaining <b>economic growth</b> <b>2) adequate flow of credit to productive sectors</b> 3) sustaining <b>moderate structure of interest rates</b> , 4) creation of <b>efficient market for govt. securities</b> .		
22	<u>Transmission of Monetary Policy</u> How changes to monetary policy <b>affect interest rates</b> & further <b>affect economic activity</b> & <b>inflation</b> <b>1) Saving and Investment Channel</b> <b>2) Cash-flow Channel</b> <b>3) Asset Prices and Wealth Channel</b> <b>4) Exchange Rate Channel</b>		
23	<u>Instrument of Monetary Policy</u> <u>Direct Instruments</u> <b>a) CRR &amp; SLR</b> <b>b) directed credit</b> in form of <b>prescribed targets</b> for preferred sectors <b>c) administered interest rates</b> .		
24			<u>Operating Procedures and Instruments</u> <u>Quantitative tools</u> <b>1. Reserve Ratio</b> → Banks keep aside % of <b>Net Demand &amp; Time Liabilities</b> . They have two types- <b>2. Cash Reserve Ratio (CRR)</b> → Banks set aside this portion in <b>cash with RBI</b> . Bank can <b>neither lend</b> it <b>nor can it earn any interest</b> on CRR <b>3. Statutory Liquidity Ratio (SLR)</b> → Banks set aside this <b>portion in liquid assets-</b> like <b>cash</b> or <b>gold</b> or <b>RBI approved securities</b> (unencumbered). Banks <b>are allowed to earn interest</b> on these securities. <b>4. Open Market Operations (OMO)</b> → To <b>control money supply</b> → RBI <b>buys &amp; sells govt securities</b> . ✓ When RBI <b>sells</b> govt securities → <b>liquidity is sucked</b> from market (done to <b>control inflation</b> ), ✓ When RBI <b>buys</b> securities → <b>Money Supply increases</b> (done during <b>contraction/depression</b> )

## CHAPTER 8 – Money Market | UNIT 3 - MONETARY POLICY

25	<p><b>Qualitative tools</b> - Selective tools that impact money supply of specific sector of economy</p> <p>1. <b>Margin requirements</b> → When margin req is <b>raised</b>, customers will be able to <b>borrow less</b></p> <p>2. <b>Moral suasion</b> → By way of <b>persuasion</b> RBI <b>convinces banks</b> to keep money in govt securities, rather than certain sectors.</p> <p>3. <b>Selective credit control</b> → Controlling credit by <b>not lending to selective industries</b> or speculative businesses.</p>	<p>2a. <b>Repo Rate</b> → Repo rate is rate at which <b>banks borrow from RBI</b> on a <b>short-term basis</b> against a <b>repurchase agreement</b></p> <p>2b. <b>Reverse Repo Rate</b> → <b>Rate RBI pays to banks</b> in order to keep additional funds in RBI. It is <b>linked</b> to repo rate: <b>Reverse Repo Rate = Repo Rate – 1</b></p> <p>3. <b>Marginal Standing Facility (MSF) Rate</b> → <b>Penal rate</b> at which RBI lends money to banks, <b>over rate available</b> under repo policy. Banks availing MSF Rate can use <b>maximum of 1% of SLR securities</b> → <b>MSF Rate = Repo Rate + 1</b></p>
26	<p><b>Market Stabilisation Scheme (MSS)</b></p> <p>Under MSS, <b>Govt</b> of India <b>borrow from RBI</b> &amp; issues treasury-bills/dated securities → done to <b>absorb excess liquidity</b> from banking system → caused by large foreign capital inflows</p>	
27	<p><b>Policy Rates</b></p> <p>1. <b>Bank Rate</b> → Interest rate at which <b>RBI lends long term funds to banks</b> → bank rate. Now used to prescribe <b>penalty</b> to bank if it <b>does not maintain</b> the prescribed <b>SLR or CRR</b></p> <p>2. <b>Liquidity Adjustment Facility (LAF)</b> → RBI uses LAF as an instrument <b>to adjust liquidity &amp; money supply</b>. The following types of LAF are-</p>	<p>28</p> <p><b>Monetary Policy Framework Agreement</b></p> <ul style="list-style-type: none"> <li>➤ <b>Agreement</b> between <b>Govt &amp; RBI</b> on <b>maximum tolerable inflation rate</b> that RBI should target to <b>achieve price stability</b>.</li> <li>➤ Announcement of an official target range for inflation is known as <b>inflation targeting</b>.</li> <li>➤ <b>Inflation target</b> → <b>set by Govt</b> in <b>consultation with RBI</b>, <b>once in every five years</b>.</li> </ul> <p>Accordingly, Central Government has notified-</p> <ul style="list-style-type: none"> <li>➤ <b>4 %</b> → <b>Consumer Price Index (CPI)</b> → <b>target</b> for <b>Aug 5, 2016 to Mar 31, 2021</b>, with the- <ul style="list-style-type: none"> <li>✓ <b>upper tolerance limit of 6%</b>,</li> <li>✓ <b>lower tolerance limit of 2%</b></li> </ul> </li> </ul>

## CHAPTER 8 – Money Market | UNIT 3 - MONETARY POLICY

29

The RBI is mandated to publish a **Monetary Policy Report** every **six months**

30

**Monetary Policy Committee (MPC)**

A **6-member committee** consisting of-

- **RBI Governor** (Chairperson),
- **RBI Deputy Governor** in charge of monetary policy,
- **One official** nominated by **RBI Board** and
- **Remaining three CG nominees.**

MPC is required to **meet at least 4 times a year**

MPC shall determine **policy rate** (repo rate) required to achieve inflation target.
